This includes vehicles purchased from private parties or presented by transient (tourist) owners and vehicles in a dealers inventory. Federal law requires that new vehicles in dealer inventory which are the subject of a safety recall must be corrected prior to sale. Failure to do so can result in civil penalties by the National Highway Traffic Safety Administration. While federal law applies only to new vehicles, Infiniti strongly encourages dealers to correct any used vehicles in their inventory before they are retailed</p>

16V306	RCMN-16V306-0049.pdf	MERCEDES BENZ	SLK300	2016	Daimler AG (DAG), the manufacturer of Mercedes-Benz vehicles has determined that on certain SLK vehicles (172 platform), improperly manufactured locknuts might have been used on the tie rod screw-connection to the rear axle wheel carrier. These potentially affected locknuts may not fulfill the required pre-tension force despite the correct tightening torque. An authorized Mercedes-Benz dealer will replace tie rod nut on right and left rear axle wheel carrier
16V308	RCMN-16V308-4792.pdf	MERCEDES-BENZ	AMG GT S	2016	Daimler AG (DAG), the manufacturer of Mercedes-Benz vehicles, has determined that on certain MY16 AMG GT S vehicles (C190 platform), the bond between the carbon-fiber driveshaft and the engine-/transmission flange might not meet the specification. This could result in loss of torque between the engine and transmission and lead to loss of motive power, and increase the risk of a potential crash. An authorized Mercedes-Benz dealer will check the driveshaft and replace the driveshaft if necessary

16V340	RCMN-16V340-0186.pdf	LEXUS	ES350	2011	<p>Hot Sheet: The U.S. automotive industry is facing the largest safety recall in its history. On May 4, 2016, the National Highway Traffic Safety Administration (NHTSA) announced an expansion of the industry-wide Takata Airbag Inflator Recalls. This announcement explained that Takata will, in five (5) phases across three (3) geographical zones, recall additional vehicles between May 2016 and the end of 2019. These vehicles contain Takata front airbag inflators that were manufactured without a desiccant. Desiccant material is a chemical drying agent that absorbs moisture. For the affected Lexus vehicles, this recall only includes certain front passenger airbag inflators. Driver airbag inflators are not included.</p> <p>On May 23, 2016, Lexus filed a Defect Information Report (DIR) with NHTSA identifying the vehicles involved in Phase 1 of the expanded Takata recall. Lexus informed the agency of its intent to conduct a voluntary Safety Recall on these vehicles. GLG and GLH Phase 1 vehicles included are also zone dependent. As a result, some of the same GLG and GLH Phase 1 model/model year vehicles may also be included in later phases in other geographic zones. Vehicles involved in Phase 1 are listed under designation GLG or GLH based on where the vehicle is operated or has been registered. Please refer to the phase /zone charts below for further information</p>

This announcement explained that Takata will, in five (5) phases across three (3) geographical zones, recall additional vehicles between May 2016 and the end of 2019. These vehicles contain Takata front airbag inflators that were manufactured without a desiccant. Desiccant material is a chemical drying agent that absorbs moisture. For the affected Lexus vehicles, this recall only includes certain front passenger airbag inflators. Driver airbag inflators are not included.</p> <p>On May 23, 2016, Lexus filed a Defect Information Report (DIR) with NHTSA identifying the vehicles involved in Phase 1 of the expanded Takata recall. Lexus informed the agency of its intent to conduct a voluntary Safety Recall on these vehicles. GLG and GLH Phase 1 vehicles included are also zone dependent. As a result, some of the same GLG and GLH Phase 1 model/model year vehicles may also be included in later phases in other geographic zones. Vehicles involved in Phase 1 are listed under designation GLG or GLH based on where the vehicle is operated or has been registered. Please refer to the phase /zone charts below for further information</p>

16V340	RCMN-16V340-1122.pdf	LEXUS	ES350	2011	<p>Hot Sheet: The U.S. automotive industry is facing the largest safety recall in its history. On May 4, 2016, the National Highway Traffic Safety Administration (NHTSA) announced an expansion of the industry-wide Takata Airbag Inflator Recalls. This announcement explained that Takata will, in five (5) phases across three (3) geographical zones, recall additional vehicles between May 2016 and the end of 2019. These vehicles contain Takata front airbag inflators that were manufactured without a desiccant. Desiccant material is a chemical drying agent that absorbs moisture. For the affected Toyota & Scion vehicles, this recall only includes certain front passenger airbag inflators. Driver airbag inflators are not included.</p> <p>On May 23, 2016, Toyota filed a Defect Information Report (DIR) with NHTSA identifying the vehicles involved in Phase 1 of the expanded Takata recall. Toyota informed the agency of its intent to conduct a voluntary Safety Recall on these vehicles. GOP and GOR Phase 1 vehicles included are also zone dependent. As a result, some of the same GOP and GOR Phase 1 model/model year vehicles may also be included in later phases in other geographic zones. Vehicles involved in Phase 1 are listed under designation GOP or GOR based on where the vehicle is operated or has been registered. Please refer to the phase / zone charts below for further information</p>

16V340	RCMN-16V340-1122.pdf	LEXUS	IS 350	2009	<p>Hot Sheet: The U.S. automotive industry is facing the largest safety recall in its history. On May 4, 2016, the National Highway Traffic Safety Administration (NHTSA) announced an expansion of the industry-wide Takata Airbag Inflator Recalls. This announcement explained that Takata will, in five (5) phases across three (3) geographical zones, recall additional vehicles between May 2016 and the end of 2019. These vehicles contain Takata front airbag inflators that were manufactured without a desiccant. Desiccant material is a chemical drying agent that absorbs moisture. For the affected Toyota & Scion vehicles, this recall only includes certain front passenger airbag inflators. Driver airbag inflators are not included.</p> <p>On May 23, 2016, Toyota filed a Defect Information Report (DIR) with NHTSA identifying the vehicles involved in Phase 1 of the expanded Takata recall. Toyota informed the agency of its intent to conduct a voluntary Safety Recall on these vehicles. GOP and GOR Phase 1 vehicles included are also zone dependent. As a result, some of the same GOP and GOR Phase 1 model/model year vehicles may also be included in later phases in other geographic zones. Vehicles involved in Phase 1 are listed under designation GOP or GOR based on where the vehicle is operated or has been registered. Please refer to the phase / zone charts below for further information</p>

16V340	RCMN-16V340-1122.pdf	TOYOTA	MATRIX	2011	<p>Hot Sheet: The U.S. automotive industry is facing the largest safety recall in its history. On May 4, 2016, the National Highway Traffic Safety Administration (NHTSA) announced an expansion of the industry-wide Takata Airbag Inflator Recalls. This announcement explained that Takata will, in five (5) phases across three (3) geographical zones, recall additional vehicles between May 2016 and the end of 2019. These vehicles contain Takata front airbag inflators that were manufactured without a desiccant. Desiccant material is a chemical drying agent that absorbs moisture. For the affected Toyota & Scion vehicles, this recall only includes certain front passenger airbag inflators. Driver airbag inflators are not included.</p> <p>On May 23, 2016, Toyota filed a Defect Information Report (DIR) with NHTSA identifying the vehicles involved in Phase 1 of the expanded Takata recall. Toyota informed the agency of its intent to conduct a voluntary Safety Recall on these vehicles. GOP and GOR Phase 1 vehicles included are also zone dependent. As a result, some of the same GOP and GOR Phase 1 model/model year vehicles may also be included in later phases in other geographic zones. Vehicles involved in Phase 1 are listed under designation GOP or GOR based on where the vehicle is operated or has been registered. Please refer to the phase / zone charts below for further information</p>

16V340	RCMN-16V340-3376.pdf	LEXUS	IS 350	2009	Dealer Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-3376.pdf	LEXUS	IS 350	2008	Dealer Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-3376.pdf	LEXUS	IS 350	2007	Dealer Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-3376.pdf	LEXUS	IS 350	2006	Dealer Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-3376.pdf	LEXUS	IS 350C	2011	Dealer Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

16V340	RCMN-16V340-4230.pdf	LEXUS	IS 350	2008	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-4230.pdf	LEXUS	IS 350	2007	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-4230.pdf	LEXUS	IS 350	2006	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-4230.pdf	LEXUS	IS 350C	2011	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250	2011	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250	2010	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250	2009	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250	2008	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250	2007	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250	2006	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250C	2011	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RCMN-16V340-6077.pdf	LEXUS	IS 250C	2010	The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V340	RCMN-16V340-8061.pdf	LEXUS	ES350	2011	Dealer Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RIONL-16V340-6297.pdf	TOYOTA	YARIS	2011	Interim Owner Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death
16V340	RIONL-16V340-6297.pdf	TOYOTA	YARIS	2010	Interim Owner Letter: The subject vehicles are equipped with front passenger airbag inflators produced by Takata. According to Takata, the propellant in these inflators may degrade after prolonged exposure to high absolute humidity and fluctuating high temperatures. Degraded propellant can cause inflator rupture during airbag deployment. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material, striking the vehicle occupants, and result in serious injury or death

The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V344	RCMN-16V344-3546.pdf	HONDA	ELEMENT	2005	Dealer message - Takata parts update. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture

16V344	RCMN-16V344-9912.pdf	ACURA	MDX	2006	On Monday, May 23, 2016, American Honda notified NHTSA of a stop sale and safety recall for specific model year 2002-2011 Honda vehicles due to passenger's airbag inflators that may rupture during deployment as a result of over-pressurization after prolonged exposure to high temperatures and high absolute humidity. Replacement part numbers for all affected models have been added to service bulletins 16-047, Safety Recall: Front Passengers Airbag Inflator May Be Over-Pressurized (Phase 1) and 16-048, Safety Recall: Takata Front Passengers Airbag Inflator (Phase 1). Replacement inflator kits are currently available for order

16V344	RCOHL-16V344-1526.pdf	ACURA	MDX	2006	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2005-2006 model year CR-V vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V344	RCOVL-16V344-2319.pdf	ACURA	RL	2009	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2006 model year Ridgeline vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>
16V344	RCOVL-16V344-2837.pdf	ACURA	MDX	2006	Representative owner letter. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V344	RCOVL-16V344-2837.pdf	ACURA	MDX	2005	Representative owner letter. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V344	RCOVL-16V344-2837.pdf	ACURA	MDX	2004	Representative owner letter. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V344	RCOVL-16V344-2837.pdf	ACURA	MDX	2003	Representative owner letter. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V344	RCOVL-16V344-2837.pdf	ACURA	RL	2011	Representative owner letter. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture

16V344	RCONL-16V344-3141.pdf	HONDA	RIDGELINE	2006	<p>Representative customer letter. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture</p>
16V344	RCONL-16V344-3248.pdf	ACURA	MDX	2006	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2003-2006 model year Element vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V344	RCOVL-16V344-3248.pdf	HONDA	PILOT	2003	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2003-2006 model year Element vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>
16V344	RCOINL-16V344-6054.pdf	HONDA	ODYSSEY	2002	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2003-2008 model year Pilot vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>
16V344	RCOVL-16V344-7685.pdf	HONDA	ELEMENT	2005	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2002-2004 model year Odyssey vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Honda will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Honda dealer</p>

In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Acura will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Acura dealer</p>
16V344	RCOVL-16V344-7967.pdf	HONDA	CR-V	2005	<p>Acura has decided that a defect which relates to motor vehicle safety exists in certain 2003-2006 model year MDX vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Acura will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Acura dealer</p>

In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Acura will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Acura dealer</p>
16V344	RCOVL-16V344-8494.pdf	ACURA	RL	2010	<p>Acura has decided that a defect which relates to motor vehicle safety exists in certain 2005-2011 model year RL vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Acura will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Acura dealer</p>

In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Acura will replace the passenger frontal airbag inflator free of charge. While parts are available to conduct airbag inflator replacements at the time of this notice, the scope of the current airbag inflator recalls creates the possibility that the parts necessary to complete the recall repair may not be available at the time you call to schedule your appointment with your authorized Acura dealer</p>
16V344	RCOVL-16V344-8494.pdf	HONDA	RIDGELINE	2007	<p>Acura has decided that a defect which relates to motor vehicle safety exists in certain 2005-2011 model year RL vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>Acura will replace the passenger frontal airbag inflator free of charge. NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V344	RCRIT-16V344-3108.pdf	ACURA	MDX	2006	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. NHTSA is prioritizing the recall of air bag inflators based on the risk of injury or death to vehicle occupants.</p> <p>To comply with NHTSAs direction, American Honda has combined the two the previous campaigns related to airbag inflators that may produce excessive pressure after long-term exposure to high absolute humidity. All the vehicles from S/B 14-046 and 14-070 are included in zone A. Currently there are five planned phases to this campaign. The subsequent phases will launch at a future date per NHTSA direction, but it will be several years before the final phase 5 launches. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>

According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. NHTSA is prioritizing the recall of air bag inflators based on the risk of injury or death to vehicle occupants.</p> <p>To comply with NHTSAs direction, American Honda has combined the two the previous campaigns related to airbag inflators that may produce excessive pressure after long-term exposure to high absolute humidity. All the vehicles from S/B 14-046 and 14-070 are included in zone A. Currently there are five planned phases to this campaign. The subsequent phases will launch at a future date per NHTSA direction, but it will be several years before the final phase 5 launches. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>
16V344	RCRIT-16V344-3108.pdf	ACURA	RL	2006	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>
16V344	RCRIT-16V344-3108.pdf	HONDA	RIDGELINE	2011	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. NHTSA is prioritizing the recall of air bag inflators based on the risk of injury or death to vehicle occupants.</p> <p>To comply with NHTSAs direction, American Honda has combined the two the previous campaigns related to airbag inflators that may produce excessive pressure after long-term exposure to high absolute humidity. All the vehicles from S/B 14-046 and 14-070 are included in zone A. Currently there are five planned phases to this campaign. The subsequent phases will launch at a future date per NHTSA direction, but it will be several years before the final phase 5 launches. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>

16V344	RCRIT-16V344-5752.pdf	HONDA	RIDGELINE	2006	<p>According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants.</p> <p>This service bulletin instructs the technician to replace the passengers airbag inflator, then return the original, undeployed inflator as directed</p>
16V344	RIONL-16V344-5955.pdf	ACURA	MDX	2006	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain XXXX model year XXXX vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>

16V344	RIONL-16V344-5955.pdf	HONDA	RIDGELINE	2006	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain XXXX model year XXXX vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>

Honda will send you another letter when parts become available to repair your vehicle</p>

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V344	RIONL-16V344-9992.pdf	HONDA	RIDGELINE	2006	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain XXXX model year XXXX vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing serious injury or fatality to vehicle occupants.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>

The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V346	RCMN-16V346-0369.pdf	HONDA	CR-V	2008	Dealer message - Takata parts update. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V346	RCMN-16V346-8423.pdf	HONDA	ACCORD	2008	Updated owner notification schedule. 16V346	RCRIT-16V346-5870.pdf	ACURA	TSX	2011	NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata airbag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand and, in extreme cases, causing the inflator to rupture and send shrapnel through the airbag toward vehicle occupants. NHTSA is prioritizing the recall of airbag inflators based on the risk of injury or death to vehicle occupants

NHTSA is prioritizing the recall of airbag inflators based on the risk of injury or death to vehicle occupants
16V346	RCRIT-16V346-5870.pdf	HONDA	ACCORD	2011	NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata airbag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand and, in extreme cases, causing the inflator to rupture and send shrapnel through the airbag toward vehicle occupants. NHTSA is prioritizing the recall of airbag inflators based on the risk of injury or death to vehicle occupants
16V346	RCRIT-16V346-5870.pdf	HONDA	ACCORD	2010	NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata airbag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand and, in extreme cases, causing the inflator to rupture and send shrapnel through the airbag toward vehicle occupants. NHTSA is prioritizing the recall of airbag inflators based on the risk of injury or death to vehicle occupants
16V346	RCRIT-16V346-5870.pdf	HONDA	ACCORD	2009	NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata airbag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand and, in extreme cases, causing the inflator to rupture and send shrapnel through the airbag toward vehicle occupants. NHTSA is prioritizing the recall of airbag inflators based on the risk of injury or death to vehicle occupants

16V346	RCRIT-16V346-6554.pdf	ACURA	TSX	2011	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. NHTSA is prioritizing the recall of air bag inflators based on the risk of injury or death to vehicle occupants.</p> <p>To comply with NHTSAs direction, American Honda has combined the two the previous campaigns related to airbag inflators that may produce excessive pressure after long-term exposure to high absolute humidity. All the vehicles from S/B 14-046 and 14-070 are included in zone A. Currently there are five planned phases to this campaign. The subsequent phases will launch at a future date per NHTSA direction, but it will be several years before the final phase 5 launches. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>

NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. NHTSA is prioritizing the recall of air bag inflators based on the risk of injury or death to vehicle occupants.</p> <p>To comply with NHTSAs direction, American Honda has combined the two the previous campaigns related to airbag inflators that may produce excessive pressure after long-term exposure to high absolute humidity. All the vehicles from S/B 14-046 and 14-070 are included in zone A. Currently there are five planned phases to this campaign. The subsequent phases will launch at a future date per NHTSA direction, but it will be several years before the final phase 5 launches. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>
16V346	RCRIT-16V346-6554.pdf	ACURA	ZDX	2010	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>
16V346	RCRIT-16V346-6554.pdf	HONDA	CIVIC HYBRID	2006	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. NHTSA is prioritizing the recall of air bag inflators based on the risk of injury or death to vehicle occupants.</p> <p>To comply with NHTSAs direction, American Honda has combined the two the previous campaigns related to airbag inflators that may produce excessive pressure after long-term exposure to high absolute humidity. All the vehicles from S/B 14-046 and 14-070 are included in zone A. Currently there are five planned phases to this campaign. The subsequent phases will launch at a future date per NHTSA direction, but it will be several years before the final phase 5 launches. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>
