16V346	RCRIT-16V346-6554.pdf	HONDA	CR-V	2007	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. According to NHTSA, the combination of time, high temperature fluctuations, and humidity contribute to the degradation of the propellant in the inflators. NHTSA has concluded that this degradation can cause the propellant to burn too quickly, creating more pressure than the inflator can withstand, and in extreme cases causing the inflator to rupture and sends shrapnel through the air bag toward vehicle occupants. NHTSA is prioritizing the recall of air bag inflators based on the risk of injury or death to vehicle occupants.</p> <p>To comply with NHTSAs direction, American Honda has combined the two the previous campaigns related to airbag inflators that may produce excessive pressure after long-term exposure to high absolute humidity. All the vehicles from S/B 14-046 and 14-070 are included in zone A. Currently there are five planned phases to this campaign. The subsequent phases will launch at a future date per NHTSA direction, but it will be several years before the final phase 5 launches. Additionally, AHM may add new affected models or affected years to each phase. Always do an iN VIN status inquiry to see if a vehicle is affected</p>
16V346	RCRIT-16V346-6554.pdf	HONDA	FCX CLARITY	2011	<p>NHTSA and its independent expert reviewed the findings of three independent investigations into the Takata air bag inflator ruptures. 16V346	RCRIT-16V346-8369.pdf	HONDA	PILOT	2009	Service bulletin - the propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture
16V346	RIONL-16V346-3443.pdf	ACURA	TSX	2011	<p>Acura has decided that a defect which relates to motor vehicle safety exists in certain 2009-2011 model year TSX vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Acura will send you another letter when parts become available to repair your vehicle</p>

In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Acura will send you another letter when parts become available to repair your vehicle</p>
16V346	RIONL-16V346-3443.pdf	HONDA	FIT	2011	<p>Acura has decided that a defect which relates to motor vehicle safety exists in certain 2009-2011 model year TSX vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Acura will send you another letter when parts become available to repair your vehicle</p>

16V346	RIONL-16V346-6841.pdf	HONDA	CIVIC HYBRID	2006	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2008-2011 model year Honda vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>

The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>
16V346	RIONL-16V346-8640.pdf	HONDA	CIVIC GX	2007	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2010-2011 model year Insight vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. 16V346	RIONL-16V346-8958.pdf	HONDA	CIVIC	2009	<p>Acura has decided that a defect which relates to motor vehicle safety exists in certain 2010-2011 model year ZDX vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. 16V346	RIONL-16V346-9813.pdf	HONDA	ACCORD	2011	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2009-2011 model year Fit vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>

The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>
16V346	RIONL-16V346-9813.pdf	HONDA	PILOT	2009	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2009-2011 model year Fit vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. Honda will send you another letter when parts become available to repair your vehicle</p>

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V346	RIONL-16V346-9946.pdf	HONDA	FCX CLARITY	2010	<p>Honda has decided that a defect which relates to motor vehicle safety exists in certain 2009-2011 model year Pilot vehicles. The propellant wafers in some of the subject inflators may degrade over time, which could lead to over-aggressive combustion in the event the airbag is activated. Overly aggressive combustion creates excessive internal pressure when the inflator is activated, which may cause the inflator body to rupture. In the event of an inflator rupture, metal fragments could pass through the airbag cushion material possibly causing injury to vehicle occupant.</p> <p>The remedy parts needed to conduct passenger frontal airbag inflator recalls will become available in late Summer/Fall of 2016. Honda will send you another letter when parts become available to repair your vehicle</p>

Affected clients were advised not to allow passengers to ride in the front passenger seat until the final remedy was performed.</p> <p>In order to better serve clients who do not want to or are unable to wait for the final remedy, Infiniti will enable clients to use their front passenger seat safely until the final remedy parts are available by providing an interim repair. Clients will need to schedule an appointment to receive the final repair once they receive notification that final remedy parts are available</p>

As previously reported, Takata has expanded their inflator safety recall campaign to recall an additional number of non-desiccated (without moisture absorbing material) inflators that were not already subject to ongoing recalls on a rolling basis prioritized by vehicle age and geographic location.</p> <p>As described below, over the next several months, Infiniti will implement this Takata recall expansion and replace the front passenger air bag inflator with a new inflator in the affected Infiniti vehicles.</p> <p>***** Recall Expansion Action Plan *****</p> <p>Infiniti is currently preparing the remedy parts necessary to execute this latest recall expansion. Infiniti expects remedy parts to be available in the Fall, 2016.</p> <p>In July, affected clients will receive an interim recall notification letter advising them of the recall and remedy parts preparation activities. Clients will be advised that they will receive another recall letter once the remedy parts are available.</p> <p>No retailer action is necessary at this time. Additional details will be provided at a later date</p>

16V358	RCRIT-16V358-5425.pdf	SAAB	9-2X	2006	<p>VERY IMPORTANT UPDATE AS OF AUGUST 4, 2016: Subaru of America, Inc. (Subaru) has been notified by Fuji Heavy Industries (FHI) that some early production 2003 MY Legacy, Outback, and Baja vehicles may have been incorrectly included in the list of vehicles requiring inflator replacement as part of the on-going Takata recalls listed above.</p> <p>Subaru will inspect the passenger side frontal air bag in your vehicle to determine if the inflator is Takata-sourced. The inspection involves lowering of the glovebox to provide enough access to visually inspect the label on the airbag module. Only vehicles with Takata airbag inflators are affected by this campaign</p>

16V359	RCRIT-16V359-9243.pdf	SAAB	9-2X	2006	<p>VERY IMPORTANT UPDATE AS OF AUGUST 4, 2016: Subaru of America, Inc. (Subaru) has been notified by Fuji Heavy Industries (FHI) that some early production 2003 MY Legacy, Outback, and Baja vehicles may have been incorrectly included in the list of vehicles requiring inflator replacement as part of the on-going Takata recalls listed above.</p> <p>Subaru will inspect the passenger side frontal air bag in your vehicle to determine if the inflator is Takata-sourced. The inspection involves lowering of the glovebox to provide enough access to visually inspect the label on the airbag module. Only vehicles with Takata airbag inflators are affected by this campaign</p>

Only vehicles with Takata airbag inflators are affected by this campaign</p>
16V359	RCRIT-16V359-9243.pdf	SUBARU	TRIBECA	2006	<p>VERY IMPORTANT UPDATE AS OF AUGUST 4, 2016: Subaru of America, Inc. (Subaru) has been notified by Fuji Heavy Industries (FHI) that some early production 2003 MY Legacy, Outback, and Baja vehicles may have been incorrectly included in the list of vehicles requiring inflator replacement as part of the on-going Takata recalls listed above.</p> <p>Subaru will inspect the passenger side frontal air bag in your vehicle to determine if the inflator is Takata-sourced. The inspection involves lowering of the glovebox to provide enough access to visually inspect the label on the airbag module. Only vehicles with Takata airbag inflators are affected by this campaign</p>

16V361	RCRIT-16V361-4746.pdf	SUBARU	BAJA	2004	<p>VERY IMPORTANT UPDATE AS OF AUGUST 4, 2016: Subaru of America, Inc. (Subaru) has been notified by Fuji Heavy Industries (FHI) that some early production 2003 MY Legacy, Outback, and Baja vehicles may have been incorrectly included in the list of vehicles requiring inflator replacement as part of the on-going Takata recalls listed above.</p> <p>Subaru will inspect the passenger side frontal air bag in your vehicle to determine if the inflator is Takata-sourced. The inspection involves lowering of the glovebox to provide enough access to visually inspect the label on the airbag module. Only vehicles with Takata airbag inflators are affected by this campaign</p>

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V363	RCOVL-16V363-6922.pdf	MERCEDES BENZ	C300	2011	<p>Mercedes-Benz USA has decided that a defect which relates to motor vehicle safety exists in certain Model Year 2008-2011 Mercedes-Benz vehicles, based on the defect decision of TK Holdings, Inc ("Takata") regarding certain airbags produced by Takata. I want to assure you that Mercedes-Benz USA, though our parent company Daimler AG, is talking all necessary measures to remedy this situation for you.</p> <p>The Mercedes-Benz vehicles mentioned above are equipped with passenger-side airbags provided by Takata. During normal airbag deployment, under certain circumstances, the passenger-side airbag inflator housing in your vehicle may rupture due to excessive internal pressure. This condition is more likely to occur if your vehicle has been exposed to high levels of absolute humidity for extended periods of time. A passenger-side inflator rupture during deployment could result in metal fragments striking the front passenger or other occupants, possibly causing serious injury or death.</p> <p>In late May 2016, Takata, the manufacturer of your passenger-side airbag inflator, informed the National Highway Traffic Safety Administration (NHTSA) of the problem. We are working closely with NHTSA and airbag suppliers, to provide a remedy. Unfortunately, unlike other parts used in manufacturing, redesign of an airbag module is a time-intensive effort given the time needed for sourcing, design, testing, certifying and manufacturing requirements. As a result, it will take us time to go through these stages in a manner that ensures the highest level of safety, durability and quality that we can provide to our customers.</p> <p>As soon as a suitable replacement part is tested and available for your vehicle's passenger-side airbag, we will send a second letter notifying you to bring your vehicle in to your local Authorized Mercedes-Benz dealer to have this work done free of charge. Until this time, there is no action required on your part</p>

16V363	RCOINL-16V363-6922.pdf	MERCEDES BENZ	C350	2011	<p>Mercedes-Benz USA has decided that a defect which relates to motor vehicle safety exists in certain Model Year 2008-2011 Mercedes-Benz vehicles, based on the defect decision of TK Holdings, Inc ("Takata") regarding certain airbags produced by Takata. I want to assure you that Mercedes-Benz USA, though our parent company Daimler AG, is talking all necessary measures to remedy this situation for you.</p> <p>The Mercedes-Benz vehicles mentioned above are equipped with passenger-side airbags provided by Takata. During normal airbag deployment, under certain circumstances, the passenger-side airbag inflator housing in your vehicle may rupture due to excessive internal pressure. This condition is more likely to occur if your vehicle has been exposed to high levels of absolute humidity for extended periods of time. A passenger-side inflator rupture during deployment could result in metal fragments striking the front passenger or other occupants, possibly causing serious injury or death.</p> <p>In late May 2016, Takata, the manufacturer of your passenger-side airbag inflator, informed the National Highway Traffic Safety Administration (NHTSA) of the problem. We are working closely with NHTSA and airbag suppliers, to provide a remedy. Unfortunately, unlike other parts used in manufacturing, redesign of an airbag module is a time-intensive effort given the time needed for sourcing, design, testing, certifying and manufacturing requirements. As a result, it will take us time to go through these stages in a manner that ensures the highest level of safety, durability and quality that we can provide to our customers.</p> <p>As soon as a suitable replacement part is tested and available for your vehicle's passenger-side airbag, we will send a second letter notifying you to bring your vehicle in to your local Authorized Mercedes-Benz dealer to have this work done free of charge. Until this time, there is no action required on your part.</p>

16V367	RCMN-16V367-0251.pdf	TOYOTA	YARIS	2015	Dealer Letter: In the subject vehicles, there is a possibility that a front upper shock assembly bearing could become damaged. If this occurs, the driver may experience abnormal noises while driving on rough road surfaces or when turning the steering wheel. If the vehicle continues to be operated in this condition, a front shock absorber piston rod could separate, causing a loss of vehicle stability and increasing the risk of a crash

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V382	RCOVL-16V382-2081.pdf	AUDI	A4	2008	Takata has reported that the passenger frontal airbag inflator could potentially rupture (due to propellant degradation occurring after long-term exposure to absolute high humidity and temperature cycling) if the vehicle is involved in a crash where the passenger frontal airbag is designed to deploy. In the event of an inflator rupture, in very rare cases metal fragments could pass through the airbag cushion material, which may result in serious injury or death to vehicle occupants
16V382	RCOVL-16V382-2081.pdf	AUDI	A4	2007	Takata has reported that the passenger frontal airbag inflator could potentially rupture (due to propellant degradation occurring after long-term exposure to absolute high humidity and temperature cycling) if the vehicle is involved in a crash where the passenger frontal airbag is designed to deploy. In the event of an inflator rupture, in very rare cases metal fragments could pass through the airbag cushion material, which may result in serious injury or death to vehicle occupants
16V382	RCOVL-16V382-2081.pdf	AUDI	A4	2006	Takata has reported that the passenger frontal airbag inflator could potentially rupture (due to propellant degradation occurring after long-term exposure to absolute high humidity and temperature cycling) if the vehicle is involved in a crash where the passenger frontal airbag is designed to deploy. In the event of an inflator rupture, in very rare cases metal fragments could pass through the airbag cushion material, which may result in serious injury or death to vehicle occupants
16V382	RCOVL-16V382-2081.pdf	AUDI	A4	2005	Takata has reported that the passenger frontal airbag inflator could potentially rupture (due to propellant degradation occurring after long-term exposure to absolute high humidity and temperature cycling) if the vehicle is involved in a crash where the passenger frontal airbag is designed to deploy. In the event of an inflator rupture, in very rare cases metal fragments could pass through the airbag cushion material, which may result in serious injury or death to vehicle occupants
16V382	RCOVL-16V382-2081.pdf	AUDI	A4	2004	Takata has reported that the passenger frontal airbag inflator could potentially rupture (due to propellant degradation occurring after long-term exposure to absolute high humidity and temperature cycling) if the vehicle is involved in a crash where the passenger frontal airbag is designed to deploy. 16V398	RCOVL-16V398-3884.docx	AMERITRANS	285	2016	Ameritrans decided that a defect which relates to motor vehicle safety exists in certain Ameritrans buses assembled from March 1, 2015 through December 23, 2015 that have Ricon S 2000 and 5000 Series wheelchair lifts installed. Under certain conditions present in some applications, the platforms included on the potentially affected S-Series model wheelchair lifts can exhibit cracking of the platform pivot plate while in the stowed position resulting from bent Knuckle Link Arm and/or DU Bearings that have fallen out of their holes in the knuckle link arm. If left unchecked the platforms can develop cracks and can propagate to the point where the separation of the rear portion of the pivot plate occurs rendering the lift potentially in operable and possibly unsafe for the operator. Ricon will provide a field modification instruction and all material required to mitigate this recall at no charge

If this condition exists it can lead to an increased risk of fire if an electrical short should occur
16V402	RMISC-16V402-5950.pdf	DUTCHMEN	KODIAK	2017	It has been decided the vehicles in this recall population may have been manufactured with 2 separate LED rope lights as back lighting for the countertop that can touch at the unprotected ends. If this condition exists it can lead to an increased risk of fire if an electrical short should occur. The remedy is to protect by installing a heat shrink tube over one end to prevent them from touching each other

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V430	RCMN-16V430-7790.pdf	INFINITI	Q50	2016	<p>The announcement from June 10th, 2016 has been revised to include:</p> <ul style="list-style-type: none"> * Campaign repair bulletins are now available. * R1610 ITB16-022 * R1611 ITB16-025 * R1612 ITB16-024 * R1613 ITB16-023 <p>Please discard earlier versions of this bulletin.</p> <p>Infiniti has notified the National Highway Traffic Safety Administration (NHTSA) of its intention to recall certain MY2014-16 Infiniti Q50 vehicles manufactured at the Tochigi, Japan plant and equipped with Direct Adaptive Steering (DAS). The subject vehicles are equipped with an optional Direct Adaptive Steering (steer-by-wire) system. During normal operation, the amount of electrical current delivered to the steering actuator motors is designed to vary based on ambient temperatures. Under certain conditions, a combination of low battery voltage at engine start up (~7 volts), combined with an initial large steering angle when the vehicle is parked (client parks car with wheels turned) can cause an immediate error in the steering ration calculation algorithm at vehicle startup; which may lead to a noticeable change in steering responsiveness and turning radius. If this issue occurs at vehicle start-up, the steering wheel is noticeably off-center and the VDC warning lamp telltale illuminates to warn the driver. If these warnings are ignored, and the vehicle is driven in this condition, it could increase the risk of a crash.</p> <p>Infiniti is committed to the safety and security of our clients and their passengers</p>

16V481	RCOVL-16V481-0137.docx	NEWMAR	DUTCH STAR	2017	On certain motorhomes, the windshield wiper system may not operate as designed. This could cause the wiper motor to stall in high torque conditions such as a dry windshield. This could also cause the lights to turn off when the wipers are activated for anything but the washing cycle. These conditions could impair the drivers visibility which could increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will update the wiper software

16V485	RCMN-16V485-1283.pdf	NISSAN	SENTRA	2016	<p>A STOP SALE CONDITION IS IN EFFECT.</p> <p>Nissan has notified the National Highway Traffic Safety Administration (NHTSA) that it is conducting a Voluntary Safety Recall Campaign on certain MY2016 Nissan Sentra vehicles sold in the United States to replace an engine room harness terminal pin.</p> <p>Due to a supplier error that has since been corrected, one of the engine room harness terminal pins may be out of specification, potentially resulting in an inadequate electrical connection between the harness terminal and the ECU. In some cases, this condition could prevent the car from starting or cause the engine to stop running while driving. Airbag functionality is unaffected, even if the engine stops running.</p> <p>Owners of potentially affected vehicles will be notified in August and asked to bring their vehicle in to an authorized Nissan retailer to have the affected engine room harness terminal pin replaced at no cost to the customer for parts and labor.</p> <p>Nissan is committed to a high level of customer safety, service, and satisfaction and are working with dealers to provide an outstanding ownership experience</p>
16V485	RCMN-16V485-4438.pdf	NISSAN	SENTRA	2016	<p>Parts Update - PM658 2016 Sentra Engine Room Harness - VSRC - Dealer Announcement</p> <p>A STOP SALE CONDITION IS IN EFFECT.</p> <p>As per the June 29, 2016 announcement, Nissan has notified the National Highway Traffic Safety Administration (NHTSA) that it is conducting a Voluntary Safety Recall Campaign on certain MY2016 Nissan Sentra vehicles sold in the United States to replace an engine room harness terminal pin.</p> <p>The purpose of this update is to inform dealers that the Harness Kit (24009-4AFOA) is no longer on restriction and may be ordered freely via normal ordering process</p>

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V487	RCMN-16V487-2265.pdf	LEXUS	CT 200H	2012	Dealer Letter:The involved vehicles are equipped with curtain shield air bags (CSA) in the driver and passenger side roof rails that have air bag inflators composed of two chambers welded together. Some inflators could have a small crack in the weld area joining the chambers, which could grow over time, and lead to the separation of the inflator chambers. This has been observed when the vehicle is parked and unoccupied for a period of time. If an inflator separates, the CSA could partially inflate, and, in limited circumstances, one or both sections of the inflator could enter the interior of the vehicle. If an occupant is present in the vehicle, there is an increased risk of injury

If an inflator separates, the CSA could partially inflate, and, in limited circumstances, one or both sections of the inflator could enter the interior of the vehicle. If an occupant is present in the vehicle, there is an increased risk of injury
16V487	RCRIT-16V487-9578.pdf	TOYOTA	PRIUS	2011	Technical Instructions: The involved vehicles are equipped with curtain shield air bags (CSA) in the driver and passenger side roof rails that have air bag inflators composed of two chambers welded together. Some inflators could have a small crack in the weld area joining the chambers, which could grow over time, and lead to the separation of the inflator chambers. This has been observed when the vehicle is parked and unoccupied for a period of time. If an inflator separates, the CSA could partially inflate, and, in limited circumstances, one or both sections of the inflator could enter the interior of the vehicle. If an occupant is present in the vehicle, there is an increased risk of injury

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V526	RCMN-16V526-1546.pdf	HONDA	CIVIC	2016	On July 8, 2016, American Honda Motor Co., Inc. notified NHTSA of a Stop Sale and Safety Recall for a small number of units of model year 2016 Civic 2-Door. Q&A file for additional details related to this recall is available
16V526	RCMN-16V526-3338.pdf	HONDA	CIVIC	2016	Dealer message - Replacement inflator kits are currently available for order. Service bulletins 16-028, Safety Recall: Front Passengers Airbag Inflator May Be Over-Pressurized (Phase 1) and 16-029, Safety Recall: Takata Front Passengers Airbag Inflator (Phase 1) now include all applicable repair procedures, covering the following models: 2010-2011 ZDX
16V526	RCMN-16V526-5196.pdf	HONDA	CIVIC	2016	Service bulletin - Revision summary: Under WARRANTY CLAIM INFORMATION, the Civic flat rate time was changed. Repair procedures are available for the 201011 Insight
16V526	RCMN-16V526-5362.pdf	HONDA	CIVIC	2016	Dealer message - Replacement inflator kits are currently available for order. Service bulletins 16-047, Safety Recall: Front Passengers Airbag Inflator May Be Over-Pressurized (Phase 1) and 16-048, Safety Recall: Takata Front Passengers Airbag Inflator (Phase 1) now include all applicable repair procedures, covering the following models: 2010-2011 Insight
16V526	RCMN-16V526-7220.pdf	HONDA	CIVIC	2016	Dealer message - certain taillight assemblies may have a LED side marker light that does not illuminate due to damage during manufacturing transit making it inoperable and therefore not compliant with FMVSS No. 108; Lamps, reflective devices, and associated equipment. Affected vehicles with an inoperative rear side marker light have decreased visibility in certain traffic conditions
16V526	RCONL-16V526-4691.pdf	HONDA	CIVIC	2016	Owner notification letter - The rear side marker LED light in the taillight assembly may have gotten damaged during transit from the parts supplier, potentially resulting in an inoperative LED light. As a result, your vehicle's visibility in traffic will decrease, which can increase the risk of a crash
16V526	RCRIT-16V526-0980.pdf	HONDA	CIVIC	2016	Certain taillight assemblies may have a LED side marker light circuit board that was damaged during transit from a parts supplier, making the marker light inoperable. The service bulletin instructs the technician to inspect and replace as needed the rear taillight assembly
16V526	RCRIT-16V526-3186.pdf	HONDA	CIVIC	2016	Service bulletin - certain taillight assemblies may have a LED side marker light that does not illuminate due to damage during manufacturing transit making it inoperable and therefore not compliant with FMVSS No. 108; Lamps, reflective devices, and associated equipment. Affected vehicles with an inoperative rear side marker light have decreased visibility in certain traffic conditions

16V527	RCMN-16V527-5043.pdf	INFINITI	M35 HYBRID	2013	<p>Hybrid Powertrain Module Reprogram Voluntary Safety Recall Campaign</p> <p>A STOP SALE CONDITION IS IN EFFECT.</p> <p>Infiniti has notified the National Highway Traffic Safety Administration (NHTSA) of its intention to recall certain MY2012-13 Infiniti Hybrid M35 vehicles to reprogram the software for the hybrid control module, automatic transmission control unit, and inverter to include logic which will allow the engine to continue operating at reduced power in the event of a cooling system malfunction.</p> <p>The affected M35 Hybrid vehicles are equipped with a hybrid powertrain system. In the event of a cooling system malfunction resulting in a system overheat condition, a warning telltale will illuminate to warn the driver. If the warning lamp is ignored and the vehicle continues to be operated for a prolonged period of time, the hybrid powertrain control module logic will shut off the engine, as designed, to prevent damage, resulting in an engine stop. The remedy will allow the engine to continue operating at reduced power in the event of a cooling system malfunction instead of shutting off</p>
16V527	RCMN-16V527-5043.pdf	INFINITI	M35 HYBRID	2012	<p>Hybrid Powertrain Module Reprogram Voluntary Safety Recall Campaign</p> <p>A STOP SALE CONDITION IS IN EFFECT.</p> <p>Infiniti has notified the National Highway Traffic Safety Administration (NHTSA) of its intention to recall certain MY2012-13 Infiniti Hybrid M35 vehicles to reprogram the software for the hybrid control module, automatic transmission control unit, and inverter to include logic which will allow the engine to continue operating at reduced power in the event of a cooling system malfunction.</p> <p>The affected M35 Hybrid vehicles are equipped with a hybrid powertrain system. 16V527	RCRIT-16V527-4962.pdf	INFINITI	M35 HYBRID	2013	<p data-bbox="1171 185 2003 207">VOLUNTARY SAFETY RECALL CAMPAIGN 2012 2013 M35 HYBRID CONTROL MODULE</p> <p data-bbox="1171 250 1325 272">INTRODUCTION</p> <p data-bbox="1171 282 2003 399">Infiniti is conducting a voluntary safety recall campaign on certain specific Model Year 2012 2013 M35 Hybrid vehicles to reprogram the Hybrid Powertrain Control Module, Traction Motor Controller, and the Transmission Control Module. This service will be provided at no charge to the customer for parts or labor.</p> <p data-bbox="1171 409 1423 431">IDENTIFICATION NUMBER</p> <p data-bbox="1171 441 2003 526">Infiniti has assigned identification number R1623 to this campaign. This number must appear on all communication and documentation of any nature dealing with this campaign.</p> <p data-bbox="1171 535 1409 558">DEALER RESPONSIBILITY</p> <p data-bbox="1171 568 2028 841">It is the dealers responsibility to check Service COMM for the campaign status on each vehicle falling within the range of this voluntary safety recall which for any reason enters the service department. This includes vehicles purchased from private parties or presented by transient (tourist) owners and vehicles in a dealers inventory. Federal law requires that new vehicles in dealer inventory which are the subject of a safety recall must be corrected prior to sale. Failure to do so can result in civil penalties by the National Highway Traffic Safety Administration. While federal law applies only to new vehicles, Infiniti strongly encourages dealers to correct any used vehicles in their inventory before they are retailed</p>

Do not rely on the system to determine if an affected motorcycle is affected by the stop sale. All 2015 and 2016 CBR300R and CB300F are under stop sale. The crankshaft may have been improperly machined, which increases the load on the connecting rod bearing. The increased load, combined with high pressure and speed on the connecting rod bearing retainer, may prematurely wear the plating of the connecting rod bearing retainer and, in the presence of blow-by gasses, cause it to corrode. The combination of these conditions can cause the connecting rod bearing retainer to prematurely wear or break

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V528	RCOVL-16V528-1186.pdf	HONDA	CB300F	2016	Honda has decided that a defect which relates to motor vehicle safety exists in 2015-2016 model year CB300F and CBR300R/RA motorcycles. A manufacturing issue may cause the connecting rod bearing retainer to wear prematurely, corrode and break, which may cause the engine to stall and/or not restart. An engine that stalls while riding increases the risk of a crash. The crankshaft will be replaced, free of charge

16V574	RCMN-16V574-4738.pdf	HYUNDAI	ELANTRA	2013	This notice updates information on a previous notification on VIN lookup availability and preparations of the recall remedy
16V574	RCMN-16V574-4763.pdf	HYUNDAI	ELANTRA	2013	This communication informs dealers/service field personnel that the subject recall has been announced but not yet launched. A description of the safety defect is included
16V574	RCMN-16V574-6615.pdf	HYUNDAI	ELANTRA	2013	Hyundai has launched a safety recall related to the stop lamp switch stopper pad on certain Model Year 2013 Elantra vehicles distributed by Hyundai Motor America. An initial shipment of Brake Pedal Stoppers began shipping on September 20, 2016 to all dealers

NHTSA ID	DOCUMENT NAME	MAKE	MODEL	MODEL YEAR	SUMMARY
16V574	RCOVL-16V574-3622.pdf	HYUNDAI	ELANTRA	2013	A stopper pad located between the stop lamp switch and the brake pedal arm may deteriorate, allowing the stop lamp switch plunger to remain extended when the brake pedal is released. A deteriorated pad can result in the stop lamps illuminating continuously, illumination of the Electronic Stability Control warning lamp, the ability to move the shift lever without depressing the brake pedal, or activation of the engine management systems brake pedal override feature. Any of the described symptoms could increase the risk of a crash. A deteriorated stopper pad does not affect the performance of the vehicles service brake system
16V575	RCMN-16V575-0637.pdf	HYUNDAI	GENESIS	2015	This communication informs dealers of the defect description and instructions for remedy including VIN and TSB identification
16V575	RCOVL-16V575-3797.pdf	HYUNDAI	GENESIS	2015	The affected vehicles may exhibit one or more of the following symptoms: <ul style="list-style-type: none"> o All warning lights illuminating o Speedometer intermittently reading inaccurately o No cluster illumination o Turn signal indicators not illuminating when turn signals are activated o Momentarily inoperative instrument cluster. Other symptoms can occur including malfunctions of the tachometer and odometer. Incorrect (or loss of) readings, messages, and warning lights displayed by the instrument cluster could increase the risk of a crash
16V576	RCMN-16V576-0358.pdf	SUBARU	OUTBACK	2017	UPDATE: Subaru Recall Campaign: WTE - 66 Front Brake Calipers, Hubs and Stabilizer Owner Notification Please be advised that owner notification letters will be mailed today, and emails will also be sent today to owners with a valid email address on file with MySubaru.com. An updated Campaign Bulletin will be posted to STIS shortly
16V576	RCMN-16V576-8470.pdf	SUBARU	OUTBACK	2017	WTE - 66 Front Brake Caliper, Wheel Hub and Stabilizer Clamp Attaching Bolt Torque. Subaru of America, Inc. (Subaru) is recalling ninety - nine (99) 2017 model year Outback vehicles due to a possible issue with the attaching bolt torque for the left and right front brake calipers, wheel hubs and the right stabilizer clamp

16V576	RCONL-16V576-3859.pdf	SUBARU	OUTBACK	2017	Recall Notification to Owners describing recall, defect and planned repair
16V576	RCRIT-16V576-0449.pdf	SUBARU	OUTBACK	2017	<p>Product Campaign Bulletin</p> <p>Subaru of America, Inc. (Subaru) is recalling ninety-nine (99) 2017 model year Outback vehicles due to a possible issue with the attaching bolt torque for the left and right front brake caliper supports, wheel hubs and the right stabilizer bar clamp.</p> <p>DESCRIPTION OF THE SAFETY RISK</p> <p>The attaching bolts for the left and right front brake caliper supports, wheel hubs and right stabilizer bar clamp on affected vehicles may not have been sufficiently tightened during production. Should any of the front brake caliper support, wheel hub or stabilizer clamp attaching bolts loosen or detach, the related components would also become loose and could possibly detach. If this were to happen, the vehicle may become unstable and/or no longer provide sufficient braking capability, which could result in a crash.</p> <p>DESCRIPTION OF THE REMEDY</p> <p>The repair procedure will involve checking the attaching bolt torque for the front brake caliper supports, wheel hubs and right stabilizer bar clamp for proper torque</p>

16V596	RCMN-16V596-1814.pdf	LEXUS	HS 250 HYBRID	2010	<p>Dealer Letter: Safety Recall G0V applies to a specific population of 2006-2011 model year RAV4 vehicles involved in Toyotas previous recall related to the Rear Lower Suspension Arm No. 1. The previous recall included the inspection of the suspension arm assemblies for corrosion and, if necessary, replacement of the suspension arm assemblies on the subject vehicles. In some cases, corroded arms may not have been identified and replaced. Moving forward, any vehicle that has not already had both rear lower suspension arms replaced under the previous recall remedy are now included in this new Safety Recall. Customers with these vehicles will be asked to return to the dealership for the revised remedy procedure. This remedy will be performed at NO CHARGE to the customer.</p> <p>In the earlier action, if the nuts for adjusting rear wheel alignment were improperly tightened when an alignment was performed, rust could form on suspension arm threads. If this occurs, and if the condition is not identified and remedied during servicing or repair under the existing remedy procedure, the threads can wear over time, causing the arm to separate, which could result in a loss of vehicle control</p>

The previous recall included the inspection of the suspension arm assemblies for corrosion and, if necessary, replacement of the suspension arm assemblies on the subject vehicles. In some cases, corroded arms may not have been identified and replaced. Moving forward, any vehicle that has not already had both rear lower suspension arms replaced under the previous recall remedy are now included in this new Safety Recall. Customers with these vehicles will be asked to return to the dealership for the revised remedy procedure. The remedy will be performed at NO CHARGE to the customer.</p> <p>In the earlier action, if the nuts for adjusting rear wheel alignment were improperly tightened when an alignment was performed, rust could form on suspension arm threads. If this occurs, and if the condition is not identified and remedied during servicing or repair under the existing remedy procedure, the threads can wear over time, causing the arm to separate, which could result in a loss of vehicle control</p>

Customers with these vehicles will be asked to return to the dealership for the revised remedy procedure. The remedy will be performed at NO CHARGE to the customer.</p> <p>In the earlier action, if the nuts for adjusting rear wheel alignment were improperly tightened when an alignment was performed, rust could form on suspension arm threads. If this occurs, and if the condition is not identified and remedied during servicing or repair under the existing remedy procedure, the threads can wear over time, causing the arm to separate, which could result in a loss of vehicle control</p>

16V610	RCRIT-16V610-7619.docx	ZERO	DS	2015	Zero Motorcycles has determined that a defect which relates to motor vehicle safety exists on certain 2015 Model Year SR, S, DS and FX model motorcycles built between April 27, 2015 and August 21, 2015. The subject motorcycles were potentially assembled with a DC-DC converter that may have insufficient power output margin. If a DC-DC converter does not have enough power output margin to support all foreseeable power demands, including most of its accessory outlet capacity, it may temporarily shut off when its power capacity is exceeded, with no prior warning to the rider. Should this occur during an Anti-Lock Braking System (ABS) activated event, the ABS and all vehicle lights would temporarily stop functioning, which could increase the risk of a crash. Zero Motorcycles has voluntarily initiated this recall to correct this condition. The remedy of this defect is for an authorized Zero Motorcycles dealer to inspect and replace the DC/DC converter on suspect vehicles

16V615	RCMN-16V615-0995.pdf	HYUNDAI	SONATA	2016	Hyundai has revised the vehicle population for Recall 148 affecting certain 2016 Model Year Sonata sedans. THIS RECALL REQUIRES A STOP SALE ON THE AFFECTED VEHICLES IN DEALER INVENTORY. The recall repair procedure is currently being developed. Hyundai will provide additional information when the remedy becomes available
16V615	RCMN-16V615-9387.pdf	HYUNDAI	SONATA	2016	Hyundai has launched a recall related to the driver frontal airbag affecting 602 Model Year 2016 Sonatas manufactured at Hyundai Motor Manufacturing Alabama produced beginning on March 28, 2016 through April 12, 2016. Static airbag deployment testing conducted by the National Highway Traffic Safety Administration indicated if a small statured adult driver, not wearing a seat belt, is involved in a frontal or near frontal crash, the driver frontal airbag may not adequately protect the drivers neck from injury. An initial shipment of driver airbag modules began shipping on 9/29/16 to dealers with applicable vehicles in Dealer Stock and SRC. Additional parts can be ordered through WebDCS by following the regular parts ordering process

16V628	RCMN-16V628-8692.pdf	HYUNDAI	TUCSON	2016	This communication provides details on the defect/risk and remedy information for the subject recall
16V628	RCONL-16V628-7981.pdf	HYUNDAI	TUCSON	2016	In higher ambient temperatures and specific operating conditions, the transmission clutch application logic can result in a delayed engagement when accelerating from a stop. If the accelerator pedal is steadily depressed for approximately 1.5 to 2 seconds, the vehicle will begin to accelerate and normal driving is resumed. However, if the accelerator pedal is repeatedly cycled, the vehicle will not accelerate. Inability to move the vehicle in traffic may increase the risk of a crash

16V630	RCMN-16V630-3729.pdf	HYUNDAI	AZERA	2008	Hyundai has recently announced, but not yet launched, a safety recall related to the drivers power seat switch on certain Model Year 2007 and 2008 Azera vehicles produced beginning on March 07, 2007 through August 14, 2007. The power-adjustable driver seat may intermittently not operate, or move forward, rearward, up, down, or recline without driver input. We are currently making preparations to implement the recall remedy. A Technical Service Bulletin (TSB) will be provided when the remedy is available

16V636	RCMN-16V636-0232.pdf	NISSAN	MAXIMA	2017	<p>ABS Actuator Voluntary Safety Recall Campaign</p> <p>***** Campaign Summary *****</p> <p>Nissan is conducting a voluntary safety recall campaign on the subject vehicles to inspect and, if necessary, replace the ABS Actuator. Some of the subject vehicles were equipped with ABS Actuators that may have been manufactured out of specification. More specifically, inappropriate die temperature controls during manufacturing may have led to the seal hardness installed in ABS actuator pumps for certain vehicles equipped with Intelligent Cruise Control (and all Murano Hybrid vehicles) being lower than specification. Under this condition, the seal may leak brake fluid. If this occurs, an ABS warning lamp will continuously illuminate on the instrument panel to warn the driver. However, if the warning is ignored and the vehicle continues to be operated in this condition, the brake fluid leak may create an electrical short in the actuator circuit, which in rare instances, may lead to a fire.</p> <p>Dealers will inspect the ABS Actuator control unit serial number. If the ABS actuator control unit serial number is affected, a new ABS actuator control unit will need to be installed prior to sale or vehicle release.</p> <p>***** What Dealers Should Do*****</p> <p>There are specific instructions for new vehicle inventory and retailed vehicles. Please ensure all service personnel are aware of how to handle each vehicle type for this campaign</p>

16V636	RCMN-16V636-9204.pdf	NISSAN	MAXIMA	2017	<p>ABS Actuator Parts Update</p> <p>***** Parts update *****</p> <p>The purpose of this update is to inform dealers that ABS Actuator parts for Maxima and Murano are now orderable on DCS as an SVC order type. Murano Hybrid parts are orderable via DCS but Murano Hybrid parts are not expected to be available until late October.</p> <p>Dealers should place orders, as needed, on DCS. Orders will be filled as parts are available on a first in, first out basis. Dealers will need to enter a VIN for each order with a maximum order quantity of 1 part per VIN. Dealers should ensure that the correct part number is ordered for each VIN</p>

16V661	RCRIT-16V661-7091.pdf	HONDA	NSS300	2015	Service bulletin - Honda Motor Co., Ltd. is conducting a Safety and Emissions Recall of affected 2014-2015 NSS300/A (Forza) scooters. Honda has determined that a defect within the fuel pump can cause the pump to seize, resulting in a loss of fuel pressure. Loss of fuel pressure will cause the engine to A) not start or B) stall while riding. Honda has determined that the original remedy fuel pump used to repair 2014 models does not meet Honda durability standards if the part was not installed within 100 days of its production date. These same fuel pumps were used in some model year 2015 vehicles which are now included in this SAFETY AND EMISSIONS RECALL

16V662	RCOVL-16V662-3686.pdf	GILLIG	LOW FLOOR	2016	Gillig has decided that a defect which relates to vehicle safety exists in certain model year 2014 through 2016 29 Foot Low Floor buses with disc brakes manufactured between November 20, 2014 and February 11, 2016. These buses have rear brake hoses that can rub and become frayed. If not corrected, the hoses can wear a hole through them causing the rear brake(s) to lock up, or fail to operate when the brakes are applied. This can increase the risk of a crash. Gillig will provide a recall remedy at no cost to the owner

16V671	RCONL-16V671-5965.pdf	JAYCO	OCTANE	2017	Incr tire range is noted on the Federal and Tire Labels.. Correct size of tire on unit is ST205/75R15C with PSI OF 50 - INCRT labels show ST205/75R15D with PSI of 65
16V672	RCMN-16V672-7172.pdf	TOYOTA	PRIUS	2016	Dealer Daily: The involved vehicles are equipped with a front passenger air bag which contains stored, compressed gas in the inflator. A component in the airbag assembly may have been improperly welded and/or misassembled. If this occurs, the stored gas may escape without a deployment signal and result in the partial inflation of the air bag. This has been observed when the vehicle is parked and unoccupied for a period of time. An airbag that inflates in this manner can, under some circumstances, increase the risk of injury and the possibility of a crash

16V701	RCOVL-16V701-6709.pdf	GILLIG	LOW FLOOR	2016	Gillig has decided that a defect which relates to motor vehicle safety exists in certain model year 2016 Low Floor transit buses manufactured May 26, 2016, to September 26, 2016. The affected buses have axles that may have insufficient grease at the wheel ends, possibly resulting in bearing failure
16V702	RCOVL-16V702-0954.pdf	MCI	J4500	2017	Certain model year 2017 MCI J4500 coaches have a multiplexing system program error affecting low air pressure signals in the vehicle's primary service brake air reservoir system. Due to the error, in the event of a low air pressure condition in the vehicle's primary service brake air reservoir system, the system does not send either an audible or visible warning signal as required by FMVSS 121, S5.1.5. If a low pressure condition occurred and the driver did not notice the condition based on the gauge in the instrument panel and stop the vehicle to investigate the loss of air pressure, the vehicle's rear service brakes would apply automatically and without further warning if the reservoir's air pressure dropped significantly, possibly resulting in a crash. MCI will fix the programming error in affected vehicles at no cost to the vehicle owners

16V702	RCRIT-16V702-7176.pdf	MCI	J4500	2017	Certain model year 2017 MCI J4500 coaches have a multiplexing system program error affecting low air pressure signals in the vehicle's primary service brake air reservoir system. Due to the error, in the event of a low air pressure condition in the vehicle's primary service brake air reservoir system, the system does not send either an audible or visible warning signal as required by FMVSS 121, S5.1.5. If a low pressure condition occurred and the driver did not notice the condition based on the gauge in the instrument panel and stop the vehicle to investigate the loss of air pressure, the vehicle's rear service brakes would apply automatically and without further warning if the reservoir's air pressure dropped significantly, possibly resulting in a crash. MCI will fix the programming error in affected vehicles at no cost to the vehicle owners
