Foreword

In the past, ordnance, explosives, and chemical warfare materials often created environmental hazards at former and current military sites. When the U.S. Army Corps of Engineers was tasked to remove these hazards, the Corps immediately realized that it had to understand the processes, practices, and materials used at these sites. Studying the history of these sites was the first step to assuring a thorough and cost-effective cleanup.

Research on the histories of the sites quickly revealed that the search for relevant documents was an arduous, time-consuming task. Researchers found that records documenting the history of the hazardous processes, practices, and materials are dispersed in various government and private collections throughout the United States. While these records are extensive, they often are difficult to locate and use.

This research guide is intended to help all environmental researchers successfully navigate the archival maze of federal records and federal records repositories. The guide is a joint effort of the Formerly Used Defense Sites team of the Office of History and the Environmental Division, both of Headquarters, U.S. Army Corps of Engineers. This volume is the third in a series, *Guides to Environmental Research*, designed to help environmental researchers complete their historical research as quickly and economically as possible.

ROBERT CREAR
Colonel, Corps of Engineers
Chief of Staff

About the Authors

Michael W. Harper received a B.S. in business administration from the University of North Dakota. He completed an 18-month ordnance internship at the U.S. Army Defense Ammunition Center. He has served the U.S. Army in the U.S., Europe, and Southwest Asia as an ammunition specialist. For the last several years, working in support of the U.S. Army Corps of Engineers, Rock Island District, Mike has characterized former military sites for ordnance and explosives hazards, written several technical reports, and specialized in environmental research on former and active military sites.

Thomas R. Reinhardt received a B.A. in history from Edinboro University of Pennsylvania. He completed a 2-year ordnance internship at the U.S. Army Defense Ammunition Center. He has served the U.S. Army in the U.S. and Europe as an ammunition specialist. For the last several years, working for the U.S. Army Corps of Engineers, Rock Island District, Tom has specialized in environmental research on former and active military sites.

Barry R. Sude received a B.A. in history from The George Washington University and holds an M.A. and Ph.D. in American Military History from Temple University. He has taught courses in history and political science at Western Carolina University and now is an archival research consultant, specializing in research on former and active military sites. Barry has written several articles on American and European military history.

Preface

Historical research is a vital part of every analysis of environmental hazards leading to the cleanup at former and current military sites. Such background information will help the researcher understand the processes, ordnance practices, and materials employed at these sites, and find ways to help mitigate the effects. *Note: references to ordnance and explosives in this guide also include chemical warfare material.*

This research guide focuses primarily on the historical records maintained by the National Archives and Records Administration (NARA) located in the Washington, D.C. area and throughout the country. It also includes four military repositories maintained by the Army, Navy, and Air Force. The researcher should check with NARA for any changes in their procedures or holdings after the date of publication of this book.

Several organizations and people helped complete this guide. The U.S. Army Technical Center for Explosives Safety, the Rock Island District of the U.S. Army Corps of Engineers, and BR Sude Research provided time and materials. Through the years, people from NARA and the military services records repositories have explained the intricacies of archival research. Vaughn Heiple and Lisa Wagner of BR Sude Research graciously let us draw on their expertise and experience. Marilyn Hunter, and later, Jean Diaz, of the U.S. Army Corps of Engineers, Office of History, contributed their formidable editing skills and technical support. John Lonquest, also of the Office of History, rewrote and contributed to several chapters of this publication.

Martin Gordon, formerly of the Office of History, not only envisioned the need for this publication but also provided the necessary guidance and support.

I. National Archives and Records Administration

Archival and Records Management Functions

When the National Archives and Records Administration (NARA) was established in 1934 it consisted of a single archive on Pennsylvania Avenue in downtown Washington, D.C. Reflecting the growth of the federal government, NARA has expanded steadily over the intervening six decades and today the agency is involved in all phases of federal records management. Although NARA's research archives in Washington, D.C., and College Park, Maryland, are still the agency's most prominent facilities, NARA also encompasses a network of regional archives, records centers, and the presidential libraries. Together these facilities house approximately 20 million cubic feet of records, 5 million maps and charts, 21 million photographs, and hundreds of thousands of rolls of movie film and video tape.

Between 1934 and 1949 NARA's focus was primarily archival, that is, collecting, preserving, and making historically valuable documents and photographs available for study. But the depression and World War II created a tidal wave of federal records, and NARA found that it had neither the space nor the staff to handle the huge influx of records. Looking for a way to systematize federal records retention and storage, in 1949 the government broadened the agency's mandate, giving it responsibility for the handling of current federal records as well as permanently valuable archival materials. To fulfill its new mission, in 1950 NARA opened its first records center. Today the records administration operates a nationwide network of 15 such interim storage facilities.

In 1969 the agency began decentralizing its archival holdings by building a series of regional archives—facilities that would make the historically valuable records readily accessible to the public in the regions where those records were created. Currently the records administration operates 12 regional archives.

Initially the regional records centers and regional archives were separate organizations (although often co-located), but in the late 1990s NARA reorganized its field program and grouped the regional records centers and

archives into 9 geographically distinct regions. The new combined offices are called Regional Records Services Facilities.

The majority of NARA's regional facilities still include separate archival and records center holdings, each with its own staff, but the names of those organizations have changed. For example, within the Great Lakes Regional Records Services Facility, the former records center is now identified as Records Center Operations, and the former regional archive is called Archival Operations. The majority of the NARA regions have a similar organizational arrangement, although a few Regional Records Services Facilities have only archival or records center holdings. A summary of NARA's Washington, D.C. area facilities and Regional Records Services Facilities, along with a matrix of their types of holdings, is presented in Figure 1. A complete list of all of NARA's facilities, including the archives and records centers in the Washington, D.C. area, regional facilities, presidential libraries, and the National Personnel Records Center, is available at NARA's website: www.nara.gov.

Archives and Records Centers: An Important Distinction

There are two fundamental differences between NARA's archival and records center holdings. First, the records centers maintain the government's more recent records. As a general guideline, records less than 30 years old are usually housed within the federal records system; whereas most of the records more than 30 years old either have been destroyed or transferred to one of the archives. (Researchers should note that the 30-year rule is only a guideline and can vary substantially depending on the archive, records center, or the originating agency.)

The second major distinction between NARA's archival and records center holdings is the legal ownership of the records. The archives own the records in their custody, the records centers do not. When records are accessioned into the archives, the originating agency transfers ownership of the records to NARA. The archives then arranges and preserves the records, prepares finding aids to facilitate their use, and makes the records available to the public.

In contrast, NARA's records centers, which include the Washington National Records Center in Suitland, Maryland, and the regional records centers, serve as specialized records warehouses, best characterized as interim storage facilities. Federal agencies transfer their inactive records to a nearby records center where they are stored, sometimes for decades. During that time, in accordance with the records retention schedules,

Figure 1. NARA Archives and Records Centers

records of transitory value are destroyed, and those records of lasting historical importance are eventually transferred to one of NARA's archives. The records centers neither own nor control the records they house. From a researcher's perspective the difference between the archives and records centers boils down to access: because the records centers do not own the records stored within their vaults, they are not allowed to grant researchers access to them. Permission to review the records must be obtained in writing from the originating agency.

Understanding the Terminology

To navigate successfully through NARA's holdings, one must understand a few key terms and concepts. First, NARA groups its records by originating agencies. A **record group** is a collection of information created by a government department, agency, or organization. For example, Record Group 77 contains the Records of the Office of the Chief of Engineers.

Record groups, in some cases, are further subdivided into entries or accessions. An **entry** is a series of related records within a record group covering a specific time frame. An **accession** is a collection of correspondence, reports, histories, contracts, or other records created by an agency branch, directorate, or department, that has been transferred to the custody of a NARA records services facility for storage, disposal, or accession into the archives.

NARA maintains more than 500 record groups; however, not all of these record groups apply to research in support of environmental cleanup at former and current military sites. The Appendix identifies record groups that do apply to these various sites—such as airfields, coastal defense installations, or bombing targets.

Locating Records within NARA

Finding the records you want within the record center system is usually more difficult than locating them in the archives. The records centers are interim storage facilities with the emphasis on storage, not research. Unlike the archives, which has prepared finding aids for many of its collections, there are few guides to record center holdings. At the centers, the two primary records management tools are the "Accession Number Master List" (Figure 2), often referred to simply as the "01 Report" and the Standard Form 135 (SF 135) (Figure 3).

Prepared by record group, the "01 Report" contains a one-line description of each accession. Although the truncated descriptions are often incomplete and sometimes misleading, the entries on the report are cross referenced by accession number to the SF 135. The SF 135 is prepared by the originating agency and accompanies the records when the documents are transferred to the records centers for storage. These forms often provide researchers with detailed descriptions of the records within the accession.

Figure 2. Accession Number Master List

Government researchers can access the “01 Reports” for each records center using the Centers Information Processing System (CIPS). Information on CIPS is available on NARA’s website. Copies of the reports also are available at the individual records centers. Online access is limited to government personnel; private patrons wishing to review the “01 Report” will have to make arrangements to view the report at the applicable records center. Although the “01 Reports” are helpful, to make a thorough survey of a record center’s holdings there is no substitute for examining the SF 135s.

Once researchers locate the applicable records, they still must obtain permission to look at them. Remember, the records centers do not own the records, they are merely storing them for the originating agency. Permission to review the records must be obtained from the originating agency or its successor, and getting that is often a time-consuming process. Once the researcher has obtained the necessary authorization, however, the records center will retrieve the records and make them available in its reading room.

Figure 3. Transmittal of Government Records Form

In contrast to the records centers, the archives' collections are better indexed and more readily accessible. For an overview of NARA's archival holdings, consult the comprehensive *Guide to Federal Records in the National Archives of the United States*, now available in a searchable electronic database at www.nara.gov. The regional archives also have a number of their finding aids available online through the Regional Records

Services Facilities' individual websites. The archives also have hundreds of printed finding aids.

Preparing for Research

When conducting research with NARA for a given military site, researchers should include the Washington, D.C. area facilities (Archives I and II and the Washington National Records Center) as well as the appropriate regional facility.

It is wise to call ahead before visiting any records center or archive. This serves several purposes. It allows you to make introductions; ensures that the records you want to use are indeed available and open for research; helps you become familiar with the facility's administrative procedures, and establishes an archivist as point-of-contact for the visit.

Before your first visit, provide the archivist with a brief written accounting of each site you are researching (Figure 4). Give the archivist as much information as possible including the name of the site, the dates it was in operation, and its location. Providing this type of information allows the archivist to review the appropriate finding aids and recommend materials you should view.

Ensure you send your request to the appropriate facility. A list of NARA facilities is found on the agency's website, and on page 3 of this guide. When sending inquiries to any of the regional records services facilities, researchers need to remember that the records they seek could either be in the records center operations or archival operations branches. Information requests should be sent to the appropriate branch.

Research Procedures

Upon arrival at the facility, you must apply for a researcher card (Figure 5). NARA's Washington, D.C. and College Park, Maryland, sites have computerized this process.

Once the researcher card is issued, consult with the archivist regarding the nature and purpose of your research. This way, if problems do arise, the archivist will understand the direction of the research and can give better assistance.

National Archives and Records Administration
Pacific Region
P.O. Box 6719
Laguna Niguel, CA 92677-2641

We will be researching the following formerly used defense sites at your facility on [date].
Please identify and pull any site-specific records before our research team arrives.

Palo Alto Precision Bombing Range Number 4

Pima County, Arizona
Township 17 South, Range 10 East, Section 31
Approximately 640 acres
Used by the Army Air Forces from 1942–1948
Associated with Davis–Monthan Air Field, 2nd Air Force, 2nd Bomb Group
Record groups: 18, 30, 48, 49, 77, 92, 156, 270, 336, 338, and 342

Camp Lamesa

San Diego County, California
Approximately 4,517.133 acres
Used by the Army, 140th Infantry, from 1942–1943
Used by the Navy, Naval Retraining Command, from 1944–1945
Record groups: 30, 48, 49, 77, 92, 111, 121, 156, 181, 270, 336, and 338

Victorville Precision Bombing Range N–3 (also known as Precision Bombing Range Number 44)

San Bernardino County, California
Township 10 North, Range 3 West, Section 8
Approximately 640 acres
Used by the Army Air Forces from 1942–1949
Associated with the Victorville Army Airfield Western Flying Training Command
Record groups: 18, 30, 48, 49, 77, 92, 156, 270, 336, 338, and 342

Victorville Precision Bombing Range Number 10

San Bernardino County, California
Approximately 640 acres
Township 4 North, Range 2 East, Sections 1 and 12, and
Township 4 North, Range 3 East, Sections 6 and 7
Used by the Army Air Forces from 1943–1948
Associated with the Victorville Army Airfield Western Flying Training Command
Record groups: 18, 30, 48, 49, 77, 92, 156, 270, 336, 338, and 342

Santa Catalina Island Bombing Area (also known as Target Number 17)

Santa Catalina Island, California
Approximately 17.5 acres
Used by the Army Signal Corps from 1941–1945 and the Navy during the 1950s
Associated with Camp Cactus
Record groups: 30, 48, 49, 77, 92, 111, 121, 156, 181, 270, 336, and 338

Figure 5. Researcher Application Form

Next, review the various finding aids and inventories to determine which records will be helpful—ideally most of this will have been done prior to visiting the archives. Findings aids are provided for most record groups and are maintained in the reference rooms. Determine which record groups and entries or accessions within a given record group are most likely to have information pertaining to your search.

Requesting records by specific box number is the most efficient way to obtain the required documents. If box listings are not available, determine whether the records in the entry are filed alphabetically by site name, date, or the War Department Decimal File or Navy filing systems. The finding aid or inventory will usually reveal how an entry is filed. If, however, you have any doubt, consult with the archivist.

After determining which records to review, prepare a reference service slip (Figure 6) or reference request. The reference service slip is used to request files from the archives. When filling out the form follow the guidelines posted in the reference room or consult the archivist.

When requesting documents in any of the records centers, use the reference request (Figure 7), often called an OF 11. An archivist must review and initial the reference service slip before the records can be pulled. It is extremely important to post the correct location information on the reference request—stack area, compartment, shelf, and row—as

REFERENCE SERVICE SLIP						DATE	NO.
NAME OF REQUESTOR				AGENCY OR ADDRESS			
UNITS OF SERVICE					SOURCE OF REQUEST (Check)		
INFORMATION SERVICE (Number of requests)		RECORDS FURNISHED (Number of items)	TEXTUAL, STILL PICTURES, ETC. (Number of pages)	MOTION PICTURES (Number of feet)	SOUND RECORDINGS (Number of feet)	NA Administrative Use

RG NO.	STACK AREA	ROW	COMPARTMENT	SHELF	OUTCARD NO.		
RECORD IDENTIFICATION							
RECEIVED BY				DATE	RETURNED TO		DATE
NATIONAL ARCHIVES AND RECORDS ADMINISTRATION				DO NOT REMOVE FROM RECORDS			NA FORM 14891 (11-89)

Figure 6. Reference Service Slip

well as the appropriate record group, entry numbers, and site name, if applicable.

The most important element is the accession number that includes the agency record group number, such as RG77 Corps of Engineers, the fiscal year it arrived, and the sequence in which it was received. If it has been transferred to the archives it will have an additional number and be identified by the region, such as NRG, 8NS, 8NN (all identify the records as in the holdings of the Rocky Mountain Region) NRG77-00-001. When you have the accession number you can always find the location.

At Archives I and II, an archivist must review and initial the reference service slip before the records can be pulled. The regions follow a simplified process. Each pull can be no larger than one cart—carts can only hold 15 to 18 archive box-sized containers—and must be from the same record group. Multiple entries from the same record group are permitted. Be aware that it may take an hour or more for the records to be pulled and brought to the research room. You are responsible for the safekeeping of records signed for and in your custody. Documents, photographs, maps, etc., must not be rearranged and must be handled with the utmost care. Rules may vary slightly from facility to facility. Consequently, you should familiarize yourself with the rules within each facility and comply with them totally, for example, cotton gloves must be worn when handling pictures; one box on the table at a time; no food,

Figure 7. Reference Request

beverages, or ink pens allowed; and only a member of the archives staff may remove staples. All briefcases and large purses are to be stored in locked cabinets.

As you conduct the research and locate pertinent documents, you must tag them for copying, Additionally, at this point, it is most important that

you document the location of all records found. The integrity of each file within a box must remain intact. The archives staff must check the documents to be copied. They will prepare the document for copying and, if applicable, apply the necessary declassification markings. Copying expenses vary depending on who does the work and the type and size of the documents. Copying can usually be completed during your research visit. Occasionally, however, when the archives staff does the copying, they will mail the documents to you.

In some instances, even though the research strategy was most thorough, your search for a given site may produce no records. This lack of records could be attributed to a myriad of reasons—documents could be lost, destroyed, transferred, or the site you are researching could have been active for just a very short time. Be sure to keep clear, accurate research notes. Keep track of the holdings you searched, and if you make copies of documents, be sure to mark each one with the record group, accession number, and the pertinent entry, box, and folder information from where it was obtained. Without that vital information, the copies will be useless.

II. NARA Repositories in the Washington, D.C. Area

Archives I (Washington, D.C.)

700 Pennsylvania Avenue, NW
Washington, D.C. 20408

202-501-5400
<http://www.nara.gov>

Records appropriate to ordnance and explosives cleanup maintained at this facility are shown below and apply to the entire United States.

RECORD GROUP 26, Records of the U.S. Coast Guard (Coast Guard, 1785-1988)

Entry: Correspondence Relating to Shore Units

Records relating to Coast Guard activities near Army, Navy, and Air Force installations.

Entry: General Correspondence and Reports, 1910-1964

Records relating to Coast Guard activities near Army, Navy, and Air Force installations.

Entry: Search and Rescue Division, Aviation Branch, 1945-1973

Records relating to Coast Guard activities near Army, Navy, and Air Force installations.

RECORD GROUP 35, Records of the Civilian Conservation Corps (Army, 1928-1953) *See Figure 8.*

Entry 170: Correspondence Relative to Forts, 1917-1938

Useful information relative to site use between World War I and the Depression.

Entry 296: Correspondence Relative to Camps and Forts, 1939-1942

Useful information relative to site use during the Depression.

WORK PROJECT REPORT SUPPLEMENT TO FORM 11

Date June 12, 1941

Camp No. SP-26 Company 2105 P. O. Salisbury, Mass. State Mass.
Salisbury Beach Reservation

Area of work program 620 acres Date work program started July 25, 1938

Has work program operated continuously since date of occupation Yes

Is camp occupied all year; winter only; summer only All Year

Give outline of Projects and work performed, completed and uncompleted

Work Completed
2 Miles of roads, 700FT. 36" Diameter Corrugated iron pipe, intake works, 25 acres of parking area, 1/2 mile of sea wall, 2 brick comfort stations 2 miles of underground water lines, 2 sewage and waste disposal systems.

Work in process of construction
3 brick comfort stations, 2 sewage and waste disposal systems, tent and trailer development, inland pool 8 acres, grading parking area 20 acres.

Arc work records properly kept Yes Is work up to schedule Yes

Has work been delayed through lack of approved jobs or other reasons Yes -
Specify Work progress has been delayed to some extent due to the lack of sufficient equipment repair funds, as well a small company turnover to the work project during the past 6 months.

Have you inspected project Yes Is work performed efficiently Yes

Is all work done according to approved plans Yes

DISTRIBUTION OF MAN-DAYS FOR PAST 3 FULL MONTHS:

Company Strength 7473 Overhead 1544 Used on project 4778

Detached service 57 Wood detail None Conditioning 54

Not released due to bad weather 145 Not used due to bad weather None

Fire duty None Sick 184 AWL, AWOL, AWOP 711

Not used for other reasons None

FORT CARROLL-----MARYLAND,

(See Defenses of Baltimore)

Latitude 39, 15, N.; Longitude 0, 31, 57. E. Washington

An unfinished United States six sided, and casemated masonry fort located in the Patapsco river on Sollers Flats, between Soller's Point and North Point, about eight miles ^{below} Baltimore, Baltimore county, Md.

Sample

The project and estimates for the erection of works on Soller's Point were made after such careful examination as early as 1818. In the year 1839 Col. Jas. G. Tetten, Chief Engineer, in his annual report to the Secretary of War stated that with Fort McHenry as the only defensive work between Baltimore and Chesapeake bay the city is wholly without defenses against an attack by land-such as for instance as was undertaken by the English in 1814-and is at the same time, not adequately protected from an attack by the river and in consequence thereof he strongly recommended the erection of a strong casemated battery on the outer extremity of Soller's Point Flats, as was projected in 1818. The erection of this work would command the channel of the river, and an expedition advancing against the city from North Point, or along the opposite shore would be liable to be cut off from all retreat by troops thrown across the river, or sent down the river and landed near the work. This recommendation was renewed each succeeding year in the annual report of the Chief Engineer and in consequence of which Congress in August, 1846, appropriated 50,000 for the commencement of batteries on Soller's Point Flats. On March, 1847, the legislature of Maryland ceded jurisdiction to the United States over the site of this work, and preliminary work was commenced the same year under the direction of Major Ogden of the United States Engineers,

~~SECRET~~

11 June 1945

MEMORANDUM FOR FILE IN SEACOAST DEFENSE PROJECTS BRANCH.

SUBJECT: Report on Visit to Harbor Defenses of Chesapeake Bay.

1. On arrival at Ft. Monroe, Va. on 6 June 45, I called on the Commanding General of the Chesapeake Bay Sector. In the ensuing conversations General Tilton stated the following opinions:

a. It seems difficult to finally complete any one of the various construction projects in the Modernization Program. For example, although, Battery Ketcham has been practically complete for some time, one of the carriage motors appears to have been overlooked and the emplacement is lacking this particular item. The slow delivery of power plants is delaying the final completion of the battery.

b. Under the reorganization of the Corps of Engineers, all maintenance work is under the supervision of the post engineer who may or may not be familiar with seacoast fortifications. The work of the civilian engineer at Ft. Monroe, who has had extensive experience with seacoast fortifications, is thus subordinated.

c. The ANTB problem has not been satisfactorily solved in two respects: first, the method of fire control has not been definitely agreed upon - antiaircraft fire control will not work - and secondly, the temporary emplacement construction costing \$20,000 is unwarranted, since for an additional \$14,000 a much more desirable permanent emplacement could be had.

d. The Mod. Program batteries which are situated a considerable distance from a post are improperly designed because they lack permanent housing for the battery personnel. T of O housing is not adequate as to type. At Ft. Story there is a regimental area of T of O buildings situated in front of one of the new 16" batteries. A shell or bomb in

CHIEF EXECUTIVE DEPARTMENT,
ALABAMA.

June 7th, 1908.

B. B. COMER,
GOVERNOR.
W. E. FORT,
PRIVATE SECRETARY.

Secretary of War,
Washington, D. C.

Sample

Dear Sir:--

I respectfully ask that funds for promotion of rifle practice be transferred from Brigadier General Bibb Graves, who has been the disbursing officer, to Major D. W. Mc Iver, who has qualified as disbursing officer for that fund.

Estimates have heretofore been made, but they are again submitted, viz: Range at Geneva, purchase of land, \$250; construction \$300. Range at Fort Deposit, rent of land \$200, construction \$300. Range at Dothan, lease of land, \$200, construction \$250. Range at Evergreen, lease of land \$200, construction \$300; total \$2,000. Range at Birmingham \$2 500.

For transportation and subsistence for rifle practice at Fort Weaver, part of expenditure having already been made.. \$500.

For expense of team to Fort Perry, transportation, subsistence and pay of men, estimated \$ 2 500. In all \$7 500.

Very respectfully,

B. B. Comer

Governor of Alabama.

In reply refer to: HEADQUARTERS FORT NIAGARA
619.3
FORT NIAGARA, NEW YORK

July 3, 1929

Subject: Restoration of Old Fort Niagara, N.Y.

To: Commanding General, Second Corps Area,
Governors Island, New York

1. In compliance with paragraph 2, letter Headquarters Second Corps Area, 619.3 (Old Fort) (Niagara), dated June 27, 1929, there are enclosed photographs showing condition of buildings at "Old Fort Niagara".

2. The following estimate of cost of restoration is submitted together with description of work in progress and in contemplation during the fiscal year 1930:

a. Public Comfort Station - A semi-detached building to match construction of "Old Castle" and provide toilet conveniences for the traveling public as well as attendants at gatherings within the "Castle". Estimated cost - \$3500.00. Plans have been approved for this building but have been returned to Corps Area Headquarters for approval of a minor change.

b. Bakery - British built in 1762. Estimated cost of restoration - \$2512.00. Photograph accompanying shows present condition except that roof has been reboarded and some work done on ovens and walls.

c. Storehouse or Barracks - French built in 1757. Original estimate to restore and remodel - \$14915.00. Photograph accompanying shows condition of roof and walls before removal of roof. Complete plans are now in preparation by Architect of "Old Fort Niagara Association" and will be forwarded for approval on receipt and checking of same.

d. Powder Magazine - French built in 1757. Original estimate to restore - \$5725.00. Photograph accompanying shows back side of elliptical arch over powder room. Space above arch and to eighteen inches above chord timbers are earth filled. Entire old roof covering has been removed. Earth fill removed to lessen weight on arch. The replacement of the permanent roof on this building is especially needed as the building is used for storage of small arms, machine gun and howitzer ammunition which should be protected. Restoration of roof, all that is contemplated to this building for the present. Estimated cost - \$1980.00.

G. E. STEWART
Colonel, 28th Infantry
Commanding.

HEADQUARTERS CALIFORNIA-ARIZONA MANEUVER AREA
Office of AC of S, G-4

29 April 1944

SUBJECT: Activities of G-4 Section.

TO : AC of S, G-3.

1. When X Corps assumed control of C-AMA on 17 January 1944, there were two problems which were immediately evident. The first was ordnance maintenance and the proper treatment or disposal of excess vehicles. There were in this area 27,000 vehicles in the area divided as follows: Infantry 15,000; Artillery 1,400; in pools 10,000. Action was taken to improve conditions by the organization of a well balanced maintenance check team, by placing increased emphasis on 1st and 2nd echelons of maintenance, by a careful analysis of the means at hand to determine the limits of production and by disposing of vehicles and other material in excess of needs and beyond the capabilities of personnel. The second problem was the huge mass of material, chiefly Quartermaster, in open storage at Base General Depot which required inspection, segregation, inventory, repair and disposal. An accumulation of some 18 months was present. This problem was solved by pooling resources of both the Combat Zone and Communications Zone as to equipment and personnel.

2. Plans for the evacuation of C-AMA were laid shortly after receipt of AGF instructions. Various aspects of these plans will be found as inclosures hereto. Statistics as to evacuation not shown on the attached inclosures, will be found in the final report to the Army Service Forces.

PETER SATHER, Jr.
Colonel, G.S.C.

SUBJECT: Report of Annual General Inspection, Marion Engineer Depot,
Marion, Ohio, FY 1948

THRU: Commanding Officer
Marion Engineer Depot
Marion, Ohio

TO: Commanding General
Second Army
Fort George Meade, Maryland

Sample

I. AUTHORITY AND COMMAND INSPECTED

1. The annual general inspection (noncontinuing type) of the Marion Engineer Depot, a Class II activity under the control of the Chief of Engineers, FY 1948, was made 19-20 April 1948 by Lt Colonel John A. Brock, IGD, under the provisions of paragraph 3, AR 20-10, 21 March 1947.

2. The last annual general inspection of the Marion Engineer Depot was made by Colonel John E. Maher, IGD, during the period 18-19 November 1946.

3. Since date of last annual general inspection, IGD, the depot was commanded by: Colonel D. Lee Hooper, CE, 21 November 1945 to 31 March 1948; Colonel Holland L. Robb, CE, 1 April 1948 to present date.

II. ORGANIZATION AND MISSION

4. The depot is organized in accordance with existing directives.

5. The mission is:

a. Receipt, maintenance, storage and issue of heavy engineer equipment in Second Army Area.

b. Stockage of Treasury Department Strategic Materials.

c. At time of inspection 7 officers and 427 civilians were employed, a strength within authorized limits and adequate (except for fire protection), to performance of the mission.

DESCRIPTION OF ATTACHED COMMUNICATION	Office of Chem Warfare Service TAG <small>(Originator)</small>	12 February 1944 <small>(Address)</small>	12 February 1944 <small>(Date)</small>	
	Designation of Chem Warfare Service Plant SPCWC 600.05 Fireland CW Plant <small>(Subject)</small>			
FROM	Deputy Chief of Staff f/Service Commands <small>(Service, division, or organization)</small>	5D-539 <small>(Location)</small>	4035 <small>(Telephone)</small>	

1. Reply to transmittal sheet of 2 March has been delayed for receipt of information that was to have been furnished from your office as to what action was contemplated on the request of the Chief of Chemical Warfare Service to classify the Firelands Plant as a sub-installation of the Pittsburgh Chemical Warfare Procurement District.

2. Inquiry of your office indicates that decision has not yet been made.

3. The machine records unit which should service the Firelands Plant depends upon the classification of the installation. In accordance with the AG letter of 3 January 1944, which designated the Firelands Plant a Class IV installation, the Fifth Service Command is the proper agency to submit the morning reports. If the request of the Chief of the Chemical Warfare Service to change the classification is approved, then the Third Service Command should make the report.

4. The Adjutant General (Machine Records Branch) indicates that the Third Service Command was instructed to service the Firelands Plant when informed by the Chief of the Chemical Warfare Service that he was requesting its redesignation as a sub-installation of the Pittsburgh Chemical Warfare Procurement District.

5. Although this office believes that the wishes of a chief of service regarding the control of one of his installations should be respected, to do so in this case would place upon the Commanding General, Third Service Command, certain responsibilities as set forth in AR 170-10 for an installation located in the geographical limits of the Fifth Service Command. A situation of this nature is not considered desirable.

6. When decision on the request of the Chief of the Chemical Warfare Service has been made by your division, The Adjutant General should be requested to notify the machine records units concerned as to the correct reporting responsibility.

For the Deputy Chief of Staff for Service Commands:

John Nash

JOHN NASH,
Colonel, General Staff Corps,
Executive.

ARMY AND NAVY MUNITIONS BOARD ALPHABETICAL DIRECTORY OF INDUSTRIAL FACILITIES

The Alphabetical Directory of Industrial Facilities was annually published in book form by the Army and Navy Munitions Board for the information of the procuring agencies of the War and Navy Departments. It recorded facilities that were considered to be qualified sources for production of problem items of munitions, in industries where capacity is limited, for the Army or Navy or both. It did not purport to be a complete list of such facilities throughout the country, but included those concerning which information had become available through various means.

The listing of facilities in the directory implied no obligation on the part of the Army, the Navy, or the facilities concerned. The majority of the plants listed, however, are engaged in war production for one or more of the procuring agencies indicated either directly through prime contracts or indirectly through subcontracts.

The recording of interests in facilities was suspended pursuant to memorandum of September 25, 1942. The following list was copied from the Kardex files maintained by the Facilities Section, conforming to the latest information available. The list completely revises the 1942 Alphabetical Directory of Industrial Facilities up through the time the recording of interests was suspended.

GUIDE TO DIRECTORY

Facility Listings - Manufacturing facilities in which interests of procuring agencies have been recorded are listed in a single alphabetical series. The designations of parent or controlling organizations precede the names of subsidiaries and divisions. Each unit in the chain of control over the operating subsidiary or division is set off from the following unit by dashes (--).

In the designation of each enterprise, controlling organizations, subsidiary, or division, the significant noun comes first, following the method used in Thomas' Register of American Manufacturers.

Reference is made to your communication transmitting certain articles of evidence to the Laboratory on November 14, 1942. The evidence is listed and described on an attached sheet.

The bearing, specimen Q1, had adhering to its bearing surface approximately six particles of aluminum oxide commercial abrasive particles. Inasmuch as the abrasive particles were partially covered with a bonding or cementing material, it was concluded that they were grinding wheel fragments. No abrasive particles were found embedded in the bearing surface. For investigative purposes, it is pointed out that aluminum oxide grinding wheels are sold under such trade names as "Aloxite" and "Alundum".

A microscopic examination of the bearing surface of specimen Q1, did not reveal that the bearing had been scored; however, the remaining bearing lining was in a pitted condition which invariably occurs whenever a bearing of this type fails. It is pointed out that if grooves had been present the heat and pressure developed during the bearing failure could have smoothed over these grooves and thus hidden them from view.

Commercial abrasive particles were not found embedded in or adhering to specimen Q2. The bearing lining contained some scratches but a microscopic examination did not disclose what caused them.

A very fine dirt was found embedded in the bearing surface of specimen Q3. The dirt was too finely pulverized for identification purposes.

MEMORANDUM FOR: Chief of Staff

1. Attached correspondence pertains to a request from the CAC for the construction of a 500 yard, 50 butt firing range on the Atlantic Side of the Isthmus.

2. Project as originally submitted by CAC called for a 10 butt firing range at Fort Sherman; however, the Deputy Commander was of the opinion that one rifle range (similar to the Empire Rifle Range) should be constructed on the Atlantic Side preferably on the East bank as to be more readily accessible. At that time General [redacted] considered that the CG, 75th AAA Brigade did not concur in that location in view of the fact that it would be immediately adjacent to the [redacted] firing range.

3. The Department Engineer was instructed to make an overall study of the Atlantic Side in order to find a more suitable location which would be satisfactory to the CAC. After considerable field and office work having been done investigating possible sites in conjunction with the CAC and other interested parties, three (3) areas were selected for detailed studies - Fort Sherman, Fort Randolph and Fort Gulick (see attached Quad Sheets). Characteristics of these sites are as follows:

a. Fort Sherman. This site presents little in its favor other than a minimum amount of grading and favorable orientation for firing, although it is firing to the south rather than to the north (ideal orientation). The disadvantages are as follows:

- (1) Firing would be across the Gatun-Port Sherman Road, definitely limiting its use to normal traffic.
- (2) Ricochet area encroaches on Limon Bay.
- (3) Inaccessibility. Site can be approached only by ferry or by crossing the sea gate at Gatun.
- (4) Low terrain requiring considerable fill to bring general area above flood levels.

b. Fort Gulick. The area northeast of this post has one possibility for a suitable range - the area is uninhabited except for farm lands on Lopez Island. Area is readily accessible from all Atlantic Side posts except Fort Sherman, and the range and danger zone are within the limits of the Canal Zone. The disadvantages of this site are as follows:

- (1) Orientation very poor, firing being approximately south 70° east.

Department of the Air Force, Headquarters USAF, Washington 25, D. C.

To: Commander, Air Defense Command, Eg AFB, Colorado Springs, Colorado

1. The use of four magazines at the U. S. Naval Ammunition Depot, Charleston, South Carolina, in connection with the Air Defense mission at the Charleston Air Force Base, has been approved by the Chief of Naval Operations.

2. The Bureau of Yards and Docks has requested the District Public Works Officer, Sixth Naval District, U. S. Naval Base, Charleston, South Carolina, to come to an agreement with the Commanding Officer of the subject facility and a representative of the Air Force, as to the specific magazines to be used and the necessary arrangements for such use.

3. It is requested that this Headquarters be advised as to the designation of the four magazines to be used, and the anticipated length of time that these magazines will be required for the needs of your Command to enable this Headquarters to acquire the formal permit.

OPERATIONAL REQUIREMENT NO. AD-13501

1. STATEMENT OF REQUIREMENT - Air-to-air rockets

Develop high performance air-to-air aircraft rockets, rocket fuzes and rocket launching devices for interceptors.

(a) Functions:

Aircraft air-to-air rockets should be designed to provide an aircraft with maximum fire power with the smallest penalty in aircraft weight and performance. The size and velocity of the rockets shall be governed by the tactical requirement for which they are designed. They shall be designed for use as the primary armament for Interceptor fighters, but will also provide support aircraft with an air-to-air rocket if tactically required for their mission.

(b) Features:

Consistent with maximum reliability, the rockets should have maximum safety features to protect the aircraft in flight. Arming the fuze shall be accomplished by any means applicable to air arming, but the fuze shall not arm in less than 400 feet of air travel from the point of motor ignition. The fuze shall not require any device external of the rocket, rocket launcher, or external of any part of the aircraft, in order to cause arming or safetizing of the fuze. Motor ignition may be accomplished by any appropriate means. The rocket heads shall be separate from the rocket motors in order to provide stowage of the components in a non-propulsive condition; however, there shall be provisions for rapid assembly of the complete unit. The launchers for the rocket may be of any design that is suitable for rocket configurations with emphasis on their aerodynamic efficiency. Retractable launchers are considered desirable for high speed aircraft. The launchers shall be capable of arrested landings and catapult launchings of the aircraft while carrying the largest rocket for which the launcher is designed. The launcher shall function at acceleration forces equivalent to the acceleration limits of the aircraft in which they are installed.

(c) Minimum Acceptable Limits of Performance:

Firing range - 1500 yards
Velocity - 2000 f/s (burnt)
Weight of explosive - 0.9 pounds.
Temperatures - Proper function at temperatures equivalent to aircraft operation outside temperature limits.
Accuracy - 20 mils. diam. (max.)

HEADQUARTERS SECOND AIR FORCE
OFFICE OF THE COMMANDING GENERAL
COLORADO SPRINGS, COLORADO

(9)

684 PD

28 January 1944

Please Address Reply To:
COMMANDING GENERAL,
Headquarters, Second Air Force,
Colorado Springs, Colorado

Subject: Bombing and Gunnery Ranges for Army Air Base,
Blythe, California.

To: Commanding General, 3rd Bombardment Group, Army
Air Base, Blythe, California

Sample

1. On 18 January 1944 the representative of this headquarters while in Santa Monica, California, communicated by telephone with Colonel Wade, Station Commandant at Army Air Base, Blythe, California, regarding the present and future arrangement with California-Arizona Maneuver Area for use of certain areas in the Maneuver Area for bombing and gunnery ranges.
2. At the time of this conversation Colonel Wade indicated it was his desire to conduct the negotiations necessary between his office and the office of the Commanding General, California-Arizona Maneuver Area. It was stated at that time that immediately upon completion of satisfactory negotiations, necessary information regarding the agreement for use as well as the correct location of the area to be used would be forwarded to this headquarters.
3. At the present time no information regarding the use of any areas in California-Arizona Maneuver Area has been received. It is requested action be taken to expedite the completion of negotiations and the transmittal of necessary information to this headquarters.

By command of Brigadier General ENT:

E. L. THARP
Captain, Air Corps
Actg. Asst. Adjutant General

14 JUL 1954

Dear Sir:

Reference is made to letter of this office dated May 5, 1954 concerning the exclusion of certain lands comprising a portion of the Carrizo Impact Range, Imperial County, California. These lands are more particularly described as follows:

Township 14 South, Range 10 East,
Secs. 7, 18, 19, 30 and 31

Township 15 South, Range 10 East,
Secs. 6, 7 and 18

Imperial County, California, SBB&M.

You were advised that these lands, through long use as an impact range, had suffered a high degree of contamination from unexploded ordnance and were therefore unsuited for reclamation projects.

It was suggested that the Bureau of Reclamation be informed of these conditions and that an indication be obtained as to whether or not that Bureau would interpose any objection to the revocation of the reclamation withdrawal to eliminate these eight sections of land. To date, no reply has been received to the above referenced letter. It would be appreciated if you would inform this office as to the status of the matter.

Very truly yours,

A handwritten signature in cursive script that reads "R. G. Mendenhall".

DEPARTMENT OF THE ARMY
OFFICE OF THE CHIEF OF ENGINEERS
WASHINGTON

602 Camp Bouse, Arizona, ENGLT
(Aerial Bombing Target near
Wall, Yuma County, Arizona)

13 March 1960

Director,
Bureau of Land Management
Department of the Interior
Washington 25, D.C.

Sample

Dear Sir:

There is hereby relinquished the use of an area of 640 acres of public land which was used as a bombing target and is located about three and one-half miles south of Wall, Arizona, and eight miles west of Bouse, Arizona. There is no evidence in the files of this office that any formal approval of the use of this land was granted.

There were no Government improvements placed on the property and no restoration work is deemed necessary. The land has been given a careful visual inspection and all explosives and explosive objects reasonably possible to detect have been removed and the land is considered fit for any use for which it is suited.

Your cooperation in making these lands available is appreciated.

FOR THE CHIEF OF ENGINEERS:

Sincerely yours,

W.H. HASTINGS
Colonel, Corps of Engineers
Assistant Chief of Engineers for Real Estate

Gentlemen:

Pursuant to your request of 13 October 1955, inclosed are the following:

a. Copy of Deed of Reconveyance dated 9 April 1948, from the State of Arizona to the United States of America, covering Lot 1, the NE 1/2 NW 1/4 and the NW 1/4 SW 1/4 of Section 32, T14, R7E, in which the mineral rights are reserved to the State.

b. Copy of Lease No. DA-04-353-Eng-25, dated 20 July 1949, between the State Land Department, State of Arizona, and the United States of America, for a period not to extend beyond 30 June 1960, covering the sub-surface rights in various Army and Air Force installations, including Gilbert Air Force Auxiliary Field.

The above instruments affect the Government's title to Tract A of the Gilbert Air Force Auxiliary Field, reported as excess by Standard Form 118 dated 23 May 1955, our No. LA-16.

FOR THE DISTRICT ENGINEER:

Very truly yours,
Harold E. Spickard

HEADQUARTERS
U. S. MARINE CORPS AIR STATION
EL CENTRO, CALIFORNIA

DECLASSIFIED
E.O. 12958, Sec. 1.3
268032

~~CONFIDENTIAL~~

13 March 1944

To: The Commandant, West Coast Naval District.
Via: (1) The Commanding General, Marine Fleet Air,
West Coast, North Island, San Diego, Calif.

Subj: Use of areas for Bombing and Gunnery in
California-Arizona Maneuver Area.

Ref: (a) Ltr fr. C.G. Hdqtrs, CANA, dtd Mar44.

1. By reference (a), the Commanding Officer was advised of the necessity of re-submitting request for such areas now used by this station for bombing and gunnery, and which are within that area known as the California-Arizona Maneuver Area.

2. This matter was taken up with Lt.Col. L. S. Moore, USMC, Operations Officer for Marine Fleet Air, West Coast, on his visit here 11 March. Col. Moore stated he would immediately take the matter up with Col. W. J. Fox, USMC, for the latter to follow through, and took a copy of reference (a) with him for that purpose.

3. Copy of reference is attached for the information of the Commandant, and advice is requested as to further action by this command.

KARL E. VOELTER

Office of the Resident Engineer
Kentucky Ordnance Works
Paducah, Kentucky

CELNR-6

15 June 1946

Subject: Decontamination of Magazines

To: Commanding Officer, Kentucky Ordnance Works, Paducah, Kentucky

1. It is desired to advise that so far as the interests of this office are concerned, the 9 magazines at Kentucky Ordnance Works have been decontaminated. The decontamination was performed by spraying the entire interior of each magazine with better than 7% solution of Sodium Sulphite. This solution was allowed to stand approximately twenty-four hours and was then flushed with clear water. In the process better than 100 pounds of Sodium Sulphite was used for each magazine. Spot tests throughout the area indicated that the decontamination was effective except Magazines No. 5 and Nos. 85 to 91, inclusive. No. 5 Magazine was used to store damaged packages of TNT and was very severely contaminated. Accordingly, the magazine was released and again treated with Sodium Sulphite powder in the amount of 100 pounds on the floor. This was allowed to set twenty-four hours and again was flushed off. Positive tests indicated contamination in this magazine following the above treatment but it is believed that no dangerous concentration of TNT exists. Magazines No. 85 to 91, inclusive, were constructed with a hard finish smooth cement floor. These magazines continued to give indications of TNT contamination after treatment, and accordingly were wet down and given an additional treatment of Sodium Sulphite powder. This powder was thoroughly worked and brushed with wet brooms and the magazines were then flushed with clear water. However, tests indicate that contamination continues to exist.

2. It is not known what further action can be taken to reduce contamination as it is the opinion of the Project Engineer that the decontamination noted above has reduced all practical possibilities that TNT concentrations exist in any dangerous degree. Furthermore, it is believed that the contamination of the above mentioned magazines is no worse than probably exists in all the others since they were all accorded the same treatment. Furthermore, advice has been received from the Federal Land Bank Representative to the effect that it is proposed to keep the magazines locked for at least a year after turn over, and it is therefore the opinion of the Project Engineer that if this is done, reasonable assurance may be felt that there will be no danger from these magazines.

Anthony Fleming
Project Engineer

BLOCK 6, SCHEDULE 6-1

CERTIFICATE

I certify that I made an investigation of the reported finding and disposal of ammunition at Martha's Vineyard, Massachusetts on 10 December 1946.

Findings: That certain ammunition was found during an inspection of leased land preparatory to returning land to lessor. That Mr. Hurd of the District Engineer Office, Boston, Massachusetts and Cpl. Leonard N. Martin, Massachusetts State Police of Oak Bluffs, Massachusetts picked up approximately two hundred (200) rounds of Caliber 30 carbine ammunition and fourteen (14) land mine fuses (M1) Anti-tank mine (practice) which was found over the ceiling in the Officers' building at the Peaked Hill Army Camp at Chilmark.

That the ammunition and fuses were delivered to the Coast Guard Station at Gay Head for disposal. From Bsn Mate 2nd Cl. G. S. Rich it was found that the listed ammunition had not been disposed of but would be as soon as a boat was available. A request was made by the investigating officer that an informal report be made to the Commanding Officer, Ft. Rodman, Massachusetts when the disposal had been accomplished.

RECOMMENDATIONS: No further action.

Seattle, WA 98115-7999

206-526-6507
Fax: 206-526-4344
archives@seattle.nara.gov

Records appropriate to ordnance and explosives cleanup maintained at this facility are shown below and apply to Idaho, Oregon, and Washington.

RECORD GROUP 16, Records of the Office of the Secretary of Agriculture
(all military services, 1893–1981)

RECORD GROUP 18, Records of the Army Air Forces
(Army Air Forces, 1903–1964)

RECORD GROUP 26, Records of the U.S. Coast Guard
(Coast Guard, 1785–1988)

RECORD GROUP 30, Records of the Bureau of Public Roads
(all military services, 1892–1972)

RECORD GROUP 48, Records of the Office of the Secretary of the Interior
(all military services, 1826–1981)

RECORD GROUP 49, Records of the Bureau of Land Management
(all military services, 1685–1989)

RECORD GROUP 71, Records of the Bureau of Yards and Docks
(Navy, 1784–1963)

RECORD GROUP 72, Records of the Bureau of Aeronautics
(Navy, 1911–1965)

RECORD GROUP 77, Records of the Office of the Chief of Engineers
(Army/Army Air Forces, 1789–1988)

**RECORD GROUP 80, General Records of the Department of the Navy,
1798–1947**
(Navy, 1804–1958)

**RECORD GROUP 92, Records of the Office of the Quartermaster
General**
(Army, 1774–1985)

RECORD GROUP 96, Records of the Farmers Home Administration
(all military services, 1918–1975)

RECORD GROUP 103, Records of the Farm Credit Administration
(all military services, 1913–1981)

RECORD GROUP 111, Records of the Office of the Chief Signal Officer
(Army, 1860–1982)

RECORD GROUP 121, Records of the Public Buildings Service
(all military services, 1801–1976)

RECORD GROUP 156, Records of the Office of the Chief of Ordnance
(Army, 1797–1968)

**RECORD GROUP 165, Records of the War Department General and
Special Staffs**
(Army, 1860–1952)

**RECORD GROUP 181, Records of the Naval Districts and Shore
Establishments**
(Navy, 1784–1981)

**RECORD GROUP 234, Records of the Reconstruction Finance
Corporation**
(all military services, 1928–1968)

**RECORD GROUP 269, General Records of the General Services
Administration**
(all military services, 1922–1989)

RECORD GROUP 270, Records of the War Assets Administration
(all military services, 1939–1954)

RECORD GROUP 291, Records of the Federal Property Resources Service
(all military services, 1944–1973)

RECORD GROUP 319, Records of the Army Staff
(Army, 1903–1992)

RECORD GROUP 336, Records of the Office of the Chief of Transportation
(Army, 1917–1966)

RECORD GROUP 338, Records of U.S. Army Commands
(Army, 1917–1993)

RECORD GROUP 392, Records of the U.S. Army Coast Artillery Districts and Defenses, 1901–1942
(Army, 1901–1950)

Other Regional Record Centers

Five other regional records centers do not have materials directly related to environmental cleanup at former and current military sites, but may have materials related to your future research on other topics. Try their website: www.nara.gov.

Great Lakes Region (Dayton)

3150 Springboro Road
Dayton, OH 45439-1883

937-225-2852
Fax: 937-225-7236
center@dayton.nara.gov

Northeast Region (Pittsfield)

10 Conte Drive
Pittsfield, MA 01201-8230

413-445-6885
Fax: 413-445-7305
center@pittsfield.nara.gov

Microfilm only.

Central Plains Region (Lee's Summit)

200 Space Center Drive
Lee's Summit, MO 64064-1182

IV. Military History Offices and Archives

Introduction

Aside from NARA, the Army, Navy, and Air Force maintain military history offices and archives that have valuable information related to the environmental hazards and subsequent cleanup at military sites. As previously stated, if the research is to be complete, you also must consider these sources of information.

Other sources include government and non-government repositories at local, state, and federal levels such as local libraries, state archives, and historical societies.

Comprehensive research also should include a wide range of topics—climatology, hydrology, geology, historical and current aerial photography, newspaper articles, previous studies, environmental assessments, real estate ownership, cultural resources, endangered species, and more.

Four military repositories have proven to be valuable sources for historical documentation regarding Army, Navy, and Air Force sites.

U.S. Army Corps of Engineers, Office of History

Humphreys Engineer Center
7701 Telegraph Road
Alexandria, Virginia 22315

703-428-6557
Fax 703-428-8172

The Office of History holds numerous research collections related to the military and civil works activities of the U.S. Army Corps of Engineers, including its role as military construction and real estate agent for the Army and Air Force. Among these are military reservations volumes, real estate records, the Coast Defense Study Group newsletters, military files, and map and image collections.

These collections, especially the real estate records and the military reservations volumes, are of particular value for environmental research of former and current military sites.

- ▶ The *real estate records* provide detailed histories of military reservations in the continental United States during the 1930s and 40s.

- ▶ The *military reservations volumes* consist of realty control file summary sheets that provide significant real estate data. These data, applicable to a wide variety of active and inactive Army and Air Force installations, include the installation's official name, the authority by and date on which it was established, location, official purpose, and real estate acquisition and disposal actions.

All collections are open to qualified researchers. Researchers must call and make an appointment prior to visiting the facility.

U.S. Army Military History Institute

22 Ashburn Drive

717 245-3611

Carlisle Barracks

Carlisle, Pennsylvania 17013

<http://carlisle-www.army.mil/usamhi>

The U.S. Army Military History Institute is the Army's central repository for materials on American military history. Its mission is to collect and preserve source materials and make them available to researchers. The institute holds more than 8 million books, periodicals, manuscripts, photographs, and audiovisual materials. These holdings span American military history from the colonial period to the present. No other agency has as extensive a collection of materials relating exclusively to the role of the military in the development of the United States.

The institute cannot conduct extensive research for patrons, but it will provide limited assistance such as bibliographic guidance, access to finding aids, and reference help.

Naval Facilities Command Historian's Office

Naval Construction Battalion Center

805-982-5913

ATTN: Code 10H-NAVFAC Historian

10 23rd Avenue

Port Hueneme, California 93043

The Naval Facilities Command Historian's Office is located in the Civil Engineer Corps-Seabee Museum. Established in 1947, this museum contains numerous artifacts including weapons, Seabee crafts, model ships, and military memorabilia. The museum also houses a large repository containing a wealth of documents pertaining to Navy sites.

Holdings at this repository include historical documents, maps, pictures, newspaper articles, and other information relating to former and current

Navy sites. Because of the volume and diversity of the records, the Naval Historical Center, Washington, D.C., highly recommends this repository for all research being conducted in support of Navy sites.

Conducting onsite research is the preferred means of collecting information from this repository. Written requests, if not too labor intensive, are honored on a case-by-case basis.

Air Force Historical Research Agency

600 Chennault Drive
Maxwell Air Force Base
Montgomery, Alabama 36112

334-953-2395

<http://www.au.af.mil/au/afhra>

The Air Force Historical Research Agency is located at Maxwell Air Force Base, site of the Air University. The agency supports the Air University by providing onsite and online access to historical documents to students, faculty, and visiting researchers. It contains more than 60 million pages devoted to the history of the Air Force and its predecessors. It is the world's largest and most valuable collection of documents on U.S. military aviation.

Researchers can collect information either of two ways.

- ▶ ***Visit the agency*** and view the documents. This process is similar to conducting research within a National Archives facility.
- ▶ ***Use the Internet*** (www.au.af.mil/au/afhra) to access the agency's database, Inferential Retrieval Indexing System, to search for microfilm reels that contain desired information. These reels are numbered and must be requested from the agency.

The Air University's Fairchild Library, co-located with the agency, provides additional research facilities. This Department of Defense library is the largest federal library outside of Washington, D.C.

Appendix

Record Groups Applicable to Specific Military Sites

The following list of types of military sites within a military community is typical but not all inclusive. If the site you are researching is not a major installation—such as training areas, bomb targets, ranges, or batteries—you should know to which major facility the site was subordinate. The records for these satellite properties, for the most part, are maintained under the major installation.

Type of Military Site	Applicable Record Groups
Army	
Posts Camps Forts Air Warning Stations Barracks Proving Grounds Military Reservations	16, 30, 35, 48, 49, 69, 77, 92, 94, 96, 98, 103, 107, 111, 112, 121, 135, 153, 156, 159, 160, 165, 175, 225, 269, 270, 291, 319, 334, 335, 336, 337, 338, 373, 391, 393, 394, 407, 429
Training Areas Maneuver Areas Demolition Areas	16, 30, 35, 48, 49, 77, 96, 98, 103, 111, 153, 156, 159, 160, 175, 269, 270, 337, 338, 391, 393, 394, 407
Ordnance/Ammunition Plants Ordnance/Ammunition Works Ordnance/Ammunition Depots Ordnance/Ammunition Storage Areas Powder Farms	16, 30, 35, 48, 49, 69, 77, 96, 103, 107, 111, 121, 135, 153, 156, 159, 162, 175, 179, 234, 240, 250, 269, 270, 291, 336, 407
Harbor Defenses Coastal Defenses Fire Control Stations Anti-Motor Torpedo Boat Batteries Mine Control Stations	30, 77, 92, 94, 98, 107, 111, 121, 153, 156, 159, 160, 175, 269, 270, 291, 336, 337, 338, 391, 392, 393, 394, 407
Impact Areas Artillery Ranges Mortar Ranges Small Arms Ranges Grenade Courts	16, 30, 48, 49, 77, 94, 96, 98, 103, 107, 111, 153, 156, 159, 160, 175, 269, 270, 337, 338, 391, 393, 394, 407

National Guard Facilities	16, 30, 35, 48, 49, 77, 92, 94, 96, 98, 103, 107, 111, 121, 153, 156, 159, 160, 168, 175, 269, 270, 291, 319, 336, 337, 338, 393, 394, 407
Navy	
Ordnance Plants Ordnance Works Ordnance Depots Ordnance Facilities Ordnance Test Sites Shipyards	16, 24, 26, 30, 38, 48, 49, 69, 71, 74, 80, 96, 103, 121, 127, 135, 143, 162, 179, 181, 225, 234, 240, 250, 269, 270, 291, 428
Naval Air Stations (NAS) Naval Air Auxiliary Stations (NAAS) Naval Air Facilities (NAF) Naval Air Auxiliary Facilities Bombing Targets	16, 24, 30, 38, 48, 49, 72, 74, 80, 96, 103, 121, 127, 143, 181, 225, 269, 270, 291, 428
Air Force/Army Air Forces	
Army Air Fields Army Air Stations Air Force Bases Air Force Stations Bombing Targets Bombing Ranges Rocket Ranges	16, 18, 30, 48, 49, 77, 92, 96, 103, 107, 111, 121, 153, 156, 159, 165, 175, 291, 319, 336, 338, 340, 341, 342, 393, 394, 407
