Coming Attractions

1. Recap: Session CD-05 (Don Porter)
2. Demo: Near poster session Wed. afternoon
3. First official release:
   mailto:mumag-announce@cobalt.nist.gov

Outline

1. Project Objectives
2. Module Survey
3. Solver Details
4. Intermodule Communication (Don Porter)

Design Criteria

- Portable
  - Tcl/Tk
  - Windows NT & '95, Unix + X
- Open Design
  - Module level
  - Tcl/Tk script level
  - C++ source code level
- Flexible
  - Simplicity vs. functionality

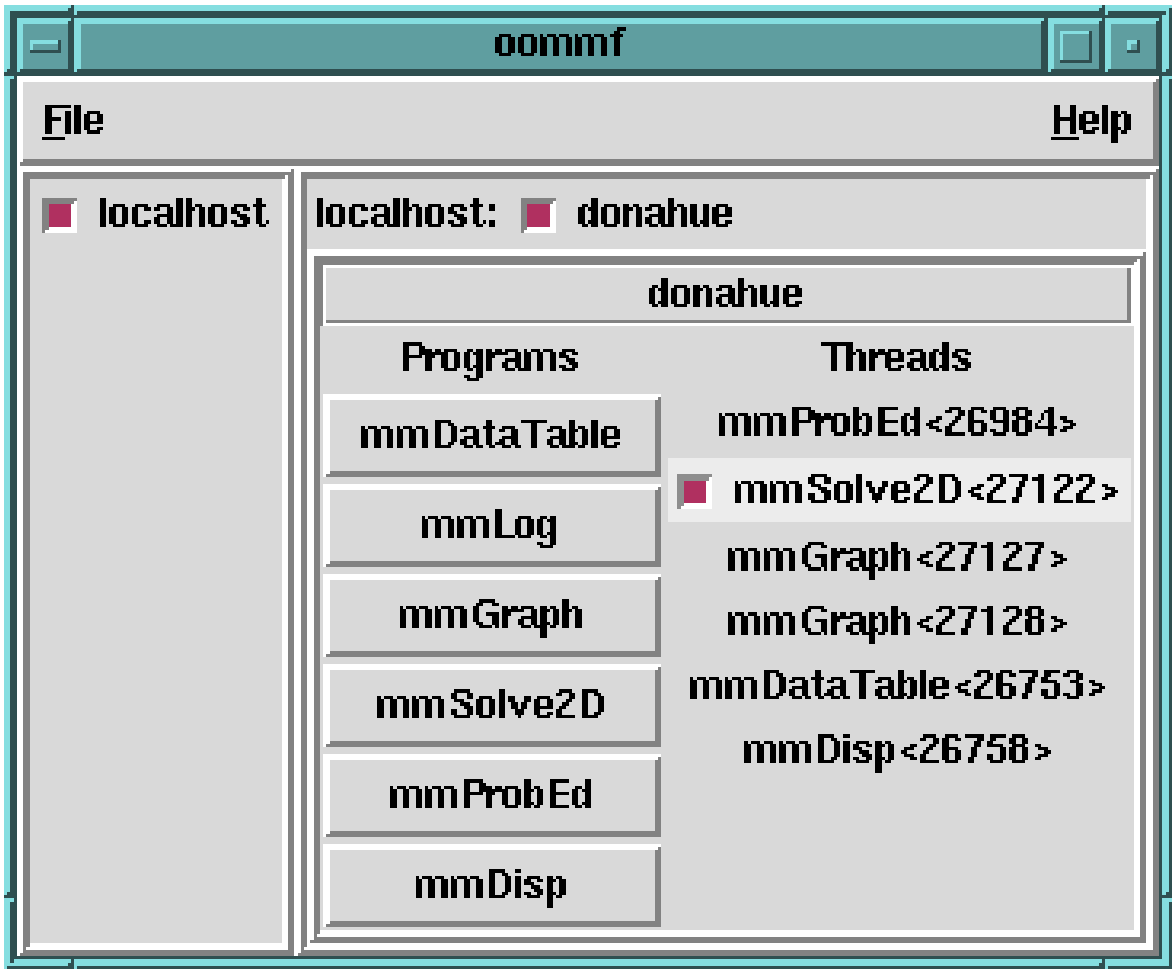
Requirements

- Tcl/Tk 7.5/4.1+ (8.0 recommended)
- Windows NT/95 or Unix+X (tested on SGI, Sun, Linux/Intel, Linux/Alpha)
- RAM: 32MB (?)
- Disk space: 5/25 MB
- C++ compiler to build from source

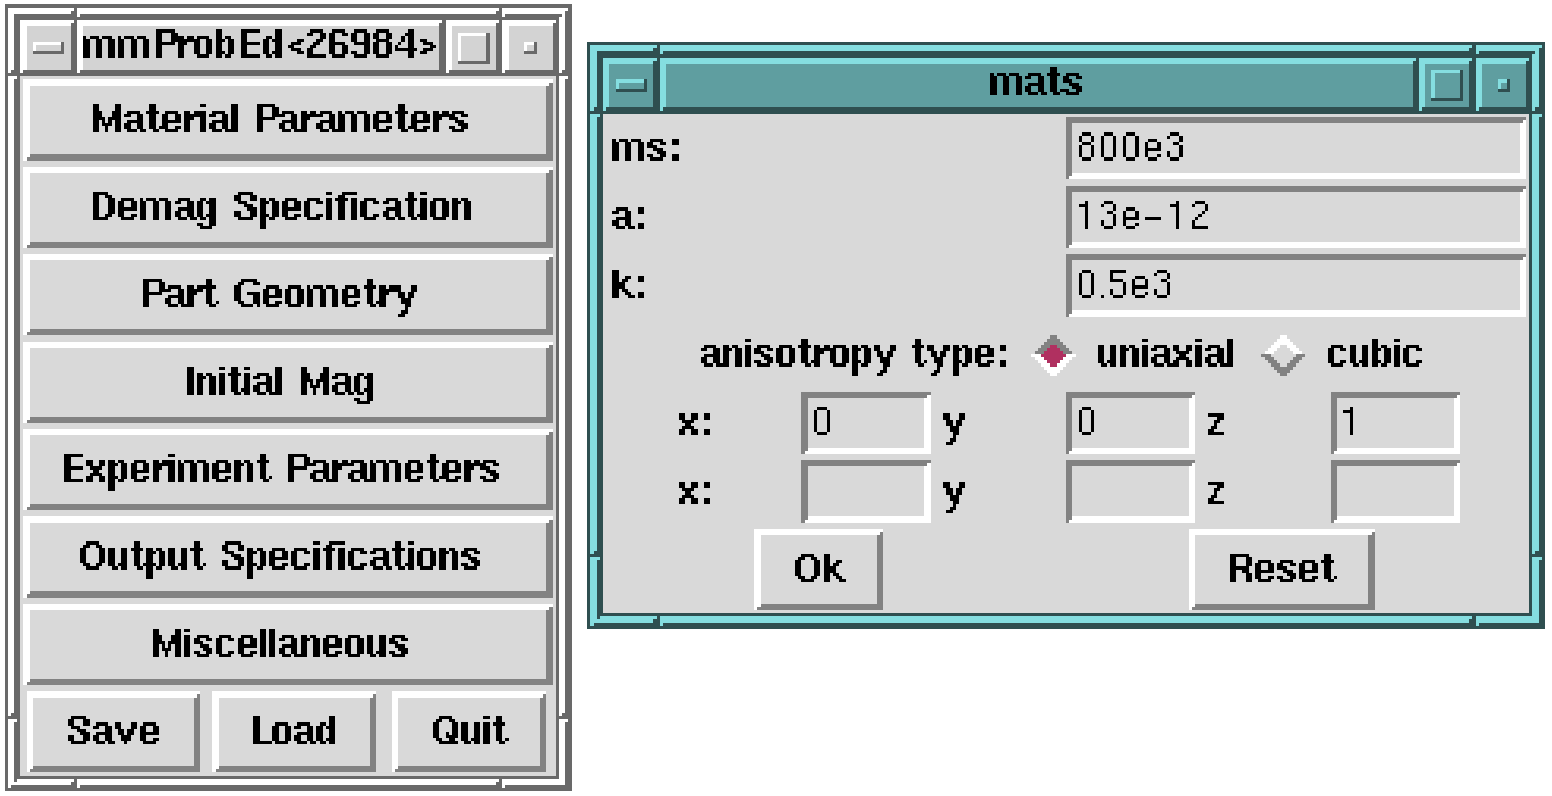
OOMMF Program Modules

- OOMMF Control/Module Launcher
- Problem Editor
- 2D Solver
- Data Table Display
- Graph Display
- Magnetization/Field Display

OOMMF Main Control/Module Launcher



Problem Editor



2D Solver

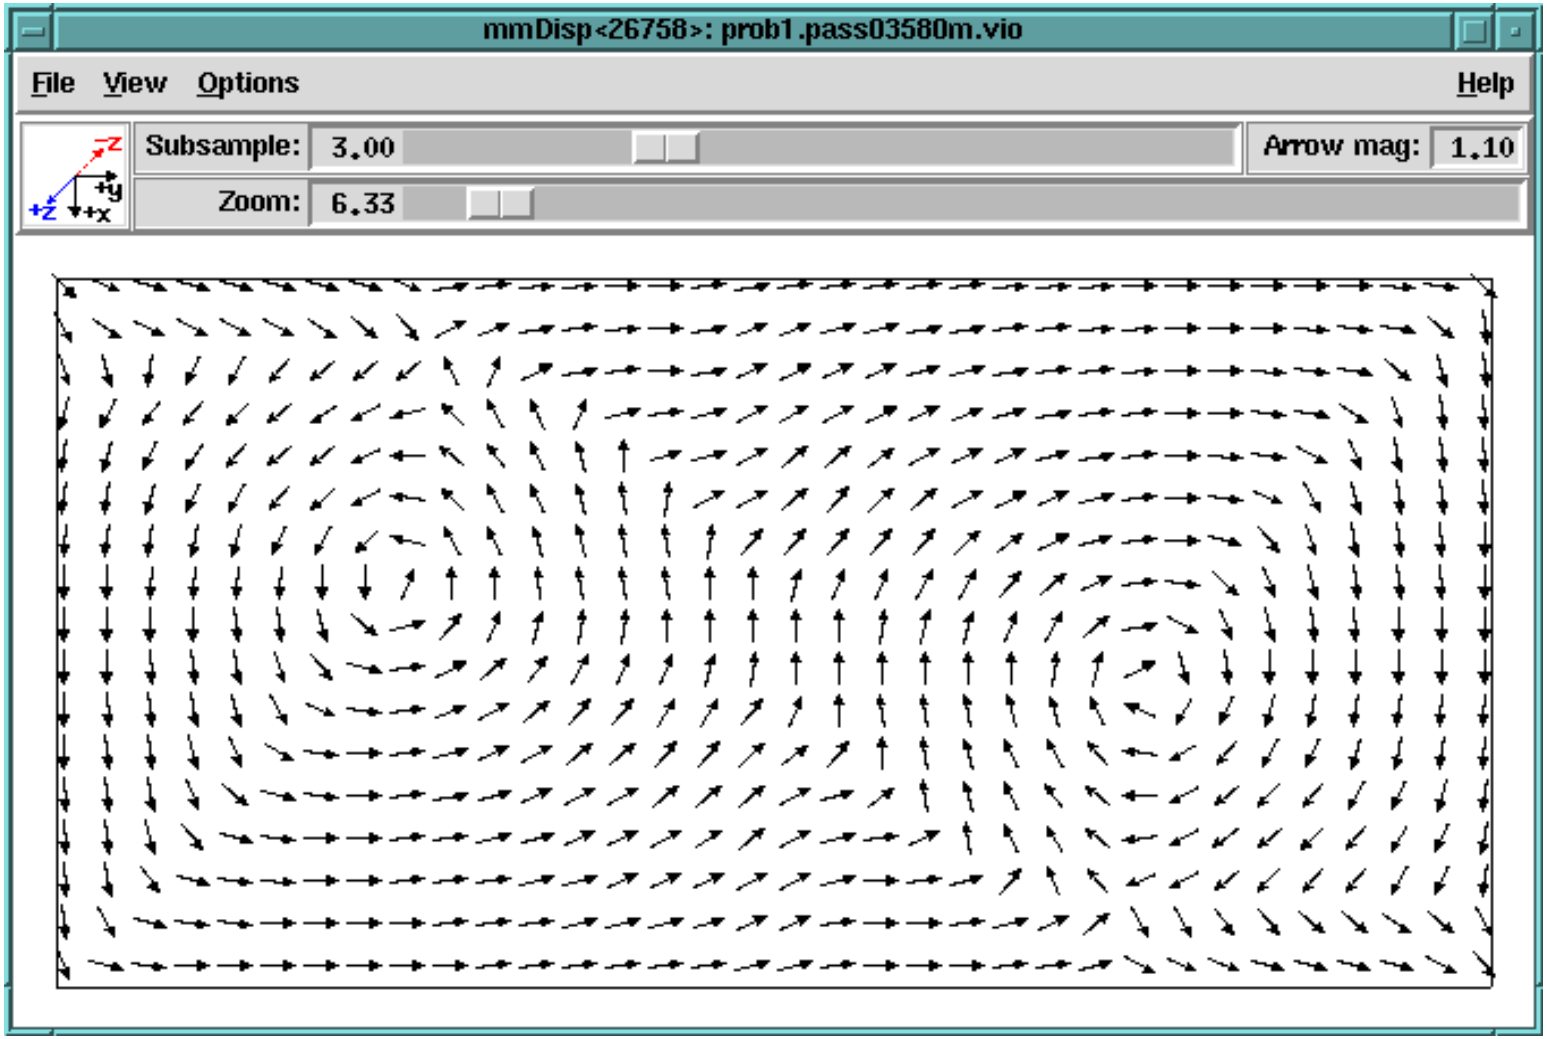
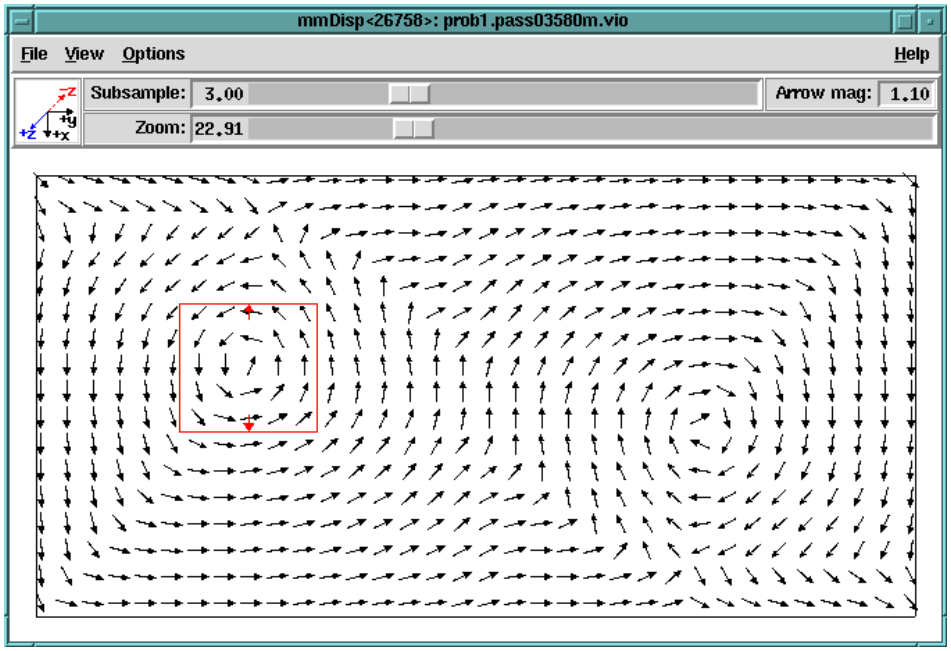
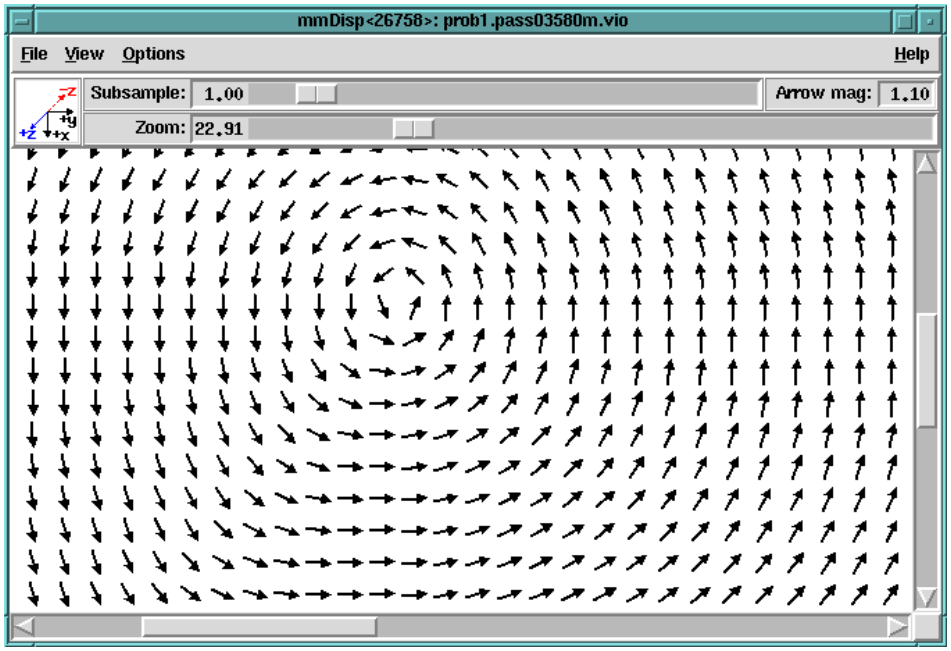
Magnetization/Field Display

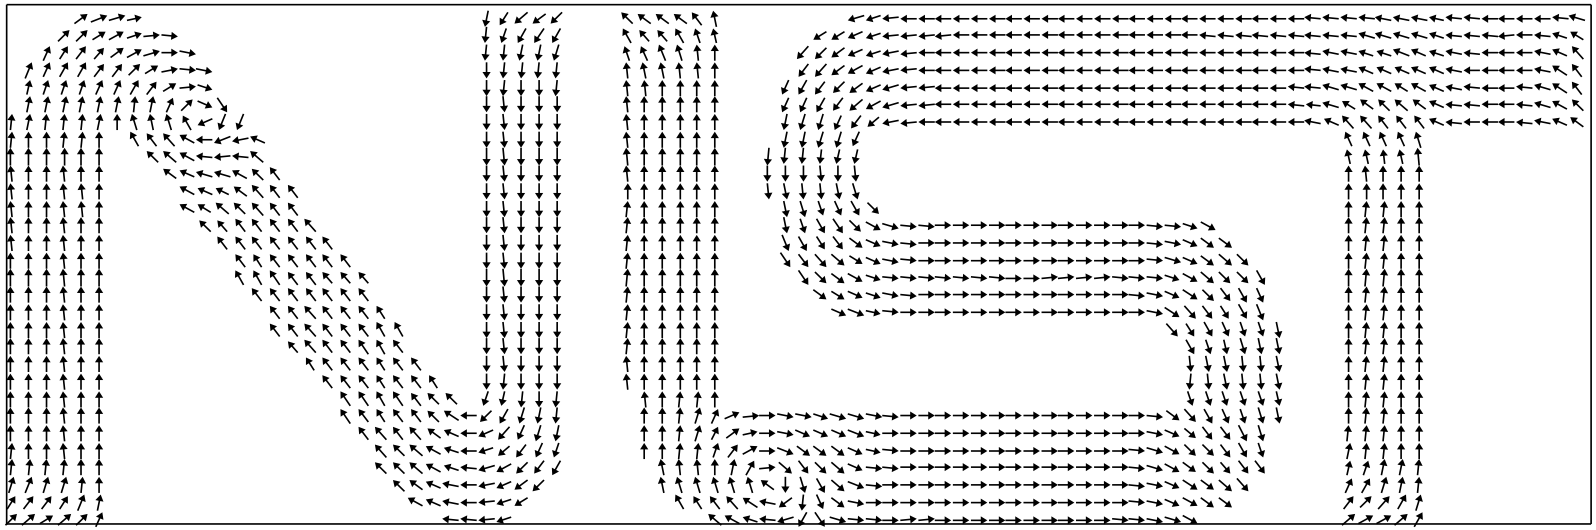


Magnetization/Field Display

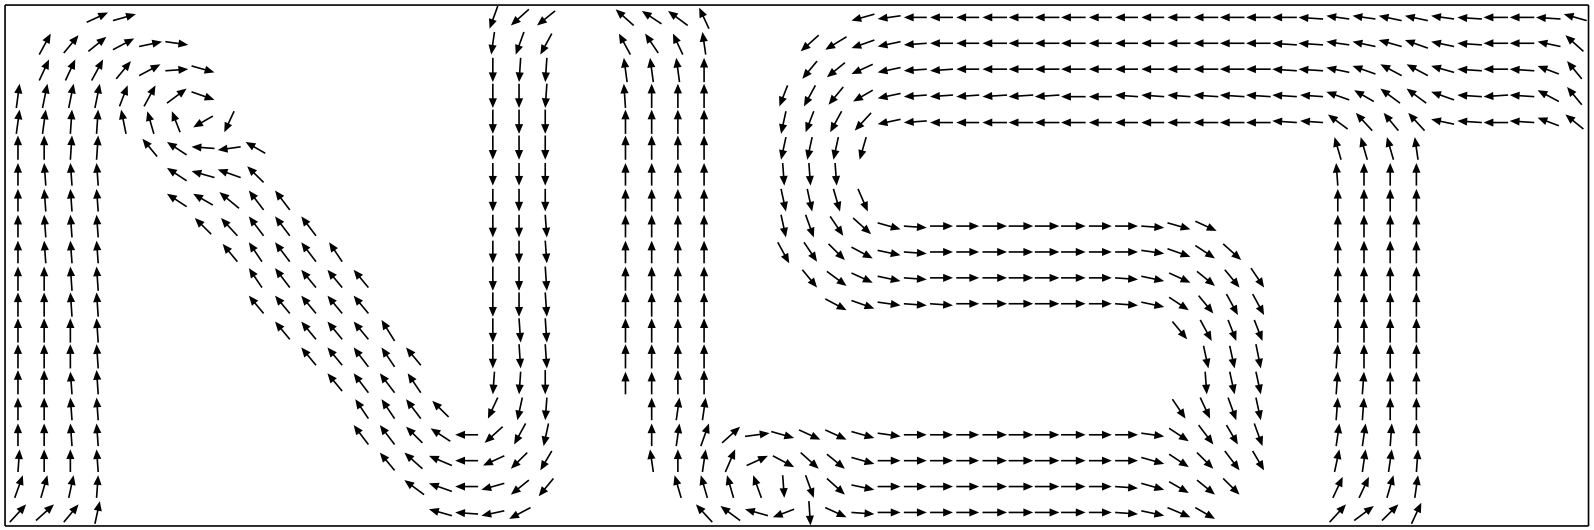




2D Solver



2D Solver



Solver Module Features

- 3D spins on a square 2D grid
- LLG ODE solver
- Demag calculated via FFT
- Anisotropy, applied field, and initial magnetization ptwise selectable
- Shaped elements

Interactive Solver Control

```
[asynca058:~/mag/OOMMF/mmsolve]$ bin-i386/mmsolve -tk
% set solver [omf_solver new -mif_filename prob1.mif]
_omf_solver0
% $solver GetEnergies
{Total 0.007102167589} {Exchange 3.826565412e-05}
{Anisotropy 4.040824693e-07} {Demag 0.007054657329}
{Zeeman 8.840523243e-06}
% $solver GetMaxTorque
0.1001536264
% $solver StepSolver
0.09989174052
% for {set i 0} {$i<10} {incr i} {$solver StepSolver}
% $solver GetMaxTorque
0.0954368046
```

```
% $solver help

'<omf_solver instance>' usage:
        $instance <instance_method> ?args?

Invalid call:
        $instance help

Invalid instance method: help

Valid instance methods:
        GetAveMag GetEnergies GetFieldStepCount
GetIterationValueLabels GetIterationValues GetMaxAngle
GetMaxTorque GetNomAppliedField GetODEStepCount
GetOutputBasename GuessAppliedFieldAxis HystLoop
IncrementFieldStep RelaxState RelaxStopCheck Reset
StepSolver WriteFieldFile WriteMagFile cget class
configure delete
```

70 Line Micromagnetic Program

```
set mif_file prob1.mif
if {$argc>0} { set mif_file [lindex $argv 0]}

```

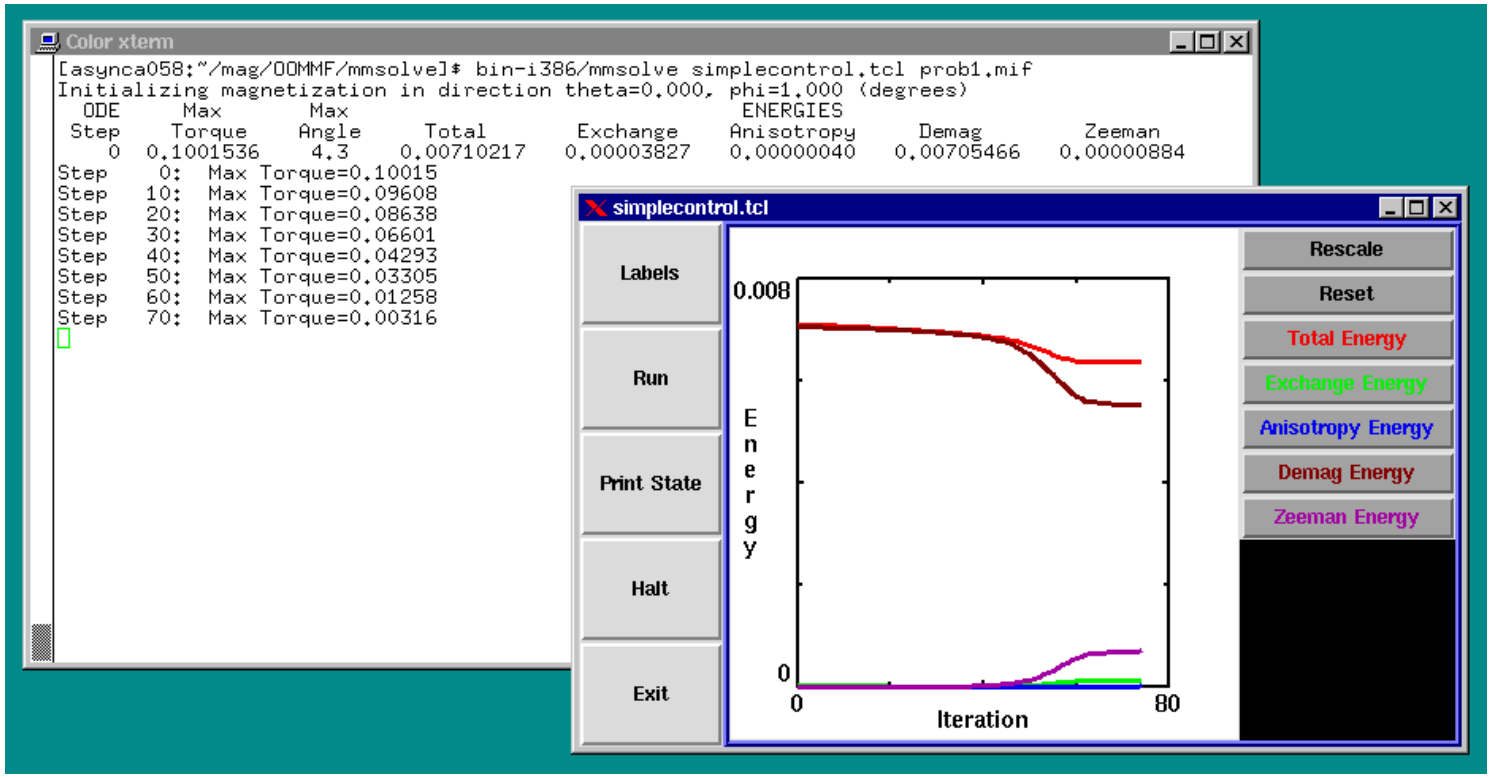
70 Line Micromagnetic Program



- Controller code is written in Tcl
- Tcl code is plain ASCII, interpreted at runtime

$\Longrightarrow$ Controller code is DATA!

Module Architecture

- Benefits
  - Networked Operation: Multiple Hosts
  - Layer of Open Design
  - Interactive Response

Module Architecture

- Objectives
  - Portable
  - Multiple Simultaneous Copies
  - Module Independence
  - Open Extensible Protocol

```
# Support libraries
package require Tk
package require em
package require net

set log [em_widgetlog new -dateformat "" -title ""]
set protocol [net_protocol new -name "OOMMF log protocol 0.0"]
$protocol Wrap $log 1
set server [net_server new -protocol $protocol -alias mmLog \
             -log em_nop]
$server Start 0
wm title . mmLog<[pid]>
em_eventHandler new $log delete { after 2000 exit }
vwait omf_forever
```
