

The Kansas City District's contracting officers and specialists work with a variety of contracting tools designed to streamline the process. These contracting tools include Design Build contracts for civil and construction contracts, Construction Manager at Risk construction contracts, the Total Environmental Restoration Contract, Indefinite Delivery of Architect-Engineer Services, Mapping, Surveying and CADD/GIS, Environmental Investigations and Design, Pre-placed Construction of Environmental Remediation, Disposal of Naturally Occurring Radioactive Material, Long Term Remedial Action Contracts, and Small Action Remedial Tool Contracts. These tools give them the special ability to advertise, negotiate, financially administer and technically oversee these powerful procurement agreements at a savings to the customer and the public.

Customers receive the benefits of many of these contracts for only a small administration fee above the actual cost of the products provided under the contract. Thus the cost to the customer is typically well below the cost to contract for the product directly and employ staff to administer and oversee the individual contract.

## **POINTS OF CONTACT**
