

Total and Alcohol-Related Fatality Rates by State, 2001-2002

Rajesh Subramanian

Introduction

This Research Note presents statistics on the number of fatalities and alcohol-related fatalities by state as well as the rate per Vehicle Miles of Travel (VMT). The data used in this report uses the 2001 Final and 2002 Annual Report File (ARF) of NHTSA's Fatality Analysis Reporting System (FARS). Annual VMT data by state is released by the Federal Highway Administration (FHWA). The number of alcohol-related fatalities are generated using BAC values reported to FARS and imputed BAC values when they are not reported. Figure 1 depicts the number of alcohol-related

fatalities per 100 Million VMT for each state in 2002. The states are color coded as to whether their rates are above (yellow, red) the national rate of 0.62 or below (blue, green). Table 1 (overleaf) depicts the statistics for 2001 and 2002. Also, VMT data is subject to revision by FHWA. VMT data is not available for Puerto Rico for 2002. According to FHWA, the 2002 VMT has been projected for Arizona and VMT for New Hampshire and North Carolina for 2002 are preliminary.
