# Sampling Event Summary

**Site:** Shiprock, New Mexico, Disposal Site

**Sampling Period:** August 30, 2010 – September 2, 2010

Groundwater and surface water sampling and analysis are performed semiannually at the Shiprock Disposal Site as specified in the July 2005 *Refinement of Conceptual Model and Recommendations for Improving Remediation Efficiency at the Shiprock, New Mexico, Site*. Sampling and analysis was conducted as specified in *Sampling and Analysis Plan for U.S. Department of Energy Office of Legacy Management Sites* (LMS/PLN/S04351, continually updated) and the *Environmental Procedures Catalog* (LMS/PRO/S04325, continually updated). Monitoring of terrace locations is performed to determine the effectiveness of active remediation. Monitoring of floodplain locations is performed to determine the progress of the natural flushing process and the effectiveness of groundwater removal to prevent contaminants from reaching the San Juan River.

The contaminants of concern for the Shiprock Disposal Site are ammonia (as nitrogen), manganese, nitrate + nitrite (as nitrogen), selenium, strontium, sulfate, and uranium. Wells with contaminant concentrations that exceeded 40 CFR 192.02 groundwater standards are listed in Table 1. Time-concentration graphs for the contaminants of concern are included in this report.

*Table 1. Shiprock Locations that Exceed Standards*

Analyte	Standard <sup>a</sup>	Site Code	Location	Concentration

<sup>a</sup> Standards are listed in 40 CFR 192.02 Table 1 to Subpart A; units are in milligrams per liter.

Floodplain river location analyte concentrations for filtered and unfiltered samples were compared to statistical benchmark values derived using data from location 0898, which is upstream of the site on the San Juan River. As shown in Table 2 and Table 3, benchmark values were not exceeded for the river locations adjacent to or downstream from the site.

*Table 2. Benchmark Comparison for Floodplain River Locations (Filtered Samples)*

Location	Ammonia as N	Manganese	Nitrate+Nitrite as N	Selenium	Strontium	Sulfate	Uranium
Benchmark	0.1	0.025	1.2	0.002	1.20	220	0.003

## Water Sampling Field Activities Verification Checklist

<b>Project</b>	Shiprock, New Mexico	<b>Date(s) of Water Sampling</b>	August 30, 2010 – September 02, 2010
<b>Date(s) of Verification</b>	December 6, 2010	<b>Name of Verifier</b>	Steve Donivan
Response (Yes, No, NA)	Comments		
<p>1. Is the SAP the primary document directing field procedures? List other documents, SOPs, instructions.</p> <p>2. Were the sampling locations specified in the planning documents sampled?</p> <p>3. Was a pre-trip calibration conducted as specified in the above-named documents?</p> <p>4. Was an operational check of the field equipment conducted daily? Did the operational checks meet criteria?</p> <p>5. Were the number and types (alkalinity, temperature, specific conductance, pH, turbidity, DO, ORP) of field measurements taken as specified?</p> <p>6. Was the category of the well documented?</p> <p>7. Were the following conditions met when purging a Category I well: Was one pump/tubing volume purged prior to sampling? Did the water level stabilize prior to sampling? Did pH, specific conductance, and turbidity measurements stabilize prior to sampling? Was the flow rate less than 500 mL/min? If a portable pump was used, was there a 4-hour delay between pump installation and sampling?</p>	<p>Yes</p> <p>Work Order Letter dated July 27, 2010. A total of 34 locations were not sampled, see Trip Report for explanation.</p> <p>Yes      Pre-trip calibration was performed on August 30, 2010.</p> <p>Yes</p> <p>NA</p>		

## Water Sampling Field Activities Verification Checklist (continued)

	<b>Response (Yes, No, NA)</b>	<b>Comments</b>
8. Were the following conditions met when purging a Category II well:		
Was the flow rate less than 500 mL/min?	Yes	
Was one pump/tubing volume removed prior to sampling?	Yes	
9. Were duplicates taken at a frequency of one per 20 samples?	Yes	Duplicate samples were collected from eight locations.
10. Were equipment blanks taken at a frequency of one per 20 samples that were collected with non-dedicated equipment?	Yes	One equipment blank was collected.
11. Were trip blanks prepared and included with each shipment of VOC samples?	NA	
12. Were QC samples assigned a fictitious site identification number? Was the true identity of the samples recorded on the Quality Assurance Sample Log or in the Field Data Collection System (FDGS) report?	Yes	
13. Were samples collected in the containers specified?	Yes	
14. Were samples filtered and preserved as specified?	Yes	The sample for location SHP01-1135 was filtered due to elevated turbidity.
15. Were the number and types of samples collected as specified?	Yes	
16. Were chain of custody records completed and was sample custody maintained?	Yes	
17. Are field data sheets signed and dated by both team members (hardcopies) or are dates present for the "Date Signed" fields (FDGS)?	Yes	
18. Was all other pertinent information documented on the field data sheets?	Yes	
19. Was the presence or absence of ice in the cooler documented at every sample location?	Yes	
20. Were water levels measured at the locations specified in the planning documents?	Yes	

## Laboratory Performance Assessment

### General Information

Report Number (RIN): 10083299  
Sample Event: August 30, 2010 – September 2, 2010  
Site(s): Shiprock Disposal Site (Floodplain), New Mexico  
Laboratory: ALS Laboratory Group, Fort Collins, Colorado  
Work Order No.: 1009148  
Analysis: Metals and Wet Chemistry  
Validator: Steve Donivan  
Review Date: October 22, 2010

This validation was performed according to the *Environmental Procedures Catalog* (LMS/PRO/S04325, continually updated), “Standard Practice for Validation of Laboratory Data.” The procedure was applied at Level 3, Data Validation. See attached Data Validation Worksheets for supporting documentation on the data review and validation. All analyses were successfully completed. The samples were prepared and analyzed using accepted procedures based on methods specified by line item code, which are listed in Table 5.

*Table 5. Analytes and Methods*

Analyte	Line Item Code	Prep Method	Analytical Method
Ammonia as N	WCH-A-005	EPA 350.1	EPA 350.1
Calcium, Magnesium, Manganese, Potassium, Sodium, Strontium	LMM-01	SW-846 3005A	SW-846 6010B
Chloride	MIS-A-039	SW-846 9056	SW-846 9056
Nitrate + Nitrite as N	WCH-A-022	EPA 353.2	EPA 353.2
Selenium, Uranium	LMM-02	SW-846 3005A	SW-846 6020A
Sulfate	MIS-A-044	SW-846 9056	SW-846 9056

### Data Qualifier Summary

Analytical results were qualified as listed in Table 6. Refer to the attached validation worksheets and the sections below for an explanation of the data qualifiers applied.

*Table 6. Data Qualifier Summary*

Sample Number	Location	Analyte	Flag	Reason
1009148-1	0501	Manganese	U	Less than 5 times the calibration blank
1009148-15	0628	Potassium	J	Poor duplicate precision
1009148-21	0768	Potassium	J	Matrix spike failure
1009148-21	0768	Sulfate	J	Matrix spike failure
1009148-36	0897	Ammonia as N	J	Mislabeled bottles, filtration status unknown
1009148-36	0897	Nitrate + Nitrite as N	J	Mislabeled bottles, filtration status unknown
1009148-37	0897	Chloride	J	Mislabeled bottles, filtration status unknown
1009148-37	0897	Manganese	U	Less than 5 times the calibration blank

*Table 6 (continued). Data Qualifier Summary*

Sample Number	Location	Analyte	Flag	Reason
1009148-37	0897	Sulfate	J	Mislabeled bottles, filtration status unknown
1009148-39	0898	Manganese	U	Less than 5 times the calibration blank
1009148-51	1105	Ammonia as N	J	Poor duplicate precision
1009148-64	1136	Selenium	U	Less than 5 times the calibration blank
1009148-68	1140	Nitrate+Nitrite as N	J	Missed holding time
1009148-76	0628 dup	Potassium	J	Poor duplicate precision
1009148-79	1105 dup	Ammonia as N	J	Poor duplicate precision
1009148-79	1105 dup	Nitrate+Nitrite as N	J	Missed holding time
1009148-80	Equip Blank	Sodium	U	Less than 5 times the method blank

### Sample Shipping/Receiving

ALS Laboratory Group in Fort Collins, Colorado, received 80 water samples on September 9, 2010, accompanied by Chain of Custody (COC) forms. The receiving documentation included copies for the shipping labels listing the air waybill numbers. The COC forms were checked to confirm that all of the samples were listed on the forms and that signatures and dates were present indicating sample relinquishment and receipt. The sample submittal documents including the COC forms had no errors or omissions with the following exception. The sample bottles from location 0897 were mislabeled. The preserved and unpreserved bottles submitted filtered (IJX 650), were both unpreserved. The preserved and unpreserved bottles submitted unfiltered (IJX 685), were both preserved. The bottle sets between these two samples got mixed up, e.g., one of the unpreserved bottles was IJX 650 and the other was really IJX 685 and one of the preserved bottles was IJX 650 and the other was really IJX 685. Because sample filtration was not expected to affect the ammonia as N, chloride, nitrate + nitrite as N, and sulfate results, the laboratory was instructed to run one bottle labeled IJX 650 for anions, and cancel the anions for IJX 685, and run one bottle labeled IJX 685 for NOx/NH3, and cancel the NOx/NH3 for IJX 650. The ammonia as N, chloride, nitrate + nitrite as N, and sulfate results for location 0897 are qualified with a “J” flag because the filtration status of the aliquots selected for analysis could not be confirmed.

### Preservation and Holding Times

The sample shipments were received intact with the temperatures inside the iced coolers between 0.8 °C and 1.2 °C, which complies with requirements. All samples were received in the correct container types and had been preserved correctly for the requested analyses with the following exception. The metals aliquot for sample 1141 was received with a pH greater than two because of the buffering capacity of the sample. Prior to analysis, the laboratory acidified and equilibrated this aliquot to a pH less than two as required. All samples were analyzed within the required holding time with the following exceptions. The re-analysis of samples 1140 and 1105 duplicate for nitrate+nitrite as N was performed beyond the holding time. The nitrate+nitrite as N results for these samples are qualified with a “J” flag as estimated values.

## Laboratory Instrument Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for all analytes. Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear curve. Compliance requirements for continuing calibration checks are established to ensure that the instrument continues to be capable of producing acceptable qualitative and quantitative data. All laboratory instrument calibrations were performed correctly in accordance with the cited methods. All calibration and laboratory spike standards were prepared from independent sources.

### *Method EPA 350.1*

Calibration was performed for ammonia as N on September 20 and 27, 2010, using six calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the method detection limit (MDL). Initial and continuing calibration verification checks were made at the required frequency resulting in 18 verification checks. All calibration checks met the acceptance criteria.

### *Method EPA 353.2*

Four calibrations were performed for nitrate + nitrite as N between September 22 and 29, 2010, using seven calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Initial and continuing calibration verification checks were made at the required frequency resulting in 22 verification checks. All calibration checks met the acceptance criteria.

### *Method SW-846 6010B*

Two calibrations for calcium, magnesium, manganese, potassium, sodium, and strontium were performed September 27-28, 2010, using single point calibrations. Initial and continuing calibration verification checks were made at the required frequency resulting in 39 verification checks. All calibration checks met the acceptance criteria. Reporting limit verification checks were made at the required frequency to verify the linearity of the calibration curve near the practical quantitation limit (PQL) and all results were within the acceptance range.

### *Method SW-846 6020A*

Initial calibrations for selenium and uranium were performed on September 28, 2010, using four calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Calibration and laboratory spike standards were prepared from independent sources. Initial and continuing calibration verification checks were made at the required frequency resulting in 15 verification checks. All calibration checks met the acceptance criteria. Reporting limit verification checks were made at the required frequency to verify the linearity of the calibration curve near the PQL and all results were within the acceptance range. Mass calibration and resolution verifications were performed at the beginning of each analytical run in accordance with the analytical procedure. Internal standard recoveries associated with requested analytes were stable and within acceptable ranges.

### *Method SW-846 9056*

Calibrations were performed for chloride and sulfate on September 2, 2010, using five calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Initial and continuing calibration verification checks were made at the required frequency resulting in 30 verification checks. All calibration checks met the acceptance criteria.

### Method and Calibration Blanks

Method blanks are analyzed to assess any contamination that may have occurred during sample preparation. Calibration blanks are analyzed to assess instrument contamination prior to and during sample analysis. All initial and continuing calibration blank results associated with the samples were below the PQL. Many magnesium, manganese, and strontium calibration blanks were negative and the absolute values were greater than the MDL but less than the PQL. All associated sample results were greater than 5 times the MDL.

### Inductively Coupled Plasma (ICP) Interference Check Sample (ICS) Analysis

ICP ICS were analyzed at the required frequency to verify the instrumental interelement and background correction factors. All check sample results met the acceptance criteria.

### Matrix Spike (MS) Analysis

MS and matrix spike duplicate (MSD) pairs were analyzed for all analytes as a measure of method performance in the sample matrix. The MS data are not evaluated when the concentration of the unspiked sample is greater than 4 times the spike concentration. The spike recoveries met the recovery criteria for all analytes evaluated with the following exceptions. The magnesium, potassium, and sulfate MS or MSD recoveries did not meet the acceptance criteria for one sample each. The associated sample results are qualified with a "J" flag as estimated values.

### Laboratory Replicate Analysis

The laboratory replicate sample results demonstrate acceptable laboratory precision. The relative percent difference values for the laboratory replicate sample and MSD sample results for all analytes were less than 20 percent, indicating acceptable laboratory precision.

### Laboratory Control Samples

Laboratory control samples were analyzed at the correct frequency to provide information on the accuracy of the analytical method and the overall laboratory performance, including sample preparation. The control sample results were acceptable for all analytes.

### Metals Serial Dilution

Serial dilutions were prepared and analyzed for the metals analyses to monitor chemical or physical interferences in the sample matrix. Serial dilution data are evaluated when the concentration of the undiluted sample is greater than 100 times the PQL for ICP-MS or greater than 50 times the PQL for ICP. All evaluated serial dilution data were acceptable.

### Detection Limits/Dilutions

Samples were diluted in a consistent and acceptable manner when required. The samples were diluted prior to analysis of uranium to reduce interferences. The required detection limits were achieved for all analytes.

### Completeness

Results were reported in the correct units for all analytes requested using contract-required laboratory qualifiers.

### Chromatography Peak Integration

The integration of analyte peaks was reviewed for all chloride and sulfate data. There were no manual integrations performed and all peak integrations were satisfactory.

### Electronic Data Deliverable (EDD) File

A revised EDD file was received on December 3, 2010. The Sample Management System EDD validation module was used to verify that the EDD files were complete and in compliance with requirements. The module compares the contents of the files to the requested analyses to ensure all and only the requested data are delivered. The contents of the EDD were manually examined to verify that the sample results accurately reflect the data contained in the sample data package.

## General Information

Report Number (RIN): 10083302  
Sample Event: August 30, 2010 – September 2, 2010  
Site(s): Shiprock Disposal Site (Terrace), New Mexico  
Laboratory: ALS Laboratory Group, Fort Collins, Colorado  
Work Order No.: 1009142  
Analysis: Metals and Wet Chemistry  
Validator: Steve Donivan  
Review Date: October 26, 2010

This validation was performed according to the *Environmental Procedures Catalog* (LMS/PRO/S04325, continually updated), “Standard Practice for Validation of Laboratory Data.” The procedure was applied at Level 3, Data Validation. See attached Data Validation Worksheets for supporting documentation on the data review and validation. All analyses were successfully completed. The samples were prepared and analyzed using accepted procedures based on methods specified by line item code, which are listed in Table 7.

*Table 7. Analytes and Methods*

Analyte	Line Item Code	Prep Method	Analytical Method
Ammonia as N	WCH-A-005	EPA 350.1	EPA 350.1
Calcium, Magnesium, Manganese, Potassium, Sodium, Strontium	LMM-01	SW-846 3005A	SW-846 6010B
Chloride	MIS-A-039	SW-846 9056	SW-846 9056
Nitrate + Nitrite as N	WCH-A-022	EPA 353.2	EPA 353.2
Selenium, Uranium	LMM-02	SW-846 3005A	SW-846 6020A
Sulfate	MIS-A-044	SW-846 9056	SW-846 9056

## Data Qualifier Summary

Analytical results were qualified as listed in Table 8. Refer to the attached validation worksheets and the sections below for an explanation of the data qualifiers applied.

*Table 8. Data Qualifier Summary*

Sample Number	Location	Analyte	Flag	Reason
All	All	Potassium	J	Matrix spike and serial dilution failures
1009142-22	0826	Ammonia as N	J	Missed holding time
1009142-29	0836	Manganese	J	Poor duplicate precision
1009142-29	0836	Selenium	J	Serial dilution failure
1009142-30	0837	Selenium	J	Serial dilution failure
1009142-62	0836 Duplicate	Manganese	J	Poor duplicate precision
1009142-62	0836 Duplicate	Selenium	J	Serial dilution failure

## Sample Shipping/Receiving

ALS Laboratory Group in Fort Collins, Colorado, received 66 water samples on September 9, 2010, accompanied by COC forms. The receiving documentation included copies for the shipping labels listing the air waybill numbers. The COC forms were checked to confirm that all of the samples were listed on the forms and that signatures and dates were present indicating sample relinquishment and receipt. The sample submittal documents including the COC forms had no errors or omissions.

## Preservation and Holding Times

The sample shipments were received intact with the temperatures inside the iced coolers between 0.2 °C and 3.2 °C, which complies with requirements. All samples were received in the correct container types and had been preserved correctly for the requested analyses with the following exceptions. The metals aliquot for sample 1088 and the preserved anions aliquot for sample 0848 were received with a pH greater than two because of the buffering capacity of the sample. Prior to analysis, the laboratory acidified and equilibrated these aliquots to a pH less than two as required. All samples were analyzed within the required holding time with the following exception. The re-analysis of sample 0826 for ammonia as N was performed beyond the holding time. The ammonia as N result for this sample is qualified with a "J" flag as an estimated value.

## Laboratory Instrument Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for all analytes. Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear curve. Compliance requirements for continuing calibration checks are established to ensure that the instrument continues to be capable of producing acceptable qualitative and quantitative data. All laboratory instrument calibrations were performed correctly in accordance with the cited methods. All calibration and laboratory spike standards were prepared from independent sources.

### *Method MCAWW 350.1*

Calibration was performed for ammonia as N on September 15 and 20, 2010, using six calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Initial and continuing calibration verification checks were made at the required frequency resulting in 17 verification checks. All calibration checks met the acceptance criteria.

### *Method MCAWW 353.2*

Calibration was performed for nitrate + nitrite as N on September 16 and 17, 2010, using seven calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Initial and continuing calibration verification checks were made at the required frequency resulting in 15 verification checks. All calibration checks met the acceptance criteria.

#### *Method SW-846 6010B*

Two calibrations for calcium, magnesium, manganese, potassium, sodium, and strontium were performed September 29, 2010, using single point calibrations. Initial and continuing calibration verification checks were made at the required frequency resulting in 20 verification checks. All calibration checks met the acceptance criteria. Reporting limit verification checks were made at the required frequency to verify the linearity of the calibration curve near the PQL and all results were within the acceptance range.

#### *Method SW-846 6020A*

Initial calibrations for selenium and uranium were performed on September 29, 2010, using four calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Calibration and laboratory spike standards were prepared from independent sources. Initial and continuing calibration verification checks were made at the required frequency resulting in 13 verification checks. All calibration checks met the acceptance criteria. Reporting limit verification checks were made at the required frequency to verify the linearity of the calibration curve near the PQL and all results were within the acceptance range. Mass calibration and resolution verifications were performed at the beginning of each analytical run in accordance with the analytical procedure. Internal standard recoveries associated with requested analytes were stable and within acceptable ranges.

#### *Method SW-846 9056*

Calibrations were performed for chloride and sulfate on September 2, 2010, using five calibration standards. The calibration curve correlation coefficient values were greater than 0.995 and the absolute values of the intercepts were less than 3 times the MDL. Initial and continuing calibration verification checks were made at the required frequency resulting in 25 verification checks. All calibration checks met the acceptance criteria.

#### Method and Calibration Blanks

Method blanks are analyzed to assess any contamination that may have occurred during sample preparation. Calibration blanks are analyzed to assess instrument contamination prior to and during sample analysis. All initial and continuing calibration blank results associated with the samples were below the PQL. Many magnesium, manganese, strontium, and sodium method and calibration blanks were negative and the absolute values were greater than the MDL but less than the PQL. Associated sample results that are less than 5 times the MDL are qualified with a "J" flag as estimated values.

#### ICP ICS Analysis

ICP ICS were analyzed at the required frequency to verify the instrumental interelement and background correction factors. All check sample results met the acceptance criteria.

### MS Analysis

MS and MSD pairs were analyzed for all analytes as a measure of method performance in the sample matrix. The MS data are not evaluated when the concentration of the unspiked sample is greater than 4 times the spike concentration. The spike recoveries met the recovery criteria for all analytes evaluated with the following exceptions. Multiple potassium MS or MSD recoveries did not meet the acceptance criteria. All potassium sample results are qualified with a "J" flag as estimated values.

### Laboratory Replicate Analysis

The laboratory replicate sample results demonstrate acceptable laboratory precision. The relative percent difference values for the laboratory replicate sample and MSD sample results for all analytes were less than 20 percent, indicating acceptable laboratory precision.

### Laboratory Control Samples

Laboratory control samples were analyzed at the correct frequency to provide information on the accuracy of the analytical method and the overall laboratory performance, including sample preparation. The control sample results were acceptable for all analytes.

### Metals Serial Dilution

Serial dilutions were prepared and analyzed for the metals analyses to monitor chemical or physical interferences in the sample matrix. Serial dilution data are evaluated when the concentration of the undiluted sample is greater than 100 times the PQL for ICP-MS or greater than 50 times the PQL for ICP. Two selenium and multiple potassium serial dilutions did not meet the acceptance criteria. The associated selenium sample results and all potassium sample results are qualified with a "J" flag as estimated values.

### Detection Limits/Dilutions

Samples were diluted in a consistent and acceptable manner when required. The samples were diluted prior to analysis of uranium to reduce interferences. The required detection limits were achieved for all analytes.

### Completeness

Results were reported in the correct units for all analytes requested using contract-required laboratory qualifiers.

### Chromatography Peak Integration

The integration of analyte peaks was reviewed for all chloride and sulfate data. There were no manual integrations performed and all peak integrations were satisfactory.

### EDD File

The revised EDD file arrived on December 3, 2010. The Sample Management System EDD validation module was used to verify that the EDD files were complete and in compliance with requirements. The module compares the contents of the files to the requested analyses to ensure all and only the requested data are delivered. The contents of the EDD were manually examined to verify that the sample results accurately reflect the data contained in the sample data package.

## **Sampling Quality Control Assessment**

The following information summarizes and assesses quality control for this sampling event.

### **Sampling Protocol**

Sample results for monitoring wells that met the Category I, II, or III low-flow sampling criteria were qualified with an “F” flag in the database, indicating the wells were purged and sampled using the low-flow sampling method.

All wells met the Category I criteria and were sampled with dedicated tubing using the low-flow purge procedure with the following exceptions:

- Floodplain wells 0610, 0766, 0797, and 0857, and terrace wells 0600, 0602, 0604, 0727, 0817, 0819, 0820, 0824, 0825, 0826, 0827, 1058, 1059, and DM7 were classified as Category II.
- Floodplain well 0734, and terrace wells 0812, 0816, 0822, 1007, 1011, 1068, 1074, and MW1 were classified as Category III.

The sample results for these wells were qualified with a “Q” flag, indicating the data are qualitative because of the sampling technique.

Both filtered and unfiltered samples were collected from floodplain river locations 0501, 0897, 0898, 0899, 0940, 0956, 0965, 1203, and 1205.

Floodplain groundwater location 1135 had a turbidity value greater than ten NTUs. The sample from this location was filtered.

Terrace surface water locations 0889, 0949, 1220, and 1221, and groundwater locations 0604, 0812, 0814, 0846, 0889, 1011, 1073, 1088, and 1092 had turbidity values greater than ten NTUs. Samples from these locations were filtered.

### **Equipment Blank Assessment**

Equipment blanks are prepared and analyzed to document contamination attributable to the sample collection process. One equipment blank was submitted with these samples. Calcium and uranium were detected in this blank. The associated sample concentrations for these analytes were greater than 5 times the blank concentration.

### **Field Duplicate Assessment**

Field duplicate samples are collected and analyzed as an indication of overall precision of the measurement process. The precision observed includes both field and laboratory precision and has more variability than laboratory duplicates, which measure only laboratory performance. The relative percent difference for duplicate results that are greater than 5 times the PQL should be less than 20 percent. For results that are less than five times the PQL, the range should be no greater than the PQL. Duplicate samples were collected from floodplain locations 0614, 0628, 0735, and 1105 and from terrace locations 0614, 0628, 0735, and 1105.

Review of the duplicate data indicated that laboratory dilution and/or transcription errors likely occurred affecting the chloride, nitrate + nitrite as N, and sulfate sample results. On October 20, 2010, the laboratory was requested to re-analyze the samples of these analytes. Revised deliverables were received December 3, 2010.

The potassium duplicate data from floodplain location 0628 did not meet the acceptance criteria. The sample and duplicate potassium results are qualified with a “J” flag as estimated values.

The ammonia as N duplicate data from floodplain location 1105 did not meet the acceptance criteria. The sample and duplicate ammonia as N results are qualified with a “J” flag as estimated values.

The manganese duplicate data from terrace location 0836 did not meet the acceptance criteria. The sample and duplicate potassium results are qualified with a “J” flag as estimated values.

## Certification

All laboratory analytical quality control criteria were met except as qualified in this report. The data qualifiers listed on the SEEPro database reports are defined on the last page of each report. All data in this package are considered validated and available for use.

## Potential Outliers Report

Potential outliers are measurements that are extremely large or small relative to the rest of the data and, therefore, are suspected of misrepresenting the population from which they were collected. Potential outliers may result from transcription errors, data-coding errors, or measurement system problems. However, outliers may also represent true extreme values of a distribution and indicate more variability in the population than was expected.

Statistical outlier tests give probabilistic evidence that an extreme value does not "fit" with the distribution of the remainder of the data and is therefore a statistical outlier. These tests should only be used to identify data points that require further investigation. The tests alone cannot determine whether a statistical outlier should be discarded or corrected within a data set.

There are three steps involved in identifying extreme values or outliers:

1. Identify extreme values that may be potential outliers by generating the Outliers Report using the Sample Management System from data in the SEEPro database. The application compares the new data set with historical data and lists the new data that fall outside the historical data range. A determination is also made if the data are normally distributed using the Shapiro-Wilk Test.
2. Apply the appropriate statistical test. Dixon's Extreme Value test is used to test for statistical outliers when the sample size is less than or equal to 25. This test considers both extreme values that are much smaller than the rest of the data (case 1) and extreme values that are much larger than the rest of the data (case 2). This test is valid only if the data without the suspected outlier are normally distributed. Rosner's Test is a parametric test that is used to detect outliers for sample sizes of 25 or more. This test also assumes that the data without the suspected outliers are normally distributed.
3. Scientifically review statistical outliers and decide on their disposition.

Review of the Outliers Report for field parameters indicates that there is a systematic problem with the oxidation-reduction data. The problem was traced to an instrument malfunction affecting two of the instruments used to collect field data. The oxidation-reduction data collected with these instruments are qualified with an "R" flag as rejected.

Other data identified as potentially anomalous generally are from locations where analyte concentrations are trending upward or downward. There were no data errors indicated from the review of these potential outliers and the data from this event are acceptable as qualified.

**STATISTICAL TESTS:**

The distribution of the data is tested for normality or lognormality using the Shapiro-Wilk Test

Outliers are identified using Dixon's Test when there are 25 or fewer data points.

Outliers are identified using Rosner's Test when there are 26 or more data points.

See Data Quality Assessment: Statistical Methods for Practitioners, EPA QC/G-9S, February 2006.

**STATISTICAL TESTS:**

The distribution of the data is tested for normality or lognormality using the Shapiro-Wilk Test

Outliers are identified using Dixon's Test when there are 25 or fewer data points.

Outliers are identified using Rosner's Test when there are 26 or more data points.

See Data Quality Assessment: Statistical Methods for Practitioners, EPA QC/G-9S, February 2006.

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

LAB QUALIFIERS:

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.
- A TIC is a suspected aldol-condensation product.
- B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
- C Pesticide result confirmed by GC-MS.
- D Analyte determined in diluted sample.
- E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
- H Holding time expired, value suspect.
- I Increased detection limit due to required dilution.
- J Estimated
- N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
- P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
- U Analytical result below detection limit.
- W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
- X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:

- F Low flow sampling method used.
- G Possible grout contamination, pH > 9.
- J Estimated value.
- L Less than 3 bore volumes purged prior to sampling.
- Q Qualitative result due to sampling technique.
- R Unusable result.
- U Parameter analyzed for but was not detected.
- X Location is undefined.

QA QUALIFIER:

- # Validated according to quality assurance guidelines.

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

LAB QUALIFIERS:

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.
- A TIC is a suspected aldol-condensation product.
- B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
- C Pesticide result confirmed by GC-MS.
- D Analyte determined in diluted sample.
- E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
- H Holding time expired, value suspect.
- I Increased detection limit due to required dilution.
- J Estimated
- N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
- P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
- U Analytical result below detection limit.
- W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
- X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:

- F Low flow sampling method used.
- G Possible grout contamination, pH > 9.
- J Estimated value.
- L Less than 3 bore volumes purged prior to sampling.
- Q Qualitative result due to sampling technique.
- R Unusable result.
- U Parameter analyzed for but was not detected.
- X Location is undefined.

QA QUALIFIER:

- # Validated according to quality assurance guidelines.

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

## LAB QUALIFIERS:

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.
- A TIC is a suspected aldol-condensation product.
- B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
- C Pesticide result confirmed by GC-MS.
- D Analyte determined in diluted sample.
- E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
- H Holding time expired, value suspect.
- I Increased detection limit due to required dilution.
- J Estimated
- N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
- P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
- U Analytical result below detection limit.
- W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
- X,Y,Z Laboratory defined qualifier, see case narrative.

## DATA QUALIFIERS:

- F Low flow sampling method used.
- G Possible grout contamination, pH > 9.
- J Estimated value.
- L Less than 3 bore volumes purged prior to sampling.
- Q Qualitative result due to sampling technique.
- R Unusable result.
- U Parameter analyzed for but was not detected.
- X Location is undefined.

## QA QUALIFIER:

- # Validated according to quality assurance guidelines.

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

## LAB QUALIFIERS:

- \* Replicate analysis not within control limits.
- > Result above upper detection limit.
- A TIC is a suspected aldol-condensation product.
- B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
- C Pesticide result confirmed by GC-MS.
- D Analyte determined in diluted sample.
- E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
- H Holding time expired, value suspect.
- I Increased detection limit due to required dilution.
- J Estimated

N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).  
P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.  
U Analytical result below detection limit.  
W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.  
X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:

F	Low flow sampling method used.	G	Possible grout contamination, pH > 9.	J	Estimated value.
L	Less than 3 bore volumes purged prior to sampling.	Q	Qualitative result due to sampling technique.	R	Unusable result.
U	Parameter analyzed for but was not detected.	X	Location is undefined.		

SAMPLE TYPES:

E Equipment Blank.

Task Order LM00-501  
Control Number 10-0813

July 27, 2010

U.S. Department of Energy  
Office of Legacy Management  
ATTN: Dr. April Gil  
Site Manager  
2597 B ½ Road  
Grand Junction, CO 81503

SUBJECT: Contract No. DE-AM01-07LM00060, S.M. Stoller Corporation (Stoller)  
August 2010 Environmental Sampling at Shiprock, New Mexico

REFERENCE: Task Order LM00-501-02-119-402, Shiprock, NM, Disposal Site

Dear Dr. Gil:

The purpose of this letter is to inform you of the upcoming sampling event at Shiprock, New Mexico. Enclosed are the map and tables specifying sample locations and analytes for monitoring at the Shiprock Disposal site. Water quality data will be collected at this site as part of the environmental sampling currently scheduled to begin the week of August 30, 2010.

Samples collected at the following SHP01 (floodplain) locations will be both filtered and unfiltered: 0501, 0897, 0898, 0899, 0940, 0956, 0965, 1203, and 1205.

The following lists show the monitoring wells (along with associated zone of completion) and surface locations scheduled for sampling during this event.

**FLOODPLAIN**

## *Memorandum*

DATE: October 6, 2010

TO: David Miller

FROM: Gretchen Baer

SUBJECT: Sampling Trip Report

**Site:** Shiprock, NM (Floodplain, SHP01, and Terrace, SHP02)

**Dates of Sampling Event:** August 30 through September 2, 2010

**Team Members:** Gretchen Baer, Jeff Price, Jeff Walters, Joe Trevino, Kent Moe, and Dan Sellers. On August 31 through September 2, some team members also helped Paul Garvin (University of Nevada, Reno) with his split sampling project at several groundwater and surface water locations.

**Number of Locations Sampled:** Samples were collected from 128 of the 162 locations identified on the sampling notification letter as follows:

	<b>Locations That Were Sampled</b>	<b>Planned Locations</b>
SHP01 monitoring wells	56	59
SHP02 monitoring wells	56	71
SHP01 surface locations	10	16
SHP02 surface locations	6	16

**Locations Not Sampled/Reason:** A total of 34 locations were not sampled for the following reasons:

- 15 surface water locations (SHP01 locations 0655, 0887, 0937, 0938, 0939, and 0959 and SHP02 locations 0786, 0884, 0885, 0933, 0934, 0936, 0942, 0958, and 1218) were dry.
- An access agreement is not in place for SHP02 surface water location 1219.
- 15 wells (SHP01 locations 0773 and 0775 and SHP02 locations 0730, 0821, 0823, 0829, 0832, 1002, 1003, 1004, 1048, 1060, 1069, 1120, and 1122) were dry.
- SHP01 well 1134 was inadvertently not sampled. The site lead confirmed that this location was used in an earlier study and is not required for this sampling event.
- SHP02 well 0839 has been destroyed.
- SHP02 well 1057 had a dedicated pump that was not functioning.

### Location Specific Information:

Location IDs	Site	Comments
0501, 0897, 0898, 0899, 0940, 0956, 0965, 1203, 1205	SHP01	Filtered and unfiltered samples were collected at these 9 locations on the San Juan River.
1089	SHP01	Alkalinity not recorded.
1112	SHP01	Equipment installed in well prevented WLs from being measured during purge.
0830	SHP02	pH < 4.
0846	SHP02	Bailed dry. Insufficient volume for alkalinity measurement and for anions. Limited volume for metals and NOx.
0949	SHP02	Surface water samples were taken ~75 feet above the regular location, which was dry.
1011	SHP02	Bailed dry. Insufficient volume for alkalinity measurement and for anions. Limited volume for metals and NOx.
1068	SHP02	Purged dry. Insufficient volume for alkalinity measurement. Limited volume for metals, anions, and NOx.
1087	SHP02	Flowmeter was not working, but was repaired by C. Holmes.
DM7	SHP02	Purged dry. Insufficient volume for metals.
MW1	SHP02	WL measured from top of steel casing.

**Quality Control Sample Cross Reference:** The following are the false identifications assigned to the quality control samples:

False ID	Site	True ID	Ticket Number	Sample Type	Associated Matrix
2041	SHP01	0628	IJX 729	Duplicate	Groundwater
2604	SHP01	0735	IJX 658	Duplicate	Groundwater
2729	SHP01	0614	IJX 673	Duplicate	Groundwater
2731	SHP01	1105	IJX 708	Duplicate	Groundwater
2810	SHP02	0837	IJX 794	Duplicate	Groundwater
2811	SHP02	0836	IJX 795	Duplicate	Groundwater
2812	SHP02	0848	IJX 803	Duplicate	Groundwater
2813	SHP02	1079	IJX 796	Duplicate	Groundwater
2899	SHP01	Associated with surface water samples sampled with the tubing reel: SHP02 0889, 0949, 1220 & SHP01 0501, 0897, 0898, 0899, 1203, 1205	IJX 723	Equipment Blank	Water

**RIN Number Assigned:** Samples were assigned to RIN 10083299 (SHP01-Floodplain) and 10083302 (SHP02-Terrace).

**Sample Shipment:** Samples were shipped from Grand Junction to ALS Laboratory Group on September 8, 2010.

**Well Inspection Summary:** One SHP02 well (0839) has been destroyed. The pump doesn't work at SHP02 well 1057.

**Equipment:** All equipment functioned properly. Multi-gas meters were used to verify the air quality in the vaults. Wells were sampled with a peristaltic pump and dedicated tubing, a dedicated bailer, or a dedicated pump. Surface waters were sampled using a peristaltic pump and dedicated tubing, a peristaltic pump and tubing reel, or by container immersion. An equipment blank was collected after decontamination of the tubing reel. All other equipment was dedicated or disposable.

**Water Level Measurements:** Water levels were measured in all sampled wells and in 11 additional wells. Water level data in the additional 11 wells was collected with the Water Level Recorder program on a PDA.

**Field Variance:** None.

**Institutional Controls:**

**Fences, Gates, and Locks:** All gates were locked and in good condition.

**Signs:** Good.

**Trespassing/Site Disturbances:** N/A

**Site Issues:** Cell phone service (Verizon) was available at the site.

**Disposal Cell/Drainage Structure Integrity:** N/A

**Vegetation/Noxious Weed Concerns:** None.

**Maintenance Requirements:**

The pump in well 1057 needs to be fixed.

Bird netting in Bob Lee Wash needs to be replaced.

**Safety Issues:** None.

**Corrective Action Required/Taken:** None.
