

Consumer Guide to Uniform Tire Quality Grading

Comparative grade designations for treadwear, traction and temperature for all passenger car tires, except deep tread, winter-type snow tires; space-saver or temporary use spares; or tires with normal rim diameters of 12 inches or less.

This publication is distributed by the U.S. Department of Transportation, National Highway Traffic Safety Administration, in the interest of information exchange. The opinions, findings and conclusions expressed in this publication are those of the author(s) and not necessarily those of the Department of Transportation or the National Highway Traffic Safety Administration. The United States Government assumes no liability for its content or use thereof. If trade or manufacturers' names or products are mentioned, it is because they are considered essential to the object of the publication and should not be construed as an endorsement. The United States Government does not endorse products or manufacturers.

Consumer Guide to Uniform Tire Quality Grading

**ALL PASSENGER CAR TIRES MUST CONFORM TO
FEDERAL SAFETY REQUIREMENTS IN ADDITION TO THESE GRADES.**

TREADWEAR: The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would under one and a half (1½) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

TRACTION - AA, A, B AND C: The traction grades from highest to lowest are AA, A, B and C and they represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

WARNING:

**The traction grade assigned to this tire is based on braking
(straight ahead) traction tests and does not include
cornering (turning) traction.**

TEMPERATURE - A, B and C: The temperature grades are A (the highest), B and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades A and B represent higher levels of performance on the laboratory test wheel than the minimum required by law.

WARNING:

**The temperature grade for this tire is established
for a tire that is properly inflated and not overloaded.
Excessive speed, under inflation, or excessive loading, either separately
or in combination, can cause heat buildup and possible tire failure.**

**NOTE: This guide is based on the latest information available at press time.
As more data are received, they will be posted on the Web site:
(www.safercar.gov/tires/pages/tireratings.cfm)**

**More information on the Uniform Tire Quality Grading System can also
be found at the above Web site.**

Underinflated Tires Can Lead to Disaster

Avoiding This Is Quick And Easy

FIND YOUR PSI.

Your PSI is the **p**ounds per **s**quare **i**nch of air pressure that's right for your tires. The correct PSI for your tires is located on your **vehicle's** tire information label – not on the sidewall of your tire.

CHECK IT MONTHLY.

At least once a month, check your vehicle's tire pressure using an accurate pressure gauge.

Bottom line: you cannot tell if your tires are underinflated just by looking.
