

## Electronic Door Lock Indication Lights

-  If your door lights blink green, the door should open with no problem
-  If your door lights blink green/yellow together, the door should open with no problem. Your time left on the key may be expiring soon. Report to team office to get it reset.
-  If your door lights blink green/red together, the door battery is dying. Please report the problem to your barracks manager. Your battery will die in about 2 weeks.
-  If your door lights blink yellow, you are at the wrong room door or at the wrong building. If there is a fast blinking yellow light, you have been locked out.
-  If your door lights blink red, you have waited too long to report this problem and your battery is now dead. A work order will have to be submitted to have the battery replaced.
