Status

The floodplain river modeling, flood inundation modeling and mapping has been completed. The United States Geological Survey has incorporated results into their Flood Inundation Mapping (FIM) program and it can now be used as a tool for the community to use for flood warning. The product is now usable on the USGS website and a public meeting was held in August 2015 to introduce the product and its use to local stakeholders. The project was completed upon conclusion of this meeting.
