

2016 R&D Forum – Day-2 (3/24/2016): Small Group Discussions

Bulk Packaging Facilitator – Victor Casillas, PHH-22

Summary:

1. Initiating GFRP as an Acceptable Material for CTMV Construction: J.P. Gibbons requested research be conducted in order to verify the safety of GFRP as a material of construction for CTMV and incorporate findings into the HMR.
2. Improving Operator Training Requirements: J.P. Gibbons requested training requirements be examined and updated accordingly for CTMV loading and unloading personnel, including wet line procedures and maintenance, in order to reduce operator involved incidents.
3. Clarification of Testing Requirements: John Heater requested clarification for the required medium during a leakage test and a pressure test for IBC and UN PT requalification. A special permit application was submitted by him on behalf of Dow Chemical.
