FLOOD CONTROL SUMMARY AT THE DALLES, OR									
Apr-Aug, kaf	91300								
Apr-Aug %-Normal	98.1%								
Apr-Aug Change, kaf (1)	-								
May-Aug, kaf	77397								
Upstream Storage Adjustment, kaf, Chart #2 (3) = 23834									
Initial Controlled Flow, ICF, kcfs, Chart #1 (3) = 339.2									
Estimated Unregulated Peak Discharge, kcfs, Chart #1-A (3) = 732.3									

Notes:

- 1** Change in official forecast from the previous month.
- 2** Normal Runoff Volumes based on 71-Year, 1929-1999, averages for MCDB, ARDB, LIB, DCDB, DWR as reported in the *2000 Level Modified Streamflow Report*, 2004. Normal Runoff Volumes based on 30-Year, 1971-2000, averages for HGH, GCL, BRN, and TDA as determined by the Northwest River Forecast Center.
- 3** Columbia River Treaty Flood Control Operating Plan, Corps of Engineers, Northwestern Division, 2003

Notes: Under certain conditions the required flood control space at DWR and BRN may be shifted to GCL prior to 30-April. The shifted rule curve shown above represents the maximum allowable flood control shift(s) for the current water year based on the current month's flood control requirements for each project and evacuation limitations at GCL; however, the actual volume shifted to GCL on any date is ultimately determined by the Bureau of Reclamation. The shift of volume for DWR to GCL has priority over the shift of volume from BRN to GCL in cases when GCL cannot accept the total combined volume.

a The potential flood control shift to GCL is limited to the operation at GCL above elevation 1252.3 ft (2744 kaf draft) at the end of February and elevation 1225.0 ft (4355 kaf draft) at the end of March and 15-April. All projects to be at their non-shifted flood control requirements at the end of April.

b No shift is allowed, all projects to be back to their non-shifted flood control requirement by 30-April.
