### Potential CIS Footprint

#### Old Notional Site Layout

#### Proposed Notional Site Layout

Layout has changed since the 2014 public scoping meeting, as planning efforts have matured and site conditions have been better defined.

Adjustments and considerations include:

- Two sites combined into one due to constraints of wetlands and available usable land.
- Requires closure of State Route 3A.
- Consolidation of four Interceptor fields to three. No longer primary and future expansion areas.
- Tightening up the layout and reducing keep out zones.
- Avoidance of wetlands and significant topography changes as much as possible.
- Facility consolidation with separate facility areas eliminated.
- CIS Footprint contains:
  - Inside zone area – Fenced in region cleared of vegetation that would require lighting
  - Outer area (“Keep Out Zone”) – Region with vegetation and no lighting but marked with signs
