Channel Portfolio Tool: User Manual [DRAFT]

Version 1.0

Marin M. Kress, Kenneth N. Mitchell

September 2016

The US Army Engineer Research and Development Center (ERDC) solves the nation's toughest engineering and environmental challenges. ERDC develops innovative solutions in civil and military engineering, geospatial sciences, water resources, and environmental sciences for the Army, the Department of Defense, civilian agencies, and our nation's public good. Find out more at www.erdclibrary.usace.army.mil.

To search for other technical reports published by ERDC, visit the ERDC online library at <http://acwc.sdp.sirsi.net/client/default>.

Abstract: The Channel Portfolio Tool (CPT) is a decision-support tool designed to help USACE operations personnel analyze the extent to which maintained navigation channels are used by commercial shipping. Analyses can be conducted for individual channels, or for a grouping of channels treated as a single project. Additionally, USACE planning personnel can use CPT to extract historical data concerning region-to-region commodity movements and consolidated statements of traffic for arbitrary listings of projects and channels. Key functionalities of CPT include:

- 1) The ability to apply multiple filters to query data published by the USACE Waterborne Commerce Statistics Center (WCSC) to get detailed results at the individual waterway reach level.
- 2) The ability to set hypothetical shoaling levels to a group of reaches or projects and identify what historical traffic would be affected by such shoaling.
- 3) The ability to quickly produce tables and visualizations displaying historical trends in commodity movements over time, space, commodity type, and potential shoaling scenarios.
- 4) The ability to evaluate multiple potential work packages.
- 5) The ability to export query results to MS Excel and GoogleEarth.

[Insert a 200-word summary here and use exactly the same one in Block 14 of the SF 298.]

DISCLAIMER: The contents of this report are not to be used for advertising, publication, or promotional purposes. Citation of trade names does not constitute an official endorsement or approval of the use of such commercial products. All product names and trademarks cited are the property of their respective owners. The findings of this report are not to be construed as an official Department of the Army position unless so designated by other authorized documents.

DESTROY THIS REPORT WHEN NO LONGER NEEDED. DO NOT RETURN IT TO THE ORIGINATOR.

Report Documentation Page

[TIP: leave the above placeholder Table of Contents as it is and do not delete it or type over it. You can use it later to easily generate an error-free Table of Contents by right-clicking on it, selecting “Update Field” from the popup menu, then clicking the “Update Entire Table” button and “OK.”]

1 Registration Information For New Users

Users must download and sign TWO non-disclosure waiver forms and register online before gaining access to CPT.

Form 1: WCSC non-disclosure document

- Electronically sign. Then save and send as an attachment to CPT@usace.army.mil. If electronic signature capability is not available then print the document, manually sign it, scan it and send as an attachment to CPT@usace.army.mil

Form 2: Census non-disclosure document

- Read and **print out** the Census non-disclosure document. **Manually sign the document**, scan it, and send as an attachment to CPT@usace.army.mil. This document MUST contain a manual signature.

Online on the CPT homepage:

- After selecting the “Register” tab, fill out all required registry information and select the “Register” button at the bottom of the screen. Once the registration and the non-disclosure forms are received and processed you will receive an email confirming registration.

Note: Once per year, on your first use after January 1st, you will be required to re-sign and re-submit **both** of the Non-Disclosure agreements before using CPT.

After you are registered and able to login you will be greeted with this Preferences page.

This image shows the basic filters that CPT users can employ to run detailed queries. The rest of this document describes these filters in more detail.

If you are interested in setting up a CPT webinar tutorial based on your specific workflow needs or questions please contact us.

CPT Program Manager

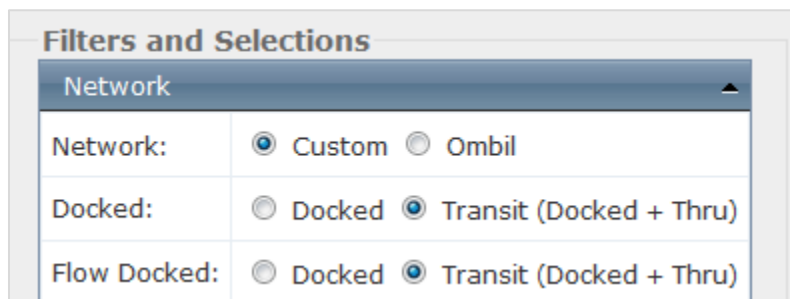

Dr. Ned Mitchell, Kenneth.N.Mitchell@usace.army.mil

2 Filters and Selections

Network

This filter allows users to select the channel network. Most users will use the default choices for this filter unless they are specifically interested in examining historical budget data. **[[NEED TO add DOCKED and FLOW DOCKED explanations in this section]]**

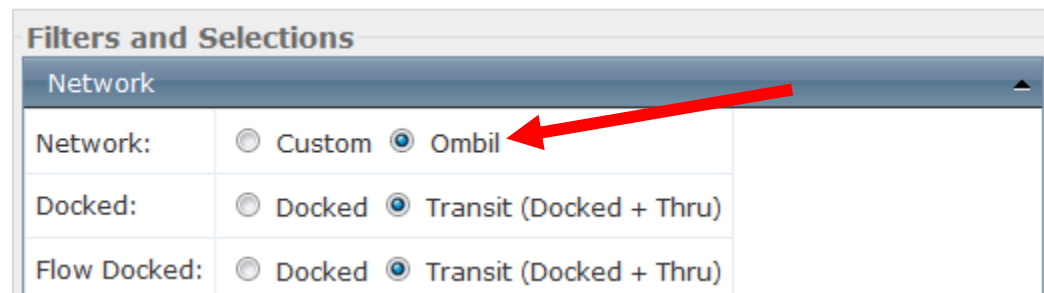

The default choices are Network: Custom, Docked: Transit, and Flow Docked: Transit.

Filters and Selections	
Network	
Network:	<input checked="" type="radio"/> Custom <input type="radio"/> Ombil
Docked:	<input type="radio"/> Docked <input checked="" type="radio"/> Transit (Docked + Thru)
Flow Docked:	<input type="radio"/> Docked <input checked="" type="radio"/> Transit (Docked + Thru)

Most users will keep the default settings for this filter.

Specialized users interested in examining budget data must select the OMBIL option. Relevant budget settings will be described below in the **Budget Years** and **Type Fund** filter sections.

Filters and Selections	
Network	
Network:	<input type="radio"/> Custom <input checked="" type="radio"/> Ombil
Docked:	<input type="radio"/> Docked <input checked="" type="radio"/> Transit (Docked + Thru)
Flow Docked:	<input type="radio"/> Docked <input checked="" type="radio"/> Transit (Docked + Thru)

Channel Conditions

This filter allows users to examine the impact of channel depth on traffic disruptions. The main elements are:

- Limiting Depth - As reported by Navigation Managers (historical data) or eHYDRO. If no other source of data is available the limiting depth value will default to the deepest vessel draft for the year.
- Conditions - Maintained channel depth can vary over time, this filter allows for shoaling impacts to be depth-adjusted on a rolling basis using historic data. This filter can be set to reflect either current or historical conditions
- Shoaling - Level of shoaling above the recorded limiting depth.

Default settings for Channel Conditions filter are shown below.

Channel Conditions	
Limiting Depth:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Conditions:	<input checked="" type="radio"/> Current <input type="radio"/> Historic
Shoaling:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

Users should keep the default selections unless specifically interested in shoaling impact scenarios.

To explore the impacts of hypothetical shoaling, you must:

- set the Shoaling option radio button to 'Enable'
- set the Shoaling Defined radio button to 'User-Defined'
- set a numeric shoaling level in the Anticipated Default Shoaling field. The picture below shows selections for hypothetical 10ft shoaling.

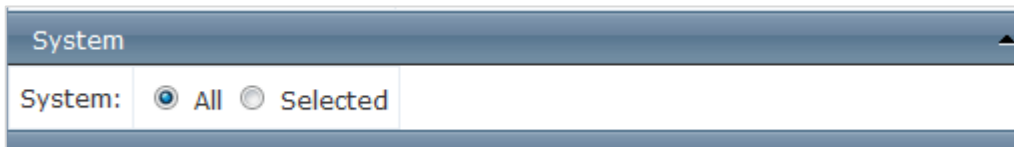

Channel Conditions	
Limiting Depth:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Conditions:	<input checked="" type="radio"/> Current <input type="radio"/> Historic
Shoaling:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Shoaling Defined:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Anticipated Default Shoaling:	10.00

System

This filter allows users to specify certain types of system traffic:

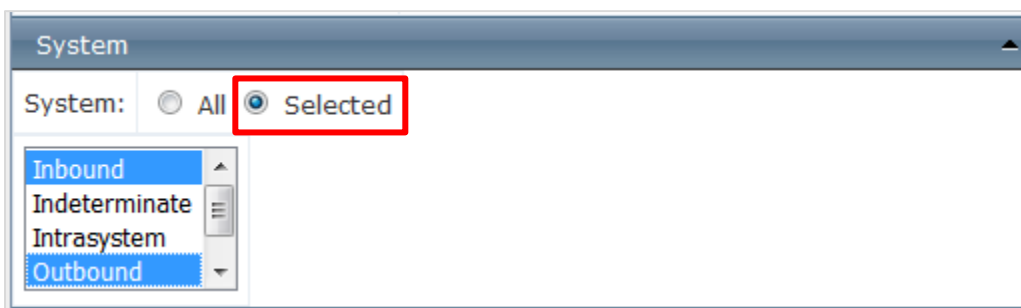

- Inbound – Cargo that enters a waterway and will offload there
- Indeterminate – Unknown, potentially because of missing data
- Intrasystem – Traffic that gets on and off the water within the location areas selected
 - Users select the specific area under the LOCATIONS page
- Outbound – Traffic that is entering the water and leaving the area
- Through – Traffic that is passing through a channel, not stopping at a port

Default setting is 'All' system types.

The screenshot shows a dropdown menu titled "System". Below the title, there is a label "System:" followed by two radio buttons: "All" (which is selected) and "Selected".

To include a subset of specific traffic types in your query click the radio button 'Selected' and press the **Ctrl** key to select multiple options from the list

The screenshot shows the "System" dropdown menu with the "Selected" radio button selected and highlighted by a red box. Below the radio buttons, a list of traffic types is visible: "Inbound", "Indeterminate", "Intrasystem", and "Outbound".

Direction

This filter allows users to select traffic moving in specific system-defined directions, this filter is most relevant to inland navigation.

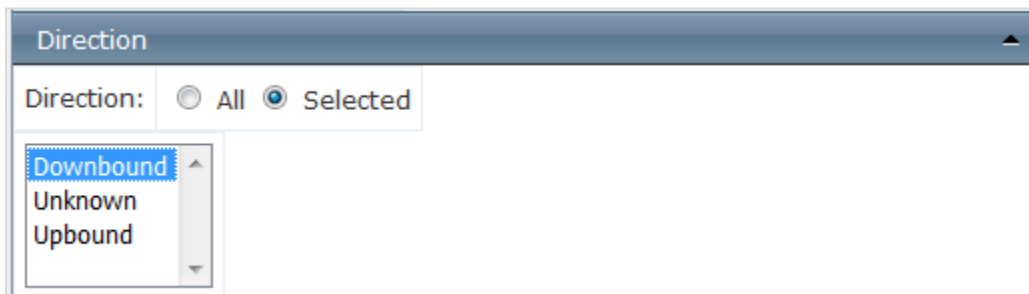

- Downbound – This designation is specific mostly to rivers with an obvious flow direction
 - Some ports use the upbound/downbound designation for traffic control within a port area.
- Unknown – Traffic moving in an unknown direction
- Upbound – Traffic moving upriver

The default choice is 'All' traffic directions.

A screenshot of a web interface titled "Direction". Below the title bar, there is a label "Direction:" followed by two radio buttons. The first radio button, labeled "All", is selected (indicated by a blue dot). The second radio button, labeled "Selected", is unselected.

User can select specific direction for their query. For example, users interested in Downbound traffic along a river would click the radio button for 'Direction: Selected' and then click on Downbound.

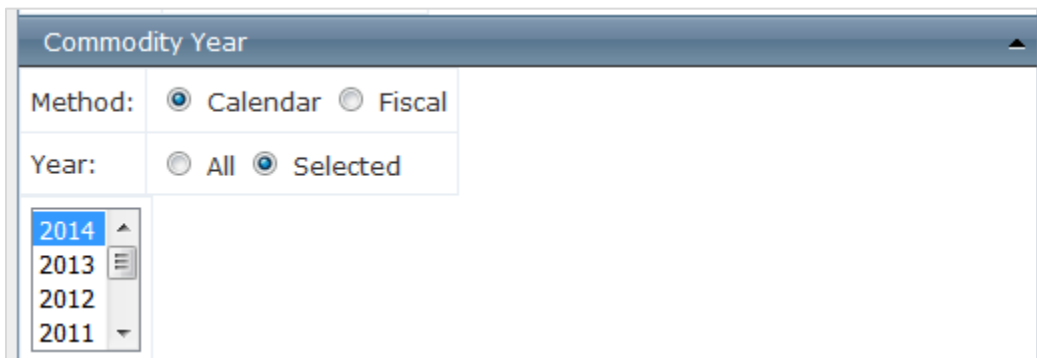

A screenshot of the same web interface titled "Direction". The "Selected" radio button is now selected. A dropdown menu is open below the "Selected" radio button, showing three options: "Downbound", "Unknown", and "Upbound". The "Downbound" option is highlighted with a blue selection bar.

Commodity Year

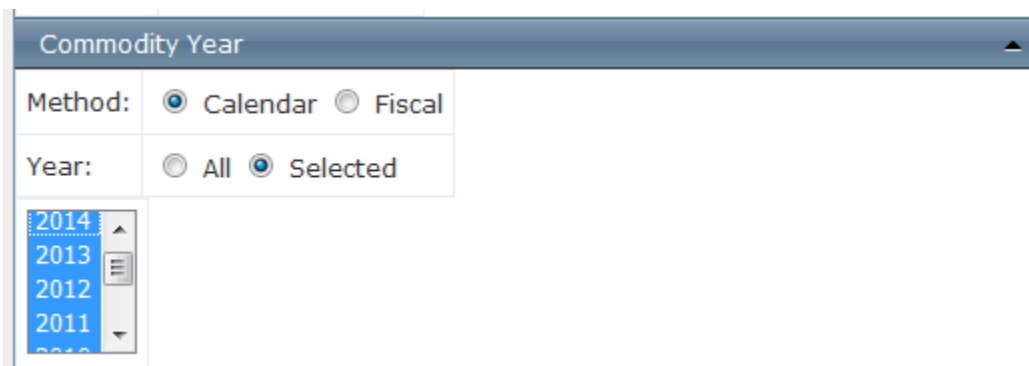

This filter allows users to select either calendar or fiscal years for their analysis. The available data in CPT is limited to the most recent seven years of published data. There is normally a 2-year lag for WCSC data, i.e., in 2016 the most recent available data is from 2014.

The default setting will be 'Method: Calendar' and 'Year: Selected' with the most recent year of data in the system and only that year as the selection.

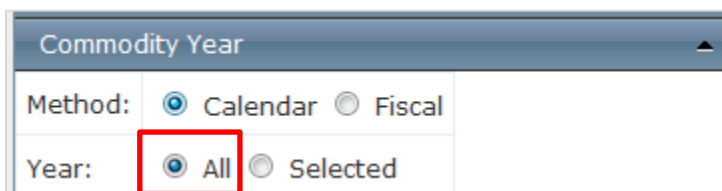

The screenshot shows the 'Commodity Year' dialog box. It has a title bar with the text 'Commodity Year'. Below the title bar, there are two rows of controls. The first row is labeled 'Method:' and contains two radio buttons: 'Calendar' (which is selected) and 'Fiscal'. The second row is labeled 'Year:' and contains two radio buttons: 'All' and 'Selected' (which is selected). Below these radio buttons is a list box containing the years 2014, 2013, 2012, and 2011. The year 2014 is highlighted in blue, indicating it is the selected year.

Users can select one year or multiple years (**Ctrl** key and click on years).

The screenshot shows the 'Commodity Year' dialog box. It has a title bar with the text 'Commodity Year'. Below the title bar, there are two rows of controls. The first row is labeled 'Method:' and contains two radio buttons: 'Calendar' (which is selected) and 'Fiscal'. The second row is labeled 'Year:' and contains two radio buttons: 'All' and 'Selected' (which is selected). Below these radio buttons is a list box containing the years 2014, 2013, 2012, and 2011. All four years are highlighted in blue, indicating they are all selected.

To select all years available click the radio button to 'All.'

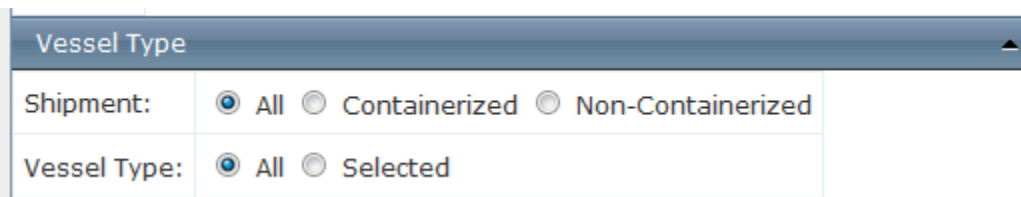

The screenshot shows the 'Commodity Year' dialog box. It has a title bar with the text 'Commodity Year'. Below the title bar, there are two rows of controls. The first row is labeled 'Method:' and contains two radio buttons: 'Calendar' (which is selected) and 'Fiscal'. The second row is labeled 'Year:' and contains two radio buttons: 'All' (which is selected) and 'Selected'. A red rectangular box highlights the 'All' radio button.

Vessel Type

This filter allows users to filter based on shipment type and/or vessel type. Available filter options include:

- Shipment
 - Containerized (shipments in 20-ft equivalent units (TEUs), aka ‘boxes’)
 - Non-containerized (carrying bulk cargo such as coal, ore, grains, etc)
- Vessel Type
 - Dry Cargo Barge
 - Liquid Barge
 - Other (Cranes, etc.)
 - Rafted Logs
 - Self-Propelled Dry
 - Tanker
 - Towboat

The default choice is all shipments and all vessel types.

Vessel Type	
Shipment:	<input checked="" type="radio"/> All <input type="radio"/> Containerized <input type="radio"/> Non-Containerized
Vessel Type:	<input checked="" type="radio"/> All <input type="radio"/> Selected

The Vessel Type filter allows the user to select multiple vessels for inclusion in the analysis. To learn more about vessel types that might be relevant to your inquiry review information on the following page from the USACE Navigation Data Center titled ‘Explanation of Vessel Type, Construction and Characteristics (VTCC Code).

Note: RO-RO = Roll on/Roll off cargo, such as automobiles

Explanation of Vessel Type, Construction and Characteristics (VTCC Code)

Construction:

A Steel	D Fiberglass
B Wood	E Other
C Aluminum	F Unknown

Type: 1 Self-Propelled, Dry Cargo

Characteristics:

02 Crewboat / Supply / Utility Vessel	10 Vehicle Carrier
03 General Cargo Freighter	11 Passenger Carrier
04 Break Bulk / RO-RO Carrier	12 Combination Passenger and Cargo
05 RO-RO Vessel	13 Ferry
06 Bulk Carrier	14 Railroad Car Ferry
07 Containership	15 Lash Vessel
08 Partial Containership	16 Excursion / Sightseeing Vessel
09 Container / Vehicle / Trailer (RO-RO) Carrier	

Type: 2 Self-Propelled, Tanker

Characteristics:

20 Petroleum / Chemical Carrier	23 Liquid Gas Carrier
21 Chemical Carrier	24 Other Tanker
22 Liquid Bulk Tanker	

Type: 3 Towboat

Characteristics:

35 Pushboat	36 Tugboat
-------------	------------

Type: 4 Non-Self-Propelled, Dry Cargo

Characteristics:

40 Open Hopper Barge	48 Covered Dry Cargo Barge
41 Covered Hopper Barge	49 RO-RO Barge
42 Carfloat (Railroad Car Barge)	50 Container Barge
43 Flat / Deck Barge	52 Lash / Seabee Barge
44 Pontoon Barge	90 Convertible Barge
47 Open Dry Cargo Barge	99 Other

Type: 5 Non-Self-Propelled, Tanker

Characteristics:

70 Liquid Cargo Barge (Single Hull)	73 Liquid Cargo Barge (Double Bottom Only)
71 Liquid Cargo Barge (Double Hull)	74 Other Liquid Cargo Barge, Not Elsewhere Included
72 Liquid Cargo Barge (Double Sided Only)	

Type: 6 Other

Characteristics:

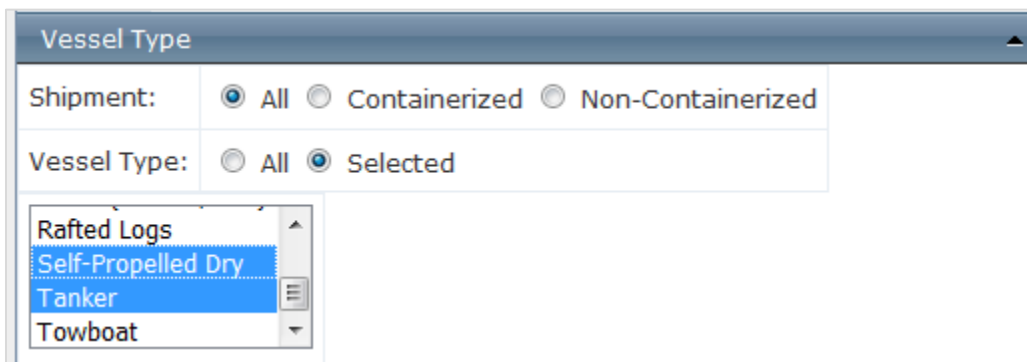

01 Undefined

This page excerpted from "Waterborne Transportation Lines of the United States. Calendar Year 2014, Volume 1 - National Summaries." Compiled under supervision of the USACE Institute for Water Resources, published by the Navigation Data Center.

[Vessel Type Filter continued]

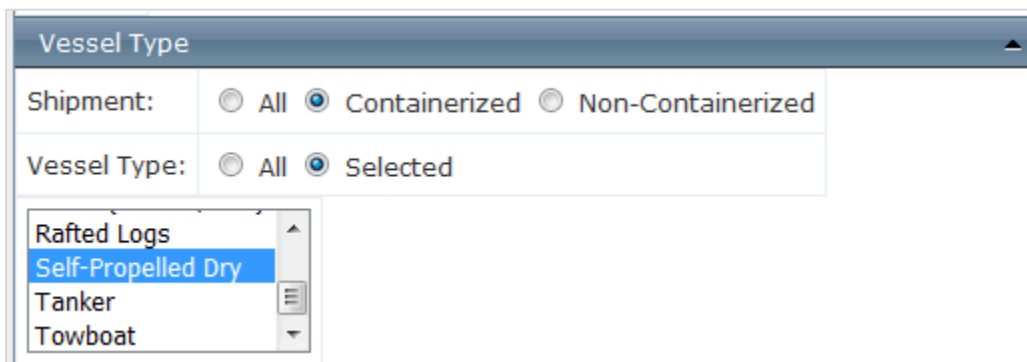

Users interested in deep draft navigation commonly limit their selection to the following vessel types: 'Self-Propelled Dry' and 'Tanker'.

With the configuration shown below, SHIPMENT radio button set to ALL, this selection covers three main deep draft navigation vessels: Tanker, Self-Propelled Dry (dry bulk, non-containerized), and Self-Propelled Dry (containerized).

The screenshot shows a 'Vessel Type' filter window. It has two sections for radio button selection: 'Shipment:' with options 'All' (selected), 'Containerized', and 'Non-Containerized'; and 'Vessel Type:' with options 'All' and 'Selected' (selected). Below these is a list box containing 'Rafted Logs', 'Self-Propelled Dry', 'Tanker', and 'Towboat'. The 'Self-Propelled Dry' option is currently selected in the list.

Users interested in only container vessels would select CONTAINERIZED radio button and SELF-PROPELLED DRY from the list.

The screenshot shows the same 'Vessel Type' filter window. In this configuration, the 'Shipment:' radio button 'Containerized' is selected, while 'All' and 'Non-Containerized' are unselected. The 'Vessel Type:' radio button 'Selected' remains selected. The list box below still shows 'Rafted Logs', 'Self-Propelled Dry', 'Tanker', and 'Towboat', with 'Self-Propelled Dry' selected.

Traffic

This filter allows users to examine shipments based on their origin or destination, categories include:

- Canadian-Exports – This traffic is exclusive to U.S. Exports to Canada.
 - *This traffic NOT included in Overseas-Exports categories*
- Canadian-Imports – This traffic is exclusive to U.S. Imports from Canada.
 - *This traffic NOT included in Overseas-Imports categories*
- Coastwise – from one U.S. port to another via deepwater
- Ferry – an historical category, no longer used
- Internal – Barge traffic on rivers, but also for certain areas like the GIWW and Long Island Sound that might be considered internal.
- Intra-Territory - involving Puerto Rico and the U.S. Virgin Islands
- Intransit-Exports – a catch-all category
- Intransit-Imports
- Lakewise – Domestic traffic between U.S. Great Lakes ports
- Local – Traffic within a port
- Overseas-Exports
- Overseas-Imports
- Unknown

The default selection for this filter is ALL traffic.

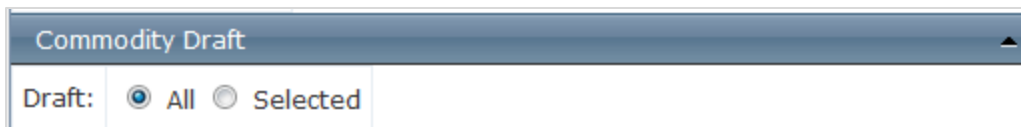

Tip: Users interested in deep-draft tonnage commonly select the following three traffic types: Coastwise, Overseas-Exports, and Overseas-Imports.

Commodity Draft

This filter allows users to specify a vessel draft range in the query.

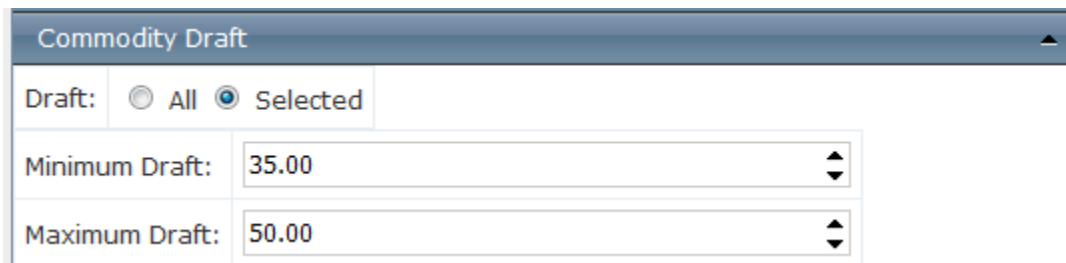

The default selection is ALL vessel drafts across all locations included in the query.

The screenshot shows a window titled "Commodity Draft". Below the title bar, there is a "Draft:" label followed by two radio buttons. The first radio button, labeled "All", is selected (indicated by a filled circle). The second radio button, labeled "Selected", is unselected (indicated by an empty circle).

Users can refine their analysis by specifying a Minimum Draft and Maximum Draft.

The screenshot below shows the radio button choice for Draft: Selected and user-specified Minimum Draft = 35ft and Maximum Draft 50ft.

The screenshot shows the "Commodity Draft" window with the "Selected" radio button selected. Below the radio buttons, there are two input fields for draft range. The "Minimum Draft:" field contains the value "35.00" and has a vertical double-headed arrow on its right side. The "Maximum Draft:" field contains the value "50.00" and also has a vertical double-headed arrow on its right side.

Commodity

This filter allows users to limit their query to specific commodity groups as defined by Waterborne Commerce Statistics Center (WCSC). A cross-reference file for commodity codes is available at:

<http://www.navigationdatacenter.us/data/datacomm.htm>

The broadest commodity level is 1-Digit specificity, the greatest level of commodity detail included in CPT data is the 5-Digit level.

The default selections are Value: Regional, Commodity Level: 2-Digit, Commodity: All.

Commodity	
Value:	<input type="radio"/> National Avg. <input checked="" type="radio"/> Regional (If N/A, default is National Avg.)
Commodity Level:	<input type="radio"/> 1-Digit <input checked="" type="radio"/> 2-Digit <input type="radio"/> 4-Digit <input type="radio"/> 5-Digit
Commodity:	<input checked="" type="radio"/> All <input type="radio"/> Selected

Users should select **Value: National Avg.** for more robust value estimates that will not be skewed by regional differences in prices.

Commodity	
Value:	<input type="radio"/> National Avg. <input checked="" type="radio"/> Regional (If N/A, default is National Avg.)
Commodity Level:	<input type="radio"/> 1-Digit <input checked="" type="radio"/> 2-Digit <input type="radio"/> 4-Digit <input type="radio"/> 5-Digit
Commodity:	<input type="radio"/> All <input checked="" type="radio"/> Selected
<input type="checkbox"/> Units (Ferried Autos, Passengers, Railway Cars) (0) <input type="checkbox"/> Coal, Lignite & Coal Coke (1) <input type="checkbox"/> Petroleum and Petroleum Products (2) <input type="checkbox"/> Chemicals and Related Products (3) <input type="checkbox"/> Crude Materials, Inedible Except Fuels (4) <input type="checkbox"/> Primary Manufactured Goods (5) <input type="checkbox"/> Food and Farm Products (6) <input checked="" type="checkbox"/> Fish (61) <input checked="" type="checkbox"/> Wheat (62) ← <input checked="" type="checkbox"/> Corn (63) <input checked="" type="checkbox"/> Barley, Rye, Oats, Rice and Sorghum Grains (64) <input checked="" type="checkbox"/> Oilseeds (Soybean, Flaxseed and Others) (65) <input checked="" type="checkbox"/> Vegetable Products (66) <input checked="" type="checkbox"/> Animal Feed, Grain Mill Products, Flour, Processed Grains (67) <input checked="" type="checkbox"/> Other Agricultural Products; Food and Kindred Products (68) <input checked="" type="checkbox"/> All Manufactured Equipment, Machinery and Products (7) <input checked="" type="checkbox"/> Waste Material; Garbage, Landfill, Sewage Sludge, Waste Water (8) <input checked="" type="checkbox"/> Unknown or Not Elsewhere Classified (9) <input checked="" type="checkbox"/> Light Load (10)	

2-Digit level commodity groups are still very broad, such as 'Wheat (62)' which falls within the 1-Digit category of 'Food and Farm Products (6)'.

Sub-lists provide the ability to refine commodity selections to the 5-Digit commodity code level.

E.g., Petroleum Oils/Oils from Bituminous Minerals, Crude (33300)

Commodity	
Value:	<input type="radio"/> National Avg. <input checked="" type="radio"/> Regional (If N/A, default is National Avg.)
Commodity Level:	<input type="radio"/> 1-Digit <input type="radio"/> 2-Digit <input type="radio"/> 4-Digit <input checked="" type="radio"/> 5-Digit
Commodity:	<input type="radio"/> All <input checked="" type="radio"/> Selected
<ul style="list-style-type: none"> <input type="checkbox"/> Units (Ferried Autos, Passengers, Railway Cars) (0) <input type="checkbox"/> Coal,Lignite & Coal Coke (1) <input type="checkbox"/> Petroleum and Petroleum Products (2) <ul style="list-style-type: none"> <input type="checkbox"/> Crude Petroleum (21) <ul style="list-style-type: none"> <input type="checkbox"/> Crude Petroleum (2100) <ul style="list-style-type: none"> <input type="checkbox"/> Petroleum Oils/Oils from Bituminous Minerals,Crude (33300) <input type="checkbox"/> Gasoline, Jet Fuel, Kerosene (22) <input type="checkbox"/> Distillate,Residual & Other Fuel Oils; Lube Oil & Greases (23) <input type="checkbox"/> Petroleum Pitches, Coke, Asphalt, Naptha and Solvents (24) <input type="checkbox"/> Petroleum Products NEC (29) <input type="checkbox"/> Chemicals and Related Products (3) <input type="checkbox"/> Crude Materials, Inedible Except Fuels (4) <input type="checkbox"/> Primary Manufactured Goods (5) <input type="checkbox"/> Food and Farm Products (6) <input type="checkbox"/> All Manufactured Equipment, Machinery and Products (7) <input type="checkbox"/> Waste Material; Garbage, Landfill, Sewage Sludge, Waste Water (8) <input type="checkbox"/> Unknown or Not Elsewhere Classified (9) <input type="checkbox"/> Light Load (10) 	

Note: Liquid Natural Gas (2640) is within the Petroleum Products (2) commodity group

<ul style="list-style-type: none"> <input type="checkbox"/> Petroleum and Petroleum Products (2) <ul style="list-style-type: none"> <input type="checkbox"/> Crude Petroleum (21) <input type="checkbox"/> Gasoline, Jet Fuel, Kerosene (22) <input type="checkbox"/> Distillate,Residual & Other Fuel Oils; Lube Oil & Greases (23) <input type="checkbox"/> Petroleum Pitches, Coke, Asphalt, Naptha and Solvents (24) <input type="checkbox"/> Petroleum Products NEC (29) <ul style="list-style-type: none"> <input type="checkbox"/> Liquid Natural Gas (2640) <input type="checkbox"/> Hydrocarbon & Petrol Gases, Liquefied and Gaseous (34000) <input type="checkbox"/> Petro. Products NEC (2990) 	
---	--

Budget Years

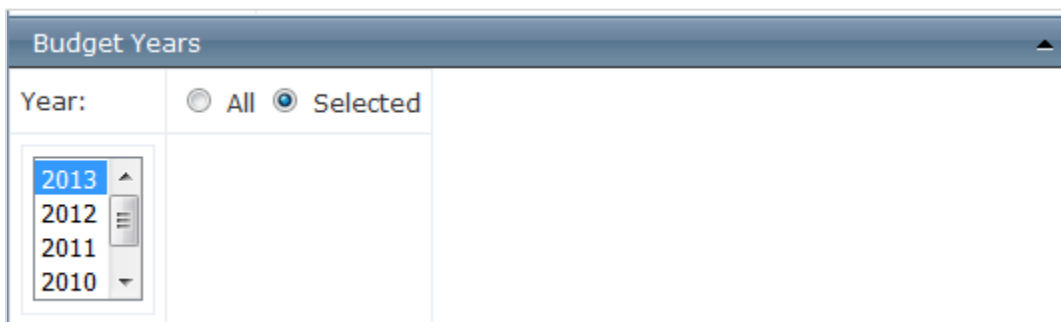

This filter allows users to include information from specific USACE budget years. Data under this filter is not yet on a regular update schedule and may be limited in time.

The default selection is ALL years.

A screenshot of a web interface titled "Budget Years". Below the title bar, there is a "Year:" label followed by two radio buttons: "All" (which is selected) and "Selected".

Users can select specific budget years from 2009 to 2013 (available budget years may change in future as CPT is updated with newer budget data).

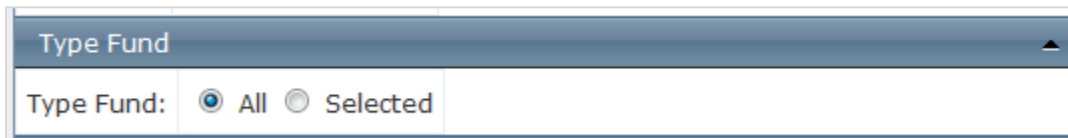

A screenshot of the "Budget Years" interface. The "Year:" label is followed by two radio buttons: "All" (unselected) and "Selected" (selected). Below the "Selected" radio button, a dropdown menu is open, displaying a list of years: 2013 (highlighted in blue), 2012, 2011, and 2010. The dropdown menu has a scroll bar and arrow buttons.

Hold **Ctrl** key while clicking to select multiple years.

Type Fund

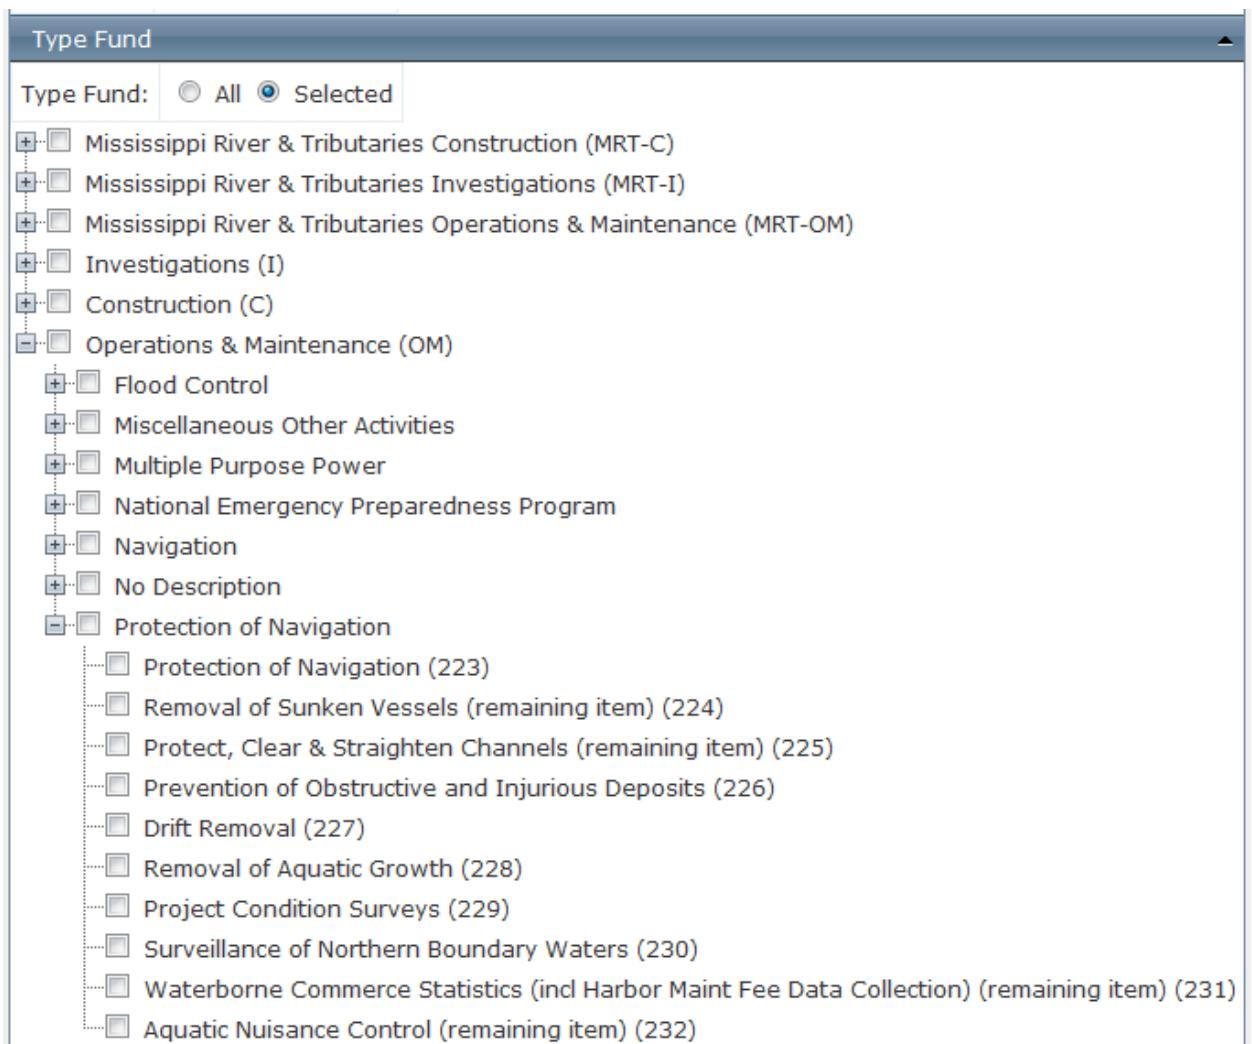

This filter allows users to select different USACE-specific funding types. In order to display results from this filter users must select 'Ombil' under the NETWORK filter group.

The default selection is ALL fund types, shown below.

The screenshot shows a dropdown menu titled "Type Fund". Below the title, there is a label "Type Fund:" followed by two radio buttons: "All" (which is selected) and "Selected".

Click the Type Fund radio button to **Selected** and a list of funds will appear. Users can select from multiple sub-lists of budget levels.

The screenshot shows the "Type Fund" dropdown menu with the "Selected" radio button selected. The menu displays a list of funding types, each with a checkbox and a plus sign icon to its left. The list is organized into a tree structure with sub-lists. The items are:

- Mississippi River & Tributaries Construction (MRT-C)
- Mississippi River & Tributaries Investigations (MRT-I)
- Mississippi River & Tributaries Operations & Maintenance (MRT-OM)
- Investigations (I)
- Construction (C)
- Operations & Maintenance (OM)
 - Flood Control
 - Miscellaneous Other Activities
 - Multiple Purpose Power
 - National Emergency Preparedness Program
 - Navigation
 - No Description
 - Protection of Navigation
 - Protection of Navigation (223)
 - Removal of Sunken Vessels (remaining item) (224)
 - Protect, Clear & Straighten Channels (remaining item) (225)
 - Prevention of Obstructive and Injurious Deposits (226)
 - Drift Removal (227)
 - Removal of Aquatic Growth (228)
 - Project Condition Surveys (229)
 - Surveillance of Northern Boundary Waters (230)
 - Waterborne Commerce Statistics (incl Harbor Maint Fee Data Collection) (remaining item) (231)
 - Aquatic Nuisance Control (remaining item) (232)

3 Filters for Grid, Charting, and GIS Calculation/Display

This group of filters controls how the query results will be displayed in tables and graphs.

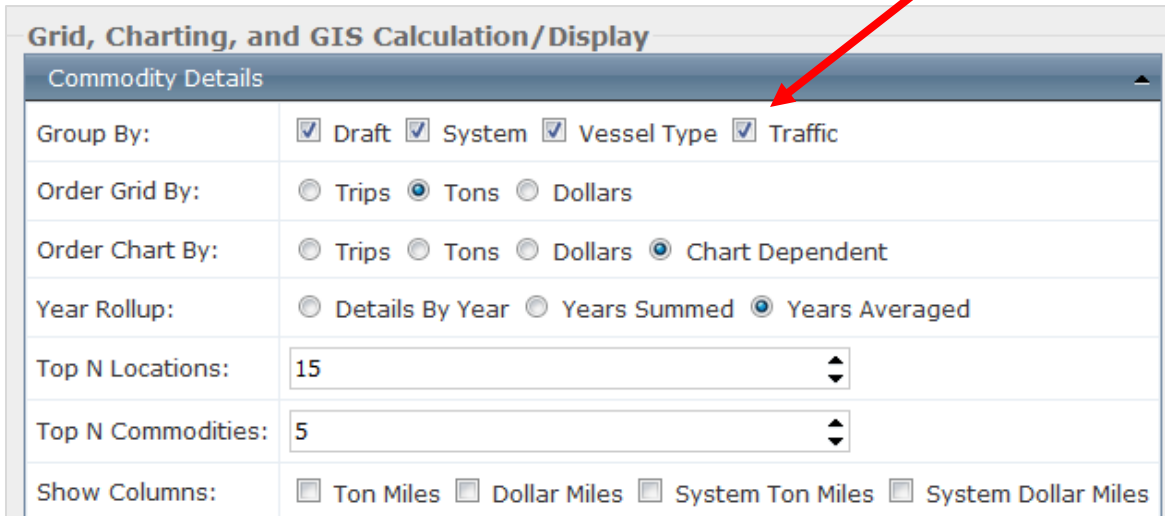

Most users will leave the default settings for these filters. However, within the Commodity Details filter the **Group By** and **Year Rollup** settings should be reviewed.

The screenshot shows a settings panel titled "Grid, Charting, and GIS Calculation/Display". The "Commodity Details" section is expanded, revealing several configuration options. Two red arrows point to the "Group By" and "Year Rollup" settings.

Commodity Details	
Group By:	<input type="checkbox"/> Draft <input type="checkbox"/> System <input type="checkbox"/> Vessel Type <input checked="" type="checkbox"/> Traffic
Order Grid By:	<input type="radio"/> Trips <input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Order Chart By:	<input type="radio"/> Trips <input type="radio"/> Tons <input type="radio"/> Dollars <input checked="" type="radio"/> Chart Dependent
Year Rollup:	<input type="radio"/> Details By Year <input type="radio"/> Years Summed <input checked="" type="radio"/> Years Averaged
Top N Locations:	15
Top N Commodities:	5
Show Columns:	<input type="checkbox"/> Ton Miles <input type="checkbox"/> Dollar Miles <input type="checkbox"/> System Ton Miles <input type="checkbox"/> System Dollar Miles

Below the "Commodity Details" section, there are several collapsed sections: "Work Package Details", "Budget Details", "X-Axis", "Y-Axis", and "GIS".

To get the maximum number of output table display combinations select **all** GROUP BY boxes.

Grid, Charting, and GIS Calculation/Display

If you are selecting multiple years for your query, results can be displayed by only one of the following options:

- Details By Year
- Years Summed
- Years Averaged

You cannot toggle between these options later when looking at results, choose the level of detail that fits your analysis requirements.

Grid, Charting, and GIS Calculation/Display

Commodity Details

Group By:	<input type="checkbox"/> Draft <input type="checkbox"/> System <input type="checkbox"/> Vessel Type <input checked="" type="checkbox"/> Traffic
Order Grid By:	<input type="radio"/> Trips <input checked="" type="radio"/> Tons <input type="radio"/> Dollars

Year Rollup:	<input checked="" type="radio"/> Details By Year <input type="radio"/> Years Summed <input type="radio"/> Years Averaged

Work Package Details

Note: Functionality of the Work Package Details filter is limited to projects that have received shoaling forecast data from the Corps' Shoaling Analysis Tool (CSAT).

For CSAT information contact Lauren.M.Dunkin@usace.army.mil

This specialty filter is designed for use by navigation project managers interested in comparing the relative cost effectiveness of several potential work packages. Each work package is a collection of reaches and target depths. Users can generate individual work package files from queries and then compare them within CPT.

The default settings for the **Work Package Details** filter are shown here.

Work Package Details	
Dredge Cost/Benefit By:	<input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Show Columns:	<input type="checkbox"/> Show Cubic Yardage
Penalty:	<input checked="" type="checkbox"/> Deeper Draft
Color Scale:	<input checked="" type="radio"/> Linear <input type="radio"/> Logarithmic
Draft Mode:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Filter Mode:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Mob\De-Mob Cost:	1,000,000
Cost\yd^3:	3.00

Work Package Details	
Dredge Cost/Benefit By:	<input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Show Columns:	<input type="checkbox"/> Show Cubic Yardage
Penalty:	<input checked="" type="checkbox"/> Deeper Draft
Color Scale:	<input checked="" type="radio"/> Linear <input type="radio"/> Logarithmic
Draft Mode:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Top N Draft:	0
Filter Mode:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Filter Details N Draft:	5
Mob\De-Mob Cost:	1,000,000
Cost\yd^3:	3.00

By enabling the **Draft Mode** and **Filter Mode** settings users can add specificity to their query (further explanation of their functions below).

Top N Draft = deepest N feet of channel depth in the work package.

Work Package Details	
Dredge Cost/Benefit By:	<input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Show Columns:	<input type="checkbox"/> Show Cubic Yardage
Penalty:	<input checked="" type="checkbox"/> Deeper Draft
Color Scale:	<input checked="" type="radio"/> Linear <input type="radio"/> Logarithmic
Draft Mode:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Top N Draft:	0
Filter Mode:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Filter Details N Draft:	5
Mob\De-Mob Cost:	1,000,000
Cost\yd^3:	3.00

Users can set this to their preference. If users select 10ft, the query will select **only** the deepest 10ft in the work package. If you **DO NOT** provide a value, the query results will only display tonnage deeper than or equal to the target elevation.

If there are uncertainties, e.g. greater under-keel clearance, users should be more generous in setting the ‘Top N Draft’ number.

Filter Details N Draft = filters results down to Nft window on either side of the target elevation.

Work Package Details	
Dredge Cost/Benefit By:	<input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Show Columns:	<input type="checkbox"/> Show Cubic Yardage
Penalty:	<input checked="" type="checkbox"/> Deeper Draft
Color Scale:	<input checked="" type="radio"/> Linear <input type="radio"/> Logarithmic
Draft Mode:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Top N Draft:	0
Filter Mode:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Filter Details N Draft:	5
Mob\De-Mob Cost:	1,000,000
Cost\yd^3:	3.00

Instead of displaying all the possible row for query results, setting this filter to 5 will result in the query results displaying only 5 ft on either side of target elevation.

Most users should set Filter Details N Draft at 10, to focus on the most relevant parts of the displayed results.

Budget Details

This specialty filter is designed to allow users to see different budget columns as part of query results. Note that budget data (fiscal year) is separate from tonnage data (calendar year). Explanation

To view any of the budget data set **Network** radio button to **Ombil**.

Filters and Selections	
Network	
Network:	<input type="radio"/> Custom <input checked="" type="radio"/> Ombil
Docked:	<input type="radio"/> Docked <input checked="" type="radio"/> Transit (Docked + Thru)

GIS

This specialty filter is for users who intend to export query results into GoogleEarth to make maps.

Click on the GIS row to expand and view the filter options.

The screenshot shows a software interface titled "Grid, Charting, and GIS Calculation/Display". It features a sidebar with several expandable sections: "Commodity Details", "Work Package Details", "Budget Details", "X-Axis", "Y-Axis", and "GIS". The "GIS" section is currently expanded and highlighted with a red rectangular border. The main content area contains the following settings:

Group By:	<input checked="" type="checkbox"/> Draft <input type="checkbox"/> System <input type="checkbox"/> Vessel Type <input checked="" type="checkbox"/> Traffic
Order Grid By:	<input type="radio"/> Trips <input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Order Chart By:	<input type="radio"/> Trips <input type="radio"/> Tons <input type="radio"/> Dollars <input checked="" type="radio"/> Chart Dependent
Year Rollup:	<input type="radio"/> Details By Year <input type="radio"/> Years Summed <input checked="" type="radio"/> Years Averaged
Top N Locations:	15
Top N Commodities:	5
Show Columns:	<input type="checkbox"/> Ton Miles <input type="checkbox"/> Dollar Miles <input type="checkbox"/> System Ton Miles <input type="checkbox"/> System Dollar Miles

The default GIS settings are shown below.

GIS	
Style:	<input checked="" type="radio"/> Line <input type="radio"/> Polygon
Scale:	<input type="radio"/> Linear <input checked="" type="radio"/> Logarithmic
Scale By:	<input type="radio"/> Trips <input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Scale From:	<input type="radio"/> Minimum <input checked="" type="radio"/> Maximum
Scale Display:	<input type="radio"/> Color <input type="radio"/> Line Width <input checked="" type="radio"/> Both
Min Line Width (pixels):	2
Max Line Width (pixels):	20
Min Polygon Width (miles):	1
Max Polygon Width (miles):	10
Min Gradient Color:	<input checked="" type="radio"/> White <input type="radio"/> Red <input type="radio"/> Orange <input type="radio"/> Yellow <input type="radio"/> Green <input type="radio"/> Blue <input type="radio"/> Indigo <input type="radio"/> Violet
Max Gradient Color:	<input type="radio"/> White <input checked="" type="radio"/> Red <input type="radio"/> Orange <input type="radio"/> Yellow <input type="radio"/> Green <input type="radio"/> Blue <input type="radio"/> Indigo <input type="radio"/> Violet

Users can choose between linear or logarithmic scale to compute line color and width.

Note that default choice for low values (including 0.00) is set to white, and default maximum is red.

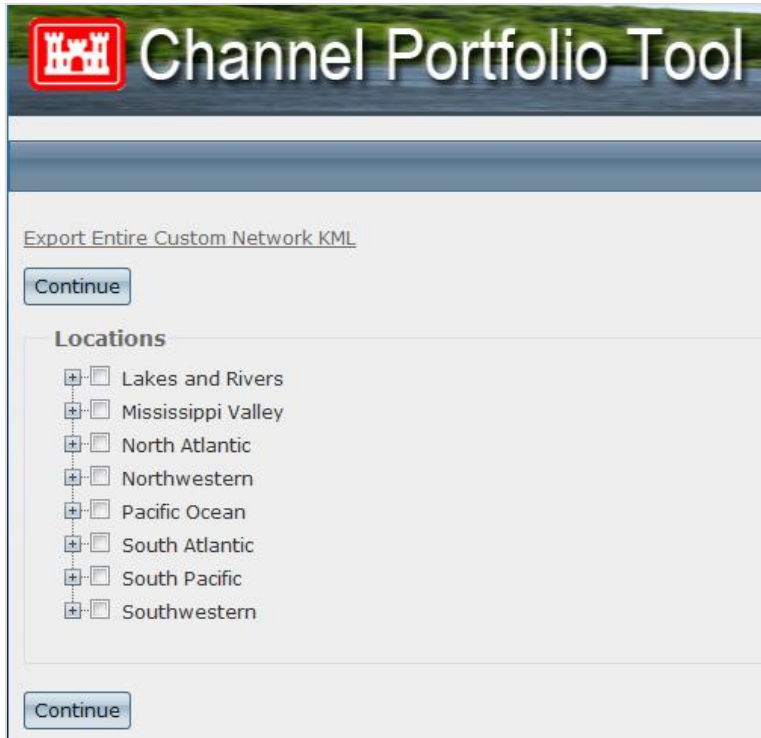

For examples of the effects of changing the default GIS settings see the sections:

- *Examples of Flow Tab exported graphics in GoogleEarth*
- *Examples of Rankings Tab exported graphics in GoogleEarth*

4 Selecting Locations

This section allows users to select channels for their query at the Division, District, Project, or individual reach level.

The landing screen for the Locations selection option is shown below.

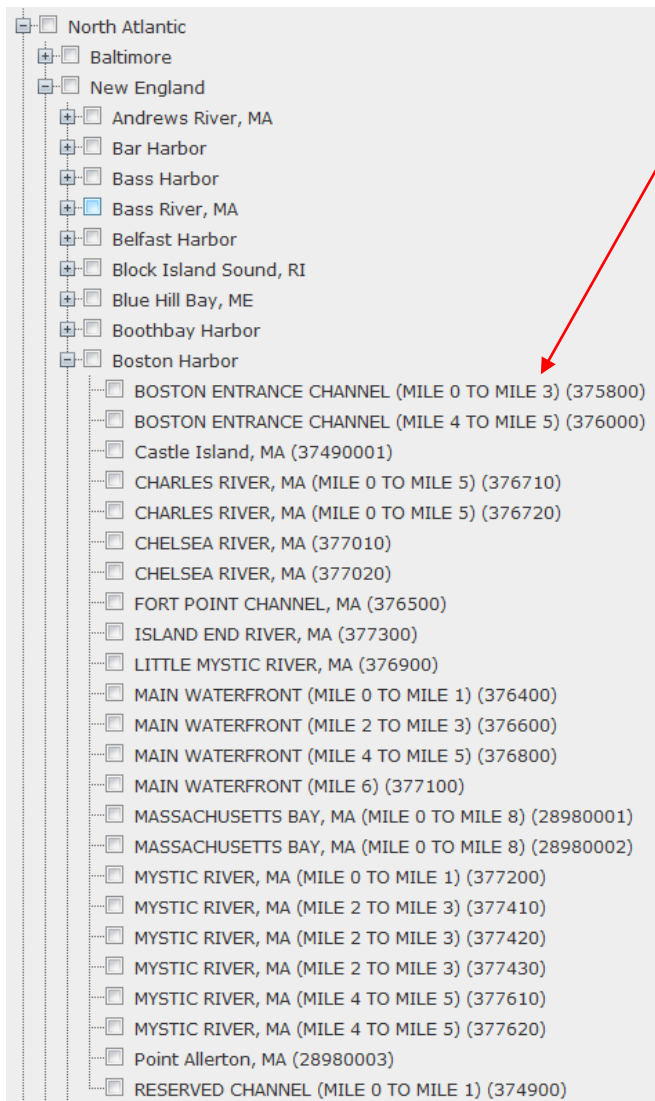

The location hierarchy has four levels: Division, District, Project, Reach.

Location filters can also be accessed via the Locations tab on the top of your screen.

Tip: Checking a box will select ALL possible sub-lists, e.g., checking the box for New England District will select all the projects listed under New England, and all the reaches within each project.

The screenshot shows reach-level detail available in North Atlantic Division, New England District, Boston Harbor project.

Reach designations generally correspond to the names and numbers as listed within the National Channel Framework. There may be exceptions to this naming where one reach has been split into two or more parts to better reflect administrative or operational realities.

When you are finished selecting locations for your query click on the Continue button at the top left corner of the screen.

NOTE: If you have already performed a query the previous locations will still be selected. The presence of selected reaches is denoted with an asterisk after a Division name.

When running a new query you must go in and un-check locations you no longer want in your query.

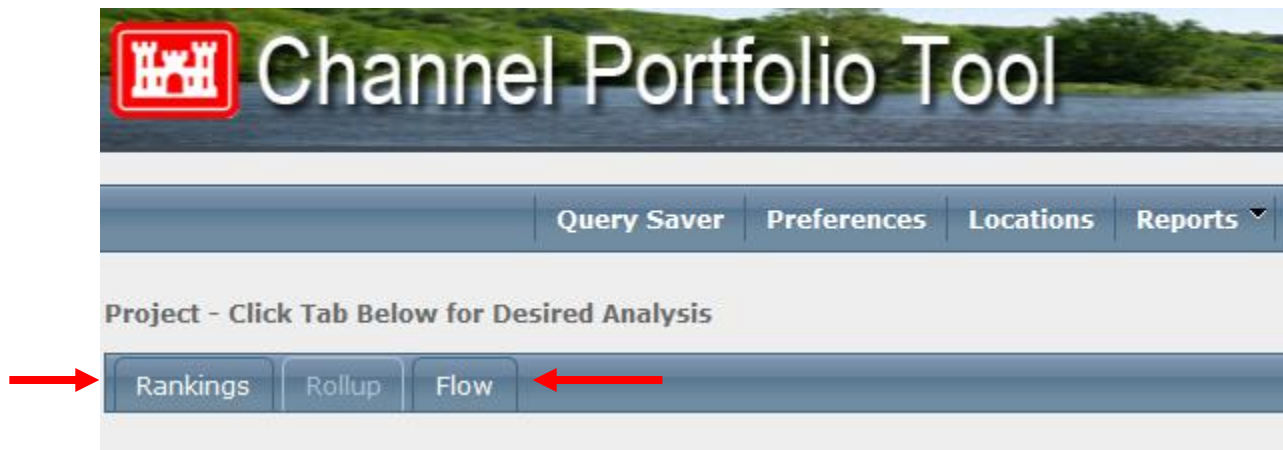

Note: After setting filters and selecting locations users can save their query information as a .cpt file for future review in conjunction with any exported query results. For instructions on how to save a .cpt file see the section of this user manual titled *Exporting saved queries as .cpt files*.

5 Viewing Query Results

After you have set the filters in PREFERENCES and LOCATIONS CPT will move to the results page, which does not display any numbers at first.

The default view is the highest organizational level selected on the Locations page (i.e. Division, District, Project, or Reach).

You must select one of the available tabs, in the view below the options are RANKINGS or FLOW.

At this highest default Report-view level there are at least two tab options for viewing query results:

- **Rankings** – This tab displays the most aggregated location record according to selected criteria. It is not appropriate to add up the numbers provided in each Rankings result to arrive at a total number for the system, such a method would result in double-counting. Double-counting can be avoided by using the Rollup tab, usually available one Report-level down (e.g. if your default view is District-level, you will need to be in the Project-level view to see the Rankings tab).
- **Flow** – This tab displays any tonnage with an origin or destination that transited the reaches selected in the Locations page.

The RANKINGS tab will display results for the combined reaches. In this example, combined filter results for all of the Jacksonville Harbor project reaches are shown as a single project-level value.

Group	Name	Tons (x1k)	Dollars (x1k)	Trips	Budget Requested (x1k)	Budget Received (x1k)
Jacksonville	Jacksonville Harbor	17,318.571	\$34,890,398.679	25,991.000	\$0.000	\$0.000

Page 1 of 1 Displaying items 1 - 1 of 1

Axis Controls

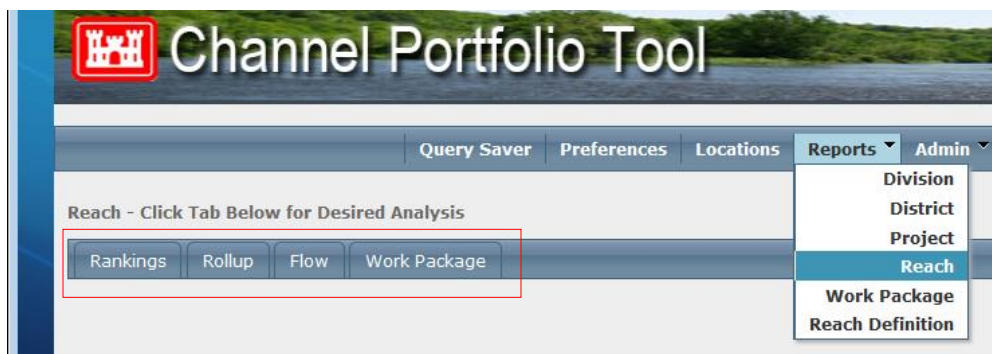

- Ranking Project vs. Average Yearly Tons for AllShipments
- Ranking Project vs. Average Yearly Dollars for AllShipments
- Ranking Project vs. Average Yearly Trips for AllShipments

The RANKINGS tab displays one table and a set of graphs, commodity information is not available on the RANKINGS tab table.

To view commodity information users must use the ROLLUP tab.

Reports: Reach Level

To view Reach-level results, users will usually need to select **Reach** from the drop-down menu under the **Reports** tab at the top of the screen. If users have selected *only reaches within a single project* the default view will be at the Reach-level.

At the **Reports: Reach** level there are 4 tabs for viewing query results:

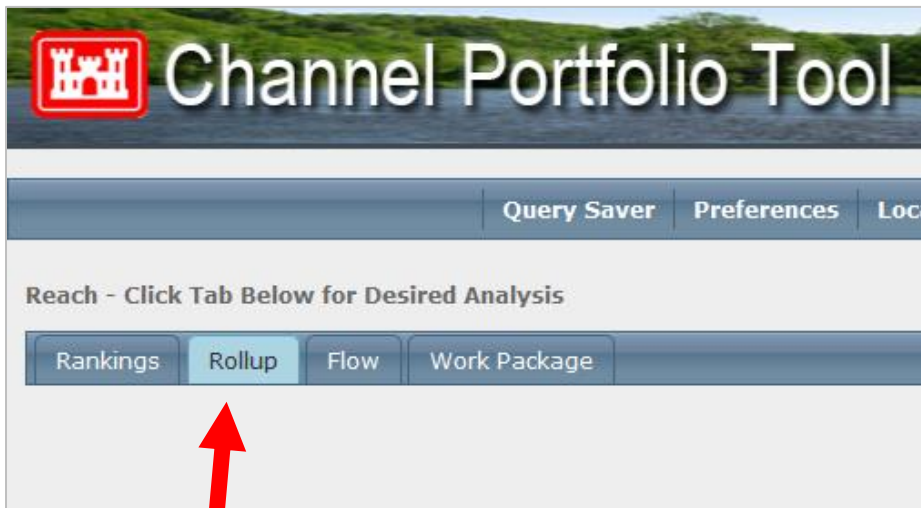

- **Rankings** – This tab displays each location (project or reach) according to selected criteria. It is not appropriate to add up the numbers provided in each Rankings result to arrive at a total number for the system, such a method would result in double-counting. Double-counting can be avoided by using the Rollup tab.
- **Rollup** – The Rollup tab in CPT is equivalent to a ‘consolidated report’¹ summary statistic used in the Waterborne Commerce of the U.S. reports for a waterway or group of channels. This method recognizes that a single voyage may transit multiple projects, but the tonnage from that voyage should only be counted once. CPT allows users to customize the selection of reaches included in the Rollup results view.
- **Flow** – This tab displays any tonnage with an origin or destination that transited the reach.
- **Work Package** - This tab displays proxy-benefit/cost information based on dredging costs, forecasted shoaling rates (where available), and tonnage supported by individual reaches.

¹ For example: U.S. Army Corps of Engineers, Waterborne Commerce Statistics Center, Navigation Data Center. Waterborne Commerce of the United States 2013. Part 1: Sheet 9: Atlantic Intra-coastal Water (Consolidated Report) between Norfolk, VA and the St. Johns River, FL. (PDF File.)

<http://www.navigationdatacenter.us/wcsc/wcsc.htm>

http://www.navigationdatacenter.us/wcsc/webpub13/Part1_WWYs_tonsbyTT_Dr_Yr_commCY2013-2009.htm

The ROLLUP tab is the most useful option for examining large systems because it avoids double-counting trips, tonnage, or values that may result from traffic moving through multiple reaches on a single voyage.

Jacksonville	(Puerto Rico) - San Juan Harbor	3,048.381	\$11,694,915.612	986.000	0	0
Gulf of Mexico	Gulf of Mexico	2,694.818	\$1,197,297.813	256.000	0	0
New Orleans	Lower Mississippi River - MVN	995.587	\$515,982.188	99.000	0	0
Galveston	Sabine-Neches Waterway	697.957	\$325,087.662	41.000	0	0

Budget Details Query Results

Budget data is totally separate from commercial shipping data, the only connection between the two is the CWIS code. CWIS codes link the budget data to a specific spatial location.

A sample budget detail query is shown below.

Filters and Selections

Network	
Network:	<input type="radio"/> Custom <input checked="" type="radio"/> Ombil
Docked:	<input type="radio"/> Docked <input checked="" type="radio"/> Transit (Docked + Thru)
Flow Docked:	<input type="radio"/> Docked <input checked="" type="radio"/> Transit (Docked + Thru)
Channel Conditions	
System	
Direction	
Commodity Year

Commodity Draft	
Commodity	
Budget Years	
Year:	<input checked="" type="radio"/> All <input type="radio"/> Selected
Type Fund	
Type Fund:	<input checked="" type="radio"/> All <input type="radio"/> Selected

Users must select Network: Ombil, if this filter is not set properly then all budget-related column results will appear as \$0.00

Set Budget Years: All

Set Type Fund: All

Under the **Budget Details** filter set **Year Rollup: Years Averaged** and select all the boxes in the **Group By** filter.

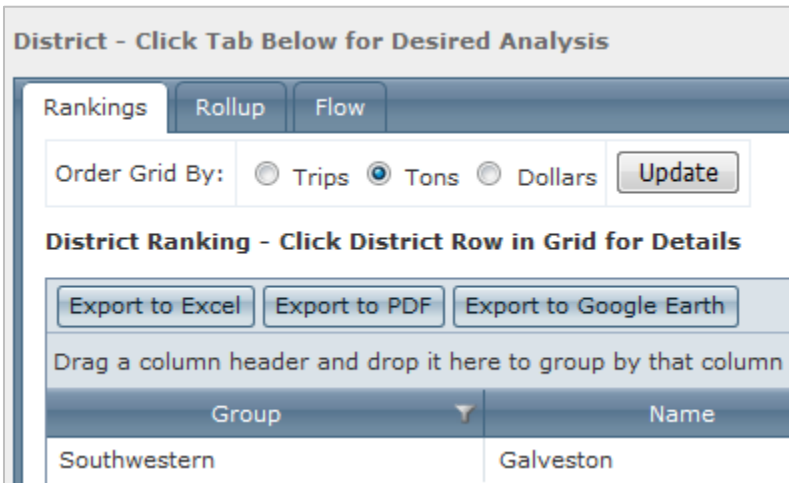

Grid, Charting, and GIS Calculation/Display

Commodity Details	
Work Package Details	
Budget Details	
Year Rollup:	<input type="radio"/> Details By Year <input type="radio"/> Years Summed <input checked="" type="radio"/> Years Averaged
Group By:	<input checked="" type="checkbox"/> Appropriation <input checked="" type="checkbox"/> Category <input checked="" type="checkbox"/> CW Type of Funds <input checked="" type="checkbox"/> Network Project <input checked="" type="checkbox"/> CWIS <input checked="" type="checkbox"/> P2 Project
Show Columns:	<input type="checkbox"/> Project Description <input type="checkbox"/> Budget Item Justification <input type="checkbox"/> Consequences <input type="checkbox"/> Remarks

On the **Locations** screen expand the Southwestern Division, select the Galveston District, then click **Continue**.

The first results screen will be for the District level results.

Open the **Rankings** tab, and then click on the row for Southwestern. A new tab called 'Galveston District Ranking' will appear.

Click on the Galveston District Ranking tab.

This tab will display three separate tables:

- District Ranking Detail – Traffic
- District Ranking Detail – Commodity
- District Ranking Detail - Budget

Scroll down to see results for the District Ranking Detail – Budget table.

District RankingDetail - Budget : Budget grid limited to 2250 items, use Export for complete dataset if needed.

Group by: Appropriation Category CW Type of Funds Network Project CWIS P2 Project

Show Columns: Project Description Budget Item Justification Consequences Remarks Update

Export to Excel | Export to PDF

Drag a column header and drop it here to group by that column

Year	Appropriation	Category	CW Type Of Funds	Network Project	CWIS	P2 Project	Budget Request Federal (x1k)	Budget Received (x1k)
2009 - 2013	Operations & Maintenance (OM)	Navigation	Channels and Harbors (96 3123 111)	GULF INTRACOA... WATERWAY, TX	0007140	OM GIWW MAINTENAN... (136022)	\$54,009.999	\$21,997.871

As with other tables, users can select different boxes in the Group by row and then click the Update button, CPT will refresh with a new table.

For example, un-checking the boxes for ‘Appropriation’ and ‘Category’, then clicking Update, will result in a new table with those columns removed.

District RankingDetail - Budget : Budget grid limited to 2250 items, use Export for complete dataset if needed.

Group by: Appropriation Category CW Type of Funds Network Project CWIS P2 Project

Show Columns: Project Description Budget Item Justification Consequences Remarks Update

Export to Excel | Export to PDF

Users can export budget tables to Excel for further analysis.

6 How to use the graphs created in CPT

Under every tab there are multiple graphs available for viewing, these are located below the query tables. These graphs are automatically drawn based on the query results, click on the row to display a graph.

Note: Graphs take a few second to load since they are drawn on the fly.

Project - Click Tab Below for Desired Analysis

Rankings Rollup **Flow**

Order Grid By: Trips Tons Dollars

Project Flow - Click Project Row in Grid for Details

Drag a column header and drop it here to group by that column

Group	Name	Tons (x1k)	Dollars (x1k)	Trips	Budget Requested (x1k)	Budget Received (x1k)
Jacksonville	Jacksonville Harbor	17,318.571	\$34,890,398.679	25,991.000	0	0
Atlantic Ocean	Atlantic Ocean	16,958.451	\$34,719,950.914	4,814.000	0	0
Jacksonville	(Puerto Rico) - San Juan Harbor	3,048.381	\$11,694,915.612	986.000	0	0

Rollup Reach Commodity Draft vs. Average Yearly Tons for AllShipments
Rollup Reach Commodity Draft vs. Average Yearly Dollars for AllShipments

Typical graph options under the **Flow** tab.

Axis Controls
Flow Reach vs. Average Yearly Tons for AllShipments
Flow Reach vs. Average Yearly Dollars for AllShipments
Flow Reach vs. Average Yearly Trips for AllShipments

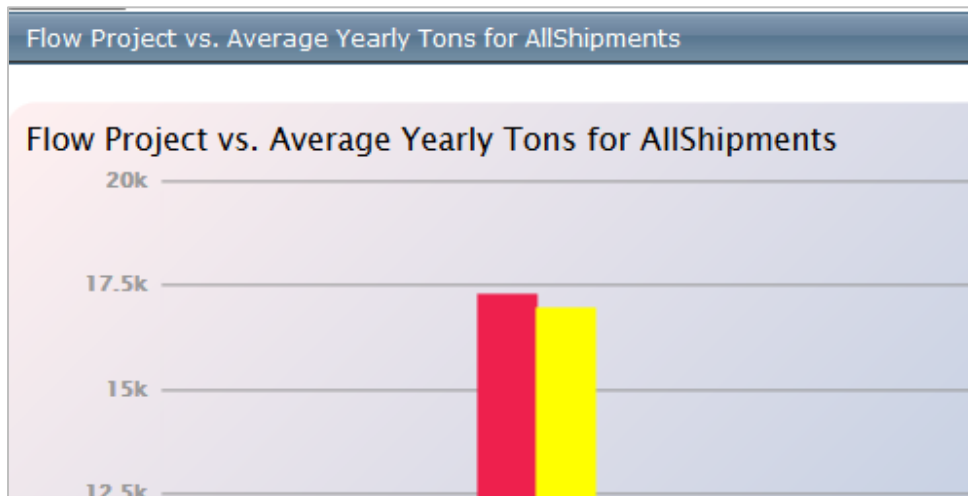

Example graphs from the PROJECT-level view.

The Project-level view has different sets of graphs available under the Rankings, Rollup, and Flow tabs. Scroll down to the bottom of your browser window to see the available options.

- Axis Controls
- Ranking Project vs. Average Yearly Tons for AllShipments
- Ranking Project vs. Average Yearly Dollars for AllShipments
- Ranking Project vs. Average Yearly Trips for AllShipments

Click on a row to expand it and view the associated graph.

Note that '[Tab] Project' is included in graph title as a record, no matter what tab you are viewing. This example is from a **Flow** tab result.

This graph is from a **Rollup** tab within the **Project** view.

Example graphs from REACH-level view

The Reach-level view has different sets of graphs available under the Rankings, Rollup, and Flow tabs. Two examples are shown below.

This example graph, the from **Reach-level Rankings** tab, displays the results for a grouping of reaches ranked by the value of tonnage that transited each reach, averaged for selected years.

This example graph, from **Reach-level Rollup** tab, shows the average number of yearly trips sorted by vessel draft for a selected group of reaches.

Graphs - Zooming

Users can click and drag to draw a box around an area on a graph to temporarily zoom in.

click and drag to draw a box to zoom

View of temporary zoom.

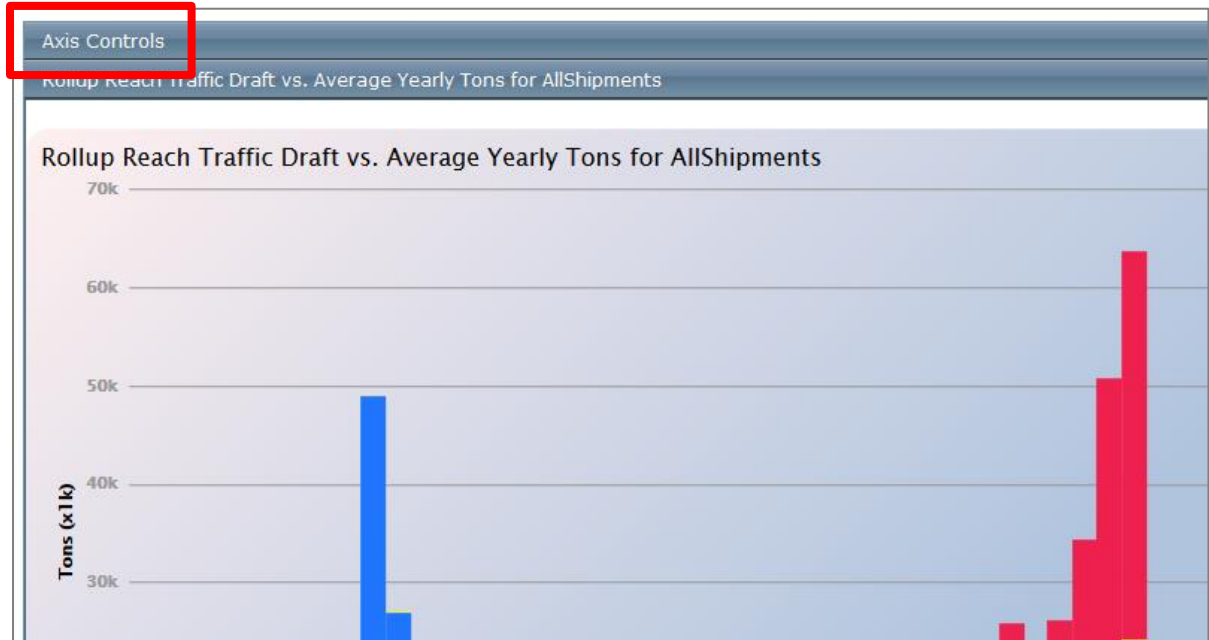

Click on the **Reset zoom** button to return to the original view.

Graphs - Changing Display Axes

Users can change graph displays in two ways:

- Un-checking items already in the legend (described in previous section, may cause the scale to automatically re-adjust)
- Adjusting the AXIS CONTROLS settings above the graphs

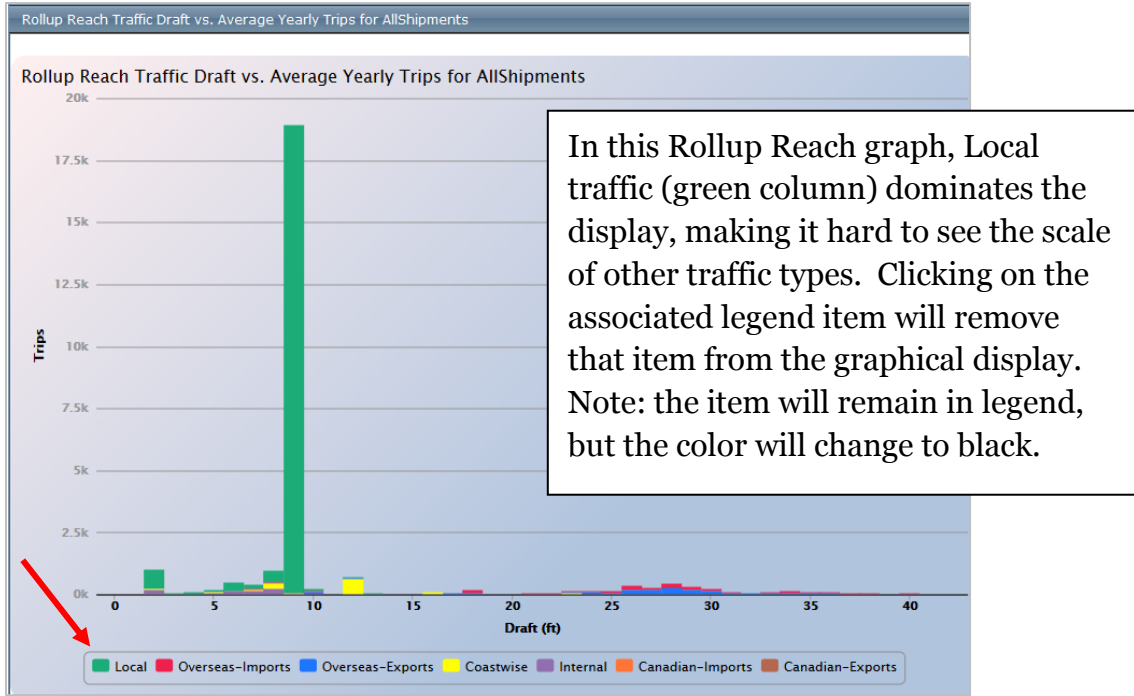

Axis Controls	
Chart X-Axis:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Draft Axis Min:	<input type="text" value="0"/>
Draft Axis Max:	<input type="text" value="50"/>
Chart Y-Axis:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Tons Axis Min:	<input type="text" value="0"/>
Tons Axis Max:	<input type="text" value="500,000"/>
Dollars Axis Min:	<input type="text" value="0"/>
Dollars Axis Max:	<input type="text" value="50,000,000"/>
Trips Axis Min:	<input type="text" value="0"/>
Trips Axis Max:	<input type="text" value="500,000"/>
<input type="button" value="Update"/>	

Selecting the radio buttons to 'User-Defined' opens the menu for adjusting both X- and Y-axis.

Graphs - Turning columns off or on

Graphs can be adjusted by the user to assist in visualizing the data.

In this case, because the Local traffic (in green) dominated the Y-axis, turning off that column will result in a re-drawn graph, shown below.

Graphs - Changing the number of individual commodities displayed

CPT commodity graphs will, by default, display the top 5 commodities and group any remaining commodities together as ‘Other Commodities.’ Users can adjust this number to show up to 9 top commodities.

The default choice for the **Top N Commodities** Filter is 5 Commodities.

Grid, Charting, and GIS Calculation/Display

Commodity Details

Group By: Draft System Vessel Type Traffic

Order Grid By: Trips Tons Dollars

Order Chart By: Trips Tons Dollars Chart Dependent

Year Rollup: Details By Year Years Summed Years Averaged

Top N Locations: 5

Top N Commodities: 5

Show Columns: Ton Miles Dollar Miles System Ton Miles System Dollar Miles

The default setting results in graphs that differentiate the top 5 commodity categories, any commodity type not in the top 5 is grouped together and shown as “Other Commodities”.

Increasing the number in the **Top N Commodities** Filter results in more detail in the resulting bar graph.

Grid, Charting, and GIS Calculation/Display	
Commodity Details	
Group By:	<input type="checkbox"/> Draft <input type="checkbox"/> System <input type="checkbox"/> Vessel Type <input checked="" type="checkbox"/> Traffic
Order Grid By:	<input type="radio"/> Trips <input checked="" type="radio"/> Tons <input type="radio"/> Dollars
Order Chart By:	<input checked="" type="radio"/> Trips <input type="radio"/> Tons <input type="radio"/> Dollars <input checked="" type="radio"/> Chart Dependent
Year Rollup:	<input type="radio"/> Details By Year <input type="radio"/> Years Summed <input checked="" type="radio"/> Years Averaged
Top N Locations:	15
Top N Commodities:	9
Show Columns:	<input type="checkbox"/> Ton Miles <input type="checkbox"/> Dollar Miles <input type="checkbox"/> System Ton Miles <input type="checkbox"/> System Dollar Miles

The same query result with the **Top N Commodities** Filter set to 9 is shown below.

Note that the graph now displays additional commodity categories.

For this query the 4 additional commodity categories shown are

- Primary Non-Ferrous Metal Products
- Unknown or Not Elsewhere Classified
- Sand, Gravel, Stone, Rock, Limestone, Soil, Dredged Material
- Pulp and Waste Paper

7 Interpreting results when shoaling has been included in the query

The results from a shoaling-impact scenario will have the same display as other CPT query results, with tables and graphs. However, the tables will only be displaying tonnage, traffic, or trips that would have been affected by the hypothetical shoaling. Graphs will show both affected traffic (grouped in a single color) and unaffected traffic (broken into multiple categories based on graph results).

In this example, **10-ft shoaling has been selected for a single project (e.g. a 15ft channel would shoal in to 5 ft, any 45 ft channel would shoal in to 35ft, etc)**. All possible traffic is included in the query.

When shoaling is enabled in a query, the results in the tables will only show the AFFECTED/disrupted shipments.

Sample table result from a shoaling-enabled query. Note that the table does not indicate what type of results you are viewing (shoaling-enabled or regular query results), however this information is included if you export to Excel. (See the section on *Exporting query results* for details.)

Reach - Click Tab Below for Desired Analysis

Rankings Rollup Flow Work Package

Reach Rollup - Traffic

Group by: Draft System Vessel Type Traffic

Order Grid By: Trips Tons Dollars

Drag a column header and drop it here to group by that column

Year	Traffic	Tons (x1k)	Dollars (x1k)	Trips
2014	Overseas-Imports	6,858.706	\$8,693,729.283	686.000
2014	Coastwise	3,698.280	\$4,913,326.679	257.000
2014	Overseas-Exports	1,412.191	\$3,730,719.319	652.000
2014	Canadian-Imports	642.437	\$498,170.411	12.000
2014	Internal	0.617	\$372.958	13.000
2014	Local	0.462	\$32.760	18,687.000
2014	Canadian-Exports	0.001	\$6.529	3.000
		12,612.69	\$17,836,357.94	20,310.00

Page 1 of 1

Displaying items 1 - 7 of 7

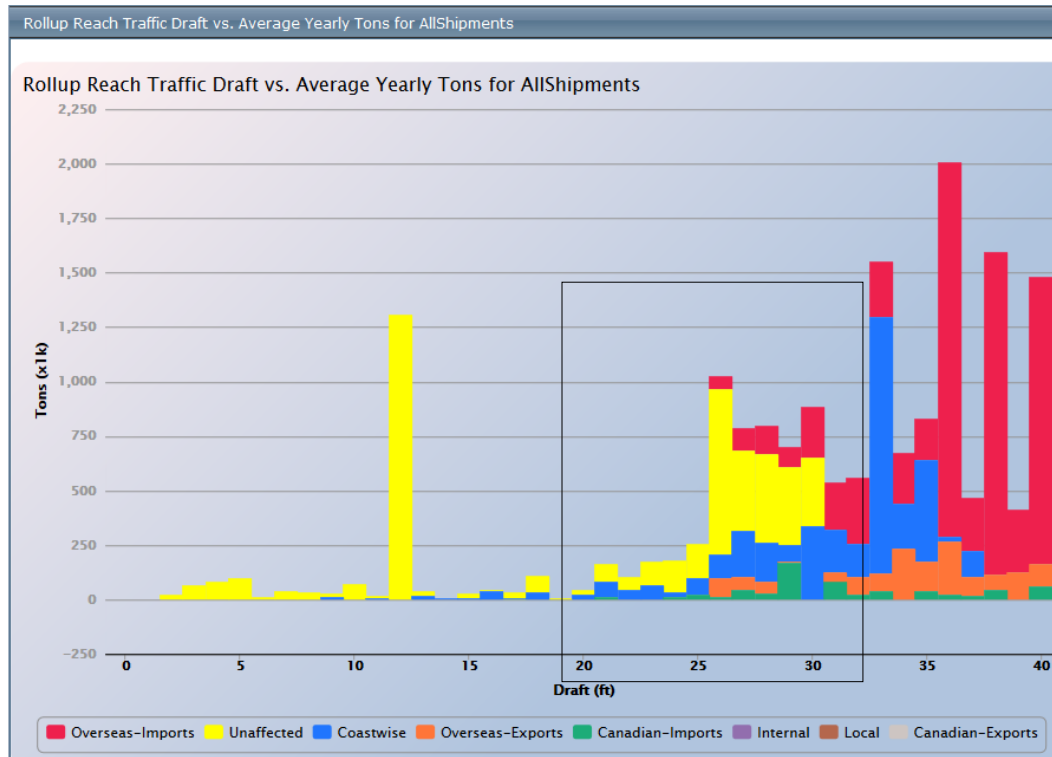

Sample graph from shoaling enabled query, showing both affected and unaffected traffic. Unaffected traffic is grouped together in one category.

Note: column colors do not consistently represent the same categories across queries and graphs. Always refer to figure legend.

Shoaling-affected and -unaffected traffic with the same draft.

When viewing the graphs of shoaling-enabled query results it is possible to have unaffected and affected traffic in the same draft column. This result may seem counterintuitive. The graph below shows unaffected traffic (yellow) at some of the same drafts as shoaling-affected traffic (other colors) in the selected group of reaches. Shoaling was set to 10 feet.

The reason for this display of unaffected and affected traffic in the same draft column is that some shallower-draft vessels transit deep draft channels.

Examining the results at 25ft draft shows 3 categories of results:

- (yellow) 25ft draft vessels that only transit 35ft+ channels, hence unaffected by 10ft shoaling.
- (blue) 25ft draft Coastwise traffic vessels that transit channels shallower than 35ft, so 10ft of shoaling would impact this traffic.
- (green) 25ft draft Canadian-Imports traffic vessels that transit channels shallower than 35ft in this project, 10ft shoaling would disrupt this traffic.

8 Exporting query results

Exporting tables to Excel or PDF

Results in any view can be exported to Excel or PDF files.

Users will be prompted to either open or save their file by a pop-up window (this may appear different depending on your browser).

Firefox prompt window

Internet explorer
prompt window

The exported Excel file will have 2 worksheets, the first worksheet contains a non-disclosure reminder and information about the filters used in the query.

Example of exported Excel file containing CPT query results.

	A	B	C	D	E	F	G
1	<p>WARNING These pages contain commercially sensitive statistics pertaining to rivers, harbors, and waterways and must be held in strict confidence as required by 33 C.F.R. § 209.320. Unauthorized disclosure could result in loss of</p>						
2	<p>AVERAGE YEARLY ROLLUP REACH TRAFFIC ORDERED BY TONS</p> <p>Filters: Network: CUSTOM; Value: Regional; Docked: Transit; Flow Docked: Transit; Shipment: AllShipments; Shoaling: DisableShoaling; System: AllSystems; Direction: AllDirections; Year Method: Calendar; Year: 2014,2013,2012,2011,2010,2009; Year Rollup: YearsAveraged; VesselType: AllVesselTypes; Traffic: AllTraffic; Draft: AllDrafts; Draft: AllDrafts; Commodities: AllCommodities;</p>						

Tip: EXPORTED EXCEL FILES DO NOT CONTAIN LOCATION INFORMATION. You must add this information to the file yourself if you wish to have a record.

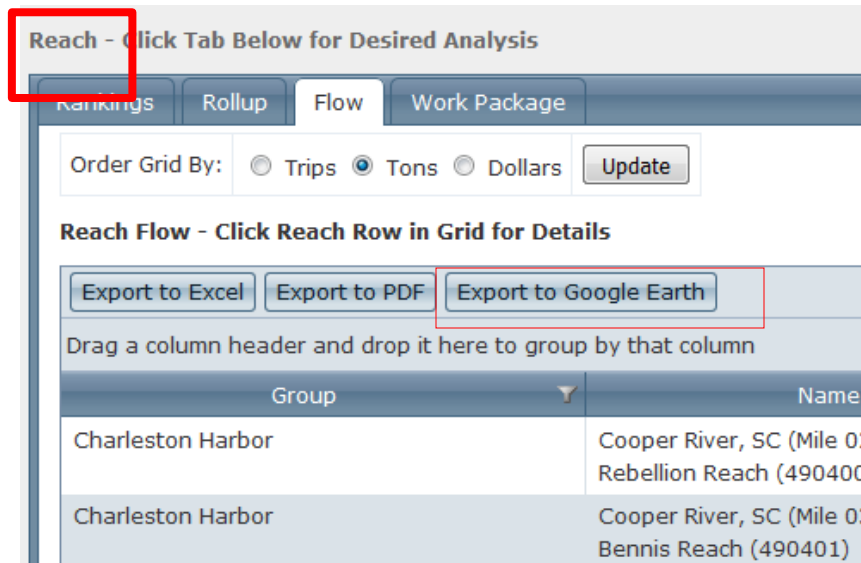

Suggestion: take a screenshot of the selected locations and insert into the excel file later.

Exporting files to Google Earth

Flow Results

Select the FLOW tab to view the results table showing commodity flows. For the most detailed information use the **Reports: Reach** view.

Under the FLOW tab there is an option to 'Export to Google Earth', this generates a .kmz file that includes the data shown in the table.

Reach - Click Tab Below for Desired Analysis

Rankings Rollup **Flow** Work Package

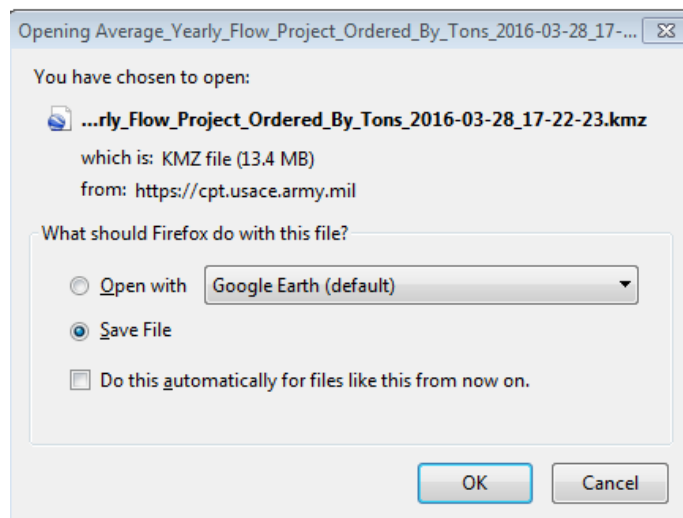

Order Grid By: Trips Tons Dollars

Reach Flow - Click Reach Row in Grid for Details

Drag a column header and drop it here to group by that column

Group	Name
Charleston Harbor	Cooper River, SC (Mile 02 Rebellion Reach (490400))
Charleston Harbor	Cooper River, SC (Mile 03 Bennis Reach (490401))

To use .kmz files you must have Google Earth pre-installed on your computer, a conversion option also exists within ArcMap.

Opening Average_Yearly_Flow_Project_Ordered_By_Tons_2016-03-28_17-22-23.kmz

You have chosen to open:

 ...rly_Flow_Project_Ordered_By_Tons_2016-03-28_17-22-23.kmz
which is: KMZ file (13.4 MB)
from: https://cpt.usace.army.mil

What should Firefox do with this file?

Open with

Save File

Do this automatically for files like this from now on.

Users will be prompted to open or save the .kmz file.

File names for exported .kmz files will include the date of your export but not location

Exported KMZ files will include only the information shown in the associated Flow-tab table, the location information is translated into a spatial display when opened in GoogleEarth.

Note that kmz files **do not include information about the years selected** in analysis or other filters used such as vessel draft.

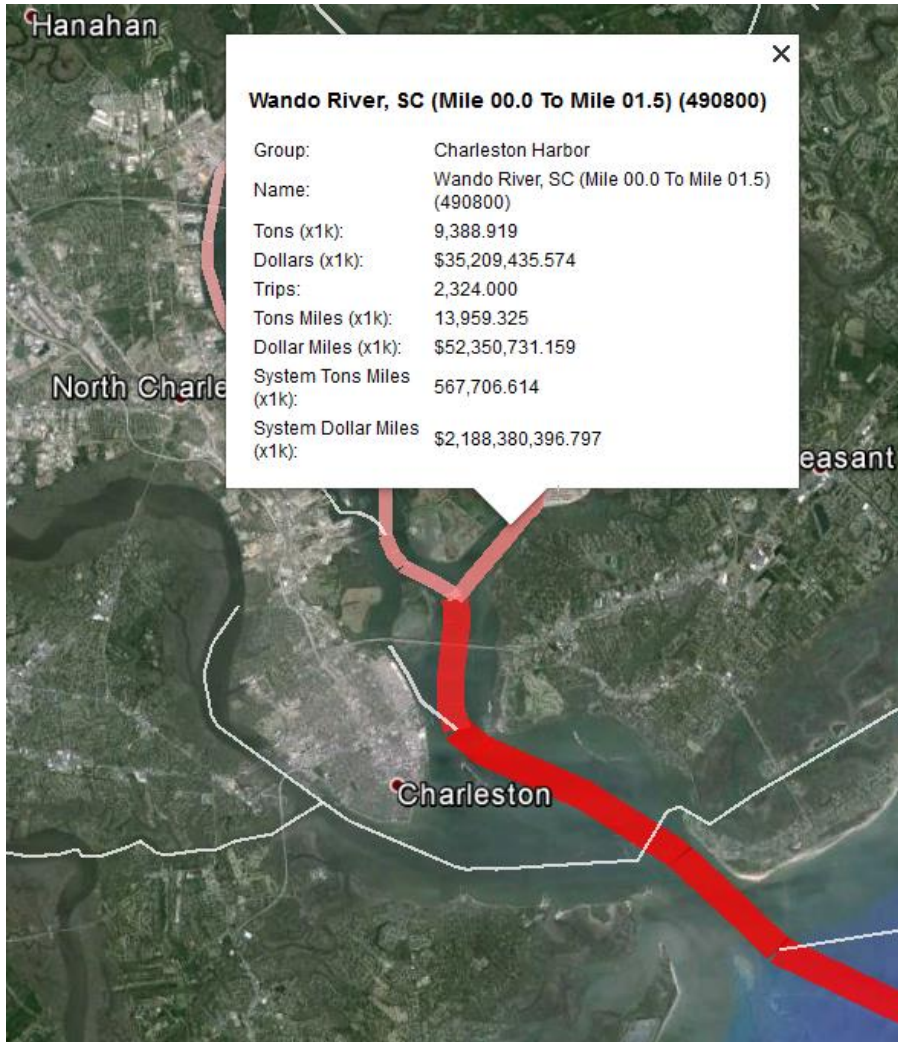

Screenshot of exported .kmz file for Charleston Harbor traffic flows.

In this image the lower values are shown as narrower and whiter lines, higher values are shown in thicker red shades, calculated automatically using a log scale.

CPT users can choose to scale both line color and line width on the initial Preferences page within the section for 'Grid, Charting, and GIS Calculation/ Display" under the filter GIS.

Within GoogleEarth users can click on a reach to display associated Flow information for a single reach.

Note that the pop-up does NOT include information about the years or commodities included in the query results.

Users are reminded to make notations of query details in the .kmz file name for their future reference.

Examples of Flow Tab exported graphics in GoogleEarth

Screenshot of **reach** level **flow** results for the commodity category “Barley, Rye, Oats, River and Sorghum Grains (64)” in Charleston Harbor, 2014.

 Scale = Linear
 Scale Display = Both
 Min Gradient Color = White
 Max Gradient Color = Orange
 All others to default

Screenshot of **reach** level **flow** results for commodity category “Petroleum and Petroleum Products (2)” in Tampa Harbor, 2014.

GIS filter custom settings in CPT
 Scale = Logarithmic
 Scale Display = Both
 Max Gradient Color = Yellow
 All others to default

Screenshot of **reach** level **flow** results for Pittsburgh District, averaged for years 2011-2014, commodity category “Primary Manufactured Goods (5)”.

GIS filter settings

Scale = Linear

Scale Display = Both

Max Line Width (pixels) = 30

Max Gradient Color = Red

All others to default

Screenshot below shows **reach** level **flow** results for Mississippi Valley Division, Portland District, and Seattle District, average for years 2011-2014, commodity category “Soybeans (6255)”.

GIS filter settings in CPT:

Scale = Linear,

Max Line Width (pixels) = 35,

Min Gradient Color = White,

Max Gradient Color = Green,

All others to default

Rankings Results

Users can export results from the Rankings tab to Google Earth. We recommend using the **Reach** view as it will more accurately assign categorical information values to the correct spatial location. (Using the **Project** view will assign the same value to all reaches within a project)

Click on the [Export to Google Earth](#) button

The screenshot shows a software interface titled "Reach - Click Tab Below for Desired Analysis". It features four tabs: "Rankings", "Rollup", "Flow", and "Work Package", with "Rankings" selected. Below the tabs, there is a section for "Order Grid By:" with three radio button options: "Trips", "Tons" (which is selected), and "Dollars". An "Update" button is located to the right of these options. Below this is a section titled "Reach Ranking - Click Reach Row in Grid for Details". This section contains three buttons: "Export to Excel", "Export to PDF", and "Export to Google Earth". Below the buttons is a text instruction: "Drag a column header and drop it here to group by that column". At the bottom, there is a table header with two columns: "Group" and "Name".

Users will be prompted to open or save the .kmz file.

File names for exported .kmz files will include the date of your export but not location

CPT users can choose to adjust both line color and line width on the initial **Preferences** page within the section for 'Grid, Charting, and GIS Calculation/ Display" under the filter GIS.

Reach-level Rankings view for selected channels in the Chicago area.

The same data exported as Project-level Rankings. *Note how this view assigns a single value to all reaches within a project, resulting in loss of spatially-nuanced information. Major differences for this example are circled in yellow below.*

Examples of Rankings Tab exported graphics in GoogleEarth

Exporting saved queries as .cpt files

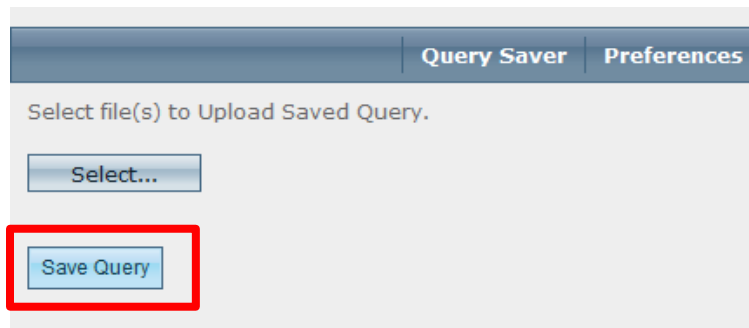

Query results that are exported to Excel do not contain information about reaches included in the query. Relevant reach information may be noted by the user in an associated file, or the user may generate and save a “.cpt” file directly from the Channel Portfolio Tool.

Users should set their filters on the Preferences page, and select relevant reaches on the Locations page. From the results window users can click on the **Query Saver** tab in the menu bar.

The Query Saver page presents two options, users can:

- Select an existing .cpt file to upload
- Save the current query by clicking on the **Save Query** button

After clicking the Save Query a prompt window will appear allowing users to select 'Save As' and rename the .cpt file. Users are advised to re-name the .cpt file to match any other relevant exported files (such as exported Excel files from the Reports page).

Depending on your web browser settings this prompt window may have a different appearance. If a window prompting you to Open or Save the file *does not appear* after clicking the **Save Query** button please check your computer's **Downloads** folder for the .cpt file.

9 Viewing Work Package Results

Users must be in the **Reports: Reach** view to the Work Package Tab

Sample display of query results under Work Package Tab

Reach - Click Tab Below for Desired Analysis

Rankings Rollup Flow Work Package

Dredge Cost/Benefit By: Tons Dollars
 Color Scale: Linear Logarithmic

This table displays the proxy -benefit/cost ratio (proxy -BCR) for dredging to a certain depth at a specified date (either now, or in the future) based on shoaling forecasts. The proxy -BCR is calculated using tonnage supported and the cost to remove sediment to get to a particular depth.

How to read the color-coded Work Package results table

This table presents a proxy -benefit/cost score based on target elevation, cost, and shoaling forecast. Brighter green colors correspond to higher scores, note that there may be a range of cells with similar scores that correspond to different depths. The results for an individual reach in the **Recommendation** column reflect the highest score.

Rate Now.
The proxy-benefit/cost of dredge to the Target Elevation now.

Delta Dollars (x1k).
Change in dollars between XX and YY

Target Elevation ft. (MLLW)
Dredge-to depth.

Rate 6 Mos.
The proxy-benefit/cost of dredging to the target elevation in 6 months.

Delta Trips

Delta Tons (x1k)

Users are **not** restricted to selecting the pre-selected recommended depth for every reach in the work package.

<input type="checkbox"/>	44	59.2073	67.5684
<input type="checkbox"/>	43	59.3232	67.7691
<input type="checkbox"/>	42	59.3492	67.8246
<input checked="" type="checkbox"/>	41	59.3501	67.8286
<input type="checkbox"/>	40	59.3501	67.8286

In this example the recommended depth is pre-selected to 41 ft (shown with a grey check mark), but that may not reflect operational necessities that require maintaining the channel at a different depth.

Selected	Target Elevation ft. (MLLW)
<input type="checkbox"/>	60
<input type="checkbox"/>	59
<input type="checkbox"/>	58
<input type="checkbox"/>	57
<input type="checkbox"/>	56
<input type="checkbox"/>	55
<input type="checkbox"/>	54
<input type="checkbox"/>	53
<input type="checkbox"/>	52
<input type="checkbox"/>	51
<input type="checkbox"/>	50
<input type="checkbox"/>	49
<input type="checkbox"/>	48
<input type="checkbox"/>	47
<input type="checkbox"/>	46
<input type="checkbox"/>	45
<input checked="" type="checkbox"/>	44
<input type="checkbox"/>	43
<input type="checkbox"/>	42
<input type="checkbox"/>	41

Simply identify the desired depth (shown under the Target Elevation ft. (MLLW) column) for a reach and check the box under the 'Selected' column.

In this example the project manager has decided that the operational requirement is for 44ft of depth for this reach.

After selecting the desired Target Elevation for **each reach** in the work package (or accepting the defaulted resulted calculated by CPT) click the **Rollup** button.

Save Work Package																	

Saving Work Packages

Once you have successfully generated a Work Package Rollup you will be able to save your work package for later side-by-side comparison. Remember, if any of the **Recommendation** columns say 'N/A' the Rollup function will not work.

Next to the Rollup table click on the **Save Work Package** button to save the unique work package you have developed. This will generate a unique file type (.wpr) that is only readable within CPT.

A window will open prompting you to save the .wpr file.

Users should customize the .wpr file name with work package specifics, including reaches selected, depth, and years considered.

The filename is the only chance to create metadata, to give your future self a clue about what's in the file.

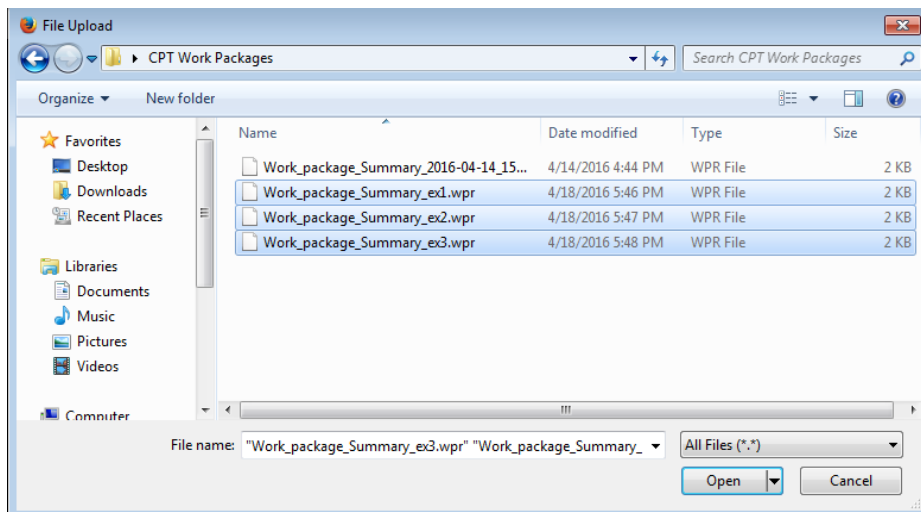

Users are advised to generate their custom .wpr files and *then* move on to comparing work packages.

Comparing Work Packages

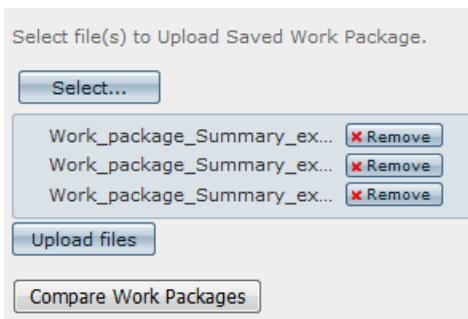

After generating multiple work package combinations (.wpr files) users can load the packages into CPT for side-by-side comparison.

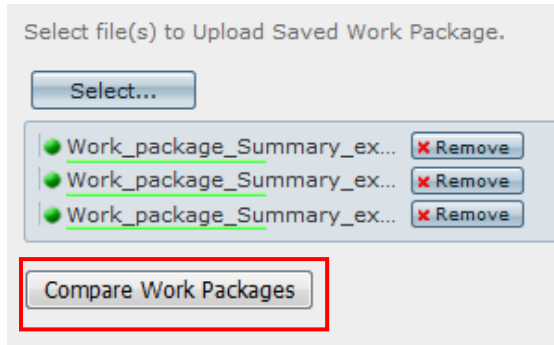

Select **Reports: Work Package** from the Reports drop-down menu at the top of the page.

Then select all of the work packages to be compared.

Selected work packages will appear in the list. Click on the **Upload files** button to load the .wpr files into CPT.

Files that have been successfully uploaded will display a green circle to the left of the filename.

Click on **Compare Work Packages** to generate the side-by-side comparison of the selected work packages.

A Work Package Rollup Comparison will appear on the same screen.

Select file(s) to Upload Saved Work Package.

Select...

- Work_package_Summary_ex... Remove
- Work_package_Summary_ex... Remove
- Work_package_Summary_ex... Remove

Compare Work Packages

Work Package Rollup Comparison

		Mob Demob Cost	Cost Per Cubic Yard	Delta Tons (x1k)	Delta Dollars (x1k)	Rate Now	Rate 6 Mos.	Rate 12 Mos.	Rate 18 Mos.	Rate 24 Mos.	Rate 30 Mos.	Rate 36 Mos.
+	?	\$800,000...	\$5.000	13,155.605	\$32,086,6...	10.3431	15.2353	19.8890	24.2704	28.3431	32.0558	35.3429
+	?	\$1,000,00...	\$3.000	16,954.989	\$34,714,6...	12.4299	18.2312	23.6659	28.6494	33.0848	36.8157	39.8077
+	?	\$100,000...	\$7.000	9,027.459	\$29,287,3...	35.4786	51.2470	65.2820	77.3521	87.2896	94.9106	100.0558

Note: Color-coding only applies *within* a work package, not across the compared packages.

In this example the top two rows have the same reaches but different Mob/Demob costs and Costs Per Cubic Yard. The third row has only two reaches, much lower Mob/Demob cost, but higher Cost Per Cubic Yard. Note the large difference in the proxy-BCR score for the third work package.

Remember: The Work Package Rollup Comparison does not include reach listings. Users of this function are advised to keep a list of specific reaches included in each work package in an easily retrievable location or to embed this information within the .wpr file name.

10 Sample Questions Tutorial

- How much tonnage transits at the deepest channel depth in the Savannah Harbor project?
- How many vessel trips were there in the Savannah Harbor project in 2014?
- How can I generate this type of graph?

Remember these caveats

- Results are based on the most recent year of data available (for this example)
- Data is for the entire year, there is no monthly or seasonal detail available
- This example includes all traffic types and all cargo types

Step 1. Select filters to use

The screenshot shows a web-based interface titled "Filters and Selections". It contains several sections of filters:

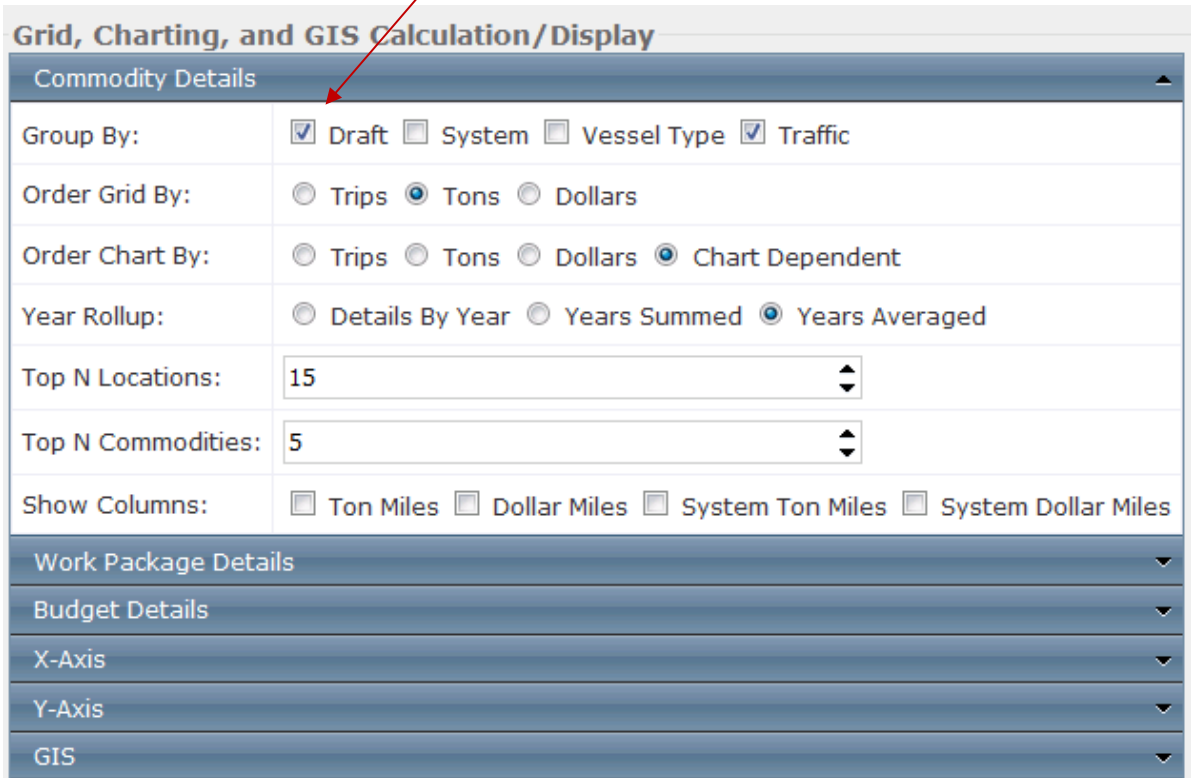

- Network:** Radio buttons for "Custom" (selected) and "Ombil".
- Docked:** Radio buttons for "Docked" and "Transit (Docked + Thru)" (selected).
- Flow Docked:** Radio buttons for "Docked" and "Transit (Docked + Thru)" (selected).
- Channel Conditions:** A dropdown menu.
- System:** A dropdown menu.
- Direction:** A dropdown menu.
- Commodity Year:** A dropdown menu.
- Method:** Radio buttons for "Calendar" (selected) and "Fiscal".
- Year:** Radio buttons for "All" and "Selected" (selected). Below this is a dropdown menu with the years 2014, 2013, 2012, and 2011. The year 2014 is selected and highlighted in blue. A red arrow points from the text on the right to this dropdown.
- Vessel Type:** A dropdown menu.
- Traffic:** A dropdown menu.
- Commodity Draft:** A dropdown menu.
- Commodity:** A dropdown menu.
- Budget Years:** A dropdown menu.
- Type Fund:** A dropdown menu.

Default is most recent year ONLY.

For this example use the default year, 2014.

Leave the other filters in this group at their defaults, don't adjust them.

Step 2. In the set of filters for **Grid, Charting, and GIS Calculation/Display**, Check the box for DRAFT under the Commodity Details filter.

Grid, Charting, and GIS Calculation/Display

Continue

Step 3. Click CONTINUE after finishing with the filters, then you will advance to Location selection.

The screenshot shows a web application interface with a 'Locations' section. At the top left is a 'Continue' button. Below it is a tree view of locations. The 'South Atlantic' location is expanded, showing a list of sub-locations. The 'Savannah Harbor' sub-location is selected, indicated by a checked checkbox. Other sub-locations include Charleston, Jacksonville, Mobile, Savannah, AIWW - SAS, Altamaha River, Brunswick Harbor, Darien Harbor, Low Use - SAS, Non-Project (Back River), Non-Project (Little Ogeechee River), Savannah River below Augusta, St Marys River GA and FL, and Wilmington. Below the tree view is another 'Continue' button.

Step 4. Under LOCATIONS, expand the menu under South Atlantic Division, then Savannah District. To expand the menu click on the plus icon.

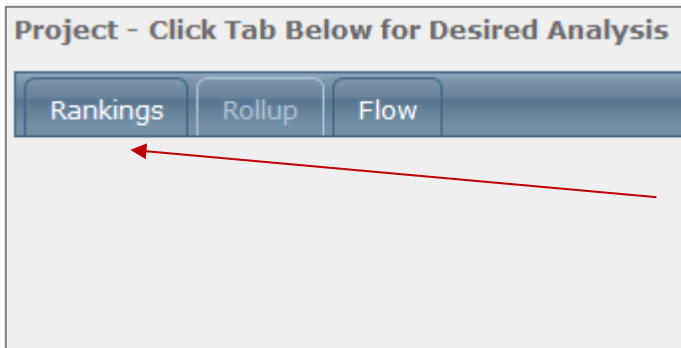

When the Savannah District Projects are visible check the box for Savannah Harbor project (this will automatically select all of the reaches within the project).

To see all reaches included in the location selection, click on the plus icon.

Note that commercial tonnage does move through some of the reaches included under the 'Savannah River below Augusta' project, but we have not included that in this example query. When in doubt, always check the reaches included in a project to ensure they reflect your desired spatial extent.

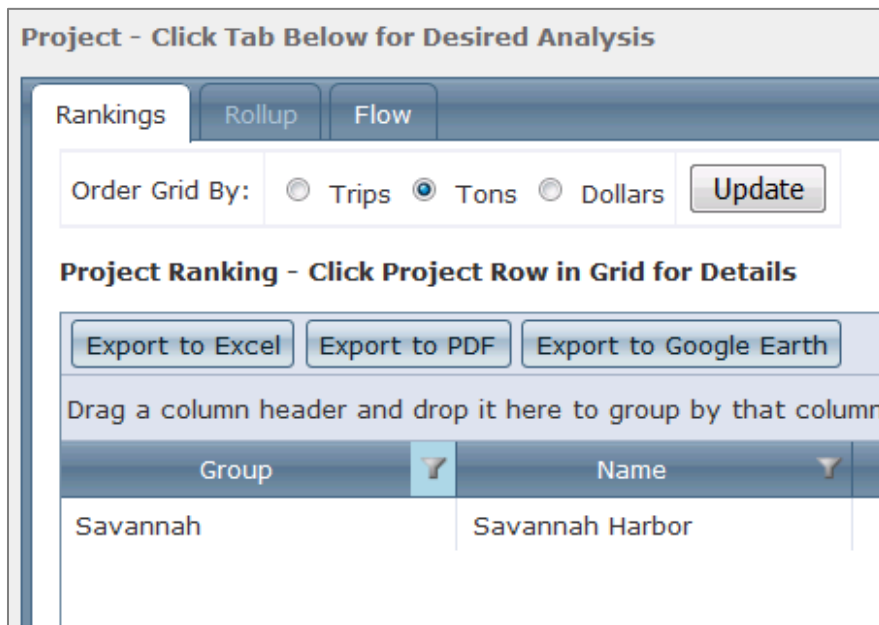

Step 5. When finished with Locations click on the **Continue** button.

The first RESULTS screen will look like the screenshot below, it's not blank, don't worry!

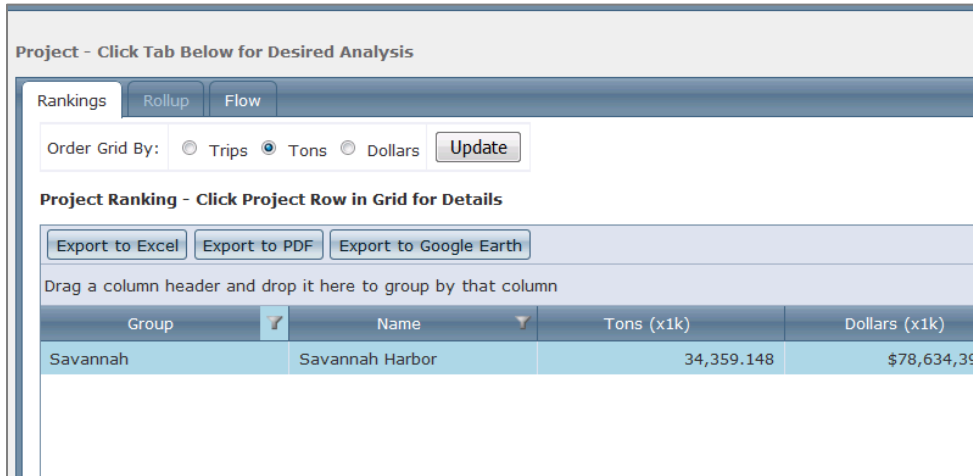

Step 6. Click on the RANKING tab.

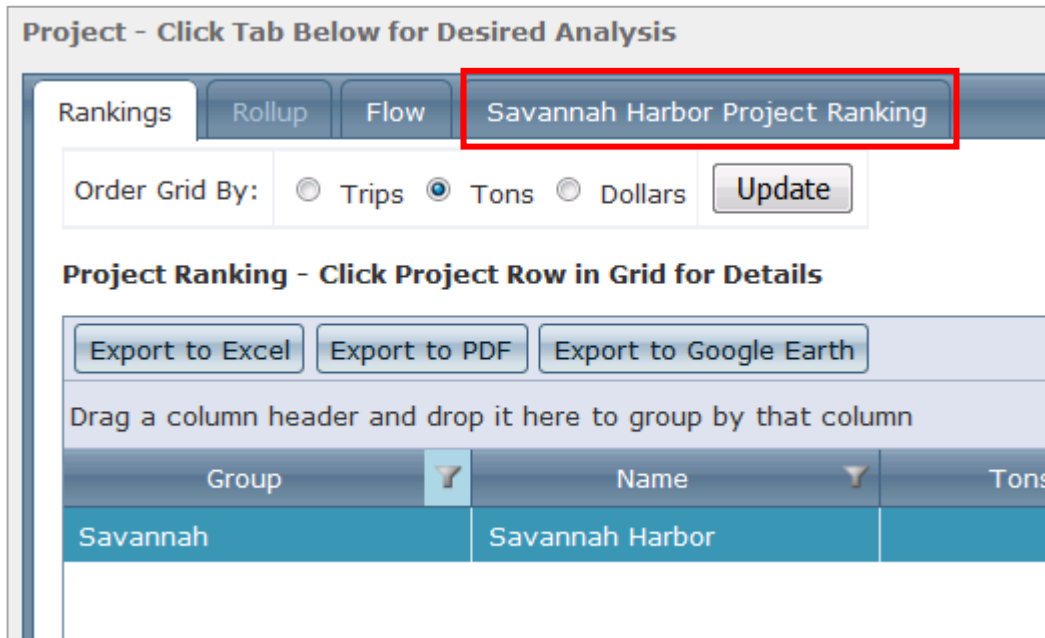

If you only selected one project there will only be one row in the **Rankings** tab results table. That's ok!

Step 7. Click on the Savannah row.....

.....and then a new tab will appear in the back.

Step 8. Click on the new tab (Savannah Harbor Project Ranking) to display detailed results.

Project - Click Tab Below for Desired Analysis

Rankings Rollup Flow Savannah Harbor Project Ranking

Project RankingDetail - Traffic

Group by: Draft System Vessel Type Traffic

Order Grid By: Trips Tons Dollars

Drag a column header and drop it here to group by that column

Year	Draft (ft)	Traffic	Tons (x1k)
2014	37	Overseas-Imports	2,257.944
2014	37	Overseas-Exports	2,185.218
2014	38	Overseas-Imports	2,182.646
2014	36	Overseas-Exports	2,109.067
2014	38	Overseas-Exports	2,055.805
2014	36	Overseas-Imports	1,653.949
2014	39	Overseas-Exports	1,499.013
2014	40	Overseas-Exports	1,443.792
			34,359.15

Page 1 of 16

Step 9. Scroll down to see the available graphs.

There will be multiple GRAPHS, click on one of the lines to view the graph. Note that the graphs show different combinations of data, please read axis titles carefully.

Axis Controls

RankingDetail Project Traffic Draft vs. Average Yearly Tons for AllShipments

RankingDetail Project Traffic Draft vs. Average Yearly Dollars for AllShipments

RankingDetail Project Traffic Draft vs. Average Yearly Trips for AllShipments

RankingDetail Project Commodity Draft vs. Average Yearly Tons for AllShipments

RankingDetail Project Commodity Draft vs. Average Yearly Dollars for AllShipments

You've got your graphs!

There is no export function for the graph files (at present).

Users can take screenshots and copy/ paste into a word doc or paint program. Depending on your screen size you may be able to hit **Ctrl** and **+** keys to zoom in on your web browser to make the graph larger before you take a screenshot

Step 10. To take a screenshot of the graphs, hold down the keys **Fn** and **Prnt Scrn.** (Depending on your computer this key combination might be **Ctrl** and **Prnt Scrn**, or **Windows icon** button and **PrtScr/SysRq**).

Some users may have a program called Snipping Tool installed. This program can be used to take screenshots by 'clipping' a part of the screen selected by the user.

Step 11. View all of the graphical results by clicking through the rows.

Now let's answer the other two questions listed at the start of the tutorial.

- How much tonnage transited at the deepest channel depth in the Savannah Harbor project in 2014?
- How many vessel trips were there in the Savannah Harbor project in 2014?

How much tonnage transited at the deepest channel depth in the Savannah Harbor project in 2014?

To answer this question go to the **Reports: Reach** view, **Rollup** tab.

Click on the column title **Draft (ft)**. Click once to sort from shallowest to deepest draft.

Click again to put deepest draft at the top.

Year	Draft (ft)	Traffic	Tons (x1k)
2014	44	Overseas-Exports	20.106
2014	43	Overseas-Exports	203.319
2014	43	Overseas-Imports	6.621
2014	42	Overseas-Exports	1,378.173
2014	42	Overseas-Imports	230.786
2014	42	Canadian-Imports	3.997
2014	41	Overseas-Exports	1,207.427
2014	41	Overseas-Imports	545.067
			34,359.15

We see that for this project there was only one type of traffic at 44ft (Overseas-Exports) and it carried just over 20,000 tons in 2014.

How many vessel trips were there in the Savannah Harbor project in 2014?

To answer this question go to the **Reports: Reach** view, **Rollup** tab. The rollup trip total for the selected reaches will be under the **Trips** column in a separate row.

The screenshot shows the 'Reach Rollup - Traffic' report for 2014. The report is filtered by 'Draft' and 'Traffic'. The 'Trips' column total is highlighted with a red box, showing 6,540.00. The report also shows 'Tons (x1k)' and 'Dollars (x1k)' for each reach.

Year	Draft (ft)	Traffic	Tons (x1k)	Dollars (x1k)	Trips
2014	37	Overseas-Imports	2,257.944	\$7,553,240.246	303.000
2014	37	Overseas-Exports	2,185.218	\$3,919,392.073	279.000
2014	38	Overseas-Imports	2,182.646	\$8,277,268.650	268.000
2014	36	Overseas-Exports	2,109.067	\$3,139,894.731	254.000
2014	38	Overseas-Exports	2,055.805	\$4,036,099.944	254.000
2014	36	Overseas-Imports	1,653.949	\$5,721,383.204	260.000
2014	39	Overseas-Exports	1,499.013	\$2,864,957.362	149.000
2014	40	Overseas-Exports	1,443.792	\$2,736,607.155	143.000
			34,359.15	\$78,634,393.56	6,540.00

You can see that there were over 6,500 vessel trips in the Savannah Harbor project in 2014.

Summary of results: In Savannah Harbor, based on 2014 data, tonnage transited in vessels drafting from 1 – 44ft. The greatest amount of tonnage was carried by vessels drafting approximately 36 to 38ft and consisted mostly of overseas-import/export cargo. Less than 500,000 tons utilized the 43ft and 44ft channel depths during the year.

End of tutorial.
