SAN ANTONIO

SAN ANTONIO SECTIONAL

SECTIONAL AERONAUTICAL CHART SCALE 1:500,000

Federal Aviation Administration

98TH EDITION EFFECTIVE 09017 10 NOV 2016
TO 09017 27 APR 2017

Obstacle clearance and navigation altitudes are based on the most current publication of the National Geodetic Survey (NGS) Digital Obstacle File (DOF). Obstacle clearance altitudes on this chart are shown as MSL values. Navigation altitudes are shown as MSL values and may be converted to AGL values by subtracting the elevation of the nearest airport. Due to the limitations of the DOF publication criteria, some obstacles may not be charted. Digital obstacle data is available at https://www.aeronav.faa.gov/Obstacle_Data/dof_publication.pdf

Aeronautical data effective 10 November 2016 through 27 April 2017. Aeronautical information contained in this publication is not to be used for flight purposes.

Visit http://www.faa.gov/air_traffic/flight_info/aeronav/digital_products/ for digital products.

Report suspected discrepancies to the National Aeronautical Charting Office at 1-800-626-7868 or 1-405-954-4401 or e-mail 9-AMC-NACO@faa.gov

163 15

Alternate minimums are not authorized at this airport.

Lowest Usable Flight Visibility

Runway	Straight-in	Circling
3	1	1
12	1	1
21	1	1
30	1	1

Lowest Usable Flight Visibility is the lowest reported visibility (RVR or CVR) value authorized for use during an approach, or takeoff, for a runway. Pilots may use a lower visibility value than the lowest published minimum when reported by the associated RVR or CVR.

CAUTION: This chart is providing navigational information for visual navigation purposes only. Information depicted may not be current due to rapidly changing aeronautical data. Operators are responsible to check for temporary flight restrictions and other aeronautical information that may affect their proposed flight.

Lowest Usable Flight Visibility is the lowest reported visibility (RVR or CVR) value authorized for use during an approach, or takeoff, for a runway. Pilots may use a lower visibility value than the lowest published minimum when reported by the associated RVR or CVR.

Alternate minimums are not authorized at this airport.

CONTROL TOWER FREQUENCIES ON SAN ANTONIO SECTIONAL CHART

Airports with control towers are listed in blue boxes. Ground control frequencies are listed above the box, tower frequencies are listed below the box. Where ATIS is available, the frequency is shown in the box. Where Clearance Delivery is available, the frequency is shown in the box. Where Pre-taxi Clearance is available, the frequency is shown in the box. Where Unicom is available, the frequency is shown in the box. Where Multicom is available, the frequency is shown in the box. Where Common Traffic Advisory Frequency is available, the frequency is shown in the box. Where Emergency Only is available, the frequency is shown in the box. Where Tower Only is available, the frequency is shown in the box. Where Part Time is available, the frequency is shown in the box. Where Airport Advisory is available, the frequency is shown in the box. Where Flight Service is available, the frequency is shown in the box. Where Radio is available, the frequency is shown in the box. Where Radar is available, the frequency is shown in the box. Where Approach is available, the frequency is shown in the box. Where Departure is available, the frequency is shown in the box. Where Center is available, the frequency is shown in the box. Where Oceanic is available, the frequency is shown in the box. Where Military is available, the frequency is shown in the box. Where Civil is available, the frequency is shown in the box. Where Private is available, the frequency is shown in the box. Where Public is available, the frequency is shown in the box. Where Restricted is available, the frequency is shown in the box. Where Prohibited is available, the frequency is shown in the box. Where Danger is available, the frequency is shown in the box. Where Warning is available, the frequency is shown in the box. Where Caution is available, the frequency is shown in the box. Where Alert is available, the frequency is shown in the box. Where Emergency is available, the frequency is shown in the box. Where Guard is available, the frequency is shown in the box. Where Unicom is available, the frequency is shown in the box. Where Multicom is available, the frequency is shown in the box. Where Common Traffic Advisory Frequency is available, the frequency is shown in the box. Where Emergency Only is available, the frequency is shown in the box. Where Tower Only is available, the frequency is shown in the box. Where Part Time is available, the frequency is shown in the box. Where Airport Advisory is available, the frequency is shown in the box. Where Flight Service is available, the frequency is shown in the box. Where Radio is available, the frequency is shown in the box. Where Radar is available, the frequency is shown in the box. Where Approach is available, the frequency is shown in the box. Where Departure is available, the frequency is shown in the box. Where Center is available, the frequency is shown in the box. Where Oceanic is available, the frequency is shown in the box. Where Military is available, the frequency is shown in the box. Where Civil is available, the frequency is shown in the box. Where Private is available, the frequency is shown in the box. Where Public is available, the frequency is shown in the box. Where Restricted is available, the frequency is shown in the box. Where Prohibited is available, the frequency is shown in the box. Where Danger is available, the frequency is shown in the box. Where Warning is available, the frequency is shown in the box. Where Caution is available, the frequency is shown in the box. Where Alert is available, the frequency is shown in the box. Where Emergency is available, the frequency is shown in the box. Where Guard is available, the frequency is shown in the box.

CAUTION: Severe turbulence may occur downwind of mountainous terrain.

CAUTION: Severe turbulence may occur downwind of mountainous terrain.
