

DATA DICTIONARY

For motor vehicle crash data

To be used with data beginning calendar year 2007

The purpose of this manual is to be a comprehensive guide to all data elements captured in the data base from police reported motor vehicle crashes that meet the criteria of a reportable crash.

One record is captured for each crash in the crash level, one record is captured in the vehicle level for each motor vehicle if it is in transport or in the roadway, and one record is captured in the person level for each person in the crash regardless of the person type or injury severity .

Within this data dictionary, you should be able to find each element by name in its respective table level, the eligible variables to match the element, and the element type and size. You may also find other information for which you can find no explanation and which means nothing to you. These pieces of information are for other uses.

You will find characters in the '**Note**' column besides some of the element names/alias. These are to let you know that the element is system generated, system verified or verified by linked tables. You should watch for these characters as they may explain why a variable listing is not indicated.

You should also be aware that some elements have no set variable listing. These elements will accept any characters. These elements are: DISTANCE FROM CITY, REFERENCE POINT, INTERSECTION DISTANCE and NAME

Should you have any questions or need additional information you may contact me at:
Karen.Bonds@asp.arkansas.gov.

Crash Level

Element Name or Alias		Date Type - Length	Comments
Entry Value	Variable Values	Value other than Variable
