

R-2508 Complex

The restricted areas that will affect most general aviation aircraft, while they are active (or “hot”) are R-2515 (Edwards AFB), R-2505 and R-2506 (NAS China Lake) and R-2502N and E (Ft Irwin). Talk to Joshua on the appropriate frequency (see the [R-2508 Airspace Quick Reference Card](#)) to determine the status of the restricted areas. You should **always** assume the areas are “hot”. Occasionally, during late nights, holidays, or weekends, the areas may be “cold” and Joshua may allow you to transit through at specific altitudes. DO NOT enter any restricted area unless Joshua allows you through flight.
