

A Career That has Eternal Significance !?!

William N. Crabtree, PhD., SCT(ASCP)

Indiana University School of Medicine

**“Please tell everyone Thank
You for me**

**...and let them know that
each one in the room is
important!!”**

A LIFE SAVED!

“I have been having some problems at work concerning my numbers...

Today I was told that if I do not increase my productivity to meet their expectations,

I will lose my job. Can they fire me or threaten to fire me for not being able to screen 150 a day?

This is just making me a little sad, and I'm not sure what to do.”

“She also said that I should not take my two ten minute breaks until my numbers increase and limit bathroom breaks. Then a couple weeks ago, she said that I was the worst imager cytotech ever and that I either needed to get up to 130 or lose my job.

I am now up to 80-90. In my interview I was told I had up to a year to get my numbers up. Can I get fired for not doing enough slides, even though I am not getting cases back from QC as misses?”

So I ask you...

**Should she be fired for
not doing 130 per day??**

This Madness has to
STOP!!

If We keep letting them do this to
Us...

We've only ourselves to
blame

It is Us who bears the shame
...and the Patients and their
Families
who feel the Pain...

Could it be that in recent years with
The advent of the monolayer Pap
and the Pap imaging systems...
That we have lost our focus
as a profession?

ETHICS
VS
PROFIT

**We have to Refocus
and**

Get back to the Center...

**Patient Centered
Care has to be our
Highest Priority!!!**

**CHANGE MUST COME
AT THE
LOCAL LEVEL !!!**

By endorsing and implementing
The *ASC's Workload
Recommendations* we now have
an opportunity to refocus our
efforts on what really matters...

Reviving the Cytotechnology
profession,

and most importantly...

Protecting the Reputation and
Validity of the Cytologic Method for
Cervical Cancer Detection...

**A Career That has
Eternal Significance !?!**

CONFLICT OF INTEREST:

**I have a conflict of interest with all
Cytology Laboratories that practice
unethical workload practices for
Cytotechnologists...shouldn't...
YOU?!?**
