## C-GLFER-Au Sable River Sea Lamprey Trap, MI

### Description

The AuSable River Sea Lamprey Trap project is located in Iosco County, Michigan at the Consumers Energy Foote Dam. The purpose of this project is to integrate a permanent attractant water trap just downstream of the Foote Dam on the Au Sable River which would enhance sea lamprey control through the removal of additional spawning-phase sea lampreys. Currently, portable assessment traps are used in the Au Sable River to capture spawning-phase sea lampreys, but the proportion of the spawning population captured remains low. Historically, permanent traps integrated with barriers and using attractant water have performed more effectively than portable traps.
