US Army Corps of Engineers

Module Topics Outline

- Shoaling scenarios and more detailed analyses
 - How a shoaling scenario is calculated in CPT
 - Filters to use for running shoaling scenario query
 - Viewing shoaling scenario results
- Associated Exercise – Run a pre-set shoaling scenario
- Users will answer a specific shoaling related question, view output tables within CPT, view a graph within CPT, and export results

Shoaling-enabled query uses

- Use historical shoaling to calculate potential disruptions from current shoaling
 - Recent Application: Southwest Pass Draft Restrictions
- CPT queries can be detailed enough to support analysis of which types of traffic (i.e., local, import, export) or vessels (i.e., tankers, dry bulk) might be most affected by shoaling in an area

Running a shoaling scenario

CPT Preferences page

Channel Conditions filter

Channel Conditions

Limiting Depth:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Conditions:	<input checked="" type="radio"/> Current <input type="radio"/> Historic
Shoaling:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

Channel Conditions

Limiting Depth:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Conditions:	<input checked="" type="radio"/> Current <input type="radio"/> Historic
Shoaling:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Shoaling Defined:	<input type="radio"/> Default <input checked="" type="radio"/> User-Defined
Anticipated Default Shoaling:	<input type="text" value="10.00"/>

Enter level of **Anticipated Default Shoaling** in 1-ft increments.

This shoaling level will apply to all selected reaches in your scenario, regardless of their original depth.

(see next slide for explanatory diagram)

The Anticipated Default Shoaling filter in CPT applies the same level of shoaling to all channels selected in query.

10 ft channel

no shoaling

30 ft channel

8 ft channel

2-ft shoaling scenario

28 ft channel

If you select both a 10-ft reach and a 30-ft deep reach in the same 2-ft shoaling scenario query the 2-ft shoaling will apply to both reaches. Any tonnage that transited those reaches and would be affected by shoaling will be included in the results.

Shoaling-enabled query – Rollup results table

Displaying items 1 - 7 of 7

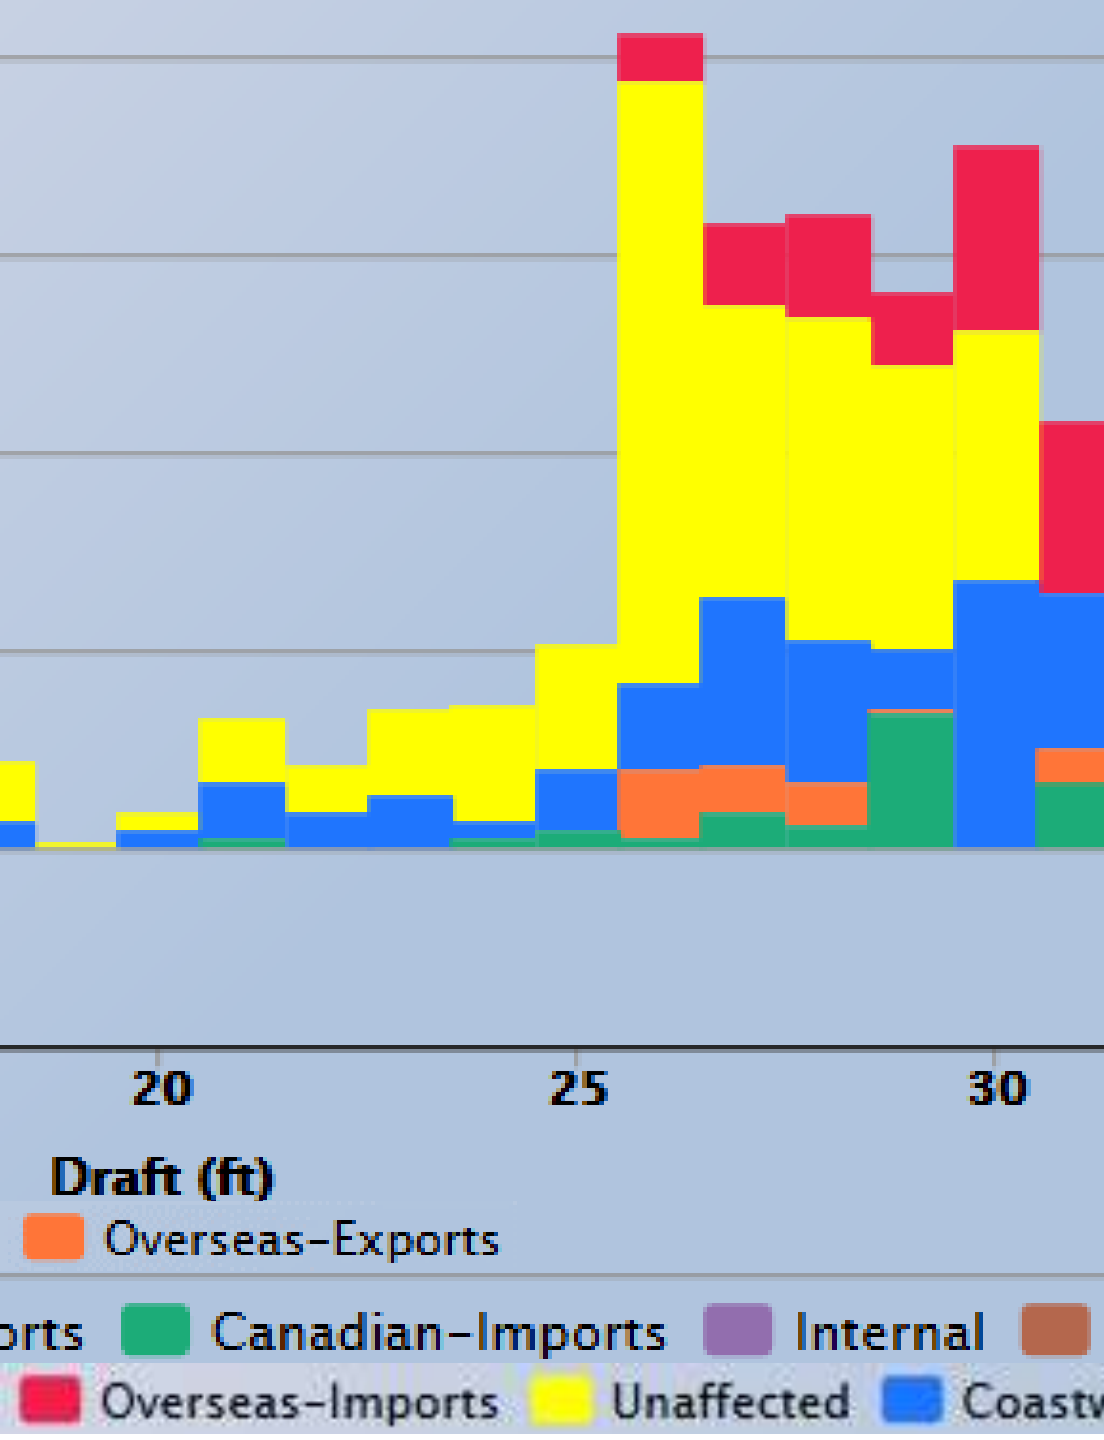

Shoaling enabled query table has the same columns as a regular query results table, but only impacted tonnage is listed.

- CPT results tables **do not** indicate if a query is shoaling enabled
- Shoaling information **is** included in files exported to Excel

Rollup Reach Traffic Draft vs. Average Yearly Tons for AllShipments

Shoaling scenario graphs will have a category called UNAFFECTED, shown here as yellow bars. Affected traffic will be labeled with the usual category labels.

It is possible to have unaffected and affected traffic in the same draft column?

This result may seem counterintuitive.

Explanation:
Some shallower-draft vessels transit deep draft channels.

If a 25ft vessel only transits 40ft channels, a few feet of shoaling in this scenario would not affect it.

Summary

- Shoaling-enabled queries have the same work flow within CPT as other queries.
- Shoaling-enabled query results have the same general layout as other queries, but...
- Results tables **only** display tonnage, traffic, or trips that ***would have been affected*** by the hypothetical shoaling
- Graphs will show **both** affected traffic and unaffected traffic
 - Affect traffic shown in multiple categories
 - Unaffected traffic grouped together

End of Module 3

Practice your shoaling
scenario queries using the
associated exercise
