

Navy Entomology Center of Excellence

Is Your Uniform Protecting You?

- Permethrin treated uniforms protect you from biting insects like mosquitoes.
- Uniforms can be treated at the factory or by hand.
- Check your uniform labels to see if they are treated with permethrin.

See your local preventive medicine authority if your uniform does not have one of these labels.

Label from a factory treated uniform

Label from a uniform treated by hand

For more information, contact your [cognizant NEPMU](#) or the [Navy Entomology Center of Excellence](#) (904-542-2424), or reach out to your preventive medicine authority.

For more information on personal protective measures, see AFPMB TG 36: <http://www.afpmb.org/sites/default/files/pubs/techguides/tg36.pdf>
