Mosquitoes

Mosquito season, (April –September)

This time of year brings an increased threat of mosquito-borne diseases such as West Nile Virus (WNV). Most mosquito bites do not lead to human illness, yet mosquito borne-diseases can be serious. Mosquitoes breed in anything that can hold water for several days. Mosquito exposure can be reduced by eliminating mosquito habitats.

To prevent mosquito bites, wear long-sleeved shirts and pants, make sure doors and windows are properly screened, and avoid mosquito-infested areas or stay indoors when mosquitoes are most active. When in mosquito-infested areas, use an effective repellent. Repellents that contain DEET, Picaridin, oil of lemon eucalyptus, or IR-3535 are registered by the EPA and have been proven to be effective.

Here are a few informative links about mosquito borne illness control:

<http://www.bfhd.wa.gov/wnv/index.php>

<http://www.cdc.gov/niosh/topics/westnile/>

If mosquitoes are flying, there is a danger from West Nile Virus. Infected mosquitoes spread West Nile Virus, a disease that can cause serious, life-altering, and even fatal symptoms. Keep using insect repellent, wear long sleeves and long pants and dump out standing water in the yard where mosquitoes can lay their eggs. The following links are from the CDC:

- [Use Mosquito Repellent](#)
- [Eliminate standing water where mosquitoes can lay eggs](#)
- [Install or Repair Window and Door Screens](#)
- [Support Community-Based Mosquito Control Programs](#)

Date April 26, 2010

Mission Support Alliance
Weekly Safety Start

Supervisor Briefing points:

- MSA provides the site-wide mosquito control program to reduce breeding sites and includes ground spraying, larvicide applications, and surveys in areas reported to be infested.
- WNV is a regional public health concern and MSA is working with Benton, Franklin and Yakima counties to assure our program is complementary with other regional programs.
- If you see standing water or suspect mosquitoes at Hanford call Ray Johnson at MSA to have the areas treated (509) 372-3056.
- Look for and eliminate areas of standing water to prevent mosquito breeding. (Prevention is your best protection)
- When outdoors, wear long sleeve shirts, long pants and socks.
- Use insect repellent per manufacturer's instructions – either directly on exposed skin, or on clothing, but never on skin covered by clothing.
- Remember, peak mosquito hours are from dusk to dawn, but biting times vary among species of mosquito.

Employee's Questions:

- Am I aware of mosquito control measures I can take at work and at home?
- Do I practice good mosquito bite prevention?
- Do I let my coworkers and Management know when I suspect an area has heavy mosquito activity?
- Review ISMS guide book, page 19

Environmental tip:

Guiding Principle 6:

Hazard Controls Tailored to Work being Performed

Visit the ISMS Web site for Phase 1 implementation activities: <http://msc.rl.gov/ims/page.cfm/ISMS>

MSA-2009-10-0014

West Nile Virus *Activities*

HAZARDOUS [CRITTERS ON THE] HANFORD SITE

Focuses on the numerous hazardous living organisms that make their home on the Hanford Site, covering spiders, snakes, ticks, rodents (Hantavirus), mosquitoes (West Nile Virus), scorpions, wasps/bees/hornets, ants, and some of the larger fauna found on the Site.
(30-60 minutes)

 **AdvanceMed Hanford**
Occupational Health Services

West Nile Virus - Actions

- Proactive pest control (56 mosquito control responses in past 5 years)
- Reactive pest control (376-PEST)
- Communicate with Benton County Mosquito Control District
- Work with facility Safety Officers to coordinate pesticide applications

West Nile Virus *Activities*

Benton County Mosquito Control

Mosquito Control Open House and Blood Drive

- Educational Activities for the Kids
- Refreshments
- Tours of the Facility

Why Donate Your
Blood to
Mosquitoes This
Summer?

The Red Cross
will be at the
Open House
accepting
donations.

Friday, June 25th 11 AM - 4 PM

If you plan to give
blood during your
visit please call for
an appointment.

509-967-2414

We are located at 4951 W Van Giesen Street next to the Post Office in West Richland. Come see how your Mosquito Control District operates and meet the staff. Let us know how we are doing in your neighborhood.

West Nile Virus - Change

- Target West Nile Virus-carrying mosquitoes (7 of 22 local species) referred to as “bird biters”
- Preparing to enhance both “barrier spray” as well as “fogging”
- Adding pesticides known to be effective in controlling mosquitoes (e.g. ‘Naled’ ‘Pyrethrum’ etc.)
- Revised structure of Animal Control Operations under the Site Commercial Pesticide Applicator to specifically control mosquitoes & respond to requests for service
