## I. UNITED STATES SHIPPING BOARD.

---

WASHINGTON, D. C., *December 1, 1919.*

TO THE CONGRESS:

We have the honor to submit herewith the Third Annual Report of the United States Shipping Board covering the fiscal year ended on June 30, 1919. The report embraces accounts of the various activities of the Board and the Emergency Fleet Corporation under the provisions of the Shipping Act of 1916, as well as under subsequent acts.

### SUMMARY OF ACTIVITIES.

During the year ended on June 30, 1919, the efforts of the Shipping Board were divided between the problems of ship production and ship operation. The signing of the armistice on November 11 caused sudden changes, and, in many matters, complete reversals of policy and methods.

#### Before the Armistice.

In the operating field, the work of the first four months centered upon securing maximum results from the vessels not actually employed for Army and Navy account in primary military service; upon securing additional tonnage for this fleet through negotiations with friendly foreign shipowners, through reconditioning old vessels, through adapting Lake vessels for salt water cruising, and otherwise; and upon supervising the conditions and terms under which all American commercial cargoes were lifted.

In the construction field, the work of the first four months was a continuous effort to meet the world war demand for speed. With the support of the fundamental industries, there was built up in less than one year a great steel fabricating and assembling organization.

#### After the Armistice.

Immediately after the signing of the armistice, and throughout the remaining seven and one-half months of the fiscal year, construction activities were curtailed as rapidly as the physical condition of the building program and the financial interests of the Government permitted. Suspension of contracts was ordered, and a careful examination of the status of each suspended contract made. In practically every case in which a contract could be cancelled at less cost to the Government than the difference between the cost to

complete and the probable market value at time of completion, cancellation was made.

There have been a few exceptions to this rule for making cancellations, but only where necessary. The ramifications of the ship-building organization were very complex. In no case did the direct responsibility of the Government extend back into industry beyond the rolling mill or the boiler or engine factory. Nevertheless, the sharp curtailment of the large building program necessarily caused serious derangements in many overlapping stages of production, and vitally affected many industries.

The ship-operating activities of the last eight months of the fiscal year have brought up for solution many problems, which are described in detail elsewhere in this report. The early release of requisitioned tonnage was considered necessary, in order to assist American industries to reorganize on a peace basis and to establish or reestablish themselves in the markets of the world. The process was begun in January as soon as the Army and the Navy began releasing tonnage to the Shipping Board. However, a sudden and unlooked-for demand upon the Shipping Board to supply shipping aggregating almost 2,000,000 deadweight tons for European civilian relief duty not only practically stopped the release of tonnage to American commerce from February to May, but in many instances caused the retention for a few more voyages of vessels already released.

In the interim, the Board was able to use with more leeway such tonnage as had been confined to the war material and essential commercial trades during the war. Many of these vessels had been making voyages to parts of the world where ships flying the American flag were almost never seen, and with which American industries never had enjoyed direct reciprocal trade relations. As soon as the embargoes on American exports were removed, American ships were able to supply many long-unfilled wants at these ports with American goods. In return they brought back to this country valuable raw materials, some of which had not been seen in this country since the early days of the war, and most of which had always been bought and shipped through foreign intermediaries.

#### **New Work and Plans.**

During May and June, the last two months of the period covered by this report, the requirements of the European civilian relief so relaxed that the Board was able to release and recover enough tonnage to meet the country's more urgent commercial needs, and to bring about a condition approaching stability in ocean freight rates.

The Shipping Board has established regular sailings of American flag ships in 41 trade routes. Most of these trade routes are in the trans-Atlantic, South American, and other more important trades,

but some of them are in parts of the world where American flag ships have not been accustomed to trade for more than a generation. To reinforce these trade routes, and to help insure their permanency, considerable work is being done in the way of establishing American bunkering stations and in setting up agencies to handle American vessels and their cargoes in foreign ports.

As stated above, the report herewith submitted covers the activities of the United States Shipping Board and subsidiary organizations for the fiscal year ending June 30, 1919. No events occurring after that date have been taken into account. Owing to the fact, however, that the membership of the Board has been changed since June 30, by the resignations of former Chairman Hurley and Commissioner Robinson and the appointment of the present Chairman to succeed Mr. Hurley, no Commissioner having been appointed to succeed Mr. Robinson, this introduction and letter of transmittal is signed by the present Chairman and Members of the Board.

Respectfully,

JOHN BARTON PAYNE, *Chairman.*

R. B. STEVENS, *Vice Chairman.*

JOHN A. DONALD, *Commissioner.*

T. A. SCOTT, *Commissioner.*

## ORGANIZATION.

---

The members of the Board at the time of the Second Annual Report, December 1, 1918, were Mr. Edward N. Hurley, Chairman, Mr. Raymond B. Stevens, Mr. John A. Donald, Mr. Bainbridge Colby, and Mr. Charles R. Page.

During the fiscal year ended June 30, 1919, two Commissioners resigned, Messrs. Bainbridge Colby (Mar. 4, 1919), and Charles R. Page (May 15, 1919). Mr. Henry M. Robinson, of California, was appointed ad interim on June 13, 1919, vice Mr. Charles R. Page.

The period of readjustment after the signing of the armistice necessitated some changes in the administrative organization providing for assignments, sales of ships, and of surplus ship construction material, and the reduction and consolidation of the field service.

### FUNCTIONS OF THE SHIPPING BOARD.

The United States Shipping Board served as the agency through which the problems of shipping control were handled, and the war powers of the United States in the field of water transportation were administered. It regulated all the shipping of the country; repaired the seized German ships; recruited and trained officers and seamen for merchant vessels; supervised the chartering of all ships (foreign and domestic) from American ports; developed port facilities; handled large problems of labor control; and operated, directly or through private shipping agencies, a vast merchant marine.

The Board acted in close cooperation with the Allied Maritime Transport Council in London, and with the War Industries Board, War Trade Board, War Labor Policies Board, and the Exports Control Committee.

The problem of conserving tonnage and providing for the effective utilization of available shipping facilities was handled by the Shipping Control Committee in New York.

The inspection and repair of vessels, and in part the transference of vessels from the Great Lakes to the ocean, was performed by the Board of Survey and Consulting Engineers and the Construction and Repair Department of the Division of Operations.

Among the important activities of the Board during the past year were the employment of tonnage for the return of troops, and for European relief service; the return of neutral and requisitioned

tonnage; payment of just compensation for requisitioned vessels; negotiations with the War and Navy Departments for reimbursement for vessels used by these departments, and the sale of ships.

#### EUROPEAN MISSION, AND THE PARIS OFFICE.

At the request of the President, for peace conference purposes, an office was established in Paris by the Chairman, personally, in December, 1918. Part of this organization was taken from the American section of the Allied Maritime Transport Council, which functioned in London throughout the war. The Paris office gathered most of its data from the Washington office and the London office of the American section of the Allied Maritime Transport Council, which was directly under the orders of the State Department.

One of the problems considered during the European mission was that of a survey of the world shipping in connection with the food situation. A conference was held in London between representatives of the Shipping Board and the American Food Administration. Shipping problems were discussed and a food program outlined.

The Vice Chairman of the Shipping Board, with other representatives of the United States, presented the views of this country at the Brussels conference relating to supplying food to the Germans, taking over of German ships, and the revictualing of Europe. The Shipping Board representative also acted on the reparation commission, and the subcommittee on navigation.

The Shipping Board organization in Paris also worked in close relation with the office of the Chief of Naval Operations of the United States Navy.

#### EMPLOYMENT OF TONNAGE FOR THE MOVEMENT OF TROOPS AND FOR EUROPEAN RELIEF SERVICE.

One of the accomplishments of America's participation in the World War was the movement of 2,000,000 troops overseas, with the elaborate supply of munitions, material, and food necessary for maintaining these troops at a high point of efficiency.

In all its efforts for the acquisition and the creation of new tonnage, the Board's uppermost thought was the needs of the Army. German vessels were taken over by the Board, and the huge task of repairing and putting them into Army service was quickly done; Dutch ships in our ports were acquired; many neutral vessels were chartered from Norway, Sweden, and Denmark; Japanese steamers were acquired in considerable number by purchase; all American steamers available for the Nation's use were requisitioned; Lake ships were reconstructed and brought to the seaboard, and a very extensive ship-building program was launched.

On November 1, 1918, the total tonnage in active service, controlled by the United States Shipping Board, amounted to 1,196 vessels of 6,540,205 deadweight tons. This included requisitioned tonnage, time chartered neutral, and seized German vessels. Of this total, 598 vessels of 4,269,838 deadweight tons were in the direct service of the Army and Navy. These carried troops and supplies to European ports. This was the situation at the signing of the armistice on November 11, 1918.

Immediately after the signing of the armistice the shipping problems of the Board were reversed. There were heavy demands for the return of troops and for European relief service. The Government entered on a food program to relieve the stricken countries of Europe and to prevent, if possible, by the rapid supply of food-stuffs, a deplorable economic and social condition which threatened to overwhelm those countries. This *food-relief movement* began in February, 1919. It reached its peak in May, 1919, at which time 264 vessels of nearly 2,000,000 deadweight tons were engaged in this movement.

#### TRANSFER OF AMERICAN VESSELS TO FOREIGN REGISTRY.

Section 9 of the Shipping Act of 1916, provides that when the United States is at war or during any national emergency, the existence of which is declared by proclamation of the President, it shall be unlawful, without first obtaining the approval of the Board, to sell, mortgage, or lease any vessel documented under the laws of the United States or to transfer any such vessel to a foreign registry or flag.

During the first few months of Shipping Board supervision a number of transfers of American vessels to foreign registries were authorized under circumstances clearly indicating that such transfers were not inconsistent with national interests. But on June 4, 1918, it was decided to permit no American vessels of more than 100 tons gross registry to pass to any foreign flag, although it later became desirable to withhold the application of this rule in a few exceptional cases.

On December 12, 1918, it was decided to authorize the sale of wooden vessels then under construction in American shipyards to foreign-owned American corporations and to foreigners without restriction, excepting to enemy ownership, and the transfer of all such documented tonnage to foreign-owned American corporations, providing such transfers were not inconsistent with national interests; also the sale of all documented wooden vessels to foreigners with *privilege to transfer to buyer's flag* in exceptional cases only, after carefully considering each case on its merits. Owing to constantly

changing conditions this policy was gradually modified until wooden vessels were permitted to pass to foreign registries unless there appeared to be some good reason why the transfers should not be approved.

This marked relaxation of policy did not apply to the transfer of American iron or steel tonnage to foreign flags, as the uncertainty of the international situation generally, the duty of the United States to provide proper transportation facilities for the return of American soldiers from overseas, and its moral obligation to carry food to the starving peoples of Europe made it manifestly unwise to part with the control of such desirable shipping. However, the Shipping Board did permit the transfer of a few old steel and iron vessels of Lake-type construction which were obviously of no value to the American merchant marine. But the Board has scrupulously avoided giving its consent to the transfer of American iron and steel vessels to any foreign registries unless it clearly appeared, from the peculiar circumstances involved in each case, that its approval was particularly desirable from the standpoint of the Government as well as the individual.

Numerous applications for the transfer of American fishing vessels to foreign registries were approved after a careful inquiry disclosed that such transfers would not be detrimental to the American fishing industry.

From June 30, 1918, to July 1, 1919, the Board authorized the transfer of the following vessels:

Number.	Gross tonnage-
253 wooden vessels.....	205, 641. 43
34 steel vessels.....	47, 203
12 iron vessels.....	14, 652. 9
<u>Total 299 vessels.....</u>	<u>267, 497. 33</u>

#### TRANSFERS FROM ONE AMERICAN CITIZEN TO ANOTHER.

The control over the transfer of American vessels from Americans to Americans was entirely relinquished on December 3, 1918, as it was evident that the conditions making the exercise of such control desirable had passed.

#### CONSTRUCTION OF SHIPS IN AMERICAN YARDS FOR FOREIGN ACCOUNT.

Direct legislative authorization for control over construction for foreign account was conferred on the Board by the Act of July 18, 1918, amending the Shipping Act, which provided that when the United States is at war or when a national emergency has been proclaimed by the President, it shall be unlawful, without first obtaining the approval of the Shipping Board, to enter into any contract,

agreement, or understanding to construct a vessel within the United States for or to be delivered to any person not a citizen of the United States without expressly stipulating that such construction shall not begin until after the war or the emergency proclaimed by the President has ended. Prior to the signing of the armistice the Board enforced this legislation. Subsequent to November 11, 1918, the Board altered its requirements so as to permit unlimited construction of wooden tonnage for American or foreign account and steel tonnage for American account.

The Board recognized the advantages of lifting all restrictions, and on June 14, 1919, a letter was sent by Chairman Hurley to all shipyards in the United States advising that upon presentation of all contracts for the construction of steel ships for foreign account approval for such construction would be granted.

#### REPORT OF LAW DEPARTMENT.

The Law Department advises the Board and its various divisions on legal matters. It handles the current legal work arising out of the various activities of the Board and of the Division of Operations of the Emergency Fleet Corporation.

Among the important matters with which the Law Department has been concerned in the past year are the following: The determination of just compensation for vessels the title to which was requisitioned by the Shipping Board, or which were lost while in its use; examination of title papers covering vessels requisitioned; adjustment of numerous problems growing out of the requisition of the use of vessels and their redelivery to owners; the acquisition of German and Austrian tonnage; the determination of just compensation for vessels requisitioned while under construction, including an important settlement with Norwegian claimants, and various reconveyances or sales to American claimants; the commercial relations of the Board with the Army and Navy as to vessels turned over to them by the Board; arrangements with foreign countries, including Japan, Uruguay, and Peru, for securing tonnage; complex and voluminous problems arising out of the use of Dutch vessels, the disposition of their cargoes, and the redelivery of the vessels; examination of ocean freight and charter rates; questions with the Railroad Administration in connection with coastwise vessels taken over by it; the drafting of proposed legislation; and the sale of vessels owned or controlled by the Board.

The Common-Law Division of the Law Department advises as to general administrative problems, proposed legislation and relations-

with Congress, sales and transfers of vessels, just compensation for requisitioned vessels, and nonmaritime claims and contracts.

The Admiralty Division advises as to maritime contracts and claims, ships' title papers, and the like. As admiralty counsel for the Emergency Fleet Corporation, it advises as to charter parties, bills of lading, and other operating contracts, and as to salvage, general average, collisions, cargo claims, and other maritime problems. With the return of the fleet to commercial service, now extending to all parts of the world, and the growth of the fleet, the work of the Admiralty Division has greatly increased. Litigation, which has multiplied rapidly since the decision of the Supreme Court in the *Lake Monroe* case, holding Shipping Board vessels in commercial service subject to libel under section 9 of the Shipping Act, is handled through, and with the excellent cooperation of the Department of Justice.

#### RETURN OF REQUISITIONED TONNAGE.

To understand the general policy of the Board in the release of requisitioned tonnage it is well to review briefly the general principles that were agreed upon (Second Annual Report, p. 34): That the United States, though not strictly speaking a "charterer," should assume in practice that relation toward the vessel requisitioned; that the owner should, in general, be allowed to operate the vessel for the United States; that the expense of operation should be apportioned between the Shipping Board and the owner in a manner similar to that prevailing, in normal times, between owner and charterer; that the Shipping Board should assume the risk of marine peril losses except under bare boat charter; that at the option of the Shipping Board the vessel might be entirely taken over and operated by the United States without the aid of the owner and the Shipping Board might again return the vessel to the owner for operation; that the period of service should be for such time as the Shipping Board might determine, but should not extend beyond the first arrival of the vessel in an American port six months after peace, unless required for governmental purposes; and that the Shipping Board should reserve the right to terminate the agreement on five days' notice.

The problem of the release of the requisitioned tonnage has been most difficult. Following the general principle stated in the Second Annual Report, the Board on January 6, 1919, adopted the policy of releasing privately owned American vessels not over 4,000 tons deadweight capacity, with the exception of vessels required for military and relief service. The operating and managing agreements which

applied to the vessels were canceled and terminated, although the Board reserved the right to requisition anew.

These vessels, after their redelivery to the owners, were still subject to the control of rates, and approval of trades, through such agencies as the Board had established. The release became effective as to vessels uncommitted for cargo after the expiration of the five days' notice. In the case of uncommitted vessels then in the United States ports, the release became effective on arrival in a United States port and the discharge of cargoes. As to vessels committed for outward cargoes, releases did not become effective until the Director of Operations had made satisfactory arrangements regarding redelivery and cancellation of charter parties and performance of existing commitments. In accordance with these duties, instructions regarding the redelivery of American requisitioned tonnage were issued in each case as rapidly as possible. On June 30, 1919, 457 vessels of a total deadweight tonnage of 2,665,000 had been redelivered.

#### SUBSTITUTE TONNAGE.

Along with the general policy of the release of requisitioned tonnage the Board agreed to assign substitute tonnage for the ships retained for Army, Navy, or relief purposes, the substitute ships to remain in the service of the charterers until the requisitioned ships were released. Special arrangements were made in case the substituted ship was returned. The Board did not undertake to supply substitutes unless it had spare tonnage, which could be so utilized without detriment to the Board's other interests.

Some owners were inclined to demand the substitute vessels on the Government time charter form instead of bare boat form of charter. To eliminate difficulties the Board adopted a resolution, stating that in so far as circumstances would permit, it would charter to American shipowners whose vessels were still under requisition substitute tonnage equivalent in amount and character to the vessels requisitioned, this substitute tonnage to be chartered to the owners at requisition rates under forms of charter similar to those under which the requisitioned vessels were being operated. Also, the deductions of hire for any loss of time resulting from difficulties in hull, machinery, or equipment of any chartered vessel would be allowed on bare boat charters.

#### RETURN OF CHARTERED NEUTRAL TONNAGE.

During the year 1918 negotiations were carried on through diplomatic channels with the cooperation of representatives of the Shipping Board on the War Trade Board, as a result of which various

agreements were concluded for the acquisition of ships from neutral countries. In these agreements the United States governmental authorities agreed to license for export necessary food supplies and other commodities for the use of those neutral nations in exchange for their agreeing to charter to the Shipping Board all the tonnage which they could spare from their own immediate needs. A number of chartering agreements were made with Sweden, Norway, and Denmark. By these agreements the United States secured from Norway about 614,000 deadweight tons of steamers and approximately 275,000 deadweight tons of sailing vessels. From Sweden the United States obtained 100,000 deadweight tons of sailing vessels and an equal amount of steamers for use outside the war zone. The arrangement with Denmark provided for the retention by that country of a stated amount of tonnage to take care of transporting the necessary food supplies and other commodities. Out of the surplus Danish tonnage above this amount the United States secured 265,000 deadweight tons of steamers.

After the cessation of hostilities and the signing of the peace treaty a number of sailing ship agreements came to an end and the Shipping Board immediately began negotiations for the return of this tonnage.

In January, 1919, the Board made known that it was ready to negotiate with shipowners for the release of all neutral vessels under requisition by the War Department, or if it was desired, to assign charters to the neutral Governments. After taking care of the American requirements for tonnage the actual negotiations were started for the redelivery of Danish, Norwegian, Swedish, and other tonnage under charter to the Board prior to the expiration of the charter period. By taking advantage of various elements it was possible to redeliver some of this tonnage at a great saving to the Government, and in no case was a bonus offered for the cancellation of any of these contracts. By June 30, 22 Danish and 5 Swedish steamers had been redelivered in European ports.

Thirty-four Norwegian, 50 Danish, and 12 Swedish steamers had been redelivered in United States ports by June 30, on several of which the contracts were canceled by mutual consent without any obligation on the part of the Board.

There remained on June 30, 1919, of which about 40 per cent is expected to be delivered at European ports—8 Swedish vessels, 23 Norwegian vessels, 13 Danish vessels, and 25 Dutch vessels, making a total of 69 steamers still under charter to the Board.

## RETURN OF DUTCH TONNAGE.

The acquisition of Dutch tonnage is referred to in detail in the *Second Annual Report* (pp. 47-48). In January, 1919, the Shipping Board advised the owners of Dutch commandeered tonnage that it was then prepared to redeliver such tonnage. Under the terms of the seizure the Board was obligated to redeliver this tonnage at the ports of seizure. Such a procedure involved unlimited complications, as the vessels had been taken over at 15 different ports. The Board immediately started negotiations to ascertain the wishes of the owners regarding redelivery ports. These negotiations at first were unsuccessful and very little progress was made. Finally it was decided to redeliver all steamers of less than 4,000 tons in United States ports, and according to this policy notices were sent to the shipowners. In March, 1919, representatives of three steamship companies owning 13 steamers met representatives of the Shipping Board and agreed to accept redelivery of all their steamers at Dutch ports on the condition that the Board would furnish free of cost to the owners sufficient coal to enable each steamer to return to a United States port. The Board accepted this proposition mainly for two reasons—first, sufficient ships were not then available without this tonnage to carry out the food program, and under the agreement the Board had the use of these steamers until they were in a position for redelivery. Second, no more satisfactory conditions could be obtained, and considering the original demands of the owners or the seizure agreement requiring these steamers to be returned to the United States in ballast for redelivery, a saving of at least \$40,000 on each ship was made. This proposition being agreed upon, 17 Dutch steamers had been redelivered in the United States by June 30, 1919, and 36 redelivered in Dutch ports.

Under the terms of the President's Proclamation of March 20, 1918, taking over the Dutch vessels, the Shipping Board was directed to make to the owners thereof full compensation, in accordance with the principles of international law. By the "Terms of employment of Dutch vessels" it was provided that—

If the vessel shall be lost, the United States will forthwith pay the owner the value of the vessel, estimated according to a schedule of values which will be communicated to the owner hereafter; or at the option of the owner, to be exercised within 30 days of the date at which the schedule of values has been communicated to him, will deliver to the owner as soon as possible after the termination of the present war a vessel of substantially similar tonnage, type, class, and value, and of substantially no greater age (any deficiency or excess in value to be adjusted by a cash payment), paying interest, in the meanwhile, from the date of loss at the rate of 6 per cent per annum on the value of the lost vessel.

After prolonged negotiations between representatives of the Shipping Board, the State Department, the British Government, the Dutch Government, and the Dutch shipowners, a scale of values acceptable to all parties concerned was finally agreed upon for the purpose of determining a rate of compensation to be awarded in the event of loss. This scale allowed 75 pounds per gross ton, or, on the option of the shipowners 50 pounds per deadweight ton, for vessels up to 10 years of age; 60 pounds per gross ton or 40 pounds per deadweight ton for vessels up to 30 years of age; and 50 pounds 10 shillings per gross ton or 35 pounds per deadweight ton for vessels over 30 years of age. The United States and the British Governments made in addition a liberal alternate for replacing any lost tonnage, paying interest at 10 per cent from the date of loss to the date of replacement. All of the Dutch shipowners elected money compensation, as provided in the agreed scale of values and the payments in each case have been made according to this agreement.

#### REPORT OF THE CHARTERING COMMITTEE AND CHARTERING EXECUTIVE.

The functional powers of the Chartering Committee and the Chartering Executive are given in the Second Annual Report (pp. 68-71).

The Chartering Committee was appointed on September 29, 1917, and continued to function until March 1, 1919. The work of the committee was continued under a Chartering Executive, who also acted as Tank Steamer Executive.

The first noted change in the work of the Chartering Committee occurred at the time the armistice was signed. After that date there were no neutral vessels chartered by the committee for long periods, as the tonnage already chartered was ample to cover the urgent war needs.

One of the duties of this committee and the Chartering Executive was the approval of charters for all ships touching United States ports. During the war period there were many restrictions and conditions in force which had to be closely observed before approval was given.

#### REGULATION OF CHARTER RATES.

During the war the question of control of tonnage and of rates was an important factor. The natural trend of the freight market since the signing of the armistice has rendered the control over rates less essential from the viewpoint of preventing them from becoming exorbitant. If anything, the situation has been reversed and the difficulty which the Chartering Executive and the various depart-

ments of the Shipping Board are now facing is to endeavor to maintain a satisfactory rate, rather than to enforce further reductions in rates.

In view of the heavy committance and tonnage which the Government has been obligated to enter into during the war and which is now under the control of the Board, it is obviously requisite that freight rates should be kept upon a paying level, as otherwise this vast tonnage would face the serious situation of having to operate at rock-bottom rates under operating costs, in many instances, quadruple the cost before and during the early part of the war.

The Chartering Committee and Chartering Executive have from time to time in conjunction with the Division of Operations determined upon certain rates as "fixed rates," i. e., rates which were to be maintained and not exceeded, the idea being to create a stable condition in freights and obviate undue fluctuations. The fixed rates were in force only in the West Indies trade and South American trade. In all other trades there was a maximum rate in effect, and in all cases the maximum rate was of such a nature that it was high enough so that no fixtures were made to the maximum rate in effect. "Fixed rates" apply to the West Indies trade. Upon the removal of the rate control in this trade, outside fixtures will probably be made at rates lower than those quoted by the Shipping Board.

The trans-Atlantic market has been extremely active so far as movements of coal are concerned. The rates are holding at about the same as those the Shipping Board are quoting, although in a few cases they have ranged from \$0.50 to \$1 more. Charter fixture in this trade outside the coal have been very few up to the present time.

#### DIVISION OF REGULATION.

The Division of Regulation shortly after the armistice was signed began to exercise its functions more fully than it had during the war period. The work of the division is essentially the regulation of rates and practices of water carriers in peace times and is properly divisible into four parts, namely, formal dockets, informal dockets, tariffs, and contracts and conferences, each of which will be separately considered.

Cases on the formal docket embrace complaints submitted by shippers and other persons against carriers subject to the Board under authority of section 22 of the Shipping Act of 1916. During the entire period the Board has been regulating the activities of water carriers only six formal complaints have been filed.

Article 24 of the Rules of Practice in Proceedings under the shipping act provides that any letter or written memorandum other than formal complaints in which a violation of the act is alleged, will be

regarded as an informal complaint and that the Board, through correspondence and informal conferences, will attempt to adjust the matter complained of. During the past year 63 of such informal complaints were filed.

Common carriers by water in interstate commerce operating on the high seas or the Great Lakes on regular routes from port to port are required by section 18 of the shipping act to file with the Board and keep open to public inspection in the form and manner prescribed by the Board their maximum rates, fares, and charges, and are prohibited from demanding, charging, or collecting rates in excess of those so published except with the approval of the Board and after 10 days' notice unless the Board for good cause shown waives such notice. A file of these tariff publications is maintained by this division and kept open to the public at all times. The Shipping Act does not impose upon carriers engaged in foreign trade the duty of filing tariffs with the Board.

The Board has issued tentative tariff regulations which have been used by carriers as a general guide in publishing their tariffs, but there is now before the Board a draft of permanent tariff regulations which will probably be promulgated at an early date.

The tariff files in the office of the division now contain 1,150 freight tariffs and 1,175 supplements thereto, and 282 passenger tariffs and 133 supplements thereto.

Carriers and other persons, such as forwarders, amenable to the jurisdiction of the Board are required by the provisions of section 15 of the Shipping Act to file copies or complete memoranda of all contracts, agreements, and understandings in respect to rates, traffic, pooling of equipment, or any other working arrangement.

The contracts and agreements above mentioned fall into two classes—the so-called steamship conferences, which are understandings among combinations of groups of steamship lines as to policies affecting operations, traffic, ports, etc.; and in the past also involved the maintenance of systems of deferred rebates which are now prohibited by law. These steamship conferences are supplemented by what are called conference agreements, these latter instruments being contracts or agreements between parties subject to the original conference and based on that conference. It does not necessarily follow, however, that all of the parties to the conference are parties to the conference agreement. The other class of contracts includes those between carriers subject to the Board outside of the conferences on the one hand and carriers and other persons subject to the act—such as persons furnishing wharf and terminal facilities in connection with a common carrier by water—on the other hand. These contracts cover a variety of matters from the furnishing of wharfrage

to the allotment of ports. In order to facilitate the work of the office, concurrences in carrier's contracts and conferences already on file have been accepted in lieu of copies of the documents themselves. A complete file of these conferences and contracts is maintained.

#### RELATIONS WITH THE RAILROAD ADMINISTRATION.

The Board through its Division of Operations maintains close contact with the United States Railroad Administration, it being fully recognized on both sides that in the interest of American foreign trade the fullest possible cooperation between ocean and rail transportation facilities is essential.

A committee composed of the Assistant Director of Traffic of the Railroad Administration and the Assistant Director of Operations of the *Emergency Fleet Corporation* has been appointed to handle the many questions involving the relations between shipping and the railroads, the following being among the important subjects which have had consideration:

- (a) Through export bills of lading.
- (b) Export and import rail rates.
- (c) Allocation of Shipping Board tonnage to relieve temporary congestion at certain ports.
- (d) Joint consideration of traffic available to support regular sailings from United States ports.
- (e) Assignment of Shipping Board vessels for railway operation.
- (f) Wage questions involving railway floating equipment and Shipping Board vessels.

It is the earnest desire of the Board to have the closest possible unity between rail and ocean carriers, so that American shippers may have a continuous transportation system for world-wide foreign trade, whereby goods can be shipped from a point in the United States to any place in the world as conveniently and with as little obstruction as to one of our own cities.

#### RELATIONS WITH THE ARMY AND NAVY AS TO VESSELS USED BY THOSE DEPARTMENTS.

Under the authority of various acts of Congress from time to time vessels have been requisitioned by the Board, and later turned over to the War and Navy Departments, generally upon a bare-boat basis. In certain cases the titles to vessels particularly desired were requisitioned by the Board, at the express request of the department needing the same, and turned over directly to such department. A large number of the vessels, the use of which was requisitioned by the Board, have been allocated for use by the War and Navy Departments. The number of Shipping Board vessels and the amount of

tonnage allocated to the Army and Navy, and redelivered by them, during the fiscal year ending June 30, 1919, is as follows:

	Aggregate deadweight tonnage.
Number of vessels allocated, 265.....	1, 713, 542
Number of vessels redelivered, 168.....	1, 008, 172
Number of vessels sunk, 10.....	45, 599
Number of vessels remaining with Army and Navy, 87.....	659, 771

The Shipping Board in these matters has cooperated with the other departments in every possible way. During the war no express written agreement was ever executed between the Shipping Board and the War and Navy Departments, but the oral understanding was, that as to vessels under requisition charters, those departments assumed all risks and liabilities imposed by such charters upon the United States Shipping Board; and as to vessels owned by the Shipping Board, the War and Navy Departments assumed all war and marine risks and the usual obligations of a charterer, except that for the appropriation year 1918-19 the Board is not permitted to make a charge (a profit) for the use of its vessels.

Near the close of hostilities, namely, in October, 1918, the Shipping Board requisitioned the title to a number of tugs upon the express request of the War Department. Upon the signing of the armistice, in November, the War Department ceased to need all these vessels. Some of them were turned back to the former owners; those which could not be so returned have been paid for by the Shipping Board.

#### DIVISION OF INSURANCE.

On October 9, 1918, the Division of Insurance was created to take the place of the Advisory Insurance Committee. This was done because of the growing importance of the insurance work and because it was considered necessary to have a division authorized to make salvage and wrecking contracts, so that no time might be lost in arranging for assistance to proceed to endangered vessels.

The marine and war-risk premium rates are fixed by the Director of Insurance and in general follow the commercial market. Since the signing of the armistice, on November 11, 1918, the war-risk rates have been greatly reduced, and since May 1, 1919, the only war-risk insurance which has been carried has been on trans-Atlantic voyages.

The nature of the duties performed by the division has changed considerably, owing to the fact that very few vessels are being chartered and a large number of those under charter have been released to their owners. Another reason for the change is the very rapid growth of the fleet owned by the Shipping Board and the consequent necessity for handling the losses. These duties are concerned only with vessels in operation and not with hulls under construction.

On January 26, 1918, the Shipping Board allotted \$10,000,000 to the insurance fund to be used in settling claims, but so far the premiums have been sufficient to take care of losses and it has been unnecessary to draw upon this appropriation. On February 20, 1919, this allotment was withdrawn.

#### LEGISLATION DURING THE FISCAL YEAR AFFECTING THE SHIPPING BOARD.

In addition to various appropriation bills providing the funds with which the Shipping Board and Emergency Fleet Corporation carry on their work, there have been some important laws passed by Congress during the fiscal year which affect the work of the Board. Among the more important are the following:

1. Amendment to the War Risk Insurance Act, approved July 11, 1918, extends protection to vessels of foreign registry operated for the Shipping Board, when such protection is otherwise unavailable except at unreasonable terms. By this amendment the Bureau of War Risk Insurance is authorized to insure vessels of foreign friendly flags when such vessels are chartered or operated by the United States Shipping Board or its agent, or chartered by an American citizen.

Such insurance is authorized only when the United States Shipping Board or its agent operates the vessel, or the charters are, by the terms of the charter party or contract with the vessel owners, required to assume the war risk or provide insurance protecting the vessel owners against war risk during the term of the charter.

2. An Act, approved July 15, 1918, amends the Act of September 7, 1916, creating the United States Shipping Board. This Act increases the control of the Shipping Board over the transfer of American vessels (including those under construction) to foreign registry or to foreign control. It also extends such control to shipyards, dry docks, shipbuilding or ship-repairing plants, and to facilities and interests therein.

3. An Act, approved July 18, 1918, confers upon the President, or the agent designated by him, authority to prescribe charter rates and freight rates and to requisition vessels, and other powers. The Act is a war measure and the powers granted expire when the treaty of peace is proclaimed between the United States and Germany, unless, on account of tonnage shortage, the President, by proclamation, extends the provisions of the Act for a period not exceeding nine months.

The Act gives the President power to require charters of American vessels, their terms, rates, or provisions to be approved by him. This control was previously exercised by the Chartering Committee in cooperation with the War Trade Board, through the control of

licenses for bunkers and stores. The present Act gives direct statutory authority for such regulation.

The President is also given power to prescribe reasonable freight rates and conditions of shipment governing transportation of goods on vessels of the United States. Previously the Shipping Board had such power only over common carriers engaged in coastwise trade. The Act authorizes the order of priority in which goods shall be carried or other services performed by vessels, and provides for regulations regarding loading, discharging, lighterage, storage, bunkering, etc., designed to promote the efficient use of tonnage during the war.

The President is authorized to extend the provisions of the Act to foreign vessels under charter to American citizens. Direct authority is given to make rules and regulations regarding safety and protective devices in the war zone and to exclude vessels not fit for war-zone service from the dangerous regions.

The Act further forbids the chartering of foreign vessels by American citizens for persons subject to the jurisdiction of the United States without the consent of the President, i. e. a necessary measure of control over foreign tonnage, similar to that exercised by England and France, to restrain the unregulated bidding for neutral vessels which threatened to inflate the neutral tonnage market. Through bunker control, in cooperation with the War Trade Board, the Chartering Committee had previously accomplished this purpose in part.

The Act contains several provisions concerning the requisition of vessels designed to promote the effective administration of the requisitioning program of the Board. It authorizes requisitioning the services as well as the possessions of vessels and compels the owner to issue to the master of a vessel requisitioned such instructions as may be necessary to place it in the service of the United States.

The Act further provides that the President shall transmit to the persons concerned a charter setting forth the hire which is just compensation for the use of the vessel, and the terms which shall govern its use. If the compensation is not accepted, recourse may be had to the Court of Claims.

The Act authorizes, also, the requisition, purchase, or lease of dry docks, wharves, loading and discharging facilities, warehouse equipment, and terminal railways. The priority of service performed by these agencies may be directed, and rules regarding the conduct of their business made.

The Act authorizes the operation of vessels, dry docks, and terminal facilities and provides that net proceeds not directly required for the purpose of the Act may be employed in the construction, requisitioning, or purchase of vessels.

Violation of provisions of the Act is punishable by a fine of not more than \$5,000, or by imprisonment for not more than two years, or both.

The powers conferred upon the President by this Act were delegated in part by him to the Shipping Board by proclamation of July 29, 1918. There are a number of bills affecting the Shipping Board pending in Congress. Among these are:

1. An Act granting the Interstate Commerce Commission jurisdiction over water rates (H. R. 4378; S. 1256).
2. An Act authorizing and regulating suits in admiralty against the United States (H. R. 712; S. 2252).
3. An Act concerning vessel mortgages (H. R. 8422, 8873; S. 2820).
4. An Act providing that a special commission be appointed to fix the sale price of the Board's vessels (H. Con. Res. 231).

#### FOREIGN TRADE.

The promotion of foreign trade comes as an incidental, rather than a primary feature of the Shipping Board's work. The Shipping Act is silent on this subject, and the various laws, proclamations, and Executive orders defining the Board's functions and powers do not specifically confer direct authority in this field.

However, since ships constitute the physical means of international commerce, the ship-operating activities of the Board necessarily have a profound effect upon the actual interchange of commodities, and the Board can not properly promote the interest of the American merchant marine and at the same time be indifferent to the movement of the goods upon which the life of that merchant marine depends. Furthermore, the operation of ships involves the use of foreign representatives and requires continual contact with foreigners engaged in commerce with this country. For these reasons, there are various indirect ways in which the Board's necessary activities touch upon the field of foreign trade.

There is no department of foreign trade in the Shipping Board, and when questions of foreign trade policy are presented such matters are referred to the appropriate governmental department. For instance, the Board recently had before it the question of the formation of an American committee of trade experts in London to keep this country advised of developments in Europe, and after consideration the matter was referred to the Department of Commerce, since it was recognized that this was not an enterprise within the Shipping Board's jurisdiction. The question of improving American-Chinese steamship facilities was also presented to the Board, but action was withheld because far-reaching matters of policy which did not lie within the Shipping Board's province were involved.

The Board is represented, however, by two of the commissioners on the Foreign Trade Committee, which is an advisory body formed to

coordinate the work of the various departments in their relation to foreign trade. The appointment of these representatives on such a committee constitutes a recognition of the vital connection of the Shipping Board with foreign trade questions.

The Board does not appoint agents for American steamship operators in foreign ports, but it does investigate the records and connections of agents abroad so as to supply confidential information regarding firms whose services are desired for the representation of American shipping interests. A list of foreign agents acceptable to the Board has been compiled and is available for operators' reference.

For ship-operating purposes the various departments of the Shipping Board organization conduct investigations which incidentally reveal trade opportunities and probable cargo movements. A number of studies have been made, and bulletins showing the result of this work have been published.

In the Division of Operations the needs of the various trades are being constantly studied in order to provide full cargoes for our vessels wherever possible. The problem of the establishment of regular liner services has been given careful attention, and considerable progress has been made.

The Port and Harbor Facilities Commission of the Board has made extensive investigations of foreign ports, has interested itself in the question of the internal routing of commodities destined for foreign exportation, and has done other work of value for the promotion of foreign trade.

The Import and Export Department of the Division of Operations has devoted practically all of its attention to the coal export problem. But here, again, the subject has been approached rather from the standpoint of efficient physical handling than with any idea of promoting the business.

Both on the operating and constructing side, the Shipping Board has been keenly alive to the necessity of supplying the shipping needs for American foreign trade. The construction program has been undergoing thorough revision in order that the country may have a well-balanced fleet, adapted to serve its prospective commercial needs.

From the foregoing account it will be seen that the Shipping Board's activities so far as they relate to foreign trade do not in any way infringe upon the province of other governmental departments, and that the Board interests itself in foreign trade in an indirect way from the shipbuilders' and ship-operators' standpoint rather than attempting to handle foreign trade problems in any direct or primary manner.

INVESTIGATIONS UNDER SECTION 12 OF THE SHIPPING ACT OF  
SEPTEMBER 7, 1916.

Section 12 of the Shipping Act of September 7, 1916, provides: "That the Board shall investigate the relative cost of building merchant vessels in the United States and in foreign maritime countries, and the relative cost, advantages, and disadvantage of operating in the foreign trade vessels under United States registry and under foreign registry. It shall examine the rules under which vessels are constructed abroad and in the United States, and the methods of classifying and rating same, and it shall examine into the subject of marine insurance, the number of companies in the United States, domestic and foreign, engaging in marine insurance, the extent of the insurance on hulls and cargoes placed or written in the United States, and the extent of reinsurance of American maritime risk in foreign countries, and ascertain what steps may be necessary to develop an ample marine insurance system as an aid in the development of an American merchant marine. It shall examine the navigation laws of the United States and the rules and regulations thereunder, and make such recommendations to Congress as it deems proper for the amendment, improvement, and revision of such laws, and for the development of the American merchant marine. It shall investigate the legal status of mortgage loans on vessel property, with a view to means of improving the security of such loans and of encouraging investment in American shipping."

A special committee was constituted for the purpose of carrying on investigations provided under section 12. The progress of this committee's work was embodied in a report of the Chairman of the Shipping Board to the President. This report was in response to House Resolution No. 549, Sixty-fifth Congress, which provides:

That the United States Shipping Board is hereby directed to furnish the House of Representatives not later than April 15, 1919, with the facts in detail as required by section 12 of the act entitled "An act to establish a United States Shipping Board and for other purposes," approved September 7, 1916, with particular reference to the recommendations of the United States Shipping Board relating to seamen's wages, equalization of the higher cost, if any, of building ships in American yards, and the method or policy proposed for operating ships in competition with foreign owned ships whether by the United States or by private corporations or individual citizens; also full information as to the plans which have been adopted for providing stations for furnishing fuel for the United States steamers all over the world.

The energies of the Shipping Board previous to the signing of the armistice were devoted to the acquisition, construction, and operation of ships for war service. There was very little opportunity during 1918 for making special investigations and reports on the most important questions connected with the work of the Board,

although some reports have been completed insofar as it has been possible under such sudden and complete change of conditions. Committees were appointed to investigate the following subjects: The progress of the work of the committee and its recommendations are noted:

I. The relative cost of building merchant vessels in the United States and foreign maritime countries.

The committee having this investigation in charge is assembling data on shipbuilding conditions in France, Great Britain, Italy, and Japan. As the investigation is not yet complete the committee considered it advisable to withhold their recommendations.

II. The relative cost, advantages, and disadvantages of operating in foreign trade vessels under United States registry.

An investigation of the comparative cost of operating vessels under British, American, Norwegian, and Japanese flags is being made. The actual investigation of comparative operating costs under different foreign flags involves, (1) the collection of comparable data regarding wages, capital charges, fuel costs, etc., (2) calculation of the combined effect of these items on the total operating cost of vessels under the different registries.

III. The rules under which vessels are constructed abroad and in the United States and the various methods of classing and rating these vessels.

A classification committee was formed of leading specialists in classification and rating of vessels. This committee held its first meeting in Philadelphia and after effecting permanent organization, appointed two subcommittees, one to investigate and compare rules under which vessels are constructed and classified by the American Bureau of Shipping, the (British) Lloyds Register of Shipping, the Bureau Veritas (French), and other classification societies, and also to further investigate the conditions under which rules may be classified or changed, and to determine in whom the authority to modify or change the rules rests in each register; the other subcommittee to inquire into the regulations adopted by the American bureau, the British Lloyds, the Bureau Veritas, and such other classification societies, for the enforcement of rules for inspection of work during construction and to report as to regulations. These committees are assembling data as to the results of their investigations.

IV. The subject of marine insurance, the number of companies in the United States, domestic and foreign, engaging in marine insurance, the extent of insurance on hulls and cargoes placed or written in the United States, and the extent of reinsurance

of American maritime risks in foreign countries, and to ascertain what steps may be necessary to develop an ample marine insurance system as an aid in the development of an American merchant marine.

A special expert on insurance has been appointed to make a thorough investigation of the subject. A complete report can not be made at this time, but the investigation shows that there are 85 American companies authorized to do marine business in this country. There are also 40 foreign marine insurance companies authorized to do business in the United States, making a total of 125 marine insurance companies authorized to do business in the United States. The net premium income is approximately \$69,233,552. These figures are subject to change, as the investigation is not complete, and the Board is not prepared to make recommendations on the subject.

V. The navigation laws of the United States and the rules and regulations thereunder.

Under the unsettled conditions which have prevailed since the signing of the armistice and the uncertainty as to the basis of readjustment, the Board has made no recommendations of material changes in the navigation laws. A special committee was appointed to make an extensive study of this subject. The work of this committee is still under way.

VI. The legal status of mortgage loans on vessel property, with a view to improving the security of such loans and of encouraging investment in American shipping.

Special attention has been given to the matter of mortgage loans. The Law Department has made a thorough study of mortgages. The result of their efforts is embodied in a bill on the subject, which has been introduced in Congress.

#### STATISTICAL STUDIES.

In the following series of tables is shown a general statistical summary of vessels under the jurisdiction of the Board, the changes in the seagoing merchant marine during the war, acquisitions and losses during the war, acquisitions and losses from July 1, 1914, to February 28, 1919.

Table I gives the changes in the United States seagoing merchant marine of 500 gross tons and over during the war. It is the purpose of this table to give a picture of the merchant marine as of August 1, 1914, and as of November-11, 1918. The grand total as of August 1, 1914, including steamers, tankers, sailing vessels, and schooner barges,

was 1,494 vessels of 2,706,317 deadweight tons. The grand total for November 11, 1918, including steamers, tankers, sailing vessels, and schooner barges, was 2,112 vessels of 5,514,448 deadweight tons. The totals of net increase or decrease are given. Statistics are given which show the number and deadweight tonnage of vessels seized from enemies by the United States, and vessels requisitioned from the Dutch by the United States.

Table II gives the acquisitions and losses during the World War. The source of the acquisitions and the causes of the losses are shown. The acquisitions from all sources from August 1, 1914, to April 5, 1917, a period of 978 days, was 406 vessels of 1,392,887 deadweight tons. From August 1, 1917, to November 11, 1918, a period of 467 days, the acquisitions from all sources amounted to 704 vessels of 2,292,531 deadweight tons. The increase of acquisitions is very noticeable under the construction column. In the period from August 1, 1914, to April 5, 1917, 978 days intervening, only 171 vessels were constructed. In the period from August 1, 1917, to November 11, 1918, 467 days intervening, 641 vessels were constructed. Just as noticeable as the construction program of the above periods are the losses that occurred during the same periods. From August 1, 1914, to April 5, 1917, there were 286 vessels lost, and from the period August 1, 1917, to November 11, 1918, 233 vessels were lost. Totals are given of the vessels seized from enemies by the United States and the vessels requisitioned from the Dutch by the United States, showing method of acquisition and causes of loss.

Table III shows the United States seagoing steam tankers of 500 gross tons and over which were acquired and lost during the period July 1, 1914, to February 28, 1919. This table shows the method of acquisition and the cause of the loss. Under acquisitions there is shown the construction for the Emergency Fleet Corporation and for private owners, vessels acquired by foreign purchase, vessels acquired by conversion, and vessels requisitioned from the Dutch. Under the table of losses, there are shown the losses from enemy action, marine risk, and vessels sold to the Philippines. Totals are included for both acquisitions and losses. Table IV supplies this same information for sailing vessels. Table V gives the same data for schooner barges.

Table VI gives a summary of the acquisitions from July 1, 1914, to February 28, 1919. This summary includes steamers, tankers, sailing vessels, and schooner barges.

Table VII is also a summary table which gives all losses, including steamers, tankers, sailing vessels, and schooner barges from July 1, 1914, to February 28, 1919.

Table VIII comprises a careful study of losses from the United States merchant marine, by cause, from July 1, 1914, to March 31, 1919. It is noticeable that 85 per cent of the losses by enemy action were steam vessels. This is due to the fact that sailing vessels were kept out of the war zone. The maximum losses from enemy action occurred in July, 1917, at the height of submarine activity, and in May, June, July, and August, 1918, when the United States fleet had increased so largely that it presented more targets to the submarines.

Table IX gives the losses of seized German and requisitioned Dutch vessels. These losses are given by months from October, 1917, to September, 1918.

TABLE I.—Changes in United States seagoing merchant marine, 500 gross tons and over, during the World War.

Vessels owned by Army, Navy and small Government departments (except Panama Canal), as also those under Philippine registry, and those seized from enemy or requisitioned from Dutch, are not included.

## LOSSES.

Losses from the United States merchant marine, by cause, from July 1, 1914, to February 28, 1919, are shown in the following summary:

TABLE VIII.—Losses from United States merchant marine, by cause, from July 1, 1914, to Mar. 31, 1919.

Cause of loss.	Total.		Steamers, excluding tankers.		Tankers.		Sailers and schooner barges.	
	Number.	Gross.	Number.	Gross.	Number.	Gross.	Number.	Gross.
<b>Exclusive of seized enemy and requisitioned Dutch vessels:</b>								
Enemy action.....	115	322,046	55	202,630	13	62,919	47	57,397
Marine risk.....	320	445,462	112	247,013	4	8,724	204	229,725
Sale to aliens.....	140	275,964	69	215,020	1	988	70	59,956
Sale to United States Government.....	32	107,361	20	87,104			12	20,257
Miscellaneous.....	35	45,968	17	28,715			18	17,253
Total.....	642	1,237,701	273	780,452	18	72,631	351	384,588
<b>Seized enemy and requisitioned Dutch vessels:</b>								
Enemy action.....	10	73,742	10	73,742				
Marine risk.....	6	25,359	6	25,359				
Total.....	16	99,101	16	99,101				
Grand total.....	658	1,336,802	289	879,553	18	72,631	351	384,588

Marine risk, abandonment, etc., if seized enemy and requisitioned Dutch vessels are included, account for 58 per cent of the vessels sunk while flying the United States flag enemy action accounting for the remaining 42 per cent of the sinkings. Of the total losses by marine risk, abandonment, etc., 44 per cent were sinkings of sailing vessels and schooners barges, although at the beginning of the war these vessels included but 35 per cent of the United States merchant marine. On the other hand, 85 per cent of the losses by enemy action were steam vessels, due to the fact that sailing vessels were kept out of the war zone. Losses by enemy action, which were small in amount until 1917, varied thereafter for six-month periods from 85,000 to 95,000 gross tons. The maximum losses from enemy action occurred in July, 1917, at the height of submarine activity, and in May, June, July, and August, 1918, when the United States fleet had increased so largely that it presented more targets to the submarines (see Table IVB). Losses by marine risk of steamers exclusive of tankers, gradually increased from 23,000 gross tons the first year of the World War to 35,000 the second year, 73,000 the third, and to 74,000 gross tons in the last six months of 1918 if seized enemy and Dutch requisitioned losses are included. A certain normal increase in losses by marine risk is bound to occur with the increasing size of the fleet. A number of collisions due to the convoy system and some accidents due to the large number of inexperienced men who had to run the ships probably account for the unusual increase in the last year and a half.

Sales to aliens, which included 23 per cent of the losses if enemy and Dutch requisitioned losses are excluded, were at their maximum the third year of the war, when for steamers exclusive of tankers, they amounted to 116,555 gross tons. During the first year of our entrance into the war the Army and Navy purchased from private owners a number of passenger vessels.

TABLE IX.—Losses of seized German and requisitioned Dutch vessels.

Period.	Seized German losses.						Requisitioned Dutch losses.					
	By enemy action.			By marine risk.			By enemy action.			By marine risk.

## DIVISION OF PLANNING AND STATISTICS.

During the fall of 1918, the attention of the members of the Division of Planning and Statistics was centered upon cooperation with the War Department in its efforts to secure ships with which to carry out its 80th-division program. The War Trade Board rulings, restricting imports, were in full operation, with the result that it was possible for the Shipping Board to release from commercial employment considerable quantities of shipping for use by the Army. The division compiled and issued detailed monthly statements, showing the exact amount and kind of shipping trading to each important commercial region of the world; also the quantity of shipping required to lift essential imports from each region, and a balance was struck indicating the excess (or deficit) of shipping in each trade. On this basis it was possible for the Shipping Board to allocate and for the General Staff of the Army to demand ships for cargo and transport purposes. The division accompanied these regularly issued "balance sheets" with monthly tabulations of actual imports of all essential articles, also imports of nonessential goods, in order to show how ships were being misused to carry too much of needed commodities or appreciable quantities of unnecessary articles. At the same time facts were being gathered and interpretive studies made to determine the efficiency of ship performance in the different trades. Undue delays in port and time spent in repairing were investigated, and a continuing record was kept of the extent of utilization of cargo capacity inbound and outbound for ships trading to each region of the world.

The staff of research workers which was responsible for recommendations to the War Trade Board concerning import restrictions in 1919 was planning drastic limitation of imports. Because of the urgent need for more and more American soldiers and supplies in Europe, and because deliveries of Emergency Fleet Corporation ships would not reach a peak until well into 1919, it was felt necessary to reduce imports for that year even more than had been the case in 1918, in order that ships already on the seas might be forced out of trade into use by the War Department. Accordingly, before the signing of the armistice the division had drawn up schedules of minimum imports, had held hearings with members of the trades on important commodities, and had already submitted to the War Trade Board its completed recommendations as to those articles which alone should be permitted to be brought to this country in ships after January 1, 1919. The results of this cooperative work with the War Department became evident during November and December when ships already allocated to the Army were delivered for employment in transport service and the service of supply. The division also aided the War Department in planning return routes

and return cargoes for transports carrying men and supplies to Siberia.

The section of the Division of Planning and Statistics which specialized in statistics on shipping, had during the past year increased its sources of information and perfected its forms of record to such an extent that it has been able to issue statements, complete and accurate to a degree not hitherto equaled in any statements on American shipping and of a sort not published elsewhere.

The division has made interpretive studies of the world tonnage situation, contrasting shipping in late prewar years with shipping at the beginning of 1919, showing the changes in vessels under the flag of each maritime nation and indicating the losses due to the war. Continuing records of world tonnage facts were kept, so that changes in world and national tonnage could be followed, and the character of vessels built by competing nations could be watched.

Other activities of the division along this line included a summary of the war-time employment of ships, a report on the acquisition and utilization of German tonnage, and a current record of facts concerning the ownership and control of the United States merchant marine. These facts about shipping companies included the sources from which each company acquired its tonnage, the size and speed of its ships, how the ships were held, and, in general, how they compared with Shipping Board vessels. This information was significant in its bearing upon the problem of assigning Shipping Board vessels to private operators for different trades.

Among the publications of the division which especially interested ship operators were (1) a study of the Relative Desirability of Ships, i. e., a report on the cost of operating four different types of ships in elected trades, and (2) a comprehensive bulletin on Steamship Fuel Stations of the World.

With a view of serving the Shipping Board as the largest operator of American shipping, and likewise to serve other ship operators and traders of the country, the division planned and carried to a conclusion a series of studies on the trade of the United States with the various parts of the world.

#### RECRUITING SERVICE.

The Second Annual Report of the Shipping Board contained figures on the work of the Recruiting Service up to November 8, 1918. The signing of the armistice, which terminated the fighting in the World War, on November 11, introduced abruptly a period of readjustment of the service from a war to a peace basis which presented new and difficult problems, and lasted into the summer of 1919.

The first step in the readjustment program was to turn back to their owners, as rapidly as practicable, the passenger steamers that

had been chartered as a war measure for use as training ships for the merchant marine, and on which apprentice seamen, stewards, and firemen were given intensive instruction for two months before being shipped in merchant crews. To replace the training vessels thus turned back to normal peace-time uses, the Shipping Board authorized the allocation to the Recruiting Service of not less than six of the wooden cargo ships constructed by the Emergency Fleet Corporation.

The total of men trained for service in the merchant marine crews by the Recruiting Service from the starting of the training system for apprentice seamen, firemen, and stewards, January, 1918, to June 15, 1919, were as follows:

Deck department (sailors).....	9,523
Engine department (firemen).....	9,053
Steward's department (messmen, etc.).....	5,333
Total.....	23,909

There were 932 students in the 26 classes in session in May, 1919. The highest attendance at the schools on a war basis had been 1,634 in September, 1918. No change had been made meanwhile in requirements for admission, only seamen with satisfactory deck experience being accepted for the navigation schools and men with satisfactory mechanical or engineering experience for the engineering schools. The course in the former is six weeks and in the latter one month. Totals of graduates from June 4, 1917, when the first school was established, to June 15, 1919, are as follows:

Navigation schools.....	4,591
Engineering schools.....	5,171
Total.....	9,762

#### Schools for Turbine Engineers.

Another division of the Recruiting Service training system for officers, which has met with gratifying success, is that for training chief engineers for turbine ships, by means of special courses at the works of companies making this type of engine.

Early in the building program of the Emergency Fleet Corporation trouble had been experienced on new vessels fitted with turbine engines. In many cases this was attributable to the assignment of chief engineers experienced in handling reciprocating engines, but unfamiliar with the basic principles of geared turbines.

Engineers who understood turbines thoroughly were then scarce.

This led the Recruiting Service to organize its turbine schools for chief engineers. The principal manufacturers of these engines cooperated heartily with the Board.

Instruction in the Recruiting Service's turbine classes is of a strictly practical character, with a proper proportion of class-room work, lectures, and blue-print study under expert instructors, to de-

velop thoroughly the student's practical knowledge of turbines gained by previously handling them at sea or by actual work on progress in construction, and in the assembling shops, or both.

The number of chief engineers trained by the Recruiting Service's turbine classes from January 1, 1919, when the system reached full development, to July 1, 1919, was 77, it being the policy of the Recruiting Service to have the supply of chief engineers never in excess of the demand.

#### Sea Service Bureau.

Notwithstanding the urgent need of crews for American merchant vessels during the war, the demand for such crews became greater with the return of peace conditions.

Formed in July, 1917, as an agency for placing in employment on shipboard the graduates of the Recruiting Service schools for deck and engineer officers, the Sea Service Bureau had first expanded its organization with the creation of the training service for apprentices in January, 1918. By the autumn of 1918 it was apparent that the Sea Service Bureau should be developed as a representative national shipping agency, and with a view to such development, the Shipping Board in November, 1918, authorized the bureau to take over the shipping offices of the Division of Operations which during the war had charge of shipping crews for all vessels under control of the Shipping Board, with principal offices at New York.

The consolidation of the shipping offices of the Division of Operations with Sea Service Bureau eliminated duplication of effort as to the shipping of men on vessels controlled by the Shipping Board, in the various cities where the Sea Service Bureau maintained shipping offices; gave the Recruiting Service control of the outlet for its graduates; and created a broad foundation for the building up of a permanent national shipping agency, for service to all American ships whether operated by private interests or the Shipping Board.

One important departure from war-time practice in the shipping of men by the Sea Service Bureau was a ruling effective May 1, 1919, making a charge of \$2.50 for each officer and man placed on a ship, no matter by whom owned or operated. In addition to this charge the operator pays the actual cost of transportation in putting men on board a ship, by means of launches or otherwise, or from one port to another. In announcing its purpose of charging a fee for placing men, the bureau invited the opinion of operators on the subject. With but two exceptions those who replied were in accord with the plan. The bureau announced that when conditions should so warrant, the charge would be eliminated.

In connection with placing crews, the bureau maintains a staff of inspectors, who visit vessels and see that living quarters for crews are maintained in accordance with law.

Under the new arrangement the business of the Sea Service Bureau shipping offices increased during the first seven months that the combined offices were in operation, from 6,330 placements in November, 1918, to 11,673, in May, 1919.

Prior to November, 1918, the Sea Service Bureau had placed 18,748 officers and men in 11 months. About 43 per cent of the men placed went into the coastwise service and 57 per cent into ocean service, including the South American trade. About 70 per cent of the crews on American vessels, before the war, were foreign born, but in May, 1918, 65.7 per cent of the men placed on vessels by the Sea Service Bureau were *American born*. This figure was considered evidence of satisfactory progress made in Americanizing the personnel of the merchant marine.

The proportion of the men placed by the Sea Service Bureau in the first seven months covered by this report to the total placed on American vessels through all agencies, has been difficult to determine. It was, found, however, in a given month (May) of all men shipped at a representative port (Boston), 64 per cent were placed through the Sea Service Bureau. In some of the smaller ports the Sea Service Bureau made practically 100 per cent of the placements.

#### **Medical Department.**

An important division of the training system for recruits is the Medical Department of the Recruiting Service. Each ship in the training fleet is equipped with a complete up-to-date hospital, with every appliance and instrument that would be required in any ordinary surgical emergency. Any major surgical operation can be scientifically and properly performed in any of these hospitals in the training ships. Each hospital has a surgeon attached, a male nurse, and hospital attendants. In the routine of the recruiting work, more than 23,000 recruits were examined physically by representatives of the medical department between January, 1918, and June, 1919.

#### **MARINE AND DOCK INDUSTRIAL RELATIONS DIVISION.**

During the years when the United States was unable to build up an ocean merchant marine, or even maintain the small fleet which she already had, it was often claimed that the great drawback lay in the labor situation. American capital would, to a certain extent, enter into shipping; but it cost more to build ships in America. American ships, when built, paid higher wages, and, it was claimed, cost more to operate. So American vessel owners either failed under the stress of international competition, or put their ships under foreign flags. The problem of the Shipping Board has been to pay such wages and to establish such conditions and opportunities aboard

ship as would induce American boys to go to sea, and to develop an efficient merchant marine.

As the basis of its attempt to maintain peace in the shipping industry and attract to the merchant marine a good quality of American youth, the Shipping Board has followed a policy of close cooperation with the marine and longshore labor unions. The total number of seamen and longshoremen in the employ of the Shipping Board is so large, and so widely scattered, that it would be impracticable for the Shipping Board itself, or its officials, to try to deal directly with the individual employees. Fortunately, however, the Shipping Board found already in existence, in each branch of the marine industry, and in the longshore industry, well-organized voluntary associations of employees, whose elected representatives seemed to enjoy the confidence of the rank and file. Whenever any question has arisen involving the peace or welfare of the men who load or man the ships, the Shipping Board has made a practice of calling upon the union representatives, or it has itself been ready to listen to any such who might come to the Board. As a result of this frank interchange of opinion a mutual understanding has usually been reached.

Several costly strikes which have recently involved the Shipping Board make it desirable, however, to emphasize the fact that labor issues are very apt nowadays to be thrashed out by industries; and that no employer, no matter how careful himself, is altogether secure, unless the basic labor condition in the whole industry of which he is a part is essentially sound. As another main feature of its labor policy, the Shipping Board has accordingly sought the cooperation of all other employers in the marine and longshore industries in the working-out of a general system of labor relationship, which might give to all concerned the largest measure of security. This movement has progressed the farthest in the longshore industry, where the National Adjustment Commission, established in August, 1917, through the joint efforts of the Shipping Board, the longshoremen, the private employers, and various Government departments, has since the war been developing into what it is hoped will be a permanent peace-time organization. The wages and working conditions of longshore employees in most of the ports of the United States are now those fixed by this representative body.

A detailed account of the measures taken by the Shipping Board in dealing with its labor problems is contained in the Second Annual Report of the Shipping Board and in the special reports of the Director of the Marine and Dock Industrial Relations Division, and the Chairman of the National Adjustment Commission, issued by the Board December 31, 1918. These reports cover the period of the war, and the month or two immediately following the armistice. During this

entire period, there was not a single strike on either ocean vessel or harbor craft, and only one minor interruption of longshore work.

#### PORT AND HARBOR FACILITIES COMMISSION.

The activities of the Commission during the fiscal year consisted of strictly war activities, dry-dock activities, port study and investigation, coal and cargo handling machinery, commerce studies, and assistance and encouragement toward port development. A brief summary of each particular activity is given in the following paragraphs:

At the time of the declaration of the armistice, the Commission had made investigation and had plans underway for the establishment of a large ship-repair plant at Norfolk, Va., where conditions as to repairs were very much congested;

For the pooling of equipment and port facilities and the establishment of a central authority for the larger ports;

The Commission's engineers had investigated coal and cargo handling facilities and methods, particularly at New York and Norfolk.

##### Dry-Dock Activities.

Dry docking facilities in the ports of the United States were so inadequate that the Commission devoted considerable part of its energies to the improvement of the dry-dock situation. It studied the provisions for dry docks abroad; made recommendation as to the best location for dry docks in the United States, for the guidance of the Emergency Fleet Corporation; recommended the construction by the Emergency Fleet Corporation of two graving docks at the Norfolk Navy Yard; and the building of 10 floating dry docks by the Emergency Fleet Corporation, for sale to private parties. The Commission also recommended the construction of 19 floating dry docks to be owned and operated by individual repair yards at certain ports where such facilities were lacking.

Dry docks are now under construction, or early construction is contemplated, at New York, Los Angeles, San Francisco, Portland, Oregon, and Seattle.

##### Port Study and Investigation.

The Commission has inspected the ports of Portland, Me.; Boston; Providence; New Bedford; New York; Philadelphia; Baltimore; Norfolk; Wilmington, N. C.; Charleston; Savannah; Brunswick; Jacksonville; San Diego; San Francisco; Los Angeles; Portland, Oreg.; Seattle, and Tacoma.

It has recently published a digest of the facilities of 27 of the principal ports of the United States, which shows in detail the characteristics of such ports, including available depths, railroad and steamship lines using the port, dry docking and repair facilities;

length and area of piers and depth of water in slips, as well as type of unloading equipment, facilities for oil and coal bunkering, warehousing, and grain storage facilities, etc.

#### Coal and Cargo Handling Machinery.

As a result of two conferences with the manufacturers of mechanical handling machinery, which were called last fall by this commission, an organization has been formed of the principal manufacturers, for the purpose of securing improvements in design and promoting wider use of such equipment. This association has recently been requested by the port authorities of New York to devote its particular attention to the conditions at that port, with the idea of equipping it with the handling appliances best suited to the needs of the port. The methods of cargo handling at the principal ports, and the costs by various methods at each port, are being investigated, with a view to obtaining correct data that will enable the Commission to furnish information and make suggestions and recommendations for improvement.

#### INVESTIGATION OF OCEAN RATES AND TERMINAL CHARGES.

In order to provide an intelligent basis for governmental regulation of ocean freight rates and of terminal companies a "Rate Investigation" was organized under the direction of Prof. Emory R. Johnson, and a study of terminal charges was conducted by Dr. C. O. Ruggles. (See "Ocean Rates and Terminal Charges," by Emory R. Johnson, and "Terminal Charges at United States Ports," by C. O. Ruggles, Government Printing Office, 1919.)

#### Ocean Charter and Freight Rates.

In the investigation of ocean freight rates, compilations have been made of the rates fixed by the Shipping Board, charter rates from 1914 to 1918 applying to commerce leaving American ports, and freight rates on "general cargo" and on the leading commodities for the year ending June 30, 1918.

#### Terminal Charges and Practices.

A careful investigation of terminal services and charges has been made and a report of the investigation published. ("Terminal Charges at United States Ports," by C. O. Ruggles, Government Printing Office, 1919.)

Conclusions formed as a result of this investigation would indicate that a greater governmental regulation of terminal facilities than has existed in the past is necessary. Among the problems to be considered are the ownership of strategic facilities by railroads, the intensity of railroad competition in terminals, the duplication of extensive properties, and the lack of coordination both among the railroads themselves and between rail and water carriers.

## BOARD OF SURVEY AND CONSULTING ENGINEERS.

This Board was organized on April 7, 1917. The original function of the Board was surveying and repairing the German and Austrian vessels acquired after the United States entered the war. The Board continued to perform, during the current fiscal year, the duties outlined in the Second Annual Report. In addition, the Board investigated for the Chartering Department the deadweight carrying capacity of vessels under charter to the Government, surveyed damages to vessels, prepared specifications for the repairs, and was part of a Joint Board of Survey, consisting of the Shipping Board, Army, and Navy, the duty of which was the surveying of vessels for redelivery to owners. The Board also acted in an advisory capacity in all technical matters of ship construction and repair. The work formerly handled by the Board was gradually taken over by the Construction and Repair Department of the Division of Operations.

## SALE OF SHIPS.

The Ship Sales Division was organized to handle the details connected with the sale of vessels constructed by the Emergency Fleet Corporation, and of other vessels to which the Board has acquired title. This division conducts the preliminary negotiations, makes appropriate recommendations to the Board concerning the offers received to purchase vessels, arranges for the delivery of vessels after acceptance of the offer by the Board, and transmits to the treasurer of the Emergency Fleet Corporation the proceeds from all sales. While no aggressive campaign has been inaugurated, the publicity given through the press that vessels were being offered by the Board has resulted in a number of sales.

Standard prices and terms for designated types of vessels have been announced, and have been given as much publicity as possible.

The aim of the Board is to place the ships sold in the hands of substantial companies with a bona fide intention to operate them, and with such experience and competency as should enable them to operate the ships successfully. With these objects in view, a thorough investigation of the financial standing and the business qualifications of every bidder or prospective purchaser is made. The fact that the Board has only one price for its ships, and that its sales transactions are made only with real operators, serves effectually to eliminate speculation.

When the sale of wooden ships is negotiated through a broker, a brokerage commission of  $1\frac{1}{2}$  per cent is allowed, but no commission is allowed on the sale of steel vessels.

## II. UNITED STATES SHIPPING BOARD EMERGENCY FLEET CORPORATION.

### DIVISION OF CONSTRUCTION.

#### ORGANIZATION AND JURISDICTION OF THE CORPORATION.

The Corporation's jurisdiction and duties, defined in the Act under which it was created, and further by various Executive orders of the President of the United States, are to purchase, construct, equip, lease, charter, maintain, and operate merchant vessels in the commerce of the United States. The controlling authority of the Corporation is vested in a Board of Trustees.

Since the Second Annual Report many changes have occurred in the membership of the Board of Trustees and in the management of the Corporation. The resignation of Charles M. Schwab, Director General, on December 2, 1918, and of Charles Piez, Vice President and General Manager, on April 30, 1919, made it necessary to rearrange the duties of the various offices, and the development of new problems incident to the curtailment of the building program added new functions.

At the close of the fiscal year ending June 30, 1919, the activities of the Corporation were under the direction of the following Trustees:

Edward N. Hurley.  
Raymond B. Stevens.  
John A. Donald.

John H. Rosseter.  
H. M. Robinson.  
J. L. Ackerson.

In reviewing the activities and accomplishments of the Corporation during the year it is proper to refer briefly to the difficulties which confronted the management from the very beginning and the obstacles it was necessary to remove before ships could be produced. It was not possible to build ships until the facilities had been provided. This involved the organization of the largest Corporation in the United States, the construction of houses and villages, extension of transportation lines, construction and enlargement of shipyards, dry docks, marine railways, and manufacturing plants, the production of materials, the training of thousands of shipyard workers, provision for the safety, health, and welfare of the men, and the protection of plants and industries from damage due to enemy plots.

When the United States became a party to the conflict, the demand for ships could not be met by the shipbuilding facilities of the world.

About 75 per cent of the American output, moreover, was controlled by the Navy Department, and, therefore, was not available. The total producing capacity of the United States was limited to 42 yards with 154 ways for steel ships and 23 yards with 102 ways for wood ships of 3,000 or more deadweight tons. To produce tonnage the Corporation was obliged to build new plants and extend old yards. This portion of the program was practically 100 per cent completed on June 30, 1919, when the shipbuilding industry of the country had attained the following proportions (exclusive of yards engaged in work for the Navy Department and those building vessels of less than 3,000 deadweight tons):

	Ways
72 steel shipyards.....	461
4 steel tug yards.....	21

When the armistice was signed, the United States had become the leading shipbuilding nation both in tonnage capacity and rapidity of construction.

During the second quarter of 1919, 48 per cent of the world's tonnage under construction was building in yards in the United States. Of the world's steel tonnage under construction 44½ per cent was in our yards. This is shown in greater detail in the following tables:

SECOND QUARTER, 1919.

TOTAL TONNAGE UNDER CONSTRUCTION.

	Deadweight tonnage.
United States.....	5,811,214 (48 per cent).
United Kingdom.....	3,786,075 (32 per cent).
Other countries.....	2,429,361 (20 per cent).
	<hr/> 12,026,650
Steel ships:	
United States.....	4,746,663 (44.5 per cent).
United Kingdom.....	3,738,408 (35.5 per cent).
Other countries.....	2,171,497 (20 per cent).
	<hr/> 10,656,568

Notwithstanding the great reduction in the personnel of the Corporation following the armistice, the disturbed condition of industry in general, the elimination of overtime and other factors tending to retard production, the momentum attained by the American shipbuilding industry established new records in output which no country has ever approached.

AW-22A

In October, 1918, the yards delivered 391,000 deadweight tons of ships, a greater tonnage than was built in this country in the entire year 1915. In the eight months following the armistice a total of 3,192,833 deadweight tons of shipping was delivered, exceeding by 500,000 deadweight tons the tonnage completed by the corporation prior to November, 1918. During May, 1919, the deliveries amounted to 814,000 deadweight tons, an output in one month about three times the average annual construction in this country in recent years, considering only ships of 3,000 deadweight tons and over.

The rapid growth in the personnel of the Corporation dates from the requisition order of August 3, 1917, by which the construction of 431 steel vessels, of 3,056,088 deadweight tons, was brought under

the control of the Corporation. On December 31, 1917, the home office force had increased to 835 and the field organization to 698. The maximum number in the former reached 4,438 in September, 1918, and the field force 4,177 in April, 1919. On June 30, 1919, five months after curtailment was begun, these figures had been decreased to 2,275 and 4,128, respectively, and will be reduced to a much greater extent in the near future.

With the signing of the armistice radical changes in the policy of the Corporation became necessary. Up to that time rapidity of construction was the object sought, but subsequent effort was directed toward restoring shipbuilding to a normal basis, and measures contributing to that end were adopted.

The greatest change in the activities of the Corporation since the return of peace is due to the policy of cancellation. The maximum building program was at its peak in October, 1918, when 17,399,961 deadweight tons were under contract. The net program as of June 30, 1919, contemplates 13,616,836 deadweight tons. Practically all cancellations have been made that could be made at less cost to the Corporation than the difference between the cost to complete and probable market value.

No material departures have been made from the program of new construction approved by the Board and submitted to Congress in April, 1918, except in the case of barges and tugs, which were considered by the Board in the nature of an emergency. No new commitments or contracts were made after September 26, 1918, except where it was necessary to carry out work already begun.

The net program and status of construction as of June 30, 1919, are shown by the following table:

	Requisitioned steel.		Contract—steel		Contract—wood.		Contract—composite.		Contract—concrete.		Total.

MANAGEMENT OF SHIPBUILDING DISTRICTS.

The district organization controls all matters affecting each district and is under the jurisdiction of the District Manager whose office was created on July 2, 1918, and who reports directly to the Vice President. All authority previously granted to the District Officer and the District Supervisor now is centralized in the District Manager, who has complete control of ship production and ship inspection.

With the establishment of this organization, the local representatives of the following home office organizations were placed under the general supervision and control of the District Manager:

- Plant Protection Section.
- Passenger Transportation and Housing Division.
- Industrial Relations Group.
- Statistical Section.
- Shipyards Plants Division.

This centralization of authority in the District Manager proved to be of valuable assistance, as the various ship divisions were consoli-

dated into the Ship Construction Division, and under the District Manager's authority construction of wood, steel, composite and concrete vessels was coordinated.

#### CONTRACTS.

Prior to June 1, 1919, all investigations and negotiations in connection with the execution of contracts were conducted by the Contract Division. On that date the duties of the division were taken over by the Assistant in Charge of Contracts, Legal Division, and the work consolidated.

During the fiscal year the activities of the Contract Division varied from the functions originally exercised by the division incident to the award of contracts for ship construction. Until the establishment of the Division of Transfer and Private Construction by the Shipping Board, it devolved upon the Contract Division to pass upon and recommend or disapprove all applications for the construction of vessels for private and foreign account.

On July 25, 1918, the jurisdiction was extended to the solicitation, receipt and analysis of proposals and the negotiation of contracts for the construction of dry docks and marine railways, and later was added the responsibility of negotiating the readjustment of contracts for refinancing companies requiring additional loans.

On June 25, 1918, the negotiation of contracts for installation of machinery and equipment in hulls was delegated to the division.

Contracts for ship construction awarded by the Emergency Fleet Corporation are of three types: (a) Lump sum, (b) cost plus fee (fixed or sliding), (c) agency. The Corporation favored the lump-sum form of contract but many contractors were unwilling to take these because of uncertainties due to war conditions. Eighty-one per cent approximately of all contracts (active) are of this type, and 19 per cent of the cost-plus form.

Because of the many difficulties encountered in the progress of the work it became necessary for the Corporation to furnish funds to complete the ships and in adjusting the claims it was considered advisable to place most of the contracts on a cost plus-a-definite-fee basis. Later lump-sum contracts contain a guaranty by which 10 per cent of the contract price is withheld until six months after delivery of the ship. In most lump-sum contracts the builder is protected against increases in wage rates, freight rates, cost of certain material, authorized overtime, and in most cases premiums for early delivery of ships are offered with liability to liquidated damages for delay. In most cases the contractor financed the improvements or extensions to plant but where advances were made by the Corporation the accounts were controlled or security obtained.

The cost plus-a-guaranteed-fee type of contract was an early form which also contained provisions for bonus payment and collection of liquidated damages. The fee was made payable thirty days after acceptance of the ship. When the Corporation financed any part of yard improvements the cost was spread over the number of ships while the Corporation retained control of the property involved. The contractor usually has the option to purchase the Corporation's interest. All expenditures and commitments are under the jurisdiction of the Corporation.

The cost plus-a-sliding-scale-fee contract permits the Corporation to share in any saving in the construction cost below the basic cost and reduces the amount of excess cost to the Corporation if the construction exceeds the estimate.

The agency form of contract was used in connection with the fabricated shipyards at Newark, N. J., Bristol, Pa., Hog Island, Pa., and Wilmington, N. C. Under this type of contract the Corporation pays all costs and the agent receives a fixed fee for the construction of the ships, based upon an estimated cost. The agent receives no fee for yard construction. Any saving in the cost of ship construction below the estimated cost is divided equally between the agent, the owner, and the employees. Any increase in the cost is deducted from the agent's normal fee until the minimum fee is reached. Adjustments in the basic cost are made as in the case of lump-sum contracts.

Since the organization of the Emergency Fleet Corporation 508 contracts for ships have been awarded, representing a total tonnage of 18,092,921 deadweight tons.

The activities of the Shipyard Plants Division have been directed toward the completion of all shipyard projects which were under way at the beginning of the year, curtailment of all projects instituted primarily as war measures, establishment of proper repair facilities to meet the requirements of the ship program, disposal of plants owned by the Emergency Fleet Corporation which have completed their work, maintenance of such plants as still are in operation, and care of such properties as are under its jurisdiction.

#### SHIPYARD PLANTS.

With this program the division has maintained flexibility in its organization to meet changed conditions in the Emergency Fleet Corporation work during the year. The division consists of the following sections with their respective organizations: Plant Construction, Dry Docks and Marine Railway, Designing, Plant Disposal, and Records and Progress. The activities of the division also include the disposition of matters relating to power, to layouts of electrical control systems on dry docks and marine railways, and to dredging.

**Plant Construction Section.**

The Plant Construction Section has charge of all problems brought to the attention of the home office relating to shipyards.

During the year the work has shifted gradually from supervision over the designing and construction of shipyards and industrial plants to the completion of contracts still in force, the closing of contracts completed, the approval of the declaration as surplus of such excess materials as were obtained for the construction of shipyards, the curtailment of all projects or portion of projects not essential to the completion of the ship program under peace conditions, and the settlement of differences which arise in the course of construction work.

A list of all shipyards, which have held Emergency Fleet Corporation contracts is given in Table I, page 149. The number of shipyards in the country in April, 1917, and those engaged in Emergency Fleet Corporation work in May, 1919, is shown in Table II, page 154. Data on shipbuilding plants arranged by districts is given in Table III, page 155.

**Dry Docks and Marine Railways.**

Expansion of ship-repair facilities of the United States followed necessarily the rapid increase in the number of ships sailing under the American flag. Additional dry docking and marine railway facilities, as well as new repair plants had to be fostered by Government aid. To handle this work the Dry Docks and Marine Railway Section of the Shipyard Plants Division was established in September, 1918. In conjunction with the Port and Harbor Facilities Commission of the United States Shipping Board, this section during the year has made complete studies of the ship repair facilities in the United States under the prewar and present conditions, and has determined the actual repair facilities required per ton of shipping as indicated by data pertaining to the United States as well as to the rest of the world. Investigations have been made which indicate the shortage of repair facilities that will exist in the United States when the program of ship construction will have been completed, also the amount and proper location of repair facilities which will be necessary to maintain the ships completed and to be completed.

The Dry Docks and Marine Railway Section prepares or exercises supervision over the preparation of designs, plans, and specifications for the construction of dry docks and marine railways and necessary repair plants, negotiates contracts, verifies by independent investigation the representations of contractors and other parties interested, and submits to the office of the vice president its findings and recommendations for review and closing of contracts. To this section has been assigned the duty of supervising the construction of dry docks

and marine railways, and repair plants, in which the Corporation has a financial interest.

In addition to the various dry docks, marine railways and repair plants being financed by loans from the Corporation, there are eight 10,000-ton dry docks now under construction by the Corporation for sale to private interests. Negotiations for the sales are carried on by the section and the findings and recommendations are prepared and submitted to the Vice President for review and approval.

#### **Designing Section.**

The Designing Section originally was organized to supply technical information and to examine plans and estimates as to engineering problems pertaining to shipyard plant construction, including construction of buildings, launching ways, and yard layouts.

Later the problems of designing, redesigning, altering, and checking plans for the various dry-dock repair plant projects were referred to the section for the detail work involved.

#### **Plant Disposal Section.**

During the war emergency the Government was obliged to build or finance shipyards as well as ship construction. As a result, several shipyards are owned entirely by the Corporation, or have reverted to its ownership in the course of their construction and operation, through various causes. Disposing of these by sale or dismantling and salvaging the materials is a part of the work of the Corporation carried on by the Shipyard Plants Division. To sell a plant in its entirety means a greater return to the Government than can be obtained if a plant were dismantled and the materials and equipment salvaged, and it has been the policy to assume charge of these plants and to attempt to dispose of them in their entirety, before disposing of the materials composing them.

The Plant Disposal Section is making the necessary investigations to determine the advisability of selling plants as going concerns or dismantling them, or of converting the shipyards to other manufacturing purposes.

#### **Records and Progress Section.**

The Records and Progress Section was organized primarily to establish and continue records of the progress in construction of shipyard plants and certain manufacturing plants. The work of this section now covers all pertinent records of shipyards, ship-repair plants, and industrial plants in which the Corporation has interests.

#### **Concrete Shipyard Section.**

The Concrete Shipyard Section, which was an active part of the Division while construction of the concrete shipbuilding yards was in progress, was discontinued February 15, 1919, due to completion

of the yards; miscellaneous work that remained was transferred to the supervision of the Plant Construction Section.

#### **Property Inventory and Custody Section.**

To identify properly and care for the materials, supplies, equipment, and other property owned by the Corporation, the Property Inventory and Custody Section was established August 30, 1918, its duty being to record and mark all property, equipment, and materials belonging to the Corporation, and to establish and maintain physical custody and regular inspection of the same.

In May, 1919, when the Supply and Sales Division was established the Property Inventory and Custody Section was transferred to that division, and later was designated as the Inventory and Appraisal Section. A complete report of the work accomplished by this Section will be found elsewhere in the report.

#### **Fire Protection Section.**

The Fire Protection Section was established in 1917. The head of the section and the principal members of the staff were engineers from the National Board of Fire Underwriters and were transferred by the Board to the Corporation at a nominal salary.

The function of the section was to lay out fire-protection systems and to inspect fire installation at the plants. The inspections preliminary to laying out the systems as well as the inspections to determine the adequacy of existing protection were made by the established local organization of the National Board of Fire Underwriters.

#### **Power Section.**

The Power Section was created to make surveys of power conditions at the shipyards under the jurisdiction of the Corporation, and to see that sufficient power was provided to every yard to prevent delay in the construction of ships. It made recommendations for augmenting sources of power in existence and in most cases succeeded in uncovering and bringing into use sufficient idle power to meet all demands. The work necessarily was greatest at the beginning of the war emergencies and within the year has so diminished that the section now virtually is abolished.

#### **Dredging Section.**

The Dredging Section was created to exercise control over all dredging operations in connection with Corporation contracts, except at the agency yards. Its duties covered the allocation of dredges and supervision over their performance that there might be no delay in plant construction or in the launching of ships. Dredging was of greatest necessity at the beginning of the construction program. Such work as now remains is confined principally to that required for dry docks, marine railways, and ship-repair plants.

**Field Organization.**

In the field the Shipyard Plants Division is represented in each district by a District Plant Engineer, who has under his direction the necessary resident engineers, traveling engineers, inspectors and staff. Originally this field force represented the home office on plant construction and had direct supervision over such work within their jurisdiction. Within the year construction work has diminished gradually and duties of the District Plant Engineers have changed accordingly. They have jurisdiction over plant maintenance in all shipyards where the Corporation has interests, and supervise directly this work. They have charge of all Corporation property not under other jurisdiction. They certify as surplus all excess materials obtained for shipyard plant construction, and transfer same to proper authorities for sale and disposal. They maintain the necessary force to guard and protect Corporation property not in actual use, and give aid and assistance with their organizations to the Dry Docks and Marine Railway Section in the performance of construction work on ship repair plants.

**PLANT PROTECTION.****Guard Branch.**

The guard organization at the time of the signing of the armistice consisted of more than 7,000 civilian guards, well organized and drilled. There also were assigned by the War Department, at the request of the Corporation, about 5,000 troops for guarding purposes.

The activities of the guard branch are indicated by the number of arrests for minor and petty offenses, more than 10,000 being made within the year. The small number of arrests for serious offenses such as attempts to burn or destroy property by alien enemies, testifies to the deterring effect the organization had upon such element, which was believed to be active in the many yards.

**Investigation Branch.**

The department of investigation was organized in April, 1918. Relations were established with the Bureau of Investigation of the Department of Justice, the Office of Naval Intelligence, the Military Intelligence Section and other agencies of the Government, and operations in which this department was jointly interested were so coordinated as to avoid duplication of effort and expense.

War time conditions imposed upon the department extensive operations to combat the machinations of enemy aliens within and without the shipyards, which work, together with other activities, required the employment of a staff never exceeding 70 special agents, under the direction of a chief and two deputy chiefs. Branch offices were opened in New York and San Francisco. After the armistice was signed, the war time work was discontinued, resulting in material reduction in personnel and curtailment of expense.

**SHIP CONSTRUCTION.**

With the increased production under the program of the Emergency Fleet Corporation the general duties of this division have expanded noticeably within the year. The work consists principally of the development of original designs of new types of vessels, approval of contractors' designs, administration in connection with ship contracts, inspection, approval of all details of construction and certificates of payment, trial trip procedure, acceptances and delivery of vessels, maintenance of records of ship construction, preparation of statistical information of the activities of the Corporation, and handling of correspondence related to these matters.

After the armistice, with the wood ship construction program curtailed, it was found desirable to return to the original organization, and consolidate the various construction units within one Division. On January 16, 1919, the Ship Construction Division was created, with jurisdiction over all the activities of steel, wood, composite and concrete construction.

The Ship Construction Division retained a naval architect and consulting engineer, as head of the Engineering Section, and established the following sections to perform necessary duties within the division:

Steel Ship, Wood Ship, and the Concrete Ship Sections to control the activities of ship construction of their respective character; Records Section, to coordinate within one section the records of all activities of the Ship Construction Division; Performance Section (developed from the former Performance Branch), to control trial trips and performance of all completed vessels; Cost Review Section to keep records on changes, extras and cost of construction on all types. The Camouflage Section existing under the old Steel Ship Construction Division was abolished with the elimination of camouflage painting after the signing of the armistice.

**Ship Construction Program.**

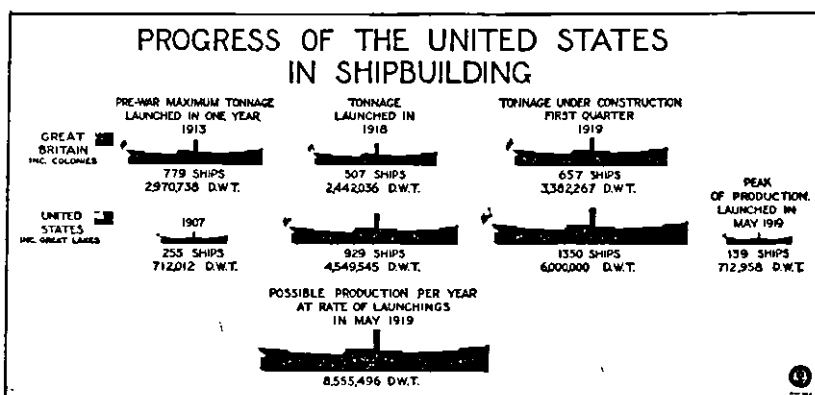

The accumulated program of ship construction, covering steel (requisitioned and contract), wood, composite, and concrete vessels, including the original program, cancellations, suspensions and active program, as of June 30, 1919, is shown in Tables IV and IV (a) pages 163 and 165.)

The maximum program, which was reached about October 15, 1918, contemplated 3,148 ships of 17,399,961 deadweight tons. (Table V page 166.)

## POLICY OF BUILDING PROGRAM.

## Wooden Vessels.

With the initial demand for additional tonnage made to the Shipping Board at its creation, a comprehensive program of wood ship construction was adopted, a large number of new firms undertaking this type of construction, and work was begun early in the Corporation's activities. With completion of earlier contracts and with availability of new yards for others, several additional contracts were made subsequently and the entire program was carried forward with the greatest possible expedition. The time for completion, however, was found to be considerably greater than originally anticipated, owing to the difficulties in obtaining workmen and materials.

As a result, on the signing of the armistice, the Corporation found itself with a large number of wooden vessels in various stages of completion and with many contracts in existence for wooden vessels on which construction had not been started. Steps were taken in all cases, where construction had not advanced too far, either to abandon the construction, or where possible to complete the vessels as barges or as hulls without machinery with the purpose of disposing of them when completed. This procedure has resulted in preventing a very considerable expenditure of Government funds. The extent of the reduction in the wood ship program at the end of the fiscal year is shown in the accumulated program.

## Composite Vessels.

Accompanying the wood ship program was a limited program, originally 50 ships, of composite construction. This type of ship, however, has proved costly to build and has required a long time for construction. Therefore, with the contraction of the wood ship program, the number of composite vessels was reduced considerably.

**Steel Vessels.**

Steel vessels on the ship construction program are divided into two classes, requisitioned and contract. The program of requisitioned vessels is nearing completion rapidly. Moreover, with the establishment of the new yards and increased production on contract steel ships, on May 24, contract deliveries exceeded deliveries of requisitioned ships, the tonnage being 2,155,625 and 2,144,887 deadweight tons, respectively.

In assigning contracts for steel vessels and also in the policy of cancellation consideration was given when possible to the creation of a properly balanced fleet with the necessary number of vessels of various sizes and types. Due to the intense stimulation of the ship-building program, the rate of construction of steel vessels and their equipment was increasing monthly until the signing of the armistice, when steps were taken to reduce the cost of construction, although it meant the sacrifice of speed.

**Concrete Vessels.**

Upon the adoption of the concrete program special engineers were enrolled to handle this new industry, and great development in design and construction of concrete vessels followed. After the armistice, pressure for tonnage being relieved, the concrete ship program was reduced to a minimum, arrangements being made to complete only those vessels which on account of their advanced state of construction, could not be abandoned without great loss. The first concrete vessel designed by the Emergency Fleet Corporation probably will be delivered in July, 1919. The construction of concrete vessels, with one exception, is being carried out in shipyards financed by and under direct control of the Corporation, the contractor being the agent of the Corporation.

**Camouflage.**

After the entry of the United States into the war the application of camouflage to all vessels being built by the Corporation became obligatory, and the work of developing methods and creating an organization for this undertaking was begun promptly.

Advantage was taken of the knowledge and experience gained abroad, and many competent artists were engaged under whose direction designs were made and applied to the vessels. A great advance was made in the art, and the result as measured by the immunity of vessels in the war zone was most satisfactory.

**Summary of Progress.**

To present briefly the progress that has been made in the ship-building program a summary of keel layings, launchings, and deliveries has been prepared (Tables VI, VII, VIII, and IX, pages 168, 170, 171, 172 ).

AGENCY YARDS.

The fabricated shipyards started the year with keels laid on 44 of the 62 ways, 19 of the ways at Hog Island being held until a greater supply of steel was available.

The following tables show the progress made from the beginning to June 30, 1919, and also the production during the fiscal year:

	Keels laid.	Launched.	Accepted.	Delivered.
To date (June 30, 1919):				
American International Shipbuilding Corporation..	88	39	27	26
Merchant Shipbuilding Corporation.....	24	12	9	9
Fiscal year:				
American International Shipbuilding Corporation..	57	39	27	26
Merchant Shipbuilding Corporation.....	12	12	9	9

At the close of the year there were 62 keels on the ways in various stages of completion from 10 to 90 per cent.

There is an ample supply of fabricated steel on hand at both yards. During the year the labor force on ship construction increased from 8,500 on July 1, 1918, to approximately 28,000 on June 30, 1919.

**Contracts at Agency Yards.**

Contract.	Shipbuilder.	Number of ships	Tonnage.
<b>STEEL CARGO SHIPS.</b>			
83	American International Shipbuilding Co.....	110	825,000
87	Merchant Shipbuilding Corporation.....	40	360,000
<b>STEEL TROOP, HOSPITAL, AND REFRIGERATOR SHIPS—CONTRACTS.</b>			
83	American International Shipbuilding Corporation.....	12	96,000
<b>NUMBER OF SHIPS SUSPENDED OR AWAITING DECISION.</b>			
83	American International Shipbuilding Corporation (troop ships).....	23	184,000
<b>SHIPS CANCELED.</b>			
83	American International Shipbuilding Corporation (troop ships).....	35	280,000
87	Merchant Shipbuilding Corporation (cargo ships).....	20	180,000

**NUMBER OF SHIPYARD EMPLOYEES.**

While the maximum number of shipbuilders engaged in the construction of wood and composite ships was attained in September, 1918, at a figure of 80,102, the employees in construction of steel ships continued to increase until May, 1919, when approximately 267,575 shipbuilders were engaged in the various steel yards constructing for the Corporation.

**QUALITY OF PRODUCTION.**

Immediately upon the signing of the armistice the ship-production program was placed upon a quality basis instead of upon a production basis, good workmanship and design together with economical methods of construction being made the controlling features.

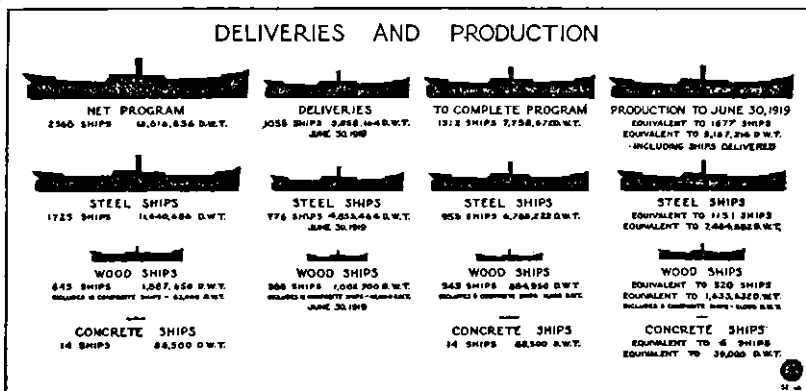

Steps were taken to analyze the various types of vessels under contract at the time and to determine in what respects it might be possible by modifying those vessels to improve their efficiency or use-

fulness. A study was made of the probable requirements of shipping in the future and a building program is being considered, including those types of vessels, particularly of larger size and greater speed, which have proved to be essential for the carrying trade of the country.

Appreciating the urgent necessity of having the vessels as built and delivered ready for continuous service, qualified engineers were enlisted, forming the nucleus of the performance section responsible for conducting trials of vessels.

Careful consideration was given to the engineering details of all vessels, and the routine in connection with inspection and trial trips was developed with the intention of discovering any defect in construction or installation before a ship was placed in service. An accurate record has been kept from an engineering point of view of the performance of each vessel on trial and in service so that future

construction could be improved as a result of this information. Notwithstanding the greatly increased and increasing number of vessels in service, the records show that difficulties experienced with these vessels have decreased to a marked degree.

#### CANCELLATIONS OF VESSEL CONTRACTS.

The general basis on which cancellations were undertaken depended upon the type of vessel involved. In the case of wooden, composite, and concrete vessels it was evident that the number actually contracted for was much in excess of the normal requirements of the country in peace time, due to the fact that such vessels either were of an untried type, therefore susceptible of improvement, or were least desirable because of such small proportions and carrying capacity.

In the case of steel vessels, before action was taken toward curtailment the construction program was reviewed by officials of the Corporation and by constituted boards of ship owners and operators.

It was determined that more of certain types of vessels were under construction than could be utilized profitably, and suspensions or cancellations were instituted where construction had not advanced to such a degree as to make this action unwise. To round out the shipbuilding program, the design of several additional types of vessels running from 10,000 to 15,000 tons dead-weight was undertaken, many of them being of relatively higher speed than the average vessel under construction, the motive power in certain instances being Diesel engines and in others quadruple expansion reciprocating engines or geared turbines, depending upon the service desired.

#### DISPOSAL OF EXCESS MATERIAL.

As a result not only of the actual suspension and cancellation of vessel contracts, but by reason of the greatly reduced rate of shipbuilding after the armistice, the Corporation found itself overbought in many particulars.

The shipyards, under intense pressure during the emergency, had built ships at a rate far in excess of the production possibilities which existed at the outbreak of the war as regards machinery, boilers, equipment, and supplies of all kinds. The Corporation, accordingly, had been forced to create new manufacturing facilities in many directions and stimulate the production of all material and equipment necessary for shipbuilding, and much of this output became surplus after the armistice.

Cancellations of excess material and equipment have been effected as promptly as possible in order to reduce the consequent loss to a minimum.

#### COOPERATION WITH DIVISION OF OPERATIONS.

As the number of vessels delivered for operation increased, the necessity of cooperation with the Division of Operations, so that the vessels when delivered should be in all respects satisfactory for the purpose intended, became increasingly important. The Department of Construction and Repair of the Division of Operations was created to receive from the Corporation the vessels as completed, making certain that in all respects these vessels as delivered would meet the requirements of the service in which they would be placed, and, in addition, attending to all matters in connection with the repairs of vessels in operation. A working agreement was made with the Department of Construction and Repair whereby that department should be kept informed regarding vessel construction and types of vessels being built at the various yards; and a procedure was estab-

lished covering the conditions under which trial trips should be held, and claims against shipbuilders for defective work after delivery of vessels should be investigated and prosecuted.

### REQUISITIONED SHIPS.

The progress made in the construction of the steel ships which were under construction when requisitioned on August 3, 1917, by the United States and placed under jurisdiction of the Construction Division for completion can be best shown by reviewing the actual figures as of June 30, 1919.

Of the total number requisitioned, 431 vessels of 3,068,341 deadweight tons, 12 vessels of 109,600 deadweight tons were changed from requisitioned to contract during this period.

Thirty-one vessels (including the 12 referred to above) of 289,960 deadweight tons have been cancelled, and 16 vessels of 122,500 deadweight tons are now under suspension. These deductions leave an active program of *384 vessels of 2,655,881 deadweight tons.*

Of this active program, only 15 vessels of 127,800 deadweight tons remain, upon which active construction on the ways has not yet been started.

The following tables indicates the condition of the requisitioned ship program when the work was taken over on August 3, 1917, and at the close of the fiscal year:

#### *Original program, Aug. 3, 1917.*

[Deadweight tons revised as of June 30, 1919.]

Total program.		Being outfitted.		On ways.		Keels not laid.	
Number.	Dead-weight tons.	Number.	Dead-weight tons.	Number.	Dead-weight tons.	Number.	Dead-weight tons.
431.....	3,068,341	19	127,165	131	964,327	281	1,976,849

#### *Net program, June 30, 1919.*

Net program.		Being outfitted.		On ways.		Keels not laid.	
Number.	Dead-weight tons.	Number.	Dead-weight tons.	Number.	Dead-weight tons.	Number.	Dead-weight tons.
384.....	2,655,881	14	112,175	23	210,800	15	127,800

Delivered, 332, of 2,205,106 deadweight tons.

The output of requisitioned ships alone for the two years was at a rate greater than the previous maximum production of all yards in the United States for that period of time and was nearly three times the average total tonnage delivered from all yards in the country between the years 1910 and 1915. This result was accomplished notwithstanding the activities of the Corporation in developing production in new and extended yards.

#### INSPECTION.

Careful and well-organized inspection has been carried out during the construction and completion of our vessels. In addition to the shipbuilder's own organization, the Corporation maintains in the shipyards its corps of machinery and hull inspectors, the number depending upon the size of yard and rate of production. These inspectors are in the yards at all times and carefully watch all items of construction as they progress. For minor items or conditions needing attention, the necessary action is taken by the shipbuilder upon instructions from the resident representative of the Corporation.

In addition to the Corporation's inspectors, the classification societies—American Bureau of Shipping and Lloyd's Register of Shipping, maintain at all important shipyards, or in shipbuilding districts, an efficient corps of their own surveyors. These surveyors make regular inspection and report to their headquarters upon character of construction relative to the classification societies' rules and regulations.

Close relationship has been maintained between the Corporation's inspectors and the classification surveyors, the attention of each representative being brought to items under his jurisdiction when discovered by the other. As the classification surveyor works in compliance with the classification rules, and the Corporation's inspector works as direct representative of the owner, there has been no overlapping or duplication of jurisdiction or duties.

After acceptance from builder, cargo vessels are delivered from the Construction Division to the operating management upon a temporary receipt for safekeeping. The vessel is then loaded and 12-hour, in case of steel, and 24-hour, in case of wood, continuous full-power sea trial is held. This trial, made by the operating management, is run under the jurisdiction of the Division of Operations. The Trial Board is again present upon this trial, and, if the trial is satisfactory, issues an acceptance certificate, certifying that a conditional or final acceptance of the vessel may be made by the operating management. If, during trials, construction defects develop, the trial is reported as unsatisfactory, and immediate steps are taken by the Construction Division to remedy the condition and have the vessel repaired for additional trials.

## PASSENGER TRANSPORTATION AND HOUSING.

*Housing of Shipyard Workers.*

The emergency shipbuilding program precipitated an urgent demand for housing facilities for the shipworkers. The act of March 1, 1918, gave the Corporation powers sufficiently broad to relieve the tenseness of this situation, and to carry into effect the contemplated plans authorized by act of July 1, 1918, for the expenditure of \$75,000,000 for housing and \$20,000,000 for transportation facilities.

The Passenger Transportation and Housing Division of the Corporation, carefully surveyed all deficiencies in housing and transportation facilities, and formulated a building program, which included the construction of houses, dormitories, apartment buildings, stores, cafeterias, boarding houses, and municipal and public utilities, in the vicinity of or adjacent to the shipyards which were unable to house their employes properly.

The housing program as modified has furnished adequate accommodations for the employees of 24 shipyards and 1 turbine plant, and has included the construction of the following buildings—8,644 houses, 94 dormitories, 5 hotels, 6 boarding houses, 849 apartments, stores, and other miscellaneous structures.

The location, extent, capacity and cost of housing projects under the supervision and control of the Corporation are embodied in the tables. The foregoing accommodations have a capacity of housing 28,064 shipyard workers, or 55,308 individuals, and include the necessary stores and business quarters.

Public utility service was required in practically all of the projects, and in a few instances only was it possible to connect up with existing public utility systems. Negotiations with municipalities and public utility companies resulted in loans being made by the Corporation covering part of the cost of installation of the necessary utilities, the loans being evidenced by agreements and ordinances, or certificates of indebtedness providing for their repayment to the Corporation within from 5 to 10 years with interest at 5 per cent *per annum*, thus placing a part of the ultimate cost upon the public utility companies and municipalities. The loans ultimately will become credits on the cost of the respective projects. Detailed statements of the cost of installation of public utilities probably will show a return to the Government of approximately \$3,000,000.

During the period of the war the Corporation, by virtue of authority conferred upon it by Congress, requisitioned 436 houses in Philadelphia, and since the armistice 362 of these houses have been sold for an amount only 6.6 per cent less than their requisitioned cost. The Passenger Transportation and Housing Division has had to deal with 3,050 housing adjustments, where alleged profiteers attempted to

take undue advantage of the shipworker. In several instances it was necessary to resort to the temporary requisitioning power of the Corporation, but all such cases have been settled amicably and the property thus requisitioned has been returned to the original owners.

The actual total cost of all housing projects in practically all instances was at variance with the estimated cost, due to local and other conditions which it was impossible to anticipate. Recent estimates and calculations, however, show that the \$75,000,000 appropriation will be adequate to complete all projects of the active program and that a substantial balance will remain unexpended.

All of the projects are in the last stages of construction or completed. At those not completed the work at present involves the installation of street improvements, etc., and the necessary cleaning up. All projects should be completed by December 15, 1919. On June 30, in all projects, there were rented approximately 5,086 houses, apartments, and stores.

The Corporation under its mortgages on housing projects had reserved the power to exercise control over the rentals, sales, and management of the projects. With the completion of substantially all of the projects and the urgent demand for houses in all localities where they exist, the problem of disposing of them necessarily has received much attention by the Passenger Transportation and Housing Division.

Because of the excess cost due to war conditions it is not to be expected that housing projects can be sold either "en masse" or to individual home buyers for an amount which will equal the actual cost thereof. However, under the plans mapped out, should a selling policy be adopted, it is predicted that projects will be disposed of at a fair price, which is all that can be expected, because the matter of cost, whether high or low, established a value only indirectly. The Corporation can not expect to obtain more than the property is worth in the open market.

#### Transportation of Shipyard Workers.

A problem closely related to housing is that of obtaining adequate facilities for transporting shipyard workers. Where it has been found necessary to construct additional facilities, contracts have been made with the various transportation companies, under the terms of which the Corporation advances the money required to furnish the needed facilities. In general, the transportation companies perform all the work required, paying the Corporation 5 per cent interest on the full cost of the work during the period of the war and agreeing to pay after the termination of the war the value of the particular items furnished, its amount of repayment being determined by a

valuation which, in practically every case, is limited to a minimum of 75 per cent of the amount advanced. It is provided that repayment be made in equal annual installments, generally extending over a period of five years, with interest at 5 per cent on unpaid installments. As security for the money advanced, the Corporation retains title to all rolling stock and equipment until repayment in full has been made and is secured further by deposits of bonds, in collateral, or by other measures deemed necessary to protect fully the Corporation's interests.

Investigation of all shipyards having contracts with the Corporation discloses that additional facilities were required at yards having contracts for 73.7 per cent of the total dead-weight tonnage under construction or under contract for the Corporation.

At all of these yards adequate transportation facilities have been provided to take care of the present and expected future situation. It is estimated that these facilities will serve 184,000 shipworkers.

At yards representing 26.3 per cent of the tonnage program it was found that no additional transportation facilities were required.

Tables illustrative of the work in connection with passenger transportation and housing will be found in the appendix (Tables X to XVIII, pages 173, 177, 178, 179, 180, 181, 183).

#### CANCELLATIONS.

The policy of cancellation has been applied so as to reduce materially the program for wood, composite, and concrete ships, but in the case of steel ships actually under construction the cancellations have produced less effect in relation to the program.

On November 20, 1918, the first resolution looking to a settlement of cancellation claims was adopted by the trustees, at which time the Vice President and General Manager was given power to settle all claims which in his judgment should be acted upon at once to effect the greatest economy. The total of such claims was limited to \$200,000, and no settlement was to be made involving a net loss to the Government of more than \$25,000 without submission of such proposed adjustment to the Board of Trustees. To facilitate the handling of this work, an organization known as the Division of Cancellation, Adjustment and Salvage was formed to expedite the handling of claims resulting from suspensions or cancellations.

On December 10, 1918, it was determined to cancel contracts for wood hulls where cancellations could be effected for not more than \$200,000 and for complete wood ships where the cost to cancel would not exceed \$300,000. The cancellation of contracts for machinery, boilers, and equipment for these ships was adjusted on the best terms possible.

Authority was granted the Corporation to cancel all contracts for vessels the keels for which could not be laid before July 1, 1919,

providing the loss sustained through such cancellation would not be excessive. The cancellation in steel vessels alone affected under this decision amounted to more than 2,000,000 tons.

On January 15, 1919, the Board of Trustees established a definite procedure to be followed in connection with cancellations.

After a preliminary survey of the situation contracts were selected for suspension, and the contractor was instructed to do no further work in connection with the vessels in question and to furnish a complete statement under oath in reference to the ship, showing all materials on hand, commitments, actual expenditures to date, and total labor cost. The statement is checked up by the Claims and Cancellations Section in conjunction with the offices of the District Manager, District Auditor, and District Plant Engineer. The statement is analyzed to determine the cost of the cancellation. If less than \$50 per deadweight ton, cancellation is ordered; if more than \$50 per deadweight ton, reinstatement is ordered if other conditions are satisfactory. This figure was established as the dividing line because it represented the difference between the actual cost of ships and what appeared to be the market value at the time. If the cancellation could be effected for less than \$50 per deadweight ton, the expenditure would be less than if the ships were completed and sold.

If cancellation is ordered, negotiations are begun with the contractor and when mutually satisfactory terms have been agreed upon the findings are submitted to the Cancellation Board, established on March 22, 1919. This Board has authority to effect settlement of all claims which involve the payment of \$50,000 or less, and its decision is final. In the matters involving larger amounts the Director General's approval is required in addition.

The cancellation program has necessitated a tremendous amount of work. Over 2,200 cases are involved, representing over \$850,000,000 in value of contracts.

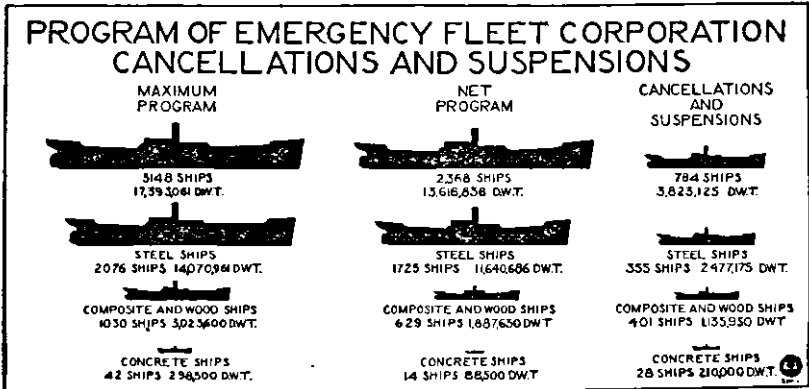

Activities of the Cancellation and Adjustment Section and Supply Cancellation Section are shown in detail in Table XIX and XX, pages 184 and 186.

The general policy of the Corporation regarding cancellations was influenced by many factors which entered into the question. As the appropriations had been made for an emergency purpose it was proper to reduce expenditures when that emergency had passed. On account of increasing costs, moreover, the ultimate expenditure for the maximum program would have exceeded the authorizations. Curtailment of the program therefore was necessary and in allotting the cancellations to the various yards consideration was given to the following features:

- (a) Cost to the Corporation of the cancellation.
- (b) Progress in respect to each hull proposed for cancellation.

- (c) Quantities of material at the yard.
- (d) Percentage manufactured or fabricated.
- (e) Status of the contracts as to amortization of plant investment.
- (f) Whether new or old yard.
- (g) Whether the Corporation had an investment interest.

(h) Whether the program included a surplus of the type of ship proposed for cancellation.

(i) Whether the general labor situation in each yard receiving cancellation orders would be disturbed by the cancellation.

In connection with the surplus of certain types the Corporation was guided by the report of a special committee of shipbuilders and ship operators appointed by the Board of Trustees to analyze the program.

### INDUSTRIAL RELATIONS.

The Industrial Relations Division was organized in May, 1918, to effect a coordinated and centralized grouping of administrative functions in connection with the various activities which, prior to

that time, were assigned to several divisions of the Corporation. The task of recruiting 300,000 shipyard workers in a brief space of time and of solving the many problems presented by this great expansion of the shipbuilding industry made a reorganization on this basis an urgent necessity.

The main features of the labor policy of the Corporation, which the organization of the Industrial Relations Division was designed to carry out, included the standardization of hours, conditions and wages, the peaceable adjustment of industrial disputes, the promotion of the welfare of employees. The natural difficulties incident to this program under normal conditions were augmented greatly because of the unsettled state of industry in general and also the unusual situation which developed. The Corporation had become, within a few months, the largest employer in the country, with the exception of the Railroad Administration. The accompanying table shows the rapid increase in the number of shipyard employees, reaching the maximum of 336,000 men in November, 1918.

*Employees engaged in shipbuilding and plant construction, Emergency Fleet Corporation program.*

As the shipyards are located at considerable distance from cities in many cases and were without the necessary utilities, housing, or transportation facilities, new problems arose in the effort to care for the men, whose numbers increased by thousands within a few days.

This situation introduced difficulties hitherto unknown in industrial management and, as the organization stood at the time of the armistice with a personnel of 358, it was unique in industrial work

In November, 1918, it became the purpose of the Corporation to contract the activities of the Industrial Relations Division as much as possible without relinquishing its contract with any of the problems which, during the period of reconstruction, could be considered vital. This was accomplished by the prompt abandonment of projected plans and the rapid reduction of personnel.

The discontinuance of the three branches, control, investigation and information, and promotion effected further reduction in the force. February 15, 1919, the Health and Sanitation Section became subject to the direction of the Public Health Service, continuing its work as a part of that body. Although this interim was marked by greatly decreased activities and narrowed functions, there was no radical departmental or organization change until April 1, 1919, when the Section of Labor Supply and Education and Training, and the Employment Management Branch were abolished, the proper disposition of the affairs of these several bodies being left to individuals formerly associated with them.

On May 1, 1919, the Division of Industrial Relations was discontinued as a bureau, and since then the work has been carried on mainly in the districts, subject to direction of the home office.

#### LABOR ADJUSTMENT.

On July 5, 1918, the Corporation, by a general order, announced that its labor policy would be in line with that laid down by the War Labor Board (see Second Annual Report, pp 84, 85), and that the principles of the policy of the War Labor Board would be followed in the terms of the rulings of the Shipbuilding Labor Adjustment Board.

The Shipbuilding Labor Adjustment Board awards established the rates as minimum only. This gave rise to a great deal of "stealing" of labor between yards which raised wages over those established by the Labor Adjustment Board. To stabilize labor conditions, therefore, on July 31, 1918, in General Order 77, the Corporation declared the rates of the Shipbuilding Labor Adjustment Board to be maximum as well as minimum.

On September 5, 1918, the Corporation, in Special Order 139, established in each shipyard district a representative of the Industrial Relations Division, who was to act in the dual capacity of district representative and examiner for the Shipbuilding Labor Adjustment Board. This arrangement was for the purpose of administering and enforcing the awards of the Shipbuilding Labor Adjustment Board by the Corporation, the representative being also the executive head in his district of all activities of the Industrial Relations Division.

On October 1, 1918, the Shipbuilding Labor Adjustment Board rendered its second set of decisions, establishing uniform hourly rates on the Atlantic coast and Pacific coast, respectively. These second awards carried with them an average increase of 15 per cent over the April awards, and made rates for the entire country practically uniform.

Then came the armistice and the speedy curtailment of the activities of the district representative of Industrial Relations as such.

On April 1, 1919, the Shipbuilding Labor Adjustment Board was dissolved without having rendered a decision on April 1. Thereupon the Corporation, by General Order 176, extended the last (Oct. 1, 1918) award of the board to October 1, 1919, and continued in each shipyard district the district representative of Industrial Relations, who also had been examiner during the life of the Board, for the purpose of administering the award, until such time as some succeeding Board or other organization is developed by agreement to handle and supervise the matter of wages, hours, and conditions. The district representative reported to and was under the respective District Managers, who in turn received their labor policies from the home office. The Corporation further announced its policy to continue to reimburse yards on the basis of the award on those contracts in which reimbursement is specified until October 1, 1919.

At the time the Macy awards were extended to October 1, 1919, it was thought by both the builders and the labor unions that there would be a downward revision in rates generally over the country. On the contrary, rates in all outside industries have increased. This produced a disquieting effect on labor as a whole, and there have been continuous demands for revisions of the wages fixed by the Shipbuilding Labor Adjustment Board award, but the Corporation has held rigidly to its policy in extending the Board's award to October 1, 1919, and there have been no increases in rates granted any crafts since October, 1918, the date of the last award.

Since March, 1918, an effort has been made to bring about respective agreements between the American Federation of Labor (Metal Trades) and the shipbuilders of the Atlantic coast, Pacific coast and Great Lakes.

This endeavor was begun with a conference held in Washington in March, 1919, between the delegates from the Pacific coast unions and representatives of the Pacific coast shipyards, and upon much pressure from the Corporation a tentative agreement was reached establishing an Industrial Board on the Pacific coast for handling matters after October 1, 1919. This agreement upon a referendum vote was rejected overwhelmingly by the men. Repeated efforts on the Atlantic coast to bring about an agreement between the Atlantic coast shipbuilders and the labor unions proved futile, while in the

Great Lakes district 8 of the 21 yards had signed individual agreements.

Care was taken to notify the Pacific coast shipbuilders that any increase in rates over and above the Adjustment Board's rates already in force would have to be borne by the shipbuilder in lump-sum yards. As to the cost-plus yards, specific authority would have to be granted to them to go along with the majority, although repeated efforts were made by the builders to induce the Corporation to continue to reimburse them for possible future increases.

#### Transfer of Enlisted Men to Reserve Corps.

Another phase of the Labor Adjustment Branch activities was the transfer of enlisted men in the active Army to the enlisted reserve corps on inactive duty.

The Selective Service Regulations of November 9, 1917, permitted local registration boards on request of the Emergency Fleet Corporation to enter registrants on the Corporation's classification list, where the registrant was regarded as not available for military service.

On October 15 exact figures were obtained showing 448,339 men engaged in construction of shipbuilding in all Corporation yards, including those largely working for the Navy.

On that date there were 72,254 on the corporation listing, made up as follows:

Class 1 men.....	26,337
Class 2 men.....	14,519
Class 3 men.....	5,202
Class 4 men.....	31,814
Class 5 men.....	9,734

There also were men in deferred classifications in 533 industrial plants doing work for the Corporation which brought the total up to about 88,000.

#### EDUCATION AND TRAINING.

As the time available for training new shipyard mechanics was limited, it was necessary to confine the membership of the classes to skilled shipyard mechanics in order to obtain instructors for this work. Thirty-six instructor training centers were established and 1,098 mechanics were trained, whose average experience at the various trades was 10.6 years. The course was covered in a period of six weeks and 75 shipyards took advantage of this opportunity to obtain instructors in 30 different trades.

The Education and Training Section had on its staff a total of 80 men. As a large number of these men were in regular positions, many of them were with the department for only a few months, which was sufficient for one course. The majority were directors of training centers and instructors.

Approximately 80,000 new shipyard mechanics were trained as a result of the work of the Education and Training Section. An average of eight men per instructor per month was trained. The average number of instructors training men during 1918 was 476 men, and the average number of men trained by these instructors producing ships through the year was 23,137.

The occupations which supplied the largest number of men to the training departments of various shipyards were, in order, (1) less skilled trades in the shipyards themselves; (2) manufacturing; (3) mechanical industries.

Four electric-welding centers were established, and equipment was sent to a fifth, which subsequently was abandoned, due to the armistice. Seventy-one men from 24 shipbuilding and auxiliary concerns were instructed in these electric-welding training centers.

About 5,000 men received supplementary training in evening schools which the section helped to establish, and 2,000 foremen and leading-men received instructions in foremanship.

#### HEALTH AND SANITATION.

This section originally was organized in November, 1917, as a branch of the Division of Shipyard Plants and became one of the industrial relations group in May, 1918, its function being to direct and govern matters relating to the health of employees and the proper sanitation of shipyards. This section was abolished February 15, 1919, and the work taken over by the United States Public Health Service.

#### SAFETY ENGINEERING.

The activities of the Corporation in Safety Engineering were inaugurated in January, 1918, by the appointment of a Chief Safety Engineer under the Insurance Department, with supervision over Government agency, and investment plants in which the Corporation is directly interested. In June, 1918, the Chief Safety Engineer was appointed head of the Safety Engineering Section of the Industrial Relations Division, and a field force, consisting of a Safety Engineer in each of the 11 shipbuilding districts, was appointed.

The Safety Engineering Section cooperated with the various divisions and sections of the general organization and acted directly through the District Heads and Safety Engineers in an advisory and consulting capacity to shipyard officials on all matters pertaining to safety engineering and the organization of accident-prevention work. The work of the Safety Engineering Section up to this time has been devoted to the organization of proper safety activities in the shipyards.

At the beginning it was found that very few of the shipbuilding plants were paying any attention to accident prevention, and therefore, it was necessary to interest the plant officials in establishing an organization which would be productive of the desired results. This meant the establishment of Safety Committees and methods of procedure in all yards and the appointment of one or more Safety Engineers in all of the yards of sufficient size to justify the assignment. The results of the efforts of the Corporation Safety Engineers in this connection are that 70 per cent of shipbuilding plants visited now have a safety organization which is devoting its time to accident-prevention work.

Periodical visits have been made to the yards and reports of safety surveys submitted to the yard managements, with recommendations covering improvement in conditions. These reports in practically all instances have been welcomed and have aided the shipbuilders to greatly improve the physical condition of their plants and assisted them in the elimination of dangerous practices, thus effecting a material reduction in accidents with increased efficiency in production.

The Safety Engineering Section has prepared for the benefit of the shipbuilding plants safety specifications for plant construction and equipment, as well as other safety standards and specifications of a technical character. This has been valuable to the engineering departments in the shipyards, enabling them to include proper safety features and facilities in the planning of new buildings and the installation of machinery, thus obviating the necessity of rearrangement to meet insurance or State requirements and doing work in the field after equipment had been installed. The inclusion of the proper safety features in the original design effects a considerable monetary saving.

The Safety Engineering Section by its activities showed the following results:

Wages saved due to prevention of minor accidents .....	\$2, 800, 000
Insurance premium returned because of safety organization.....	1, 000, 000
Total.....	3, 800, 000
Value of reduced rates for 1919.....	7, 000, 000
Total.....	10, 800, 000
Estimated proportion of saving to Corporation.....	6, 000, 000

The economic and efficiency value attached to the Safety movement by the conservation of man power and improved working conditions in the shipyards can not be estimated in dollars and cents. This fact, however, can not be ignored and has certainly played a most important part in efficient and economic ship production.

On May 1, 1919, the Safety Engineering Section was transferred to the Ship Construction Division.

#### SUPPLY AND SALES.

July 1, 1918, found the newly established Supply Division (which subsequently became the Supply and Sales Division) in process of organization. Production on equipment orders, on the whole, was ahead of requirements; purchases amounted to approximately \$5,000,000 per week, and the personnel included 1,800 employees. The work of the division was divided among 10 district offices, located at Boston, New York, Philadelphia, Washington, Atlanta, Chicago, Youngstown, St. Louis, Seattle, and San Francisco.

At the signing of the armistice production was up to requirements, but steps were taken to curtail such activities at once, there being at that time 1,300 outstanding orders on which production and inspection were being followed.

A Cancellation Section thereupon was established to handle the cancellation of equipment contracts, conforming to the rules and regulations laid down for the Corporation.

The personnel at that time numbered 1,600 and a reduction was undertaken at the rate of approximately 300 a month.

On May 1, 1919, the Supply Division was reorganized and designated the Supply and Sales Division with jurisdiction and duties as follows:

##### 1. Inventory and Appraisal Section.

Inventory and appraisal of all property in which the Emergency Fleet Corporation has an ownership or investment interest other than office supplies and equipment now under the jurisdiction of the general office.

##### 2. Material Section.

Procurement, custody, and distribution of property, supplies, and materials as exercised heretofore by the Supply Division.

Custody of material and equipment in shipyard plants existing as surplus and salvage or relinquished from active or inactive shipyards, dry docks, old repair plants, marine railways, or industrial plants.

Custody of surplus or salvaged materials and equipment, relinquished by the Transportation and Purchasing Divisions.

Custody of vessels and hulls on which no further work is to be performed and to be turned over to the Supply and Sales Division by the Ship Construction Division.

##### . Sales Section.

The sale of all surplus and salvage material.

**4. Cancellation Section.**

All functions relative to contract cancellations and adjustments other than those handled by the Assistant in Charge of Cancellations.

At the time of reorganization (May 1, 1919) there were 700 employees in the division. On June 30, 1919, the number had been reduced to 600.

*Field organization.*—The country was divided into five supply and sales districts, with headquarters as follows:

- New York, suboffice at Boston.
- Philadelphia.
- New Orleans, suboffice at Jacksonville.
- Chicago.
- Portland, suboffices at Seattle and San Francisco.

**Sales Section.**

The Sales Section acts as a central agency for the maintenance of records as they exist and is the direct communicative source with the corresponding section of the District Supply and Sales Office to facilitate the work. It receives, reviews, and presents to the Sales Review Board all sales transactions sent in by the District Supply and Sales Managers for approval. It is further charged with the interpretation of policies and sales procedure of the Corporation as applied to individual transactions.

The sales activities of the Corporation began on August 19, 1918, when orders were issued authorizing the Supply Division to handle the resale of raw material, equipment, and supplies owned by the Emergency Fleet Corporation, which should be resold in the interest of the Corporation. The sales made by the Supply Division, under this order, were almost completely of scrap material left over in the manufacture of boilers.

On December 5, 1918, orders were issued establishing the Division of Cancellations, Adjustment and Salvage, one of the duties of this division being to dispose of any material resulting from the adjustments of cancellations.

A summary of the result in the sale of materials up to and including June 30, 1919, follows:

Sales prior to May 1, 1919.....	\$282, 154. 19
Sales subsequent to May 1, 1919:	
Northeastern district office, New York.....	150, 668. 95
Eastern district office, Philadelphia.....	32, 175. 24
Southern district office, New Orleans, La.....	22, 731. 35
Central district office, Chicago.....	4, 591. 00
Western district office, Portland, Oreg.....	74, 648. 00
Lumber.....	109, 873. 38
Office equipment.....	54, 463. 02
Total.....	\$731, 305. 13

## Material Section.

The Material Section has administrative jurisdiction over the operations of all warehouses and storage yards over which the Supply and Sales Division has jurisdiction. It maintains records on current material showing quantities, locations, and description, and cost including transportation expenses. It also maintains stock records on surplus or salvage items, showing quantities, location, and purchase price on salvage surplus items. It maintains purchase records showing outstanding orders and quantities due thereon and the dates of expected delivery. It compares quantities required by the construction divisions with the stocks on hand and determines surplus or shortages of shipbuilding materials and supplies. It issues all shipping instructions to distribute or to store shipbuilding material or supplies.

Prior to the signing of the armistice in November, 1918, the Supply Division not only purchased material which it was obligated to supply the various contractors but also purchased for all contractors certain material on which there was a shortage, or on which production was so limited that centralized control was necessary. Shortly after the armistice, the necessity for this centralized control having ceased to exist, the policy was adopted of purchasing only such material as the corporation was obligated to supply to its contractors.

The total value of materials purchased follows:

To July 1, 1918 .....	\$361, 861, 032. 87
From July 1, 1918, to Nov. 15, 1918 .....	139, 083, 239. 64
From Nov. 15, 1918, to June 30, 1919 .....	37, 256, 582. 21
Grand total to June 30, 1919 .....	<u>\$538, 200, 854. 72</u>

Purchases of lumber on the west coast are not included.

## SUMMARY OF PURCHASES.

Machinery and equipment.....	\$302, 374, 199. 64
Raw materials.....	201, 078, 756. 96
Lumber.....	34, 747, 898. 12
	<u>\$538, 200, 854. 72</u>

With the changes in the shipbuilding program and the cancellation of shipbuilding contracts, it was found that there were large quantities of material, supplies, and equipment in the various shipyards which were no longer required. The concentration and warehousing of this material and maintenance of detailed records concerning it and preparation of lists of material available for sale, are now the chief functions of the Material Section. While the Corporation had for some time maintained warehouses to facilitate the distribution of its materials, these warehouses were entirely inadequate

to properly store the large volume of material that became surplus and which it was necessary to collect. For this purpose, a comprehensive warehousing scheme was outlined and warehouses were established at convenient points in each shipyard district for the concentration and warehousing of the surplus material in that district.

#### **Cancellation Section.**

The jurisdiction of the Cancellation Section covers the following activities: (1) Preliminary approval of supply cancellation cases involving expenses amounting to more than \$50,000; (2) final approval of supply cancellation cases which amount to \$50,000 or less; (3) preliminary approval of recommendations of settlement in such cases; (4) investigation, negotiation, and recommendation for settlement of supply cancellation cases amounting to \$50,000 or less; (5) investigation, negotiation, and recommendation for settlement of supply cancellation cases amounting to more than \$50,000 upon request; (6) final settlement of supply cancellation cases which may be made without cost to the Corporation; (7) maintenance of supply cancellation progress records; (8) maintenance of hull status records in regard to the suspensions and cancellations; (9) investigation of ship construction subcontracts upon request; (10) certification of vouchers for payment of all supply cancellation claims; (11) certification of the Material Section of equipment salvage which results from the final settlement of supply cancellation claims; (12) preparation of reports on supply cancellation cases.

Table XX, page 186, shows the cases handled by the Cancellation Section to June 30, 1919, inclusive.

#### **Inventory and Appraisal Section.**

The functions of the Inventory and Appraisal Section are as follows: (1) Inventory and appraisal of all property in which the Corporation has ownership or investment interests; (2) maintenance of stock records and appraisal records of all property, equipment, and materials, except "inventory" classifications; (3) insertion of appraisal values in all certifications of surpluses or salvage where the procedure prescribed for the making of such certification requires an appraisal value.

During the war period when maximum shipyard production was of paramount importance the Corporation financed shipbuilders or contractors in extending their yards, and in many instances advanced to shipbuilders and contractors funds for the complete construction of new shipyards and industrial plants.

These advances were covered in contracts by a clause stating that at the termination of the contract the shipbuilder or contractor had the option of purchasing these improvements, but if the option should not be exercised the improvements would revert back to the Corpo-

ration to be disposed of as the Corporation saw fit. These moneys usually were available in the form of lump-sum advances to be expended as the contractor might decide necessary to bring to a maximum the efficiency of his particular yard. The contractor reported his expenditures back to the Corporation by submitting vouchers for purchases made from these lump-sum advances.

A complete list is made of all equipment, buildings, dredging, wharves, power houses, railroads, or other improvements coming under the expenditure of Corporation funds, and this physical list is checked against the contractor's books and the Corporation auditor's books.

The section, out of 278 active projects, has completed inventories in 205 instances, 122 of which have been signed; inventories at many of the remaining projects are in process and are being concluded as rapidly as possible; 59 large projects have been appraised; appraisals at 12 other large projects are nearing completion and appraisals at many more are going forward rapidly.

#### ORGANIZATION AND METHODS STAFF.

The Division of Construction of the Corporation having been transferred to Philadelphia and its activities greatly multiplied, by July 1, 1918, the question of organization and methods had become extremely complicated. To meet this situation, a corps of management experts had been appointed to the staff of the Vice President in Charge of Administration to work out the administrative and organization problems that were developing.

The activities of the Organization and Methods Staff, or Section (which was created in March, 1919), have included the following:

Development of accounting classifications for analysis of expenditures; establishment of schedules for personnel control and audit of pay roll; establishment of centralized control and decentralized physical location of home office service organizations, such as stenographic, clerical, filing and messenger branches; development of definite contract procedure; preparation of regulations and procedure on reimbursement to shipbuilders on account of increased cost of labor; development of principles and needs of uniform cost accounting methods in the shipbuilding industry; development of plan of administration in shipbuilding districts; development of plan and procedure for inventory of plant, property, and equipment of the corporation; development of plans for the consolidation of all ship construction activities under a single organization unit; development of jurisdiction definitions and procedure coordinating the activities of the Corporation with reference to cancellations, claims, and contracts; and detailed analysis of functions and procedure of the Shipyard Plants Division and preparation of recommendations based thereon.

## LEGAL DIVISION.

In considering the work of the Legal Division, the year may be divided into three more or less distinct periods. The first, embracing the time from July 1, 1918, to the signing of the armistice, was a period of expansion; the second extending from that time to the early spring, was a period of retrenchment; the third, reaching from then to the present time, has been a period of liquidation. In each of these periods the work of the division has had distinctive characteristics.

During the period of expansion, when every effort was being made to increase and hasten the production of vessels, the division was called upon to prepare contracts for ship construction, for the building of new shipyards and the extension of old ones and the housing of shipyard workers; to prepare financing agreements, including bonds, mortgages, and other forms of security; to attend conferences and participate, in an advisory capacity, in the negotiations which led up to these transactions, and to give advice as to the new legislation needed to meet the unprecedented situation.

When retrenchment was begun the division was called upon to give advice in halting and curtailing the construction program. It had to give the necessary legal advice and draft the proper orders and documents for the cancellation of contracts for ships, for shipyards, shipyard extensions, housing, materials and supplies; and for the many financing agreements which had been made. This involved a vast amount of legal work of a character entirely different from that which previously had been done.

A period of liquidation necessarily followed this retrenchment which greatly multiplied the demands on the Legal Division. Innumerable conferences, adjustments, and settlements with contractors and subcontractors grew out of cancellation proceedings, which involved negotiation, the application of legal principles and the preparation of legal documents.

**Cancellation Section.**

In view of the heavy increase and importance of the legal work of the Corporation, it was deemed advisable to divide the division into sections, to each of which is assigned a certain branch of the work. A Cancellation Section has been established, the members of which advise and assist those in charge of the cancellations.

**Litigation Section.**

As a result of liquidation, litigation set in and it became necessary to provide a Litigation Section in the Legal Division. When any matter reaches the stage of litigation it is turned over to this section, which refers it to the Attorney General under the President's Executive order of May 31, 1918. While the Attorney General is charged

with the duty of conducting the litigation of the Emergency Fleet Corporation, it is necessary for the Corporation's own legal staff to cooperate actively in the prosecution or defense of the suits. This litigation is conducted on the theory that the Corporation is an agency of the Government and whenever possible the suits are drawn into the United States courts. The work of this section is increasing steadily and will become heavier as the process of liquidation progresses.

#### Contract Section.

There is a section for the preparation of contracts, bonds, mortgages and similar instruments and giving advice in the preliminary negotiations, and a section for handling miscellaneous matters. The division has been called upon frequently for advice in connection with the cases of contractors in financial difficulties. Many of these cases involved complicated facts and relationships, the exact status of which could be determined with difficulty. The facts were ascertained and reviewed and recommendations made as to the steps to be taken for the protection of the Corporation's interests.

#### FINANCIAL ADMINISTRATION.

The financial affairs of the Division of Construction of the Corporation were not centralized under one control until April 15, 1919, when the present Finance Division was organized. Prior to April 15, the financial activities were divided between the following agencies:

Finance Division (Office of the Comptroller).

Auditing Division.

Committee on Financial Administration.

This sharing of responsibility and jurisdiction was not conducive to the development of a proper accounting system. The division as now organized is responsible for all financial affairs of the construction branch of the Corporation. Instead of having three distinct heads, the jurisdiction and responsibilities now are under the Comptroller as Executive Head of the Finance Division.

The division's responsibilities as established now (under General Order No. 24) embrace the following authorities and activities:

(a) Maintenance of accounts which show currently the financial status of all relations in which the Corporation is either debtor or creditor.

(b) Prescription of forms of accounting for the corporation and for contractors where the contractual relationship gives the Corporation power to prescribe.

(c) Audit of all financial transactions including claims and adjustments in which the Corporation is either debtor or creditor.

(d) Installation and maintenance of methods of control of the funds of the corporation through restrictive allotments or in such

manner as may be determined by the executives of the Corporation including the physical preparation of pay rolls personnel schedules.

(e) Maintenance of all records bearing upon the financial relations of the Corporation.

(f) Formal preparation of an annual budget of revenues and disbursements.

(g) Administration of the insurance plan and the maintenance of separate reports for these funds.

(h) Examinations into the credit of contractors who have or who may be seeking contractual relations with the Corporation.

(i) Preparation of all financial statements of estimates of cost and expenditures.

(j) Direction and control of all District Comptrollers and their organizations and duties.

(k) Custodianship of all documents representing the property of the Corporation.

(l) In general, the management and control under the direction of the chief executives of all the financial affairs of the Corporation.

*District organization.*—The district organization of the division has provided for auditing, accounting, and other financial work under District Comptrollers in 12 districts and headquarters.

#### HOME OFFICE ORGANIZATION.

The home office organization is divided into the following sections and branches:

- (1) Executive and Administrative.
- (2) Reports Section.
- (3) Cost Estimates Section.
  - (a) Construction Cost Branch.
  - (b) Allotment Branch.
- (4) Personnel Control Section.
  - (a) Pay roll Branch.
  - (b) Organization Branch.
- (5) Financial Investigations Section.
- (6) Auditing Section.
  - (a) Voucher Auditing Branch.
    - (1) Contract Unit.
    - (2) Purchase Order Unit.
  - (b) Accounts Inspection Branch.
- (7) Accounting Section.
  - (a) General Books Branch.
  - (b) Financial Statements Branch.
  - (c) Rebilling Branch.
  - (d) Reconciliation Branch.
  - (e) Property and Supplies Accounts Branch.
- (8) Credit Section.
- (9) Insurance Section.

# COMPARATIVE EXPENDITURES TO COMPLETION OF E. F. C. PROGRAM (ESTIMATED)

FOR ADMINISTRATION  
\$45,000,000

FOR TRANSPORTATION  
\$10,125,309

FOR HOUSING  
\$68,485,700

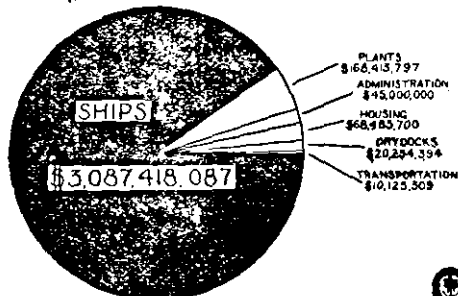

FOR DRYDOCKS AND MARINE RAILWAYS  
\$20,294,394

FOR PLANTS  
\$168,413,797

FOR SHIPS  
\$3,087,418,087

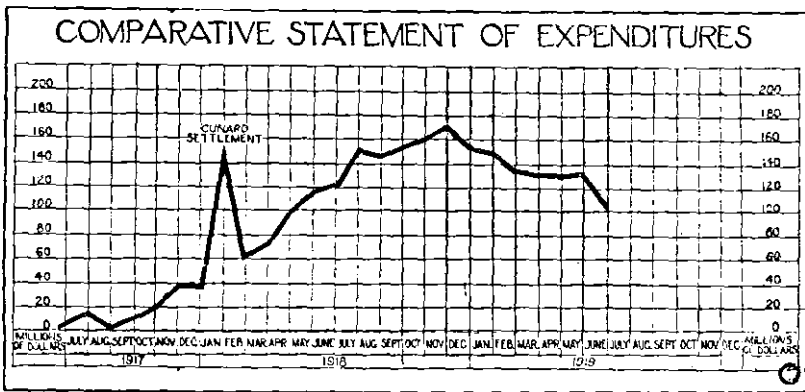

Accounting System.

The accounting system of the Division of Construction, as well as the auditing system, was developed under the authority and direction of the General Auditor. The districts were made practically independent units in jurisdiction, with control as to methods through general circulars issued by the General Auditor, general ledger control accounts were maintained in the home office in addition to duplicates of all district accounts in the form of subsidiary ledgers and journals. In March, 1919, the majority of the subsidiary ledgers maintained in the home office were abandoned. One factor that militated against the development and maintenance of satisfactory accounts was the rush requirement of the war program. The most essential thing was the building of ships, and in the campaign for quick production, the

desirability of financial control through accurate and up-to-date accounts was not emphasized as it might have been.

Plans now being made effective will result in better control over district accounting by the home office, and the establishment in the home office of more detailed accounts. One development under way is a hull cost ledger, which will show in analytical form the cost of each hull. The rush of the shipbuilding program resulted in the accumulation of a large volume of unbilled materials and equipment, but this accumulation has been reduced greatly and is being allocated to the proper accounts.

The difficulty of establishing and maintaining a proper accounting system in a short time can be understood by a glance at the balance sheet of June 30, 1919. To that date expenditures of the Construction Division aggregated \$2,512,692,002.95. This vast amount was scattered over hundreds of building and manufacturing projects all over the United States and in China and Japan. The expenditures between June 30, 1918, and June 30, 1919, were \$1,741,997,945.63, or at the average rate of almost \$150,000,000 per month.

The appendix includes (a) condensed comparative balance sheet, XXI, page 187.

(b) Statement of authorizations, appropriations, and expenditures, XXII, page 188.

Schedule A, expenditures for requisitioned and contract ships.

Schedule B, plant and property.

Schedule C, dry docks and marine railways.

Schedule D, housing.

Schedule E, transportation.

Schedule F, advances.

(c) District office pay rolls, XXIII, page 194.

(d) Home office pay roll, XXIV, page 195.

### III. UNITED STATES SHIPPING BOARD EMERGENCY FLEET CORPORATION.

---

#### DIVISION OF OPERATIONS.

The evolution of the present Division of Operations is described in the Second Annual Report of the Board (pp. 54, 55). Since that report was made, some of the functions heretofore performed by other agencies have been taken over by this division, such as the work of the Shipping Control Committee, the Chartering Committee, and the Board of Survey and Consulting Engineers, the functions of which were described in detail in the Second Annual Report.

#### ORGANIZATION.

The centralized plan of organization of the division has for its purpose the delegation of all problems of operation to agencies, in so far as the necessities of a uniform policy permit. Through these agencies, direct dealings are established with managing and operating agencies of the Shipping Board.

The increased activities and scope of the Division of Operations within the past year has necessitated the establishment of an administrative force both in the home office and in the field. In the home office, the work may be grouped into four main classes of activities—exports and imports, traffic and trades, vessel management, and construction and repair. The field organization consists of eight district offices, each under an Assistant Director or District Agent with jurisdiction over various ports which are geographically related. The organization, therefore, follows a definite procedure. All instructions, assignments, etc., are issued by the home office through the assistant director or district agent, to whom the operators and managers of vessels under the control of the Board report.

The accounts of the operators and managers are settled by the agency auditors who make all adjustments and settlements at their respective ports. The Assistant Comptroller or District Auditor then reviews the accounts, makes final adjustments and settlements, and then forwards the accounts to the general office.

A general outline of the organization activities of the home office and field office is as follows:

#### ORGANIZATION.

General offices, Washington, D. C.

Districts with headquarters and assistant directors or district agents as named will be as follows:

North Atlantic District.—Connecticut River to Cape May; assistant director, New York.

New England District.—Atlantic coast, Halifax, Nova Scotia, to Connecticut River; district agent, Boston; agent Halifax.

Philadelphia District.—Philadelphia and Delaware Bay; district agent, Philadelphia.

Baltimore District.—District agent, Baltimore.

South Atlantic District.—Ports of South Atlantic, Hampton Roads to and including Miami, Fla.; assistant director, Norfolk; agent, Savannah, Ga., and Charleston; agent, Brunswick, Ga., and Fernandina, Fla.; agent, Jacksonville, Fla.

Gulf District.—Ports, Key West, Fla., to Mexico; assistant director, New Orleans; agents, Key West, Fla.; Pensacola, Fla.; Mobile, Ala.; Gulfport, Miss.; Port Arthur, comprising Beaumont and Orange, Tex.; Galveston, comprising Texas City and Houston.

Pacific Coast District.—All Pacific coast ports; assistant director, San Francisco; agents, Seattle and Portland.

Great Lakes District.—Great Lakes, including St. Lawrence River to Montreal; assistant director, Cleveland.

There shall be for each district:

1. An assistant director or district agent, with a staff adequate to care for activities of the district. Where necessary, agencies directly under the districts will be created.
2. An assistant comptroller or district auditor and staff sufficient to meet the volume of business of the district, with agency auditors at agencies where necessary.
3. An assistant treasurer or cashier for each district or agency where necessary.

GENERAL OFFICE.

FIELD OFFICE.<sup>1</sup>

Director of Operations.

Assistant Director of Operations:

Traffic Trades, Rates—claims.

Allocations and assignments.

Construction and Repair Department.

Departmental of Governmental and Foreign Relations.

Personal Department:

Deck Section.

Engineer Section.

Steward Section.

Supercargoes.

Supervisors.

Contract Department.

Supply Department.

General despatch agent.

Office Management Committee:

Mail and files.

Telegraph and cable.

Assistant Director of Operations or district agent:

Traffic Department..

Assistant director.

Chief inspector.

Assistant director.

Port captain.

Port engineer.

Port steward.

Assistant director.

Assistant director.

Assistant director.

Price expert or purchasing agent.

Despatch agent.

Assistant director.

GENERAL OFFICE.

Director of operations (relating to operations):

Supervision and general control.

Definition of policy and procedure.

General orders affecting all agencies.

Regularity of procedure.

Approval of trade allocations and rates.

<sup>1</sup> In the above arrangement, officials in the general office appear opposite the field officials with corresponding functions.

Comptroller (relating to auditing and accounting):

- Supervision and control.
- Definition of policy and procedure.
- Regularity of procedure.
- All communications with foreign Governments and Government departments.
- Control of finances, statements, and reports.
- Statistics.

FIELD ORGANIZATION.

Assistant director or district agent:

- All communications to be addressed to assistant director for attention party interested.
- Regularity of procedure.
- Details of operations—Supervision and control of operators and managers as directed by the general office.
- Authority to approve of and direct operations and management within district according to policies outlined by general office.
- General office to approve all exceptions to policies prescribed upon recommendations of district.
- Recommendations as to reliability and capability of operators and managers.
- Recommendations as to available cargo.
- Recommendations as to tonnage requirements.
- Recommendations as to rate fluctuations.
- Supervision of certification of all accounts.

Assistant comptrollers or district auditors:

- Complete audit and settlement with managers and operators.
- Irregularities, overcharges, etc., to be brought specifically to attention of assistant director.
- All accounting to be direct with operators and managers facilitating settlement.
- Completed accounts to be forwarded to general office.
- Policy and procedure as directed by comptroller in accordance at all times with policy of director of operations.

CONTRACT DEPARTMENT.

The Contract Department maintains a record of all contractual obligations of the Division of Operations in so far as they relate to the operation of ships and secures such documents and data as may be necessary for the Comptroller to initiate a settlement of vessel accounts.

All disputes arising under charter are referred to this department for settlement; also the checking up of deliveries, deadweight, etc. The verification of the deadweight only has resulted in large savings to the Government.

The Off Hire and Demurrage Section of this department examines and checks up off-hire, demurrage, dispatch money, false freight, etc., handling these cases to a final decision, calling upon the Law Department for decisions whenever necessary.

In December, 1918, a Savings Section was created to handle the question of savings under a clause of the time requisition charter party, providing that any expenses saved by the owners during delays

in which no reduction of hire is made shall be credited to the United States. An investigation has been made of all detentions in American and foreign ports, with very successful results.

In order to have data on which to base settlements in compliance with the terms of charters, an Inventory Section was established in September, 1918, to procure inventories covering consumable stores, expendable and permanent equipment on board all vessels under charter to or owned and chartered by the Shipping Board. The propriety of all claims arising under the clauses of charter parties which provide for inventory settlements are passed upon, and when found to be within the provisions of the charters, are referred to the Comptroller for audit and settlement.

This department, further, has charge of the issuance of instructions regarding the deliveries and redeliveries of American and neutral tonnage.

#### ALLOCATION DEPARTMENT.

In January, 1919, the function of the Shipping Control Committee of allocating the vessels owned and under the control of the Shipping Board to cargoes and trade routes, so as to use available tonnage in the most essential trades, was transferred to the Division of Operations. It became necessary, therefore, to create in this division a Department of Trades and Allocations, with the committee's organization in New York City as a part of the division's agency there. The work of this department was later divided and two departments created:—(1) Allocation Department; (2) Shipping Trades Department.

In the work of the Allocation Department, close cooperation with other departments is secured by daily meetings of the department heads constituting the Allocation Committee. The manager of the Allocation Department in this manner is assisted by those possessing the records of available vessels, their sizes, types and locations; a compilation of trade requirements and offerings, data on the readiness of ships, etc.

Many perplexing difficulties necessitating changes in published allocations, quick decision and action have confronted this department, growing out of abnormal conditions, due to strikes, uncertain labor conditions, congestion and delay caused by ship repairs in ports, both at home and abroad. In many cases these conditions have required the withdrawal or diversion of ships. Railroad terminal and port conditions at the port of New York have caused the diversion of freight to Atlantic ports south, and to handle this business and attract cargoes, fixtures have been made to berths in the various North Atlantic, South Atlantic and Gulf ports.

The signing of the armistice gave promise of early resumption of trade with foreign ports and the return of vessels to commerce. Trade routes were, therefore, laid out and freight rates established to meet the new conditions. However, the Division of Operations was soon confronted with the unprecedented food program for the relief of the civilian population of Europe. This demanded the immediate withdrawal of vessels already allocated to the different trade routes, and the employment of these steamers together with every other available ship to meet our obligations in the colossal food movement. Beginning in February, this movement reached its peak in May, when 264 vessels, aggregating about 2,000,000 deadweight tons, were withheld from commercial trades on account of it.

In effecting the coast-to-coast movement of foodstuffs, new vessels, wood and steel, finishing on the Pacific coast, have been employed. The great part of these vessels have brought food from the Pacific coast and gone from this coast to Europe.

In the month of February 134 steamers, aggregating 1,248,688 deadweight tons, were engaged in the movement of foodstuffs to Europe. This represented 11.8 per cent of the total Shipping Board tonnage operating during that month. In the month of March 160 steamers, totaling 1,092,412 deadweight tons, or 14.8 per cent of the total Shipping Board tonnage operating in March, were employed in the European food relief program. In April a total of 225 ships of an aggregate of 1,534,584 tons deadweight were allocated for this service. This represented 22.5 per cent of the active Shipping Board tonnage.

Our present inability to furnish sufficient tonnage to lift the large amount of bulk cargo offering is due to the utilization of Shipping Board tonnage to relieve the desperate fuel situation in Italy and Northern European countries; the movement of coal to the Pacific for United States Navy consumption, and the allocation of tonnage to meet the food relief program. Relief is looked for as new construction becomes available, and as the various European relief programs are completed, allowing the utilization of this tonnage to relieve the freight congestion now existing on the Atlantic and Gulf seaboard.

#### SHIPPING TRADES DEPARTMENT.

The function of this department is to place Shipping Board vessels in trades and to secure cargoes for such vessels. This is done by making a study of the exports and imports of the various countries of the world and the channels through which these exports and imports flow. This study is designed to determine the number and the most suitable types of ships required by the different trades. The department receives through operating and managing agents, from

the division's district organization, and through commercial channels reports of cargoes offering at the ports of the United States. The department is also kept informed of cargoes offering in foreign ports, prevailing charter rates, and the general conditions of trade by reports received from United States commercial agents, field agents of the Food Administration, commercial attachés of the Department of Commerce, and the agents of operators of Shipping Board vessels throughout the world.

From the information thus obtained the department is able to offer information and advice with reference to the allocation of vessels to the different trades. It is also able to arrange fixtures for both outward and return cargoes.

The following table, as issued June 30, 1919, by this department, shows the employment of all the active vessels under the control of the Shipping Board on that date. It also shows the service or trade in which the ships were engaged, the tonnage in each trade, and the relation in percentage which the amount of tonnage in each service or trade then bore to the total amount in actual service:

Trades.	Number of ships.	Per cent of total.	Tonnage.	Per cent of total.

Particular attention is called to the number and percentage of the total of vessels engaged in the service of the Army, Navy, and European food relief.

#### EXPORTS AND IMPORTS DEPARTMENT.

This department was created pursuant to a resolution of the Shipping Board with the initial object of handling the subject of export coal. This important trade called for special attention, and the department's organization has resulted in an improvement in the movement of this commodity and in a better feeling among coal exporters.

Among the accomplishments of the department, since its organization, may be mentioned the use of wooden vessels in the coal trade by all exporters; the diversion of all boats too prompt for other trades into the coal trade, thus practically eliminating idle days for ships and promoting the equitable distribution of Shipping Board tonnage among foreign countries and among our American exporters; the building up of an export coal trade along lines promising the greatest permanence, and the elimination of speculation in Shipping Board vessels in the coal trade. Assistance also has been rendered in creating bunkering stations for Shipping Board vessels abroad, and in working out an insurance plan for the Board's wooden vessels which would tend to make them more attractive to the trade.

## ASSIGNMENT DEPARTMENT.

All assignments of vessels for operation or management for the account of the Division of Operations are made by the Shipping Board. The department furnishes the Board information in regard to the experience of the various operating and managing companies, their standing in business, financial responsibility, and foreign connections, agencies, and correspondents. In cases in which the firms have been owners or charterers, the number of vessels chartered by them are ascertained and considered.

It has been the endeavor to assign to steamship companies whose vessels had been requisitioned by the Board a sufficient amount to replace the tonnage taken—their own vessels, so far as practicable. Likewise, in the case of companies which employed chartered vessels, principally neutral ships in regular trades, it was the policy, when it was required by the Chartering Committee to charter such ships to the Board, to assign the vessels to the companies concerned for operation and management. It has been insisted, however, that the operators and managers of Shipping Board tonnage be competent to handle the tonnage in an efficient manner irrespective of whether they were the owners of requisitioned tonnage or had been the charterers of neutral tonnage.

Having a record of the performance of the steamship operators of the country, it is possible properly to determine their efficiency, and in any respects in which the steamship companies are lacking assistance can be rendered by suggestions for improvement which are developed by comparisons of methods employed.

In the establishment of regular lines and trades it will be practicable, with the information which has been obtained, for the Board to assign its vessels for operation and management to firms whose records justify the highest expectations for the development of American shipping.

In accordance with a resolution of the Shipping Board, a total of 41 line services, chiefly to European and South American ports, have been established and various others are contemplated. These routes are established by the definite assignment of vessels to the various routes for an indefinite but terminable period, and endeavor is made to secure the most efficient operators in the various routes, all regard being had for preference in such assignments for American citizens. The vessels so assigned for operation for Government account are placed on the berth with definite regular advertised sailing dates. The operators of vessels in such line routes are selected from a list of applicants.

### DECK DEPARTMENT.

Efforts have been put forth by this department to expedite the relief of Navy crews on cargo carriers and tank vessels used in Army service during the war, in order that the vessels might return to commercial trade as soon as possible. Success has attended each aim in this connection, and the efforts of the department will continue until release of the last vessel is effected.

The selection of officers of the Deck Department of Shipping Board vessels is left to the discretion of managing companies, subject to final review at Washington, but assistance is rendered by the Deck Department whenever possible in obtaining deck officers to secure the quick dispatch of a vessel. In cases of vessels relieved of Navy crews, it is the policy of this department to retain Naval Reserve officers if possible by reason of their familiarity with the vessel. The deck crews of Shipping Board vessels are supplied by managing companies, with the assistance of the Shipping Board Sea Service Bureau.

In case of vessels under construction, arrangements are made to place the master and chief engineer aboard prior to actual delivery in order that they may familiarize themselves with the vessel.

Service records of all officers employed on Shipping Board vessels are kept on file by this department and current transfers and discharges added thereto.

A normal manning scale has been prepared, indicating the complement required by various types and sizes of vessels under the control of the Shipping Board. Crew summaries are checked against this scale, and the managers of the vessels are directed to make any changes which may be necessary. Disputes concerning payment of wages, overtime claims, loss of personal effects, etc., are also handled by this department.

The department supervises the inspection of vessels in domestic ports to ascertain their sanitary condition, the character and cleanliness of crews' quarters, etc., and the necessary action is taken on the reports of such inspections.

In general the Deck Department bonds its efforts toward securing and retaining competent officers and seamen, minimizing crew trouble, obtaining quick dispatch of vessels as far as manning is concerned, keeping vessels in trim condition and securing records and reports on matters pertaining to the Deck Department of Shipping Board vessels.

### ENGINEERS' DEPARTMENT.

The supervision of the personnel and matters affecting the fire-room, engine room, and machinery of Shipping Board vessels is vested in this department.

Each vessel is classed separately, according to horsepower, boilers, and auxiliaries. In crewing the vessel, the complement of engineers, oilers, watertenders, coal passers, and wipers is determined in accordance with the mechanical equipment of each vessel and the character of fuel. A normal manning scale has been arranged to facilitate the crewing of vessels, copies of which have been furnished all agents and managers. On new construction, as soon as crews are placed on board, a crew list is forwarded to this office and checked.

This department keeps a record of all engineer officers employed or who have been employed on vessels of the Shipping Board. When an engineer on any vessel has been reported for having committed a breach of discipline, or, through negligence, for causing any damage to the mechanical equipment, the facts are noted on his record and the case is investigated. There is no attempt to maintain a black list; the purpose being to improve the personnel and to make all engineers appreciate that, with the large amount of money invested in the mechanical equipment under their control, it is necessary for them to conduct themselves at all times as responsible men.

All correspondence from district officers relating to the Engineer Department personnel or any differences arising between the manager and the Engineers' Department on any vessel is referred to this office, carefully considered, and the manager is advised of the decision reached so that it may be carried out.

The department examines the abstract of sea log, and if it develops that an excessive amount of fuel has been consumed for the passage considering the tonnage of vessel, horsepower of vessel, and weather conditions, the Supervisor's Department is immediately informed, and the district office under which the vessel is operating is called upon to secure an explanation from the chief engineer of the vessel as to the cause of this excessive expenditure of fuel. Reports are also made to the Supply Division of any excessive amount of stores purchased or consumed.

Practical experience and a wide range of information on these subjects enables this department to take care of a constant flow of inquiries from many sources, especially from the Supervisor's Department, and to assist in securing the efficient conduct of the Engine Department of Shipping Board vessels.

#### PURERSERS' DEPARTMENT.

The Pursers' Department of this division consists of two sections—the Stewards' Section and the Supercargo Section.

The principal part of the work of the Stewards' Section is performed by the port stewards connected with the several field agencies of the division. Matters relating to subsistence, proper manning of the stewards' department of vessels, and the application of the wage

scale are handled in this section. The records of the Stewards' Department personnel are kept here.

The employment of supercargoes is a revival of the ancient practice of shipowners which had fallen into disuse, but which is regarded of vital importance in the expeditious operation of our ships under present unprecedented conditions. Supercargoes are the direct representatives of the United States Shipping Board aboard ships, and they assist the officers and agents in the care and handling of cargoes and in procuring the quickest possible dispatch of the vessels.

The selection and instruction of supercargo candidates and their general supervision after assignment to ships come under the Pursers' Department.

Supercargoes submit reports on all matters coming under their observation which either directly or indirectly have bearing upon the operation of vessels. These reports are referred to the departments of the Shipping Board which are directly concerned, and are used by them in correcting existing faults or bad practices and in shaping future policies.

These men also observe general conditions and take the initiative in any matters that come up which affect the interest of the Shipping Board. In many instances they have been able to expedite the turn-around of vessels, prevent excessive charges and other fraudulent practices, secure return cargoes, etc., resulting in great saving to the Shipping Board. They have the interest of the Shipping Board primarily at heart (in its capacity as owner or charterer), and have a full understanding of the exact relationship between the Shipping Board and operators and managers. Their reports on trade and economic conditions are transmitted to the various governmental and private agencies interested, including the Bureau of Foreign and Domestic Commerce, and the Office of the Foreign Trade Adviser of the Department of State. They are also made available to chambers of commerce and to all American citizens who are interested in foreign trade.

Supercargoes are now assigned to 706 ships operated and managed for the Shipping Board, including ships manned by the Navy and operated for Shipping Board account.

#### **Operating Section.**

The Operating Section represents the Pursers' Department on the allocation Committee.

The section maintains records of the specifications of all vessels and their past performances, and a port file, made up mostly of supercargoes' reports. In connection with this file, supercargoes are instructed as to the information they are to obtain while in foreign ports. These reports are now being compiled for publication.

This section also makes voyage calculations, showing the entire expense to a vessel on a particular voyage, thereby assisting in making rates where rates have not been established.

The section also assists in determining compensation for the use of requisitioned vessels, for which settlement is in dispute.

#### **Bunkering Section.**

The function of this section is to see that all Shipping Board vessels are bunkered properly and that operators obtain bunkers where the Shipping Board has contracts, or if this is impossible, where the best prices obtain.

When a vessel has been allocated, operators submit to the district representative a tentative bunkering schedule. The district representative forwards this with his comment to this department for final approval.

Certain fixed rules governing the bunkering of Shipping Board vessels in all trades have been permanently established but no rules have been made regarding the quantity of bunkers to be carried.

The Bunkering Section, working with the Fuel Section of the Supply Department, keeps in touch at all times with the leading ports of the world regarding the bunker stocks in hand, prices, and the facilities for handling these stocks. This information is sent to all representatives of the Division of Operations, who transmit it to the vessel operators.

#### **SUPERVISORS' DEPARTMENT.**

The Supervisors' Department originally was a section of the Pursers' Department. The work assumed such proportions and importance that it was found necessary to create a new department.

The Supervisors' Department is charged with the duty of procuring prompt dispatch at ports, efficient loading and discharging, the observance of proper bunkering, prompt action on repairs, etc. The department reviews the performance of operators and managers and assists to protect and serve the interests of the Shipping Board.

There are at present 38 sections, each of which is in charge of a supervisor. The vessels actually operating for Shipping Board account are divided among the various sections, 25 ships to each, and to promote the efficiency which comes with specialization, sailing vessels are handled by one section as also are wooden steamers, vessels under construction, vessels operating for other than Shipping Board account, etc.

The Supervisors' Department is the medium by which the Division of Operations keeps in close touch with its vessels, and they stand somewhat in the position of operating managers or steamship operators of a steamship company. They receive reports from

operators and managing agents, port representatives of the division, and from the supercargoes.

Once assigned to a supervisor, a vessel remains under his supervision as long as she is operated for Shipping Board account, regardless of trade. A supervisor thus becomes thoroughly familiar with all of the ships in his section, as well as with many different trades, and is competent to judge of their requirements and possibilities.

Conditions requiring action or a remedy, if the matter does not come within the province of the department manager, are reported to such other departments as may be concerned.

For the information of the Division of Operations the department issues each week day a set of supervisors' bulletins showing the exact status of each ship.

#### RATE AND CLAIM DEPARTMENT.

The Rate Section was organized in April, 1918. From that date until November, the rates were fixed and controlled by the Shipping Board, and the department was engaged almost entirely in the preparation of data looking to resumption of competitive shipping.

With the signing of the armistice the situation abruptly changed; a number of requisitioned vessels were released, sailing vessels were permitted to resume trans-Atlantic service, and considerable pressure was brought to bear to make such reductions in the ocean rates as would permit American manufacturers to compete in world-wide trade. Finally, in January, reductions in the trans-Atlantic rates approximately 66½ per cent under the old figures were announced. At the same time there was a considerable reduction in the Pacific Ocean rates.

The department receives at intervals reports on foreign rates from the London office of the Division of Operations, and consuls at various foreign ports also give from time to time a résumé of the rate situation. The information furnished is compiled so that the Division of Operations can in a measure determine what rates are necessary in competition with vessels of other countries.

During the summer of 1918 authority to use bunker licenses was made use of to guarantee the application of Shipping Board rates to vessels of all flags. This had the effect to an extent of stabilizing the rate situation. After January 1, 1919, no attempt was made to control rates over other than Shipping Board vessels, with the exception of South American and West Indies business.

Prior to January 1 rates to South America, both east and west coasts, were approximately \$35 per ton. Since January 1 there has been considerable fluctuation, but the tendency has been to reduce the rates, which now range from \$22 to \$32 per ton. During the period of control South American and West Indian rates were partly

controlled by the requirement of approval of all charters by the chartering executive at New York.

The rates fixed in January, applicable on Shipping Board vessels, have been fairly stable. During the first half of the year, the demand for ships to carry out the European civilian relief program made it impossible to satisfy the demand for tonnage for commercial cargoes, and the division was criticized for its failure to provide ships to protect the rates announced. With the completion of the food relief program, it has been possible to work out a number of liner services, and rates have been published from time to time to take care of each trade. Competition has grown keener as foreign tonnage has entered United States ports, and it has been necessary to make some reductions in rates to meet such competition. As stated above, however, rates in general have been fairly stable, and it is expected that there will be no decided changes in rates for several months to come.

The Shipping Board has now established rates and issued tariffs as follows:

North Atlantic ports to United Kingdom.

North Atlantic ports to Rotterdam, Antwerp, French Atlantic, Bremen, Hamburg, Scandinavian ports, Finland, Lisbon, French Mediterranean, and Italian ports.

South Atlantic and Gulf ports to United Kingdom, French Atlantic, Rotterdam, Antwerp, Bremen, Hamburg, Scandinavian ports, Finland, French Mediterranean and Adriatic ports.

North Atlantic ports to Greece and Italian ports.

North Atlantic ports to India.

North Atlantic ports to North Africa, Levant, Red Sea.

North Atlantic ports to Japan, China, Philippine Islands.

North Atlantic ports to French Indo China, Dutch East Indies, Federated Malay States.

North Atlantic ports to Australia, New Zealand.

North Atlantic ports to West Coast of Africa.

North Atlantic ports to South Africa.

Atlantic and Gulf to South America.

Coal: Atlantic and Gulf to South America. Pacific coast to Japan, China, Manila.

Cotton: United States Atlantic and Gulf to United Kingdom and continental ports.

Coal: North Atlantic ports to France, Italy, Holland, Belgium, Denmark, Sweden, Trieste, Fiume, and Venice.

Lumber: South Atlantic and Gulf to United Kingdom and continent. Pacific coast to United Kingdom, French Atlantic, Antwerp, Rotterdam, Christiania, Copenhagen, Gothenburg, Stockholm.

The Claim Section of the department has exerted considerable influence in protecting the interests of the Board. This section has not attempted to handle claims direct, but leaves small loss and damage claims to be settled in the judgment of the operators. All claims in excess of \$100,000 must be sent to Washington for ap-

proval before payment can be made. The results of this supervision have been highly beneficial.

Another very important work instituted and carried through by the Claim Section was the correction of abuses by sugar refineries in the handling of sugar claims. Steamers had always been called upon to pay for shorts and such other charges as the refineries considered proper, payment for such claims being deducted from the freight charges. No allowance was made for overs. This practice was summarily stopped, and the credit of overs applied against shorts will mean the saving of from \$20,000 to \$50,000 in the course of a year.

The principal efforts of the Claim Section are bent more upon the prevention of claims than seeking to escape responsibility when cause for claim has been established. With this object in mind, suggestions have at times been made to operators when such seemed necessary.

#### TUG AND BARGE DEPARTMENT.

During the year the division has operated 20 chartered barges and 3 chartered and 1 owned tug in the movement of piling and lumber for the Hog Island shipyard, the Quartermaster Department of the Army, and the Railroad Administration.

Fourteen Shipping Board-owned sea-going tugs were in operation doing general coastwise towing. Of the 10 harbor tugs brought down from the Great Lakes in the Spring of 1918, 4 were turned over to the Army, and 2 are being operated by the New York agency—3 at Norfolk and 1 on the Kennebec River. There are at New York 5 coal-box bunkering barges and at Norfolk 2 derrick bunkering lighters which were purchased and rigged up for use at Hampton Roads.

#### SAILING VESSELS.

The large amount of French sailing tonnage (192,150 deadweight tons) which had been tied up at Dakar and other ports on account of the submarine menace was secured by the Shipping Board on charter and under an agreement to engage in safe trades and also to substitute 1 ton of steamships for 2 of sailing. With these sailing vessels mahogany was moved for the Aircraft Production Service, Australian wheat for the Food Administration, wool for the Quartermaster's Department, and nitrates and manganese ore from South America to munitions manufacturers in the United States.

#### CONSTRUCTION AND REPAIR DEPARTMENT.

While recognizing the pressing need for war emergency tonnage, upon which the Ship Construction Division of the Emergency Fleet Corporation was bending all its energies, it was deemed necessary, if the Shipping Board were to have a merchant fleet which could be

operated in postwar competition, to direct attention to corrections in the designs and construction of ships building, and to prepare plans for new tonnage that could hold its own in competitive trades. On November 11, 1918, with this object in view, and to the end also of providing for the inspection of new vessels before acceptance by the Division of Operations, and later of carrying on repair work, the Construction and Repair Department of this division was created.

The work of this department is segregated into three sections as follows: Design and New Construction, Inspection and Acceptances, and Repairs.

The Design and New Construction Section passes upon designs for future construction to be undertaken by the Emergency Fleet Corporation and acts upon comments and reports, based upon actual experience of operation, which are received from the representatives of the Construction and Repair Department, ship managers and operators, and other reliable sources. The wood-ship situation has received careful consideration by this department and many alterations and improvements have been recommended, and as a result these vessels should be more satisfactorily operated.

Careful investigation of the various emergency types of vessels disclosed the fact that few of these contain the more important features that are essential for economical operation of vessels to successfully meet competition. This department was therefore instructed to prepare designs for new types of cargo vessels. It was concluded that the larger vessels of 10,000, 12,500, and 15,000 dead-weight tons would be the most practical sizes to meet general trade requirements. In the preparation of designs for these three types of vessels consideration has been given to obtaining the largest possible cubic measurement, the most advanced method of cargo-handling facilities, and the most comfortable, sanitary, and practical accommodations for the officers and crews.

The Army Transport Service, War Department, was consulted in order that provision could be made so that in the event of emergency these vessels could be rapidly and economically converted into troop ships, and provision is made in such an event for the quick installation of additional water-tight bulkheads.

Careful attention has been given to the steaming radius of these vessels and provision has been made for 13,000 nautical miles. The oil fuel and the feed water will be carried in the inner bottom tanks, a deep oil fuel tank being fitted in the lower part of No. 1 hold. This same feature is embodied on each side of the shaft tunnel in the afterhold, thus utilizing the full benefit of the cargo space for fuel oil which could not otherwise be advantageously used for general cargo.

As the Diesel type of internal combustion engine has demonstrated its practicability and reliability, as well as an economic advantage of

the highest order, it was thought advisable to make use of this type of engine in connection with the new vessels. In order to make an intelligent comparison, however, it was concluded that some of the vessels of the 10,000 deadweight ton type, identical in every other respect, be fitted with quadruple-expansion engines and Scotch boilers, and the others with the Diesel type internal-combustion engine.

Designs also have been prepared for the conversion of certain vessels under construction into passenger ships, it having been found that these vessels could not be completed in time to meet the present demand for ships to transport our troops from Europe. The arrangements made embody many distinctive features, afford every comfort for the traveler, and will place these vessels among the finest ever constructed for passenger service.

The War Department is now turning over to the Shipping Board the ex-German vessels and this department is engaged in fitting out these vessels as passenger ships. Plans are being made to equip these ships in the most modern and up-to-date manner possible in order that we may compete in every particular with foreign-trade rivals.

The field organization of this department, which is maintained for the inspection and acceptance of new vessels and for the repair of all Shipping Board vessels, is divided into eight districts, corresponding to the general district organizations of the Division of Operations and is in direct charge of chief inspectors, reporting to the district representatives of the Division of Operations, who in turn are held responsible for the proper conduct of the work of this department in their respective districts.

On January 1 this organization took over the inspection and acceptance of new vessels in behalf of the Division of Operations, and a method of conducting trial trips therefore was agreed upon with the Ship Construction Division.

The representatives of the Construction and Repair Department have attended 181 dock trials, 177 light-load trials, and 102 loaded sea trials, a total of 460 trials. The institution of the present method of conducting trial trips has brought to light numerous changes or betterments which have been mutually agreed upon with the Ship Construction Division. Favorable action has been taken upon a total of 1,586 items of changes recommended by the representatives of the Construction and Repair Department, many of these changes affecting a number of vessels of the same type. The representatives of this department have inspected 432 vessels under construction, many of which are now in successful operation.

A decided improvement has been observed in the operation of new vessels since the inspection and acceptance work has been organized and administered in this manner.

On May 1, 1919, the Construction and Repair Department of the Division of Operations was vested with complete responsibility for and jurisdiction over the physical condition of all Shipping Board vessels.

Under the present method of handling repairs to vessels the managers and operators are instructed to notify the division's district representatives of the work required. Inspection will be made by the accredited representatives of the ship managing companies who are held responsible for the quality of material and workmanship and the complete and satisfactory performance of the work contemplated.

Daily and weekly statements indicating the dates upon which both new vessels and vessels under repairs will be available for cargo loading are issued by this department. The information upon which these reports are based is received in daily telegraphic advices from the field representatives.

#### OIL-FUEL STATIONS.

An examination has been made of the oil bunkering facilities of the world to ascertain the existing facilities and determine what improvements and installations are necessary for the use of the American merchant marine. Fairly complete data have been procured with reference to the ports of North America, and a study of foreign and American insular ports is now under way. Fuel-oil bunkering facilities for the special accommodation of the American merchant marine are being provided by the Shipping Board at the following ports:

*St. Thomas, Virgin Island.*—Work of installing a fuel-oil station in connection with the Navy station at this port is nearing completion and is expected to be in operation on October 1, 1919. This station will have a storage capacity of 110,000 barrels of fuel oil in two tanks located 600 feet south of the Navy wharf, at an elevation of about 100 feet above the wharf. A 10-inch pipe main connects these tanks with the loading head on the Navy wharf. Suitable pumping and lighting facilities have been provided. This station will have a gravity bunkering capacity of 1,200 barrels an hour.

*Honolulu, Territory of Hawaii.*—The Shipping Board has authorized the lease of a site at this port, effective January 1, 1919.

*Manila, Phillipine Islands.*—A station of equal capacity to the St. Thomas station is proposed at Manila, and two 55,000-barrel tanks have already been shipped to that port for erection.

*Ponta Delgada, Azores.*—The Shipping Board barge *Wasayga*, with a capacity of 25,000 barrels of fuel oil, has been dispatched to this port, where it will remain as a floating bunkering station pending the building of a fuel-oil station at Ponta Delgada. Permission has been granted by the Portuguese Government to an American company for the erection of this station, and the work of construction will proceed promptly.

*Bizerta, Tunis.*—Additional storage tanks are being erected by an American company, which already has holdings at this port for use as a bunkering station by the Shipping Board. Two 55,000-barrel tanks will be shipped to Bizerta for this installation.

*Constantinople; Aden, Arabia, and Colombo, India.*—Similar arrangements as those at Bizerta are under way for bunkering stations at these ports.

#### SUPPLY DEPARTMENT.

This department supervises the District Purchasing and Stores Departments of the Division of Operations and reviews the purchases made by managers, operators, and agents for the account of the Division of Operations.

Uniform working procedure is being established in all District Purchasing and Stores Departments, thereby coordinating their activities in connection with the purchase, care, and use of materials, supplies, and equipment, as well as the assembling, classifying, and ultimately disposing of surplus usable property and scrap. The department acts as a clearing house for surplus property between the various districts of the Division of Operations; also between the Division of Operations as a whole, the Division of Construction, and other Government departments.

Expenditures made by managers, operators, and agents for account of the Division of Operations are analyzed, and the results are compiled for the information and guidance of all interested departments of the Division of Operations in future transactions with them.

Contracts for fuel oil for a period of one year have recently been made to take care of Shipping Board requirements at Boston, New York, Philadelphia, Baltimore, Norfolk, New Orleans, Port Arthur, Galveston, and Cristobal. The total deliveries at these ports will amount to not less than 9,850,000 barrels in 12 months, on which it is estimated that there is a saving of \$6,725,000. This is based on prices believed to represent the probable market prices for the ensuing 12 months, had not the Division of Operations gone into the market.

Prices quoted on fuel oil for the Pacific coast, at the time bids were submitted for Atlantic and Gulf ports were unsatisfactory and the bids were rejected. However, it is hoped favorable prices may soon be obtained.

Steps are being taken to contract for Shipping Board requirements of coal, lubricating oils, greases, paint, packing and other supplies which, from the standpoint of economy or more consistent ship operation, it is advisable to purchase through one agency.

Information as to prices, grades, and available supply of both coal and oil fuel, as well as facilities for bunkering ships at important world ports, is compiled and distributed in pamphlet form monthly to officers of the Division of Operations, for use in the preparation of bunker schedules.

The Supply Department is interested in all matters pertaining to supplies with a view to reducing costs to the minimum, consistent with efficiency.

#### DISPATCH DEPARTMENT.

A close check on the port performances of vessels is kept by this department to discover instances of failure on the part of operators and agents to effect the quickest possible turnaround. The records on this subject include also port performances abroad. Assistance and directions are given operators of Shipping Board vessels, and disciplinary and remedial action is taken where necessary. The great importance of quick turnaround is recognized, and every effort is made to reach the highest point of efficiency in port performances. Considerable improvement has been shown in the turnaround of vessels, particularly in the English trade.

#### ACTUARIAL DEPARTMENT.

The Actuarial Department was created on May 1, 1919, for the purpose of compiling and presenting to the Director of Operations specific information pertaining to the results obtained in the operation of vessels.

By means of reports and analytical statements there may be shown the earning capacity of vessels, by classes and types, trade routes, commodities handled, managers, and operators, compiled from information obtainable on voyages actually made or to be made, whether completed, partially completed, or in contemplation.

This department endeavors to collate and show the various elements of cost of operation, classified as desired, with a view to effecting greater economies and producing more satisfactory results.

Special assignments are also undertaken under the direction of the Director of Operations.

#### SHIPPING INFORMATION DEPARTMENT.

The work of the Shipping Information Department is best illustrated by a brief résumé of the publications which it issues:

*"Register of Ships Owned by the United States Shipping Board."*—The first edition of the register was issued in February, 1919, and the

second in April. The third will be issued shortly. It is intended to publish this volume semiannually. Data contained therein covers type, dimensions, tonnages, draft, speed, cubic measurements, fuel capacity and consumption, type of engines and boilers, cargo-handling equipment, etc.

*"List of American and Foreign Ships."*—This publication is issued semimonthly and shows the fleet owned by the Shipping Board as per deliveries by the Ship Construction Division. It also lists chartered vessels under the jurisdiction of the Board. A tabulation of shipowners and operating companies is also incorporated in this publication, showing the original number of their fleets, withdrawals by requisition, additions by assignments for management and operation by the Shipping Board and the total number of vessels and amount of tonnage under the jurisdiction of each company as of date of publication.

*"Contract and Requisitioned Steamships."*—This publication is issued monthly and deals with the construction program, showing deliveries and expected deliveries of vessels, classified as requisitioned or contract and steel or wood. Keel layings, launchings, and deliveries are also tabulated by number of vessels and amount of tonnage per month from August, 1917.

In addition to the foregoing, files of blue prints of vessel plans are maintained, copies of which are furnished managers and operators upon request to assist them in the stowage of cargoes.

Special reports on various subjects within the scope of the department are compiled as required by the divisions of the Shipping Board and personal service is extended to managers, operators, and the general public in search of information on shipping topics.

#### RADIO DEPARTMENT.

The Radio Department of the Division of Operations was organized to take over the duties performed for the Shipping Board during the existence of hostilities by the Bureau of Steam Engineering of the Navy Department. At the beginning of the war, the Shipping Board availed itself of the offer of the Navy Department to furnish radio apparatus and radio operators for all Shipping Board vessels. By Executive proclamation, the control of all radio telegraphy during the war was vested in the Navy Department, due to the military aspects of the radio situation, and the Navy was hence in a position to control all apparatus and operators.

Owing to the release of naval radio operators from the service upon the demobilization of the Navy, and the decision of Congress not to give the Navy Department permanent control of radio telegraphy in time of peace, the Navy eventually expressed its desire to be released from handling the radio service of the Shipping Board as soon as the

Shipping Board was prepared to handle its own radio service. The Navy will continue to install radio apparatus upon new vessels constructed for the Shipping Board, as a considerable quantity of apparatus purchased during the war is still on hand. Contracts for keeping this apparatus in repair, for handling the accounting for all radiograms, furnishing of operators, and attending to all details of the radio service have been entered into with various radio companies, and all services performed by the radio companies will be supervised by the Radio Department.

General supervision is exercised over all radio messages between the Division of Operations and Shipping Board vessels at sea, and immediate action is taken in cases which indicate that either the apparatus or the operators are inefficient. Reports are received from all available sources concerning service performed by the radio companies which have contracted to furnish radio service, to insure that the provisions of the contracts are being carefully complied with at all times. A complete record is kept of all apparatus and operators, together with the cost of the set and the expense of installation, in order that these figures may be immediately available in case it is desired to sell a ship.

Records will also be kept as to what extent the receipts from radio messages balance expenditures for repairs and operation, and also any notable instances where radio has been of assistance to vessels in distress. If one commercial message of 20 words length is filed aboard each ship each day, the service will become self-supporting. Similarly, if radio is the means of saving one ship in distress from being lost, the actual saving in money will be sufficient to pay operating costs for about three years.

#### ADMISSION OF FOREIGN AND FOREIGN-BUILT VESSELS TO THE COASTWISE TRADE OF THE UNITED STATES.

Under the provisions of the Act approved October 6, 1917, the suspension of existing provisions of law was authorized, and the Shipping Board was given jurisdiction over the issuance of permits to vessels of foreign registry and foreign-built vessels of American registry to engage in the coastwise trade of the United States during the war with Germany and for a period of 120 days thereafter. The coastwise trade with Alaska or between ports of Alaska does not come within the provisions of the act. By a resolution of the Shipping Board the authority to issue such coastwise permits was delegated to the Director of Operations.

During the year covered by this report permits were granted to approximately 300 vessels, about four-fifths of which were in coastwise trade on the Atlantic and Pacific coasts and the remainder on the Great Lakes. These permits usually have been for a single

voyage, but in the case of Canadian vessels trading on the Great Lakes the permits covered the 1918 season of navigation on the Great Lakes.

Since the signing of the armistice the necessity for granting permits under this war-emergency legislation has grown less and permits are now issued only in the most exceptional cases.

#### REPORT OF THE COMPTROLLER OF THE DIVISION OF OPERATIONS FOR THE FISCAL YEAR ENDED JUNE 30, 1919.

It is the function of the Comptroller's Department of the Division of Operations to audit all revenue and disbursements arising from the operation of Shipping Board vessels and to compile the results of this operation in such a manner as to furnish the operating division, and others who may require it, with the necessary cost and statistical data.

##### Increase in Activities During the Fiscal Year June 30, 1919.

The activities of the Comptroller's office have increased very largely during the past fiscal year. In fact the volume of business transacted has grown to proportions which no one in the organization had the vision to foresee.

This increase in activities may be partially appreciated when one considers the increase in the tonnage operated by the Division of Operations during the same period. At June 30, 1918, there were approximately 4,000,000 deadweight tons of shipping under the control of the Board, of which about 2,500,000 were in the Army and Navy services, leaving less than 1,500,000 operated by the Division of Operations. At June 30, 1919, however, the tonnage under Shipping Board control was approximately 7,000,000, of which about 1,000,000 were in the Army and Navy services, so that approximately 6,000,000 deadweight tons were in the service of the Division of Operations. This would indicate an increase of about 4,500,000 deadweight tons in the tonnage under actual operation of the Division of Operations, or, in other words, an increase of over 300 per cent.

The increase in the activity of this office is perhaps even better illustrated by the increase in the gross revenues reported to the Division of Operations during the fiscal year ended, over the period up to June 30, 1918.

From the beginning of operation up to June 30, 1918, gross revenues totaling approximately \$80,000,000 were reported to the Comptroller of the Division of Operations. During the year ended June 30, 1919, however, the total gross revenues reported approximate almost \$500,000,000. These figures clearly indicate the extremely rapid increase in the volume of transactions passing through the Comptroller's Department.

## Increases in Personnel.

To meet the enormous increases in its business, it has been necessary for the Comptroller's office to expand proportionately. The impossibility of securing adequate office space has been one of the greatest obstacles encountered during the year, and this was partially overcome by the securing of the Hooe Building as the headquarters of the Comptroller's organization.

It has been an even greater problem to secure a trained personnel to handle the increasing volume of work. The greater part of the work requires the services of trained accountants, especially of those with experience in the steamship business. This type of men it has been practically impossible to secure. This has forced upon the Comptroller's office the policy of securing men untrained in steamship accounting and training them in our offices for the work they are to perform. This has naturally necessitated large increases in personnel during the past fiscal year. The force in the Comptroller's office in Washington has increased from 98 to 580, whereas the force throughout the entire organization has increased from 379 to 1,545. A table showing the increase in personnel during the year by agencies and months follows:

	Baltimore, Md.	Boston, Mass.	Cleveland, Ohio.	New Orleans, La.	New York, N. Y.	Norfolk, Va.	Philadelphia, Pa.	Portland, Oreg.	San Francisco, Calif.	Seattle, Wash.	Total agencies.	Washington office.	Grand total.
July, 1918.....	3	10	11	2	218	14	2	3	11	7	281	98	379
August, 1918.....	5	10	11	2	224	11	2	3	9	7	287	100	387
September, 1918.....	5	10	14	2	211	17	2	3	9	8	281	110	391
October, 1918.....	13	10	14	3	318	19	2	3	9	7	398	130	528
November, 1918.....	13	10	14	3	358	22	2	3	9	5	439	152	591
December, 1918.....	21	11	14	3	390	26	2	3	13	5	488	180	668
January, 1919.....	20	10	15	5	443	35	2	3	13	6	552	288	840
February, 1919.....	20	10	15	7	495	48	2	3	13	7	620	335	955
March, 1919.....	20	10	15	9	608	51	2	3	14	8	740	432	1,172
April, 1919.....	22	9	15	9	623	51	2	3	14	9	759	495	1,254
May, 1919.....	25	33	15	10	644	55	2	4	40	9	843	528	1,367
June 30, 1919.....	76	33	16	34	681	63	14	4	40	4	965	580	1,545

## Changes in Organization.

The Comptroller's Department has not merely increased in size, with this increase in the number of personnel, there have been installed improvements in procedure and in the methods of organization, which have very materially facilitated the prompt and accurate handling of the business of the Comptroller's Department.

As the foremost among these changes may be mentioned the installation of the decentralized plan of organization. It is impossible in this brief report to outline all the details of this plan. It is important, however, to notice some of the benefits that are resulting

from the decentralizing of the Comptroller's organization. Under the new plan, the Comptroller is able to obtain—

(a) A detailed local audit of all revenues and disbursements on Shipping Board vessels in United States ports. This audit was formerly performed in Washington;

(b) Settlement of accounts with operators and managers by the local auditor in the port where the operator or manager is located. These settlements were formerly made only in Washington, in most cases after endless correspondence and long delay;

(c) Direct supervision over the accounts and accounting methods of companies acting as agents for the Division of Operations either as operators or managers. Under the old plan, no such supervision was exercised.

Another change that has helped to facilitate the work of the Comptroller's Department was the installation of a uniform accounting system in all the district offices of the Division of Operations. It is not desirable in this report to go into the details of the accounting methods of the Comptroller's Department, but anyone familiar with accounts will appreciate the value of the installation of uniform accounting procedure in all branches of this organization. This change has made it possible to prepare monthly financial statements for the entire division very shortly after the close of the month.

Another important step in the proper organization of the Comptroller's Department was the separation of the auditing of repairs from the auditing of voyage accounts. This was done by organizing a Repair Cost Audit Department under the supervision of the general auditor of repairs, with headquarters in Washington and with district representatives in each of our district offices. This has resulted in the prompt reimbursement of repair yards and in saving of large sums of money to the Shipping Board, and has at the same time given the Comptroller's Department more complete control over repair costs than had been obtained prior to that time.

These changes in organizations, along with many others of a more detailed nature, have tended toward the more efficient handling of the Comptroller's work.

## APPENDIX.

TABLE XVI.—*Legal arrangements involved in connection with the Emergency Fleet Corporation's housing projects for shipyard employees.*

1. (a) Shipbuilder is required to contribute cost of land to be developed. Title to land is insured by responsible title company at expense of shipbuilder.

(b) Shipbuilder organizes subsidiary realty company which acquires title to land in exchange for its stock for cost of land at par.

(c) If land be without streets or public utilities, shipbuilder or municipality is required to furnish or contribute to cost of installation of same.

2. (a) Shipbuilder agrees with realty company (advance money mortgage agreement) to advance or cause to be advanced all further costs of development without fee to shipbuilder or realty company.

(b) Realty company executes its bond for all advances made payable on or before 10 years, with semiannual interest at 5 per cent; securing same by blanket mortgage, with proper provisions therein for releases in event of sales of individual lots to shipyard workers.

3. Shipbuilder realty company and Emergency Fleet Corporation execute triparty agreement (known as operation agreement) which provides as follows:

(a) Shipbuilder assigns advance money mortgage agreement and bond and mortgage to Emergency Fleet Corporation.

(b) Shipbuilder guarantees all undertakings of realty company therein except as to payment of loan.

(c) Shipbuilder pledges entire capital stock of realty company as collateral to its guaranty (see (b) ) reserving voting and other rights therein.

(d) Upon any default of realty company or shipbuilder, Emergency Fleet Corporation may sell pledged stock without notice and become purchaser at any such sale, without affecting its right to foreclose mortgage.

(e) After 36 months shipbuilder may assign stock of realty company to Emergency Fleet Corporation and be relieved of its guaranty if not then in default.

(f) Emergency Fleet Corporation assumes obligation of shipbuilder to make advances.

(g) Realty company agrees not to increase capital stock without consent of Emergency Fleet Corporation.

(h) Provision made for application of revenues of realty company from whatsoever source derived.

(i) Realty company limited to 5 per cent dividends on its stock until mortgage is paid.

(j) Dividends thereafter limited to 6 per cent, with option to apply excess earnings, if any, to amount of 2 per cent per annum of capital stock originally issued toward its amortization and balance to improvement of unsold property.

(k) Emergency Fleet Corporation controls sales, renting, and restrictions on property until six months after conclusion of war.

(l) Upon sales Emergency Fleet Corporation grants release from blanket mortgage and accepts money mortgage on similar terms in lieu thereof.

(m) Provisions for appraisal not earlier than two years, nor later than five years, after conclusion of war (time at option of Emergency Fleet Corporation) if revenues of realty company prove insufficient to meet carrying charges, including 3 per cent annual amortization of mortgage.

As result of appraisal there may be maximum write-off on mortgage of 30 per cent in recognition of excessively high construction costs.

Individual purchasers may get the benefit of any such write-off by leaving 30 per cent of the release value of their lots on bond and mortgage.

4. Emergency Fleet Corporation approves selection of architects, engineers, contracts, etc., and determines amount of their respective compensations.

5. Resort is only had to power of requisition where price asked for land required is excessive or delay in securing good title would otherwise occur.

TABLE XVII.—*Contracts entered into by Emergency Fleet Corporation for providing street railway facilities for transportation of shipyard employees.*

Contract No.	Contract drawn with—	Description of work.	Amount authorized in contract.	Revised total estimated expenditures.	Estimated amount to be returned to Government.	Estimated net loss to Government.
1	Lewiston, Augusta & Waterville Street Railway, Bath, Me.	Install 13,000-volt transmission line and alter track.	\$71,500.00			
		Purchase 6 passenger cars and 1 snowplow.	99,000.00			
			170,500.00	\$137,037.45	\$105,000.00	\$32,037.45
2	National Engineering Corporation, Harry A. Wood, Boston, Mass.	Wooden auto roadway (Portsmouth, N. H.)	3,343.00	3,194.19	.....	3,194.19
3	Receiver, Bay State Street Railway, Boston, Mass.	Purchase substation equipment.	32,000.00			
		Rehabilitate 26 passenger cars.	35,135.14			
			67,135.14	67,000.14	54,743.25	12,256.89
4	Metropolitan Park Commission, Boston, Mass.	Widening Neponset River Bridge.	62,236.00	53,462.74	.....	53,462.74
5	Richmond Light & Railroad Co., New Brighton, Staten Island, N. Y.	Purchase 20 passenger cars.	260,000.00			
		Improve power facilities.	346,460.00			
			606,450.00	606,460.00	482,009.00	124,451.00
6	Public Service Railway, Newark, N.J.	Install track loop....	10,591.00			
		Install railway feeder.	28,995.00			
			39,586.00	26,189.65	16,994.14	9,195.51
7	Southern Penn Traction Co.	Purchase 22 passenger cars.	319,000.00	319,634.60	239,725.95	79,908.65
		Rehabilitate 1½ miles of track.	86,412.70	89,919.85	89,919.85	1
		Construct 6 miles of single track and roadway along Chester Pike between Darby and Eddystone.	733,000.00	1,001,802.33	818,167.53	1183,634.80
		Delaware County Electric Co.	Install additional equipment in Folsom substation.	80,000.00	56,333.63	36,000.00
			1,218,412.70	1,467,690.41	1,183,813.33	283,877.08
8	Public Service Railway, Newark, N.J.	Install electrical apparatus in power house and substations; erect transmission line and feeder; construct 2 terminal loops and purchase 33 passenger cars.	1,240,780.00	1,140,780.00	855,585.00	285,195.00
9	.....do.....	Extend track to Yorkship Village.	250,000.00	240,000.00	219,587.25	20,412.75
10	United Railways & Electric Co. of Baltimore, Baltimore, Md.	Extend track to Sparrows Point.	145,472.25			
		Purchase 50 passenger cars.	822,510.00			
			967,982.25	958,982.25	719,236.69	239,745.56

<sup>1</sup> Amount required covers paving not included in original estimate.

TABLE XVII.—Contracts entered into by Emergency Fleet Corporation for providing street railway facilities for transportation of shipyard employees—Continued.

Contract No.	Contract drawn with—	Description of work.	Amount authorized in contract.	Revised total estimated expenditures.	Estimated amount to be returned to Government.	Estimated net loss to Government.
11	Newport News & Hampton Railway, Gas & Electric Co., Hampton, Va.	Install 3.8 miles of track.	\$175,000.00			
		Purchase 10 passenger cars.	125,000.00			
			300,000.00	\$319,000.00	\$239,250.00	\$79,750.00
12	Tidewater Power Co., Wilmington, N. C.	Purchase 8 second-hand passenger cars.	28,500.00			
		Install track and overhead.	150,000.00			
		Install additional power facilities.	200,000.00			
			378,500.00	378,500.00	273,000.00	105,500.00
13	Chatham County, Savannah, Russell Estate, Savannah, Ga.	Purchase of right of way.	4,415.46	4,415.46	.....	4,415.46
14	Mobile Light & Railway Co., Mobile, Ala.	Purchase 9 cars and extend track.	7,500.00	9,000.00	.....	9,000.00
15	Chas. Swank et al., Beaumont, Tex.	Purchase ferry equipment.	3,250.00	3,250.00	2,000.00	1,250.00
16	Duluth Street Railway, Duluth, Minn.	Purchase of 6-passenger cars, 1 snow-pow, and substation equipment.	81,058.67	81,058.67	60,794.00	20,264.67
17	New York Central R. R., Ashtabula, Ohio.	Sidewalk along bridge.	6,000.00	185.16	.....	185.16
18	City of Tacoma, Tacoma, Wash.	Purchase 10 second-hand cars.	74,100.00			
		Construction of track and loading station.	158,200.00			
			232,400.00	232,398.40	202,229.21	30,169.19
19	Portland Railway, Light & Power Co., Portland, Oreg.	Purchase 25 passenger cars.	150,000.00			
		Construct 3 track loops.	21,000.00			
			171,000.00	150,329.80	112,747.35	37,582.45
20	San Francisco-Oakland Terminal Co., Oakland, Calif.	Construction of track	9,675.00	9,675.00	9,675.00	
		Purchase 51 cars....	465,600.00	6,817.49		6,817.49
21	San Diego Electric Railway, San Diego, Calif.	Install 1 mile of single track.	57,000.00	46,883.65	46,883.65	.....
22	Philadelphia Rapid Transit Co.	Purchase 100 cars, install track and power equipment and terminal.	2,271,655.52	2,161,655.52	1,080,827.76	1,080,827.76
23	Philadelphia Railways Co., Philadelphia, Pa.	Purchase 30 cars, install track and power equipment.	826,006.70	1,009,994.02	504,997.01	504,997.01
24	Public Service Railway Co., Newark, N. J.	Purchase 18 cars and extend track.	837,344.33	687,995.01	309,597.75	378,397.26
Total.....			10,345,340.77	9,801,955.01	6,478,970.39	3,322,984.62

TABLE XVIII.—Security held by Emergency Fleet Corporation for payment of sums expended on account of contracts for provision of transportation facilities.

Contract drawn with—	Date.	Revised estimated amount.	Security.	Amount.
Lewiston, Augusta & Waterville Street Railway, Bath, Me.	July 15, 1918	\$137,037	Title to all new material purchased at estimated cost of.	\$115,000
Receiver, Bay State Street Railway, Boston, Mass.	June 28, 1918	67,000	First mortgage refunding 6 per cent bonds of par value.	60,000
Richmond Light & Railroad Co., New Brighton, Staten Island.	Aug. 28, 1918	606,460	Title to all new material purchased at estimated first cost of. Receiver's certificates of face value of amount advanced.	49,152
Public Service Railway, Newark, N. J. (work at Kearny, N. J.).	Aug. 12, 1918 July 31, 1918	20,189	Title to all new material purchased at estimated first cost of. A lien on railroad company's earnings, consisting of one-tenth of cost power furnished the shipyards during the war and one-half of cost power furnished after the war.	522,045
Southern Pennsylvania Traction Co., Philadelphia, Pa.	Dec. 3, 1918 Sept. 4, 1918	319,634 89,919	Franchise, consents, etc., and title to work at estimated first cost of.	26,189
Delaware County Electric Co., Philadelphia, Pa.	.....	1,001,802 56,333	Title to street cars of contract cost.... First mortgage bonds of Wilmington & Philadelphia Traction Co., at 75 per cent of their par value, to the net amount of.	319,634 89,919
Public Service Railway, Newark, N. J. (work at Camden, N. J.).	Apr. 18, 1918	1,140,780	Full title to track of estimated cost of. Title to power equipment at estimated first cost of. Title to power apparatus at estimated first cost of. Title to trackage at estimated first cost of.	1,001,802 56,333 569,785 218,495
Public Service Railway, Newark, N. J. (Yorkship village track).	July 11, 1918	210,000	Title to street cars at estimated first cost of. Also bond executed by public-service corporation guaranteeing performance of contract.	352,500
United Railways & Electric Co., Baltimore, Md.	July 10, 1918	958,982	Title to track construction at estimated first cost of.	210,000
Newport News & Hampton Railway, Gas & Electric Co., Hampton, Va.	May 21, 1918	319,000	Title to street cars at contract cost of... Franchises, consents, etc., and title to track at estimated first cost of. Title to power apparatus purchased at estimated first cost of. Franchises, consents, etc.	822,510 136,472 114,465 204,635
Tidewater Power Co., Wilmington, N. C.	Aug. 28, 1918	378,500	First mortgage 6 per cent bonds at par value of amount of 85 per cent of amount advanced for track and overhead and at estimated first cost of. A lien on the power company's earnings, consisting of the profit on the power delivered to the shipyard.	150,000
Charles Swank et al., Beaumont, Tex.	Sept. 13, 1918	3,250	Retains ownership and title to 8 second-hand cars costing.	28,500
Duluth Street Railway, Duluth, Minn.	Aug. 27, 1918	81,058	Title to ferryboat at contract cost of...	3,250
City of Tacoma, Wash.	Sept. 11, 1918	232,398	Title to cars, snow plow, and electrical apparatus at contract cost of. Title to cars at contract cost of..... Title to track and all other facilities provided at estimated first cost of.	81,058 111,722 120,676
Portland Railway, Light & Power Co., Portland, Ore.	July 13, 1918	150,329	Bonds of the municipal street car line, guaranteed as to principal and interest by the city of Tacoma to the face value of. All rights, franchises, etc., necessary to construction and operation.	232,400
San Francisco-Oakland Terminal Co.	Aug. 16, 1918	9,675	Title to street cars of contract cost of... Title to trackage provided at an estimated first cost of. All rights, franchises, etc., necessary to construction and operation.	145,187 5,142
			Note of the Emergency Transportation Co., guaranteed by the San Francisco-Oakland Terminal Co., as to principal and interest.	9,675
			Stock of the Emergency Transportation Co. of par value.	10,100

## INDEX

	Page.
Acceptance of new vessels, function of Construction and Repair Department	117
Accidents:	
Prevention of.....	87-88
Safety engineering.....	87-88
Accounts and accounting:	
Construction Division, system.....	99
Division of Operations—	
Decentralization plan of organization.....	125
Uniform system.....	125
Acquisition of vessels:	
By construction.....	9-10, 60-64, 68-74
By purchase or charter from foreigners.....	9, 17, 19-20, 36-37
By requisition.....	9-10, 36-39, 76-77
By seizure of German and Austrian vessels.....	9, 36-37, 40-41
Dutch vessels.....	18-20, 36-39
Actuarial Department.....	120
Aden, Arabia, fuel-oil station.....	119
Adjustment:	
Of labor problems—	
Agencies and organizations employed.....	84-86
Function of Board.....	13
Policy.....	52-54, 84-86
Admiralty Division, Law Department:	
Cooperation with Justice Department.....	18
Duties, powers, etc.....	18
Admiralty suits against United States:	
Settlement—	
Cooperation of the Law Division with Justice Department.....	18
Law Division to advise.....	17-18
Regulation by act of Congress.....	29
Admission of vessels to American registry for coastwise trade.....	122-123
Advance payments on contracts, Appendix, Part II, Table XXII.	
Advisory Insurance Committee. (See Insurance Division.)	
Agencies:	
Of Division of Operations—	
Establishment.....	11
Organization, etc.....	101-103
Agency form contract.....	62-63
Agents, for American steamship operators in foreign ports, list.....	30
Agreements:	
On rates, filed with Shipping Board.....	24-25
With Denmark.....	19-20
With Dutch shipowners.....	21-22
Alaska, permits for coastwise trade unnecessary.....	122

Allied Maritime Transport Council:	
American section—	Page.
Connection with State Department.....	14
Information furnished by.....	14
Cooperation with Shipping Board.....	13
Allocation Committee:	
Daily meetings.....	104
Operating Section, Purser's Department, representative on.....	111-112
Allocation Department.....	104
Allocation of vessels:	
For European food relief.....	13-15, 105
For movement of troops.....	13-15
Organizations and agencies—	
Allocation Department.....	104
Shipping Control Committee.....	13, 104
Research work of Division of Planning and Statistics.....	48-49
Statistical résumé.....	105
