Current State of the NTC Mobile App

1. Everyone has different devices and settings, some devices are set to update apps automatically. Some devices require the user to physically go to the app store and update from there. If you are having issues with items not refreshing, go to your app store and update the app.

2. You may find that the slide show and messages page will not update right away. We are currently working on a refreshing solution to make it more instant. Right now we rely on the user's devices to decide when to dump the cache (memory) to update the slide show and messages page.

3. Feedback from the community is always welcome, please leave an ice comment and help make the app even better. ICE: https://ice.disa.mil/index.cfm?fa=card&sp=117169&s=443&dep=*DoD&sc=2
