

FIPS 140-2 Validation Certificate

The National Institute of Standards
and Technology of the United States
of America

The Communications Security
Establishment of the Government
of Canada

Certificate No. 865

The National Institute of Standards and Technology, as the United States FIPS 140-2 Cryptographic Module Validation Authority; and the Communications Security Establishment, as the Canadian FIPS 140-2 Cryptographic Module Validation Authority; hereby validate the FIPS 140-2 testing results of the Cryptographic Module identified as:

RSA BSAFE® Crypto-C Micro Edition (ME) by RSA Security, Inc.
(When operated in FIPS mode)

in accordance with the Derived Test Requirements for FIPS 140-2, Security Requirements for Cryptographic Modules. FIPS 140-2 specifies the security requirements that are to be satisfied by a cryptographic module utilized within a security system protecting *Sensitive Information* (United States) or *Protected Information* (Canada) within computer and telecommunications systems (including voice systems).

Products which use the above identified cryptographic module may be labeled as complying with the requirements of FIPS 140-2 so long as the product, throughout its life cycle, continues to use the validated version of the cryptographic module as specified in this certificate. The validation report contains additional details concerning test results. No reliability test has been performed and no warranty of the products by both agencies is either expressed or implied.

This certificate includes details on the scope of conformance and validation authority signatures on the reverse.

FIPS 140-2 provides four increasing, qualitative levels of security: Level 1, Level 2, Level 3, and Level 4. These levels are intended to cover the wide range and potential applications and environments in which cryptographic modules may be employed. The security requirements cover eleven areas related to the secure design and implementation of a cryptographic module. The scope of conformance achieved by the cryptographic modules as tested in the product identified as:

RSA BSAFE® Crypto-C Micro Edition (ME) by RSA Security, Inc.
(Software Version: 2.1.0.2; Software)

Atlan Laboratories, NVLAP Lab Code 200492-0
CRYPTIK Version 7.0

and tested by the Cryptographic Module Testing accredited laboratory:
 is as follows:

<p><i>Cryptographic Module Specification:</i> Level 1</p> <p><i>Roles, Services, and Authentication:</i> Level 1</p> <p><i>Physical Security:</i> Level N/A (Multi-Chip Standalone)</p> <p><i>EMI/EMC:</i> Level 1</p> <p><i>Design Assurance:</i> Level 1</p> <p><i>Operational Environment:</i> Level 1</p>	<p><i>Cryptographic Module Ports and Interfaces:</i> Level 1</p> <p><i>Finite State Model:</i> Level 1</p> <p><i>Cryptographic Key Management:</i> Level 1</p> <p><i>Self-Tests:</i> Level 1</p> <p><i>Mitigation of Other Attacks:</i> Level 1</p> <p><i>tested in the following configuration(s):</i> AIX 5L v5.2 (32-bit PowerPC); AIX 5L v5.2 (64-bit PowerPC); AIX 5L v5.3 (32-bit PowerPC); AIX 5L v5.3 (64-bit PowerPC); HP-UX 11.11 PA-RISC 2.0 (32-bit); HP-UX 11.23 PA-RISC 2.0W (64-bit); HP-UX 11.23 Itanium 2 (32-bit); HP-UX 11.23 Itanium 2 (64-bit); Red Hat Enterprise Linux AS 4.0 (32-bit x86); Red Hat Enterprise Linux AS 4.0 (64-bit x86_64); Solaris 10 (32-bit SPARC v8); Solaris 10 (32-bit SPARC v8+); Solaris 10 (64-bit SPARC v9); Solaris 10 (64-bit x86_64); SuSE Linux Enterprise Server 9.0 (32-bit x86); SuSE Linux Enterprise Server 9.0 (64-bit x86_64); VxWorks 5.4 (PPC 604); VxWorks 5.5 (PPC 603); VxWorks 5.5 (PPC 604); VxWorks General Purpose Platform 6.0 (PPC 604); Windows Mobile 2003; Windows Mobile 2003 Phone Edition; Windows Mobile 5.0; Windows Mobile 5.0 Phone Edition; Windows 2003 Server SP1 (32-bit x86 - VS8.0 build); Windows 2003 SP1 (32-bit x86 - VS6.0 build); Windows 2003 Server SP1 (64-bit x86_64); Windows 2003 Server SP1 (Itanium 2) (in single-user mode)</p>
--	--

The following FIPS approved Cryptographic Algorithms are used: **AES (Cert. #644); DSA (Cert. #242); ECDSA (Cert. #68); HMAC (Cert. #333); RNG (Cert. #367 and vendor affirmed: SP 800-90); RSA (Cert. #295); SHS (Cert. #679); Triple-DES (Cert. #596)**

The cryptographic module also contains the following non-FIPS approved algorithms: **MD2; MD5; HMAC MD5; DES; DES40; RC2; RC4; RC5; ECAES; RSA (key wrapping; key establishment methodology provides at least 80 bits of encryption strength); Diffie-Hellman (key agreement; key establishment methodology provides at least 80 bits of encryption strength); EC Diffie-Hellman (key agreement; key establishment methodology provides between 80 and 285 bits of encryption strength)**

Overall Level Achieved: 1
