

Continental United States (CONUS) Interceptor Site

SECTION 3.6 – Summary of Environmental Consequences, Impacts, and Mitigation Options

Environmental Impact Statement Draft

Department of Defense
Missile Defense Agency
5700 18th Street
For Belvoir, VA 22060-557

DISTRIBUTION STATEMENT A.
Approved for public release;
distribution is unlimited.

May 2016

Approved for Public Release
16-MDA-8659 (9 May 16)

This page intentionally left blank.

Table of Contents

1.0	Purpose and Need for Potential Continental United States Interceptor Site Deployment	1-1
1.1	Introduction	1-1
1.2	Background	1-1
1.2.1	Threats	1-2
1.2.2	Ballistic Missile Defense System	1-2
1.3	Purpose and Need	1-4
1.4	Decisions to be Made	1-4
1.5	Scope of the Environmental Impact Statement	1-4
1.6	Cooperating Agencies	1-5
1.7	Summary of Public Participation	1-5
1.7.1	Scoping Process	1-6
1.7.2	Notice of Intent	1-6
1.7.3	Public Scoping Period and Meetings	1-6
1.7.4	Summary of Scoping	1-9
1.7.4.1	<i>Fort Custer Training Center, Fort Custer, Augusta, Michigan</i>	<i>1-9</i>
1.7.4.2	<i>Camp Ravenna Joint Military Training Center, Portage and Trumbull Counties, Ohio</i>	<i>1-10</i>
1.7.4.3	<i>Fort Drum, Fort Drum, New York</i>	<i>1-11</i>
1.7.4.4	<i>Center for Security Forces Detachment Kittery Survival, Evasion, Resistance and Escape Training Facility, Redington Township, Maine</i>	<i>1-11</i>
1.7.5	Coordination with Regulatory Agencies	1-12
1.7.6	Public Review of Draft Environmental Impact Statement	1-13
1.7.7	Public Comment Period	1-13
1.8	Related Environmental Documentation	1-13
2.0	Description of the Continental United States Interceptor Site Deployment Concept and Alternatives Considered	2-1
2.1	Introduction	2-1
2.2	Objectives	2-1
2.3	Ground-Based Midcourse Defense System	2-1
2.3.1	Ground-Based Interceptors	2-2
2.4	Continental Interceptor Site Deployment Concept	2-2
2.4.1	Continental Interceptor Site Facilities	2-3

2.4.1.1	<i>Mission Facilities</i>	2-3
2.4.1.2	<i>Mission Support Facilities</i>	2-6
2.4.1.3	<i>Non-Mission Facilities</i>	2-10
2.4.1.4	<i>Infrastructure</i>	2-10
2.5	Construction	2-11
2.5.1	Baseline Construction Schedule	2-11
2.5.2	Expedited Construction Schedule	2-13
2.6	Ground-Based Interceptor Transportation, Assembly, and Integration Activities (Construction and Operation)	2-13
2.6.1	Silo Interface Vault/Silo Transport	2-14
2.6.2	Ground-Based Interceptor Component Transport and Integration	2-14
2.7	CONUS Interceptor Site Day-to-Day Operations	2-14
2.7.1	Hazardous Materials and Hazardous Waste Management	2-15
2.7.2	Safety Systems	2-16
2.7.2.1	<i>Explosive Safety Quantity-Distances</i>	2-16
2.7.2.2	<i>Electromagnetic Radiation Safety Distances</i>	2-16
2.7.2.3	<i>Fire Protection</i>	2-16
2.7.3	Security	2-16
2.7.4	Snow Removal	2-17
2.8	Decommissioning and Disposal	2-17
2.9	CIS Deployment Alternatives	2-18
2.9.1	Fort Custer Training Center, Augusta, Michigan	2-19
2.9.2	Camp Ravenna Joint Military Training Center – Ohio Army National Guard, Portage and Trumbull Counties, Ohio	2-20
2.9.3	Fort Drum, New York	2-21
2.10	No Action Alternative	2-22
2.11	Siting Study and Alternatives Considered But Not Carried Forward	2-22
2.11.1	Siting Study	2-22
2.11.2	SERE East Site	2-24
3.0	Affected Environment, Environmental Consequences, and Mitigation	3-1
3.1	Introduction	3-1
3.2	No Action Alternative	3-4
3.2.1	Air Quality	3-4
3.2.2	Airspace	3-4
3.2.3	Biological Resources	3-4
3.2.4	Cultural Resources	3-4
3.2.5	Environmental Justice	3-4

3.2.6	Geology and Soils	3-4
3.2.7	Hazardous Materials and Hazardous Waste Management	3-5
3.2.8	Health and Safety	3-5
3.2.9	Land Use	3-5
3.2.10	Noise	3-5
3.2.11	Socioeconomics	3-5
3.2.12	Transportation	3-5
3.2.13	Utilities	3-5
3.2.14	Water Resources	3-6
3.2.15	Wetlands	3-6
3.2.16	Visual/Aesthetics	3-6
3.3	FCTC Sites, Augusta, Michigan	3-7
3.3.1	Air Quality – FCTC Sites	3-7
3.3.1.1	<i>Regulatory Framework – Air Quality – FCTC Sites</i>	3-7
3.3.1.2	<i>Affected Environment – Air Quality – FCTC Sites</i>	3-11
3.3.1.3	<i>Environmental Consequences and Mitigation – Air Quality – FCTC Sites</i>	3-15
3.3.2	Airspace – FCTC Sites	3-49
3.3.2.1	<i>Regulatory Framework – Airspace – FCTC Sites</i>	3-49
3.3.2.2	<i>Affected Environment – Airspace – FCTC Sites</i>	3-49
3.3.2.3	<i>Environmental Consequences and Mitigation – Airspace – FCTC Sites</i>	3-52
3.3.3	Biological Resources – FCTC Sites	3-59
3.3.3.1	<i>Regulatory Framework – Biological Resources – FCTC Sites</i>	3-59
3.3.3.2	<i>Affected Environment – Biological Resources – FCTC Sites</i>	3-60
3.3.3.3	<i>Environmental Consequences and Mitigation – Biological Resources – FCTC Sites</i>	3-79
3.3.4	Cultural Resources – FCTC Sites	3-97
3.3.4.1	<i>Regulatory Framework – Cultural Resources – FCTC Sites</i>	3-97
3.3.4.2	<i>Prehistoric and Historic Background – FCTC Sites</i>	3-100
3.3.4.3	<i>Affected Environment – Cultural Resources – FCTC Sites</i>	3-102
3.3.4.4	<i>Environmental Consequences and Mitigation – Cultural Resources – FCTC Sites</i>	3-106

3.3.5	Environmental Justice – FCTC Sites	3-113
3.3.5.1	<i>Regulatory Framework – Environmental Justice – FCTC Sites</i>	<i>3-113</i>
3.3.5.2	<i>Affected Environment – Environmental Justice – FCTC Sites</i>	<i>3-113</i>
3.3.5.3	<i>Environmental Consequences and Mitigation – Environmental Justice – FCTC Sites</i>	<i>3-119</i>
3.3.6	Geology and Soils – FCTC Sites	3-125
3.3.6.1	<i>Regulatory Framework – Geology and Soils – FCTC Sites</i>	<i>3-125</i>
3.3.6.2	<i>Affected Environment – Geology and Soils – FCTC Sites</i>	<i>3-125</i>
3.3.6.3	<i>Environmental Consequences and Mitigation – Geology and Soils – FCTC Sites</i>	<i>3-127</i>
3.3.7	Hazardous Materials and Hazardous Waste Management – FCTC Sites	3-133
3.3.7.1	<i>Regulatory Framework – Hazardous Materials and Hazardous Waste Management – FCTC Sites</i>	<i>3-133</i>
3.3.7.2	<i>Affected Environment – Hazardous Materials and Hazardous Waste Management – FCTC Sites</i>	<i>3-134</i>
3.3.7.3	<i>Environmental Consequences and Mitigation – Hazard Materials and Hazardous Waste – FCTC Sites</i>	<i>3-136</i>
3.3.8	Health & Safety – FCTC Sites	3-141
3.3.8.1	<i>Regulatory Framework – Health & Safety – FCTC Sites</i>	<i>3-141</i>
3.3.8.2	<i>Affected Environment – Health & Safety – FCTC Sites</i>	<i>3-141</i>
3.3.8.3	<i>Environmental Consequences and Mitigation–Health & Safety - FCTC Sites</i>	<i>3-144</i>
3.3.9	Land Use – FCTC Sites	3-151
3.3.9.1	<i>Regulatory Framework – Water Resources – FCTC Sites</i>	<i>3-151</i>
3.3.9.2	<i>Affected Environment – FCTC Sites</i>	<i>3-153</i>
3.3.9.3	<i>Environmental Consequences and Mitigation – Land Use – FCTC Sites</i>	<i>3-157</i>
3.3.10	Noise – FCTC Sites	3-167
3.3.10.1	<i>Noise Regulations and Guidelines – FCTC Sites</i>	<i>3-167</i>
3.3.10.2	<i>Noise Introduction – FCTC Sites</i>	<i>3-168</i>
3.3.10.3	<i>Affected Environment – Noise – FCTC Sites</i>	<i>3-170</i>
3.3.10.4	<i>Environmental Consequences and Mitigation – Noise – FCTC Sites</i>	<i>3-173</i>

3.3.11	Socioeconomics – FCTC Sites	3-189
3.3.11.1	<i>Regulatory Framework – Socioeconomics – FCTC Sites</i>	<i>3-189</i>
3.3.11.2	<i>Affected Environment – Socioeconomics – FCTC Sites</i>	<i>3-189</i>
3.3.11.3	<i>Environmental Consequences and Mitigation – Socioeconomics – FCTC Sites</i>	<i>3-201</i>
3.3.12	Transportation – FCTC Sites	3-217
3.3.12.1	<i>Regulatory Framework – Transportation – FCTC Sites</i>	<i>3-217</i>
3.3.12.2	<i>Affected Environment – Transportation – FCTC Sites</i>	<i>3-217</i>
3.3.12.3	<i>Environmental Consequences and Mitigation – Transportation – FCTC Sites</i>	<i>3-223</i>
3.3.13	Utilities – FCTC Sites	3-243
3.3.13.1	<i>Regulatory Framework – Utilities – FCTC Sites</i>	<i>3-243</i>
3.3.13.2	<i>Affected Environment – Utilities – FCTC Sites</i>	<i>3-243</i>
3.3.13.3	<i>Environmental Consequences and Mitigation – Utilities – FCTC Sites</i>	<i>3-247</i>
3.3.14	Water Resources – FCTC Sites	3-257
3.3.14.1	<i>Regulatory Framework – Water Resources – FCTC Sites</i>	<i>3-257</i>
3.3.14.2	<i>Affected Environment – Water Resources – FCTC Sites</i>	<i>3-258</i>
3.3.14.3	<i>Environmental Consequences and Mitigation – Water Resources – FCTC Sites</i>	<i>3-274</i>
3.3.15	Wetlands – FCTC Sites	3-299
3.3.15.1	<i>Regulatory Framework – Wetlands – FCTC Sites</i>	<i>3-299</i>
3.3.15.2	<i>Affected Environment – Wetlands – FCTC Sites</i>	<i>3-302</i>
3.3.15.3	<i>Environmental Consequences and Mitigation – Wetlands – FCTC Sites</i>	<i>3-309</i>
3.3.16	Visual/Aesthetics – FCTC Sites	3-321
3.3.16.1	<i>Visual/Aesthetics – Regulatory Framework – FCTC Sites</i>	<i>3-321</i>
3.3.16.2	<i>Visual Impact Assessment Methodology</i>	<i>3-321</i>
3.3.16.3	<i>Affected Environment – FCTC Sites</i>	<i>3-325</i>
3.3.16.4	<i>Environmental Consequences and Mitigation – Visual/Aesthetics – FCTC Sites</i>	<i>3-332</i>
3.3.17	Cumulative Impacts – FCTC Sites	3-359
3.4	CRJMTC, Portage and Trumbull Counties, Ohio	3-361
3.4.1	Air Quality – CRJMTC	3-361
3.4.1.1	<i>Regulatory Framework – Air Quality – CRJMTC</i>	<i>3-361</i>

3.4.1.2	<i>Affected Environment – Air Quality – CRJMTC</i>	3-366
3.4.1.3	<i>Environmental Consequences and Mitigation – Air Quality – CRJMTC</i>	3-370
3.4.2	<i>Airspace – CRJMTC</i>	3-395
3.4.2.1	<i>Regulatory Framework – Airspace – CRJMTC</i>	3-395
3.4.2.2	<i>Affected Environment – Airspace – CRJMTC</i>	3-395
3.4.2.3	<i>Environmental Consequences and Mitigation – Airspace – CRJMTC</i>	3-397
3.4.3	<i>Biological Resources – CRJMTC</i>	3-403
3.4.3.1	<i>Regulatory Framework - Biological Resources – CRJMTC</i>	3-403
3.4.3.2	<i>Affected Environment – Biological Resources – CRJMTC</i>	3-404
3.4.3.3	<i>Environmental Consequences and Mitigation – Biological Resources – CRJMTC</i>	3-418
3.4.4	<i>Cultural Resources – CRJMTC</i>	3-433
3.4.4.1	<i>Regulatory Framework – Cultural Resources – CRJMTC</i>	3-433
3.4.4.2	<i>Prehistoric and Historic Background – Cultural Resources - CRJMTC</i>	3-436
3.4.4.3	<i>Affected Environment – Cultural Resources – CRJMTC</i>	3-441
3.4.4.4	<i>Environmental Consequences and Mitigation – Cultural Resources – CRJMTC</i>	3-449
3.4.5	<i>Environmental Justice – CRJMTC</i>	3-455
3.4.5.1	<i>Regulatory Framework – Environmental Justice – CRJMTC</i>	3-455
3.4.5.2	<i>Affected Environment – Environmental Justice – CRJMTC</i>	3-455
3.4.5.3	<i>Environmental Consequences and Mitigation – Environmental Justice – CRJMTC</i>	3-461
3.4.6	<i>Geology and Soils – CRJMTC</i>	3-469
3.4.6.1	<i>Regulatory Framework – Geology and Soils – CRJMTC</i>	3-469
3.4.6.2	<i>Affected Environment – Geology and Soils – CRJMTC</i>	3-469
3.4.6.3	<i>Environmental Consequences and Mitigation - Geology and Soils - CRJMTC</i>	3-472
3.4.7	<i>Hazardous Materials and Hazardous Waste – CRJMTC</i>	3-477
3.4.7.1	<i>Regulatory Framework – Hazardous Materials and Hazardous Waste – CRJMTC</i>	3-477
3.4.7.2	<i>Affected Environment – Hazardous Materials and Hazardous Waste Management – CRJMTC</i>	3-477

3.4.7.3	<i>Environmental Consequences and Mitigation – Hazardous Materials and Hazardous Waste – CRJMTC</i>	3-485
3.4.8	Health & Safety – CRJMTC	3-491
3.4.8.1	<i>Regulatory Framework – Health & Safety – CRJMTC</i>	3-491
3.4.8.2	<i>Affected Environment – Health & Safety – CRJMTC</i>	3-491
3.4.8.3	<i>Environmental Consequences and Mitigation – Health & Safety - CRJMTC</i>	3-493
3.4.9	Land Use – CRJMTC	3-499
3.4.9.1	<i>Regulatory Framework – Land Use – CRJMTC</i>	3-499
3.4.9.2	<i>Affected Environment – Land Use - CRJMTC</i>	3-503
3.4.9.3	<i>Environmental Consequences and Mitigations– Land Use – CRJMTC</i>	3-508
3.4.10	Noise – CRJMTC	3-525
3.4.10.1	<i>Noise Regulations and Guidelines - CRJMTC</i>	3-525
3.4.10.2	<i>Noise Introduction - CRJMTC</i>	3-525
3.4.10.3	<i>Affected Environment – Noise - CRJMTC</i>	3-528
3.4.10.4	<i>Environmental Consequences and Mitigation</i>	3-531
3.4.11	Socioeconomics – CRJMTC	3-545
3.4.11.1	<i>Regulatory Framework – Socioeconomics – CRJMTC</i>	3-545
3.4.11.2	<i>Affected Environment – Socioeconomics – CRJMTC</i>	3-545
3.4.11.3	<i>Environmental Consequences and Mitigation – Socioeconomics - CRJMTC</i>	3-558
3.4.12	Transportation – CRJMTC	3-573
3.4.12.1	<i>Regulatory Framework - Transportation – CRJMTC</i>	3-573
3.4.12.2	<i>Affected Environment - Transportation – CRJMTC</i>	3-573
3.4.12.3	<i>Environmental Consequences and Mitigation – Transportation - CRJMTC</i>	3-576
3.4.13	Utilities – CRJMTC	3-587
3.4.13.1	<i>Regulatory Framework – Utilities – CRJMTC</i>	3-587
3.4.13.2	<i>Affected Environment – Utilities – CRJMTC</i>	3-587
3.4.13.3	<i>Environmental Consequences and Mitigation – Utilities - CRJMTC</i>	3-590
3.4.14	Water Resources – CRJMTC	3-599
3.4.14.1	<i>Regulatory Framework –Water Resources – CRJMTC</i>	3-599
3.4.14.2	<i>Affected Environment – Water Resources – CRJMTC</i>	3-600
3.4.14.3	<i>Environmental Consequences and Mitigation – Water Resources - CRJMTC</i>	3-612

3.4.15	Wetlands – CRJMTC	3-625
3.4.15.1	<i>Regulatory Framework – Wetlands - CRJMTC</i>	<i>3-625</i>
3.4.15.2	<i>Affected Environment – Wetlands – CRJMTC</i>	<i>3-629</i>
3.4.15.3	<i>Environmental Consequences and Mitigation – Wetlands - CRJMTC</i>	<i>3-645</i>
3.4.16	Visual/Aesthetics – CRJMTC	3-659
3.4.16.1	<i>Regulatory Environment – Visual/Aesthetics – CRJMTC</i>	<i>3-659</i>
3.4.16.2	<i>Affected Environment – Visual/Aesthetics – CRJMTC</i>	<i>3-659</i>
3.4.16.3	<i>Environmental Consequences and Mitigation – Visual/Aesthetics - CRJMTC</i>	<i>3-668</i>
3.4.17	Cumulative Impacts – CRJMTC	3-687
3.5	FTD, Fort Drum, New York	3-689
3.5.1	Air Quality – FTD	3-689
3.5.1.1	<i>Regulatory Framework – Air Quality - FTD</i>	<i>3-689</i>
3.5.1.2	<i>Affected Environment – Air Quality – FTD</i>	<i>3-694</i>
3.5.1.3	<i>Environmental Consequences and Mitigation – Air Quality - FTD</i>	<i>3-698</i>
3.5.2	Airspace – FTD	3-723
3.5.2.1	<i>Regulatory Framework – Airspace - FTD</i>	<i>3-723</i>
3.5.2.2	<i>Affected Environment– Airspace - FTD</i>	<i>3-723</i>
3.5.2.3	<i>Environmental Consequences and Mitigation – Airspace – FTD</i>	<i>3-725</i>
3.5.3	Biological Resources – FTD	3-731
3.5.3.1	<i>Regulatory Framework – Biological Resources – FTD</i>	<i>3-731</i>
3.5.3.2	<i>Affected Environment – Biological Resources – FTD</i>	<i>3-732</i>
3.5.3.3	<i>Environmental Consequences and Mitigation – Biological Resources – FTD</i>	<i>3-740</i>
3.5.4	Cultural Resources – FTD	3-751
3.5.4.1	<i>Regulatory Framework – Cultural Resources - FTD</i>	<i>3-751</i>
3.5.4.2	<i>Affected Environment – Cultural Resources – FTD</i>	<i>3-754</i>
3.5.4.3	<i>Environmental Consequences and Mitigation – Cultural Resources – FTD</i>	<i>3-760</i>
3.5.5	Environmental Justice – FTD	3-765
3.5.5.1	<i>Regulatory Framework – Environmental Justice – FTD</i>	<i>3-765</i>
3.5.5.2	<i>Affected Environment – Environmental Justice – FTD</i>	<i>3-765</i>
3.5.5.3	<i>Environmental Consequences and Mitigation – Environmental Justice – FTD</i>	<i>3-770</i>

3.5.6	Geology and Soils – FTD	3-779
3.5.6.1	Regulatory Framework – Geology and Soils – FTD	3-779
3.5.6.2	Affected Environment – Geology and Soils – FTD	3-779
3.5.6.3	Environmental Consequences and Mitigation – Geology and Soils – FTD	3-781
3.5.7	Hazardous Materials and Hazardous Waste Management – FTD	3-785
3.5.7.1	Regulatory Framework – Hazardous Materials and Hazardous Waste Management – FTD	3-785
3.5.7.2	Affected Environment – Hazardous Materials and Hazardous Waste Management – FTD	3-785
3.5.7.3	Environmental Consequences and Mitigation – Hazard Materials and Hazardous Waste Management – FTD	3-787
3.5.8	Health & Safety – FTD	3-791
3.5.8.1	Regulatory Framework – Health & Safety - FTD	3-791
3.5.8.2	Affected Environment – Health & Safety – FTD	3-791
3.5.8.3	Environmental Consequences and Mitigation – Health & Safety - FTD	3-793
3.5.9	Land Use – FTD	3-799
3.5.9.1	Regulatory Framework – Land Use - FTD	3-799
3.5.9.2	Affected Environment – Land Use - FTD	3-804
3.5.9.3	Environmental Consequences and Mitigation – Land Use - FTD	3-811
3.5.10	Noise – FTD	3-825
3.5.10.1	Noise Regulations and Guidelines – Land Use - FTD	3-825
3.5.10.2	Noise Introduction – Noise - FTD	3-825
3.5.10.3	Affected Environment – Noise – FTD	3-828
3.5.10.4	Environmental Consequences and Mitigation – Noise - FTD	3-831
3.5.11	Socioeconomics – FTD	3-847
3.5.11.1	Regulatory Framework – Socioeconomics – FTD	3-847
3.5.11.2	Affected Environment – Socioeconomics – FTD	3-847
3.5.11.3	Environmental Consequences and Mitigation – Socioeconomics – FTD	3-857
3.5.12	Transportation – FTD	3-873
3.5.12.1	Regulatory Framework – Transportation – FTD	3-873
3.5.12.2	Affected Environment – Transportation – FTD	3-873
3.5.12.3	Environmental Consequences and Mitigation – Transportation - FTD	3-877

3.5.13	Utilities – FTD	3-891
3.5.13.1	<i>Regulatory Framework – Utilities – FTD</i>	<i>3-891</i>
3.5.13.2	<i>Affected Environment – Utilities – FTD</i>	<i>3-891</i>
3.5.13.3	<i>Environmental Consequences and Mitigation – Utilities - FTD</i>	<i>3-893</i>
3.5.14	Water Resources – FTD	3-901
3.5.14.1	<i>Regulatory Framework – Water Resources – FTD</i>	<i>3-901</i>
3.5.14.2	<i>Affected Environment – Water Resources – FTD</i>	<i>3-902</i>
3.5.14.3	<i>Environmental Consequences and Mitigation – Water Resources - FTD</i>	<i>3-907</i>
3.5.15	Wetlands – FTD	3-919
3.5.15.1	<i>Regulatory Framework – Wetlands – FTD</i>	<i>3-919</i>
3.5.15.2	<i>Affected Environment – Wetlands - FTD</i>	<i>3-923</i>
3.5.15.3	<i>Environmental Consequences and Mitigation – Wetlands - FTD</i>	<i>3-930</i>
3.5.16	Visual/Aesthetics– FTD	3-945
3.5.16.1	<i>Regulatory Environment – Visual/Aesthetics – FTD</i>	<i>3-945</i>
3.5.16.2	<i>Affected Environment – Visual/Aesthetics – FTD</i>	<i>3-945</i>
3.5.16.3	<i>Environmental Consequences and Mitigation– Visual/Aesthetics – FTD</i>	<i>3-953</i>
3.5.17	Cumulative Impacts - FTD	3-977
3.6	Summary of Environmental Consequences, Impacts, and Mitigation Options	3-979
4.0	Consultation and Coordination	4-1
4.1	Federal Agencies	4-1
4.2	State Agencies	4-1
4.2.1	Michigan	4-1
4.2.2	Ohio	4-1
4.2.3	New York	4-1
4.3	Local Agencies	4-2
4.3.1	Michigan	4-2
4.3.2	Ohio	4-2
4.3.3	New York	4-2

3.6 Summary of Environmental Consequences, Impacts, and Mitigation Options

A comparative summary of the environmental consequences and impacts, along with potential mitigation options to address the impacts for the potential deployment Alternatives at FCTC, CRJMTC, and FTD is presented in Table 3.6-1. Due to the lack of impacts and mitigation options for the No Action Alternative (see Section 3.2) it is not included in the table.

This page intentionally left blank.

Table 3.6-1 Comparative Summary of Environmental Impacts and Potential Mitigations for CIS Candidate Sites

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
AIR QUALITY				
<p>Construction: Baseline Schedule Impacts</p> <p><u>Potential Mitigation</u></p>	<p>Based on modelled results, minor and temporary impacts from fugitive dust, but small in comparison to those typically generated for Kalamazoo and Calhoun Counties, would be expected. Potential dust impacts would be reduced through dust control best management practices (BMPs).</p> <p>BMPs to reduce dust emissions during construction could consist of use of dust inhibitors; revegetating disturbed areas; proper maintenance of construction vehicles and equipment, use of clean fuels, and application of anti-idling procedures.</p> <p>Estimated greenhouse gases (GHGs) would be below the CEQ reference point of 25,000 metric tons and would not require a full quantitative analysis.</p> <p>No mitigation would be required.</p>	<p>Expected impacts would be similar to FCTC Site 1 (minor and temporary fugitive dust impacts and small in comparison to those typically generated for Kalamazoo County), but would be reduced through dust control BMPs.</p> <p>Similar to FCTC Site 1, a full quantitative analysis would not be required for GHGs.</p> <p>Similar to FCTC Site 1, no mitigation would be required.</p>	<p>Based on modelled results, minor and temporary impacts from fugitive dust, but small in comparison to those typically generated for Portage County, would be expected, but would be reduced through dust control BMPs.</p> <p>BMPs to reduce dust emissions during construction could consist of use of dust inhibitors; revegetating disturbed areas; proper maintenance of construction vehicles and equipment, use of clean fuels, and application of anti-idling procedures.</p> <p>Estimated GHGs would be below standards and a full quantitative analysis would not be required.</p> <p>No mitigation would be required.</p>	<p>Based on modelled results, minor and temporary impacts from fugitive dust, but small in comparison to those typically generated for Jefferson County, would be expected.</p> <p>BMPs to reduce dust emissions during construction could consist of use of dust inhibitors; revegetating disturbed areas; proper maintenance of construction vehicles and equipment, use of clean fuels, and application of anti-idling procedures.</p> <p>Estimated GHGs would be below standards and would not require a full quantitative analysis.</p> <p>No mitigation would be required.</p>
<p>Construction: Expedited Schedule Impacts</p> <p><u>Potential Mitigation</u></p>	<p>The shorter construction time period would result in increased emissions. However, similar to the baseline schedule, only temporary and minor impacts would be expected. These emissions would be reduced through use of BMPs similar to those defined for the baseline schedule.</p> <p>No mitigation would be required.</p>	<p>Similar to FCTC Site 1, only temporary and minor impacts would be expected that would be addressed through use of BMPs.</p> <p>Similar to FCTC Site 1, no mitigation would be required.</p>	<p>The shorter construction time period would result in increased emissions. However, similar to the baseline schedule, only temporary and minor impacts would be expected. These emissions would be reduced through use of BMPs similar to those defined for the baseline schedule.</p> <p>No mitigation would be required.</p>	<p>The shorter construction time period would result in increased emissions. However, similar to the baseline schedule, only temporary and minor impacts would be expected. These emissions would be reduced through use of BMPs similar to those defined for the baseline schedule.</p> <p>No mitigation would be required.</p>
<p>Operation: Baseline Schedule Impacts</p>	<p>Minor impacts to air quality emissions would be expected in comparison to typical Kalamazoo and Calhoun Counties emissions.</p> <p>Estimated GHGs do not indicate the need for quantitative analysis.</p> <p>An operating permit would be required.</p>	<p>Impacts would be the same as those for FCTC Site 1 (minor emission impacts, no quantitative analysis required for GHGs, but operating permit required).</p> <p>BMPs that would be implemented to reduce emissions during operations activities would consist of maintaining equipment in working order, limiting number of operation hours, and installation of air emission controls.</p>	<p>Minor impacts to air quality emissions would be expected in comparison to typical Portage County emissions.</p> <p>Estimated GHGs do not indicate need for quantitative analysis.</p> <p>An operating permit would be required.</p>	<p>Minor impacts to air quality emissions would be expected in comparison to typical Jefferson County emissions.</p> <p>Estimated GHGs do not indicate need for quantitative analysis.</p> <p>An operating permit would be required.</p>

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<u>Potential Mitigation</u>	BMPs that would be implemented to reduce emissions during operations activities would consist of maintaining equipment in working order, limiting number of operation hours, and installation of air emission controls. No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	BMPs that would be implemented to reduce emissions during operations activities would consist of maintaining equipment in working order, limiting number of operation hours, and installation of air emission controls. No mitigation would be required.	BMPs that would be implemented to reduce emissions during operations activities would consist of maintaining equipment in working order, limiting number of operation hours, and installation of air emission controls. No mitigation would be required.
Operation: Expedited Schedule Impacts	The shorter time period would result in slightly increased emissions during the initial operations. However, overall and similar to the baseline schedule, only temporary and minor impacts are expected for air quality and GHG emissions. Similar to the baseline schedule, these emissions would be reduced through use of BMPs. An operating permit would be required.	The impacts would be the same as those for FCTC Site 1 (minor impacts).	The impacts would be the similar (minor), but higher than the baseline schedule impacts, which would be reduced by BMPs. An operating permit would be required.	The impacts would be the similar (minor), but higher than the baseline schedule impacts, which would be reduced by BMPs. An operating permit would be required.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	No mitigation would be required.	No mitigation would be required.
General Conformity: Baseline Schedule Impacts	Based on initial operation and construction activities, no general conformity thresholds would be exceeded, therefore, no general conformity determination would be required.	Similar to FCTC Site 1, no general conformity determination would be required.	Based on initial operation and construction activities, no general conformity thresholds would be exceeded, therefore no general conformity determination would be required.	Based on initial operation and construction activities, no general conformity thresholds would be exceeded, therefore no general conformity determination would be required.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	No mitigation would be required.	No mitigation would be required.
General Conformity: Expedited Schedule Impacts	The estimated construction emission for NO _x would exceed the general conformity threshold. In Year 3, this exceedance would trigger the need for a general conformity determination.	Similar to FCTC Site 1, a general conformity determination would be required.	The estimated construction emission for NO _x would exceed the general conformity threshold. This exceedance would trigger the need for a general conformity determination.	The estimated construction emission for NO _x would exceed the general conformity threshold. This exceedance would trigger the need for a general conformity determination.
<u>Potential Mitigation</u>	Based on results of the general conformity determination, mitigation or securing offsets could be required.	Similar to FCTC Site 1, the need for mitigation would be based on the general conformity determination.	Based on results of the general conformity determination, mitigation or securing offsets could be required.	Based on results of the general conformity determination, mitigation or securing offsets could be required.
AIRSPACE				
Construction: Baseline Schedule Impacts	Impacts would be negligible.	Similar to FCTC Site 1, impacts would be negligible.	Impacts would be negligible.	Impacts would be negligible.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	No mitigation would be required.	No mitigation would be required.

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
Construction: Expedited Schedule Impacts	Impacts would be negligible.	Similar to FCTC Site 1, impacts would be negligible.	Impacts would be negligible.	Impacts would be negligible.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	No mitigation would be required.	No mitigation would be required.
Operation: Impacts	<p>Due to controlled airspace of adjacent airports and airfields, associated airspace impacts would be negligible to minor.</p> <p>Runway incursion with W.K. Kellogg has been identified as a potential safety concern that would need to be coordinated with the local air traffic control to determine appropriate mitigation.</p> <p>An avoidance area over the IDT and SATCOM facilities would need to be established. Impacts would be minor.</p> <p>Although there are numerous air traffic corridors from Michigan, Indiana, and Wisconsin in the vicinity of FCTC, negligible airspace related impacts would occur.</p>	<p>Due to controlled airspace of adjacent airports and airfields, associated airspace impacts would be negligible to minor.</p> <p>Runway incursion with W.K. Kellogg would be of less concern than FCTC Site 1, due to its further distance from W.K. Kellogg Airfield.</p> <p>An avoidance area over the IDT and SATCOM facilities would need to be established. Impacts would be minor.</p> <p>Although there are numerous air traffic corridors from Michigan, Indiana, and Wisconsin in the vicinity of FCTC, negligible airspace related impacts would occur.</p>	<p>Airspace is not controlled by adjacent airports or airfields. Impacts that would interfere with controlled airspace would be negligible.</p> <p>An avoidance area over the IDT and SATCOM facilities would need to be established. Impacts would be minor.</p> <p>Although there are numerous air traffic corridors from Cleveland, OH to Pittsburg, PA in the vicinity of CRJMTC, negligible airspace related impacts would occur.</p>	<p>Due to existing controlled airspace over FTD and Wheeler-Sack Army Airport, airspace issues would need to be coordinated with FTD. Impacts would be minor.</p> <p>An avoidance area over the IDT and SATCOM facilities would need to be established and coordinated with FTD. Impacts would be minor.</p> <p>Due to existing controlled airspace over FTD, there are no air traffic corridors in the airspace over FTD.</p>
<u>Potential Mitigation</u>	Mitigation would need to be addressed for runway incursion with the adjacent airfield (W.K. Kellogg).	Similar to FCTC Site 1, mitigation would need to be addressed for runway incursion with the adjacent airfield (W.K. Kellogg).	Impacts would be negligible to minor; therefore, no mitigation would be required.	Impacts would be negligible to minor; therefore, no mitigation would be required.
BIOLOGICAL RESOURCES				
Construction: Baseline Schedule Impacts: Threatened and Endangered (T&E) Species	<p>There are no T&E species currently present in the FCTC Site 1 footprint, but loss of suitable habitats would occur for the Northern Long-Eared bat (NLEB) and Indiana bat, Mitchell's Satyr butterfly, copperbelly watersnake, and eastern massasauga rattlesnake. Therefore, impacts would be minor.</p> <p>A bald eagle nest is present at FCTC, but is not within the FCTC Site 1 CIS footprint or regulated buffer distances. Impacts would be negligible.</p>	<p>There are no T&E species currently present in the FCTC Site 2 footprint, but loss of suitable habitats would occur for the NLEB and Indiana bat, Mitchell's Satyr butterfly, copperbelly watersnake, and eastern massasauga rattlesnake. Therefore, impacts would be minor.</p> <p>A bald eagle is present at FCTC, but is not within the FCTC Site 2 CIS footprint or regulated buffer distances. Impacts would be negligible.</p>	<p>The NLEB has been identified at the CRJMTC CIS footprint. Impacts would include loss of roost trees and foraging habitat. To reduce impacts, seasonal restrictions on tree removal would be implemented to the practical extent possible. Therefore, impacts would be minor.</p> <p>Loss of suitable habitat for the Indiana bat, Mitchell's Satyr butterfly, eastern massasauga rattlesnake, and monkshood would occur, but none of these T&E species are currently present.</p>	<p>The NLEB has been identified in the FTD CIS footprint. The Indiana bats are present at FTD in the cantonment area and roost within 5 miles FTD, but are not known to roost in the FTD CIS footprint. However, due to their general presence at FTD, adverse indirect impacts for these two bat species would result from loss of roost habitat and forage. To reduce impacts, seasonal restrictions on tree removal would be implemented to practical extent possible. Therefore, the impacts would be minor.</p>

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<p><u>Potential Mitigation:</u> <i>T&E Species</i></p> <p><u>Impacts:</u> <i>Other Species</i></p> <p><u>Potential Mitigation:</u> <i>Other Species</i></p>	<p>Overall, the baseline construction schedule impacts may affect, but would not likely adversely affect the potential T&E species.</p> <p>Although habitats may be lost, no T&E species would be directly impacted. Therefore, because the baseline construction schedule impacts would be minor and may affect, but would not likely adversely affect the potential T&E species, no mitigation would be required.</p> <p>Vegetation: The FCTC Site 1 footprint consists of 1,008 acres; 805 acres would be cleared (230 acres of grassland and 575 acres of forest).</p> <p>Habitat conversion: Loss of vegetation alliances from forested and grassland areas to maintained turf grass areas. Localized wetland and vegetation composition change from changes in hydrology/filling.</p> <p>Birds, Wildlife, Fish, and Reptiles: Direct impacts due to displacement, indirect impacts due to loss of breeding and foraging habitat.</p> <p>BMPs would be implemented to address impacts would consist of practices such as clearing in non-nesting or breeding periods to practical extent and managing erosion/sedimentation. In addition to the BMPs, the military readiness exemption for birds covered by the MBTA would be invoked for the CIS project, as needed, because although takes of individual birds may occur within the CIS footprint, the overall population of species would not be adversely affected.</p> <p>Overall impacts to other species are likely to be minor.</p> <p>Because overall impacts to other species would be minor, no mitigation measures (compensatory, offsetting activities, or otherwise) were identified.</p>	<p>Overall, the baseline construction schedule impacts may affect, but would not likely adversely affect the potential T&E species.</p> <p>Although habitats may be lost, no T&E species would be directly impacted. Therefore, because the baseline construction schedule impacts would be minor and may affect, but would not likely adversely affect the potential T&E species, no mitigation would be required.</p> <p>Vegetation: The FCTC Site 2 footprint consists of 1,040 acres; 831 acres would be cleared (primarily forest). The quality of forest, fen habitat, and other vegetation community slightly higher than FCTC Site 1.</p> <p>Similar but slightly elevated impacts over those for FCTC Site 1 for habitat conversion (habitat for FCTC Site 2 slightly higher quality than FCTC Site 1) and slightly elevated impacts to birds, wildlife, fish, and reptiles would occur.</p> <p>Similar to FCTC Site 1, impacts would be minor and addressed through implementation of BMPs. In addition to the BMPs, the military readiness exemption for birds covered by the MBTA would be invoked for the CIS project, as needed, because although takes of individual birds may occur within the CIS footprint, the overall population of species would not be adversely affected.</p> <p>Overall impacts to other species are likely to be minor.</p> <p>Because overall impacts to other species would be minor, no mitigation measures (compensatory, offsetting activities, or otherwise) were identified.</p>	<p>A bald eagle nest is present at CRJMTC, but not within the CIS footprint or regulated buffer distances. Impacts would be negligible.</p> <p>Overall, the baseline construction schedule impacts may affect, but would not likely adversely affect other potential T&E species.</p> <p>Because the baseline construction schedule impacts would be minor and may affect, but would not likely adversely affect the NLEB or other T&E species, no mitigation would be required.</p> <p>Vegetation: The CRJMTC CIS footprint consists of 1,070 acres; 941 acres to be cleared (391 forested acres, 314 shrub acres, and 236 herbaceous acres).</p> <p>Habitat conversion: Loss of forested, shrub, and herbaceous vegetation alliances to maintained turf grass areas. Localized wetland and vegetation composition change from changes in hydrology/filling.</p> <p>Birds, Wildlife, Fish, and Reptiles: Direct impacts due to displacement, indirect impacts due to loss of breeding and foraging habitat.</p> <p>BMPs would be implemented to address impacts and would consist of practices such as clearing in non-nesting or breeding periods to practical extent and managing erosion/sedimentation. In addition to the BMPs, the military readiness exemption for birds covered by the MBTA would be invoked for the CIS project, as needed, because although takes of individual birds may occur within the CIS footprint, the overall population of species would not be adversely affected.</p> <p>Overall impacts to other species are likely to be minor.</p> <p>Because overall impacts to other species would be minor, no mitigation measures (compensatory, offsetting activities, or otherwise) were identified.</p>	<p>Overall, the baseline construction schedule impacts may affect, but would not likely adversely affect, the NLEB and Indiana bat within the FTD CIS footprint.</p> <p>Because the baseline construction schedule impacts would be minor and may affect, but would not likely adversely affect the NLEB or Indiana bat, no mitigation would be required.</p> <p>Vegetation: The FTD CIS footprint consists of 1,219 acres; 996 acres to be cleared (846 mixed forested acres, 113 shrub acres, and 37 herbaceous acres).</p> <p>Habitat conversion: Loss of forested, shrub, and herbaceous vegetation alliances to maintained turf grass areas. Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<u>Potential Mitigation</u>	Based on minimizing impacts through use of construction BMPs, the overall impacts for soil and geology at FCTC Site 1 would be moderate. Therefore, no mitigation would be required.	Based on minimizing impacts through use of construction BMPs, the overall impacts for soil and geology at FCTC Site 2 would be moderate. Therefore, no mitigation would be required.	Based on minimizing typical impacts through use of construction BMPs, the overall impacts for soil and geology at the CRJMTC CIS footprint would be moderate; therefore, no mitigation would be required. Due to the presence of the AOCs, groundwater encountered during construction activities would need to be characterized to determine whether or not treatment would be required prior to discharge, and if required, treated.	Based on minimizing impacts through use of construction BMPs, the overall impacts for soil and geology at the FTD CIS footprint would be moderate. Therefore, no mitigation would be required.
Operation: Impacts	Primary impacts would be related to erosion control which would be minimized through use of BMPs.	Primary impacts would be related to erosion control which would be minimized through use of BMPs.	Primary impacts would be related to erosion control which would be minimized through use of BMPs.	Primary impacts would be related to erosion control which would be minimized through use of BMPs.
<u>Potential Mitigation</u>	There would be negligible impacts for geology and soils; therefore, no mitigation would be required.	There would be negligible impacts for geology and soils; therefore, no mitigation would be required.	There would be negligible impacts for geology and soils; therefore, no mitigation would be required.	There would be negligible impacts for geology and soils; therefore, no mitigation would be required.
HAZARDOUS MATERIALS/HAZARDOUS WASTE				
Construction: Baseline Schedule Impacts	Construction activities would use/generate limited construction-related hazardous materials/hazardous waste (HM/HW) that would be addressed through implementation of HazCom and Hazardous Waste HazWst programs and plans established by the construction contractor and coordinated with existing FCTC plans and policies. Therefore, negligible impacts would occur.	Impacts would be similar to those defined for FCTC Site 1 (negligible impacts).	Construction activities would use/generate limited construction-related HM/HW that would be addressed through implementation of HazCom and HazWst programs and plans established by the construction contractor and coordinated with existing CRJMTC plans and policies. Therefore, negligible impacts would occur. Soil remedial work within AOCs would be completed prior to construction actions to protect workers and the environment; however, contaminated groundwater could be encountered during dewatering. This impact would be moderate.	Construction activities would use/generate limited construction-related HM/HW that would be addressed through implementation of HazCom and HazWst programs and plans established by the construction contractor and coordinated with existing FTD plans and policies. Therefore, negligible impacts would occur.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	No mitigation would be required for construction HW/HW related activities for the deployment of the CIS, other than those potentially associated with groundwater characterization and treatment, if required, during dewatering activities.	No mitigation would be required.

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<p>Construction: <i>Expedited Schedule</i> <u>Impacts</u></p> <p><u>Potential Mitigation</u></p>	<p>Similar to the baseline schedule, limited construction HM/HW use/generated during the expedited schedule would be minimized to negligible impacts by implementation of contractor and FCTC HazCom /HazWst programs, plans, and BMPs.</p> <p>No mitigation would be required.</p>	<p>Impacts would be similar to those defined for FCTC Site 1 (negligible impacts).</p> <p>Similar to FCTC Site 1, no mitigation would be required.</p>	<p>Similar to the baseline schedule, limited construction HM/HW use/generated during the expedited schedule would be minimized to negligible impacts by implementation of contractor and CRJMTC HazCom/HazWst programs, plans, and BMPs. The amounts of potentially contaminated groundwater from dewatering in a shorter timeframe could increase. These impacts would be moderate.</p> <p>No mitigation would be required for general HM/HW impacts.</p> <p>Groundwater from dewatering would need to be characterized and treated, if required.</p>	<p>Similar to the baseline schedule, limited construction HM/HW use/generated during the expedited schedule would be minimized to negligible impacts by implementation of contractor and FTD HazCom/HazWst programs, plans, and BMPs.</p> <p>No mitigation would be required.</p>
<p>Operation: <u>Impacts</u></p> <p><u>Potential Mitigation</u></p>	<p>New hazardous materials would be introduced to the site, including additional fuel, small quantities of interceptor (KV device) fuel [hydrazine and oxidizer (nitrogen tetroxide)] and small explosive components. The potential for accidental release and exposure of toxic materials onsite would be minimized to negligible impacts by the implementation of newly developed CIS HazCom/HazWst plans and programs and coordination with FCTC plans and policies currently in place.</p> <p>No mitigation would be required.</p>	<p>Impacts would be similar to those defined for FCTC Site 1 (negligible impacts).</p> <p>Similar to FCTC Site 1, no mitigation would be required.</p>	<p>New hazardous materials would be introduced to the site, including additional fuel, small quantities of interceptor (KV device) fuel [hydrazine and oxidizer (nitrogen tetroxide)] and small explosive components. The potential for accidental release and exposure of toxic materials onsite would be minimized to negligible impacts with the implementation of CIS HazCom/HazWst Plans and programs and coordination with FTD plans and policies currently in place.</p> <p>No mitigation would be required.</p>
HEALTH AND SAFETY				
<p>Construction: <i>Baseline Schedule</i> <u>Impacts</u></p>	<p>Minor hazards inherent to general construction activities would be addressed by preparation and implementation of health and safety planning documentation (safety plans and job hazard assessments) and training.</p> <p>The perceived low risk for onsite construction personnel of encountering unexploded ordnance would be addressed through unexploded ordnance awareness training.</p> <p>Hazards related to the offsite and onsite transportation of materials would be addressed through preparation and implementation of transportation safety</p>	<p>Minor hazards would be similar to those defined for FCTC Site 1.</p>	<p>Minor hazards inherent to general construction activities would be addressed by preparation and implementation of health and safety planning documentation (safety plans and job hazard assessments) and training.</p> <p>The perceived low risk for onsite construction personnel of encountering unexploded ordnance would be addressed through unexploded ordnance awareness training.</p> <p>Hazards related to the offsite and onsite transportation of materials would be addressed through preparation and implementation of transportation safety</p>	<p>Minor hazards inherent to general construction activities would be addressed by preparation and implementation of health and safety planning documentation (safety plans and job hazard assessments) and training.</p> <p>The perceived low risk for onsite construction personnel of encountering unexploded ordnance would be addressed through unexploded ordnance awareness training.</p> <p>Hazards related to the offsite and onsite transportation of materials would be addressed through preparation and implementation of transportation safety</p>

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<u>Potential Mitigation</u>	procedures, training, and adherence to DOT regulations and requirements. Health and safety impacts would be addressed through common safety practices; therefore, no mitigation would be required.	Health and safety impacts would be addressed through common safety practices; therefore, no mitigation would be required.	procedures, training, and adherence to DOT regulations and requirements. Minor safety hazards due to the potential presences of MEC and UXO would be addressed by the standard practice of performing a UXO survey and removal prior to start of construction. Health and safety impacts would be addressed through common safety practices; therefore, no mitigation would be required.	procedures, training, and adherence to DOT regulations and requirements. Health and safety impacts would be addressed through common safety practices; therefore, no mitigation would be required.
Construction: <u>Expedited Schedule Impacts</u>	Enhanced, but minor, health and safety impacts would occur for implementation of the expedited construction schedules due to the increased number of personnel onsite, longer working hours, and night work. Similar to the baseline schedule, these issues would be addressed by the implementation of common and some enhanced health and safety practices.	Similar to FCTC Site 1, enhanced, but minor, health and safety impacts would occur for implementation of the expedited construction schedules and be addressed by the implementation of common and some enhanced health and safety practices.	Enhanced health and safety issues would occur for implementation of the expedited construction schedules due to the increased number of personnel onsite, longer working hours, and night work. Similar to the baseline schedule, these issues would be addressed by the implementation of common and some enhanced health and safety practices.	Enhanced, but minor, health and safety impacts would occur for implementation of the expedited construction schedules due to the increased number of personnel onsite, longer working hours, and night work. Similar to the baseline schedule, these issues would be addressed by the implementation of common and some enhanced health and safety practices.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	No mitigation would be required.	No mitigation would be required.
Operation: <u>Impacts</u>	Overall, minor impacts would occur.	Overall, minor impacts would occur.	Overall, minor impacts would occur.	Overall, minor impacts would occur.
<u>Potential Mitigation</u>	Increased emergency services may be required. Final facility design would provide requirements and the need for enhanced emergency services and adequate fire protection. Additional small explosive risk would be related to GBI functions. This risk would be addressed during the facility design by placing the facilities at appropriate explosive safety arcs. Other than the potential need to enhance emergency services, no mitigation would be required.	Increased emergency services may be required. Final facility design would provide requirements and the need for enhanced emergency services and adequate fire protection. Additional small explosive risk would be related to GBI functions. This risk would be addressed during the facility design by placing the facilities at appropriate explosive safety arcs. Other than the potential need to enhance emergency services, no mitigation would be required.
LAND USE				
Construction: <u>Baseline Schedule Impacts</u>	Impacts to regional land use plans (land use conversion and recreation) would be minor.	Similar to FCTC Site 1, impacts to regional land use plans (land use conversion and recreation) would be minor.	Impacts to regional land use (recreation) would be minor.	Impacts to regional land use would be minor (no conflicts with regional plans, minor land conversion; transportation impacts are addressed under Transportation resource).

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<u>Potential Mitigation</u>	There would be some conflicts with the INRMP from loss of some training areas (including 7.62 mm firing range), and some reduction in recreation lands. However, the 7.62 mm range would move to an existing range at another MIARNG facility with adequate training capability for the increased training (no perceived impacts). The CIS impacts would be compatible and consistent with the overall land use designation for FCTC (military/training) and secondary recreational use. Overall impacts would be minor. No mitigation would be required.	Similar to FCTC Site 1 for site land use, conflicts with INRMP, from loss of some training areas and reduction in recreation lands. For FCTC Site 2, there would not be any training loss impacts from relocating the 7.62 mm firing range (not in FCTC Site 2 footprint). However, similar to FCTC Site 1 for the remaining conflicts identified, overall impacts would be minor due to the compatibility with overall land use designation (military/training) and secondary recreational use. Similar to FCTC Site 1, no mitigation would be required.	There would be some possible conflicts with existing INRMP due to training land loss. However, the INRMP would be revised, as needed, to support the military mission (including the CIS). Several facilities would be relocated from within the CRJMTC CIS footprint to other locations at CRJMTC. However, land use for the CIS within CRJMTC would be compatible with overall CRJMTC land use designation (military/training). No impacts were noted for designed relocation facility areas. Overall impacts would be minor. No mitigation would be required.	There would be some possible minor conflicts with INRMP (loss of training area and natural resources) and areas for recreational use. Concern also with impact for closure and rerouting of Highway 3A traffic; however, this would probably not impact land use designations. Land use for the CIS would be compatible with overall FTD land use designation (military/training). Recreation use is secondary. Available land versus land use losses would be minor. Overall impacts would be minor. No mitigation would be required.
Construction: <u>Expedited Schedule Impacts</u> <u>Potential Mitigation</u>	Similar to the baseline schedule, regional and site land use impacts would be minor. No mitigation would be required.	Similar to the FCTC Site 1 expedited schedule and the FCTC Site 2 baseline schedule impact, regional and site land use impacts would be minor. Similar to FCTC Site 1, no mitigation would be required.	Similar to the baseline schedule, regional and site land use impacts would be minor. No mitigation would be required.	Similar to the baseline schedule, regional and site land use impacts would be minor. No mitigation would be required.
Operation: <u>Impacts</u> <u>Potential Mitigation</u>	Conflicts with regional and site land use impacts would be minor (primarily secondary recreation loss). No mitigation would be required.	Similar to FCTC Site 1, conflicts with regional land use plans would be minor (land use conversion and recreation). Similar to FCTC Site 1, no mitigation would be required.	Conflicts with regional and site land use impacts would be minor (primarily secondary recreation loss). No mitigation would be required.	Conflicts for regional and site land use impacts would be minor (primarily to closure/traffic rerouting of Hwy 3A traffic and secondary recreation loss). No mitigation would be required.
NOISE				
Construction: <u>Baseline Schedule Impacts</u>	Background sound levels were at or above established standards. Construction impact results were determined based on a worst-case qualitative assessment of sound level increases to potential receptors from construction versus background levels. The potential increase determined for FCTC Site 1 to the nearest receptor would be unnoticed to very noticeable (minor/moderate); whereas the furthest of the next three receptors would be unnoticed (negligible impacts). These impacts are conservative and would be addressed by BMPs.	Results would be similar to FCTC Site 1 (minor impacts), except noise at the closest receptor would be increased to very noticeable.	Background sound levels were at or above established standards. Construction impact results were determined based on a worst-case qualitative assessment of sound level increases to potential receptors from construction versus background levels. The potential increase determined for the CRJMTC CIS footprint to the nearest receptor would be tolerable to objectionable (moderate impacts); whereas the furthest of the next three receptors would be unnoticed (negligible impacts). These impacts are conservative and would be addressed by BMPs.	Background sound levels were at or above established standards. Construction impact results were determined based on a worst-case qualitative assessment of sound level increases to potential receptor at site from construction versus background levels. The potential increase determined for the FTD CIS footprint to the nearest receptor would be tolerable to objectionable (moderate impacts); whereas the furthest of the next four receptors would be unnoticed (negligible impacts). These impacts are conservative and would be reduced by BMPs.

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTTC Site	FTD Site
<u>Potential Mitigation</u>	<p>Standard noise-reducing BMPs would consist of using vibratory versus pile-driving equipment, use of equipment with mufflers/silencers and techniques, such as limiting construction times, especially at nighttime.</p> <p>BMPs would address noise to minor impacts.</p> <p>No mitigation would be required.</p>	<p>Similar to FCTC Site 1, BMPs would address noise to minor impacts.</p> <p>No mitigation would be required.</p>	<p>Standard noise-reducing BMPs would consist of using vibratory versus pile-driving equipment, use of equipment with mufflers/silencers and techniques, such as limiting construction times, especially at nighttime.</p> <p>BMPs would address noise to minor/moderate impacts.</p> <p>No mitigation would be required.</p>	<p>Standard noise-reducing BMPs would consist of using vibratory versus pile-driving equipment, use of equipment with mufflers/silencers and techniques, such as limiting construction times, especially at nighttime.</p> <p>BMPs would address noise to minor/moderate impacts.</p> <p>No mitigation would be required.</p>
<u>Construction: Expedited Schedule Impacts</u>	<p>Daytime results would be similar to baseline schedule.</p> <p>Qualitative impact results were also determined for nighttime work. The nighttime background levels were typically less than established standards.</p> <p>The potential nighttime increase to the nearest receptor would be intrusive to objectionable (moderate impacts); whereas the furthest of the next three receptors would be intrusive (minor impacts). These impacts are conservative and would be addressed by BMPs.</p> <p>BMPs would be similar to baseline schedule, with limiting the noisier activities to daytime hours as much as possible.</p> <p>BMPs would address noise impacts to minor/moderate.</p> <p>No mitigation would be required.</p>	<p>Results would be similar to FCTC Site 1, except for the noise at the closest receptor would be increased to very noticeable.</p> <p>Similar to FCTC Site 1, BMPs would address noise to minor/moderate impacts.</p> <p>No mitigation would be required.</p>	<p>Daytime results would be similar to baseline schedule.</p> <p>Qualitative impact results were also determined for nighttime work. The nighttime background levels were typically less than established standards.</p> <p>The potential nighttime increase to the nearest receptor would be objectionable to very objectionable/intolerable (moderate impacts); whereas the furthest of the next three receptors would be intrusive (minor impacts). These impacts are conservative and would be addressed by BMPs.</p> <p>BMPs would be similar to baseline schedule, with limiting the noisier activities to daytime hours as much as possible.</p> <p>BMPs would address noise to minor/moderate impacts.</p> <p>No mitigation would be required.</p>	<p>Daytime results would be similar to baseline schedule.</p> <p>Qualitative impact results were also determined for nighttime work. Rerouting of traffic to NY 3 would occur, which would increase travel time through the area.</p> <p>Several state highways, interstates, and roads are available to address traffic to/from the CIS (including consideration of closing NY 3A). Based on the</p>

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<p>Potential Mitigation</p>	<p>Minor impacts would occur due to road improvements and new road construction within FCTC Site 1.</p> <p>Overall, impacts to transportation would be major.</p> <p>No mitigation would be required for heavy haul transport.</p> <p>An access permit would require a traffic impact study be conducted. Traffic signals at the ramp termini of I-94 WB and EB off ramps at I-94BL/M 37 would be required to facilitate the movement of traffic through these intersections. In addition, staggered work shifts not to coincide with existing peak hour traffic could also be considered to lessen impacts.</p> <p>Modifications to the existing traffic signals (phasings and timings) at the I-94BL/M 37 and CIS gate and Columbia Avenue/Skyline Drive would be required.</p> <p>No mitigation would be required for existing road improvements or new road construction within FCTC Site 1.</p>	<p>Minor impacts would occur due to road improvements and new road construction within FCTC Site 2.</p> <p>Overall, impacts to transportation would be minor.</p> <p>No mitigation would be required for heavy haul transport.</p> <p>Once the new tight diamond interchange improvements are completed and traffic flow is normalized at the I-94 and 40th Street interchange, a traffic impact study would be required to re-assess the CIS-generated traffic at this interchange. Results of that study may require additional mitigation such as the addition of a traffic light or dedicated turn lane at the 40th Street and CIS Gate intersection. In addition, staggered work shifts not to coincide with existing peak hour traffic could also be considered to lessen impacts.</p> <p>The scheduled improvements to 40th Street due to the new interchange project at Exit 88 should be extended north a few hundred feet to the CIS gate location off of 40th Street.</p> <p>No mitigation would be required for existing road improvements or new road improvements within FCTC Site 2.</p>	<p>Minor impacts would occur due to road improvements and new road construction within CRJMTC.</p> <p>Overall, impacts to transportation would be minor.</p> <p>No mitigation would be required for heavy haul transport.</p> <p>An access permit would require a traffic impact study be conducted. Results of that study may require additional mitigation such as the addition of a traffic light or dedicated turn lane. In addition, staggered work shifts not to coincide with existing peak hour traffic could also be considered to lessen impacts.</p> <p>No mitigation would be required for existing road improvements or new road construction within CRJMTC.</p>	<p>assessment of additional traffic, moderate decreases in the level of services would occur for two lane highways, but would not drop below acceptable design levels. In addition, there would be major impacts to motorists within the Village of Carthage at the signalized intersection of School Street (North and South) and NY 3/126 (State Street) during the evening peak traffic hour.</p> <p>Practices such as staggered work shift could be implemented to address peak traffic impacts.</p> <p>Minor impacts would occur due to required modifications and improvements to onsite FTD roads (removal of some existing roundabouts for equipment delivery, and upgrades to roads) within the CIS footprint.</p> <p>Overall, impacts to transportation would be moderate/major.</p> <p>No mitigation would be required for heavy haul transport.</p> <p>An access permit would require a traffic impact study be conducted. Results of that study may require additional mitigation such as the addition of a traffic light.</p> <p>The signal timing at the School Street (North and South) and NY 3/126 (State Street) would require modification. Consideration of a dedicated left turn lane for N. School Street south bound traffic, along with protected phasing, could be another mitigation option. Staggered work shifts could also be considered. In addition, staggered work shifts not to coincide with existing peak hour traffic could also be considered to lessen impacts.</p> <p>No mitigation would be required for upgrades and modifications of existing roads within FTD.</p>
<p>Construction: Expedited Schedule Impacts</p>	<p>For the expedited schedule, two shifts with similar personnel and a staggered 2-hour transition period</p>	<p>For the expedited schedule, two shifts with similar personnel and a staggered 2-hour transition period</p>	<p>For the expedited schedule, two shifts with similar personnel and a staggered 2-hour transition period</p>	<p>For the expedited schedule, two shifts with similar personnel and a staggered 2-hour transition period</p>

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<u>Potential Mitigation</u>	between shifts was assumed. The overall impacts would be similar to the baseline schedule impacts (major). Mitigation similar to the baseline construction schedule would occur.	between shifts was assumed. The overall impacts would be similar to the baseline schedule impacts (minor). Mitigation similar to the baseline construction schedule would occur.	between shifts was assumed. The overall impacts would be similar to the baseline schedule impacts (minor). Mitigation similar to the baseline construction schedule would occur.	between shifts was assumed. The overall impacts would be similar to the baseline schedule impacts (moderate/major). Mitigation similar to the baseline construction schedule would occur.
Operation: Impacts	For operations, three shifts with higher personnel for the first (normal daytime shift) and lower personnel for the next two shifts were assumed. With these assumed conditions, major delays would occur for those exiting I-94 at Exit 92 similar to the baseline construction schedule for roads around FCTC Site 1.	For operations, three shifts with higher personnel for the first (normal daytime shift) and lower personnel for the next two shifts were assumed. With these assumed conditions, minor impacts, similar to the baseline construction schedule for roads around FCTC Site 2, would occur.	For operations, three shifts with higher personnel for the first (normal daytime shift) and lower personnel for the next two shifts were assumed. With these assumed conditions, minor impacts, similar to the baseline construction schedule for roads around CRJMTC, would occur.	For operations, three shifts with higher personnel for the first (normal daytime shift) and lower personnel for the next two shifts were assumed. With these assumed conditions, moderate impacts would occur on the two-lane highways, but not below acceptable design levels. In addition, there would be major impacts to motorists within the Village of Carthage at the signalized intersection of School Street (North and South) and NY 3/126 (State Street) during the evening peak hour.
<u>Potential Mitigation</u>	Mitigation similar to the baseline schedule would occur.	Similar to FCTC Site 1, mitigation similar to the baseline schedule would occur.	Mitigation similar to the baseline schedule would occur.	Mitigation similar to the baseline schedule would occur.
UTILITIES				
Construction: Baseline Schedule Impacts	Utility services are available from commercial sources or through the construction contractor; therefore, negligible impacts would occur.	Similar to FCTC Site 1, negligible impacts would occur.	Utility services are available from commercial sources or through the construction contractor; therefore, negligible impacts would occur. To avoid potential impacts, onsite groundwater water sources would be avoided due to the potential need to treat contaminated water near AOCs.	Utility services are available from commercial sources or through the construction contractor; therefore, negligible impacts would occur. Potential negligible to minor impacts would occur due to running service lines from long distances. However, impacts would be minimized by using pre-developed road right-of-ways.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	No mitigation would be required.	No mitigation would be required.
Construction: Expedited Schedule Impacts	Similar to the baseline schedule, negligible impacts would occur.	Similar to FCTC Site 1, and baseline schedule, negligible impacts would occur.	Similar to the baseline schedule, negligible impacts would occur.	Similar to the baseline schedule, negligible to minor impacts would occur.
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1 and baseline schedule, no mitigation would be required.	No mitigation would be required.	No mitigation would be required.
Operation: Impacts	Utility services are available from commercial sources. An onsite groundwater aquifer source is also available and a supply facility would be developed for emergency situations. Overall negligible to minor impacts would occur.	Similar to FCTC Site 1, negligible to minor impacts would occur.	Utility services are available from commercial sources, negligible impacts would occur. For emergency/backup water sources, contaminated groundwater may be encountered from AOCs. Minor	Utility services are available from commercial sources. An onsite groundwater aquifer source is also available and a supply facility would be developed for emergency situations. Overall negligible to minor impacts would occur.

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTTC Site	FTD Site
<u>Potential Mitigation</u>	No mitigation would be required.	Similar to FCTC Site 1, no mitigation would be required.	to moderate impacts could occur, but would be minimized to minor with methods consisting of an evaluation of well location/placement and cased well installation. No mitigation would be required for utilities used for routine operations. However, the potential impact from contaminated groundwater would need to be addressed by the evaluation and location of groundwater well, installation of cased wells, and/or treatment if required.	No mitigation would be required.
WATER RESOURCES				
<p>Construction: Baseline Schedule Impacts: Surface Water/ Streams</p> <p><i>Groundwater</i></p>	<p>Other than wetlands (addressed separately), there are limited surface water bodies in the CIS footprint.</p> <p>Minor other surface water impacts would result from:</p> <ul style="list-style-type: none"> - Clearing, grading, and addition of fill could affect surface water hydrology and artificially divert stream flows. - Disturbance of land would result in soil erosion and sedimentation. - Inadvertent releases of construction pollutants could impact surface water quality. <p>BMPs would address these minor impacts through the development and implementation of a SWPPP, SPCC Plan, and associated BMPs.</p> <p>Some short-term, but minor impacts to site hydrology from dewatering during installation of deeper excavations and foundations would occur. Techniques would be implemented to minimize dewatering withdrawal such as installation of liners, concrete plugs/columns or cementation.</p>	<p>Similar to FCTC Site 1, limited surface water in CIS footprint.</p> <p>Similar to FCTC Site 1, minor impacts to other surface water would occur at FCTC Site 2. These impacts would be addressed through implementation of BMPs.</p> <p>Similar to FCTC Site 1, minor impacts to groundwater would occur. These impacts would be addressed through implementation standard dewatering minimization techniques.</p>	<p>Surface water identified in the CIS footprint consists of wetlands (addressed separately), several ponds, and approximately 5.2 miles of unnamed streams.</p> <p>The approximate 5.2 miles of unnamed streams consists of: 1.4 miles of perennial streams (continuous flow throughout year), 1.8 miles of intermittent streams (flows during wet seasons), and 2 miles of ephemeral streams (flows briefly after rainfall).</p> <p>Major (significant) impacts to surface water hydrology would occur due to modifications of streams that traverse the CRJMTTC CIS footprint.</p> <p>Minor other surface water impacts would occur due to soil erosion and sedimentation and inadvertent pollutants. BMPs would address these minimal impacts through development and implementation of SWPPP and SPCC plans.</p> <p>Some short-term, but minor impacts to site hydrology from dewatering during both shallow and deeper excavations and foundations would occur. Techniques would be implemented to minimize dewatering withdrawal such as installation of liners, concrete plugs/columns or cementation.</p>	<p>Surface water identified in the CIS footprint consists of wetlands (addressed separately) and approximately 6 miles of streams.</p> <p>The approximate 6 miles of streams consist of 1.2 miles of perennial (continuous flowing) named streams (West Branch Black Creek) and 4.8 miles of intermittent streams (flows during wet seasons).</p> <p>Major (significant) impacts to surface water hydrology would occur due to modifications (rerouting, enclosing, and/or filling) of surface water streams that traverse the FTD CIS footprint. Modification may not only have major hydrologic impacts to wetlands and other surface water bodies, it may also affect wildlife and plant habitats.</p> <p>Minor other surface water impacts would occur due to soil erosion and sedimentation and inadvertent pollutants. BMPs would address these minimal impacts through development and implementation of SWPPP and SPCC plans.</p> <p>Some short-term, but minor impacts to site hydrology from dewatering during both shallow and deeper excavations and foundations would occur. Techniques would be implemented to minimize dewatering withdrawal such as installation of liners, concrete plugs/columns or cementation.</p>

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<p><u>Potential Mitigation:</u> <i>Surface Water/ Streams</i></p> <p><i>Groundwater</i></p>	<p>Minor storm water, sedimentation/erosion, and pollutant impacts to surface water would be addressed through implementation of BMPs; therefore, no mitigation would be required.</p> <p>Minor dewatering impacts to groundwater would be addressed by standard techniques to reduce water withdrawals. Therefore, no mitigation would be required.</p>	<p>Similar to FCTC Site 1, Minor storm water, sedimentation/erosion and pollutant impacts to surface water would be addressed through implementation of BMPs; therefore, no mitigation would be required.</p> <p>Similar to FCTC Site 1, implement techniques to limit dewatering quantities would be provided; therefore, no mitigation would be required.</p>	<p>Due the presence of AOCs within the CIS footprint, contaminated groundwater may be encountered. Therefore, moderate impacts could occur.</p> <p>Major (significant) impacts to surface water hydrology would be analyzed during facility design and mitigation options such as rerouting the streams could be implemented.</p> <p>Minor storm water, sedimentation/erosion, and pollutant impacts to surface water would be addressed through implementation of BMPs; therefore, no mitigation would be required to address these impacts.</p> <p>Due to AOCs, groundwater generated during dewatering activities would need to be characterized, and then treated as needed.</p>	<p>Major (significant) impacts to surface water hydrology would be analyzed during facility design and mitigation options such as routing major tributaries below ground or around the CIS footprint to downgradient discharge points, or splitting the site into two sites enclosed by a security fence (leaving the existing streams in place) would be further evaluated during the design for implementation.</p> <p>Minor storm water, sedimentation/erosion, and pollutant impacts to surface water would be addressed through implementation of BMPs; therefore, no mitigation would be required to address these impacts.</p> <p>Minor dewatering impacts to groundwater would be addressed by standard techniques to reduce water withdrawals. Therefore, no mitigation would be required.</p>
<p>Construction: Expedited Schedule Impact: <i>Surface Water/ Streams</i></p> <p><i>Groundwater</i></p> <p><u>Potential Mitigation:</u> <i>Surface Water/ Streams and Groundwater</i></p>	<p>Impacts would be similar to those defined for the baseline schedule, but would be intensified. However, by addressing impacts with BMPs in a more aggressive manner, impacts would be minor.</p> <p>Impacts would be similar to baseline schedule, with some increased intensity in quantities of dewatering generated. Impacts would remain minor through implementation of dewatering minimization techniques.</p> <p>Similar to baseline schedule, no mitigation would be required.</p>	<p>Similar to FCTC Site 1 and the baseline schedule, impacts would be slightly increased, but would remain minor through implementation of BMPs.</p> <p>Similar to FCTC Site 1 and the baseline schedule, impacts would be slightly increased, but would remain minor through implementation dewatering minimization techniques</p> <p>Similar to FCTC Site 1 and the baseline schedule, no mitigation would be required.</p>	<p>Major (significant) impacts to surface water hydrology, similar to the baseline schedule would occur and would require mitigation.</p> <p>Other surface water impacts, due to erosion, sedimentation, and inadvertent pollutants, would be similar to those defined for the baseline schedule, but would be intensified. However, by addressing impacts with BMPs in a more aggressive manner, impacts would be minor.</p> <p>Groundwater generated, especially near AOCs, would need to be characterized, and disposed or treated as needed.</p> <p>Mitigations would be similar to baseline schedule.</p>	<p>Major (significant) impacts to surface water hydrology, similar to the baseline schedule would occur and would require mitigation.</p> <p>Other surface water impacts would be similar to those defined for the baseline schedule, but would be intensified. However, by addressing impacts with BMPs in a more aggressive manner, impacts would be minor.</p> <p>Clearing and grading (erosion/sedimentation control) constraints of 5 acres would need to be addressed.</p> <p>Impacts would be similar to baseline schedule, with some increased intensity in quantities of dewatering generated. Impacts would remain minor through implementation of dewatering minimization techniques</p> <p>Mitigations would be similar to baseline schedule.</p>

WETLANDS				
<p>Construction: <i>Baseline Schedule</i> <u>Impacts</u></p>	<p>Permanent major (significant) direct impact from filling, draining, and trenching would result in the loss of approximately 20 acres of wetlands within the CIS footprint. No high quality fens or wetlands are located in the FCTC Site 1 footprint.</p> <p>Some permanent indirect hydrologic connection to wetlands outside the CIS footprint would lower the quality as a natural feature. Vegetation changes/quality changes from filling degraded or introduction of invasive species.</p> <p>Some temporal indirect impacts could occur from erosion/sedimentation to wetlands outside the footprint. These impacts would be addressed by BMPS such as soil erosion and sediment control devices.</p>	<p>Permanent major (significant) direct impact from filling, draining, and trenching would result in the loss of approximately 78 acres within the CIS footprint. Some wetlands in the footprint are part of fen complex; however, two of three fens are low quality fens.</p> <p>Indirect and temporal indirect impacts would be similar to those defined for FCTC Site 1.</p>	<p>Permanent major (significant) direct impact from filling, draining, and trenching would result in the loss of approximately 20.2 acres within the CIS footprint consisting of: Category 3 (high quality) -12.4 acres; Category 2/modified Category 2 - 7.4 acres; and Category1 (lowest quality) - 0.4 acres.</p> <p>Some permanent indirect impacts to wetlands outside the CIS footprint would occur from changes by erosion/sedimentation, changes in hydrology, and permanent vegetation changes. Permanent major impacts would occur to approximately 1 acre.</p> <p>Some temporal indirect impacts could occur from erosion/sedimentation to wetlands outside the footprint. These impacts would be addressed by BMPs such as soil erosion and sediment control devices and buffered for impacts by other large wetlands. These potential impacts would be minor and short-term.</p>	<p>Permanent major (significant) direct impact from filling, draining, and trenching would result in the loss of approximately 26 acres within the CIS footprint consisting of both high quality wetlands and lower quality wetlands associated with disturbed areas (training areas, timber harvest locations, and roadsides).</p> <p>Some permanent indirect impacts to wetlands outside of the CIS footprint would be impacted by changes by erosion/sedimentation, changes in hydrology, and permanent vegetation changes. Potentially major impacts would occur to an estimated 60 acres.</p> <p>Some temporal indirect impacts could occur from erosion/sedimentation (downstream of the footprint) and hydrology changes (upgradient of the footprint) to wetlands outside the footprint. These impacts would be addressed by BMPs such as soil erosion and sediment control devices and buffered for impacts by other large wetlands. These potential impacts would be minor and short-term.</p>

Impacts/ Potential Mitigation	FCTC Site 1	FCTC Site 2	CRJMTC Site	FTD Site
<p><u>Potential Mitigation</u></p>	<p>Unavoidable wetland impacts in Michigan of greater than 5 acres of wetlands is considered essential to conservation of state's natural resource would require mitigation to replace lost wetland acreage and wetland functions.</p> <p>Mitigation for wetland loss could consist of the following or combined thereof: wetland creation in off-installation uplands, purchase of mitigation bank credits or in-lieu fee program benefits).</p> <p>The specific types and amount of mitigation would not be determined until a CIS deployment and site is selected, and a permit application under Section 404 and the Michigan water quality certification process under Section 401 are initiated.</p>	<p>Similar mitigation to FCTC Site 1 would be required, with exception that some of the portions of the FCTC Site 2 wetlands would have a higher quality; therefore, would require a higher mitigation ratio than FCTC Site 1 wetlands.</p>	<p>Unavoidable wetland impacts in Ohio of greater than 1 acre would require mitigation to replace lost wetland acreage and wetland functions.</p> <p>Mitigation for wetland loss could consist of onsite mitigation for value and function and offsite mitigation provided in the same watershed, or through banking sites (in-lieu fee program) which is available and the preferred option by CRJMTC.</p> <p>The specific types and amount of mitigation would not be determined until a CIS deployment and site is selected and a permit application under Sections 404 and 401 and the Ohio Isolated Wetlands Permit Program processes are initiated.</p>	<p>Substantial efforts were made during the site consolidation activities to avoid and minimize wetland losses.</p> <p>Unavoidable wetland impacts in New York of greater than 1 acre would require mitigation to replace lost wetland acreage and wetland functions.</p> <p>Mitigation for wetland loss could consist of onsite mitigation for value and function and offsite mitigation provided in the same watershed, or through banking sites (in-lieu fee program) which is the preferred option. Currently, only FTD has a wetland mitigation bank for this watershed although an in-lieu fee program sponsored by others may be a viable option, which is available and the preferred option by FTD.</p> <p>The specific types and amount of mitigation would not be determined until a CIS deployment and site is selected, and a permit application under Sections 404 and 401 and the USACE and NYSDEC permit program processes are initiated.</p>
<p>Construction: <u>Expedited Schedule Impacts</u></p> <p><u>Potential Mitigation</u></p>	<p>Similar major (significant) impacts to the baseline schedule would occur with the potential for higher intensive impacts, earlier loss of wetland habitat and groundwater flow, and higher degree of sedimentation to manage due to the compressed schedule.</p> <p>BMPs would need to be implemented more aggressively.</p> <p>Mitigation similar to the baseline schedule would be required.</p>	<p>Similar major (significant) impacts to baseline schedule would occur with the potential for higher intensive impacts, earlier loss of wetland habitat and groundwater flow, and higher degree of sedimentation to manage due to the compressed schedule.</p> <p>BMPs would need to be implemented more aggressively.</p> <p>Mitigation similar to FCTC Site 1 and the FCTC 2 baseline schedule would be required.</p>	<p>Similar major (significant) impacts to the baseline schedule would occur with the potential for higher intensive impacts.
