

# **Safety and Fitness Electronic Records (SAFER) System and Commercial Vehicle Information Exchange Window (CVIEW)**

**Carrier, Vehicle, and Driver Snapshots**

Baseline Version

White Paper

August 2001

Prepared for:

Federal Highway Administration

Prepared by:

The Johns Hopkins University  
Applied Physics Laboratory

*The Motor Carrier Safety Improvement Act was signed into law on December 9, 1999. This act established a new FMCSA within the US DOT, effective January 1, 2000. Prior to that, the motor carrier and highway safety program was administered under the Federal Highway Administration (FHWA).*

*The mission of the FMCSA is to improve truck and commercial passenger carrier safety on our nation's highways through information technology, targeted enforcement, research and technology, outreach, and partnerships. The FMCSA manages the ITS/Commercial Vehicle Operations (CVO) Program, a voluntary effort involving public and private partnerships that uses information systems, innovative technologies, and business practice reengineering to improve safety, simplify government administrative systems, and provide savings to states and motor carriers. The FMCSA works closely with the FHWA's ITS JPO to ensure the integration and interoperability of ITS/CVO systems with the national ITS program.*

### **Please note that this is a Baseline Version**

This is a baseline document. This document has completed internal and external reviews of previously published drafts and preliminary versions. All comments received to date have been incorporated or addressed.

**Note:** This document and other CVISN-related documentation are available for review and downloading by the ITS/CVO community from the JHU/APL CVISN site on the World Wide Web. The URL for the CVISN site is: <http://www.jhuapl.edu/cvisn/>

Review and comments to this document are welcome. Please send comments to:

Ms. Sandra B. Salazar

Fax: 240-228-6149  
E-Mail: <mailto:Sandra.Salazar@jhuapl.edu>

**Change Summary:** Version P1.0 of the document incorporated revisions related to these change requests:

- CRF 188 - Modify Data Structures for HazMat Carried/Shipped Table
- CRF 229 - Add Carrier Snapshot Fields for SafeStat Categories
- CRF 231 - PRISM Updates
- CRF 234 - Title Number for Vehicle
- CRF 252 - State Level Hot List
- CRF 253 - Weight Compliance History Screening
- CRF 270 - Add SafetyNet 2000 Fields to Carrier Snapshot
- CRF 274 - Add Fields to Snapshots for Screening Enrollment
- CRF 275 - Add Licensing and Insurance Information to SAFER Snapshots

- CRF 291 - Add License Plate State Field to Vehicle Database
- CRF 323 - Table 05 Updates
- CRF 376 - Addition of SafetyNet 2000 Data Elements
- CRF 391 - New Vehicle Views
- CRF 424 - Add Total Cars to Snapshot
- CRF 475 - Title Number for Vehicle
- CRF 476 - E-Screening
- CRF 484 - IRP Fleets and Multiple Check Flags
- CRF 548 - Primary Carrier ID
- CRF 549 - Transponder ID
- CRF 560 - Lengthen Vehicle Identification Number
- CRF 570 - Add Jurisdiction and Plate to Vehicle ID

The baseline version of the document incorporates revisions related to these change requests:

- CRF 212 - OOS Flags
- CRF 353 - IFTA View
- CRF 607 - Rename IRP Check Flag
- CRF 626 - Add L & I Summary Fields to Carrier Snapshot
- CRF 693 - Add MCS 150 Mileage and Year to Carrier Snapshot
- CRF 1031 - Don't Create Vehicle snapshots from inspection reports
- CRF 1046 - Clear Definition for IRP Check Flag
- CRF 1059 - 4 digit SSN's for Tax-Id in Carrier Snapshot
- CRF 1308 - IRP View for Carrier
- CRF 1322 - IRP Vehicle View Sans Transponder ID
- CRF 1508 - CVIEW Will Not Store IRs Locally
- CRF 1551 - No EDI Queries from JHU/APL-developed CVIEW to SAFER
- CRF 1662 - Safer Now Stores IRs for 60 Days

# SAFER/CVIEW Carrier, Vehicle and Driver Snapshots

## Executive Summary

The national Safety and Fitness Electronic Records (SAFER) system and its distributed version, the state Commercial Vehicle Information Exchange Window (CVIEW) system or equivalent, manage information relating to the safety and credentials of motor carriers and vehicles. The information stored in both SAFER and CVIEW today is organized into two major types of data, carrier and vehicle. The design also accommodates a driver data type for future use. These data types are called snapshots since they provide summary information that is intended to give a quick picture of the safety performance history and basic credentials information. In addition, SAFER and CVIEW make available, but do not permanently store, more detailed information contained in reports. This paper discusses the SAFER/CVIEW snapshots. For CVISN Level 1, only carrier and vehicle snapshots are supported.

SAFER/CVIEW snapshots contain three general categories of information: identification/census, safety, and credential. The identification/census section of the snapshot provides identifying numbers, names, addresses and other information that establishes the identity of the carrier or vehicle. The safety information includes selected statistics related to accidents, violations and inspections, as well as safety ratings, if they exist. The credential information is equivalent to the decals and paper documents carried today on commercial vehicles. The information included in the snapshots has been undergoing a process of review and refinement over the course of two to four years; additions are still possible as new uses are identified for snapshots.

The original purpose for the SAFER/CVIEW snapshots was to support electronic screening of vehicles at commercial vehicle check stations. In one operating scenario, on approach to the check station, identification information is read from the vehicle's transponder, and the vehicle is weighed. The identifiers are correlated with the SAFER/CVIEW snapshots, safety history, registration and authority data are checked, credentials check flags are examined, weight is checked against legal limits, and a decision made as to whether or not the vehicle should be pulled in. As the SAFER and CVIEW or equivalent systems are implemented, the value of snapshots for administrative processes becomes clear. Today, programs such as Performance and Registration Information Systems Management (PRISM) also plan to use snapshots to evaluate safety history in connection with vehicle registration.

The revision of the whitepaper describes in detail the content of the snapshots processed by SAFER/CVIEW version 2. In this version, data items contained in the snapshots have been updated as a result of the implementation of several Change Requests (CRs) reviewed and processed by the CVISN Architecture Configuration Control Board (ACCB). A new appendix (C) has been added that defines the allowable values for some data elements in carrier and vehicle snapshots. Appendix A has been modified to include SAFER database specific information that details data element types, lengths and table locations. In addition, formats of the tables in both *Appendix A. Detailed Snapshot Contents* and *Appendix B. Snapshot Views and*

*Data Sources* have been changed to enhance readability. Appendix D now contains the viewgraphs for use in describing snapshots concepts and contents.

**Summary of Snapshot Contents**

**Snapshot Data Stored in SAFER/CVIEW**

<b>Data → ↓Snapshot</b>	<b>Identifier/Census Data</b>	<b>Safety Information</b>	<b>Credential Information</b>

# 1 Overview

## 1.1 Introduction

**SAFER (Safety and Fitness Electronic Record) System** is a national data exchange system developed by the Federal Motor Carrier Safety Administration (FMCSA). SAFER provides standardized carrier, vehicle, and driver (future) datasets (snapshots and reports) containing limited safety and credentials information to users. SAFER is an on-line system that is available to users over a nationwide data network, and will return an interstate carrier, vehicle, and/or driver (future) snapshot to the requester within a few seconds. The design goal for a query response for a single record is ten seconds or less 90% of the time; this goal does not account for dial-up time, if that communications mode is selected.

**CVIEW (Commercial Vehicle Information Exchange Window) System** is a system whose primary focus is to provide exchange of intra- and interstate snapshots and reports for carriers, vehicles, and drivers (future) within a state. The CVIEW or equivalent assembles and maintains the credentials portions of interstate snapshots and assembles and stores intrastate snapshots. A distributed, state-level version of the SAFER system, CVIEW or equivalent is a key element of each state's CVISN design. The prototype and pilot CVISN states are implementing CVIEWS. The CVIEWS will collect information from the CV credentialing and tax systems to formulate segments of the interstate carrier, vehicle, and driver (future) snapshots and reports for exchange within the state (e.g., with roadside sites) and with the SAFER system.

SAFER/CVIEW **snapshots** contain limited identification/census, safety, and credential information. Snapshots are used primarily by systems to support making quick decisions. Different snapshot "views" (i.e., subsets) support different system users. Snapshots are assembled by SAFER/CVIEW from proactive inputs from multiple sources and are stored within the SAFER/CVIEW systems. The paper describes in detail the content of the snapshots processed by SAFER/CVIEW version 2. SAFER was initially built to provide snapshot data to CVIEW using EDI. That is the mechanism by which the JHU/APL CVIEW currently receives subscription data from SAFER. SAFER also responds to EDI queries for snapshots. In the JHU/APL version of CVIEW however, snapshot queries (carrier only) are sent to SAFER via remote procedure call (RPC), not EDI. In accordance with CRF 1551, the RPC capability was implemented in both SAFER and CVIEW to improve performance for the near-term, but its long-term support is uncertain and continued availability is not guaranteed. EDI is the current official interface. States can enhance the JHU/APL

CVIEW by implementing EDI snapshot queries; however, in the future, the snapshot interface is expected to be Web-based, using XML and HTTP; new developers should concentrate on that approach.

**Standardized safety reports** generally contain more details than snapshots, but not necessarily the complete set of information available. Reports will be pre-defined according to user demands. People (as opposed to systems) normally use reports when snapshots do not provide all the needed information. As with snapshots, different report types support different people/functions. Reports are transmitted via flat-file. Reports are usually generated by the authoritative source, and simply transmitted to the requester by SAFER/CVIEW. In accordance with CRFs 1508 and 1662, inspection report data is retained in SAFER on a temporary basis for 60 days. Inspection reports are not stored in CVIEW.

The remainder of this paper discusses snapshots.

## 1.2 Fundamental Principles Related to Snapshots

These principles guided the approach to the development of the SAFER and CVIEW or equivalent systems, and drove the contents proposed for snapshots.

- **There are three types of snapshots: carrier, vehicle, and driver (future).**  
These represent the three key entities in commercial vehicle operations.
- **SAFER manages interstate snapshots.**  
The SAFER system was created to facilitate the exchange of carrier safety information among jurisdictions. The system has been extended to also provide credential summaries for interstate carriers, and to provide safety and credential summaries for interstate vehicles and drivers.

As part of ongoing efforts to improve SAFER, the SAFER Option Working Group has been formed to look at ways to include intrastate data as well as interstate data as an alternative to developing and maintaining CVIEWs in individual states.

- **The State CVIEW (or equivalent) assembles and maintains the credentials portion of interstate snapshots and assembles and stores intrastate snapshots.**  
The CVIEW or equivalent system provides for the electronic exchange of interstate carrier and vehicle credential data between state source systems and SAFER. The CVIEW or equivalent system provides for the electronic exchange of intrastate carrier and vehicle safety and credential data between state source systems and users.
- **Snapshots were primarily designed to support roadside electronic screening; many other uses have emerged.**  
Congress mandated that carrier safety information be provided to roadside check stations as part of an initiative to improve safety in commercial vehicle operations. As snapshots were extended to include credentials information, their utility for other applications also grew. For example, PRISM (Performance and Registration Information Systems Management) states

intend to use snapshots to check the carrier's safety status before renewing vehicle registration.

While carrier and vehicle snapshots are currently well defined and being used in many ways, driver snapshots remain conceptual. Administrative concerns, particularly regarding privacy, along with the technology currently in use, such as transponders and the communications infrastructure supporting roadside users, limit the availability of driver data. However, screening based on the driver may prove to be effective in improving safety. CVISN will continue to evaluate whether roadside screening based on driver license status can provide a cost-effective benefit when used in addition to screening based on the vehicle and carrier.

- **Snapshots are routinely distributed according to subscription criteria.**

A subscriber may set snapshot content-driven criteria for which snapshots should be provided by SAFER/CVIEW to that user. For example, a roadside site in Kentucky may choose to receive snapshots for all carriers based in Kentucky, plus those based in Tennessee, Virginia, Ohio, Indiana, Missouri, Illinois, North Carolina, and West Virginia. For details on how to establish a subscription with SAFER, contact the Volpe SAFER Help desk.

- **Snapshots are also available for near-immediate response to a query.**

An occasional user of snapshots may request them one at a time. Or, a regular subscriber system may request a snapshot that is not covered by its subscription criteria.

- **Authoritative sources contribute specific segments of data proactively to snapshots, sometimes via indirect source systems.**

So that snapshots contain accurate information, sources of record (a.k.a. "authoritative sources") provide snapshot inputs to SAFER and CVIEW. Not all authoritative sources must be connected directly to SAFER/CVIEW to feed information to the snapshots.

- **Snapshots contain summary safety data, plus the equivalent of decals and paper documents carried on commercial vehicles today.**

As technology allows movement away from paper documents and towards paperless vehicles, snapshots provide information equivalent to the "papers" carried on commercial vehicles today, but in electronic form that computers can process. These electronic equivalents to documents will allow mainline electronic screening for safe and properly credentialed vehicles.

- **Snapshot data are stored in SAFER and CVIEW.**

SAFER and CVIEW store snapshot data for two reasons: to provide immediate response to a query, and to prevent SAFER/CVIEW from imposing undue data access/refresh burdens on authoritative sources. The design goal for a query response is ten seconds or less 90% of the time; this goal does not account for dial-up time assuming that communication mode is selected. This also assumes that a single record is returned as opposed to an aggregate response. If SAFER/CVIEW had to construct a complete snapshot from scratch every time any data in the snapshot changed, then all of the data source systems for that snapshot would be queried every time any item in the snapshot changed. The underlying motivation for the

snapshot concept is that data from a variety of sources should be made available to other systems to support near-real-time processing demands. To allow such quick response, snapshots are stored by the systems that provide them.

- **SAFER and CVIEW do not store copies of data readily available to SAFER/CVIEW users from other on-line systems.**  
Replication of data is undesirable, and should be avoided unless the information is not readily available (i.e., when needed and according to user timeliness requirements) to those authorized users who need the data.

### 1.3 Operational Concepts Related to Snapshots

The snapshot user and snapshot builder perspectives imply these operational concepts:

- **Carriers, vehicles, and drivers may operate as intrastate or interstate entities.**  
When carriers and vehicles are registered, the jurisdictions in which they intend to operate are specified. Most drivers obtain licenses that authorize them to drive in all jurisdictions. In some cases, licenses restrict the driver to intrastate operation. This interstate/intrastate distinction helps to clarify which snapshot data SAFER is responsible for, and which snapshot data the state CVIEWs must manage.
- **SAFER provides snapshots on interstate operators to authorized users.**  
SAFER is responsible for managing the snapshot data for interstate carriers, vehicles, and drivers (future), and for providing the data only to authorized users.
- **SAFER snapshots are provided to users based upon subscription or interactive request. Each user sets subscription criteria. The normal means of snapshot distribution is based on the subscription lists.**  
Subscription criteria are based on certain data contained in the snapshots. Subscribers can also define the change criteria that cause an updated version of a snapshot to be sent to them. For instance, some roadside site may choose not to use stolen and junked vehicle flags from the snapshots because it has some other means to access that information. In that case, the subscription criteria for that site could filter out any snapshot updates that might occur only because of changes in those flags. Carrier subscriptions may be established to generate all carriers in a given state or states, all active carriers nationally or by specific USDOT number. The subscription is filled when the snapshot is updated. Vehicle subscriptions may be established for vehicles registered in a given state or states.
- **By including the data equivalent to the decals and paper documents carried on commercial vehicles today as part of the snapshots, SAFER supports the notion of the paperless vehicle.**  
Under the “paperless vehicle” concept, drivers will no longer have to carry “hardcopy” evidence of the credentials for themselves, their vehicle, or the associated carrier. Instead, roadside enforcement officers will be able to check their credentials by a look-up in the

infrastructure, based on some standard identifiers. Snapshots are an early step towards providing rapid access to basic credentialing information electronically.

- **MCMIS provides safety data to SAFER for interstate carriers.**  
MCMIS is the primary source of safety data about interstate carriers today, and will continue to be so. State SAFETYNET systems update MCMIS with safety information collected at roadside sites. Since MCMIS is not set up to handle a large volume of requests for specific data, SAFER will provide summaries of the data stored in MCMIS to authorized users as part of the carrier snapshots.
- **The State CVIEW usually acts as the single point of contact within the state for providing interstate snapshot segment inputs to SAFER, and for retrieving interstate snapshots from SAFER for users within the state.**  
State information systems are usually the authoritative sources for data contained in snapshots. Each state's information systems are configured uniquely. To make the connection between states and SAFER simple, the recommended implementation option is to have the CVIEW collect inputs from the state systems and forward those snapshot segments to SAFER. Likewise, the state CVIEW will subscribe to SAFER (based on criteria that cover all of the state's snapshot needs) to receive snapshots for interstate operators. The snapshot views CVIEW gets from SAFER must cover all the data items needed by in-state systems.
- **Some authoritative sources not equipped to handle a high volume of information requests send check flags to CVIEW/SAFER. The check flags are based on criteria that are common across jurisdictions. Each authoritative source sets their flag proactively.**  
Check flags are used to indicate recent activity, especially negative actions regarding credentials. Instead of trying to maintain the latest credentials status in the SAFER snapshot, source systems send CVIEW/SAFER a check flag that acts as a warning to the receiving snapshot user to check with the authoritative source. The authoritative sources that choose to use this approach are responsible for sending check flag updates to CVIEW/SAFER proactively. Updating proactively means that the source system determines when it is necessary to send CVIEW/SAFER new information, and only updates the records that have changed. Generally, previously existing records in CVIEW/SAFER that have been updated are replaced.
- **The State CVIEW assembles and stores snapshots for intrastate carriers, vehicles, and drivers.**  
As SAFER does for interstate carriers, vehicles, and drivers (future), the State CVIEW assembles and stores snapshots for intrastate operators. This implies that the state CVIEW interacts with all information systems in the state that are associated with commercial vehicle intrastate safety and credentialing activities. If all those systems connect to CVIEW, then they can exchange information with each other via the CVIEW snapshots.
- **The State CVIEW provides snapshots to roadside sites and other users within the state.**

As the source of intrastate snapshots, it is natural for CVIEW to be the distribution agent for intrastate snapshots. Since CVIEW also acts as the interface between the state and SAFER, it is a natural distribution agent for the snapshots that SAFER provides (i.e., interstate snapshots). The state CVIEW will distribute snapshots to state subscribers according to their unique criteria. If a user system within the state needs another snapshot, it will make the request to CVIEW, which will pass the request to SAFER, if necessary, and return the desired snapshot to the requesting system.

- **SAFER will provide support for retrieving recent inspection reports.**  
If a SAFER/CVIEW user needs inspection information beyond that provided in the snapshot, a “past inspection report query (PIQ)” may be issued to SAFER or CVIEW. In accordance with CRFs 1508 and 1662, SAFER retains inspection reports for 60 days. Inspection reports are not stored in CVIEW. The state CVIEW or equivalent will pass the request for an inspection report on to SAFER. Authorized personnel could choose to go directly to the source system (MCMIS) for the information rather than to CVIEW or SAFER, in cases where this capability exists.
- **Snapshot users should always check with the authoritative source prior to any enforcement action.**  
SAFER and CVIEW are not authoritative sources for any information. They are systems that provide information from a variety of sources to streamline roadside (and other) operations. Whenever enforcement action is to be taken, users should check with the authoritative source to verify that the accuracy of the information on which the action is to be based.
- **Alternatives to using SAFER and CVIEW to exchange snapshots are being explored.**  
The SAFER Option Working Group (SOWG) is looking into options and concepts for using SAFER only. This group is also looking into alternative strategies for exchanging snapshots.

## 2 Definitions of Snapshot-Related Terms

### SAFER/CVIEW Snapshots

A collection of carrier, vehicle, and driver (future) information assembled from authoritative or indirect sources. Snapshots reflect the state of those data when the information was provided to SAFER/CVIEW. SAFER assembles snapshots for interstate carriers and vehicles. Driver snapshots are not presently available. The state CVIEW assembles snapshots for intrastate carriers, vehicles, and drivers. Snapshot data *are stored* in SAFER and CVIEW. SAFER was initially built to provide snapshot data to CVIEW using EDI. That is the mechanism by which the JHU/APL CVIEW currently receives subscription data from SAFER. SAFER also responds to EDI queries for snapshots. In the JHU/APL version of CVIEW however, snapshot queries (carrier only) are sent to SAFER via remote procedure call (RPC), not EDI. The RPC capability was implemented in both SAFER and CVIEW to improve performance for the near-term, but its long-term support is uncertain and continued availability is not guaranteed. EDI is the current official interface. States can enhance the JHU/APL CVIEW by implementing EDI snapshot queries; however, in the future, the snapshot interface is expected to be Web-based, using XML and HTTP; new developers should concentrate on that approach.

### SAFER/CVIEW Reports

Provided in response to a user query, these generally contain more detailed information than a snapshot. The inspection reports provided by SAFER are stored for 60 days. They are transmitted according to custom interface agreements.

### Identification & Census Data

Data used to distinguish one carrier, vehicle, or driver (future) from another. The information is factual rather than evaluative.

### Historical Safety & Credential Information

Information used to characterize the past safety performance of the carrier, vehicle or driver (future); and information used to characterize the carrier's or the vehicle's credentials, such as registration.

### Check Flags

Indicator set by the authoritative source to alert users that there has recently (e.g., within a day or a week) been some problem with the associated credential. Since the check flag does not attempt to reflect up-to-the-minute status, the problem may have been resolved and the flag not yet reset by the source.

### Current Safety Status

Most recent safety indicators, for instance, out-of-service (OOS) status.

### Permit Data

The equivalent of the paper documents issued to the holder to authorize some special activity, such as the carrying of oversize, overweight, or HazMat loads.

### **Other Credential Data**

Data used to describe other credentials such as fuel tax, carrier registration, HazMat, etc.

### **Detail**

The lowest level of information available; may be raw input from the original source, or corrected based on update from the source, or from a review by an evaluative agency.

### **Summary**

Information computed/determined/inferred from details.

### **View**

A subset of the snapshot data stored in SAFER/CVIEW, tailored to a specific purpose. A view is used to define the data to be sent to/from SAFER/CVIEW via the TS 285 Transaction. Data sent to and from SAFER/CVIEW utilizes a defined input and output view to describe the portion of the snapshot being sent or received. Additional information about each view including whether the view is used for input, output or both is provided in Section 3.3. The following Carrier snapshot views are currently defined: Full, ISS, MCMIS, SafetyNet, Licensing & Insurance, E-screening enrollment, Roadside, SAFEVUE, IFTA, and IRP. The following vehicle snapshot views are defined: Full, IRP with Tag, IRP w/o Tag, Inspection, Roadside, and E-screening Enrollment. Appendix B shows the specific data contained in each view.

### **Snapshot Segment**

Describes the portion of a complete snapshot being sent to SAFER from an authoritative source. Data sent to SAFER/CVIEW utilizes an input view to describe what data is being sent for use in updating or creating a snapshot.

### **Authoritative Source**

Authoritative sources are information systems that can provide the correct response to a question. The authoritative source is the final arbiter in case of conflicts about data validity. Each jurisdiction identifies an authoritative source for each data element.

### **Indirect Source**

An indirect source acts on behalf of an authoritative source to answer questions.

### 3 Snapshot Contents and Views

The SAFER and CVIEW systems contain information relating to the safety and credentials of motor carriers, vehicles and drivers (future). This information is organized into three record types, one each for carrier, vehicle and driver (future). They are called snapshots since they provide summary information, which is intended to give a quick picture of the safety performance and credentials.

Since the snapshot information serves a variety of users and purposes, a particular application may need only a subset of it. In order to save storage and transmission expense, SAFER and CVIEW provide *views* of the snapshot that contain only that subset of the information needed by a particular application.

This section summarizes the contents of the snapshots, and explains the purpose of each “view” that has been defined. The contents of snapshots may change as the SAFER/CVIEW and the legacy systems that supply data evolve. The contents of this document reflect the information and capabilities available using SAFER/CVIEW software 2.4.

#### 3.1 Snapshot Changes

The contents of this paper reflect all changes to the content or interpretation of fields contained in the carrier or vehicle snapshot that have been approved and implemented as publication of this document. However a series of Change Request Forms (CRFs) have been recommended by the CVISN Architecture Configuration Control Board (ACCB) for FMCSA approval but have not yet been implemented. These changes may require significant work on the part of the SAFER development team. To date, there have not been sufficient resources to accomplish the implementation of these CRFs without adversely impacting the ongoing SAFER development schedule. To ensure that these concepts are carried forward, two lists of CRF’s are being maintained. The first list shown below includes CRF’s that have been closed with Version 2 of SAFER/CVIEW and are documented in this paper. The second list shown below includes CRF’s that are under consideration and may be scheduled and implemented by the SAFER development team.

CRF List Addressed – These are CRF’s that have been addressed by SAFER and are closed.

- CRF 212 - OOS Flags
- CRF 353 - IFTA View
- CRF 607 - Rename IRP Check Flag
- CRF 626 - Add L & I Summary Fields to Carrier Snapshot
- CRF 693 - Add MCS 150 Mileage and Year to Carrier Snapshot
- CRF 1031 - Don’t Create Vehicle snapshots from inspection reports
- CRF 1046 - Clear Definition for IRP Check Flag
- CRF 1059 - 4 digit SSN’s for Tax-Id in Carrier Snapshot
- CRF 1308 - IRP View for Carrier
- CRF 1322 - IRP Vehicle View Sans Transponder ID

- CRF 1508 – CVIEW Version 3 will not Store IRs locally
- CRF 1551 - No EDI Queries from JHU/APL-developed CVIEW to SAFER
- CRF 1662 – SAFER now stores IRs for 60 days

CRF List Not Addressed – These are CRF’s that may be scheduled and implemented by the SAFER development team.

- CRF 252 - State Level Hot List
- CRF 253 - Weight Compliance History Screening
- CRF 393 – Last Update Date for Views
- CRF 484 – IRP Fleets and Multiple Check Flags
- CRF 714 - Multiple IRP Account number per Carrier
- CRF 827 – Snapshot View And updates
- CRF 940 - Prism Based Vehicle Changes for Vehicle Snapshots
- CRF 1028 - Change or Add options for snapshot
- CRF 1082 - Diesel Emissions
- CRF 1227 - Make Registration Data Repeating Fields
- CRF 1737 - Call Safety Carrier PRISM Carrier

## 3.2 Contents Summary

The SAFER and CVIEW systems store information about carriers, vehicles and drivers (future). For each of these entities a unique snapshot has been defined. Although each entity is unique, the information stored for each falls into the same general categories. These are *identification and census* information; *safety* information and *credential* information. In the safety and credential categories, some data are flags or check flags.

Identification and Census Information. Each unique carrier, vehicle and driver (future) is identified and described in the snapshot database. Carrier\_ID\_Number is used to distinguish one carrier from another. Carrier\_ID\_Number is the US DOT number for interstate carriers. Vehicle Identification Number (VIN) is used to distinguish one vehicle from another. General descriptive information is also included, both as a means of confirming identification in cases where some ambiguity may exist, and also when it is needed by the applications being supported. Census information is factual in nature and is not “evaluative” as, for instance, a safety score is. An example is the description of a carrier’s operations, such as the cargo it carries, found in the carrier snapshot.

Safety Information. Snapshots contain safety information for carriers, vehicles and drivers (future). Snapshots include selected statistics related to accidents, violations and inspections, as well as safety ratings, if they exist. For instance, the carrier snapshot includes the carrier’s Motor Carrier Safety Improvement Process (MCSIP) level, Selective Compliance Enforcement (SCE) score and SafeStat indicator, a crash summary, and other safety related information.

Credential Information. Carriers, vehicles and drivers are often issued paper credentials that are produced or displayed at the roadside. An example is the IRP “cab card.” In some cases an electronic analog of the paper credential is provided in the snapshot.

Flags and Check Flags. Roadside operations that might need driver or vehicle status information must obtain it from the authoritative source itself. In order to support this process, snapshots contain *check flags* that may be used by an authoritative source as a placeholder for status, and to indicate that actual status information should be retrieved. Check flags can be considered an intermediate step between current status and historical information. They are available for use as a warning to check with the appropriate authoritative source because of recent problematic credentials-related activity in carrier, vehicle, or driver data for which the authoritative source is responsible.

The check flag is set by the authoritative source to say that the status of a particular entity may be suspect for some reason. If the check flag for a source is set, the snapshot user may want to query the authoritative source for up-to-date status information. A query would be necessary before any enforcement action could take place, since the flag in and of itself does not provide the necessary specifics. Maintaining check flags in the snapshots is more cost effective than maintaining current status, and provides more recent information than historical records based on initial credential applications.

Appendix A contains spreadsheets that show the detailed list of items in each snapshot. Appendix B shows the items in each existing snapshot view. Appendix C contains tables that list expected values, if defined for a given element. This appendix describes validations done by the SAFER application. The ACCB provides mechanisms for discussion of changes to the standard snapshot item lists and the SAFER/CVIEW staff and CVISN ACCB will process requests for new views.

### **3.2.1 Carrier Snapshot**

The carrier snapshot contains several identifiers by which it may be accessed depending on the application or area of interest. Retrieval of carrier snapshots may be done using Carrier\_ID\_Number or ICC number. Updates to the carrier snapshot are done using the Carrier\_ID\_Number as the Primary Carrier ID so that revised or new information can be matched to existing records. Please see reference 2 for more information on identifiers. Carrier\_ID\_Number is the US DOT Number for interstate carriers.

In addition to the identifiers, information that characterizes the carrier, including its operations, is also included. Safety history, inspections, and resulting ratings are summarized in the snapshot. Credential data equivalent to that carried on each of the carrier's vehicles is included in the credentials section. Check flags to alert enforcement officers about recent credentialing activities or problems are part of the snapshot. E-screening enrollment data to identify participating carriers is included in the snapshot.

### **3.2.2 Vehicle Snapshot**

The vehicle snapshot also contains several identifiers by which it may be accessed depending on the information available to the requester. Vehicle snapshots may be retrieved by VIN or by License\_Plate\_Number and IRP\_Base\_State. Vehicle snapshots are updated using only the Vehicle Plate ID. Please see reference 2 for more information on identifiers.

Snapshot safety data includes an overview of the last inspection, when the CVSA decal will expire, and summaries of inspections and violations. Again, data equivalent to the information carried on the vehicle are part of the credentials section. Check flags to alert enforcement officers about recent credentialing activities or problems are part of the snapshot. E-screening enrollment data to identify participating vehicles is included in the snapshot.

### **3.2.3 Driver Snapshot (Future)**

The driver snapshot, if and when it is implemented, may be keyed by the Driver Unique ID (based on the driver's license number). Other census information may be stored in the snapshot to clarify the identity of the driver and to support data integrity checks. Snapshot safety data may include recent inspection results, and historical accident, inspection, and violation summaries. Check flags to alert enforcement officials about recent credentialing activities or problems may be part of the snapshot.

## **3.3 View Summaries**

A view is used to define the data to be sent to/from SAFER/CVIEW via the TS 285 Transaction. Data sent from SAFER/CVIEW utilizes a defined view to describe the portion of the snapshot the requestor will receive or a sender is updating. Retrieval criteria are used to retrieve snapshots from safer via query. The senders use updated keys to identify to SAFER the snapshot to be changed.

Appendix B contains tables that provide a detailed description of the fields contained in each view defined for carrier and vehicle snapshots. The views defined in Appendix B represent the views available for SAFER/CVIEW version 2. Additional views will be defined as necessary as the systems mature. Users can submit requests for additional views to:

Ms. Sandra B. Salazar  
CVISN Architecture Configuration Control Board  
MS 24E225  
The Johns Hopkins University Applied Physics Laboratory  
11100 Johns Hopkins Rd  
Laurel, MD 20723-6099  
Phone: 240-228-7610  
Fax: 240-228-6149  
E-Mail: <mailto:Sandra.Salazar@jhuapl.edu>

The request will be reviewed by the Architecture CCB.

### **3.3.1 Carrier Views**

The following Carrier snapshot views are currently defined: Full, ISS, MCMIS, SafetyNet, Licensing & Insurance, E-screening enrollment, Roadside, SAFEVUE, IFTA, IRP and PRISM.

### 3.3.1.1 Full View (Q105)

View Type: Retrieval  
Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)

or

ICC\_Number

The full view includes all SAFER snapshot data pertaining to the carrier.

### 3.3.1.2 Inspection Selection System (ISS) View (Q110)

View Type: Retrieval  
Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)

or

ICC\_Number

This view contains the SAFER data required to support the identification of the carrier and the computation of the ISS score for use in determining which vehicles should be inspected.

### 3.3.2.3 MCMIS View (Q102)

View Type: Update and Retrieval  
Update Key: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)  
Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)

or

ICC\_Number

The MCMIS view details the information supplied to SAFER by the Federal Motor Carrier Safety Administration MCMIS system about the safety, safety review, and inspection history of interstate motor carriers.

### 3.3.2.4 SAFETYNET View (Q101)

View Type: Retrieval  
Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)

or

ICC\_Number

The SAFETYNET 2000 view describes the information being sent from MCMIS to SAFETYNET via the carrier snapshot.

### 3.3.2.5 Licensing and Insurance View (Q107)

View Type: Update and Retrieval  
Update Key: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)  
Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)

or

**ICC\_Number**

This view includes the information from the Licensing and Insurance System obtained from the Interstate Commerce Commission (ICC) and being maintained by FMCSA.

**3.3.2.6 E-Screening Enrollment View (Q104)**

View Type: Update and Retrieval

Update Key: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID (null permitted)

Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID (null permitted)

or

**ICC\_Number**

The E-Screening Enrollment view contains the information necessary to register carriers in multiple screening programs and to permit screening by transponder ID across boundaries of jurisdictions and screening programs.

**3.3.2.7 Roadside (ROC) View (Q108)**

View Type: Retrieval

Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID (null permitted)

or

**ICC\_Number**

The ROC view contains the information necessary to screen vehicle and carriers at the roadside.

**3.3.2.8 SAFEVUE View (Q103)**

View Type: Retrieval

Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID (null permitted)

or

**ICC\_Number**

The SAFEVUE view contains the information required by the SAFEVUE software. This software is no longer being maintained but the view is being retained for backwards compatibility.

**3.3.2.9 International Fuel Tax Agreement (IFTA) View (Q109)**

View Type: Update and Retrieval

Update Key: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID (null permitted)

Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID (null permitted)

or

**ICC\_Number**

The IFTA view contains the information necessary to update IFTA credentials information in the carrier snapshot.

**3.3.2.10 International Registration Plan (IRP) View (Q111)**

View Type: Update and Retrieval

Update Key: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)

Retrieval Criteria: Carrier\_Id\_Number + Issuing\_Authority (null permitted) + Terminal\_ID  
(null permitted)

or

ICC\_Number

In accordance with CRF 1308, the IRP view contains the information necessary to update the IRP credentials information in the carrier snapshot.

### 3.3.3 Vehicle Views

The following vehicle snapshot views are defined: Full, IRP with Tag, IRP without Tag, Inspection, Roadside, and E-screening Enrollment.

#### 3.3.3.1 Full View (Q303)

View Type: Retrieval

Retrieval Criteria: VIN

or

License\_Plate\_Number + IRP\_Base\_State

The full view includes all SAFER snapshot data pertaining to the vehicle.

#### 3.3.3.2 International Registration Plan (IRP ) With TagId View (Q304)

View Type: Update and Retrieval

Update Key: VIN

Retrieval Criteria: VIN

or

License\_Plate\_Number + IRP\_Base\_State

The IRP view is intended to facilitate the update of snapshots with registration information equivalent to what is carried in the vehicle now.

#### 3.3.3.3 Inspection View (Q302)

View Type: Update and Retrieval

Update Key: License\_Plate\_Number + IRP\_Base\_State

Retrieval Criteria: VIN

or

License\_Plate\_Number + IRP\_Base\_State

The inspection view contains information provided by an inspector at the roadside. It includes the identification and safety information from an ASPEN inspection report that is used to update SAFER and CVIEW. This information provides guidance to the inspectors about past problem areas that should be reviewed in future inspections.

#### 3.3.3.4 Roadside (ROC) View (Q301)

View Type: Retrieval

Retrieval Criteria: VIN

or

License\_Plate\_Number + IRP\_Base\_State

This view is intended to support roadside operations, including electronic screening, providing information to the roadside official once a vehicle has been pulled over, and providing information for safety inspections.

### **3.3.3.5 E-Screening Enrollment View (Q305)**

View Type: Update and Retrieval

Update Key: VIN

Retrieval Criteria: VIN

or

License\_Plate\_Number + IRP\_Base\_State

The E-Screening Enrollment view contains the information necessary to register a carrier's vehicles in multiple screening programs and to permit screening by transponder ID across boundaries of jurisdictions and screening programs.

### **3.3.3.6 International Registration System (IRP) Without TagID View (Q306)**

View Type: Update and Retrieval

Update Key: VIN

Retrieval Criteria: VIN

or

License\_Plate\_Number + IRP\_Base\_State

The IRP view is intended to facilitate the update of snapshots with registration information equivalent to what is carried in the vehicle now. This view differs from view Q304 in that it does not include transponder ID.

## 4 How Snapshots are Maintained and Accessed

### 4.1 SAFER/CVIEW Snapshots Are Updated Proactively

Updating snapshots proactively means that when any information in the snapshot changes, the SAFER/CVIEW systems are informed of the change. The new information is inserted in place of the old snapshot segment(s) it replaces, and the snapshot is re-distributed according to each user's subscription criteria. This approach will reduce the number of queries against legacy systems for information contained in the snapshots.

To update snapshot segments, source systems should use common primary identifiers so that different segments can be matched to the correct carrier or vehicle. Please see reference 2 for more information on identifiers.

The concepts and approaches listed below support the proactive updating of snapshots:

- **The authoritative source is responsible for keeping the data in snapshots up-to-date.**  
There are several information systems associated with each carrier, vehicle, and driver. The most practical way for maintaining accurate information in the snapshots is for the source systems of record to send updates to the snapshot assemblers (SAFER and CVIEW).

- **Snapshot data authoritative source systems will send segment updates as “complete replacements” (EDI operation is named “replace”)**

A segment update is a complete replacement. The snapshot segment update will contain all of the data the source system normally provides to the snapshots. All values within the view will be used to replace the data in the snapshot. For instance, if the original snapshot contained non-null data, and the segment update sent as a complete replacement contained nulls, the nulls would over-write the non-null data.

Selecting a defined view identifies data included in any snapshot segment update. Since complete replacement is done, all data included in a view must be supplied. If there isn't a view to meet the needs of an authoritative source system, a new view can be requested through the CVISN ACCB. Authoritative sources can send replacement data in the same format as that used for the initial population of the snapshot databases. Only one interface implementation is required, for both the legacy systems, and for SAFER and CVIEW.

- **The source systems will not normally update all snapshots by completely replacing the database, but, rather, will update only those snapshots that have changed.**

Transfers of large quantities of snapshot segments from authoritative sources may be used initially to maintain the snapshot database until legacy systems are modified to support sending change updates proactively. Limiting the transmission of information from the legacy systems to “changes only” minimizes the amount of network traffic associated with maintaining the snapshots.

- **The changed snapshot data will be provided to SAFER/CVIEW proactively by the source system shortly after the change occurs.**

Legacy system implementations will send snapshot updates proactively upon change, without prompting from SAFER/CVIEW.

## 4.2 Snapshot Exchanges Between SAFER and CVIEW

The SAFER system has vehicle and carrier snapshot subscriptions set up on it that include the vehicles and carriers requested by a state CVIEW system. When SAFER receives and processes a snapshot segment update, it triggers the subscription fulfillment for a particular state's CVIEW system if that CVIEW's subscription criteria included the vehicle or carrier for which the update was received. The updated snapshot view is sent to the subscribing CVIEW. The CVIEW system updates its database with the newly obtained vehicle or carrier snapshot information.

Similarly, SAFER is a subscriber to each state's CVIEW and using defined views SAFER receives credentials-related snapshot segments for interstate carriers and vehicles based in that state.

## 4.3 Accessing Snapshots

This section describes the current methods and criteria for requesting snapshots using SAFER and CVIEW. Additional criteria to be used in requesting snapshots will be added as the systems evolve.

- **SAFER/CVIEW users can subscribe to receive snapshot updates proactively upon change, based on criteria defined by the subscriber.**

A subscription may be established that will send snapshot updates for specific entities when specific changes occur. A carrier snapshot subscription may be based on the following criteria:

- Matching a list of up to 100 USDOT Numbers
- Matching a list of up to 100 ICC Numbers
- State where the carrier is domiciled
- All carriers

Any (or all) fields may be specified to trigger an update when a change occurs, and the type of change may be specified so that a snapshot is only sent when the change is of significance to the user. For example, a roadside site in Kentucky may choose to receive snapshots for all carriers based in Kentucky, plus those based in Tennessee, Virginia, Ohio, Indiana, Missouri, Illinois, North Carolina, and West Virginia.

A vehicle snapshot subscription may be based on the following criteria:

- IRP Base State
- Jurisdiction state (Jurisdictions in which the vehicle is registered)
- All Vehicles

Any (or all) fields may be specified to trigger an update when a change occurs, and the type of change may be specified so that a snapshot is only sent when the change is of significance to the user. For example, a roadside site in Kentucky may choose to receive snapshots for all vehicles based in Kentucky for IRP, plus those based in Tennessee, Virginia, Ohio, Indiana, Missouri, Illinois, North Carolina, and West Virginia.

SAFER Subscriptions must be set up and maintained manually on a user's behalf by the SAFER service provider. Jurisdictions operating CVIEW systems must set up and maintain subscriptions manually on a user's behalf. Users must contact SAFER or CVIEW system operators directly to have subscription criteria manually keyed into the systems' data mailbox configuration. The subscriber may update the criteria based on experience so that more or fewer updates are sent to the subscribing system automatically.

- **Users can also request a new snapshot via a query that supplies enough identity information for SAFER/CVIEW to find the snapshot.**

Identifiers for carrier, vehicle, and driver (future) are necessary to be able to locate the desired snapshot.

Requests formatted in ANSI ASC X12 EDI TS 285 format, using one of the standard identifiers will be processed by SAFER/CVIEW, and the requested snapshot is returned within seconds of the request. The design goal for a query response for a single record is ten seconds or less 90% of the time; this goal does not account for dial-up time, if that communications mode is selected.

In SAFER/CVIEW version 2, carrier snapshots can be requested using the following options:  
US DOT Number (Primary Carrier ID for Interstate Carriers)

In SAFER/CVIEW version 2, vehicle snapshots can be requested using the following options:

- VIN
- Jurisdiction and License Plate

## Appendix A. Detailed Snapshot Contents

There are currently three major builds of the SAFER and CVIEW System. They are Version 1.5, Version 1.6, and Version 2.

The following tables give a detailed description of the carrier and vehicle snapshots. The tables reflect current status as of Version 2 of SAFER/CVIEW. The fields are grouped together according to the type of data they represent, for instance, all carrier safety ratings may be found in one section. For each field these columns are provided:

- Data description,
- The SAFER database element name including a table name,
- EDI Implementation Guide (IG) data item name,
- CRF reference,
- Type, length and precision of the data element
- Comments that may aid in understanding the field.

Repeating fields in this table are indicated by noting the table within which they are stored. Comments provide additional information.

For information about how the snapshot data are transmitted using TS 285, see Reference 3.

This Page Intentionally Blank

## Appendix A: Carrier Snapshot

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
<b>Carrier ID Section</b>					
Primary Carrier ID					
Carrier Specific ID: USDOT	Carrier.CARRIER_ID_NUMBER	Carrier ID Number - DOT	548	VARCHAR2(12)	Carrier-Specific Identifier corresponding to the ID type inter or intrastate (alphanumeric); if carrier is interstate, must be USDOT number; if carrier is intrastate and has a USDOT number, must be USDOT number; for state-specific IDs, the Carrier-Specific Identifier may include a prefix to clarify the agency/source of the identifier.
Carrier Specific ID: State Specific	Carrier.STATE_CARRIER_ID	Carrier ID Number - State	548	VARCHAR2(12)	Required for an Intrastate Carrier. Carrier's Intrastate identification number.
Jurisdiction Code	Carrier.ISSUING_AUTHORITY	Carrier ID Number - Issuing Jurisdiction	548	CHAR(4)	Required for an Intrastate Carrier. Jurisdiction Code, if carrier is intrastate (alphanumeric); 2 - character country code, 2-character subdivision code; the allowable country and subdivision codes are defined in the FMCSA Code Directory.
Carrier Terminal ID	Carrier.TERMINAL_ID	Carrier ID Number - Terminal ID	548	CHAR(4)	Carrier Terminal ID designated by carrier (alphanumeric)
DUNS Number	Carrier.DUNS_NUMBER	Carrier ID Number - DUNS		CHAR(9)	Dunn & Bradstreet identification number belonging to carrier.
Tax ID Type	Carrier.TAX_ID_TYPE	Tax ID Type		CHAR(1)	The SSN and TIN are mutually exclusive. S = SSN; E = Employer ID (MCMIS & SAFER)
Tax Number	Carrier.TAX_ID_NUMBER	Tax ID Number	1059	NUMBER (22) Precision 9	The SSN and TIN are mutually exclusive. S = SSN; E = Employer ID (MCMIS & SAFER), only 4 digits of SSN are carried
ID Number: ICC Number 1	Carrier.ICC_NUMBER_1	Carrier ID Number: ICC Number 1		NUMBER (22) Precision 6	Federally assigned US ICC identification number (ICC docket number)
ID Number: ICC Number 2	Carrier.ICC_NUMBER_2	Carrier ID Number: ICC Number 2		NUMBER (22) Precision 6	Federally assigned US ICC identification number (ICC docket number)
ID Number: ICC Number 3	Carrier.ICC_NUMBER_3	Carrier ID Number: ICC Number 3		NUMBER (22) Precision 6	Federally assigned US ICC identification number (ICC docket number)
OIC Number	Carrier.OIC_NUMBER	FMCSA OIC	270 376	CHAR(2)	Code number of officer in charge
Date Carrier Added	Carrier.DATE_ADDED	Date DOT Assigned		DATE(7)	Date Carrier added to MCMIS

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
Date of MCMIS file	Carrier.FILE_CREATE_DATE	MCMIS File Create Date		DATE(7)	The date on which MCMIS created the snapshot updates.
Legal Name	Carrier.CARRIER_NAME	Carrier Name Legal		VARCHAR2(55)	May include organization name or first, middle and last name of a person
DBA Name	Carrier.DBA_NAME	Carrier Name DBA		VARCHAR2(55)	Doing Business As Name (if different from Legal Name)
Alphabetizer: Primary	Carrier.NAME_ALPHABETIZER	Carrier Name Legal - Alphabetizer Code		VARCHAR2(17)	Index key for search
Alphabetizer: Secondary	Carrier.NAME_ALPHABETIZER2	Carrier Name DBA - Alphabetizer Code		VARCHAR2(17)	Index key for search
Region Code	Carrier.REGION_CODE	FMCSA Region Code	270 376	CHAR(2)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
Territory Code	Carrier.TERRITORY_CODE	FMCSA Territory Code	270 376	VARCHAR2(2)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
Street Address	Carrier.STREET	Carrier Business Address - Street	270 376	VARCHAR2(30)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
Colonia	Carrier.COLONIA	Carrier Business Address - Colonia	270 376	VARCHAR2(25)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
City	Carrier.CITY	Carrier Business Address - City	270 376	VARCHAR2(25)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
State	Carrier.STATE	Carrier Business Address - State	270 376	CHAR(2)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
Zip Code	Carrier.ZIP_CODE	Carrier Business Address - Postal Code	270 376	CHAR(5)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
Zip Code Plus 4	Carrier.ZIP_PLUS_4		270 376	CHAR(5)	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only
County Code	Carrier.COUNTY_CODE	Carrier Business Address - County	270 376	NUMBER(22) Precision 3	Office address: street, city, state, zip, county code (FIPS code within state) ISS-City, Zip, State, Street-only PRISM-City, County, Zip, State, Street-only

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
Country	Carrier.COUNTRY	Carrier Business Address - Country	270 376	CHAR(1)	Office address: country code
Mailing Address	Carrier.MAIL_STREET	Carrier Mailing Address - Street	376	VARCHAR2(30)	If different from Street Address
Mailing Address	Carrier.MAIL_CITY	Carrier Mailing Address - City	376	VARCHAR2(25)	If different from Street Address - City
Mailing Address	Carrier.MAIL_STATE	Carrier Mailing Address - State	376	CHAR(2)	If different from Street Address - State
Mailing Address	Carrier.MAIL_ZIP_CODE	Carrier Mailing Address - Postal Code	376	CHAR(5)	If different from Street Address – Postal Code
Mailing Address	Carrier.MAIL_ZIP_PLUS_4		376	CHAR(5)	If different from Street Address
Mailing Address	Carrier.MAIL_COUNTY_CODE	Carrier Mailing Address - County	376	NUMBER(22) Precision 3	If different from Street Address - County
Mailing Address	Carrier.MAIL_COLONIA	Carrier Mailing Address - Colonia	376	VARCHAR2(25)	If different from Street Address - Colonia
Communication Numbers	Carrier.EMAIL_ADDRESS	Carrier Business Address - Email	270 376	VARCHAR2(80)	Phone, email, FAX, etc. SAFER only contains the main voice phone number supplied by MCMIS
Communication Numbers	Carrier.TELEPHONE_AREA_CODE		270 376	CHAR(3)	Phone, email, FAX, etc. SAFER only contains the main voice phone number supplied by MCMIS
Communication Numbers	Carrier.TELEPHONE_NUMBER	Carrier Business Address - Phone	270 376	CHAR(7)	Phone, email, FAX, etc. SAFER only contains the main voice phone number supplied by MCMIS
Communication Numbers	Carrier.FAX_AREA_CODE		270 376	CHAR(3)	Phone, email, FAX, etc. SAFER only contains the main voice phone number supplied by MCMIS
Communication Numbers	Carrier.FAX_NUMBER	Carrier Business Address - FAX	270 376	VARCHAR2(13)	Phone, email, FAX, etc. SAFER only contains the main voice phone number supplied by MCMIS
<b>Carrier &amp; Shipper Characterization</b>					
Classifications	Carrier.ENTITY_TYPE	Entity Type		CHAR(1)	Carrier, Shipper, Registrant
MCMIS Status	Carrier.MCMIS_STATUS	MCMIS Status		CHAR(1)	Active/inactive
MCMIS Status Date	Carrier.MCMIS_STATUS_DATE	MCMIS Status Date		DATE(7)	Date carrier status updated at MCMIS
MCMIS File Create Date	Carrier.MCMIS_TRANSACTION_DATE		270	DATE(7)	
Date of Last Update	Carrier.LAST_UPDATE_DATE	Last Update Date		DATE(7)	Date carrier updated at MCMIS

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
Last Update User	Carrier.LAST_UPDATE_USERID	Last Update User ID		CHAR(8)	Staff who updated carrier at MCMIS
Carrier Types:					
Interstate	Carrier.CARRIER_INTERSTATE	Interstate Carrier		CHAR(1)	Interstate Operations
Interstate (HazMat)	Carrier.CARRIER_INTERSTATE_HM	Interstate HazMat Carrier		CHAR(1)	Obsolete
Intrastate (Non-HazMat)	Carrier.CARRIER_INTRASTATE_NHM	Intrastate Non-HazMat Carrier	270	CHAR(1)	Intrastate non-HazMat operations
Interstate (Non-HazMat)	Carrier.CARRIER_INTERSTATE_NHM	Interstate Non-HazMat Carrier		CHAR(1)	Obsolete
Intrastate (HazMat)	Carrier.CARRIER_INTRASTATE_HM	Intrastate HazMat Carrier		CHAR(1)	Intrastate HazMat Operations
Placarded (HazMat)	Carrier.CARRIER_HAZMAT_PLACARDED	Carrier Placarded Indicator	270	NUMBER(22) Precision 1	Placarded
Shipper Types:					
Interstate	Carrier.SHIPPER_INTERSTATE	Interstate Shipper		CHAR(1)	Obsolete
Interstate (HazMat)	Carrier.SHIPPER_INTERSTATE_HM	Interstate HazMat Shipper		CHAR(1)	Shipper Interstate HazMat operations
Intrastate (HazMat)	Carrier.SHIPPER_INTRASTATE_HM	Intrastate HazMat Shipper	270	CHAR(1)	Shipper Intrastate operations
HAZMAT_STATUS	Carrier.HAZMAT_STATUS		270	CHAR(3)	
Operations	Carrier_class.CLASS_CODE	Carrier Operation		VARCHAR2(3)	Authorized for hire, exempt for hire, interstate, intrastate, HazMat, bus, etc.
Operations	Carrier_class.CLASS_OTHER_DESC	Carrier Other Classification		VARCHAR2(10)	
Cargo Classifications	Carrier_Cargo.CARGO_OTHER_DESC	Cargo Non HazMat Other Description		VARCHAR2(16)	Cargo hauled by carrier. From MCMIS registration form. NOT related to ICC operating authority. See operating authority below.
Cargo Classifications	Carrier_Cargo.CARGO_CODE	Cargo Non-HazMat		VARCHAR2(3)	Cargo hauled by carrier. From MCMIS registration form. NOT related to ICC operating authority. See operating authority below.

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
HAZMATs Carried/Shipped/Cargo (HazMat Carried, Shipped, and Form repeat for each Category)	Carrier_HazMat.HAZMAT_CODE	Cargo HazMat	188 323	VARCHAR2(3)	HM carried by inter/intrastate carrier. Code indicates material and packaging (tank; package; both) HazMat codes 30-42 added under CRF 323 for the MCMIS restructuring.
HAZMATs Carried/Shipped/Cargo (HazMat Carried, Shipped, and Form repeat for each Category)	Carrier_HazMat.HAZMAT_CARRIED_SHIPPED	Cargo HazMat Carrier/Shipped	188 323	CHAR(1)	HM carried by inter/intrastate carrier. Code indicates material and packaging (tank; package; both) HazMat codes 30-42 added under CRF 323 for the MCMIS restructuring.
HAZMATs Carried/Shipped/Cargo (HazMat Carried, Shipped, and Form repeat for each Category)	Carrier_HazMat.BULK_NONBULK see Table 3 below	Cargo HazMat Format	188 323	CHAR(1)	HM carried by inter/intrastate carrier. Code indicates material and packaging (tank; package; both) HazMat codes 30-42 added under CRF 323 for the MCMIS restructuring.
Bus	Carrier.BUS	Bus Operator		CHAR(1)	Commercial Bus Operator (Data not currently being provided)
Number of Drivers, Total	Carrier.QUANTITY_DRIVERS	Quantity - Drivers Data		NUMBER(22) Precision 5	Total Number of Drivers

## Appendix A: Vehicle Snapshot

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
<b>Vehicle ID Section</b>					
Date of last update	Vehicle.LAST_UPDATE_DATE	Last Update Date		DATE(7)	Applies to the entire snapshot
Vehicle Identification Number	Vehicle.VIN	Vehicle ID Number - VIN		VARCHAR2(17)	Vehicle Identification Number assigned by manufacturer (alphanumeric)
<b>Vehicle Plate ID:</b>					
Jurisdiction Code	Vehicle.LICENSE_PLATE_STATE	License Plate Jurisdiction	570 291 391	VARCHAR2(2)	Jurisdiction (state or province) code (alphanumeric); the allowable subdivision codes will be defined in the FMCSA Code Directory
License Plate ID	Vehicle.LICENSE_PLATE_NUMBER	License Plate Number	570	VARHCAR2(12)	License plate ID (alphanumeric)
Titling Jurisdiction	Vehicle.TITLE_JURISDICTION	Title Jurisdiction	234 475	VARCHAR2(2)	Jurisdiction (state or province) where the vehicle was titled.
Title Number	Vehicle.TITLE_NUMBER	Title Number	234 475	VARCHAR2(17)	Title number.
Registration Base Jurisdiction	Vehicle.IRP_BASE_STATE	IRP Base State		VARCHAR2(2)	IRP Cab Card Base State
Unit Number	Vehicle.UNIT_NUMBER	Carrier Assigned Unit Number		VARCHAR2(5)	IRP Cab Card unit number
<b>Transponder ID:</b>					
Transponder Serial Number	Vehicle.TRANSPONDER_NUMBER	Vehicle ID Number - Transponder Number	549	VARCHAR2(10)	Flag = 0 Vehicle Transponder ID (Character representation of 32 - bit unsigned integer) Flag = 1 Vehicle Transponder ID (Character representation of 20 - bit unsigned integer)
Vehicle Owner	Vehicle.OWNER_NAME	Owner Name		VARCHAR2(55)	IRP Cab Card Owner. (Name, Alpha)
Vehicle Operator	Vehicle.OPERATOR_NAME	Operator Name	391	VARCHAR2(55)	IRP Cab Card Operator. (Name, Alpha)

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
<b>Registration Carrier Identifier:</b>					
ID: USDOT	Vehicle.CVIS_DEFAULT_CARRIER	Safety Carrier ID - DOT	548	VARCHAR2(12)	Carrier-Specific Identifier corresponding to the ID type (alphanumeric); if carrier is interstate, must be USDOT number; if carrier is intrastate and has a USDOT number, must be USDOT number; for state-specific IDs, the Carrier-Specific Identifier may include a prefix to clarify the agency/source of the identifier.
Jurisdiction Code:	Vehicle.DEFAULT_ISSUING_AUTHORITY	Safety Issuing Jurisdiction	548	VARCHAR2(4)	Required for an Intrastate Carrier. Jurisdiction Code, if carrier is intrastate (alphanumeric); 2 - character country code, 2-character subdivision code ; the allowable country and subdivision codes are defined in the FHWA Code Directory.
Carrier Terminal ID	Vehicle.DEFAULT_TERMINAL_ID	Safety Terminal ID	548	VARCHAR2(4)	Carrier Terminal ID designated by carrier (alphanumeric).
<b>Vehicle Description</b>					
Equipment type	Vehicle.TYPE	Vehicle Type		VARCHAR2(2)	IRP Cab Card Type
Make	Vehicle.MAKE	Vehicle Make		VARCHAR2(10)	IRP Cab Card Make
Model	Vehicle.MODEL	Vehicle Model		VARCHAR2(3)	Model of Make
Year	Vehicle.MODEL_YEAR	Vehicle Model Year		VARCHAR2(4)	IRP Cab Card Year
Vehicle Gross Weight	Vehicle.GVW	Weight - Gross		NUMBER(22) Precision - 8	IRP Cab Card Gross Vehicle Weight
Unladen Weight	Vehicle.UNLADEN_WEIGHT	Weight - Unladen		NUMBER(22) Precision - 8	IRP Cab Card Unladen Weight
Number of axles/seats	Vehicle.NUMBER_OF_AXLES	Number of Axles		NUMBER(22) Precision - 2	IRP Cab Card Number of Axles for Trucks only. If Bus, then number of seats.
Type of Fuel	Vehicle.FUEL	Vehicle Fuel Type		VARCHAR2(2)	IRP Cab Card Fuel
<b>Flags and Check Flags</b>					

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
NMVTIS Check Flag	Vehicle.NMVTIS_CHECK_FLAG	NMVTIS Check Flag	1046	VARCHAR2(3)	· "S26" to indicate a check with the appropriate authoritative source is needed · "S27" to indicate no check with the appropriate authoritative source is needed · "U" to indicate no information is available
NMVTIS Check Flag Update Date	Vehicle.NMVTIS_CHECK_DATE	NMVTIS Check Flag Date		DATE(7)	Date Flag was set
IRP Check Flag	Vehicle.IRP_CHECK_FLAG	IRP Check Flag	1046	VARCHAR2(3)	· "S26" to indicate a check with the appropriate authoritative source is needed · "S27" to indicate no check with the appropriate authoritative source is needed · "U" to indicate no information is available
IRP Check Flag Update Date	Vehicle.IRP_CHECK_DATE	IRP Check Flag Date		DATE(7)	Date Flag was set
<b>Vehicle Credential Data - Registration</b>					
Registration Number / IRP Account number	Vehicle.IRP_ACCOUNT_NUM	IRP Account Number		VARCHAR2(15)	IRP "Cab Card" Account number
Registration Effective Date	Vehicle.REGISTRATION_START_DATE	IRP Registration Start Date		DATE(7)	IRP "Cab Card" Registration start
Registration Expiration Date	Vehicle.REGISTRATION_EXPIRE_DATE	IRP Registration Expiration Date		DATE(7)	IRP "Cab Card" Registration expiration date
<b>Weights</b>					
IRP Jurisdiction For Each State	Vehicle_IRP_JURIS.IRP_JURISDICTION	IRP Jurisdiction		VARCHAR2(4)	IRP "Cab Card" Information: States & Weights (*Multiple occurrence Table) Weight Carried/Qualified
IRP Weight For Each State	Vehicle_IRP_JURIS.IRP_WEIGHT_CARRIED	IRP Jurisdiction Weight		VARCHAR2(8)	IRP "Cab Card" Information: States & Weights (*Multiple occurrence Table) Weight Carried/Qualified
<b>Vehicle Credential Data - Trip Permit(s)</b>					
Permit Type	Vehicle_permit.PERMIT_TYPE			VARCHAR2(3)	Type of Permit

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
Permit ID	Vehicle_permit.PERMIT_NUMBER	Permit number Permit HazMat Number Permit OS/OW Number		VARCHAR2(22)	Permit ID Number
Permit Effective Date	Vehicle_permit.PERMIT_START_DATE	Permit start date Permit HazMat Start Date Permit OS/OW Start Date		DATE(7)	Valid start date
Permit Expiration Date	Vehicle_permit.PERMIT_EXPIRE_DATE	Permit expire date Permit HazMat Expiration Date Permit OS/OW Expiration Date		DATE(7)	Valid expiration date
Cargo Type	Vehicle_permit.PERMIT_CARGO_TYPE	Permit OS/OW Cargo Type		VARCHAR2(3)	Permitted cargo type
Cargo Format	Vehicle_permit.PERMIT_CARGO_FORMAT	Permit OS/O Cargo Format		VARCHAR2(3)	Permitted cargo format
Cargo Weight	Vehicle_permit.PERMIT_CARGO_WEIGHT	Permit OS/OW Weight		NUMBER(22) Precision - 8	Permitted cargo weight
Cargo Width	Vehicle_permit.PERMIT_CARGO_WIDTH	Permit OS/OW Width		NUMBER(22) Precision - 5	Permitted cargo width
Cargo Length	Vehicle_permit.PERMIT_CARGO_LENGTH	Permit OS/OW Length		NUMBER(22) Precision - 5	Permitted cargo length
Cargo Height	Vehicle_permit.PERMIT_CARGO_HEIGHT	Permit OS/OW Cargo Height		NUMBER(22) Precision - 5	Permitted cargo height
Cargo Overall Length	Vehicle_permit.PERMIT_CARGO_OVERALL_LENGTH	Permit OS/OW Cargo Overall Length		NUMBER(22) Precision - 5	Permitted cargo overall length
Cargo Front Projection	Vehicle_permit.PERMIT_CARGO_PROJECT_FRONT	Permit OS/OW Cargo Project Front		NUMBER(22) Precision - 5	Permitted front projection
Cargo Rear Projection	Vehicle_permit.PERMIT_CARGO_PROJECT_REAR	Permit OS/OW Cargo Project Rear		NUMBER(22) Precision - 5	Permitted rear projection
Registered Axle Spacings	Vehicle_permit.PERMIT_VEHICLE_AXLE_CONFIG	Permit OS/OW Vehicle Axle Configuration		VARCHAR2(25)	Permitted axle configuration

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
<b>Permit Restrictions</b>					
Key for Permit Restrictions Table	Vehicle_permit_restrictions.PERMIT_NUMBER	Permit Number		VARCHAR2(22)	Used to link to permit restrictions table
Permit Restriction	Vehicle_permit_restrictions.PERMIT_RESTRICTION	Permit Restriction Permit HazMat Restriction		VARCHAR2(80)	Permit Restriction
<b>Permit Weight</b>					
Key for Permit Weights Table	Vehicle_permit_weights.PERMIT_NUMBER	Permit Number		VARCHAR2(22)	Used to link to permit weights table
Permit Jurisdictions	Vehicle_permit_weights.PERMIT_JURISDICTION	Permit Jurisdiction Permit HazMat Jurisdiction Permit OS/OW Jurisdiction		VARCHAR2(4)	Permitted Jurisdictions and Weights
Permit Weights	Vehicle_permit_weights.PERMIT_WEIGHT_CARRIED	Permit Jurisdiction Weight		NUMBER(22) Precision - 8	Permitted Jurisdictions and Weights
<b>Vehicle Last Inspection Overview</b>					
Inspection date/time	Vehicle.INSPECTION_DATETIME	Inspection Start Date, Time		DATE(7)	For overview: last inspection only
Inspection location	Vehicle.INSPECTION_LOCATION	Inspection Location Code		VARCHAR2(6)	Location Code: last inspection only
Inspection Report ID	Vehicle.INSPECTION_RPTNUM	Inspection Report Number		VARCHAR2(16)	For overview: last inspection only
Inspection Carrier US DOT #	Vehicle.CARRIER_ID_NUMBER	Inspection Carrier ID - DOT		VARCHAR2(12)	DOT number for last inspection report sent to SAFER
Inspection Carrier Issuing	Vehicle.CARRIER_ISSUING_AUTHORITY	Inspection Carrier Issuing		VARCHAR2(4)	Country Code + State Code (FIPS) (Last Inspection)
Inspection Terminal ID	Vehicle.TERMINAL_ID	Inspection Carrier Terminal ID		VARCHAR2(4)	Carrier Assigned Terminal ID (4 Characters) (Last Inspection)

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
Inspection State Assigned Carrier Census Number	Vehicle.CARRIER_STATE_ID	Inspection Carrier State ID		VARCHAR2(29)	Last Inspection Only
CVSA Decal Issued (Yes/No)	Vehicle.CVSA_CERT_FLAG	Inspection CVSA Certification Issued Flag		VARCHAR2(3)	Last Inspection Only. Field updated only when CVIS decal is issued. If not issued by latest Inspection Report, it is not over written.
Date CVSA decal expires	Vehicle.CVSA_EXPIRE_DATE	CVSA Expiration Date		DATE(7)	Expiration Date. Field updated only when CVIS decal is issued. If not issued by latest Inspection Report, it is not over written.
OOS flag	Vehicle.INSPECTION_OOS_FLAG	Inspection OOS Flag	212	VARCHAR2(3)	Indicates whether or not the last inspection resulted in an out-of-service order. Does not indicate whether or not the vehicle is currently out of service.
Driver OOS Order ID / Report ID	Vehicle.OOS_RPTNUM	OOS Report Number		VARCHAR2(16)	*Inspection Identifier or the last out-of-service order. May have been earlier than the last inspection.
Out of Service 'Until' Info	Vehicle.OOS_UNTIL	OOS Until		VARCHAR2(25)	*Out-of-Service 'Until' Info from Inspection Report.
Vehicle OOS order date/time	Vehicle.OOS_DATETIME	OOS Date, Time	212	DATE(7)	For overview: most recent OOS order only
Date/time vehicle OOS repair verified	Vehicle.OOS_VERIFY_DATE	OOS Verify Date		DATE(7)	Currently Not available.
<b>OOS Reason Codes</b>					
Key to Vehicle Reason Table	Vehicle_reason.OOS_RPTNUM	OOS Report Number		VARCHAR2(16)	The federal violation code number for each out-of-service violation. 14 Characters. (*Multiple occurrence Table)
OOS order reason code	Vehicle_reason.OOS_VIOLATION_REASON	OOS Reason		VARCHAR2(14)	The federal violation code number for each out-of-service violation. 14 Characters. (*Multiple occurrence Table)
<b>Vehicle Inspection &amp; Violation Summary</b>					
Inspection Date Start	Vehicle.INSP_SUM_START_DATE	Inspection Start Date		DATE(7)	Time Period. Information based only on SAFER statistics and does not necessarily represent all statistics for the vehicle.
Inspection Date End	Vehicle.INSP_SUM_END_DATE	Inspection End Date		DATE(7)	Time Period. Information based only on SAFER statistics and does not necessarily represent all statistics for the vehicle.

Data Description	SAFER Database Table & Field Name (Table.Field)	EDI IG Data Item	Applicable CR Number	SAFER Database Element Type and Length	Comments
Number of Inspections with HAZMAT present over period	Vehicle.INSP_SUM_HM_INSPS	Inspection/Violation Summary HazMat Inspections		NUMBER(22) Precision - 3	Total Within Period. Information based only on SAFER statistics and does not necessarily represent all statistics for the vehicle.
Total Number of Inspections present over period	Vehicle.INSP_SUM_INSPECTION_TOTAL	Inspection/Violation Summary Vehicle Inspections		NUMBER(22) Precision - 3	Total Within Period. Information based only on SAFER statistics and does not necessarily represent all statistics for the vehicle.
Number of OOS inspections, Vehicle	Vehicle.INSP_SUM_OOS_VEH_INSPS	Inspection/Violation Summary OOS Vehicle Inspections		NUMBER(22) Precision - 3	Total Within Period. Information based only on SAFER statistics and does not necessarily represent all statistics for the vehicle.
Number of Vehicle OOS orders over period	Vehicle.INSP_SUM_OOS_ORDER_COUNT	Inspection/Violation Summary OOS Orders		NUMBER(22) Precision - 3	Total Within Period. From Inspections and other sources. Information based only on SAFER statistics and does not necessarily represent all statistics for the vehicle.
Number of Vehicle OOS violations over period	Vehicle.INSP_SUM_OOS_VIOL_COUNT	Inspection/Violation Summary OOS Violations		NUMBER(22) Precision - 6	May be several violations per out-of-service order. Information based only on SAFER statistics and does not necessarily represent all statistics for the vehicle.
<b>Vehicle Electronic Screening Enrollment</b>					
Activity ID	Vehicle_escreen.ACTIVITY_CODE	Safety Program Indicator	274 476	CHAR(2)	This portion is intended to support electronic screening enrollment, but other Activity IDs may support other activities. E01 - Indicates E-screening Program
Jurisdiction ID	Vehicle_escreen.JURISDICTION_CODE	Safety Program Jurisdiction ID	274 476	CHAR(4)	4 character code identifying a jurisdiction
Vehicle Action	Vehicle_escreen.VEHICLE_ACTION	Safety Program Action Data	274 476	CHAR(3)	Carrier sets this value to indicate preference to participate in electronic screening in this jurisdiction. Not used for Vehicle Snapshot.
Vehicle Action Date	Vehicle_escreen.VEHICLE_ACTION_DATE	Safety Program Action Date	274 476	DATE(7)	Date of carrier election to participate.
Jurisdiction Action	Vehicle_escreen.JURISDICTION_ACTION	Safety Program Jurisdiction Action	274 476	CHAR(3)	State or jurisdiction acceptance or rejection of the carrier in the program. This field is optional if the state has an open enrollment policy.

<b>Data Description</b>	<b>SAFER Database Table &amp; Field Name (Table.Field)</b>	<b>EDI IG Data Item</b>	<b>Applicable CR Number</b>	<b>SAFER Database Element Type and Length</b>	<b>Comments</b>
Jurisdiction Action Date	Vehicle_escreen.JURISDICTION_ACTION_DATE	Safety Program Jurisdiction Action Date	274 476	DATE(7)	Date of the state decision, if specified.

***Appendix B.***

**Snapshot Views and Data Sources**

## Appendix B. Snapshot Views and Data Sources

There are currently three major builds of the SAFER and CVIEW System. They are Version 1.5, Version 1.6, and Version 2. Views are associated with each build by revision number. A view with a revision number of 1 is available in Version 1.5, a view with a revision number of 2 is available in Version 1.6, and a view with a revision number of 3 is available in Version 2.

The following tables give a detailed description of the carrier and vehicle snapshots. The tables reflect current status as of version 2 of SAFER/CVIEW. The fields are grouped together according to the type of data they represent, for instance, all carrier safety ratings may be found in one section. For each field these columns are provided:

- Data description,
- The SAFER database element name,
- Available views,
- For national and/or regional/state sources
  - Authoritative Source
  - Authoritative Source Availability

A number in the view column indicates the view revision that contains the data item. The source name is supplied for each data element where an electronic source is available. The availability column indicates when SAFER and CVIEW will support the exchange of the data element. In this version of the table, only Maryland is listed in the regional/state source columns.

**Allowable Values For Data Elements**

The following pages summarize the allowable values for data elements that are validated before inclusion in the snapshot database. The tables represent the allowable values that are checked by the SAFER/CVIEW application software.

# Appendix C

This appendix describes allowable values for entries in the snapshot for which validation is done.

Table C-1. Allowable Values for Cargo Entries

CAR DESCRIPTION
UT Utilities
CS Construction
WW Water Well
AG Agriculture/Farm
BM Building Materials
BV Beverages
CC Coal, Coke
CH Chemicals
DB Commodities Dry Bulk
DT Drive-Away, Tow-Away
GB Garbage, Refuse, Trash
GF General Freight
GH Grain, Feed, Hay
HG Household Goods
IM Intermodal Cont.
LG Liquids/Gases
LM Logs, Poles, Beams, Lumber
LS Livestock
MC Machinery Large Objects
MH Mobile Homes
ML Metal
MT Meat
MV Motor Vehicles

OE	Oilfield Equipment
PD	Fresh Produce
PP	Paper Products
PS	Passengers
RF	Refrigerated Food
UM	US Mail
ZZ	Other

Table C-2. Allowable Values For Car\_Veh\_Action Entries

COD DESCRIPTION

Baseline Version

***Appendix D.***

**Snapshot Concepts Viewgraphs**

The following pages summarize the contents of this paper in viewgraph form. They are included as a convenient mechanism for readers to present the concepts

This Page Intentionally Blank

## **CVISN Concepts: What are snapshots and how are they built? Presentation Outline**

---

- Snapshot fundamental principles & operational concepts
- Definition of Snapshot-Related Terms
  - SAFER & CVIEW
  - SAFER/CVIEW Snapshots & Reports
  - Other terms related to categories of data
- Snapshots and reports provide the standard information from multiple authoritative sources that systems and people need
- Snapshot Data Stored in SAFER/CVIEW
- How Snapshots Are Maintained and Accessed
- Method for handling DMV Data in SAFER/CVIEW Snapshots

## Snapshots: Fundamental Principles

---

- **Three types: carrier, vehicle & driver (future)**
- **SAFER manages interstate snapshots**
- **State CVIEWs (or equivalent) manage intrastate and interstate snapshots**
- **Snapshots were primarily designed to support roadside electronic screening; many other uses have emerged**
- **Routinely distributed according to subscription criteria**
- **Also available for near-immediate response to a query**
- **Authoritative sources contribute specific segments of data proactively to snapshots, sometimes via indirect source systems**
- **Contain summary safety data, plus the equivalent of decals and paper documents carried on commercial vehicles today**
- **Data are stored in SAFER or CVIEW**
- **SAFER and CVIEW do not store copies of data readily available to SAFER/CVIEW users from other on-line systems.**

# SAFER/CVIEW Operational Concepts

---

1. Carriers, vehicles, and drivers may operate intrastate or interstate.
2. SAFER provides snapshots and reports on interstate operators to authorized users.
3. SAFER snapshots are provided to users based upon subscription or interactive request. Subscription criteria are defined by each user. The normal means of snapshot distribution is based on the subscription lists.
4. By including the data equivalent to the decals and paper documents carried on commercial vehicles today as part of the snapshots, SAFER supports the notion of the paperless vehicle.
5. MCMIS provides safety data to SAFER for interstate carriers.
6. The State CVIEW usually acts as the single point of contact within the state for providing interstate snapshot segment and report inputs to SAFER, and for retrieving interstate snapshots and reports from SAFER.
7. Some authoritative sources not equipped to handle a high volume of information requests send check flags to CVIEW/SAFER. The check flags are based on criteria that are common across jurisdictions. Each authoritative source sets their flag proactively.
8. The State CVIEW assembles and stores snapshots for intrastate carriers, vehicles, and drivers(future).
9. The State CVIEW manages interstate snapshots for vehicles that operate in the state.
10. The State CVIEW provides snapshots to roadside sites and other users within the state.
11. Data available from an on-line source are not part of snapshots. Such data may be included in reports.
12. The state CVIEW and/or SAFER will provide support for retrieving recent inspection reports
13. Snapshot users should always check with the authoritative source (perhaps through SAFER or CVIEW) prior to any enforcement action.
14. The SAFER Option Working Group (SOWG) is looking into options and concepts for using SAFER only. This group is also looking into alternative strategies for exchanging snapshots.

## Definition of Snapshot-Related Terms:

### SAFER (Safety and Fitness Electronic Record) System

A multi-state system that provides standardized carrier, vehicle, and driver (future) datasets (snapshots and reports) containing limited safety and credentials information to authorized users. The system is under development by FMCSA. SAFER is designed as an on-line system that will be available to users. SAFER will have data snapshots for SAFER state drivers (future) who enter the system through inspections clearance programs or the state driver licensing process. The base state CVIEW assembles snapshots for intrastate carriers, vehicles, and drivers. Snapshot data are stored in SAFER or CVIEW. Generally, the assembly and transmission are accomplished using ANSI ASC X12 EDI transaction set (TS) 285.

### CVIEW (Commercial Vehicle Information Exchange Window) System

Assesses information from the CV safety, contain more detailed information than snapshots. The state reports to the state by SAFER or CVIEW from authoritative sources are not stored in SAFER or CVIEW. They are also transmitted using the ANSI ASC X12 EDI transactions, primarily using TS 284, Commercial Vehicle Safety Reports. Not all data held by authoritative sources can be accessed using SAFER/CVIEW and ANSI ASC X12 EDI transactions, due to intentional limitations in the transaction set design. Data made available by an on-line system may be included in SAFER/CVIEW reports, but will not be part of snapshots.

## Definition of Snapshot-Related Terms:

---

### **Identification & Census Data**

Data used to distinguish one carrier, vehicle, or driver from another. The information is factual rather than evaluative.

### **Historical Safety & Credential Information**

Information that characterizes the past safety performance of the carrier or driver; information about the carrier's or the vehicle's credentials, such as registration.

### **Check Flags**

Indicator set by the authoritative source to alert users that there has recently (e.g., within a day or a week) been some problem with the associated credential. Since the check flag does not attempt to reflect up-to-the-minute status, the problem may have been resolved and the flag not yet reset by the source.

### **Current Safety Status**

Most recent safety indicators, for instance, out-of-service (OOS) status.

### **Permit Data**

The equivalent of the paper documents issued to the holder to authorize some special activity, such as the carrying of oversize, overweight, or HazMat loads.

## Definition of Snapshot-Related Terms:

---

### **Other Credential Data**

Data about other credentials such as fuel tax, carrier registration, HazMat, etc.

### **Detail**

The lowest level of information available; may be raw input from the original source, or corrected based on update from the source, or from a review by an evaluative agency

### **Summary**

Information computed/determined/inferred from details.

### **View**

A subset of the snapshot data stored in SAFER/CVIEW, tailored to a specific purpose. A view is used to define the data to be sent to/from SAFER/CVIEW via the TS 285 Transaction. Data sent from SAFER/CVIEW utilizes a defined output view to describe the portion of the snapshot the requestor will receive. The following Carrier snapshot views are currently defined: Full, ISS, MCMIS, SNET 2K, Licensing & Insurance, IRP, E-screening Enrollment, ROC, SAFEVUE, IFTA. The following vehicle snapshot views are defined: Full, IRP with and without TagId, Inspection, Roadside, and E-screening Enrollment.

## Definition of Snapshot-Related Terms:

---

### **Snapshot Segment**

Describes the portion of a snapshot being sent to SAFER from an authoritative source. Data sent to SAFER/CVIEW utilizes an input view to describe what data is being sent for use in updating or creating snapshot.

### **Authoritative Source**

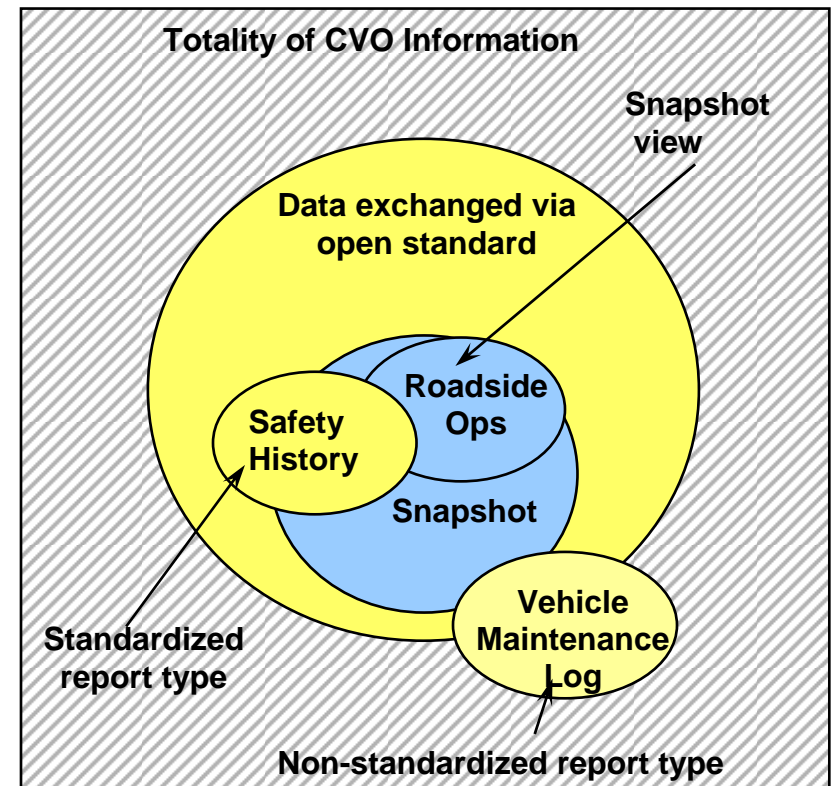

Authoritative sources are information systems that can provide the correct response to a question. The authoritative source is the final arbiter in case of conflicts about data validity. Each jurisdiction identifies an authoritative source for each data element.

### **Indirect Source**

An indirect source acts on behalf of an authoritative source to answer questions.

## Snapshots and reports provide the standard information from multiple authoritative sources that systems and people need

- **SAFER/CVIEW Snapshots for Carrier, Vehicle, and Driver(Future)**
  - Contain identifier/census data, limited safety and credential information
  - Used primarily by systems to support making quick decisions
  - Different views support different system users
  - Assembled from proactive inputs from multiple sources
  - Snapshot data are stored by SAFER/CVIEW
  - Transmitted via flat-file, Remote Procedure Calls, or EDI X12 ASC transaction set 285
- **Standardized Carrier, Vehicle, and Driver (Future) Safety Reports**
  - Contain more details than snapshot, but not necessarily the complete set of information available
  - Used when timeliness of query response is less critical
  - Used primarily by people when snapshot does not provide all the needed information
  - Different views support different people/functions
  - Assembled from interactive inputs from multiple sources by SAFER/CVIEW
  - Generally not stored by SAFER/CVIEW
  - Transmitted via flat-file

## Snapshot Data Stored in SAFER/CVIEW

Data → ↓Snapshot	Identifier/Census Data	Safety Information	Credential Information
Carrier	<ul style="list-style-type: none"> <li>● Primary Carrier ID;</li> <li>● Other IDs (e.g., Taxpayer ID, DUNS, IRP account, etc.);</li> <li>● Names;</li> <li>● Addresses;</li> <li>● Type;</li> <li>● Operations Characterization</li> </ul>	<ul style="list-style-type: none"> <li>● Safety Ratings;</li> <li>● Accident, Inspection &amp; Violation Summaries;</li> <li>● Safety Review History;</li> <li>● Last OOS;</li> <li>● PRISM Data</li> </ul>	<ul style="list-style-type: none"> <li>● Carrier Registration;</li> <li>● Fuel Tax Data</li> <li>● Insurance Data;</li> <li>● HazMat Registration;</li> <li>● Permit Data;</li> <li>● Electronic Screening Enrollment;</li> <li>● Carrier Check Flags (e.g., IRP &amp; IFTA flags)</li> </ul>
Vehicle	<ul style="list-style-type: none"> <li>● <sup>1</sup>VIN;</li> <li>● <sup>1</sup>Vehicle Plate ID</li> <li>● Other IDs (e.g., Plate, IRP Account, CVIS Default Carrier, Transponder, Title Number);</li> <li>● Vehicle Description</li> </ul>	<ul style="list-style-type: none"> <li>● Last Inspection Overview;</li> <li>● Inspection &amp; Violation Summaries;</li> <li>● Last OOS;</li> <li>● CVSA Decal Data;</li> <li>● PRISM Data</li> </ul>	<ul style="list-style-type: none"> <li>● Apportionment (i.e. Cab Card Data);</li> <li>● Permit Data;</li> <li>● Electronic Screening Enrollment;</li> <li>● Vehicle Check Flags: (e.g., Registration Check Flag)</li> </ul>
Driver (Future)	<ul style="list-style-type: none"> <li><sup>1</sup>Driver Unique ID;</li> <li><sup>1</sup>Home State;</li> <li>Names;</li> <li>Address;</li> <li>DOB, Sex;</li> <li>Citizenship</li> </ul>	<ul style="list-style-type: none"> <li>Last Inspection Overview;</li> <li>Accident Summary;</li> <li>Inspection &amp; Violation Summaries;</li> <li><sup>1</sup>Last OOS</li> </ul>	<ul style="list-style-type: none"> <li>Driver Check Flags (e.g., DMV Check Flag)</li> </ul>

● As of April 2001, fields populated in the SAFER database for interstate  
 Note: 1 = Data are current; all other data are historical

## How Snapshots Are Maintained and Accessed

---

### **SAFER/CVIEW Snapshots are updated proactively**

- The authoritative source is responsible for keeping the data in snapshots up-to-date.
- Snapshot updates from the source will be in the form of replacement snapshot segments defined by a view for those carriers, vehicles, or drivers (future) for which the data have changed. The replacement segments will contain all of the data the source system normally provides to the snapshots
- The source systems will not normally update all snapshots by completely replacing the database, but, rather, will update only those snapshots that have changed. Transfers of large quantities of snapshot segments from authoritative sources may be used initially until legacy systems are modified to support sending change updates proactively.
- The changed snapshot data will be provided to SAFER/CVIEW either proactively by the source system shortly after the change occurs.

## How Snapshots Are Maintained and Accessed (continued)

---

### **SAFER/CVIEW Users can:**

- Subscribe to receive snapshot updates proactively upon change, based on criteria defined by the subscriber
- Request a new snapshot via a query that supplies enough identity information for SAFER/CVIEW to find the snapshot
