

UNITED STATES DEPARTMENT OF AGRICULTURE ANIMAL AND PLANT HEALTH INSPECTION SERVICE ANNUAL REPORT OF RESEARCH FACILITY (TYPE OR PRINT)	1. CERTIFICATE NUMBER: 51-F-0001 CUSTOMER NUMBER: 432	FORM APPROVED OMB NO. 0579-0036
Uniformed Services Univ. Of The Health Sciences 4301 Jones Bridge Rd. Bethesda, MD 20814 Telephone: (301)-295-1909		

NOV 26 2004

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, or experimentation, or held for these purposes. Attach additional sheets if necessary)

FACILITY LOCATIONS (Sites) - See Attached Listing

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS Form 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animal being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report)	F. TOTAL NUMBER OF ANIMALS (COLUMNS C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters			14		14
8. Rabbits			14		14
9. Non-human Primates					
10. Sheep					
11. Pigs			498		498
12. Other Farm Animals					
Goats			35		35
13. Other Animals					
Sand Rats	132		75		75
Gerbils			11		11
Ferrets			38		38

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and an Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Listing of Actual Facility Sites for Virion systems, Inc.

1. Research Facility: Virion systems, Inc.*
9610 Medical Center Drive
Suite 100
Rockville, Maryland 20850
(301) 309-1844

2. Breeding/Holding Facility: Virion systems, Inc.*
9620 Medical Center Drive
Suite 102
Rockville, Maryland 20850
(301) 294-8061

* Animals are housed in the vivariums of both facilities.

Noted Exceptions to the Regulations and Standards

1. Rodents experiencing difficulty obtaining feed suspended in a wire bar lid or masticating biscuits are provided feed/fines or moistened feed on the floor of the cage.**
2. Waste that is, or may be perceived to be, contaminated by biohazards is disposed of using Medical Pathological Waste boxes, which remain, uncovered until sealed for incineration.* **

* The materials in these boxes are items such as exam/surgical gloves, disposable drapes /toweling, gauze squares, closed tubes, large sharps containers, etc. Carcasses are kept in a carcass freezer until the disposal company arrives for pick-up. Then the Medical Pathological Waste bags and transport boxes are sealed. (The boxes are lined with biohazard bags).

** Both of the above mentioned items that deviate from the Animal Welfare Regulations and Standards have been discussed and approved by the entire IACUC Committee. At every meeting the two exceptions are discussed to see if it is necessary to continue having these items as exceptions to the regulations.

Reasoning for the Exceptions.

1. Cotton rats being wild rodents feed differently than regular laboratory rodents. They also have a different body shape. These two items sometimes constitute a need to have rodent chow or another appropriate diet easily available to them. For example, heavily pregnant cotton rats sometimes have a difficult time sitting up on their haunches to get food when they are full term. Also cotton rats have a tendency to chip or break their incisors when attempting to escape. Therefore they often will not be able to obtain food through the bars of a wire bar lid and will not be able to chew standard rodent chow, so they are given a soft, balanced rodent diet until their incisors grow out. At what time the pregnant female delivers and/or the incisors have grown back, the animal is returned to being fed from a wire bar lid.

2. The MPW transport box is prepared in advance and lined with 2 biohazard bags. Any contaminated item or perceived contaminated item is placed into the box to await pick up. Sharps are in a contained, sealed secondary safety container. Any oozing, leaking, or odiferous items must be contained and placed in a secondary container prior to placing them in the MPW box (tissues, carcasses). These items are frozen and placed in the box just prior to being removed for incineration. The reasoning behind this is to reduce the number of places where biohazard items or those perceived as such are kept prior to pick up. The boxes are vividly marked as to what they contain and are kept in an out of the way area.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual rese teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and ap Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary inc brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

12-2-04

IACUC approved exceptions to AWA regulations:

A. Not cleaning or sanitizing at required frequencies.

1. Two cats are used for studies involving human allergy to cats. These animals are housed in a small room resembling an apartment to replicate conditions in a normal human household. The room has a rug, a bed with sheets, litter pans, food and water containers and portable cages. The cats deposit hair, dander, and other allergens on the sheets. Humans are exposed to these allergens by either entering the housing room, or by exposure to air from the room. At the request of the investigator, and approved by the IACUC the following room husbandry procedures are followed:
 - a. The room floor is mopped with clean water only
 - b. The sheets are laundered only when changed by the investigator
 - c. The rug is not vacuumed or shaken except by the investigators when they collect material for experimental challenges.

2. A number of baboon cages are machine sanitized at 3-5 week intervals rather than the required two-week interval. These are cages in which baboons have been fitted with chronically indwelling intravenous or intragastric catheters, which are protected by a tether and harness system. The back of the cage contains an instrument panel with levers and lights that the baboon uses to produce food pellets and/or drug delivery. To sanitize the cages, the animals must be chemically restrained (ketamine hydrochloride), and the system must be dismantled. The baboon must be chemically restrained on ketamine until the cage wash is complete and the system reassembled (about 30 min). (This time is used to perform a physical examination of the baboon, shave and scrub the catheter exit site, clip nails, clean teeth, obtain a body weight, etc). For some studies, the administration of a drug like ketamine and the interruption of daily experimental assessment would introduce a potentially confounding variable if an arbitrary two-week (or shorter) interval were chosen. At the request of the investigator, the IACUC approved a maximum interval of up to 5 weeks between machine sanitization. All other routine husbandry procedures, including the cleaning of cage pans, are done on schedule. In addition some cleaning of the cage bars can be accomplished as needed when the baboon is in the cage to maintain the environment as clean as possible.

B. Providing space outside of that specified by the standards.

1. We occasionally house two juvenile monkeys in cages that contain a total of 6 square feet of floor space. These cages are 60 inches high however, so they contain a total of 30 cubic feet. The veterinary medical officer felt that with the installation of additional perches these cages could be approved by the IACUC for holding two juvenile animals. As necessary and when additional perches are installed animals will be pair housed in these cages.
2. As part of a vaccine study, monkeys will be pair housed in a 4 sq ft Horsfall isolator for up to 21 days to prevent exposure of personnel to infectious agents. Monkeys will be returned to normal after confirmation that they are no longer shedding the infectious agents.
3. As part of imaging studies, dogs will be housed in a 9.2 sq ft, 35.5 inch high cage for up to 10 days to contain radionuclides used in the study. This housing is required to assure personnel safety

and prevent environmental contamination.

C. Exemption from the institution's environmental enrichment program and use of alternative programs during study.

1. The investigator requested and obtained an exemption from the IACUC from the requirement for social housing and/or environmental enrichment as described in the institution's Primate Environmental Enrichment Program. Prior to behavioral training, or viral infection we routinely house compatible animals together in pairs, triples or groups, depending on their age and sex. In addition, the standard cage enrichment and novel food enrichments are made available. However, if there is a behavioral component to the study, animals must be individually housed for training on to the tasks using computerized response boards (food pellet reward), or non-computerized manual dexterity devices (raisin puzzle feeder). During this time other enrichment devices may not be used. It is important to consider, however, that the animal's use of the computerized board or manual device certainly provides enrichment. The investigators will try to pair house animals during the weekends if it does not interfere with the training. During infections animals may or may not be pair housed. Animals will be singly housed if necessary to complete the study goals.

2. As part of a study of control of appetite, satiety and gastric motility non human primates will be singly housed, however, they will be provided with toys, remain within visual and olfactory contact with other monkeys, and will interact with humans.

D. Exemption form normal environmental temperature requirements.

1. As part of a study of effects of different drugs on the brain, squirrel monkeys will be maintained in an environmental chamber at 33°C [91.4°F] for 12 hours.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 51-R-0013

2. Number 13 of animals used in this study.

3. Species (common name) Rabbit of animals used in the study.

4. Explain the procedure producing pain and/or distress.

Rabbits were injected intravenously with varying doses of recombinant human Tumor Necrosis Factor alpha (rhTNF) or rhTNF bound to 25 nm colloidal gold particles (rhTNF-cAu). rhTNF-cAu is being developed as a new cancer treatment, and based on extensive murine studies the new drug is both safer and more effective at reducing tumors than rhTNF alone. As part of our efforts to bring this new drug entity into a first-in-man clinical trial, the FDA requires that we conduct a toxicology study in a second, non-rodent species. Based on our pre-IND meeting with the FDA panel, it was agreed that rabbits could be the species of choice for such a toxicology study. It is well-known in the literature that intravenous administration of native rhTNF at specific doses can cause fever, malaise, hypotension, gastrointestinal distress, including a cessation in eating, organ failure and death. Conversely, the colloidal gold nanoparticles are safe and have been used clinically for over 30 years. Rabbits were injected with doses of rhTNF-cAu that were known to cause fever, malaise and gastrointestinal distress, but were not fatal.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Scientifically, the study was designed to determine toxic effects of rhTNF-cAu, so anesthesia or other palliative measures could not be taken. Each rabbit was monitored closely throughout the 8-hour maximum acute toxic period, and clear, defined measures of clinical distress were established prior to treatment. Additionally, all animals were observed each day following treatment until normal eating, drinking and activity were re-established. If, during the acute toxicity period, a treated rabbit exhibited significant adverse effects over two consecutive 60-minute observation periods, then the animal was to be euthanized. No animals met these criteria and all treated animals resumed normal behavior within a maximum of 3 days post-treatment.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all the exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL
 (Chief Executive Officer or Legally Responsible Institutional Official)

	NAME & TITLE OF C.E.O. OR INSTITUTIONAL OFFICIAL (Type or Print)	DATE SIGNED 11/30/04
--	--	--------------------------------

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 51-R-0032
2. Number 185 of animals used in this study.
3. Species (common name) Guinea Pigs of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Plucking hair from the side of the guinea pig for placing a patch on the skin

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see item 6 below)

The hair must be plucked rather than shaved, which would cause skin irritation or use of depilatory cream, which may interfere with the patch.

The procedure takes approximately 2 minutes, anesthesia can not be used. Immuno suppression as a result of anesthesia is a well-documented phenomenon, and can last up to 7 days. As the study is looking for an immune response, this is unacceptable.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Burros	2	1	0	0	1

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and an Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

<p>Human Genome Sciences Inc 9410 Key West Avenue Rockville, MD 20850</p> <p>Telephone: (301) -251-6023</p>		

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, or experimentation, or held for these purposes. Attach additional sheets if necessary)

FACILITY LOCATIONS (Sites) - See Attached Listing

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS Form 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animal being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reason such drugs were not used must be attached to this report)	F. TOTAL NUMBER OF ANIMALS (COLUMNS C + D + E)
4. Dogs					0
5. Cats					0
6. Guinea Pigs		350			350
7. Hamsters					0
8. Rabbits					0
9. Non-human Primates					0
10. Sheep					0
11. Pigs					0
12. Other Farm Animals					0
13. Other Animals					0

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and an Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.
