Louisiana Highway/Rail Grade Crossing Safety Action Plan – FY 2012-2016

Executive Summary

The State of Louisiana's Department of Transportation and Development (LADOTD) is hereby submitting the "Louisiana Highway/Rail Grade Crossing Safety Action Plan – FY 2012-2016" (Action Plan) to the Federal Railroad Administration as required by the Rail Safety Improvement Act of October 2008 and detailed in the Federal Railroad Administration's final rule in Part 234 of the Code of Federal Regulations (Title: 49 Transportation). The "Action Plan" submitted herein is the result of updates to a living document which has been continually revised and updated over the past five years and has guided "Education, Engineering and Enforcement" efforts for improving crossing safety in Louisiana. The original "State of Louisiana Highway-Rail Grade Crossing Safety Plan of March 2006" was developed over a 17 month period from August 2004 through March 2006 and was submitted to the Federal Railroad Administration in April of 2006.

Background

The U.S. Department of Transportation's Office of Inspector General issued a report on grade crossing safety in June, 2004 and suggested state safety action plans should be initiated by the six states with continued high frequency of multiple-incident collision locations. At the request of both Federal Highway Administration (FHWA) and Federal Railroad Administration (FRA), the State of Louisiana's Department of Transportation and Development (LADOTD) agreed to pilot the development of a "Highway-Rail Grade Crossing Safety Action Plan." The LADOTD worked with no additional funding to develop a plan and worked in cooperation with Louisiana Operation Lifesaver (LAOL), Louisiana Highway Safety Commission (LHSC), Louisiana State Police (LSP), the Louisiana Technology Assistance Program (LTAP) and the Class I railroads. Technical assistance for development of the plan was provided by FHWA and FRA.

Summary of the "Action Plan"

As required by the FRA rule for developing "State Action Plans" (CFR Part 234), this plan maintains the original plan's focus that addresses (1) mitigating collisions at multiple-incident locations, (2) development of a crossing consolidation program (originated in the original plan) and (3) the initiation of a "Grade Separation Program." A five year data report (2005-2009) summarizing collisions for all public crossings, as well as those collisions at multiple-incident locations, is included in Appendix C. The original "Action Plan- FY 2006-2011," with its six year data analysis (1999-2004), conclusions and "action items" is also included because the new plan builds upon the original plan (see Appendices A & B). A newly updated "Action Plan", with a five year implementation timeline, has been developed by LADOTD with assistance from LAOL, LTAP, FHWA and FRA. The new "Action Plan" will be included in the state's Highway Safety Improvement Plan as was the original plan and its updates since 2006.

The new "Action Plan" details the proposed action items and outlines (1) what the desired outcomes are, (2) who will lead those efforts, and (3) timelines with measurable progress. The new "Action Plan" also has detailed action items for the following areas: Annual FRA Report and Data Review, Review of Multi-Collision Locations Reviews, Highway/Rail Safety Program Documentation, Crossing Inventory, Grade Crossing Closure and Consolidation Policy and Project List, Crossing Signal Preemption, Crossbuck Assembly Program, Operation Lifesaver Enforcement Education Programming, Outreach to Local Road Authorities, Railroad Safety Conference, Creation of a Statewide Railroad Operations Coordinator Position, Field Testing of Innovative Technology, and Railroad Grade Separation Program. Please see the last section of this report for the new "Action Plan".

Multiple-Collisions: Comparison of Data Reports:

The data analysis, performed by LADOTD, for the original plan (March 2006) looked at a six year period of collision data (1999-2004). The data report for the new "Action Plan" (FY 2012-2016) looked at a five year period of data (2005-2009) and was provided by FRA (see Appendix C). The new data report contains a more extensive analysis of the data than did the previous report. Analysis for the 1999-2004 data report indicated that a total of 521 statewide collisions occurred during this six year period. During the five year period analyzed in the new report (2005-2009), 509 total statewide collisions occurred and while this is a slightly higher rate of collisions, the new report shows that the number of multiple-incident locations has declined from 50 percent of total collisions (1999-2004) to 44 percent (see Table 1 of the new report in Appendix C). The total number of collisions which occurred at crossings without gates fell from 85 percent (1999 to 2004) to 79 percent (2005 to 2009). The number of total collisions at crossings within 75 feet of an adjacent intersection also fell from 78 (1999 to 2004) to 58 percent for statewide collisions (2005 to 2009) and from 97 percent (1999 to 2004) to 50 percent (2005 to 2009) for multi-incident collisions. The total number of multiple-incident collisions declined from 432 (1999 to 2004) to 223 (2005 to 2009) and the number of multiple-incident collision locations fell from 177 locations (1999 to 2004) to 85 (2005 to 2009).

There is some data available in the new tables that were not as thoroughly examined in the original data report (1999-2004); such as data found in Table 6a, Table 7 and Table 8. Table 7 shows collision data reported by the railroads (FRA form 6180.57 report) which indicates that an "active" device was also interconnected with a nearby traffic signal for 22 of the statewide collisions and that 14 of them (63.64 percent) occurred at "multiple-incident" locations. Table 8 shows that a high number of collisions at crossings located within 75 feet of an adjacent intersection were among the collisions at multiple-incident locations. For example, of the 16 statewide collisions where an active warning device was "interconnected" with a nearby traffic device, 81.25 percent of them were multiple-incident collisions. Table 8 also shows that for the 216 collisions, with only passive devices installed, 50 percent of them were multiple-incident collisions. It should be noted that Table 6b and Table 8 (2005-2009) included collision reports linked to the FRA Grade Crossing Inventory and therefore the data is not complete due to the problem of incomplete data in the FRA Inventory.

A comparison of the two data reports (1999 to 2004 versus 2005 to 2009) shows that Louisiana has made improvements since the original "Action Plan – FY2006-2010." The more recent analysis (2005-2009) shows that a focus on multiple-incident collision locations is still reasonable and this was the decision reached at the recent stakeholders meeting in Baton Rouge (May 16, 2011). Therefore, the new "Action Plan" continues to focus on "action items" which will help reduce multiple-incident collisions and improve the overall quality of programming efforts for crossing improvements.

Crossing Consolidation Program

In 2006, LADOTD was given statutory authority to close grade crossings through administrative procedure. LADOTD considered use of this authority to be an "action item" which was included in the original "Action Plan – FY 2006-2010." The state has not used this authority to date but has begun the process in Ascension and Rapides Parishes to make the local communities aware of the need to close redundant crossings. The new "Action Plan" will follow LADOTD's "Highway/Railroad Grade Crossing Consolidation and Closure Procedures" as guidelines for using the state's authority. The new goal will be to initiate proceedings to close two crossings per year for each of the "Action Plan's" years.

Grade Separation Program

In 2010 LADOTD began a new program dedicated to constructing grade separations at existing crossings. This program will focus on Louisiana State Routes for the initial years. This Program is meant to eliminate at-grade highway/railroad crossings, which are resulting in collision incidents and roadway and railway delays, and replace with grade-separated crossings. This Program is meant to improve the transporting of Louisiana's people, goods and services by starting with localized issues that will impact the transportation system on a grander scale.

This program's process will be documented according to federal requirements as it is a new LADOTD program. This program will also incorporate input from local LADOTD district personnel, the Louisiana Metropolitan Planning Organizations (MPOs), any railroads actively operating in Louisiana, the local government officials, local traffic

engineers, local police agencies, and local citizen inputs provided to LADOTD through the Public Information/Customer Service Section's efforts.

The State of Louisiana Highway/Rail Grade Crossing Safety Action Plan – FY 2012-2016

Item No.	Action Item (what)	Desired Outcome (why)	Lead Agency/Person(s) (who)	Timeline/Progress/Comments (when)
1	<p>FRA REPORT & DATA REVIEW</p> <ul style="list-style-type: none"> FRA will annually issue a report on the last five years of Louisiana highway/rail crossing collisions for review by DOTD and the RR Safety Committee. 	<ul style="list-style-type: none"> To serve as a cross reference between the RR Safety program and the FRA data and effective planning of safety funding. Annually DOTD will check for inconsistencies between FRA and DOTD data. 	<p>FRA / DOTD Carolyn Cook/ Bill Shrewsberry/ Ben Valmorla</p>	<ul style="list-style-type: none"> FRA will provide LA DOTD their five year collision report by May 31, of each year. This annual report will be reviewed by DOTD, FRA, FHWA & appropriate RR's. Any recommendations or changes to the State's RR Safety Program list due to this report will be submitted to the RR Safety Program Committee prior to the annual selection committee meeting.
1a	<p>MULTI-COLLISION LOCATIONS - PRELIMINARY REVIEWS</p> <ul style="list-style-type: none"> Conduct data and preliminary field reviews of multi-collision Hwy/Rail crossings locations over the past 5 years, based on FRA report, to determine which locations should be considered for the program. 	<ul style="list-style-type: none"> To perform data and preliminary field reviews for multi-collision crossings and document the crossings' recommended actions; warnings, enforcement, closures, etc. 	<p>DOTD Bill Shrewsberry</p>	<ul style="list-style-type: none"> Complete data and preliminary field reviews of multi-collision crossings, as applicable, and add locations for closure or upgrade to the State RR Safety Program list in accordance with Action Items 1b, 3 & 4. The State's RR Safety Program list contains many of these multi-collision crossings already programmed with Diagnostic Reviews (DR). All projects selected for the State RR Safety Program will have formal DRs performed prior to construction. This process will repeat every year after receipt of FRA data.
1b	<p>HIGHWAY/RAIL SAFETY PROGRAM DOCUMENTATION</p> <ul style="list-style-type: none"> Review, update, and document the Highway/Rail Safety Program project selection and prioritization process 	<ul style="list-style-type: none"> All procedures are documented 	<p>DOTD Bill Shrewsberry</p>	<ul style="list-style-type: none"> Documentation for crossing upgrades and consolidation/closures project selection and prioritization is complete by June 30, 2012. Documentation for Preemption and Innovative Technology project selection and prioritization is complete by December 2012.
2	<p>CROSSING INVENTORY</p> <ul style="list-style-type: none"> Enter into and maintain a contract to develop a RR inventory solution compliant with RSIA and which interfaces with FRA data for public and private crossings. 	<ul style="list-style-type: none"> To better provide safety summaries of Hwy/Rail crossing data and allow for transfer of new FRA data info between the individual RR's and FRA in accordance with new federal RSIA law. To accommodate the resumption and "syncing" of inventory data once again between DOTD and the FRA. 	<p>DOTD Bill Shrewsberry</p>	<ul style="list-style-type: none"> Contract in place October, 2011. Report inventory to FRA prior to September 30, 2012, and annually thereafter. This contract will have a three year time line. This RR inventory item will be kept and revised as needed for our five year AP.
3	<p>CLOSURE/CONSOLIDATION POLICY</p> <ul style="list-style-type: none"> Develop and refine DOTD policy for closures/consolidations using the state law (RS 48:390. 1). 	<ul style="list-style-type: none"> To have formal documents supporting DOTD's recommendations for closures/consolidations on State and local roadways. 	<p>DOTD Simone Ardoin</p>	<ul style="list-style-type: none"> Finalize Closure/Consolidation Documents and have approved by DOTD Chief Engineer by December 2011. Continue to review and refine procedures based on "lessons learned" in applying the processes.

Item No.	Action Item (what)	Desired Outcome (why)	Lead Agency/Person(s) (who)	Timeline/Progress/Comments (when)
4	<p>CLOSURE/CONSOLIDATION PROJECT LIST</p> <ul style="list-style-type: none"> Develop list of candidate closures/consolidations and implement DOTD Policy and state law (RS 48:390. 1). 	<ul style="list-style-type: none"> To include list of strong closure candidates. To close redundant and unnecessary Hwy/Rail crossings and improve public safety statewide. 	<p>DOTD Bill Shrewsberry</p>	<ul style="list-style-type: none"> Prepare recommended closure candidate list each year as part of the process. Present Closure List to RR Safety Program Committee in accordance with Action Item 1b. Initiate a minimum of two proceedings each year.
5	<p>SIGNAL PREEMPTION</p> <ul style="list-style-type: none"> Identify and prioritize crossings needing preemption or improvements to existing preemption. Program the improvements at these locations utilizing safety funds. 	<ul style="list-style-type: none"> Develop a list of projects for the Program Develop a list of locations with existing preemption 	<p>DOTD Bill Shrewsberry</p>	<ul style="list-style-type: none"> Present Preemption List to RR Safety Program Committee in accordance with Action Item 1b. Allow Rail/Safety Engineer to attend NCUTCD meetings to remain involved in the Preemption process and position LA DOTD to address national issues with other states. Define procedures for Traffic Engineers' Reporting on RR and TSI for the future. Review preemption within DOTD Traffic Signal Design Manual and recommend modifications as necessary. Present information at DTOE meetings. Hold new training course by December 2012.
6	<p>Crossbuck Assembly Program</p> <ul style="list-style-type: none"> Develop Crossbuck Assembly (CBA) Projects for Louisiana public crossings. (Crossbuck with stop or yield sign) 	<ul style="list-style-type: none"> To coordinate with each railroad company and local governing authority, to install CBAs at the approaches of each of their passive public Hwy/Rail crossings in the interest of public safety. All public passive crossings to be updated with new CBAs. 	<p>DOTD Bill Shrewsberry</p>	<ul style="list-style-type: none"> DOTD will Work Order at least five CBA projects by June 30, each year. CBA Projects to have new proposed MUTCD compliant Crossbuck Assemblies installed at all state, Parish, and City passive public crossings by June 30, 2016.
7	<p>ENFORCEMENT & EDUCATION</p> <ul style="list-style-type: none"> Continue to partner with Operation Lifesaver (LAOL) and Louisiana State Police (LSP) to target areas needing enforcement and education. 	<ul style="list-style-type: none"> To determine per historical record, prioritized collision parishes or corridors most in need of targeted education and enforcement. To improve our partnerships in promoting highway/rail safety and getting help with safety awareness through education and enforcement. To consider the location of crossings near highway intersections where Hwy/Rail collisions have occurred for potential enforcement. 	<p>DOTD / FRA LAOL / LSP / RR's Bill Shrewsberry/ Carolyn Cook/ Pat Edwards/James Anderson /Allen Pepper</p>	<ul style="list-style-type: none"> Review FRA data (see Action Item No. 1) and RR's reports with RR Inventory (see Action Item No. 2) and share information and submit report for LAOL and LSP overview by October 31, each year. This report will provide suggested areas to target education and enforcement efforts. This will allow for a special report to be given to LAOL for their fiscal year, October to September, to help focus LAOL efforts. DOTD to provide LAOL a quarterly program status report in a single page format to help in LAOL discussions and planning. The RR inventory (see Action Item No. 2) will have GIS coordinates to aid LAOL and LSP in identifying locations.

Item No.	Action Item (what)	Desired Outcome (why)	Lead Agency/Person(s) (who)	Timeline/Progress/Comments (when)
8	<p>LOCAL OUTREACH TO ROADWAY OFFICIALS</p> <ul style="list-style-type: none"> Continue to partner with Louisiana Local Training Assistance Program (LTAP) in promoting education and awareness to local authorities on highway/rail safety issues. 	<ul style="list-style-type: none"> To encourage modification of LTAP's existing training of the MUTCD to emphasize signs, markings, signals at Hwy/Rail crossings. To promote local agency responsibilities for inspection and maintenance at all Hwy/Rail grade crossings in appropriate LTAP training courses. Coordinate with LMA and Police Jury Assoc. to educate toward Hwy/Rail safety and develop partnerships for training and presentations. 	<p>DOTD / LTAP Bill Shrewsberry/ Marie Walsh</p>	<ul style="list-style-type: none"> Present at a minimum of one meeting sponsored by LTAP per year.
9	<p>RR SAFETY CONFERENCE</p> <ul style="list-style-type: none"> Host bi-annual (every other year) Railroad Safety Conference in conjunction with bi-annual Traffic Safety Summit, with Railroad companies on planning committee. 	<ul style="list-style-type: none"> To involve all relevant stakeholders in Hwy/Rail Safety planning and foster a closer working relationship between all stakeholders involved 	<p>DOTD Karla Courtade/ Simone Ardoin</p>	<ul style="list-style-type: none"> March 2012 March 2014 March 2016
10	<p>STATEWIDE RR COORDINATOR</p> <ul style="list-style-type: none"> Establish a new statewide operations position for Railroad Coordination 	<ul style="list-style-type: none"> To discuss Hwy/Rail grade crossing issues and share best practices To help DOTD+ Districts and Headquarters manage Hwy/Rail grade crossing issues. To foster communication between DOTD Districts and Headquarters 	<p>DOTD Simone Ardoin / Rhett Deselle</p>	<ul style="list-style-type: none"> Establish position by December 2011
11	<p>INNOVATIVE TECHNOLOGY</p> <ul style="list-style-type: none"> Document issues and criteria to be used when selecting specific innovative solutions at multi-collisions locations or corridors. 	<ul style="list-style-type: none"> To test and maintain "cutting edge" technology in Hwy/Rail safety 	<p>DOTD Bill Shrewsberry</p>	<ul style="list-style-type: none"> Develop list of projects in accordance with Action Item 1b. Submit status report on "Innovative and 'Cutting Edge' Technology at Highway/Rail Grade Crossings" by May 31 of each year and include in HSIP annual report. Document procedures and revise as needed to include "lessons learned" and best practices for public relations.
12	<p>RR GRADE SEPARATION PROGRAM</p> <ul style="list-style-type: none"> Implement new Railroad Grade Separation Program on State Highway System Roadways for existing grade crossings. 	<ul style="list-style-type: none"> Develop written criteria and process for selecting locations and obtaining funding for grade separation projects. 	<p>DOTD Kay Courtier</p>	<ul style="list-style-type: none"> Complete documentation of project selection and prioritization process. Develop a list of projects approved by the Project Selection Committee. Begin preliminary engineering for several projects by July 2012. Program sufficient number of projects to utilize all available funding each year.

STATE OF LOUISIANA HIGHWAY-RAIL GRADE CROSSING SAFETY ACTION PLAN

DRAFT – December 28, 2005

Section 1: Introduction

Louisiana has the regrettable distinction of being in the top five states in the nation for the number of highway-rail grade crossing collisions and fatalities according to Federal Railroad Administration statistics. This ranking exists in spite of the fact that for the last two years, Louisiana has spent more than three times its annual allocation under the Federal Section 130 Railroad Safety Funding Program for highway-rail grade crossing improvements. Factors that contribute to Louisiana's highway-rail grade crossing safety record include:

1. Six (6) Class 1 railroads and numerous short-line railroads operating in LA;
2. Increases in Class 1 train speeds;
3. Community resistance to closing redundant highway-rail grade crossings;
4. Year-round dense vegetation growth and track curvature due to paralleling meandering waterways, both of which impede driver's line of sight at crossings;
5. Inconsistent enforcement and prosecution of highway-rail grade crossing offenders;
6. Insufficient funding for all needed safety improvements.
7. Highway users not obeying warnings posted at the highway-rail grade crossings.

This Action Plan is intended to analyze and systematically address for resolution the varied issues affecting Louisiana's highway-rail safety. It is a living document that will be updated annually. This plan was initiated for several purposes:

- To provide a response to the U.S. Department of Transportation Office of the Inspector General (OIG) report dated June 2004;
- To be the highway-rail grade crossing portion of the new Louisiana Strategic Highway Safety Plan;
- To focus and organize safety efforts to reduce the number of collisions and improve safety at highway-rail grade crossings in Louisiana

This plan was developed with input from state, federal, local and private stakeholders of the highway-rail grade crossing safety program. Special review was given to the public highway-rail grade crossings where multiple collisions have occurred within the last six years.

Section 2: Analysis of Existing Highway-rail Grade Crossings and Collision Data

For this initial Louisiana Railroad Safety Action Plan, the data used to analyze the highway-rail grade crossings in Louisiana was taken from the Federal Railroad Administration (FRA) collision reports and national grade crossing inventory. The FRA data was used because the OIG used this same data in its recent national review of highway-rail grade crossing safety and in making their conclusion that a greater national focus should be given to highway-rail grade crossings where multiple collisions (2 or more) have occurred. For consistency purposes, the FRA data was used to enable Louisiana to respond to the OIG review. The State of Louisiana maintains its own highway-rail grade crossing database that is somewhat different from the FRA data. This issue of differing data will be addressed in action items and as this Action Plan is updated in the future, the Louisiana data will be used.

In Louisiana, railroads operate in 57 of the 64 parishes. There were 52 parishes in which a total of 862 highway-rail collisions occurred at public crossings during the period of 1999-2004. FRA data shows that Louisiana has 3,435 public at-grade vehicle crossings and 3,133 private at-grade vehicle crossings and approximately 3000 rail miles. Having twice as many crossings as rail miles statewide had already been determined by both the State of Louisiana and the U.S. Department of Transportation as a major factor in why Louisiana ranks so high in the number of collisions and fatalities each year. Appropriate closing of redundant highway-rail grade crossings has been and remains a focus for both agencies.

For the purpose of developing this Action Plan in Louisiana, further study of the state's highway-rail grade crossing safety issues began with a data review of the state's highway-rail grade crossings that have had two or more collisions within the 6-year interval (1999 through 2004). This review was completed to address the OIG's focus on "multi collision" crossings. Pertinent highway-rail grade crossing data was compiled from FRA collision reports (FRA Form 6180.57) for the six-year period of 1999 through 2004 and FRA grade crossing inventory information for Louisiana.

Initially, FRA data indicated that there were 193 public crossings that had two or more collisions during the period of 1999 through 2004. Additional review determined that 16 of these crossings were actually private crossings. There were 55 collisions at these 16 private crossings. For the purposes of this Action Plan, only the actual 177 public highway-rail grade crossings and the 432 collisions that occurred at these public crossings were included in this analysis as the "multi-collision" crossings. Per public law SAFETEA-LU SECTION 1401 Section 148 (d) (1) (A)), federal safety funds can only be used on highway safety improvement projects on public roads or publicly owned bicycle or pedestrian pathways or trails. Therefore, only public crossings are eligible for federally-funded highway-rail grade crossing safety projects. A public highway-rail grade crossing is defined as a crossing where the roadway across the railroad track is part of the general system of public streets and highways, is open to the general traveling public, and where both roadway approaches leading up to the crossing are

maintained by a public authority.

The “multi-collision” crossings data was then compared to statewide highway-rail grade crossing collisions and inventory information to determine trends and look for areas of possible safety improvement. A complete summary of the analysis comparing the two groups of collision data – all public/statewide crossings and the 177 “multi-collision” crossings (for the period of 1999-2004) - is found in the Appendix following the Action Plan (see Tables 1 through 10).

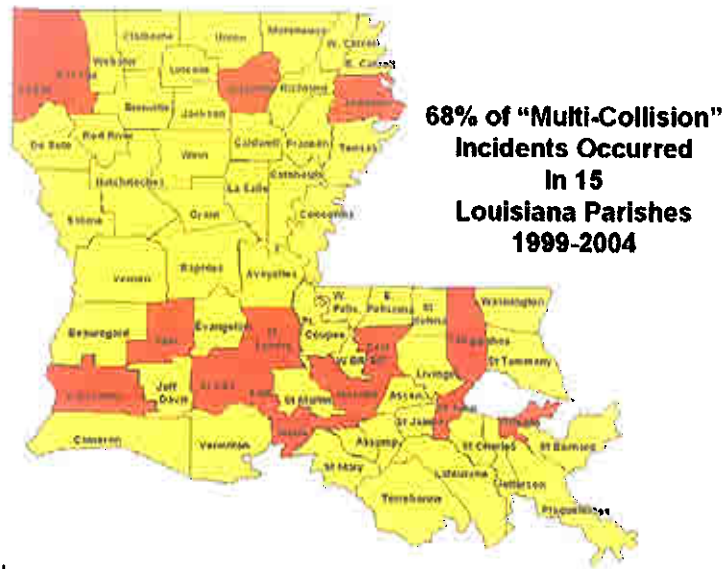

Several facts that can be seen from the statewide data, the “multi-collision data, and a comparison of the 2 groups of collision data are:

- Sixty percent of all statewide collisions (521 collisions) occurred in only 14 parishes - each experienced more than 20 collisions during this 6-year period.
- Sixty-eight percent of the “multi-collision” incidents occurred in just 15 of the parishes - each experienced more than 10 highway-rail collisions.
- Two parishes accounted for 16% of the “multi-collision” incidents. These two parishes, East Baton Rouge (38 collisions) and Caddo (31 collisions) are both highly populated urban areas and are the parishes ranked the highest for all collisions during 1999-2004 (East Baton Rouge – 70 collisions and Caddo – 51 collisions).

The two maps below give a graphical view, by Parish, of where the majority of highway-rail collisions are occurring in Louisiana:

- Purple Parishes in the first map are Parishes that have 20 or more total collisions from 1999 to 2004
- Red Parishes in the second map are Parishes with more than 10 of the “multi collision” incidents from 1999 to 2004.

The majority of the Parishes with higher number of highway-rail collisions are in both the statewide and "multi-collision" groups. Madison and Acadia Parish are the only two parishes in the "multi-collision" group that are not also in the statewide group. Jefferson Parish is the only parish in the statewide group that is not also in the "multi-collision" group.

Other facts that can be seen from the statewide data, the "multi-collision" data, and a comparison of the 2 groups of collision data are:

- The 177 "multi-collision" crossings comprise only 5% of the public crossings in the state, yet were the location for 50% of the collisions - see Table 1.
- Fifty-three percent of the fatal collisions and 58 percent of the injury collisions occurred at the "multi-collision" locations - see Table 1.
- Overall, over 85% of the collisions occurred at crossings without gates. Only 14% of collisions statewide and 12% of collisions at "multi-collision" crossings occurred at crossings with gates and flashing light signals - see Table 2.
- For both the statewide and "multi-collision" data, over 80 % of the collisions involved the train hitting the highway user - see Table 3.
- Analysis of reports of the "Highway-user Action Prior to the Collision" (see Table 3) shows that in 85% of the collisions statewide and at "multi-collision" crossings, it was reported that the highway-user "Did Not Stop" at the crossing prior to the collision or "Stopped on the Crossing", thus, in the majority of the collisions, the Highway-users did not heed the passive or active warning devices at the crossings.
- The majority of the time it was reported that the highway-user's position was

"Moving over the Crossing" prior to the collision (70 percent for both groups) – see Table 4.

- More than 53 percent of the statewide collisions compared with 50 percent of the collisions at "multi-crossing" locations involved an automobile or a van - see Table 5.
- According to the FRA Inventory, a high percentage of the collisions occurred at grade crossings that are near an adjacent highway intersection (statewide = 78% and "multi-collision" locations = 97%.) Highway intersection in this case refers to all types of intersections of two roadways, including non-controlled, stop sign controlled and traffic signal controlled. For both data sets, a small percentage (3%) of the collisions occurred at crossings where the highway-rail grade crossing active warning device was reported to FRA as "interconnected with a nearby traffic signal" - see Table 6. There are discrepancies between FRA's and Louisiana's database information concerning interconnection of highway-rail grade crossing active warning devices and nearby traffic signals. This issue is addressed in the Action items.
- Most of the collisions in Louisiana (statewide = 80%; "multi-collision" crossings = 79%) involved the Union Pacific Railroad, Kansas City Southern Railway, and the Canadian National/Illinois Central Railroad. Amtrak was involved in 35 collisions during this 6 year period and 21 of those (60 percent) occurred at the "multi-collision" locations - see Table 7.
- Over 90% of the collisions for both groups occurred on mainline track – see Table 9.
- In general, train speeds were reported to be slightly higher at the time of the collisions occurring at the "multi-collision" locations than for all statewide collisions - see Table 9. The average train speed was 29 m.p.h. for all statewide collisions and an average of 31 m.p.h. for the "multi-collision" locations.
- The data below shows that most of the collisions occurred in the ranges of 10-20 mph and 36-49 mph. This pattern is consistent in both data sets – see Table 9.
- The majority of highway-users in both groups were males (statewide = 69%; "multi-collision" locations = 68%).

Upon completion of this study of available data, it is apparent that the "multi-collision" crossing locations in Louisiana have no statistically significant difference (greater than 5%) in collision and inventory data from the statewide crossings where all collisions have occurred from 1999-2004, **with one exception:**

Collisions at highway-rail grade crossings located near highway intersections make up 78% of the total statewide collisions, but make up a much higher percentage (97%) of the collisions at "multi-collision" crossings.

This issue of crossings located near highway intersections will be a major focus of this

Action Plan, beginning with the “multi-collision” locations and the Parishes with the most collisions.

Significant similarities found in the data from all collisions at statewide and “multi-collision” crossings that dictate further focused actions are:

- The majority of highway-rail grade crossing collisions are located in only 16 of Louisiana’s 64 Parishes.
- In the majority of collisions, the highway user was male.
- In 85% of the collisions, the Highway-users did not heed the passive or active warning devices at the crossings.
- Over 85% of the collisions were at highway-rail grade crossings without gates.

Section 3: Current Status of 177 “Multi-Collision” Public Crossings in Louisiana

Engineering improvements have been made or are underway at many of the 177 “multi-collision” highway-rail grade crossings in Louisiana. A summary of actions already taken is as follows:

- Four of the 177 crossings have been permanently closed and another 5 are closure candidates.
- Since 1999, 50 of the 177 have been equipped with gates.
- Since 1999, 61 of the 177 were equipped with either standard mast or cantilever flashing light signals.
- During the next program year, 15 of the crossings are scheduled for upgrading.
- Forty of the 177 crossings are still under engineering review for additional improvements.

Section 4: Highway-Rail Grade Crossing Safety Goals and Action Items

Goal: The initial goal of the Louisiana Railroad Safety Action Plan is to reduce the number of highway-rail grade crossing collisions at public crossings in Louisiana by 30 collisions per year by calendar year-end 2007.

Immediate Action Items: Determine the data and information that Louisiana needs to better manage the Highway-Rail Safety program with a more systematic, data driven approach.

1. Coordinate with Louisiana State Police (LSP) and local law enforcement agencies to improve reporting of motor vehicle crashes at highway-rail grade crossings and improve the quality of the data obtained from the motor vehicle crash reports.

Target Date: Initiate discussions by February 2006

Lead Persons Assigned:

- LADOTD - Dan Magri and Kim Brunty
- LSP - Ralph Mitchell
- FHWA - Seve Serna

2. Develop framework/conventions/system for a Geographic Information System (GIS) base map & layer maps that will contain all Louisiana highway-rail grade crossing information (i.e. location, inventory, crash data, train speeds and movements from Railroads, GPS coordinates of crossings, Louisiana Operation Lifesaver presenter and location information).

Target Date: Initiate by March, 2006 with Quarterly Updates

Lead Persons Assigned:

- LADOTD - Gary Milligan, Jason Dunlap, and Tom Richardson
- FHWA – Seve Serna

3. Complete a Diagnostic Review of the highway-rail grade crossings near highway intersections where collisions have occurred (including reviewing the highway crash data at the highway intersection) to determine the causes and relationships of the collisions and safety improvement recommendations. The “multi-collision” crossing locations will be the first sub-set of public crossings to be reviewed as well as the 16 Parishes with the most collisions.

Target Date: “Multi-Collision” crossings reviews completed by March 2006, and a plan documented to review other crossings on a quarterly basis by April 2006.

Lead Persons Assigned:

- LADOTD - Bill Shrewsberry and Carlton Bell
- Federal Highway Administration (FHWA) - Seve Serna

4. Convene a working group of stakeholders to work with the Louisiana Department of Transportation and Development (LADOTD) to improve the process through which the state obtains, manages and updates information for the Louisiana Highway-Rail Grade Crossing Inventory and Collision database. This will include making recommendations to resolve the issue of differing collision and inventory information between the State of Louisiana and the Federal Railroad Administration (FRA.)

Target Date: Meet by May 2006 – At the meeting's conclusion, the actual tasks will be assigned to complete the process.

Lead Persons Assigned:

- ***LADOTD - Bill Shrewsberry***
- ***FHWA - Mary Stringfellow***

Short Term Action Items (within 6 months)

1. **Implement recently passed legislation providing LADOTD the legal authorization to close crossings in the interest of public safety (under SB 353)**

The LADOTD worked with the Governor's office and the Louisiana Attorney General's office to draft proposed legislation for the 2005 legislative session authorizing LADOTD to close highway-rail grade crossings in the interest of public safety. Louisiana Senator Lentini sponsored the bill, it passed the legislative process and has recently been signed by the Governor. It is now Louisiana law. Actions are presently underway to implement the process for crossing closures according to this new Louisiana Law, Act 347. LA DOTD has identified an initial list of ten highway-rail grade crossings that can be closed under this state law.

Target Date: Law has passed; Enrolled August 2005.

Lead Persons Assigned:

- ***DOTD - Bill Shrewsberry, Carlton Bell, Gary Milligan, and Kim Brunty***
- ***FHWA – Seve Serna***

2. **Implementing Innovations and New Technology**
 - a. Develop a LADOTD preemption policy based on the Manual on Uniform Traffic Control Devices (MUTCD) standards, national best practices, and the latest available technology, including:
 - i. Identify/categorize crossings that are candidates for preemption in accordance with the MUTCD standards;
 - ii. Convene a working group to draft a new LADOTD preemption policy; host a preemption workshop for the task group prior to

- drafting the policy to provide a thorough understanding of railroad and highway signal systems and how the two systems must function as a single system, and new technology available to better perform preemption;
- iii. Present the draft LADOTD preemption policy to railroad companies and other appropriate stakeholders for review and comment. Revise as needed and finalize policy;
 - iv. Host preemption training based on new approved LADOTD preemption policy;
 - 1) LADOTD in-service – for LADOTD grade crossing designers and technicians, highway traffic signal designers and technicians, FHWA and FRA personnel.
 - 2) Regional workshops for local jurisdictions through Louisiana Technology Assistance Program (LTAP) center beginning in the 16 parishes with the majority of statewide collisions and “multi-collision” locations;
 - v. Prepare changes to traffic signal controller procurement specifications as needed to support new preemption technology;
 - vi. Pilot two highway-rail crossing installations with preemption based on new policy guidelines and latest available technology – edit policy as needed;
 - vii. Review/update this policy on a bi-annual (every 2 years) basis, if needed, as technology advances.

Target Date: June 2006 (Initial preemption meeting and training was held August 16-17, 2005)

Lead Persons Assigned:

- ***LADOTD - Bill Shrewsberry, Paul Hsu, Peter Allain, and David Backstedt,***
- ***FHWA - John Broemmelsiek and Seve Serna***

b. Yield/Stop signs at Railroad Crossings

- i. Develop a program to install Yield or Stop signs per the MUTCD at appropriate passive crossings beginning in early 2006.
- ii. Draft a legislative request for a resolution requiring all municipal governments and parish jurisdictions to identify and report all public crossings to the LADOTD.

Target Date: February 2006

Lead Persons Assigned:

- ***LADOTD - Bill Shrewsberry, Gary Milligan, and Peter Allain***
- ***FHWA – Seve Serna***
- ***Louisiana Highway Safety Commission (LHSC) – Jim Champagne***

- **LA Operation Lifesaver – Betsey Tramonte and Bryant Laiche**

- Continue to investigate innovations for highway-rail grade crossing safety improvements, where appropriate, such as alternative (extendable or small foundation) gates, channelization, rumble strips, LED powered solar crossing signs and others. The “multi-collision” locations with active devices will continue to be reviewed under this process.

Target Date: June 2006

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry and Carlton Bell**
- **FHWA - Seve Serna**

3. Operation Lifesaver

- Locate by GIS mapping where Operation Lifesaver (OL) has trained presenters and where OL presentations have been made in the past 6 years and compare against where collisions are occurring;
- Evaluate and prioritize areas, such as the 16 parishes where the highest percentage of statewide collisions and collisions at “multi-collision” locations have occurred, plus focusing on male drivers, to target for increased OL education/presentations;
- Increase Operation Lifesaver presenters trained in these targeted areas;
- Increase OL presentations at local High Schools and to other appropriate groups in these targeted areas.

Target Date: June 2005

Lead Persons Assigned:

- **LA Operation Life Saver - Betsey Tramonte and Bryant Laiche**
- **LADOTD - Karla Schiro, Gary Milligan, and Kim Brunty**

4. Enforcement – Focused Enforcement of Highway/Rail Crossing Laws

- Locate by GIS analysis, crossing locations where highway-rail collisions have occurred – specifically identifying those near highway intersections;
- Prioritize areas with a high highway-rail grade crossing collision history over time by parish and/or corridors to target for focused enforcement;
- Work with law enforcement agencies in identified target areas to increase enforcement on a routine basis. (for example - enforcing “Do Not Stop on Tracks” and increasing Officer-on-the-Train program);
- Partner with Louisiana State Police (LSP), local law enforcement agencies and railroad police departments to support legislation and implement a “CARE” (crossing accident reduction enforcement) Program to increase enforcement of traffic laws regarding vehicle operation at highway-rail

grade crossings. This program is intended to utilize railroad police officers to supplement state and local police officers in enforcement of traffic laws at highway-rail grade crossings.

- e. Partner with Louisiana Highway Safety Commission (LHSC), Louisiana State Police (LSP), and each railroad law enforcement department to support legislation to allow the use of video surveillance/enforcement at crossings and on corridors with high collision history.

Target Date: June 2006

Lead Persons Assigned:

- **LADOTD - Gary Milligan and Kim Brunty**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**
- **LSP – Ralph Mitchell**

5. Partner with Louisiana Local Technical Assistance Program (LTAP) Center to:

- a. Modify the LTAP Center's existing training on the Manual on Uniform Traffic Control Devices (MUTCD) to include emphasis on signs, markings and signals at highway-rail grade crossings;
- b. Incorporate information on local agency responsibilities for inspection and maintenance at the highway-rail grade crossings in all appropriate LTAP Center training courses;
- c. Work with the Louisiana Municipal Association and Police Jury Association through the LTAP Center to increase education concerning local agency responsibilities at highway-rail grade crossings. Develop partnerships for training and presentations on this topic.

Target Date: June 2005

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry**
- **FHWA - Mary Stringfellow**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**
- **LA LTAP Center - Marie Walsh**

6. Distribute comments from Louisiana Railroad Safety Summit Held in March of 2005.

Target Date: Completed – Comments were e-mailed to participants in August 2005

Lead Persons Assigned:

- **LADOTD - Shawn Wilson and Bill Shrewsberry**

7. Public Information & Education Regarding Train Speeds

- a. Partner with railroads to create a process to improve notification of train speed increases to affected cities/towns/parishes through the LADOTD.

Target Date: June 2006

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry, Mark Lambert, and Karla Schiro**

8. Improve Driver Education Regarding Highway-Rail Grade Crossing Safety

- b. Produce a Louisiana-specific driver education video with emphasis on highway-rail grade crossing safety. Focus will be given to an educational message to reach male drivers.
- c. Develop a plan to distribute the video to appropriate training organizations/agencies in Louisiana.

Target Date: Initiate by February 2006

Lead Persons Assigned:

- **LADOTD - Karla Schiro, Kim Brunty, and Gary Milligan**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**

9. Continue Systematic Diagnostic Review Program to Review, Verify, and Document (in writing and with photos) the Conditions at Public Highway-Rail Grade Crossings Pertaining to:

- a. Sight distance (issues with buildings, vegetation, track curvature etc.);
- b. Condition and location of warning signs;
- c. Crossing surface condition;
- d. Number and type of highway-users;
- e. Train speed, number of trains and other pertinent inventory information;
- f. Number and severity of collisions;
- g. Adjacent intersection information and traffic control in place
- h. Traffic signal – validation of traffic signal preemption operation, if appropriate;
- i. Provide an annual summary, in the Highway Safety Improvement Program (HSIP) report to FHWA, of the number of field, diagnostic, and/or traffic signal preemption reviews completed on highway-rail grade crossings.

Target Date: June 2006

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry, Gary Milligan, Carlton Bell, Kim Brunty, and Gordon Nelson**
- **FHWA - Seve Serna**

Long Term Action Items (beyond 6 months)

1. Education - Institutionalize highway-rail safety information for all driver education courses in Louisiana.

Target Date: Ongoing

Lead Persons Assigned:

- **LADOTD - Karla Schiro and Kim Brunty**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**

2. Enforcement - Continue to work with law enforcement agencies in Louisiana to increase focused enforcement of motor vehicle codes for highway-rail grade crossings on a routine basis.

Target Date: Ongoing

Lead Persons Assigned:

- **LADOTD - Kim Brunty**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**
- **LSP - Ralph Mitchell**

3. Host an annual Railroad Safety Conference in conjunction with annual Traffic Safety Summit - include railroad companies on the conference planning committee.

Target Date: Annual

Lead Persons Assigned:

- **LADOTD - Dan Magri, Bill Shrewsberry, and Karla Schiro**
- **FHWA - Mary Stringfellow**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**
- **LA LTAP Center - Marie Walsh**

4. Increase level of funding for LADOTD Railroad Safety Program
 - a. Identify and prioritize funding needs for improving highway-rail grade crossing safety
 - b. Evaluate increasing the funding level, after passing of new federal transportation law and in the future.
 - c. Partner with railroad companies for joint funding of corridor safety projects in conformance with House Resolution 185.

Target Date: August 2006 and ongoing

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry, Dan Magri, Carlton Bell, and Gary Milligan**
- **FHWA – Seve Serna**

5. Develop an outreach program for increased legal awareness of highway-rail grade crossing safety issues

Target Date: September 2006

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**
- **LA Attorney General's Office - Will Crawford**
- **LSP - Ralph Mitchell**

6. Foster a closer working relationship between LADOTD Headquarters Rail Program staff and all District Railroad coordinators and HQ/District Traffic Operations staff:

- a. Host annual meetings to discuss highway-rail grade crossing issues and share best practices
- b. Provide improved tools and communication to help Districts better handle highway-rail grade crossing issues.

Target Date: September 2006 and ongoing

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry, Kim Brunty, Gordon Nelson, and Peter Allain**

7. Evaluate the pros/cons and feasibility of hiring a consultant to augment LADOTD efforts for implementation of this Highway-rail grade crossing safety Action Plan.

Target Date: September 2006

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry and Dan Magri**
- **FHWA - Mary Stringfellow**

8. Develop a long-term prioritized program focused on installing passive signing and pavement markings for public crossings, with special focus on major highway routes near the prominent railroad corridors.

Target Date: December 2006

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry, Carlton Bell, Kim Brunty, Dan Magri and Peter Allain**
- **FHWA - Seve Serna and John Broemmelsiek**

9. Develop a comprehensive highway-rail grade crossing closure awareness program based on new Louisiana highway-rail grade crossing closure law:
- a. Develop outreach plan and support materials.
 - b. Develop a State policy to limit the proximity of new public crossings to existing public crossings
 - c. Work with LADOTD's Access Management Task Force to develop policies to address the proliferation of private highway-rail grade crossings and transitioning to public crossings
 - d. Partner with the LHSC, the LSP, and each railroad law enforcement department to support legislation to address the closing of private highway-rail grade crossings.

Target Date: December 2006

Lead Persons Assigned:

- **LADOTD - Bill Shrewsberry, Carlton Bell, Dan Magri, Scott Wimmer, Tony Dorsa, and Dawn Young**
- **LA Attorney General's Office – Will Crawford**
- **FHWA - Mary Stringfellow and John Broemmelsiek**
- **LA Operation Lifesaver - Betsey Tramonte and Bryant Laiche**
- **LA LTAP Center - Marie Walsh**

APPENDIX

State of Louisiana Public Crossings 1999-2004

Comparing Collisions at All Statewide Public Crossings with Collisions at Public "Multi-Collision" Crossings Using Federal Railroad Administration Data

Table 1 – Public Crossings and Collision Summary

The data below shows that approximately 50% of the state's collisions at public crossings occurred at 5% of all the state crossings (i.e. the multi-collision crossings). The data also shows that over 50% (b/a) of the total fatal and injury collisions occurred at 5% of all the state crossings (i.e. the multi-collision crossings). The same pattern (a/862, b/432) of fatalities and injuries occurred statewide and at the multi-collision crossings.

Data Category	At Statewide Public Highway-rail grade crossings		At Public "Multi-Collision" Crossings		% of "Multi Collision" vs. Statewide
	(a)		(b)		(b/a)
Total Public Highway-rail grade crossings	3,435		177		5%
Total Collisions at Public Crossings	862		432		50%
Collision Breakdown	(a)	(a/862)	(b)	(b/432)	(b/a)
Total Fatal Collision Events	83	10%	44	10%	53%
Total Injury Collision Events	267	31%	153	35%	58%
Amtrak Involved Collision Events	37	4%	16	4%	43%
Others Collisions (No fatalities or injuries)	475	55%	219	51%	43%
Total	862		432		50%
Total Fatalities from Events	92		54		59%
Total Injuries from Events	371		217		58%

Table 2 – Public Crossing Collisions by Warning Device

The data below shows that most (over 85%) of the collisions occurred at crossings without gates, only 14% and 12% occurred at crossing with gates and flashing light signals. The distribution for type of warning device at the crossing was about the same for all statewide collisions as it was for collisions at multi-collision crossings.

Data Category	At Statewide Public Highway- rail grade crossings		At Public "Multi- Collision" Crossings		% of "Multi Collision" vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by Warning Devices					
Gates and Flashing light signals	122	14%	53	12%	43%
Standard or Cantilever Flashing Light Signals	245	28%	129	30%	53%
Traffic Signals/Wig-wags	12	1%	5	1%	42%
Stop Sign with Crossbuck	114	13%	60	14%	53%
Crossbuck Only	359	41%	185	43%	52%
Flagged by Train Crew or Watchman	9	1%	-	-	-
None	1	0%	-	-	-
Total	862	98%	432	100%	-

**Table 3 – Public Crossing Collisions by Circumstance
and Highway-User Action (at collision)**

The data below shows that over 80% of collisions involved the train hitting the highway-user. The trend is similar for both data sets. The data also shows that almost 60% (58% & 59%) of the highway-users “did not stop” prior to the collision and approximately 25% “stopped on the crossing” prior to the collision. Similar patterns of highway-user action were reported for collisions in both data groups (statewide and multi-collision crossings). When “Did not Stop” and “Stopped on Crossing” data are added together, over 80% of the collisions occurred when Highway-Users did not heed the passive or active warning devices at the crossings.

Data Category	At Statewide Public Highway-rail grade crossings		At Public “Multi-Collision” Crossings		% of “Multi Collision” vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – Circumstance					(b/a)
Train Hit Highway-User	705	80%	360	84%	51%
Highway-User Hit Train	157	18%	72	17%	46%
Total	862		432		-
Collisions – by Highway-User Action Prior to Collision	(a)	(a/862)	(b)	(b/432)	(b/a)
Drove Around or Through Gates	29	3%	8	2%	28%
Stopped and then Proceeded	64	7%	37	9%	58%
Did not Stop	501	58%	256	59%	50%
Stopped on Crossing	215	25%	105	24%	47%
Other	53	6%	26	6%	49%
Total	862		432		-

Table 4 – Public Crossing Collisions by Highway-User Position Prior to Collision

The data below shows that most of the highway-users were “Moving Over the Crossing” prior to the collision (see Table 3 indicating very few (7% & 9%) of them “Stopped and then Proceeded”). 25% of the highway-users had “Stopped on the Crossing” prior to the collision. The same pattern exists in both data groups (statewide and multi-collision crossings). Note that a high percentage (69%) of the collisions reporting “Trapped on Crossing” are among the “multi-collision” locations.

Data Category	At Statewide Public Highway-rail grade crossings		At Public “Multi-Collision” Crossings		% of “Multi Collision” vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by <u>Position of Highway User at Time of Collision</u>					(b/a)
Stalled on crossing	30	3%	12	3%	4%
Stopped on crossing	214	25%	108	25%	49%
Moving over Crossing	602	70%	301	70%	49%
Trapped on Crossing	16	2%	11	3%	69%
Total	862		432		---

Table 5 – Public Crossing Collisions by Type of Highway-User/Vehicle

The data below shows that over 50% of the collisions involved automobiles/vans, with the same pattern existing in both groups (state wide and multi-collision crossings).

Data Category	At Statewide Public Highway-rail grade crossings		At Public "Multi-Collision" Crossings		% of "Multi Collision" vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by Type of Vehicle/ Highway User					(b/a)
Automobile/Van	443	53%	216	50%	13%
Pick-up Truck	160	18%	74	17%	46%
Truck	119	13%	63	15%	53%
Truck-Trailer	104	12%	62	14%	60%
School Bus	1	0%	0	0%	0%
Bus	1	0%	0	0%	0%
Motor Cycle	2	0%	1	0%	0%
Other Motor Vehicle	9	1%	5	1%	56%
Pedestrian at crossing	6	1%	0	0%	0%
Other Highway User	17	2%	4	1%	25%
Other	-	-	7	2%	25%
Total	862		432		-

Table 6 – Public Crossing Collisions by Adjacent Intersection and Traffic Signal/Crossing Signal Interconnection

The data below shows that 78% of the collisions at crossings statewide occur near a highway intersection. This percentage is even higher (97%) at the “multi-collision” crossing locations. Highway intersection, in this case, refers to all types of intersections, from non-controlled, stop sign controlled and traffic signal controlled. For both data sets, a small percent (3%) of the collisions occurred at crossings where the highway-rail grade crossing warning device is interconnected with a nearby intersection traffic signal.

Data Category	At Statewide Public Highway-rail grade crossings		At Public “Multi-Collision” Crossings		% of “Multi Collision” vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by Adjacent Intersection and Interconnection	(a)	(a/862)	(b)	(b/432)	(b/a)
Railroad Crossings Near Intersection (per FRA Inventory)	672	78%	417	97%	62%
Warning Device Interconnected with a Nearby Intersection Traffic Signal (Per FRA Collision Data)	29	3%	15	3%	52%
Unknown Interconnection Requirement (Per FRA Collision Data)	161	19%	-	-	-
Total	862		432		-

Note: The FRA crossing inventory data initially made no distinction between “railroad crossings near intersections with no traffic signal” and “railroad crossings near intersections with traffic signal”. Although FRA has added this distinction to their database, from a cursory review of the FRA website this data has not been fully integrated into the FRA database. Thus the statewide data that was derived from the FRA data does not fully reflect a true evaluation of the field conditions relative to interconnection of the railroad signal with the traffic signal. This is work that needs to be completed and is listed in the action items.

Table 7 – Public Crossing Collisions by Railroad

The table below shows that most of the collisions in both data sets involved the Union Pacific Railroad, Kansas City Southern Railway, and the Canadian National/Illinois Central Railroad.

Data Category	At Statewide Public Highway-rail grade crossings		At Public "Multi-Collision" Crossings		% of "Multi Collision" vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by Railroads	(a)	(a/862)	(b)	(b/432)	(b/a)
Union Pacific Railroad (operating 1,136 track miles)	301	34%	145	34%	48%
Kansas City Southern Railway (operating 917 track miles)	264	30%	131	30%	50%
Canadian National (Illinois Central) (operating 263 track miles)	141	16%	66	15%	47%
BNSF Railway (operating 347 track miles)	55	6%	30	7%	55%
Norfolk Southern (operating 82 track miles)	39	4%	26	6%	67%
CSX (operating 35 track miles)	2	0%	0	-	
Amtrak (operating >300 track miles)	35	4%	21	5%	60%
Louisiana & Delta River Railroad (operating 120 track miles)	19	2%	7	2%	37%
Arkansas, Louisiana & Mississippi Railroad (operating 45 track miles)	6	1%	4	1%	67%
Louisiana & North Western (operating 38 track miles)	2	0%	1	0%	100%
New Orleans Gulf Coast (operating 28 track miles)	11	1%	2	0%	18%
Acadiana Railway Co. (operating 63 track miles)	4	0%	0	-	-
New Orleans Public Belt	5	1%	0	-	
Total *					
* Note: some duplicate counts due to reporting from two railroads sharing trackage rights	884*		434*		

Table 8 – Public Crossing Collisions by Type of Track

The table below shows that most (over 90%) of the collisions in both groups occurred at grade crossings on mainline track. A high percentage of the yard track collisions occurred at the collisions at “multi-collision” locations.

Data Category	At Statewide Public Highway-rail grade crossings		At Public “Multi-Collision” Crossings		% of “Multi Collision” vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by Track Type					
Mainline	776	90%	399	92%	50%
Industry	50	6%	16	4%	32%
Yard	34	4%	17	4%	50%
Siding	2	0%		-	-
Total	862		432		

Table 9 – Public Crossing Collisions by Train Speed

In general, train speeds were reported to be slightly higher at the time of the collisions occurring at the “multi-collision” locations than for all statewide collisions (see Table 9). The average train speed was 29 m.p.h. for all statewide collisions and an average of 31 m.p.h. for the “multi-collision” locations. The data below shows that most of the collisions occurred in the ranges of 10-20 mph and 36-49 mph. This pattern is consistent in both data sets.

Data Category	At Statewide Public Highway-rail grade crossings		At Public “Multi-Collision” Crossings		% of “Multi Collision” vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by Train Speed (mph)					
Avg. Train Speed at time of collision	29		31		
Unknown Train Speed	19	2%	11	3%	58%
Less than 10 mph	-	0%	51	12%	-
10 to 20 mph	357	41%	102	24%	28%
21 to 35 mph	155	18%	83	19%	52%
36 to 49 mph	212	25%	112	26%	51%
50 to 60mph	102	12%	62	14%	60%
Over 60mph	17	2%	11	3%	65%
Total	862		432		

Table 10 – Public Crossing Collisions by Driver Age and Gender

The following table is a summary of the age and gender of the driver/operator reported for all statewide collisions and for the collisions at “multi-collision” locations. It shows that the majority of collisions for both statewide and “multi-collision” crossings are male (69% & 68%).

Data Category	At Statewide Public Highway-rail grade crossings		At Public “Multi-Collision” Crossings		% of “Multi-Collision” vs. Statewide
	(a)	(a/862)	(b)	(b/432)	
Collisions – by Age and Gender of Highway-user					
Unknown Age/Gender	1	<1%	5	1%	-
Total Male	612	69%	296	68%	48%
Male Ages 12-26	139	16%	74	17%	53%
Male Ages 27-39	154	17%	72	17%	47%
Male Ages 40-55	147	17%	60	14%	41%
Male Ages 56-69	72	8%	35	8%	47%
Male Ages 70 +	41	5%	25	6%	61%
Male Age Unknown	56	6%	30	7%	-
Total Female	249	28%	131	30%	52%
Female Ages 12-26	75	8%	43	10%	57%
Female Ages 27-39	67	8%	42	10%	63%
Female Ages 40-55	46	5%	19	4%	41%
Female Ages 56-69	25	3%	9	2%	36%
Female Ages 70 +	17	2%	7	2%	41%
Female Age Unknown	16	2%	11	3%	-

Appendix B
Amended 2006 Action Plan

Louisiana Highway/Rail Grade Crossing Safety Action Plan

(Amended from March 2006 Action Plan) August 2011

Item No.	Action Item (what)	Desired Outcome (why)	Lead Agency/Person(s) (who)	Progress/Comments (when) Expected Outcomes and Accomplishments
1	<ul style="list-style-type: none"> Report annually on the comparison of the highway/rail crossing collisions on the LA CRASH and FRA databases. 	<ul style="list-style-type: none"> To serve as a cross reference between the LA CRASH database and the FRA data and promote more complete data reporting. Annual data check for consistencies between data with an analysis of the data discrepancies. 	DOTD / LSU Karla Courtade/ Dr. Sneider/ Bill Shrewsberry	<ul style="list-style-type: none"> DOTD compared FRA data vs. LA CRASH data for first two years. DOTD determined FRA data is more accurate and consistent and will be used for data analysis for future Action Plan.
2	<ul style="list-style-type: none"> Enter into contract to develop inventory solution, for DOTD to be able to interface with. 	<ul style="list-style-type: none"> To better provide safety summaries of Hwy/Rail crossing data and allow for transfer of new FRA data info between the individual RR's and FRA in accordance with new federal RSIA law. 	DOTD Bill Shrewsberry	<ul style="list-style-type: none"> DOTD received approval for "Request for Proposals" and advertised for consultant services in July 2011. Should have contract by October 2011. This item will be kept and revised for our 2012 to 2016 AP.
3	<ul style="list-style-type: none"> Conduct an annual review of multi-collision Hwy/Rail crossing crashes over the past 5 years. Complete Diagnostic Reviews (DR) on 25% on those crossings per SFY. 	<ul style="list-style-type: none"> To determine common causes and relationships between the referenced crossings and to improve the process for remedy. 	DOTD Hwy/Rail Safety Unit	<ul style="list-style-type: none"> The initial action plan dated March 2006, focused on public crossings with multiple collisions based on FRA data from 1999 – 2004. Of this initial list of multi-collision crossings, 90% have been addressed (DR performed) through an upgrade or closure or reviewed and determined to be a low priority. Of these initial crossings, 15 remain on the priority list and are in discussion with the individual railroad carrier and/or local governing authority. DOTD and FRA continue to review the five year multi-collision data and use this information to present to the RR Safety Program Selection Committee. DOTD will modify for 2012 to 2016 AP.
4	<ul style="list-style-type: none"> Ensure compliance with the Rail Safety Improvement Act, by being able to transfer inventory data with FRA as required. 	<ul style="list-style-type: none"> To accommodate the resumption and "syncing" of inventory data once again between DOTD and the FRA. 	DOTD / FHWA / FRA Hwy/Rail Safety Unit	<ul style="list-style-type: none"> See Action Item No. 2.
5	<ul style="list-style-type: none"> Develop DOTD policy for closures using the state law (RS 48:390. 1). 	<ul style="list-style-type: none"> To include formal plan for determining/listing closure candidates. To close redundant and unnecessary Hwy/Rail crossings and improve public safety statewide. 	DOTD Simone Ardoin	<ul style="list-style-type: none"> DOTD has developed a draft "Highway/Railroad Grade Crossing Consolidation and Closure Procedures" document. RR Unit has picked two state highway crossings to close under the state law and have scheduled public meetings for August and September 2011. DOTD will modify for 2012 to 2016 AP.
6	<ul style="list-style-type: none"> Review of RR preemption status and monitor with each District. Each District should have a report prepared on their traffic signals near RR active warning and update it annually. Review of DOTD Traffic Signal Design Manual continued to support its use; however, it is recommended that sufficient training be given to Districts and others partners associated with RR preemption. Identify and categorize crossings where is needed or changes are desired and make this part of the Annual RR Priority Plan statewide. 	<ul style="list-style-type: none"> To provide a standardized preemption and to promote safe and efficient interconnections of Hwy/Rail signals with nearby affected highway traffic signals statewide in accordance with the MUTCD. To monitor installation methodologies statewide and keep key personnel trained. 	DOTD Bill Shrewsberry	<ul style="list-style-type: none"> After much discussion and research, DOTD has determined that standardizing pre-emption is problematic and should be handled on case-by-case basis. General guidelines will be developed in next AP. DOTD has developed a preliminary list of crossings which will be refined in next Action Plan. DOTD has developed draft flow chart to better coordinate between Traffic Services, Traffic Engineers, Operations and Railroads. DOTD will modify for 2012 to 2016 AP.

Item No.	Action Item (what)	Desired Outcome (why)	Lead Agency/Person(s) (who)	Progress/Comments (when) Expected Outcomes and Accomplishments
7	<ul style="list-style-type: none"> Develop 3 Statewide Crossbuck Enhancement Projects. 	<ul style="list-style-type: none"> To coordinate with each railroad company operating within the State of Louisiana, to install supplemental Yield (default) or Stop signs at the approaches of each of their passive public Hwy/Rail crossings in the interest of public safety. Cooperation of passive crossing identification by local governments would significantly expedite completion of the Statewide Crossbuck Enhancement Project. Statewide Crossbuck Enhancement Project to have new proposed MUTCD compliant Crossbuck Assemblies installed at all state, Parish, and City passive public crossings by June 30, 2014. 	DOTD Bill Shrewsberry	<ul style="list-style-type: none"> DOTD has funded Crossbuck Enhancement projects on BNSF, KCS, LNW, NOGC, NS and UP passive crossings. This is a total of over 800 passive crossings upgraded or to be upgraded. DOTD will modify for 2012 to 2016 AP.
8	<ul style="list-style-type: none"> Ensure that our software solution for the inventory will be able to have GIS capabilities and also be able to be shared with outside agencies such as LaOL and State Police. Submit an annual report to LSP on suggested areas to target enforcement. 	<ul style="list-style-type: none"> To locate by mapping analysis specifically those locations near highway intersections where Hwy/Rail collisions have occurred To determine per historical record, prioritized collision parishes or corridors most in need of targeted enforcement Our goal is to improve our partnerships in promoting highway/rail safety and getting help with enforcement and awareness. 	DOTD /FRA LHSC/ LAOL / RR Bill Shrewsberry	<ul style="list-style-type: none"> See Action Item 2. Coordinated with LSP and OL, and used 2006 AP to assist OL and partners to focus on key Parishes for education and enforcement. DOTD will modify for 2012 to 2016 AP.
9	<ul style="list-style-type: none"> Continue to partner with (LTAP) Louisiana Local Training Assistance Program in promoting education and awareness on highway/rail safety issues. 	<ul style="list-style-type: none"> To encourage modification of LTAP's existing training of the MUTCD to emphasize signs, markings, signals at Hwy/Rail crossings. To promote local agency responsibilities for inspection and maintenance at all Hwy/Rail grade crossings in appropriate LTAP's training courses. Coordinate with LMA and Police Jury Assoc. to educate them toward Hwy/Rail safety and develop partnerships with them for training and presentations. 	DOTD / LTAP / LAOL / RR Co.s Marie Walsh	<ul style="list-style-type: none"> DOTD Highway/Rail Safety Unit made presentations relative to highway/rail safety at several Parish Engineers and Supervisors meetings to educate and obtain local engineering feedback in 2009, 2010 and 2011. DOTD will modify for 2012 to 2016 AP.
10	<ul style="list-style-type: none"> Host bi-annual (every other year) Railroad Safety Conference in conjunction with bi-annual Traffic Safety Summit, with Railroad companies on planning committee. 	<ul style="list-style-type: none"> To involve all relevant parties in Hwy/Rail Safety planning and foster a closer working relationship between all parties involved 	DOTD/ Karla Courtade/ Simone Ardoin	<ul style="list-style-type: none"> DATES OF CONFERENCES: March 2008 & 2010 DOTD will modify for 2012 to 2016 AP.
11	<ul style="list-style-type: none"> Host bi-annual (every other year) meeting for DOTD personnel to help improve communication, exchange ideas, and promote highway/rail safety and awareness. 	<ul style="list-style-type: none"> To discuss Hwy/Rail grade crossing issues and share best practices To help Districts better handle Hwy/Rail grade crossing issues. 	DOTD Simone Ardoin	<ul style="list-style-type: none"> Meetings were held at the Railroad Safety Conference (See Action Item 10) or at the DOTD Engineering Conferences in the years the Railroad Safety Conference was not held. DOTD will replace this item in 2012 to 2016 AP.
12	<ul style="list-style-type: none"> Develop a procedure to set aside a percentage of yearly budget partition for RR Safety Projects to test innovative solutions for Hwy/Rail Crossings. Be able to submit an annual report on test cases attempted. 	<ul style="list-style-type: none"> To test and maintain "cutting edge" technology in Hwy/Rail safety 	DOTD Bill Shrewsberry	<ul style="list-style-type: none"> DOTD has prepared annual reports of 'alternate innovation' for highway/rail safety projects. This information is included in the HSIP annual report. Types of innovations include special surfaces and LED lighting on stop signs. Video enforcement is also being reviewed for possible use. DOTD will modify for 2012 to 2016 AP.

Appendix C
New Data Report (2005-2009)

**State of Louisiana Highway-Rail Grade Crossing Safety Action Plan
Total Public Highway-Rail Grade Crossing Collisions
and Collisions at Single-Incident and Multiple-Incident Collision Locations
Calendar Years 2005 to 2009
Tables 1 to 20**

Appendix D
2010 LADOTD Highway/Rail
Safety Report

Louisiana DOTD Highway/Rail Grade Crossing Safety Report HSIP State Fiscal Year 2010 (July '09 through June '10)

I. Introduction

Improving highway/rail safety is a primary goal for the Louisiana Department of Transportation and Development's (DOTD) Highway/Rail Safety Unit. DOTD does this by developing projects to upgrade or install active warning devices to current technology, working with local governments and communities to try to consolidate crossings through effective corridor projects, and working with railroads to upgrade passive crossings to current recommendations, specifically adding yield or stop signs.

DOTD manages an annual Railroad Safety Program of over \$8 million of highway/rail crossing safety projects. DOTD only receives approximately \$4 million of FHWA funding specifically earmarked for highway/rail crossing safety, but as the issue of highway/rail safety is so important to Louisiana, DOTD also obligates an additional \$4 million of federal/state funds for an overall Railroad Safety Program of t \$8 million.

DOTD partners with the Louisiana Highway Safety Commission, Louisiana State Police, Louisiana Operation Lifesaver, individual railroads, and others to coordinate and enhance highway/rail safety via all available methods and to promote the recognized three "E's" (Education, Enforcement, and Engineering) of highway/rail safety. These areas are addressed in our Highway/Rail Safety Action Plan.

II. General Program

- a. Summary of the Program – DOTD initially analyzes the public crossings with a rating index derived from our inventory data. Input is collected from the following sources: engineers, local government, law enforcement, and the public. Due to increases in train volumes and/or speeds, several major Class I corridors have merited particular attention. The majority of DOTD's focus is on corridor projects where there are multiple crossings evaluated for improvement within a specified area.
- b. Number of public grade crossings: 3,214 (see the below Table for 2009 data comparisons to 2010) The chart below offers a comparison of 2009 vs. 2010. The 2010 numbers were collected from DOTD's statewide railroad inventory database as of June 2010. The total number of public crossings remained the same from 2009 to 2010 because along with several closures, there were new crossings added and some 'private' crossings have revised to 'public.' However, there are more grade separations and crossings with active warning devices.

Year	Total crossings	Active (signals)	Passive (signs)	Grade Separations
2010	3,214	1,406	1,445	363
2009	3,214	1,379	1,476	359

- c. State's assessment of overall highway/rail safety program
 - Assessment of time frame – Louisiana's State Fiscal Year 2010 (SFY 10). The specific timeframe of SFY 10 is July 1, 2009 through June 30, 2010.

- Summary of projects – DOTD obligated and issued work orders of over \$8 Million for their Railroad Safety Program in SFY 10 (July 09- June 10). These projects are as follows:
 - ◆ (32) thirty-two projects for gates,
 - ◆ (11) eleven projects for new surfaces,
 - ◆ (2) two projects for flashing light without gates
 - ◆ Approximately 360 new crossbuck assemblies using a metal pole as a standard, about 50 of these are with the New Orleans & Gulf Coast Railroad (NOGC) and the remainder with Kansas City Southern (KCS), and
 - ◆ (3) three crossings were negotiated for closure directly related to crossings/projects that were work ordered in SFY 10. Two of these have been closed this fiscal year. One crossing is set to be closed in SFY 2011.

Note: See the attached Table 1 for a summary of SFY 10's highway/rail safety projects.

- DOTD also conducts highway/rail crossing safety improvements when DOTD regular road construction projects require it. These construction projects amounted to an additional \$2.2 million obligated and issued work orders for highway-rail crossing projects in SFY 10. These projects are as follows:
 - ◆ (5) five projects gates,
 - ◆ (6) six projects for new surfaces,
 - ◆ (2) two projects for flashing lights without gates, and
 - ◆ (8) eight crossings minor railroad signal connections where simultaneous preemption was negotiated for LA 23 traffic signals adjacent to NOGC as a result of our LA 23 construction project in Jefferson and Plaquemines Parishes.

Note: These projects are not shown on the attached Table 1, but the information is being provided to further illustrate DOTD's commitment to highway/rail safety.

- Trend in grade crossing closures – (2) Two of Louisiana's public highway/rail grade crossings were physically closed in SFY 10 as direct result of projects that are part of DOTD's railroad Safety Program. These (2) two closed crossings are as follows: Market Street (US 71) and Hearne Street in Shreveport. One to be closed is directly associated with the gating of Front Street that was work ordered in SFY 10 and DOTD's Highway/Rail Safety Unit has laid the groundwork for many corridor projects across the state and foresee significant potential improvement in highway/rail safety over the next five to ten years. There have been on going meetings with the City of New Iberia discussing consolidations. The proposed consolidations in Tangipahoa Parish were discussed with public officials and more meetings are set for SFY11. The individual railroads and DOTD are committed to pursuing the labor intensive process of closing highway-rail crossings with local governments for improved public safety.

- Reduction in crashes and fatalities – DOTD has tracked its safety program since the Highway Safety Act in the 1970's and the creation of the federal DOT No. system for tracking crossing data. Louisiana's collisions and injuries, as well as the fatalities, have been significantly reduced since 1975. Based on our rough approximation, the data supports both collisions, injuries and fatalities have been reduced by at least two thirds in this period. See the attached graphs on pages 7 and 8.
- d. Annual grade crossing safety improvement funding
- Louisiana's allocation of Section 130 funding – Louisiana has an annual federal apportionment of \$4 million specifically for Section 130 highway/rail safety.
 - Other sources of funding for grade crossing improvements – DOTD's Railroad Safety Program goal is to authorize over \$8 million in highway-rail projects each state fiscal year. To meet this goal, in addition to the \$4 million of Section 130 funds, DOTD must use other federal/state safety funds each state fiscal year to meet this State Program goal of \$8 million. For DOTD's Railroad Safety Program this state fiscal year, the actual funding breakdown is as follows: \$3.0 million of 130 funds, \$4.8 million of other HSIP federal funds and \$500,000 of state funding. Also, DOTD uses federal/state construction funds when upgrading a highway/rail crossing that is tied directly to a DOTD road construction project. BNSF Railway, Kansas City Southern Railway and Union Pacific Railroad contributed to specific highway/rail safety projects or used their funds independently to assist the DOTD Railroad Safety Program. The City of Morgan City assisted by negotiating with a local business for a guardrail improvement, altering a nearby street movements for safety and doing paving and curb work in the area of several crossings.
- e. Program emphasis areas and changes from previous years' programs. The Railroad Safety Action Plan has been approved by both FHWA and FRA and is a dynamic document. The most recent Railroad Safety Action Plan consists of twelve Action Items for on going discussions with our safety partners (FHWA, FRA, Louisiana State Police, Louisiana Highway Safety Commission, Louisiana Technology Transfer, and Louisiana Operation Lifesaver). On new safety projects begun this year, the new diagnostic review form was used. DOTD continues to focus on corridors as a primary means to enhance highway/rail safety. DOTD added new Crossbuck Assembly (Crossbucks combined with a Stop or Yield Sign) projects with both KCS and NOGC this year. These Crossbuck Assembly projects, which were authorized for construction, will add about 360 Crossbuck Assemblies through out the state. These Crossbuck Assembly projects were modeled after the BNSF Crossbuck Assembly Program for Louisiana. The Crossbuck Assembly metal post standard is being reviewed by other railroads for possible safety projects.

III. Data

a. Status of grade crossing inventory

- Updates – The DOTD Highway/Rail Safety Unit maintains DOTD's crossing inventory database. All updates to individual crossing data are

CONFIDENTIAL INFORMATION: This document is based on information compiled or collected pursuant to 23 U.S.C. §§130 and 148 and other federal safety programs and is exempt from discovery or admission under 23 U.S.C. §§ 402 and 409. Contact the LA/DOTD Railroad Safety Unit at 225-379-1573 before releasing any information.

made daily for major changes in the warning devices or notification of closures. Crossings on DOTD's state maintained highway system have their estimated traffic volume updated annually. FRA Collisions have recently been updated into DOTD's inventory. DOTD conducts numerous field reviews with the railroad and local governments on the Class I mainlines for significant corridor projects. Although DOTD works hard to maintain quality data in our inventory, we do not regularly update the FRA's data due to our existing mainframe inventory system. We are working to update this database.

- Estimated accuracy, currency – DOTD has a very high level of confidence in the data on the Class I mainlines because of our ongoing efforts with the Class I railroads in Louisiana. Data provided for shortlines, branchlines, industrial leads, and private crossings only have a moderate level of confidence due to less routine and ongoing interaction with DOTD.
- Dollar amount of Section 130 funds spent on inventory – DOTD did not spend any 130 funds on inventory upgrades in SFY 10.

b. Limitations

- Description of limitations – Although crossings on DOTD's state maintained highway system are updated annually for their traffic volume estimates, those public crossings not on DOTD's state maintained highway system are not easily cross referenced to other traffic count estimate sources.
- Plans for upgrades and expected costs – DOTD planned on incorporating its existing data into a new software analysis tool. This was not able to be done, but DOTD is reviewing its options and still maintaining its inventory. DOTD hopes to a new plan for modifying of inventory to assist better interaction with the FRA and railroads. See Updates comments in IIIa above. DOTD's goal is to have a contract for this inventory process executed by December 31, 2010. The initial cost estimate is projected to be less than \$50,000.

IV. Project Selection

a. Methodology for assessing grade crossings

DOTD has a numerical rating based on our crossing inventory information and recent the collision history for public crossings. The collision history, the physical geometry of the crossing, coupled with local and railroad input are reviewed with this rating to develop our crossing list. This list is presented to our highway rail safety committee for approval yearly.

b. Procedure for prioritizing/selecting projects

DOTD's overall highway/rail safety crossing list has been developed over years of review with the individual railroads, local DOTD Districts and local governments, to be divided into three safety categories, 1) Individual Crossings, 2) Corridors, and 3) Shortlines, with our primary focus on Major Class I corridor projects. The Corridor category is the largest because once an individual crossing is selected for review by our highway rail safety committee the actual field review with the railroad and locals often produces a need or decision to review adjacent crossings too. Once a decision is made to review more than one crossing, DOTD

combines and organizes the associated work into the Corridor category for our project tracking purposes.

V. Current Fiscal Year Projects

- a. Summary – See the attached Table 1.
- b. Additional fiscal year program information
 - Percentage of Section 130 funds spent on protective devices – DOTD spent over 90% of our Railroad Safety Program funds on warning devices.
 - Innovative strategies used – Based on joint reviews with NOGC and the City of Gretna, Crossbuck Assemblies with 24/7 LED flashing lights were funded for installation on NOGC crossings along LA 18 in Gretna. These installations may be the first authorized at public crossings in the country. Also, a special crossing surface with longer field panels outside the rails is to be installed early in SFY 2011 at a shortline crossing of US 79 in Homer where the crossing's skew and high truck traffic have contributed to crossing surface problems.
 - Education and enforcement strategies used – DOTD continues to be proactive by partnering with the Louisiana Highway Safety Commission, Louisiana State Police, Louisiana Operation Lifesaver, local officials and the railroads. DOTD helped host the national Highway/Rail Safety Conference with the Texas Transportation Institute in New Orleans in November 2009. Approximately 200 people attended and discussed the latest in the field of highway-rail safety. DOTD hosted the bi-annual Louisiana Highway/Rail Safety Conference in Baton Rouge in March 2010 with over 200 people in attendance. DOTD observed five railroad law enforcement "Officer on the Train" events, in which local law enforcement officials ticketed drivers for failure to obey traffic laws at highway-rail crossings and attended several railroad safety meetings.
- c. Description of individual projects – See the attached Table 1.

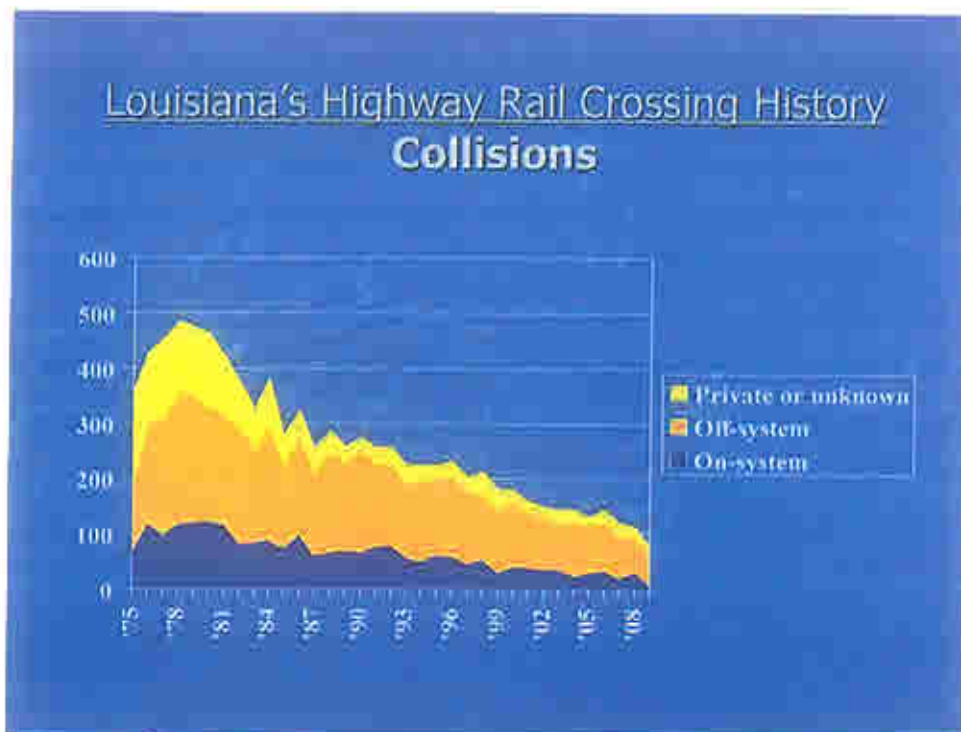

VI. Evaluation of Previous Projects

- a. Methodology for assessing effectiveness of improvement projects – DOTD tracks the effectiveness of our highway/rail safety program by comparing the differences in the crossings' collisions, injuries, and fatalities. These differences extend before, and after, the improvements at the individual crossing, using the same time frame.
- b. Summary of the assessment results of the effectiveness of previous projects – See Table 2. This is a table of DOTD's highway/rail safety projects that were completed in SFY 07 (July 2006 through June 2007). The table summarizes the projects and compares collisions, injuries, and fatalities in the three years before, and after, these improvements. This shows that DOTD's highway/rail safety efforts for SFY 07 reduced the number of collisions from 45 to 5, reduced the number of injuries from 23 to 0, and reduced the number of fatalities from 8 to 0 at the crossings where improvements were made.

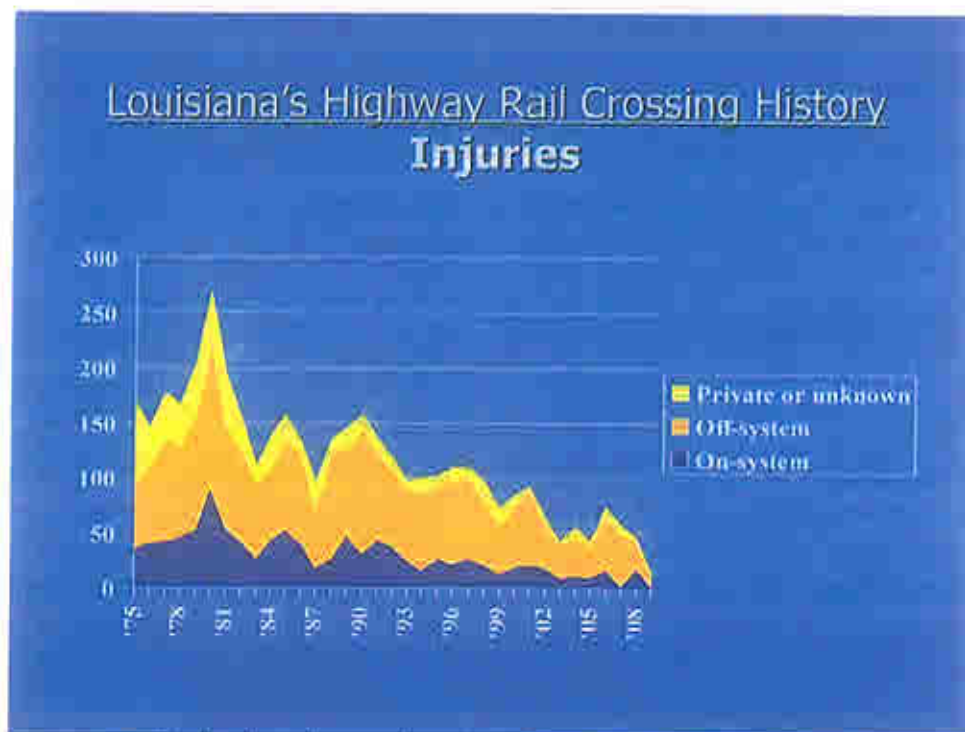

VII. Conclusions

- a. Recommendation for future implementation of Section 130, i.e. Railroad Safety Program – DOTD proposes to:
 - Be proactive in funding for railroad safety by supplementing the earmarked highway/rail safety with additional funding sources
 - Work with our safety partners: FHWA, FRA, Louisiana State Police, Louisiana Highway Safety Commission, Louisiana Local Technical Assistance Program and Louisiana Operation Lifesaver and the local governments
 - Evaluate the new highway-rail crossing priority process as a way to track the time it takes for planning and delivery of highway/rail safety projects. The priority process will also reflect the current progress of those same projects.
 - Use the new diagnostic review form
 - Had railroad safety committee meeting
 - Update the Action Plan and have two railroad Action Plan committee meetings a year
 - Purchase new software for the railroad inventory
 - Authorize additional Crossbuck Assembly jobs for passive public crossings
 - Have ongoing railroad preemption discussions with the railroads in accordance with funding and safety
 - Focus on effective corridor projects with local governments
 - Have several projects demonstrating new or innovative technologies funded this coming year
- b. Additional comments – DOTD hopes that the continuation of these corridor projects will show a growing number of closures and enhanced safety areas. It is hoped that these new procedures will both help educate and encourage the local governments and produce the dialogue needed to promote safer corridors to further reduce highway/rail collisions and tragedies in Louisiana.

Louisiana Highway/Rail Crossing History Graphs

Collisions have been reduced significantly, by over two thirds.

Injuries have been reduced significantly, by **over two** thirds.

CONFIDENTIAL INFORMATION: This document is based on information compiled or collected pursuant to 23 U.S.C. §§130 and 148 and other federal safety programs and is exempt from discovery or admission under 23 U.S.C. §§ 402 and 409. Contact the LADOTD Railroad Safety Unit at 225-379-1573 before releasing any information.

Fatalities have been reduced, by over two thirds.

Although highway/rail fatalities are random, Louisiana's last eight years of highway/rail crossing fatalities number as follows:

Year	# of fatalities
2002	12
2003	15
2004	21
2005	20
2006	8
2007	14
2008	15
2009	11

* Due to limited numbers of highway-rail collisions and randomness, Effectiveness is determined as follows: (# collisions after - # collisions before) / # collisions before									Before				After				Effectiveness* (as %)
									Fatal	Injury	PDO	Coll	Fatal	Injury	PDO	Coll	
Costs	\$7,911,571	Totals	8	23	28	46	0	0	3	5	-89%
