

**CAPT Koski – The HART has not started yet. NMCI has not approved it yet.  
February 2007 is a possible implementation date.**

### **HART Update**

The Health Assessment Review Tool (HART) 1.0 is to be released late this fall. The HART 1.0 consists of five Coupler variants, this includes the previous four variants and the addition of the HART Readiness (HART-R) variant. These variants were created to give preventive medicine professionals more flexibility in choosing an assessment that fits their operational needs. Each is Web-enabled and is scheduled to become available on the World Wide Web through TRICARE Online in 2006. Each variant will also be an integral part of CHCS II when it is deployed to your site. The *HART 1.0 Readiness Variant (HART-R)* is based on the Screening HART question set with a few questions removed and readiness-specific questions added.

### **HART/HEAR Custom Online Training**

Contact us and schedule your own session. Choose your own topic or let us guide the discussion. We have trainers available most weekdays from 0800 – 1600 EDT/EST. Call 1.888.256.2001 or send e-mail to [crc@pkc.com](mailto:crc@pkc.com).
