

Preventing problems

NEVER feed coyotes! Don't place food outdoors that will attract wild animals. Clean up pet food. Secure garbage cans. Don't try to pet a coyote and teach children not to approach any unfamiliar animal.

Don't let coyotes intimidate you. Frighten away coyotes by making loud noises and acting aggressively, such as waving your arms in the air, throwing sticks at it or spraying it with a hose. Don't attempt to hurt it because injured animals are more likely to attack. Be aware of unusual coyote behavior. Teach children to recognize and not to run from coyotes. If children are approached, have them move slowly into a house, trailer, or building.

Keep your pets safe

Coyotes can and do prey on domestic cats and small dogs. To protect your pets, don't allow them to roam freely. Most coyote attacks on pets occur either at night or at dusk or dawn. Keep your pets indoors during those periods and do not leave out pet food overnight. Keep cats indoors. When cats wander freely, there's an increased risk of them being attacked by coyotes. Coyotes are also attracted by garbage. Problems can be significantly reduced if residents secure trash.

Coyotes are found throughout California. Coyotes typically weigh between 15-30 pounds. They have pointed ears, a narrow muzzle and a bushy tail. Males tend to be larger than females. Coyote fur is usually grayish-brown. The scientific name of the coyote, *Canis latrans*, means "barking dog." Coyotes use vocalizations such as barking like dogs, but most often heard making shrill yips and howls. Howling is often a group effort that begins as a simple howl, but quickly increases into a series of group howls and high-pitched barks. Coyotes typically are shy and elusive, but they occasionally can be spotted either alone, in pairs or in small groups where food is readily available. Coyotes remain active year round. Coyotes play an important role in the ecosystem by helping to keep rodent populations under control.

Co-existing with coyotes

Coyotes can be curious but are also timid and generally run away if challenged. Just remember that any wild animal will protect itself or its young. Never initiate a close encounter with a coyote.

If a coyote approaches too closely, immediately act aggressively toward the coyote. Wave your arms, throw things like stones and shout at the coyote. If necessary, make yourself appear larger by standing up or stepping onto a rock, stump or stair. Convince the coyote you are a potential danger to be avoided.

Where coyote encounters occur regularly, walk pets at other times besides nighttime hours, dusk and dawn. Carry something that will make noise or scare the animal, such as a small air horn, big water pistol, solid walking stick, or golf club. These things may deter the coyote at close range. Make a “coyote shaker” by putting a few washers, pebbles or pennies into an empty soft drink can. Wrap the can in foil and tape closed. Continue “hazing” the coyote until the animal leaves; otherwise the coyote will learn to wait to leave until the activity stops.

Coyote fast facts

1. Coyotes live throughout California and in every state but Hawaii.
2. They weigh 15-30 pounds. The males are slightly larger than the females.
3. Coyotes eat whatever is available, including fruits, nuts, seeds, dead animals, rodents, garbage, pet food, domestic cats, and small dogs.
4. They breed every year with 2 to 12 pups per litter. Pups are raised in a den.
5. Removing coyotes from one area can result in other coyotes moving in from surrounding areas and producing more pups per litter.

Myths about coyotes

1. Coyotes are extremely dangerous: FALSE!

There have been very few reported cases of coyotes biting people. The coyote's innate fear of humans tends to keep them from getting too close.

2. Coyotes are a new problem: FALSE!
Coyotes have been in California for many years and will continue to make their homes around the state. This medium-sized predator is extremely adaptable, thriving in urban, suburban and rural areas.

3. Coyotes need our help to survive: FALSE!

People like to feed animals. However, by providing a “free lunch” for coyotes, you eliminate their natural fear of humans and increase their populations. Remember ... a fed coyote causes problems. Keep ‘em wild!

4. Coyotes can be totally eliminated: FALSE!

Removing coyotes is an inefficient and ineffective method to control populations. They compensate by increasing litter size and new coyotes move into areas where others have been removed. Populations can quickly return to original size.
