

Public Notice Submission

Provider Name: Sunflower Broadband

Summary: Sunflower Broadband ("Sunflower") provides residential broadband services that exceed the broadband definitions specified in the NOFA. Sunflower's lowest internet tier is 3 Mbps and its highest tier is 50 Mbps. Residential subscribers may also chose a variable speed service that is advantageous for the customer demographic that downloads large files or utilizes streaming applications. Residential services are delivered on a HFC network with DOCSIS 3.0 cable modems. PON service ranging from 2 Mbps to 100 Gbps is available to businesses and potentially any residential unit that requests a PON product. Sunflower covers 100% of 22 census tracts listed on the "Coverage and Subscription Data" tab. Stimulus awards involving the census tracts listed in this response would duplicate broadband services that are offered at very competitive prices levels and would not be the most efficient use of government funding.
