

James Rabinowitz, Ph.D.

Dr. James Rabinowitz is a research physicist. He received a Ph.D. in physics from the State University of New York at Buffalo where he was a member of the Center for Theoretical Biology. He received additional training at Uppsala University in Sweden and postdoctoral training at the Institute of Environmental Medicine of New York University. Before joining the EPA he was at New York University and New York Institute of Technology. His research interests are in developing and understanding the relationships between chemical structure and biological effects and in developing and applying computational approaches based on molecular interactions for predicting chemical toxicity.
