Business Area impacts determined by current state and approach:

Higher Impact Drivers:

- Large Amount of UID Required Property
- Multiple Marking Processes
- Direct Part Marking/Re-Design Requirements
- Engineering Drawing Changes
- No 2D Data Matrix Capability/Specifications
- Majority of Supplier Base Not UID Capable
- Full Information System Integration
- Post Contract Planning

Lower Impact Drivers:

- Small Amount Of UID Required Property
- Common Marking Process Exists
- Label/Name Plate Markings Can Be Applied
- Alternate Method To Engineering Drawing Changes
- 2D Data Matrix Capability/Specifications Exist
- Majority Of Supplier Base UID Capable
- Minimal Information System Integration
- Upfront Planning
