

## FARS/MCMIS Fatal Crash Record Matching Tool

A tool designed to help reconcile differences between the number of fatal crash records in the FARS and MCMIS databases.

Updated Results: **6/26/2009**

### Matching Tool Description

Provides a full description of the FARS/MCMIS Fatal Crash Record Matching Tool

### National Results

Provides the number of records matched for all States

### Individual State Results

Provides the matching results for each State grouped by matched, potentially matched, and not matched records and **NEW** has the capability to accept comments on each record evaluated

The **FARS/MCMIS Fatal Crash Record Matching Tool** is designed to help reconcile differences between the Fatality Analysis Reporting System (FARS) and Motor Carrier Management Information System (MCMIS) databases. A methodology was developed to "match" fatal large truck and bus crash records between the FARS and MCMIS databases. The methodology defines a "matched record" between the two databases as a crash that involved at least one fatality, involved a large truck or bus, and contains the same information in several key fields (e.g., county, date, time, VIN, DOT #, etc.). The methodology has more than 40 unique matching combinations that can produce a single match between FARS and MCMIS fatal crash records.
