# Sampling Event Summary

**Site:** Shiprock, New Mexico, Disposal Site

**Sampling Period:** September 10–13, 2007

Groundwater and surface water sampling and analysis are performed semiannually at the Shiprock Disposal Site as specified in the *Refinement of Conceptual Model and Recommendations for Improving Remediation Efficiency at the Shiprock, New Mexico, Site* (July 2005). Sampling and analysis was conducted as specified in *Sampling and Analysis Plan for U.S. Department of Energy Office of Legacy Management Sites* (October 2006) and the *Environmental Procedures Catalog* (STO 6). Additional locations were sampled for this event to update plume maps. Monitoring of terrace locations is performed to determine the effectiveness of active remediation. Monitoring of floodplain locations is performed to determine the progress of the natural flushing process and the effectiveness of groundwater removal to prevent contaminants from reaching the San Juan River.

The contaminants of concern (COCs) for the Shiprock Disposal Site are ammonia, manganese, nitrate + nitrite as N, selenium, strontium, sulfate, and uranium. Wells with contaminant concentrations that exceeded groundwater standards or proposed alternate concentration limits are listed in Table 1. Review of these data does not indicate any unexpected movement of contaminated groundwater. Time-concentration graphs of the COCs for the groundwater locations listed in Table 1 (with the exception of extraction wells) are included in this report.

Floodplain surface water analyte concentrations were compared to statistical benchmark values derived using data from 20 samplings (December 9, 1998 through September 12, 2007) of location 0898, which is upstream of the site on the San Juan River. Benchmark values were not exceeded for the point-of-exposure river locations adjacent to or downstream from the site.

*Table 1. Shiprock Locations that Exceed Standards*

Analyte	Standard <sup>a</sup>	Site Code	Location	Concentration

## Water Sampling Field Activities Verification Checklist

Project	Shiprock, New Mexico		Date(s) of Water Sampling	Sept. 10-13, 2007
Date(s) of Verification	12/27/07		Name of Verifier	Gretchen Baer
			Response (Yes, No, NA)	Comments
1. Is the SAP the primary document directing field procedures?			Yes	Work order letter dated August 7, 2007
List other documents, SOP's, instructions.			No	Surface waters 0655, 0885, 0884, 0933, 0936, 0937, 0938, and 0959 were dry. Wells 0736, 0768, 0775, 0804, 0822, 1006, 1067, 1069, 1112, 1113, & 1116 were dry. Wells 0783 & 0782 could not be found and are presumed destroyed. Well 0828 had a casing that was 10 feet above ground due to soil grading work around it, so it could not be sampled. Wells 0615 & 1105 may have water but were clogged with roots. Well 0829 was not sampled and the reason was not documented.
2. Were the sampling locations specified in the planning documents sampled?			Yes	
3. Was a pre-trip calibration conducted as specified in the above named documents?			Yes	Exceptions: On 9/13/07, a turbidimeter and specific conductivity were checked only once, and only 2 points were checked for another turbidimeter. All adjacent checks were well within criteria.
4. Was an operational check of the field equipment conducted twice daily?			Yes	A YSI was recalibrated for specific conductivity on 9/11/07.
Did the operational checks meet criteria?			No	Insufficient volume was available for some or all field parameters at: 0734, 0786, & 1058. Some parameters were not recorded inadvertently at: 0730, 0846, 0889, 1059, & 1117. Phenolphthalein alk was not recorded at: 0897 & 1203.
5. Were the number and types (alkalinity, temperature, Ec, pH, turbidity, DO, ORP) of field measurements taken as specified?			No	Some wells (1060, 1091, 1092, & 1093) were not categorized or were mis-categorized by the samplers.
6. Was the Category of the well documented?			Yes	
7. Were the following conditions met when purging a Category I well:			No	Water levels were not recorded at 0730 & 0816. At 0817 the water level drop exceeded category I requirements. Data are qualified as "Q."
Was one pump/tubing volume purged prior to sampling?			No	Turbidity was >10 NTU at 0843 & 1068. Data are qualified as "Q."
Did the water level stabilize prior to sampling?			Yes	
Did pH, specific conductance, and turbidity measurements stabilize prior to sampling?			NA	
Was the flow rate less than 500 mL/min?				
If a portable pump was used, was there a 4 hour delay between pump installation and sampling?				

## Water Sampling Field Activities Verification Checklist (continued)

	<b>Response (Yes, No, NA)</b>	<b>Comments</b>
8. Were the following conditions met when purging a Category II well:		
Was the flow rate less than 500 mL/min?	Yes	
Was one pump/tubing volume removed prior to sampling?	Yes	
9. Were duplicates taken at a frequency of one per 20 samples?	Yes	
10. Were equipment blanks taken at a frequency of one per 20 samples that were collected with nondedicated equipment?	Yes	
11. Were trip blanks prepared and included with each shipment of VOC samples?	NA	
12. Were QC samples assigned a fictitious site identification number?	Yes	
Was the true identity of the samples recorded on the Quality Assurance Sample Log?	Yes	
13. Were samples collected in the containers specified?	Yes	
14. Were samples filtered and preserved as specified?	Yes	
15. Were the number and types of samples collected as specified?	Yes	
16. Were chain of custody records completed and was sample custody maintained?	Yes	
17. Are field data sheets signed and dated by both team members?	No	Location 0730 was missing one signature.
18. Was all other pertinent information documented on the field data sheets?	Yes	
19. Was the presence or absence of ice in the cooler documented at every sample location?	No	Presence of ice was not documented at location 1104.
20. Were water levels measured at the locations specified in the planning documents?	NA	

## Laboratory Performance Assessment

### General Information

Report Number (RIN): 07081119  
Sample Event: September 10–13, 2007  
Site(s): Shiprock, New Mexico  
Laboratory: Paragon Analytics, Fort Collins, Colorado  
Work Order No.: 0709086  
Analysis: Metals and Wet Chemistry  
Validator: Gretchen Baer  
Review Date: November 7, 2007

This validation was performed according to the *Environmental Procedures Catalog* (STO 6), “Standard Practice for Validation of Laboratory Data,” GT-9(P) (2006). The procedure was applied at Level 3, Data Validation. See attached Data Validation Worksheets for supporting documentation on the data review and validation. All analyses were successfully completed. The samples were prepared and analyzed using accepted procedures based on methods specified by line item code, which are listed in Table 2.

*Table 2. Analytes and Methods*

Analyte	Line Item Code	Prep Method	Analytical Method
Ammonia as N	WCH-A-005	MCAWW 350.1	MCAWW 350.1
Calcium, Magnesium, Potassium, Sodium, Strontium	MET-A-020	SW-846 3005A	SW-846 6010B
Chloride	MIS-A-039	SW-846 9056	SW-846 9056
Manganese	GJO-17	SW-846 3005A	SW-846 6010B
Nitrate + Nitrite as N	WCH-A-022	MCAWW 353.2	MCAWW 353.2
Selenium	GJO-14	SW-846 3005A	SW-846 6020A
Sulfate	MIS-A-044	SW-846 9056	SW-846 9056
Total Dissolved Solids	WCH-A-033	MCAWW 160.1	MCAWW 160.1
Uranium	GJO-01	SW-846 3005A	SW-846 6020A

### Data Qualifier Summary

Analytical results were qualified as listed in Table 3. Refer to the attached validation worksheets and the sections below for an explanation of the data qualifiers applied.

*Table 3. Data Qualifier Summary*

Sample Number	Location	Analyte	Flag	Reason
0709086-1	0501	Chloride	J	Improper storage at laboratory
0709086-1	0501	Sulfate	J	Improper storage at laboratory
0709086-6	0735	Total Dissolved Solids	J	Exceeded holding time
0709086-10	1114	Total Dissolved Solids	J	Exceeded holding time
0709086-11	1115	Total Dissolved Solids	J	Exceeded holding time
0709086-12	1117	Total Dissolved Solids	J	Exceeded holding time
0709086-13	1203	Chloride	J	Improper storage at laboratory
0709086-13	1203	Sulfate	J	Improper storage at laboratory
0709086-14	2608 (1203 dup)	Chloride	J	Improper storage at laboratory
0709086-14	2608 (1203 dup)	Sulfate	J	Improper storage at laboratory
0709086-27	0830	Total Dissolved Solids	J	Exceeded holding time
0709086-32	1058	Total Dissolved Solids	J	Exceeded holding time
0709086-33	1059	Total Dissolved Solids	J	Exceeded holding time
0709086-34	1060	Manganese	J	Negative CCB  greater than MDL
0709086-37	1074	Total Dissolved Solids	J	Exceeded holding time
0709086-38	1091	Total Dissolved Solids	J	Exceeded holding time
0709086-39	1092	Total Dissolved Solids	J	Exceeded holding time
0709086-40	1093	Total Dissolved Solids	J	Exceeded holding time
0709086-49	0662	Manganese	U	Less than 5 times the equipment blank
0709086-60	0816	Manganese	J	Negative CCB  greater than MDL
0709086-67	0838	Manganese	J	Negative CCB  greater than MDL
0709086-69	0844	Manganese	J	Negative CCB  greater than MDL
0709086-72	0853	Sodium	J	Serial dilution failure
0709086-76	0887	Manganese	U	Less than 5 times the equipment blank
0709086-77	0889	Manganese	J	Negative CCB  greater than MDL
0709086-78	0897	Manganese	U	Less than 5 times the equipment blank
0709086-79	0898	Manganese	U	Less than 5 times the equipment blank
0709086-92	1079	Manganese	J	Negative CCB  greater than MDL
0709086-106	2535 (equip blank)	Potassium	U	Less than 5 times the calibration blank
0709086-106	2535 (equip blank)	Sodium	U	Less than 5 times the calibration blank
0709086-106	2535 (equip blank)	Uranium	U	Less than 5 times the calibration blank
0709086-109	2609 (equip blank)	Potassium	U	Less than 5 times the calibration blank
0709086-109	2609 (equip blank)	Sodium	U	Less than 5 times the calibration blank
0709086-109	2609 (equip blank)	Uranium	U	Less than 5 times the calibration blank

### Sample Shipping/Receiving

Paragon Analytics in Fort Collins, Colorado, received 109 water samples on September 13, 14, and 15, 2007, accompanied by Chain of Custody (COC) forms. (One of the coolers shipped on September 12, 2008, was delayed during shipping and was received one day late on September 14, 2008.) The COC forms were checked to confirm that all of the samples were and that signatures and dates were present indicating sample relinquishment and receipt. The sample submittal documents including the COC forms and the sample tickets had no errors or omissions, with these exceptions: two sample times were either incorrect or missing on a COC and a location ID was incorrect on a COC and ticket. The laboratory corrected these errors.

### Preservation and Holding Times

The sample shipments were received intact with the temperatures within the chilled coolers of 1.6, 1.8, 2.8, 2.2, and 1.8 °C, which complies with requirements. All samples were received in the correct container types and had been preserved correctly for the requested analyses. The bottle containing the total dissolved solids (TDS) fraction for location 0728 was received with a hole. Approximately 75 percent of the sample had leaked out but sufficient volume remained for analysis. All 11 samples that were collected on September 10, 2007, exceeded the 7-day holding time for TDS analysis by one day. These samples were delivered in the cooler that was delayed by FedEx during shipping; therefore, the laboratory received the samples after over one-half of the holding time had expired. No error was made by the sampling team or the laboratory. These TDS results are qualified with a "J" flag as estimated values. All other samples were analyzed within the applicable holding times. All sample aliquots for all analyses were filtered in the field.

Laboratory personnel inadvertently left some of the bottles for chloride and sulfate (Cl and SO<sub>4</sub>) analysis out of cold storage overnight. For most of these samples, sufficient volume from a properly chilled TDS bottle was available for the Cl and SO<sub>4</sub> analysis. For three samples (locations 0501, 1203, and the 1203 field duplicate), no other bottles were available and the Cl and SO<sub>4</sub> analysis was performed on the aliquots that had been left out; these results are qualified with a "J" flag (estimated).

### Laboratory Instrument Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for all analytes. Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear curve. Compliance requirements for continuing calibration checks are established to ensure that the instrument continues to be capable of producing acceptable qualitative and quantitative data. All laboratory instrument calibrations were performed correctly in accordance with the cited methods.

#### *Method MCAWW 160.1*

There are no initial or continuing calibration requirements associated with the determination of TDS.

#### *Method MCAWW 350.1*

Calibrations were performed for ammonia as N on September 24, 2007, using six calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the method detection limit (MDL). Initial and continuing calibration verification checks were made at the required frequency resulting in 22 verification checks. All calibration checks met the acceptance criteria.

### *Method MCAWW 353.2*

Calibrations were performed for nitrate + nitrite as N on September 19, 20, and 21, 2007, using seven calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Initial and continuing calibration verification checks were made at the required frequency resulting in 17 verification checks. All calibration checks met the acceptance criteria.

### *Method SW-846 6010B*

Calibrations for calcium, magnesium, manganese, potassium, sodium, and strontium were performed on October 5 and 8, 2007, using four calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the reporting limits. Calibration and laboratory spike standards were prepared from independent sources. Initial and continuing calibration verification checks were made at the required frequency resulting in 35 verification checks. All calibration checks met the acceptance criteria. Reporting limit verification checks were made at the required frequency to verify the linearity of the calibration curve near the practical quantitation limit (PQL) and all results were within the acceptance range.

### *Method SW-846 6020A*

Calibrations were performed for selenium on October 1 and 2, 2007, and for uranium on September 20, 26, and 27, 2007, using seven calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Calibration and laboratory spike standards were prepared from independent sources. Initial and continuing calibration verification checks were made at the required frequency resulting in 18 verification checks for selenium and 31 checks for uranium. All calibration checks met the acceptance criteria. Reporting limit verification checks were made at the required frequency to verify the linearity of the calibration curve near the PQL and all results were within the acceptance range. Mass calibration and resolution verifications were performed at the beginning of each analytical run in accordance with the analytical procedure. Internal standard recoveries associated with requested analytes were stable and within acceptable ranges.

### *Method SW-846 9056*

Calibrations were performed for chloride and sulfate on September 14, 2007, using five calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Calibration and laboratory spike standards were prepared from independent sources. Initial and continuing calibration verification checks were made at the required frequency resulting in 22 verification checks. All calibration checks met the acceptance criteria.

### Method and Calibration Blanks

Method blanks are analyzed to assess any contamination that may have occurred during sample preparation. Calibration blanks are analyzed to assess instrument contamination prior to and

during sample analysis. All method blank and initial and continuing calibration blank (ICB and CCB) results associated with the samples were below the PQL with the exception of CCB1 (September 20, 2007) and CCB2 (September 21, 2007) analyzed for sulfate. The samples associated with these CCBs had sulfate concentrations greater than 10 times the blanks. In cases where a blank concentration exceeds the MDL, the associated sample results are qualified with a “U” flag (not detected) when the sample result is greater than the MDL but less than 5 times the blank concentration.

For magnesium, manganese, and strontium, some calibration blanks were negative and the absolute values were greater than the MDL but less than the PQL. All magnesium and strontium results were greater than 5 times the MDL, so no results are qualified. Manganese results less than 5 times the MDL are qualified with a “J” flag (estimated).

#### Inductively Coupled Plasma (ICP) Interference Check Sample (ICS) Analysis

Inductively coupled plasma interference check samples were analyzed at the required frequency to verify the instrumental interelement and background correction factors. All check sample results met the acceptance criteria.

#### Matrix Spike Analysis

Matrix spike and matrix spike duplicate (MS/MSD) pairs were analyzed for all analytes as a measure of method performance in the sample matrix. Matrix spikes are not required for sodium, potassium, magnesium, and calcium; these results were evaluated only for acceptable precision. The MS data are not evaluated when the concentration of the unspiked sample is greater than 4 times the spike concentration. Spikes that were performed on samples from other clients were not evaluated. The spike recoveries met the recovery criteria for all analytes evaluated. Some strontium spike recoveries exceeded the laboratory’s acceptance criteria, but were within the ± 25 percent requirement.

#### Laboratory Replicate Analysis

The laboratory replicate sample results demonstrate acceptable laboratory precision. The relative percent difference (RPD) values for the laboratory replicate sample and matrix spike duplicate sample results for all analytes were less than 20 percent, indicating acceptable laboratory precision.

#### Laboratory Control Samples (LCSs)

LCSs were analyzed at the correct frequency to provide information on the accuracy of the analytical method and the overall laboratory performance, including sample preparation. The LCS results were acceptable for all analytes.

#### Metals Serial Dilution

Serial dilutions were prepared and analyzed for the metals analyses to monitor chemical or physical interferences in the sample matrix. Serial dilution data are evaluated when the

concentration of the undiluted sample is greater than 100 times the PQL for ICP-MS or greater than 50 times the PQL for ICP. All evaluated serial dilution data were acceptable with the following exception. One serial dilution result did not meet the acceptance criteria for sodium. The associated result is qualified with a "J" flag as an estimated value.

The laboratory flagged the ICP results for location 1109 for serial dilution failure. The serial dilution results were very low and were similar to the calibration blanks while the sample results were more than 50 times the PQLs. This suggests analyst error rather than a serial dilution failure. Instrument error is not suspected because all calibration verifications and matrix spikes that bracket the serial dilution were within acceptance limits. No qualification for serial dilution failure for this sample is necessary.

#### Detection Limits/Dilutions

Samples were diluted in a consistent and acceptable manner when required. The samples were diluted prior to analysis of uranium to reduce interferences. The required detection limits were achieved for all analytes.

#### Completeness

Results were reported in the correct units for all analytes requested using contract-required laboratory qualifiers.

#### Chromatography Peak Integration

The integration of analyte peaks was reviewed for all chloride and sulfate data. There were no manual integrations performed and all peak integrations were satisfactory.

#### Electronic Data Deliverable (EDD) File

The EDD file arrived on October 15, 2007. The Sample Management System EDD validation module was used to verify that the EDD file was complete and in compliance with requirements. The module compares the contents of the file to the requested analyses to ensure all and only the requested data are delivered. The contents of the EDD were manually examined to verify that the sample results accurately reflect the data contained in the sample data package.

#### Anion/Cation Balance

The anion/cation balance is used to determine if major ion concentrations have been quantified correctly. The total anions should balance with (be equal to) the total cations when expressed in milliequivalents per liter (meq/L). Table 4 shows the total cation and anion results from this event and the charge balance, which is an RPD calculation. Typically, a charge balance difference of 10 percent is considered acceptable.

*Table 4. Comparison of Major Anions and Cations*

Site Code	Location	Cations (meq/L)	Anions (meq/L)	Charge Balance (%)

SHP02	MW1	159.2	205.6	<b>12.7</b>

The charge balance value was greater than ten percent for 21 locations. Further review of the data for these locations did not indicate any errors in the data. Most were only slightly above ten percent, but two (0887 and 0942) were considerably higher. Locations 0887 and 0942 are surface waters. High turbidity at these may have constituted an interference during the alkalinity measurement resulting in higher charge balance differences.

Alkalinity results for these locations were not determined: 0730, 0734, 0786, 0846, 0889, and 1058; therefore, the charge balance is not applicable.

### General Data Validation Report

RIN: 07081119 Lab Code: PAR Validator: Gretchen Baer Validation Date: 11/5/2007

Project: Shiprock Analysis Type:  Metals  General Chem  Rad  Organics

# of Samples: 109 Matrix: WATER Requested Analysis Completed: Yes

#### Chain of Custody

Present: OK Signed: OK Dated: OK

#### Sample

Integrity: OK Preservation: OK Temperature: OK

#### Select Quality Parameters

Holding Times

There are 11 holding time failures.

Detection Limits

The reported detection limits are equal to or below contract requirements.

Field/Trip Blanks

There were 2 trip/equipment blanks evaluated.

Field Duplicates

There were 5 duplicates evaluated.

## **Sampling Quality Control Assessment**

The following information summarizes and assesses quality control for this sampling event.

### **Sampling Protocol**

Sample results for monitor wells that met the Category I, II, or III low-flow sampling criteria were qualified with an “F” flag in the database, indicating the wells were purged and sampled using the low-flow sampling method.

All wells met the Category I criteria and were sampled with dedicated tubing using the low-flow purge procedure with the following exceptions:

- Wells 0610, 0797, 1058, 1059, 1060, and 1074 were classified as Category II.
- Wells 0600, 0726, 0728, 0731, 0734, 0812, 0814, 0815, 0827, 0832, 0833, 0839, 0844, 1007, 1072, 1073, 1120, DM7, and MW1 were classified as Category III.
- Turbidity requirements were not met for wells 0843 and 1068.
- Water levels were not measured for wells 0730 and 0816.
- The water level drop exceeded the Category I criterion for well 0817.

The sample results for these wells were qualified with a “Q” flag, indicating the data are qualitative because of the sampling technique.

### **Equipment Blank**

An equipment blank was collected after completion of decontamination and prior to collection of environmental samples. This blank is useful in documenting adequate decontamination of sampling equipment. The following analytes were detected in the equipment blank (2535) that was associated with samples collected using a bailer: calcium, magnesium, manganese, potassium, sodium, strontium, sulfate, and uranium. The following analytes were detected in the equipment blank (2609) that was associated with surface water samples collected using a hose reel: calcium, magnesium, manganese, potassium, sodium, strontium, and uranium. Sample results that are less than 5 times the equipment blank concentration are qualified with a “U” flag as not detected. Most sample results for these analytes were more than 5 times the equipment blank concentrations and do not require further qualification.

### **Field Duplicate Assessment**

Field duplicate samples are collected and analyzed as an indication of overall precision of the measurement process. The precision observed includes both field and laboratory precision and has more variability than laboratory duplicates, which measure only laboratory performance. Duplicate samples were collected from locations 0662, 0855, 1057, 1089, and 1203. The U.S. Environmental Protection Agency recommended laboratory duplicate criterion is less than 20 percent relative difference for results that are greater than 5 times the PQL. The duplicate results were acceptable, with the following exceptions. For location 0662 (surface water), the potassium and uranium relative differences were 29 percent and 23 percent, respectively. For

location 1057 (groundwater), the ammonia as N and nitrate + nitrite as N relative differences were 31 percent and 34 percent, respectively. There were no analytical errors identified during the review of the data. The field notes did not describe any unusual conditions during sampling at these locations.

## Certification

All laboratory analytical quality control criteria were met except as qualified in this report. The data qualifiers listed on the SEEPro database reports are defined on the last page of each report. All data in this package are considered validated and available for use.

## Outliers Report

Potential outliers are measurements that are extremely large or small relative to the rest of the data and, therefore, are suspected of misrepresenting the population from which they were collected. Potential outliers may result from transcription errors, data-coding errors, or measurement system problems. However, outliers may also represent true extreme values of a distribution and indicate more variability in the population than was expected.

Statistical outlier tests give probabilistic evidence that an extreme value does not "fit" with the distribution of the remainder of the data and is therefore a statistical outlier. These tests should only be used to identify data points that require further investigation. The tests alone cannot determine whether a statistical outlier should be discarded or corrected within a data set.

There are three steps involved in identifying extreme values or outliers:

1. Identify extreme values that may be potential outliers by generating the Outliers Report using the Sample Management System from data in the SEEPro database. The application compares the new data set with historical data and lists all new data that fall outside the historical data range. Data listed in the report are highlighted if the concentration detected is not within 50 percent of historical minimum or maximum values. A determination is also made if the data are normally distributed using the Studentized Range Test.
2. Apply the appropriate statistical test. Dixon's Extreme Value test is used to test for statistical outliers when the sample size is less than or equal to 25. This test considers both extreme values that are much smaller than the rest of the data (case 1) and extreme values that are much larger than the rest of the data (case 2). This test is valid only if the data without the suspected outlier are normally distributed. Rosner's Test is a parametric test that is used to detect outliers for sample sizes of 25 or more. This test also assumes that the data without the suspected outliers are normally distributed.
3. Scientifically review statistical outliers and decide on their disposition.

Sixty-six results are listed on the Anomalous Data Review Checksheet for further review. All other sample results meet these criteria and are acceptable for use as qualified. At this time, all data from this sampling event may be treated as validated results.

Most of the anomalies appeared in locations that have not been sampled since 2002 or earlier. Because the gaps between the September 2007 data and the previous data are greater than five years for these locations, high or low points may not necessarily indicate errors in the data. Future measurements should be closely examined.

Anomalous results for locations 0618, 1057, 1089, and 1093 may indicate trends in the data. Anomalous results also appeared in locations 0610, 0726, 0734, 0786, 0817, 0818, 0832, 0934, 1071, and 1092; definitive trending at these locations is not recognized.

Table 5 summarizes the anomalies identified in a previous report (March 2007). The right-hand column describes the result for this sampling event (September 2007).

*Table 5. Comparison of March 2007 Anomalies with September 2007 Results*

<b>Loc. No.</b>	<b>Site Code</b>	<b>Analyte</b>	<b>Type of Anomaly in March 2007</b>	<b>September 2007 Measurement</b>
0614	SHP01	Selenium	High	Measurement is lower & within historical range
0797	SHP01	Nitrate	High	Measurement is lower & near historical range
0797	SHP01	Uranium	High	Measurement is lower but still elevated
1089	SHP01	Nitrate	Low	Measurement is higher but still low; possible downward trend
1079	SHP02	Manganese	Low	Measurement is lower; possible downward trend
1088	SHP02	Manganese	Low	Measurement is higher & within historical range
1093	SHP02	Ammonia	High	Measurement is lower but still elevated

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

### LAB QUALIFIERS:

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.
- A TIC is a suspected aldol-condensation product.
- B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
- C Pesticide result confirmed by GC-MS.
- D Analyte determined in diluted sample.
- E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
- H Holding time expired, value suspect.
- I Increased detection limit due to required dilution.
- J Estimated
- N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
- P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
- U Analytical result below detection limit.
- W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
- X,Y,Z Laboratory defined qualifier, see case narrative.

### DATA QUALIFIERS:

F Low flow sampling method used.  
L Less than 3 bore volumes purged prior to sampling.  
U Parameter analyzed for but was not detected.

G Possible grout contamination, pH > 9.  
Q Qualitative result due to sampling technique.  
X Location is undefined.

J Estimated value.  
R Unusable result.

**STATISTICAL TESTS:**

The distribution of the data is tested for normality using the Studentized Range Test  
Outliers are identified using Dixon's Test when there are 25 or fewer data points.  
Outliers are identified using Rosner's Test when there are 26 or more data points.  
See Data Quality Assessment: Statistical Methods for Practitioners, EPA QC/G-9S, February 2006.

## Anomalous Data Review Checksheet

**Site:** Shiprock, NM, Disposal Site

**Sampling Data:** Groundwater and Surface Water

**Reviewer:** Gretchen Baer  
Name (print)

*Gretchen R Baer* 1/18/08  
Signature Date

**Site Hydrologist:** David Miller  
Name (print)

*David Miller* 1/13/08  
Signature Date

**Date of Review:** December 27, 2007

<b>Loc. No.</b>	<b>Analyte</b>	<b>Type of Anomaly</b>	<b>Disposition</b>
0817 SHP02	Ammonia Total as N	Low	Compare to future results
0818 SHP02	Ammonia Total as N	Low	Compare to future results

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

LAB QUALIFIERS:

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.
- A TIC is a suspected aldol-condensation product.
- B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
- C Pesticide result confirmed by GC-MS.
- D Analyte determined in diluted sample.
- E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
- H Holding time expired, value suspect.
- I Increased detection limit due to required dilution.
- J Estimated
- N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
- P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
- U Analytical result below detection limit.
- W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
- X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:

- F Low flow sampling method used.
- G Possible grout contamination, pH > 9.
- J Estimated value.
- L Less than 3 bore volumes purged prior to sampling.
- Q Qualitative result due to sampling technique.
- R Unusable result.
- U Parameter analyzed for but was not detected.
- X Location is undefined.

QA QUALIFIER:

- # Validated according to quality assurance guidelines.

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

**LAB QUALIFIERS:**

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.

A TIC is a suspected aldol-condensation product.  
B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.  
C Pesticide result confirmed by GC-MS.  
D Analyte determined in diluted sample.  
E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.  
H Holding time expired, value suspect.  
I Increased detection limit due to required dilution.  
J Estimated  
N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).  
P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.  
U Analytical result below detection limit.  
W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.  
X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:

F Low flow sampling method used. G Possible grout contamination, pH > 9. J Estimated value.  
L Less than 3 bore volumes purged prior to sampling. Q Qualitative result due to sampling technique. R Unusable result.  
U Parameter analyzed for but was not detected. X Location is undefined.

QA QUALIFIER:

# Validated according to quality assurance guidelines.

## LAB QUALIFIERS:

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.

- A TIC is a suspected aldol-condensation product.
- B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
- C Pesticide result confirmed by GC-MS.
- D Analyte determined in diluted sample.
- E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
- H Holding time expired, value suspect.
- I Increased detection limit due to required dilution.
- J Estimated
- N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
- P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
- U Analytical result below detection limit.
- W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
- X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:

- F Low flow sampling method used.
- G Possible grout contamination, pH > 9.
- J Estimated value.
- L Less than 3 bore volumes purged prior to sampling.
- Q Qualitative result due to sampling technique.
- R Unusable result.
- U Parameter analyzed for but was not detected.
- X Location is undefined.

QA QUALIFIER:

- # Validated according to quality assurance guidelines.

Richard P. Bush  
Program Manager  
U.S. Department of Energy  
Grand Junction Office  
2597 B ¾ Road  
Grand Junction, CO 81503

SUBJECT: Contract No. DE-AC01-02GJ79491, Stoller  
September 2007 Environmental Sampling at Shiprock, New Mexico

Reference: FY 2007 LM Task Order No. ST07-100-03

Dear Mr. Bush:

The purpose of this letter is to inform you of the upcoming sampling event at Shiprock, New Mexico. Enclosed are the map and tables specifying sample locations and analytes for routine monitoring. Water quality data will be collected from monitor wells and surface locations at this site as part of the routine environmental sampling scheduled to begin the week of September 10, 2007.

The following lists show the well and surface locations scheduled for sampling during this event.

**Monitor Wells (filtered)\***

## *Memorandum*

Control Number N/A

DATE: October 3, 2007

TO: David Miller

FROM: Emile A. Bettez

SUBJECT: Routine Sampling Trip Report

**Site:** Shiprock, NM

**Date of Sampling Event:** September 10-14, 2007

**Team Members:** G. Baer, E. Bettez, S. Campbell, J. Price, D. Sellers, and J. Trevino

**Number of Locations Sampled:** Samples were collected from 69 monitor wells, 15 extraction wells, and 15 surface water locations. In addition, 5 duplicate samples and 2 equipment blanks were collected for QA/QC purposes.

**Locations Not Sampled/Reason:** Surface water locations 0655, 0885, 0889, 0933, 0936, 0937, 0938, and 0959 were dry. Wells 0736, 0768, 0775, 0804, 0822, 1006, 1067, 1069, 1112, 1113, and 1116 were dry or had insufficient water to sample. Wells 0783 and 0782 could not be found and are presumed destroyed by construction equipment.

Well 0828 had a casing that was 10 feet above ground due to soil grading work around it, so it could not be sampled.

Wells 0615 and 1105 may have water but were clogged with roots. This was confirmed by a visual inspection with a flashlight. Water was inaccessible with the equipment we had. These wells will need to be developed.

**Field Variance:** Well 0734 and seep 0786 had insufficient water to record parameters, but we were able to collect limited volume samples.

**Quality Control Sample Cross Reference:** The following are the false identifications assigned to the quality control samples:

False ID	True ID	Sample Type	Associated Matrix	Ticket Number
2608	1203	Duplicate	SW	NFD 312
2533	1089	Duplicate	GW	NFD 352
2534	0855	Duplicate	GW	NFD 364
2605	1057	Duplicate	GW	NFD 082
2535	NA	Equipment Blank	DI	NFK 938
2604	0662	Duplicate	SW	NFJ 148
2609	NA	Equipment Blank	DI	NFJ 150

**RIN Number Assigned:** All samples were assigned to RIN 07081119.

**Sample Shipment:** The first shipment was shipped via FedEx to Paragon Analytical from Farmington, New Mexico, on September 12. A second shipment to Paragon Analytical was prepared at GJO and sent via FedEx on September 14, with waybill 860501097114.

**Water Level Measurements:** Water levels were collected in all sampled wells, with the exception of the extraction wells. Water level data are provided in the Location Specific Table. These data represent depth to water (ft btoc) measurements.

**Well Inspection Summary:** Well inspections were conducted at all sampled wells. Riser caps were missing on wells MW-1, DM-7, and 0728, and bags were used as an interim measure. There were no labels on wells 0792, 0798, 0812, and 0833; the samplers painted numbers on them. Wells 0843, 0846, and 1068 need developing. Well 0817 needs a bladder pump. Wells 0782 and 0783 have apparently been destroyed by construction equipment.

**Equipment:** Wells were sampled using the low-flow procedure with dedicated bladder pumps and dedicated tubing, or with the peristaltic pump if needed. Surface water samples were collected with a portable peristaltic pump.

A bailer had to be used to collect samples in well 1060. The bladder pump had to be reset at the bottom of well 0832.

**Data logger Transducers:** Data loggers were successfully downloaded from 6 locations (5 well locations and 1 river location) in the floodplain area (SHP01) and 15 well locations in the terrace location (SHP02). The data logger at well location SHP02-0604 was replaced with a troll 4000 data logger and a new test started. All data has been uploaded to the database.

**Regulatory:** None.

**Location Specific Information:** The following is a table of samples collected:

Ticket Number	Location	Sample Date	Description	WL
NFD 301	0735	9/10/2007	Cat. I	6.90
NFD 302	0501	9/10/2007	SW	
NFD 303	1117	9/10/2007	Cat. I	10.16

**Institutional Controls:** We observed that there are no gates or fences impeding access to the site.

**Fences, Gates, Locks:** No problems encountered.

**Signs:** No missing or vandalized signs were observed.

**Trespassing/Site Disturbances:** N/A

## **Site Issues**

**Disposal Cell/Drainage Structure Integrity:** OK

**Vegetation/Noxious Weed Concerns:** Access to surface water locations 0501 and 1203 were very overgrown with vegetation and were difficult to access.

**Maintenance Requirements:** None observed.

**Corrective Action Required/Taken:** N/A

## **Errata for the Shiprock Trip Report Dated October 3, 2007**

*Number of Locations Sampled: Change “collected from 69 monitor wells” to “collected from 71 monitor wells” and “15 surface water locations” to “16 surface water locations.” This will add up to a total of 109 locations sampled.*

*Location Specific Information: Add the following rows to the table*

NFK 943	1122	9/13/2007	Cat. I	22.26
NFK 944	1007	9/13/2007	Cat. III	44.72

*Location Specific Information: Change this row*

NFJ 145	0884	9/13/2007	SW	
to				
NFJ 145	0889	9/13/2007	SW	

*Reported by Gretchen Baer on May 21, 2008*
