

PROJECT INFORMATION SHEET

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG

I-St. Clair River Management Plan, MI

Description

The St. Clair River and Lake St. Clair form the border between Michigan and Canada and flow southward connecting Lake Huron to the Detroit River and Lake Erie. The project area is comprised of the St. Clair River and Lake St. Clair watersheds. Both the river and lake are international bodies of water shared by the state of Michigan and Ontario, Canada. The Corps prepared a Management Plan for the Lake and the River in 2004. WRDA 2007 authorized the Corps to implement the recommendations of the Management Plan.

Status

The original product of this project was a Strategic Implementation Plan (SIP), designed to address issues within the Area of Concern (AOC). The SIP is a document that is updated annually to incorporate new projects into the master project listing. Individual projects are then initiated, generally utilizing Great Lakes Restoration Initiative (GLRI) funds, to initiate the investigative and feasibility phases of ecosystem restoration projects. This project did not receive FY16 funding, greatly restricting USACE ability to adequately coordinate with SEMCOG on updates to the SIP project listing.
