1. SITUATION:

A. THE VOL OF OIL SPILLED AT SPM ON EVENING OF 24AUG98 WAS EST AT TEN BBLS BASED ON VISUAL OBS FROM FIRST LIGHT OVERFLIGHT BY EXPERT AERIAL OBSERVERS ON 25AUG98. THE OBSERVED OIL WAS CONTAINED AND RECOV IN THE VICINITY OF THE SPM. NUMEROUS OVERFLTS OVER FOUR DAYS DID NOT LOCATE ANY OTHER OIL, WHICH SUPPORTED THAT THE SPILL WAS TEN BBLS.

WHEN TARBALLS WERE FIRST OBSERVED ON KAUAI, OIL EXPERTS WERE ASKED TO RECONFIRM THE OIL VOL LOST AS IT SEEMED APPARENT THAT THE SPILL POTENTIAL WAS GREATER THAN THE ORIGINAL TEN BBLS. DUE TO THE SMALL VOL OF OIL NOW BEING LOCATED IT HAS NOT BEEN POSS TO DETERMINE THE AMOUNT OF OIL SPILLED. HOWEVER, BASED ON A THOROUGH REVIEW OF THE TRANSFER OPS THAT TOOK PLACE BETWEEN THE REFINERY AND SHIP, TESORO IS CONFIDENT THAT THE MAX VOL THAT COULD HAVE BEEN SPILLED IS LESS THAN 117 BBLS. ORSV'S HAWAII RESPONDER AND CLEAN ISLANDS ON SCENE, HOWEVER NEITHER VESSEL HAS ENCOUNTERED RECOVERABLE OIL. CONTINUOUS AERIAL OBSERVATIONS BY COMMERCIAL HELICOPTER WITH CG AND RP PERSONNEL RPT MINOR TARBALL CONCENTRATIONS ON SEVERAL BEACHES AND ISOLATED TARBALLS IN NEARSHORE AREAS. 2 BEACH SITES WITH MINIMAL OIL IMPACT ARE ACTIVELY BEING CLEANED AND HAVE BEEN CLOSED TO THE PUBLIC FOR SAFETY REASONS.
