Kansas City District

Construction Services

The Kansas City District supports military, civil works and Hazardous, Toxic and Radioactive Waste (HTRW) projects throughout Missouri and Kansas. We provide construction services at Fort Riley, Fort Leavenworth, and McConnell Air Force Base, in Kansas; Fort Leonard Wood, and Whiteman Air Force Base, in Missouri; and Lake City Army Ammunition Plant and the National Geospatial Agency, in Missouri. We are responsible for the Reserve Design Program in a 10-state area extending from Missouri northward. We are responsible for civil works projects on the Blue River, Missouri River, Turkey Creek and Brush Creek. HTRW projects include environmental cleanup projects in Kansas and Missouri as well as support to U.S. GPA Region II. Our expertise ranges from master planning to engineering plans and specifications, to construction management and installation support.

Typical projects include construction of military housing, barracks operations centers, office/classroom buildings and child care facilities. Projects include new construction or renovation of an existing facility. Our experience covers partnering agreements with our customers, in-house or contracted design of the project, advertisement and award of the construction contract (bid projects, negotiated projects, Best Value, Request for Proposal), financial administration of the contract, and field supervision and quality assurance inspections of the construction work underway.
