

State Per Capita Personal Income and State Personal Income, 2001

By Duke Tran

IN 2001, growth in per capita personal income for the Nation slowed to 2.7 percent from 5.8 percent in 2000 (table A).¹ The 2.7-percent growth was the weakest since 1991—the trough of the 1990–91 U.S. recession—when it was 2.3 percent. Growth in per capita income decelerated in 46 States and the District of Columbia (DC). U.S. per capita income was \$30,271 in 2001 and \$29,469 in 2000. The following are among the major highlights for 2001:

- Three western States—Washington, Nevada, and Oregon—and South Dakota and Michigan had the slowest growth in per capita income in 2001 (chart 1).

1. Per capita personal income is the annual personal income of residents divided by resident population as of July 1.

- Four small, energy-intensive States—New Mexico, Wyoming, Oklahoma, and Alaska—led the Nation in per capita income growth in 2001.

- Connecticut continued to lead the Nation with per capita income of \$41,930, while Mississippi continued to trail with per capita income of \$21,643.

This article also discusses personal income growth in the fourth quarter of 2001:

- U.S. personal income declined \$16.6 billion, or 0.2 percent (at quarterly rates), the first decline since the first quarter of 1994.
- The weakness was widespread; personal income declined in 34 States, was unchanged in Massachusetts and New Mexico, and grew only slightly in 14 States and DC.

CHART 1

Per Capita Personal Income Growth in 2001

At the end of this article are four tables: Table 1 presents estimates of personal income and per capita personal income for 1996–2001; table 2, disposable personal income and per capita disposable personal income for the same period; table 3, quarterly estimates of personal income for each State and region beginning with the first quarter of 1998; and table 4, quarterly estimates of personal income by major source and of earnings by industry beginning with the second quarter of 2000.

U.S. per capita income growth

The slowdown in per capita income growth in 2001 reflected a substantial deceleration in personal income growth, to 3.7 percent in 2001 from 7.0 percent in 2000, and a slight deceleration in population growth, to 0.9 percent from 1.1 percent (table A).²

The deceleration in U.S. personal income growth reflected slowdowns in two major components: Net earnings, which accounted for nearly 70 percent of personal income, grew only 3.4 percent in 2001 after growing 7.8 percent in 2000; and dividends, interest, and rent, which accounted for about 18 percent of personal income, grew only 2.0 percent after growing 5.8 percent (table B).³ Transfer payments, the third major component of personal income, grew 7.6 percent in 2001 after growing 5.1 percent in 2000.

2. The preliminary estimates of State personal income for the year 2001 are derived from the average of the estimates of State personal income for the four quarters of 2001. This estimate of U.S. personal income—the sum of the estimates of State personal income for each State—differs from the estimate of personal income in the national income and product accounts (see the box “Note on the Estimates of State Personal Income”).

3. Net earnings is calculated as earnings by place of work less personal contributions for social insurance plus an adjustment that converts these earnings to a place-of-residence basis. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

Net earnings is used to analyze changes in the composition of personal income; earnings by place of work is used to analyze changes in the industrial structure of earnings. Estimates of net earnings by industry are not available, because the source data used to adjust earnings to a place-of-residence basis are not available by industry and because personal contributions for social insurance are not estimated by industry. For the definitions of the components of earnings, see U.S. Bureau of Economic Analysis, *State Personal Income, 1929–97* (Washington, DC: U.S. Government Printing Office, 1999), or go to BEA's Web site at <www.bea.gov/bea/mp.htm>, and look under “Regional programs” for “State Personal Income, 1929–97.”

Acknowledgments

The quarterly and preliminary annual estimates of State personal income were prepared by Marian B. Sacks, Matthew A. von Kerczek, and Daniel R. Corrin of the Regional Economic Measurement Division, under the supervision of James M. Zavrel, Chief of the Regional Income Branch. Robert L. Brown, Chief of the Regional Economic Measurement Division, provided general guidance.

The slowdown in earnings in 2001 mainly reflected a substantial deceleration in payroll growth, to 3.4 percent from 8.2 percent, because of weak job growth (the U.S. unemployment rate increased to 4.8 percent in 2001 from 4.0 percent in 2000). The slowdown in dividends, interest, and rent was accounted for by a downturn in interest income that reflected lower interest rates.

State per capita income growth

Most States shared in the Nation's deceleration in per capita personal income growth in 2001. Forty-six States and DC, accounting for 96.3 percent of U.S. personal income and 95.3 percent of population, had slower income growth in 2001 than in 2000 (table A).

Per capita income growth was unchanged in Arkansas. Per capita income growth picked up in New Mexico, Louisiana, and Alabama, reflecting a combination of accelerations in personal income growth and decelerations in population growth.

By industry, earnings growth decelerated or turned negative in all major industry groups in most States. The weakness was widespread in both durable and nondurable goods manufacturing, wholesale trade, and transportation and public utilities.

Slowest growing States. In 2001, the five States with the slowest growth in per capita income were Washington (1.1 percent), Nevada (1.2 percent), Oregon (1.2 percent), South Dakota (1.3 percent), and Michigan (1.4 percent) (chart 1). Of these States, only Washington had per capita income above the U.S. average of \$30,271. Washington ranked 10th highest in per capita income in 1999, dropped to 11th in 2000, and to 13th in 2001.

With the exception of Nevada, personal income growth in the slowest growing States was below the U.S. average of 3.7 percent. In South Dakota and Michigan, population growth was below the U.S. average of 0.9 percent.

In Nevada, population growth, which was more than four times the U.S. average of 0.9 percent, offset fast growth in personal income. This pattern of rapid population growth offsetting fast growth in personal income has persisted since 1992.

In the other four States—Washington, Oregon, South Dakota, and Michigan—personal income growth was held back by slow growth in net earnings (tables C and D).

In Washington and Oregon, declines in wholesale trade and construction held back earnings growth, and in Oregon, a large decline in durable goods manufacturing also contributed to slow earnings growth. Washington had the slowest growth rate in earnings in services, at only 0.7 percent, compared with 5.7 per-

cent in the Nation.

In South Dakota, a large decline in farm earnings was the major contributor to the weak earnings growth. A decline in durable goods manufacturing also contributed.

In Michigan, declines in earnings in both durable and nondurable goods manufacturing and wholesale trade were the major contributors to the slow earnings growth; declines in construction and farms also contributed. The decline in durable goods manufacturing partly reflected a slowdown in the motor vehicle industry.

Fastest growing States. In 2001, the four States with the fastest growth in per capita incomes were New Mexico (5.6 percent), Wyoming (5.2 percent), Oklahoma (4.8 percent), and Alaska (4.6 percent). Of these States, only Alaska had per capita income above the U.S. average of \$30,271. Alaska ranked 14th in per capita income nationwide in 2001, up from 15th in 2000. This was the first increase in rank for Alaska since 1997, when it dropped out of the top 10 per capita income States.

By size, these four States together accounted for a relatively small share (1.9 percent) of the U.S. personal income and contributed 2.7 percent of total income growth in 2001. Growth rates in personal income in all four States exceeded the U.S. average of 3.7 percent, and except in Alaska, growth rates in population were below the U.S. average of 0.9 percent.

In all four of the fastest growing States, net earnings was the major contributor to personal income growth. Transfer payments also contributed substantially to personal income growth in New Mexico, Oklahoma, and Alaska.

All four States had double-digit increases in mining earnings, but the major contributors to growth in earnings by place of work were earnings in government and in services. The strength in government earnings was mainly in State and local government.

In all four States, earnings in construction also contributed substantially to the fast earnings growth. In New Mexico and Wyoming, earnings in retail trade also contributed substantially to earnings growth. In Oklahoma and Alaska, earnings in transportation and public utilities also contributed substantially to earnings growth.

Rankings of State per capita income

The ranking of States by per capita income changed little from 2000 to 2001. Wyoming, Nebraska, and Kansas increased more than two positions in rank, while Georgia and Oregon declined more than two positions in rank (table A).

The increases in rank in Wyoming (to 20th from

28th), Nebraska (to 22nd from 26th), and Kansas (to 24th from 27th), reflected near- or above-average growth in personal income and virtually no growth in population. In contrast, the decrease in rank in Oregon (to 29th from 25th) reflected weak growth in personal income and above-average growth in population. The decrease in rank in Georgia (to 27th from 22nd), reflected rapid population growth that more than offset fast income growth.

The 10 States with the highest per capita incomes in 2001 were Connecticut (\$41,930), Massachusetts

In the preliminary annual estimates of State personal income presented in this article, U.S. personal income—the sum of the estimates for all States—increased 3.7 percent in 2001. The national income and product accounts (NIPA) estimate of personal income, which was released on March 29, 2002 (and which included the “final” estimate for the fourth quarter of 2001), increased 4.9 percent. The 1.2-percentage-point, or \$90 billion, difference primarily reflects the incorporation of more recent source data for wage and salary disbursements and for farm proprietors’ income into the State estimates.¹

In 2001, the increase in the U.S. total of the State estimates of wages and salaries is \$90.0 billion less than the corresponding increase in the NIPA estimates of wages and salaries. This difference reflects the incorporation of Bureau of Labor Statistics (BLS) tabulations of the wages and salaries of employees covered by unemployment insurance (UI) for 2001 into the State estimates. Each April, as part of the procedure for preparing the national control totals used for the State estimates for the most recent year, the annual NIPA estimate of wages and salaries, which is based primarily on national data from the monthly BLS establishment survey, is compared with an alternative annual estimate that is based primarily on UI tabulations of wages and salaries for the first three quarters of the year and on a BEA estimate for the fourth quarter.² This year, because the two series differed significantly, the UI-based estimate, which incorporates the more comprehensive tabulations for three of the quarters, was used to develop the national control totals for wages and salaries.

In 2001, the decrease in the U.S. total of the State estimates of farm proprietors’ income is \$2.7 billion in 2001;

1. The State estimates also differ from the NIPA estimates because of differences in coverage and in the methodologies used to prepare the estimates. The main differences stem from the treatment of the income of U.S. residents who are working abroad and the treatment of the income of foreign residents who are working in the United States. For a detailed description of the differences, see the box “Personal Income in the NIPA’s and State Personal Income” in Robert L. Brown et al., “Comprehensive Revision of State Personal Income, Revised Estimates for 1969–98,” SURVEY OF CURRENT BUSINESS 80 (June 2000): 72. The article may also be viewed on BEA’s Web site at <www.bea.gov/bea/regional/articles/0600spi/maintext.htm>.

(\$38,845), New Jersey (\$38,153), New York (\$35,884), Maryland (\$34,950), New Hampshire (\$33,928), Colorado (\$32,957), Minnesota (\$32,791), Illinois (\$32,755), and California (\$32,648). Of these States, per capita incomes in Connecticut, Massachusetts, New Jersey, New York, and Maryland have been ranked in the top five States every year since 1991. Except for New Hampshire, Colorado, and California, growth rates in per capita income in these top 10 States exceeded or equaled the U.S. average of 2.7 percent in 2001.

Note on the Estimates of State Personal Income

in contrast, the decrease in the NIPA estimates is \$3.0 billion. The difference reflects the incorporation of more recent annual State data from the U.S. Department of Agriculture (USDA) into the State estimates for 2001.

The table below shows the history of the April adjustments to wages and salaries over the past 12 years. In half of the years, no adjustment was made, because the UI-based series did not differ significantly from the NIPA estimates of wages and salaries. In those cases, when the next NIPA revision to wages and salaries was released, usually in July, the revisions to the growth in wages and salaries were small, ranging from a downward revision of \$6.9 billion to an upward revision of \$13.8 billion. The growth rate for wages and salaries was revised 0.1 percentage point or less in four of the cases, and the largest revision was 0.4 percentage point for the 1997 estimate.

For each of the six times that the national control total of wages and salaries was adjusted for the State series, the direction of the revision was correct. Except for the adjustment of the 2000 estimate, the subsequent annual revision to the NIPA estimate was larger than the adjustment to the State estimate. In the 2000 estimate, the April adjustment overstated the annual revision by \$10.3 billion.

This year's adjustment is the largest dollar adjustment since these procedures were first implemented in 1990. However, in percentage terms, the 1990 adjustment reduced the growth rate of wages and salaries in 1989 by 2.3 percentage points, while this year's adjustment reduces the growth rate in 2001 by 1.9 percentage points.

In July, as part of the regular annual revision of the NIPAs, the national estimates of wages and salaries for 2001 will be revised to incorporate the four quarters of UI

2. The monthly establishment survey covers total nonagricultural employment and the average weekly hours and average hourly earnings of production and nonsupervisory workers. The UI tabulations are compiled from reports filed quarterly by all employers covered by State UI laws and by the unemployment compensation program for Federal employees; these data cover wages and salaries, bonuses, and other non-regular payments for virtually all workers. For more detailed information, see "Sources and Methods for the Quarterly Estimates of State Personal Income" in *State Personal Income, 1929-97* (Washington, DC: U.S. Government Printing Office, May 1999), or go to <www.bea.gov/bea/regional/articles/spi2997/maintext.htm>.

The 10 States with the lowest per capita incomes in 2001 were Mississippi (\$21,643), West Virginia (\$22,725), Arkansas (\$22,912), New Mexico (\$23,162), Montana (\$23,532), Louisiana (\$24,084), Utah (\$24,202), Idaho (\$24,257), Alabama (\$24,426), and South Carolina (\$24,594). In most of these States, per capita incomes have been near or below 80 percent of the U.S. averages since 1991. Only South Carolina and Idaho had growth rates in per capita income that were below the U.S. average of 2.7 percent in 2001.

tabulations from BLS. The NIPA revision will also incorporate the latest USDA data and other more recent, complete, detailed, and consistent data than those that were previously incorporated.

State personal income, fourth quarter 2001

In the fourth quarter of 2001, U.S. personal income decreased \$16.7 billion, a drop of 0.2 percent. It was the first negative quarterly growth rate since a 0.6-percent decrease in the first quarter of 1994.

Personal income declined in 34 States and was unchanged in Massachusetts and New Mexico. Personal income grew slightly in 14 States and DC; the largest increase was 0.5 percent in Alaska (table E).

By industry, declines in farms, in manufacturing, and in wholesale trade were the major contributors to the decline in earnings by place of work. Most States shared the weakness in these major industries. Montana and Kansas had the largest percentage declines in farm earnings. New Mexico, Connecticut, and Utah had the largest percentage declines in manufacturing earnings. Hawaii, Arkansas, and Colorado had the largest percentage declines in wholesale trade (table F).

Tables A–F and tables 1–4 follow.

Table A. Per Capita Personal Income, Personal Income, and Population, by State and Region, 2000–2001

1. Net earnings is earnings by place of work—the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income—less personal contributions for social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

Note. Estimates may not add to totals because of rounding.

1. Net earnings is earnings by place of work—the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income—less personal contributions for social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

Note. Estimates may not add to totals because of rounding.

^a Preliminary.^r Revised.

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. Estimates reflect population estimates available as of April 2002.

2. Percent change was calculated from unrounded data.

Note. The personal income level shown for the United States is derived as the sum of the State esti-

mates. It differs from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

Table 2. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region, 1996–2001

Area name	Disposable Personal Income						Per capita disposable personal income ¹						Rank in U.S.

^p Preliminary.^r Revised.

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. Estimates reflect population estimates available as of April 2002.

2. Percent change was calculated from unrounded data.

Note. The personal income level shown for the United States is derived as the sum of the State esti-

mates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

Table 3. Personal Income by State and Region
 [Millions of dollars, seasonally adjusted at annual rates]

Area name	1998				1999				2000				2001				Percent change ¹

^d Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.

¹ The estimates of earnings for 2000–2001 are based on the 1987 Standard Industrial Classification.

2. Personal contributions for social insurance are included in earnings by type and by industry, but they are excluded from personal income.

3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United

States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less wage and salary disbursements to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

6. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

and Earnings by Industry¹, 2000:II–2001:IV—Continued
