1 INTRODUCTION

1.1 LTPP Program Overview

During the early 1980s, the Transportation Research Board (TRB) of the National Research Council, under the sponsorship of the Federal Highway Administration (FHWA) and with the cooperation of the American Association of State Highway and Transportation Officials (AASHTO), undertook a Strategic Transportation Research Study (STRS) of the deterioration of the Nation's highway and bridge infrastructure system. The study recommended that a Strategic Highway Research Program (SHRP) be initiated to focus research and development activities on improving highway transportation. The study report, published in 1984 as TRB Special Report 202, *America's Highways, Accelerating the Search for Innovation*, recommended six strategic research areas. The Long-Term Pavement Performance (LTPP) Program was one of these areas. During 1985 and 1986, independent contractors developed detailed research plans for SHRP. The detailed research plans were published in May 1986 as a TRB report entitled *Strategic Highway Research Program-Research Plans.*

The LTPP program was envisioned as a comprehensive program to satisfy a wide range of pavement information needs. It draws on technical knowledge of pavements currently available and seeks to develop models that will better explain how pavements perform. It also seeks to gain knowledge of the specific effects on pavement performance of various design features, traffic and environment, materials, construction quality, and maintenance practices. As sufficient data become available, analyses are conducted to provide better performance prediction models for use in pavement design and management; better understanding of the effects of many variables on pavement performance; and new techniques for pavement design, construction, and rehabilitation.

1.2 The LTPP Database

Over its lifetime, the LTPP Project has amassed a large volume of data. These data are maintained on the FHWA's LTPP Information Management System (IMS). The IMS is composed of the Pavement Performance Database (PPDB), and the Ancillary Information Management System (AIMS). The PPDB is warehoused as a relational Oracle database consisting of carefully designed tables and data elements that are populated through data entry screens and data loader programs. The AIMS is a collection of mostly electronic formatted data and information collected to populate the PPDB. It includes raw and processed data files from field data collection equipment, documents, software, photos, videos, maps, and more.

This document focuses on the automated quality data checks applied to data loaded into the PPDB. This data is released to the public annually. Tables no longer included in the public release remain listed in this document for historical purposes.

The PPDB is organized by data module. Tables in the database are grouped and named based on the type of data they contain. This organization reflects the modularity of the LTPP data. This allows for convenient dissemination and use since many analysts are interested in only a subset of the LTPP data. The data modules contained in the PPDB are listed alphabetically in Table 1. This table provides a brief description of each data module, the associated QC Manual chapter, and the table prefix that is used to label related tables in the database.

1.3 LTPP Data and Data Quality

LTPP data are collected and processed by four regional contractors and a central technical support services contractor (TSSC). The regional contractors have primary responsible for construction and monitoring data for test sections in their region. They load the data into the LTPP Data Entry Portal (LDEP). Data from the LDEP is transferred to the central database for quality assurance and periodic release to the public. The central TSSC is responsible for collection and processing of climate data for all test sections and dynamic load response data from the SPS2 site in North Carolina. The TSSC is also responsible for reviewing data collected and processed by the regions and providing database software and programming for operation of the LTPP database.

From the outset of the LTPP Program, data quality has been considered of paramount importance. Procedures for collecting and processing data were developed and updated over time to promote consistency across regional contractors, laboratories, equipment operators, participating highway agencies, etc. To reinforce these procedures, automated data checks were programmed into the PPDB to detect data anomalies, possible data input errors, referential integrity of integrated data storage structures, and logical relationships between related data elements.

1.4 QC/QA Plan for LTPP Data

The LTPP data quality control/quality assurance (QC/QA) plan follows the logical steps starting with data collection, initial review, data load processing, post-load automated data checks, and review of data upload and processing results.

1. **Data Collection**: Procedures for collecting data are documented in separate publications for data contained each module of the PPDB. These procedures are intended to promote uniformity, accuracy, and quality. For equipment measurements, quality control procedures include routine calibrations, data checks during acquisition, and data checks prior to database loading.

2. **Initial Data Review:** Data are supplied in both electronic and paper formats from participating highway agencies and as measured by contractor field crews. Regional engineers review all data prior to input into LDEP to check for errors related to field operations, procedures, equipment operations, transcription, etc. The initial data review is intended to catch obvious data collection errors prior to entry. Procedure charts document data management procedures and collection guides are used as references. A formal QC/QA procedure is used by all regional contractors that document all aspects of data collection, processing, and checks.

   In addition, some data are preprocessed before they are entered. For example, the ProQual software is used to check profile data in the field and to flag data anomalies according to: (1) an actual pavement feature, (2) the result of equipment malfunctions, or (3) unexplained. PADIAS software performs some QC/QA checks before surface distress data are loaded. The FWDSCAN program is a preprocessor for FWD files. Traffic data is analyzed and summarized before it is loaded via the LTPP Traffic Analysis Software (LTAS) into LDEP.

3. **Data Load Checks:** Checks are programmed into the PPDB system to identify errors as data are entered. These checks include mandatory, logic, range, data verification, and other miscellaneous checks. Some checks are performed in the data entry forms, some in the data loader programs, and some are enforced by the database structure/definitions. Examples are provided below:

Verification checks essentially refer to a system-wide QC/QA feature employed to verify that a given STATE_CODE and SHRP_ID combination is a valid LTPP section and that it has not been released from the program. Data entry is restricted in every module to only valid LTPP sections.

Mandatory checks are enforced automatically by the Oracle® database since all key fields (and some others) are defined as NOT NULL. That means that Oracle® will not allow a record to be entered into a table unless each NOT NULL field has a value. Additionally, other fields may be required under certain conditions. In these cases the forms will either require input or will invoke a message that the field should be entered.

Range checks ensure that numeric field values fall within a defined range. Some ranges are absolute, e.g., in a sieve analysis, the value must be greater than zero and less than 100 percent passing. Other ranges are warnings, e.g., a lane width is expected to be between 10 and 15. If a number outside of this range is entered, a message is invoked so that the person entering the data may double check the number. Some data fields require input from a list of coded values. For these fields, the data entry form verifies the input value against database tables storing these codes. Undefined codes cannot be entered.

Logic checks are dispersed throughout the system and are intended to ensure data compatibility across tables. For example, if test results for a Bulk Specific Gravity Test on an asphalt core are being entered, the input form checks that the core sample tested matches a core that has already been entered into the database from the field sampling data sheets. Data loader programs perform similar checks before inserting records into related tables.

Construction number (CN) checks fall into the category of miscellaneous checks. As a data record is loaded or input into the database, a CN is assigned to it to indicate the pavement structure of the section at the time the data was collected. This number is determined by comparing various input values with information in the database, usually dates or field sets. Before the automated QC checks are run, a series of SQL scripts are run to update all CNs in the database. The CN is a critical element in some of the automated checks.

4. **Automated Data Checks:** Once data are input into the PPDB, automated data checks are performed. The results of the automated QC process are stored in a coded field named RECORD_STATUS. Originally, five categories of checks (levels A - E) were programmed as described below. Currently, most data modules have only three categories of checks: levels C, D and E.

    a. All data records begin at level A. Originally, random checks of data were performed to ensure correct data transfer from regional databases (the system preceding LDEP) to the central database. This check is currently done by comparing record counts before and after a data transfer from LDEP to the central PPDB. This does not cause a change in record status.
    b. Originally, a set of dependency checks were performed to ensure that basic essential section information had been recorded in the PPDB. These checks have been incorporated into the E level checks for most modules, but still exist for some tables in the TST module.
    c. A minimum data search is performed for critical elements. For example, Inventory data should contain the coordinates of the section, friction data should contain the skid number, and rehabilitation data should have a code entered to identify each work type activity. In some cases, these checks are implemented

by defining the data elements as NOT NULL fields. Without values for these fields, a record cannot be stored.

d. Range checks are applied to certain fields to identify data values that fall outside an expected range.
e. Intramodular checks are employed to verify the consistency of data within a data module. For example, a level E check could be used to verify that there is the correct number of child records to support a master record. Or, a level E check could be used to examine the relationship between fields containing the minimum, mean, and maximum specific gravities of a material. These checks are similar to the logic checks programmed into the system as discussed in item 3.

QC programs are coded for each data module in the PPDB. Some modules have one QC program with all checks included; other modules require multiple programs to implement all checks. For a given module, the QC programs are run consecutively beginning with level B, if applicable. Each record must pass B level checks before it is promoted to a "B" status that is recorded in the RECORD_STATUS field.

All records passing the level B checks are candidates for level C promotion. Once a record passes level C checks, it is assigned a RECORD_STATUS of "C" and is a candidate for level D promotion. This process continues through the level E checks.

The QC programs provide output that shows which records do not pass each check. Once the programs are completed, the regional contractors review the output and resolve any data errors possible. Often, the data entered is accurate and legitimate, but does not pass a QC check. When this occurs, a manual upgrade of the record status can be performed. The QC process should be completed before data is transferred to the central PPDB.

1.5 Interpreting Record Status

Once data has been uploaded to the central database, it becomes available for distribution to the public. Records completing the QC process with a level E status can mean any of the following:

Records have passed all of the data checks.
Records may have failed some data checks; however, they have been manually upgraded after inspection and data editing.
Records may contain errors that have not been detected by the current data review process.

Records with a status of less than E have either not completed the QC process or were left at a lower level of record status because they contained a flaw.

The QC checks applied to LTPP data are limited. It is not possible to inspect all of the data for all types of potential anomalies. As the program evolves and improvements are made to the QC checks, some data previously classified as level E may be reclassified to a lower status.

LTPP data users assume the responsibility for conclusions based on interpretation of data collected by the LTPP program. Level E data should not be considered more reliable than non-level E data. Likewise, non-level E data should not be considered less reliable than level E data. The record status for non-level E data can be used as an indicator of potential issues for these data.

1.6 Document Organization

The remaining chapters of this manual document the automated data checks programmed to be performed on each table in the PPDB. Chapters are organized by data module, and data checks are organized by level (A - E) within each chapter. The level A subsection is used as a placeholder, since there are no automated checks associated with this level. The level B subsection is a placeholder in most chapters where the associated level B checks have been incorporated into level E. Currently all data modules have level C, D, and E checks.

Table 1. Alphabetical Listing of Data Types in PPDB

Data Module*	Table Name Prefix	QC Manual Chapter	Description
Administration	NA	25	This module contains database definition tables, static lookup tables, and metadata tables. The EXPERIMENT_SECTION table contains basic section information and drives most database activities. QC checks are only defined for EXPERIMENT_SECTION, MON_CATEGORY, and SECTION_COORDINATES.
Automated Weather Station	AWS	23	This module contains data collected by the LTPP program from automated weather stations installed on some SPS projects.
Climate	CLM	12	This module contains data collected from offsite weather stations that are used to compute a simulated virtual weather station for LTPP test sections or project sites. Data in this module are updated at 5-year intervals.
Data Consolidated Views	NA	29	This module contains data on layer properties consolidated from INV, RHB and SPS modules.
Deflection/FWD	MON_DEFL	5	Deflection is a submodule of Monitoring data. It contains data from FWD tests.
Distress	MON_DIS	7	Distress is a submodule of Monitoring data. It contains distress survey data from both manual and film-based (PADIAS) surveys.
Drainage	MON_ DRAIN	27	Drainage is a submodule of Monitoring data. It contains the general site conditions and the results of the inspections of the edge drain system video from selected SPS 1 and 2 project sites.

Data Module*	Table Name Prefix	QC Manual Chapter	Description
Dynamic Load Response	DLR	24	This module contains dynamic load response instrumentation data from SPS test sections located in North Carolina and Ohio.
Friction	MON_ FRICTION	8	Friction is a submodule of Monitoring data. It contains friction measurements taken by participating highway agencies.
Ground Penetrating Radar	GPR	28	This module contains the results of ground penetrating radar measurements of layer thickness performed on a subset of SPS test sections.
Inventory	INV	2	This module contains inventory information for all GPS test sections and for SPS sections originally classified in maintenance and rehabilitation experiments. Tables in this module contain information such as the location of the test section and structure information supplied by the owning State or Provincial agency.
Maintenance	MNT	9	This module contains information on maintenance type treatments reported by a highway agency that were applied to a test section.
Materials Sampling and Testing	TST	3	This module contains field and laboratory materials testing data.
Profile (Longitudinal)	MON_ PROFILE	4	Longitudinal profile is a submodule of Monitoring data. It contains data collected by an automated profiler or by manual dipstick measurements.
Profile (Transverse)/ RUT	MON_ T_PROF	6	Transverse profile is a submodule of Monitoring data. It contains both transverse profile data and computed transverse profile distortion indices (rut depth) from manual dipstick measurements or the optical Pavement Distress Analysis System (PADIAS) method.
Rehabilitation	RHB	10	This module contains information on rehabilitation treatments.

Data Module*	Table Name Prefix	QC Manual Chapter	Description
Seasonal Monitoring Program	SMP	22	This module contains SMP-specific data, such as the onsite air temperature and precipitation data, subsurface temperature and moisture content data, and frost-related measurements.
SPS Construction	SPS1, SPS2, ..., SPS9, SPS	13 - 21, 26	This module contains construction data for each SPS experiment (1 - 9); a chapter is dedicated to each. There is also a module/chapter for general SPS information.
Traffic	TRF	11	This module contains traffic load, classification, and volume data in the lane the LTPP test section is located. One subset of the module (TRF_MEPDG tables) includes computed parameters that have data summarized for use with the new pavement design guide. A second subset (TRF_ESAL) includes computed ESAL values for the LTPP lane based on available materials and monitored traffic loading data.

***Bolded Data Types comprise the Monitoring data module.**

The appendices to this document contain reference information. Appendix A contains a discussion of test section designations, including a description of GPS and SPS sections and a list of the non-supplemental, or core, sections for each SPS experiment. Appendix B contains a list of units used throughout this document. Appendix C contains a list of database enforced constraints defined in the PPDB. This list indicates which database elements are defined as not null (must be defined for every record), which are part of a primary key (noted with a PK in parentheses), and which are coded values. Coded value lists are provided in Appendix D.

2 INVENTORY QC PROGRAMS

Data is present in **INV_*** tables for pavements which were in service at the time of their acceptance into the LTPP program. Data is present on a section basis for GPS experiments. Data representative of an SPS project prior to maintenance or rehabilitation is present if there is no GPS section linked as a control section on the project. Since the information on SPS projects is for pre-construction conditions, only one entry will exist under the project level ID to represent all sections on the project prior to treatment. A project level ID ends in 00. The tables in which such SHRP_IDs are expected are **INV_AGE**, **INV_GENERAL**, **INV_ID** and **INV_LAYER**. Depending on the data collection guidelines for a particular SPS project, data may exist in other **INV_*** tables.

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

These checks verify that it is possible for a given section or project to have data in the indicated table. Note that for SPS projects, unless there is a significant variation in subgrade or base materials, all data, except for layering, is entered at the PROJECT level. SPS9 projects are the only ones for which there is no section specification data at all.

All checks but those for SPS5, 6 and 7 are one to one. For SPS5, 6 and 7, since the data in **INV_LAYER** is supposed to be entered at the section rather than the project level, the checks should be one to many.

Conditions 1 and 2, below, apply to all of the following tables containing GPS experiment-specific checks on DESCRIPTION and MATERIAL_TYPE.

1. The DESCRIPTION code must exist unless proceeded by an “if”.
2. The MATERIAL_TYPE is associated only with the DESCRIPTION that is on the same line of the table.

For sections in the GPS1 Experiment, refer to INV_LAYER:

- Check for the following:

DESCRIPTION	MATERIAL_TYPE
2	71 - 73, 81, 83
9	2
3	1
4	28
5	22, 23, 41

[8] This check moved from Level D section due to the relational and conditional nature of the check to be consistent with specifications guidelines. The code does not need to be modified for GPS at the present time. Checks of this type for SPS projects, however, should be in the Level E QC.

Table: INV_UNBOUND

Extract RECORD_STATUS, NO_40_PASSING, and NO_200_PASSING from **INV_GRADATION** for matching STATE_CODE, SHRP_ID and LAYER_NO.

Extract PLASTICITY_INDEX, LIQUID_LIMIT, and PLASTIC_LIMIT from **INV_UNBOUND**.

Extract AASHTO_SOIL_CLASS from **INV_UNBOUND**.

- Generate a value of GI based on the following calculations

  F = NO_200_PASSING
  LL = Liquid Limit
  PI = Plasticity Index
  GI = (F - 35) [0.2 + 0.005 (LL - 40)] + 0.01 (F - 15) (PI - 10)

  If GI < 0, then GI = 0; if GI > 20, then GI = 20

If RECORD_STATUS ≥ 'D', then the value of AASHTO_SOIL_CLASS in **INV_UNBOUND** must match the criteria in the following table:

AASHTO SOIL CLASS	NO. 40 PASSING	NO. 200 PASSING	PLASTICITY INDEX	GI	LIQUID LIMIT	LIQ. LIM.- PLASTICITY INDEX
01	<30	<15	< 6	0		
02	<50	<25	< 6	0		
03	>50	<10	NP	0		
04		<35	<10	0	<40	
05		<35	<10	0	>40	
06		<35	>10	< 4	<40	
07		<35	>10	< 4	>40	
08		>35	<10	< 8	<40	
09		>35	<10	<12	>40	
10		>35	>10	<16	<40	
11		>35	>10	<20	>40	>30
12		>35	>10	<20	>40	<30

If the check indicates that the AASHTO_SOIL_CLASS does not meet the criteria above, a message statement indicating that "AASHTO_SOIL_CLASS does not match gradation and Atterberg data" is appropriate.

3 MATERIALS TESTING QC PROGRAMS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

Dependency checks (B) are performed on records at level A. For the Materials Testing data, the dependency checks are:

- For a given record in the **TST_UG07_SS07_*** tables, check to make sure that all existing records in **TST_SAMPLE_LOG** with matching STATE_CODE, SHRP_ID, CONSTRUCTION_NO, and SAMPLE_NO are at level E
- No B level checks on other **TST_*** tables

For sections in the SPS1 Experiment:

DESCRIPTION 2, 3 - 9; 11 (not supplementals)

If LAYER_NO > 1, then the REPR_THICKNESS and MATL_CODE must be non-null.

If REPR_THICKNESS is non-null, it must be ≥ 0.

For all sections, the following ranges are valid for the given DESCRIPTION (not supplementals):

DESCRIPTION	REPR_THICKNESS
2	0.0 - 1.5
6	4.0 - 47.9
7	24.0 - 240.0
8	0.1 - 0.5
9	0.1 - 1.0

10	0.0 - 1.5, 999.9	11, 12, 71 - 73, 81 - 84, 999

For all CONSTRUCTION_NOs, the following range for REPR_THICKNESS is valid for the given combinations of DESCRIPTIONs. Please note that this applies to a DESCRIPTION = 3 and all LAYER_NOs below a DESCRIPTION = 3 that have a DESCRIPTION = 4 (not supplementals).

DESCRIPTION	REPR_THICKNESS
3 + 4	1.0 - 14.0, 999.9

For all CONSTRUCTION_NOs, a DESCRIPTION = 11 is not valid (not supplementals).

For CONSTRUCTION_NO = 1, a DESCRIPTION = 1 is not valid.

For CONSTRUCTION_NO ≥ 2, a DESCRIPTION = 1 is not valid except for SHRP_ID like ?310 (not supplementals).

For CONSTRUCTION_NO = 2 and SHRP_ID like ?310, the following ranges (if not null) are valid for a DESCRIPTION = 1:

REPR_THICKNESS	MATL_CODE
0.0 - 1.5	1

For sections in the SPS4 Experiment:

If LAYER_NO > 1, then the REPR_THICKNESS and MATL_CODE must be non-null.

If REPR_THICKNESS is non-null, it must be ≥ 0.

For all CONSTRUCTION_NOs and for all sections, the following ranges are valid for the given DESCRIPTION (not supplementals):

DESCRIPTION	REPR_THICKNESS	MATL_CODE

7	24.0 - 240.0, 999.9	100 - 178, 200 - 294, 999

For all CONSTRUCTION_NOs, a DESCRIPTION = 1, 2, 4, 8, 9, 10, or 11 is not valid (not supplementals).

For sections in the SPS5 Experiment:

If LAYER_NO > 1, then the REPR_THICKNESS and MATL_CODE must be non-null.

If REPR_THICKNESS is non-null, it must be > 0.

For all CONSTRUCTION_NOs and for all sections (SHRP_ID like ?501-?509), the following ranges (if not null) are valid for the given DESCRIPTION (not supplementals):

A DESCRIPTION = 11 is not valid.

The following checks specifically apply for CONSTRUCTION_NO = 1:

A DESCRIPTION = 1 is not valid.

For all sections (SHRP_ID_ LIKE ?501 - ?509), the following range for REPR_THICKNESS is valid for the given combinations of DESCRIPTIONs. Please note that this applies to a DESCRIPTION = 3 and all LAYER_NOs below a DESCRIPTION = 3 that have a DESCRIPTION = 4 (not supplementals).

DESCRIPTION	REPR_THICKNESS	MATL_CODE
3 + 4	3.0 – 14.0, 999.9	1, 999

The following checks specifically apply for CONSTRUCTION_NO ≥ 2:

For all sections (SHRP_ID_ LIKE ?501 - ?509), the following range for REPR_THICKNESS is valid for the given combinations of DESCRIPTIONs. Please note that this applies to a DESCRIPTION = 3 and all LAYER_NOs below a DESCRIPTION = 3 that have a DESCRIPTION = 4 (not supplementals).

DESCRIPTION	REPR_THICKNESS	MATL_CODE
3 + 4	0.0 – 14.0, 999.9	1, 999

DESCRIPTION = 1 not valid for SHRP_ID = ?501.

For test sections where SHRP_ID = ?502 - ?509, the following ranges are valid:

SECT. ID	DESCRIPTION[8]	MATL_CODE9	REPR_THICKNESS
?502	1 + 4	13	1.0 - 3.0
?503	1 + 4	13	4.0 - 6.0
?504	1 + 4	1	4.0 - 6.0
?505	1 + 4	1	1.0 - 3.0
?506	1 + 4	1	2.0 - 5.0[10]

8 These thicknesses include the experimental design overlay thickness and an additional allowance (over and above the experimental design overlay thickness) of 2 inches for the mill-replacement layer. If milling in excess of 2 inches occurs, the data may fail the QC checks. Therefore, this data is to be flagged and commented upon by the RCOC prior to manual upgrading of RECORD_STATUS.

9 Similar to note 8 above, the MATL_CODE should be checked for all LAYER_NOs with a DESCRIPTION=1 and all LAYER_NOs above the LAYER_NO with a DESCRIPTION=3 that have a DESCRIPTION=4 (if a LAYER_NO with a DESCRIPTION=4 exists). It is not mandatory that a LAYER_NO with a DESCRIPTION=4 exist above a LAYER_NO with a DESCRIPTION=3.

SECT. ID	DESCRIPTION[8]	MATL_CODE9	REPR_THICKNESS
?507	1 + 4	1	5.0 - 8.0[10]
?508	1 + 4	13	5.0 - 8.0[10]
?509	1 + 4	13	2.0 - 5.0[10]

For sections in the SPS6 Experiment:

If LAYER_NO > 1, then the REPR_THICKNESS and MATL_CODE must be non-null.

If REPR_THICKNESS is non-null, it must be $\geq$ 0.

For all CONSTRUCTION_NOs and for all sections (SHRP_ID like ?601 - ?608), the following ranges are valid for the given DESCRIPTION (not supplementals):

DESCRIPTION	REPR_THICKNESS	MATL_CODE
2	0.0 - 1.5, 999.9	71 - 73, 81 - 83, 999

10 These thicknesses include the experimental design overlay thickness and an additional allowance (over and above the experimental design overlay thickness) of 2 inches for the mill-replacement layer. If milling in excess of 2 inches occurs, the data may fail the QC checks. Therefore, this data is to be flagged and commented upon by the RCOC prior to manual upgrading of RECORD_STATUS.

DESCRIPTION	REPR_THICKNESS	MATL_CODE
1	0.8 - 8.0, 999.9	1, 999
4	1.0 - 10.0, 999.9	1, 999

The following checks specifically apply for CONSTRUCTION_NO ≥ 2:

For CONSTRUCTION_NO = 2, a DESCRIPTION = 1 or 4 with a REPR_THICKNESS > 0 is not valid for SHRP_ID = ?601, ?602, or ?605.

For test sections where SHRP_ID = ?603, ?604, ?606, ?607, ?608 the following ranges are valid:

SECTION	DESCRIPTION[11]	REPR_THICKNESS	MATL_CODE
?603	1 + 4	3.0 - 5.0, 999.9	1
?604	1 + 4	3.0 - 5.0, 999.9	1
?606	1 + 4	3.0 - 5.0, 999.9	1
?607	1 + 4	3.0 - 5.0, 999.9	1
?608	1 + 4	7.0 - 9.0, 999.9	1

For sections in the SPS7 Experiment:

If LAYER_NO > 1, then the REPR_THICKNESS and MATL_CODE must be non-null.

If REPR_THICKNESS is non-null, it must be ≥ 0.

For all sections (SHRP_ID like ?701 - ?709), the following ranges are valid for the given DESCRIPTION (not supplementals):

DESCRIPTION	REPR_THICKNESS	MATL_CODE
2	0.0 - 1.5, 999.9	71 - 73, 81 - 83, 999
3	7.0 - 13.0, 999.9	4, 5, 6, 999
5	3.0 - 24.0, 999.9	302 - 310, 319 - 341, 350, 999
6	4.0 - 47.9, 999.9	302 - 310, 319 - 341, 350, 999

11 DESCRIPTION above includes the LAYER_NO with a DESCRIPTION = 1 and all LAYER_NOs above the LAYER_NO with a DESCRIPTION = 3 that have a DESCRIPTION = 4 (if a LAYER_NO with a DESCRIPTION = 4 exists). It is not mandatory that a LAYER_NO with a DESCRIPTION = 4 exist above a LAYER_NO with a DESCRIPTION = 3. The REPR_THICKNESS values should be summed for all LAYER_NOs corresponding to the above criteria and compared with the values listed for REPR_THICKNESS above.

DESCRIPTION	REPR_THICKNESS	MATL_CODE
7	24.0 - 240.0, 999.9	100 - 178, 200 - 294, 999
8	0.1 - 6.0, 999.9	74 - 84, 999
9	0.0 - 2.5, 999	2, 999
10	0.0 - 1.5, 999.9	11, 12, 71 - 73, 81 - 84, 999

For all CONSTRUCTION_NOs, a DESCRIPTION = 4 or 11 is not valid (not supplementals).

For CONSTRUCTION_NO = 1, a DESCRIPTION = 1 is not valid.

The following checks specifically apply for CONSTRUCTION_NO > = 2:

DESCRIPTION = 1 is not valid for SHRP_ID = ?701.

DESCRIPTION = 2, 9 or 10 is not valid (not supplementals).

For test sections where SHRP_ID = ?702-?709 the following ranges are valid for a DESCRIPTION =1:

SHRP_ID	REPR_THICKNESS
?702 - ?705	2.0 - 4.0
?706 - ?709	4.0 - 6.0

SHRP_ID	MATL_CODE
?702 - ?709	4, 90, 999

For sections in the SPS8 Experiment:

If LAYER_NO > 1, then the REPR_THICKNESS and MATL_CODE must be non-null.

If REPR_THICKNESS is non-null, it must be $\geq$ 0.

For SHRP_ID like ?801 - ?806:

DESCRIPTION 3 - 9, 11

For sections like ?801 - ?806, the following ranges are valid for the given DESCRIPTION:

4 PROFILE QC PROGRAMS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

No Dependency Checks are performed for Profile because Profile data are not dependent on Layer or Experiment data.

C. Minimum Data Elements

Tables and accompanying fields that must be included in a data record are identified below. Explanations are provided for those fields having certain conditions as to when they are required (i.e., X = always; * = conditionally).

Table	Field	Condition
MON_PROFILE_DATA	LEFT_ELEVATION	X
	RIGHT_ELEVATION	X
MON_PROFILE_MASTER	AVERAGE_SPEED	*
	* if DEVICE_CODE = P	
	DISPLACEMENT	X
	FILTER_WAVELENGTH	*
	* if DEVICE_CODE = P	
	IRI_AVERAGE	X
	IRI_LEFT_WHEEL_PATH	X
	IRI_RIGHT_WHEEL_PATH	X
	RMSVA_16	X
	RMSVA_4	X
	SENSOR_TYPE	*
	* if DEVICE_CODE = P	
	SLOPE_VARIANCE	X
	SOFTWARE_VERSION	X
	START_METHOD	*
	* if DEVICE_CODE = P	

D. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name. SPS supplemental sections are not checked.

Table	Units	Range
MON_PROFILE_DATA		
LEFT_ELEVATION	mm	-150 - 150
RIGHT_ELEVATION	mm	-150 - 150
MON_PROFILE_MASTER		
DEVICE_CODE		D or P
IRI_AVERAGE	m/km	0.4 - 4.8
IRI_LEFT_WHEEL_PATH	m/km	0.4 - 4.8
IRI_RIGHT_WHEEL_PATH	m/km	0.4 - 4.8
RCO_CODE		1, 2, or 3

The following expanded range checks are applicable only if the DEVICE_CODE = P:

AVERAGE_SPEED	kph	45 - 90
FILTER_WAVELENGTH	m	91.4 or 100
SENSOR_TYPE		1, 2, or 3
START_METHOD		1 or 2
STOP_METHOD		1, 2, or 3
WAVE_LENGTH_INIT		null, 0 or 1

The following expanded range checks are applicable on if the DEVICE_CODE = D:

AVERAGE_SPEED	kph	null
FILTER_WAVELENGTH	m	null
SENSOR_TYPE		null
START_METHOD		null
STOP_METHOD		null
WAVE_LENGTH_INIT		null

E. Intramodular Checks

Each E-type check is separated by a single line. In general, each bullet represents a procedure, action, etc., of the check.

The **MON_PROFILE_MASTER** table contains a record for each profilometer run at a given SHRP site. The other table related to the profile module is the **MON_PROFILE_DATA** table which contains actual profilometer-generated elevations at a fixed interval along the current run. The additional piece of information included in this table is a status field, EVENT_MARK. Each record in the **MON_PROFILE_MASTER** should be analyzed independently along with all associated records within **the MON_PROFILE_DATA** table. After applying all checks within a particular level (e.g., expanded range checks) to this family of records, and if all of the QC/QA checks have been successfully passed, the entire group of records can be promoted to the next appropriate level by modifying the RECORD_STATUS field in each of the records.

Tables: MON_PROFILE_DATA and MON_PROFILE MASTER

- For each **MON_PROFILE_MASTER** test, ensure that the number of matching records in the MON_PROFILE_DATA table is in the following range: [(SECTION_END - SECTION_START)/ELEVATION_SAMPLE_LENGTH/1000] - 10 <= MatchingRecords <= [(SECTION_END - SECTION_START)/ELEVATION_SAMPLE_LENGTH/1000] + 25

Error Message: MON_PROFILE_MASTER-E-1, Number of records {MatchingRecords} not between {SECTION_START)/ELEVATION_SAMPLE_LENGTH/1000] - 10} and {[(SECTION_END - SECTION_START)/ELEVATION_SAMPLE_LENGTH/1000] + 25}

- If SENSOR_TYPE = 3 and DEVICE_CODE = P, then WAVE_LENGTH_INIT must be null

  Error Message: MON_PROFILE_MASTER-E-2, SENSOR_TYPE = 3 requires WAVE_LENGTH_INIT to be null when DEVICE_CODE='P'

- If SENSOR_TYPE = 1, 2 and DEVICE_CODE = P, then WAVE_LENGTH_INIT must be non-null

  Error Message: MON_PROFILE_MASTER-E-3, SENSOR_TYPE = {SENSOR_TYPE} requires WAVE_LENGTH_INIT to be non-null when DEVICE_CODE='P'

E. Intramodular Checks

Each E-type check is separated by a single line. In general, each bullet represents a procedure, action, etc., of the check.

Table: MON_DEFL_BUFFER_SHAPE

- If BUFFER_ASSIGN_DATE > 1-JUN-1999 and DEFL_UNIT_ID is in (8002-58, 8002-59, 8002-60, 8002-61, 8002-129, 8002-130, 8002-131, 8002-132) BUFFER_SHAPE cannot be 9

  Error Message: Unknown buffer shape not allowed for LTPP equipment.

- If BUFFER_ORDER_NO > 1, then BUFFER_ORDER_NO - 1 must exist for matching DEFL_UNIT_ID

  Error Message: For DEFL_UNIT_ID = ?, BUFFER_ORDER_NO = ? Cannot exist without BUFFER_ORDER_NO = ? - 1.

- For the same DEFL_UNIT_ID and BUFFER_ORDER_NO, BUFFER_ASSIGN_DATE < BUFFER_DEASSIGN_DATE

  Error Message: For DEFL_UNIT_ID = ? And BUFFER_ORDER_NO = ?, BUFFER_ASSIGN_DATE >= BUFFER_DEASSIGN_DATE.

For the same DEFL_UNIT_ID, on any pair of BUFFER_ORDER_NO [BN] and BUFFER_ORDER_NO + 1 [BN + 1] (i.e. 1, 2 or 2, 3, etc.), perform the following checks:

- BUFFER_ASSIGN_DATE(BN + 1) > BUFFER_ASSIGN_DATE(BN)

  Error Message: For DEFL_UNIT_ID = ?, BUFFER_ASSIGN_DATE(BN + 1) <= BUFFER_ASSIGN_DATE(BN)

- BUFFER_ASSIGN_DATE(BN + 1) > BUFFER_DEASSIGN_DATE(BN)

  Error Message: For DEFL_UNIT_ID = ?, BUFFER_ASSIGN_DATE(BN + 1) <= BUFFER_DEASSIGN_DATE(BN)

Tables: MON_DEFL_DEV_CONFIG, MON_DEFL_DEV_SENSORS

- For each record in **MON_DEFL_DEV_CONFIG** the number of records in **MON_DEFL_DEV_SENSORS** with matching CONFIGURATION_NO should be equal to **MON_DEFL_DEV_CONFIG**.NO_ACTIVE_DEFLECTORS

  Error message: **MON_DEFL_DEV_CONFIG**-E-101 The number of records in **MON_DEFL_DEV_SENSORS** is not equal to **MON_DEFL_DEV_CONFIG**.NO_ ACTIVE_DEFLECTORS for CONFIGURATION_NO = {CONFIGURATION_NO }.

- For each record in **MON_DEFL_DEV_SENSORS** a record in **MON_DEFL_DEV_CONFIG** with matching CONFIGURATION_NO must exist

  Error message: **MON_DEFL_DEV_CONFIG**-E-102 A matching record does not exist in **MON_DEFL_DEV_CONFIG** for **MON_DEFL_DEV_SENSORS** {CONFIGURATION_NO, SENSOR_NO}.

Note to Programmer: At this point, set RECORD_STATUS = E for all MON_DEFL_DEV_CONFIG records passing the previous Level E checks.

Tables: MON_DEFL_DEV_SENSORS, MON_DEFL_LOC_INFO, MON_DEFL_MASTER

- For each record in **MON_DEFL_DEV_SENSORS,** the value of CENTER_OFFSET must be equal to the value in the table below depending on value of **MON_DEFL_LOC_INFO**.LANE_NO for matching CONFIGURATION_NO and **MON_DEFL_MASTER**.SOFTWARE_VERSION = 10 or 20 for matching STATE_CODE,

Or

If **MON_DEFL_MASTER**.SOFTWARE_VERSION = 25 or 1.?.? (FWDWin) for matching STATE_CODE, SHRP_ID, and TEST_DATE, the required value for CENTER_OFFSET is the same for all values of **MON_DEFL_LOC_INFO**.LANE_NO

Error message: **MON_DEFL_DEV_SENSORS**-E-101 Center offset {CENTER_OFFSET} does not match LTPP Edition 25 specifications for matching LANE_NO {LANE_NO} and SOFTWARE_VERSION {SOFTWARE_VERSION}. See MON_DEFL_LOC_INFO section-{STATE_CODE, SHRP_ID} test_date - {TEST_DATE}, lane_no - {LANE_NO}.

*Note to Programmer: Note that the relationship between records in **MON_DEFL_DEV_SENSORS** and **MON_DEFL_LOC_INFO** is a one to many relationship. All unique combinations of CONFIGURATION_NO and LANE_NO in **MON_DEFL_LOC_INFO** must be checked to make sure the sensor spacing is correct. This check does not have to be performed for SENSOR_NO = 1 since the CENTER_OFFSET should always be zero. At this*

point, set RECORD_STATUS = E for all MON_DEFL_DEV_SENSORS records passing the previous Level E checks.

Table: MON_DEFL_DROP_DATA

- For each record with non-null values of PEAK_DEFL_(n) and PEAK_DEFL_(n + 1) where n is in (1 - 8)

  If LANE_NO is in (F0, F1, F3, J0, J1, J2, J3, J6, J7, J8, C0, C1, C3, S1, S3, G1, G3, P1, P3, L1, L3)

  And

  If PEAK_DEFL_(n) < PEAK_DEFL_(n + 1)

  Then

  Set **MON_DEFL_DROP_DATA**.NON_DECREASING_DEFL = 1

  Warning message: **MON_DEFL_DROP_DATA**-W-101 Deflection Basin test with non-decreasing deflection: record has been flagged.

Note to Programmer: This check is only to populate the NON_DECREASING_DEFL field for records not satisfying this check, and to generate a warning message in the QC log. DO NOT reset RECORD_STATUS for records not satisfying this check. Note that the relationship between sensor 8 and 9 is not being tested.

- When LANE_NO in (J4, J5, C4, C5), **MON_DEFL_DROP_DATA**.PEAK_DEFL_1 must not be null.

F. Manual Upgrade Guidelines

The following actions can be taken whenever data with known errors has been uploaded or when records fail the various QC checks:

Delete Data	Single data fields, multiple fields and complete records can be removed.
Edit Data	Change data elements.
Manually Upgrade Data	After inspection of records failing checks, SQL statements can be applied to increase RECORD_STATUS to the next level. In some instances, a record failing a check may be left at its highest level of RECORD_STATUS without removal from the database.

Delete Data

Erroneous data caused by measurement and equipment errors should be removed from the IMS. In some cases single or groups of data elements within a record can be removed, and in other cases the entire record should be deleted. If records are to be modified, then the modification should occur prior to running the QC check programs. If records are modified after running the QC programs, then all related records for the field measurement set in the other **MON_DEFL_*** tables must have their RECORD_STATUS reset to A and the QC programs re-executed. If changes are made to a data set and it is reloaded, then **MON_DEFL_MASTER**.LOAD_DATE should be set to the current date. Some examples of deletions of FWD data include:

- Bad air or surface temperature measurements from the on-board FWD temperature sensors should be deleted
- Within a drop data set record in **MON_DEFL_DROP_DATA**, peak deflection measurements can be removed under the following conditions:
  - Measurements contained in the PEAK_DEFL_1 field can be deleted from a record if the value exceeds 2032 microns. Note that this is based on the maximum limit of accuracy for the deflection sensors stated by the manufacturer
  - If PEAK_DEFL_2 exceeds 2032 microns, and PEAK_DEFL_1 also exceeds 2032 microns, and if the test is a basin measurement, then both PEAK_DEFL_1 and PEAK_DEFL_2 can be deleted from a record
  - If the test is a load transfer measurement, then the complete record must be deleted if any of the PEAK_DEFL_* values exceed 2032 microns
  - If the test is a basin test and PEAK_DEFL_*N* where *N* is 3 or greater exceeds 2032 microns, then the complete record must be removed
  - If any of the PEAK_DEFL_* readings are negative, the complete record should be deleted
- For records in **MON_DEFL_DROP_DATA** failing the minimum level D range check on PEAK_DEFL_*, the entire drop data set should be examined for reasonableness. It has been found that drop data sets which contain zero peak deflections are most often associated with

equipment errors and have irregular deflection basin shapes. Records with anomalous or erroneous deflection basins should be deleted. In some cases it is useful to refer to the COMMENTS_1 and COMMENTS_2 field in the related record in **MON_DEFL_LOC_INFO** to see if the field operator has identified the drop set as being erroneous. In many cases such as this, the entire drop set should be deleted as well as the related record in **MON_DEFL_LOC_INFO**.

- In general, single fields or values in the **MON_DEFL_DEV_SENSORS** and **MON_DEFL_DEV_CONFIG** tables should never be deleted. Deletions to these tables should be made to complete records if needed. However since multiple FWD data sets from measurements performed on different days at different sites can share the same records in these tables; i.e. have the same CONFIGURATION_NO, these deletions should be performed with caution. If records in either one of these tables are deleted, then the record with matching CONFIGURATION_NO in the other table must be deleted as well as complete FWD data sets with matching CONFIGURATION_NO in the **MON_DEFL_LOC_INFO**.

Edit Data

Within this context, editing data means changing the value of a field in the data base. This should only be performed when there is overwhelmingly convincing evidence available which supports the change. If records are to be modified, then the modification should occur prior to running the QC check programs. In general, if data fields in a record are modified after running the QC programs, then all related records for the field measurement set in the other **MON_DEFL_*** tables must have their RECORD_STATUS reset to A and the QC programs re-executed. There are a few edits that can be made without the need to reset RECORD_STATUS, as noted below. If changes are made to a data set after they have been previously uploaded to the IMS, then **MON_DEFL_MASTER**.LOAD_DATE should be set to the current date.

- The following edits can be made without need to reset RECORD_STATUS:
  - Changes to the comments fields in **MON_DEFL_LOC_INFO**
  - Changes to the values in **MON_DEFL_DROP_DATA**.HISTORY_STORED, although an edit to this field should not normally be needed
  - Entry of or changes to values in **MON_DEFL_DEV_SENSORS**.CENTER_OFFSET_FLAG of 1 or 2
  - Changes to **MON_DEFL_TEMP_VALUES**.WEATHER_CONDITION
- The following fields can be edited, provided convincing evidence is available supporting the change. If any of these fields are modified, the RECORD_STATUS of all other related records in the **MON_DEFL_*** tables should be reset to A. (Note that for some of these changes, the IMS will automatically reset the record status back to A.)
  - LANE_NO in **MON_DEFL_LOC_INFO** and **MON_DEFL_DROP_DATA**. Note that if changes are made to this field in either table, then the change must also be made to related records in the other table. Since LANE_NO is a key field, it can not be changed to a value for another existing record.
  - If a value of 3 is entered in **MON_DEFL_DEV_SENSORS**.CENTER_OFFSET_FLAG field, then the record status in **MON_DEFL_DEV_SENSORS** should be reset to A so that the QC will check for matching record(s) in **MON_DEFL_EST_SENSOR_OFFSET** table

- Correction of entries to .LAYER_TEMP_DEPTH* or LOCATION_NO in **MON_DEFL_TEMP_DEPTHS**. The QC needs to be re-run to check related entries in **MON_DEFL_TEMP_VALUES** and valid range.

- Correction of entries to LAYER_TEMPERATURE_* or LOCATION_NO in **MON_DEFL_TEMP_VALUES.** The QC needs to be re-run to check related entries in **MON_DEFL_TEMP_DEPTHS** and valid range.

Manually Upgrade Data

The following tables should never be manually upgraded: **MON_DEFL_FLX_***.

One concept in development of the QC checks is to flag data extremes, illogical relationships, and data relationships which violate LTPP test protocols. The FWD QC specifications were significantly revised based on problems that have been identified with the FWD data. Some of the checks were set to catch the "symptoms" of errant or abnormal data, but because of the structure and nature of the data, data failing a check does not always mean the data is bad. Therefore, the RCOCs must exercise judgment in the upgrade decision. In most cases an investigation of the data will be required to differentiate good from bad data and to make the decision on whether or not to apply a manual upgrade, remove the errant data, or leave the data in the IMS at a sub-level E status. The following examples are not exhaustive; other conditions may exist which may dictate another action. When in doubt, FHWA guidance and approval should be sought.

The following are some examples of when data failing a QC check should **not** be upgraded.

- In general, data failing a level C check should not be upgraded. The level C checks are considered mandatory data elements. Records failing these checks, and those in other related tables should be considered for removal from the IMS.

- When a peak deflection value exceeds 2,032 microns. See previous discussion on deletion of fields with excessive deflection.

- Crack and joint opening measurements which exceed 25-mm. This is the maximum value that can be entered by protocol. Values greater than 25-mm generally indicate that the measurements were not performed using a metric measurement device.

- Data sets for which the deflection sensors relative gain values exceed the level D specifications. In this situation, consideration should be given to either removing the peak deflection values of the offending sensor, or leaving the entire FWD data set at level C.

- Data sets for which the POINT_LOC values exceed the level D specification. The level D ranges have been set so that measurements occurring more than 31 m (100 feet) in front of or after a 304 m (1000 foot) test section are flagged. More precise level E checks are also performed, in which the actual length of SPS test sections are determined from the **SPS_PROJECT_STATIONS** table. Thus, records for SPS test sections failing the POINT_LOC level E criteria may be due to an error in the **SPS_PROJECT_STATIONS** table, which should be corrected. In those cases where measurements outside the monitoring portion of the test section were performed for LANE_NO like J0 and F0, it is recommended that the matching records in **MON_DEFL_POINT_LOC** and **MON_DEFL_DROP_DATA** be left in the data base below level E, since some of these tests were performed as part of pre-SMP installation testing. Since these measurements were performed outside the monitoring portion of the test section, the objective of this action is to make them harder to obtain so that they are not automatically included in general data releases.

- Data sets with LANE_NO values which fail the level D check should not be upgraded. Instead the LANE_NO should be corrected in accordance with LTPP protocol. SPR's should be

issued for valid LANE_NO that are not defined in the level D QC check.

- Records which fail logical (i.e. less than, greater than, equal to) level E date relationship checks should never be upgraded. The cause for these errors should be found and corrected.

- Records which fail the **MON_DEFL_LOC_INFO** level E check on CRACK_JOINT_OPEN_WIDTH. Crack and joint opening measurements should not be included for data sets in which the LANE_NO is not C4, C5, J4, or J5.

- Records which fail the **MON_DEFL_TEMP_DEPTHS** level E checks on relationship between LAYER_TEMP_DEPTH_(N) and LAYER_TEMP_DEPTH_(N + 1). These depths should be corrected so that LAYER_TEMP_DEPTH_(N) is shallower than LAYER_TEMP_DEPTH_(N + 1).

- Records which fail the level D check on **MON_DEFL_DEV_CONFIG**.PLATE_RADIUS. The LTPP FWDs are equipped with only the two defined size load plates. Records should not normally fail this check.

The following are examples of when records failing the QC should be manually upgraded:

- **MON_DEFL_DROP_DATA** records in which the peak deflections for the outer most sensors fail the minimum range check. In this case the deflection basin must pass an engineering reasonableness test in which the entire deflection basin must either all contain very small deflections, or the deflection basin suggests a very weak deflection signature with a very steep deflection-distance curvature. This check was added since it was found that the majority of data sets with zero, or very low, deflection responses were errant.

- Data sets which fail the level E check between LANE_NO and CENTER_OFFSET. This should only be done in the case where the RCOC has compelling evidence to suggest or prove that the data was collected with non-standard sensor spacings.

- Data sets which exhibit strange or abnormal behavior which cannot be attributed to equipment or measurement errors, provided they pass the test of engineering reasonableness

6 TRANSVERSE PROFILE AND RUTTING QC PROGRAMS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

No B Level checks are identified.

C. Minimum Data Elements

Tables and accompanying fields that must be included in a data record are identified below. Explanations are provided for those fields having certain conditions as to when they are required (i.e., X = always; * = conditionally).

E. Intramodular Checks

Each E-type check is separated by a single line. In general, each bullet represents a procedure, action, etc., of the check.

Table: MON_T_PROF_MASTER

- If DEVICE_CODE = “D” then FOOTPAD_SPACING must be NON-NULL
- If DEVICE_CODE = “D” then PVMT_WIDTH must be NON-NULL
- If DEVICE_CODE = “P” then FOOTPAD_SPACING must be NULL
- If DEVICE_CODE = “P” then PVMT_WIDTH must be NON-NULL

Note to Programmer: If above checks fail, set UPDATE_MASTER_FLAG= .F. If above checks pass and all checks below pass for each SHRP_ID, STATE_CODE, SURVEY_DATE, set ***MON_T_PROF_MASTER****.RECORD_STATUS = ‘E’*

Tables: MON_T_PROF_MASTER, MON_T_PROF_DEV_CONFIG

For SHRP_ID, STATE_CODE, and SURVEY_DATE:

- Where DEVICE_CODE = “P”, check that a matching record exists in **MON_T_PROF_DEV_CONFIG**, and set RECORD_STATUS = “E” in **MON_T_PROF_DEV_CONFIG**
- Where DEVICE_CODE = “D”, check that a matching record exists in **MON_T_PROF_DEV_CONFIG**, and set RECORD_STATUS = “E” in **MON_T_PROF_DEV_CONFIG**

Note to Programmer: If above checks fail, set UPDATE_MASTER_FLAG = .F.

Tables: MON_T_PROF_MASTER, MON_T_PROF_PROFILE

For SHRP_ID, STATE_CODE, SURVEY_DATE:

- If DEVICE_CODE = “D” then NO_PROFILES must equal the total number of POINT_LOCs within **MON_T_PROF_PROFILE**
- If DEVICE_CODE = “P” then NO_PROFILES must equal the total number of POINT_LOCs within **MON_T_PROF_PROFILE**

Note to Programmer: If above checks fail, set UPDATE_MASTER_FLAG = .F. and UPDATE_RUT_XY = .F.

For SHRP_ID, STATE_CODE, SURVEY_DATE, POINT_LOC:

Access **MON_T_PROF_MASTER** and identify DEVICE_CODE, PVMT_WIDTH, and FOOTPAD_SPACING

- If DEVICE_CODE = “D”, then there must be valid non-null entries in MON_T_PROF_PROFILE. X1 through X(1 + truncated (PVMT_WIDTH/FOOTPAD_SPACING)), and Y1 through Y(1 + truncated (PVMT_WIDTH/FOOTPAD_SPACING))

  [Example: PVMT_WIDTH = 3800 mm, FOOTPAD_SPACING = 305 mm; truncated value = 12, valid entries should then exist in X1 through X13 and Y1 through Y13]

- If DEVICE_CODE = “D”, then check to ensure X1 < X2 < X3 <X4 <----------X(1 + truncated (PVMT_WIDTH/FOOTPAD_SPACING))

- If DEVICE_CODE = “P”, then there should be valid non-null entries in X1 through X24 and Y1 through Y24

- If DEVICE_CODE = “P”, then check to ensure X1 < X2 < X3 < X4 <----------X29 < X30

- For all DEVICE_CODEs, (PVMT_WIDTH - 16mm) <= X?(last used) <= (PVMT_WIDTH + 16mm)

  [For example, if X15 is the last NON-NULL X-coordinate, then (PVMT_WIDTH - 16mm) <= X15 <= (PVMT_WIDTH + 16mm)]

*Note to Programmer: If above checks fail, set UPDATE_MASTER_FLAG = .F. else if UPDATE_RUT_XY = .T., set **MON_T_PROF_PROFILE**.RECORD_STATUS = ‘E’*

Tables: MON_T_PROF_MASTER, MON_T_PROF_PROFILE, MON_T_PROF_DEV_CONFIG

- All records in **MON_T_PROF_PROFILE** and **MON_T_PROF_DEV_CONFIG**, reaching Level E, whose parent record in **MON_T_PROF_MASTER** is not at Level E will be set back to Level D.

The QC checks for **MON_T_PROF_PROFILE** and **MON_T_PROF_MASTER** must be executed before running the following level E QC checks. Manual upgrades should not be permitted for records failing these level E checks.

Tables: MON_T_PROF_CROSS_SLOPE, MON_T_PROF_MASTER

- For matching STATE_CODE, SHRP_ID, and SURVEY_DATE, **MON_T_PROF_CROSS_SLOPE**.T_PROF_WIDTH <= **MON_T_PROF_MASTER**.PVMT_WIDTH

  Error Message: **MON_T_PROF_CROSS_SLOPE**-E-101, {STATE_CODE, SHRP_ID, SURVEY_DATE} Recorded transverse profile width is greater than pavement width in **MON_T_PROF_MASTER**

Tables: MON_T_PROF_CROSS_SLOPE, MON_T_PROF_PROFILE

- For matching STATE_CODE, SHRP_ID, SURVEY_DATE, and POINT_LOC, There must be a record in **MON_T_PROF_PROFILE** with RECORD_STATUS = ‘E’

Error Message: **MON_T_PROF_CROSS_SLOPE**-E-102, {STATE_CODE, SHRP_ID, SURVEY_DATE, POINT_LOC} RECORD_STATUS in **MON_T_PROF_PROFILE** is not = E

E. Intramodular Checks

Each E-type check is separated by a single line. In general, each bullet represents a procedure, action, etc., of the check.

Note: A check has been added after level E processing to check each record, regardless of record_status, for a match in the MON_DIS_LINK table. Any record without a match is listed in the QC output file, but the record status is not changed.

Table: MON_DIS_AC_REV

- The summation of low (L), moderate (M), and high (H) severity levels for data elements should meet the following range checks:

Data Elements	Range
BLK_CRACK_A_i	0.0 - 650.0
EDGE_CRACK_L_i	0.0 - 155.0
GATOR_CRACK_A_i	0.0 - 650.0
LONG_CRACK_NWP_i	0.0 - 465.0
LONG_CRACK_NWP_SEAL_L_i	0.0 - 465.0
LONG_CRACK_WP_L_i	0.0 - 310.0
LONG_CRACK_WP_SEAL_L_i	0.0 - 310.0
PATCH_A_i	0.0 - 325.0
PATCH_NO_i	0 - 100
POTHOLES_A_i	0.0 - 165.0

TRANS_CRACK_L_i	0.0 - 690.0
TRANS_CRACK_NO_i	0 - 150
TRANS_CRACK_SEAL_L_i	0.0 - 690.0

  Example:

  0.0 <= (GATOR_CRACK_A_L + GATOR_CRACK_A_M + GATOR_CRACK_A_H) <= 650.0

- Sum of GATOR and BLK must be between 0.0 - 650.0
- Sum of BLEEDING, RAVELING, POLISH_AGG_A must be between 0.0 - 650.0
- Sum of LONG_CRACK_WP_SEAL_L (L, M, H) must be <= Sum LONG_CRACK_WP_L (L, M, H)
- LONG_CRACK_WP_SEAL_L_L must be <= LONG_CRACK_WP_L_L

Tables: MON_DIS_AC_REV, EXPERIMENT_SECTION, TST_L05B (not supplementals)

- For SPS 9C and SPS 9J for matching STATE_CODE, SHRP_ID and CONSTRUCTION_NO in **TST_L05B**, select MAX(LAYER_NO) for DESCRIPTION = 1 or 3 and check that MATL_CODE = 1, 2, 13 or 700

Tables: MON_DIS_AC_REV, MON_DIS_LINK

- For each record in **MON_DIS_AC_REV**, there must be a record in **MON_DIS_LINK** with matching STATE_CODE, SHRP_ID, and SURVEY_DATE and TABLENAME = 'MON_DIS_AC_REV'

  Error message: MON_DIS_AC_REV-E-101 {STATE_CODE, SHRP_ID, SURVEY_DATE} There is no matching record in **MON_DIS_LINK**.

Table: MON_DIS_CRCP_REV

- The summation of low (L), moderate (M), and high (H) severity levels for data elements should meet the following range checks:

Data Elements	Range
DURAB_CRACK_A_i	0.0 - 217.0
DURAB_CRACK_NO_i	0 - 100
CONST_JOINT_NO_i	0 - 2
LONG_CRACK_L_i	0.0 - 620.0

  Error message: MON_DIS_CRCP_REV-E-101 {STATE_CODE, SHRP_ID, SURVEY_DATE} There is no matching record in **MON_DIS_LINK**.

Table: MON_DIS_JPCC_FAULT

- The summation of low (L), moderate (M), and high (H) severity levels for data elements should meet the following range checks:

Data Elements	Range
SPALLED_LENGTH_i	0.0 - 5.1

- In **EXPERIMENT_SECTION** (not supplementals):
  For matching STATE_CODE, SHRP_ID, CONSTRUCTION_NO, check that the experiment assignment is in (G3, G4, G7R, G9, S2, S4, S6, S7, S8 for SHRP_ID like ?807 - ?812, S9J)

Tables: MON_DIS_JPCC_FAULT, EXPERIMENT_SECTION, TST_L05B

- For SPS 9J for matching STATE_CODE, SHRP_ID, CONSTRUCTION_NO in **TST_L05B**, select MAX(LAYER_NO) for DESCRIPTION = 1 or 3 and check that MATL_CODE = 4, 5, or 730

Tables: MON_DIS_JPCC_FAULT, MON_DIS_LINK

8 FRICTION QC PROGRAMS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

No dependency checks are performed.

C. Minimum Data Elements

Tables and accompanying fields that must be included in a data record are identified below. Explanations are provided for those fields having certain conditions as to when they are required (i.e., X = always; * = conditionally).

Table	Field	Condition
MON_FRICTION	CALIBRATION_DATE	X
	FRICTION_METHOD	X
	FRICTION_NO_BEGIN	X
	FRICTION_NO_END	X
	FRICTION_SPEED	X

D. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name.

Table	Units	Range
MON_FRICTION		
FRICTION_DATE		<= Today
FRICTION_NO_BEGIN[1]	%	25 - 100
FRICTION_NO_END[1]	%	25 - 100
FRICTION_SPEED	mph	35 - 55

[1] This range combines two ranges, that which is appropriate for AASHTO T242 or ASTM E274 specified units (25 - 60) and that which is appropriate for other devices (50 - 100).

E. Intramodular Checks

Each E-type check is separated by a single line. In general, each bullet represents a procedure, action, etc., of the check.

Table: MON_FRICTION

For SHRP_ID, STATE_CODE, and CONSTRUCTION_NO:

- If the FRICTION_METHOD in **MON_FRICTION** = 3, there must be a valid entry in FRICTION_METHOD_OTHER

10 REHABILITATION QC PROGRAMS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

No dependency checks are performed.

C. Minimum Data Elements

Tables and accompanying fields that must be included in a data record are identified below. Explanations are provided for those fields having certain conditions as to when they are required (i.e., X = always; * = conditionally).

E. Intramodular Checks

Each E-type check is separated by a single line. In general, each bullet represents a procedure, action, etc., of the check.

Table: RHB_ACO_LAB_MIX

- If ASPHALT_GRADE is in (17, 35, 99), then ASPHALT_GRADE_OTHER must be non-null

  Error Message: RHB_ACO_LAB_MIX-E-1 {STATE_CODE, SHRP_ID, DATE_COMPLETE, LAYER_NO} ASPHALT_GRADE = {ASPHALT_GRADE} requires non-null entry in ASPHALT_GRADE_OTHER.

Tables: RHB_ACO_SP_AGGR_PROP, RHB_ACO_AGGR_PROP

- A record must exist in **RHB_ACO_AGGR_PROP** with matching STATE_CODE, SHRP_ID, DATE_COMPLETE, and LAYER_NO

  Error message: RHB_ACO_SP_AGGR_PROP-E-1 {STATE_CODE, SHRP_ID, DATE_COMPLETE, LAYER_NO} Matching record does not exist in RHB_ACO_AGGR_PROP.

Tables: RHB_ACO_SP_MIX_PROP, RHB_ACO_MIX_PROP

- A record must exist in **RHB_ACO_MIX_PROP** with matching STATE_CODE, SHRP_ID, DATE_COMPLETE, LAYER_NO, and SAMPLE_TYPE

  Error message: RHB_ACO_SP_MIX_PROP-E-1 {STATE_CODE, SHRP_ID, DATE_COMPLETE, LAYER_NO, SAMPLE_TYPE} Matching record does not exist in RHB_ACO_MIX_PROP.

Tables: RHB_ACO_SP_PROP

- If SOURCE = 77, then SOURCE_OTHER must be non-null

  Error Message: RHB_ACO_SP_PROP-E-1 {STATE_CODE, SHRP_ID, DATE_COMPLETE, LAYER_NO} SOURCE = {SOURCE} requires non-null entry in SOURCE_OTHER.

Tables: RHB_ACO_SP_PROP, RHB_ACO_PROP

- A record must exist in **RHB_ACO_PROP** with matching STATE_CODE, SHRP_ID, DATE_COMPLETE, and LAYER_NO

  Error message: RHB_ACO_SP_PROP-E-2 {STATE_CODE, SHRP_ID, DATE_COMPLETE, LAYER_NO} Matching record does not exist in RHB_ACO_PROP.

Table: RHB_CAUSE_INFO

- If PRIMARY_REASON_RHB = 1 or 2, GEN_PAVEMENT_RHB_CAUSE must be non-null

  Error Message: GEN_PAVEMENT_RHB_CAUSE cannot be null when PRIMARY_REASON_RHB is pavement condition

- If PRIMARY_REASON_RHB = 1 or 2, a “Y” should be entered for at least one of the RHB_DIS_* fields

  Error Message: At least one type of RHB_DIS_* must exist when PRIMARY_REASON_RHB is pavement condition

- If RHB_DIS_OTHER is “Y”, the RHB_DIS_OTHER_TYPE must be non-null and not blank

  Error Message: When RHB_DIS_OTHER exists, its description must be in RHB_DIS_OTHER_TYPE.

- If PRIMARY_REASON_RHB = 3, GEN_PAVEMENT_RHB_CAUSE must be null

  Error Message: When PRIMARY_REASON_RHB is not pavement condition, GEN_PAVEMENT_RHB_CAUSE must be null.

- If PRIMARY_REASON_RHB = 3, all the RHB_DIS_* fields must be “N” except RHB_DIS_OTHER_TYPE which must be null

  Error Message: When PRIMARY_REASON_RHB is not pavement condition, RHB_DIS_* cannot exist.

- If PRIMARY_REASON_RHB = 3, a “Y” should be entered for at least one of the RHB_REASON_* fields

  Error Message: If PRIMARY_REASON_RHB is not pavement condition, at least one reason must be identified in RHB_REASON_*.

- If RHB_REASON_NON_PAVE_OTHER is “Y”, RHB_REASON_NON_PAVE_COMMENT must be non-null and not blank

  Error Message: When RHB_REASON_NON_PAVE_OTHER is true, its description must be in RHB_REASON_NON_PAVE_COMMENT.

Table: RHB_IMP

11 TRAFFIC QC PROGRAMS

Manual upgrades are the process by which data entries that do not meet the guidelines of the QC but are in verified as correct entry of the data provided are advanced to the next record status. Manual upgrades for tables in the TRF module are restricted for data associated with Traffic Data Sheet 16, LTPP Monitored Traffic Data, Site Calibration Summary. The tables populated with data from this form are TRF_EQUIPMENT_MASTER, TRF_CALIBRATION_AVC and TRF_CALIBRATION_WIM. Only sites with a known protocol other than autocalibration may have manual upgrades when the data provided falls does not meet the criteria codified by the QC. A known protocol is defined as a method for which written documentation is available to the LTPP program for distribution to data users. The criteria are based on the LTPP definition of research quality data for traffic. Other QC failures that may not be upgraded are documented throughout this chapter.

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

No dependency checks are performed.

C. Minimum Data Elements

Minimum data checks for all Traffic data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

E. Intramodular Checks

Intramodular checks for all traffic data tables are specified below. Each E-type check is separated by a single line. In general, each bullet represents a procedure, action, etc., of the check. SPS 3 and 4 projects are excluded from the QC due to the redundancy of such a check when the linked GPS sections are already reviewed. Unless otherwise indicated, all records affected by these checks may be manually upgraded subject to verification of the data from the original data sheet submission.

Table: SPSWIM_VALIDATION_INIT and TRF_EQUIPMENT_MASTER

- For matching STATE_CODE, SHRP_ID, and TRF_EQUIPMENT_MASTER.WIM_AVC_CALIB_DATE = SPSWIM_VALIDATION_INIT.FIRST_VALIDATION, FIRST_FULL_YEAR >= to_char(FIRST_VALIDATION,'YYYY').

  Error message: **SPSWIM_VALIDATION_INIT** E-100, FIRST_VALIDATION prior to FIRST_FULL_YEAR.

Table: TRF_BASIC_INFO

- If FUNC_CLASS_MOD is not null, then FUNC_CLASS <> FUNC_CLASS_MOD

  Error message: **TRF_BASIC_INFO**-E-102, Functional class has not changed for {STATE_CODE, SHRP_ID}

- If FUNC_CLASS_MOD in (1, 2, 6, 7, 8, 9) then FUNC_CLASS_MOD < FUNC_CLASS

  Error message: **TRF_BASIC_INFO**-E-103, {STATE_CODE, SHRP_ID} has gone from a higher to lower rural functional class.

- If FUNC_CLASS in (11, 12, 14, 16, 17) then FUNC_CLASS_MOD in (11, 12, 14, 16) and FUNC_CLASS_MOD < FUNC_CLASS

  Error message: **TRF_BASIC_INFO**-E-104, {STATE_CODE, SHRP_ID} has either gone from urban to rural or from a higher to a lower urban class.

Table: TRF_BASIC_INFO and INV_GENERAL[7]

For matching STATE_CODE, SHRP_ID and the experiment for CN=1

EXPERIMENT	TRF_BASIC_INFO. PAVE_TYPE_TRF	INV_GENERAL. PAVEMENT_TYPE
GPS 1, 2, 6A	1	1 - 3, 7, 28 - 30
GPS 3, 4, 5, 9	2	11 - 25 or 31 - 39
GPS 7A	3	3, 10, 28 - 39, 49
SPS 5	1	1, 2, 7

7 Sections with experiment designation 6B, 6C, 6D, 6S, 7D, 7F, 7R, 7S are not original construction and therefore have no entries in the referenced tables.

EXPERIMENT	TRF_BASIC_INFO. PAVE_TYPE_TRF	INV_GENERAL. PAVEMENT_TYPE

SPS 9 with sections like 9N, 9O	1	1, 2, 7
SPS 9 with sections like 9C, 9J	2	11 - 25 or 31 - 39

Error Message: **TRF_BASIC_INFO**-E-106, Pavement structural type {PAVE_TYPE_TRF} is inconsistent with original structure {PAVEMENT TYPE}.

- For matching STATE_CODE, SHRP_ID, **TRF_BASIC_INFO**.NO_LTPP_LANES = **INV_GENERAL**.NO_OF_LANES[8]

  Error Message: **TRF_BASIC_INFO**-E-107, Traffic location has {NO.LTPP.LANES} lanes and basic section information has {NO_OF_LANES}

Tables: TRF_BASIC_INFO and INV_ID[9]

- For matching STATE_CODE, SHRP_ID, county must match between **TRF_BASIC_INFO.**COUNTY_NAME and **INV_ID**.COUNTY

  Error Message: **TRF_BASIC_INFO**-E-108, FIPS code for county {County} does not match {COUNTY_NAME} for State {STATE_CODE}.

- For matching STATE_CODE, SHRP_ID, **TRF_BASIC_INFO**.FUNC_CLASS = **INV_ID**.FUNCTIONAL_CLASS

  Error Message: **TRF_BASIC_INFO**-E-109, Traffic location is functional class {**TRF_BASIC_INFO**. FUNC_CLASS} while basic section is {**INV_ID**.FUNCTIONAL_CLASS}

- For matching STATE_CODE, SHRP_ID, direction of travel must match between **TRF_BASIC_INFO.**DIR_TRAV_LTPP and **INV_ID**.DIRECTION_OF_TRAVEL

  Error Message: **TRF_BASIC_INFO**-E-110, Travel direction is not the same for traffic location {DIR_TRAV_LTPP} and basic section {DIRECTION_OF_TRAVEL}

12 CLIMATIC QC PROGRAMS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

No dependency checks are performed.

C. Minimum Data Elements

Tables and accompanying fields that must be included in a data record are identified below. Explanations are provided for those fields having certain conditions as to when they are required (i.e., X = always; * = conditionally).

Table	Field	Condition

13 SPS1 CONSTRUCTION

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

Dependency checks (B) are performed on records at level A. These checks are performed to ensure that essential data (data which are required to properly reference all other data) are present and adequate. For SPS1 sections, the dependency checks are performed for specific SPS sections (SINIT).

Four types of checks are performed for the SINIT checks; INIT B - an experiment verification check, INIT C- a minimum data check, INIT D - an expanded range check, and INIT E - an intramodular check. Each of these checks are specified below. **A Project record must be at level E in SPS_PROJECT_STATIONS prior to a section passing the level B check for the remaining tables. (See SPS2 Construction Table Dependency Checks at the end of this section.)**

- All records in each Construction table are checked against **SPS_PROJECT_STATIONS** for matching project level ID. If the corresponding project level records are at level E in **SPS_PROJECT_STATIONS**, the records in the construction tables go to level B.

C. Experiment Verification Checks

Tables: SPS_ID, SPS_PROJECT_STATIONS, SPS1_LAYER

- For each SPS1 record in **SPS1_LAYER**, the corresponding Project Level record must be at level E in **SPS_ID** and **SPS_PROJECT_STATIONS**

D. Minimum Data Checks

Minimum data checks for all SPS1 Construction data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

E. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name.

SPS1_LAYER

DESCRIPTION	MEAN_THICKNESS
6	4.0 - 47.9
7	null
8	0.1 - 0.5
9	0.1 - 1.0
11	4.0 - 47.9

In addition, for each test section in the primary experiment, the following ranges apply for DESCRIPTION = 3, 4[1] and 5[2].

[1] If DESCRIPTION = 4 exists.

	THICKNESS[3]		
	DESCRIPTION = 3 + 4	**DESCRIPTION = 5**	**DESCRIPTION = 5 + 5**
?101	6.0 - 8.0	7.0 - 9.0	
?102	3.0 - 5.0	11.0 - 13.0	
?103	3.0 - 5.0	7.0 - 9.0	
?104	6.0 - 8.0	11.0 - 13.0	
?105	3.0 - 5.0		6.5 - 9.5
?106	6.0 - 8.0		10.5 - 13.5
?107	3.0 - 5.0		6.5 - 9.5
?108	6.0 - 8.0		10 5 - 13.5
?109	6.0 - 8.0		14.5 - 17.5
?110	6.0 - 8.0		6.5 - 9.5
?111	3.0 - 5.0		10.5 - 13.5
?112	3.0 - 5.0		14.5 - 17.5
?114	6.0 - 8.0	11.0 - 13.0	
?115	6.0 - 8.0	7.0 - 9.0	
?116	3.0 - 5.0	11.0 - 13.0	
?117	6.0 - 8.0		6.5 - 9.5
?118	3.0 - 5.0		10.5 - 13.5
?119	6.0 - 8.0		6.5 - 9.5
?120	3.0 - 5.0		10.5 - 13.5
?121	3.0 - 5.0		14.5 - 17.5

[2] Sections with a "5 + 5" DESCRIPTION must have two LAYER_NOs with a DESCRIPTION = 5. The thicknesses for these two layers should be summed.

[3] Thickness above includes the variables MEAN_THICKNESS, MAX_THICKNESS and MIN_THICKNESS. MEAN_THICKNESS is required, therefore if it is null it will not be raised above RECORD_STATUS = B. For the other two thicknesses, the check is valid only if the values exist.

	THICKNESS[3]		
	DESCRIPTION = 3 + 4	**DESCRIPTION = 5**	**DESCRIPTION = 5 + 5**
?122	3.0 - 5.0		6.5 - 9.5
?123	6.0 - 8.0		10.5 - 13.5
?124	6.0 - 8.0		14.5 - 17.5

In addition, for each test section, the following ranges apply for each DESCRIPTION (not supplementals):

DESCRIPTION	MATERIAL_TYPE
3	1
4	1
6	22 - 27, 37, 40 - 44
7	51 - 56, 57 - 65
8	74, 75
9	2
11	51 - 56, 57 - 65

In addition, for each test section in the primary experiment, the following range applies for DESCRIPTION = 5:

F. Intramodular Checks

Intramodular checks for all SPS1 Construction data tables are specified below.

Table: SPS1_LAYER

- Logical Layering Checks

  –The top layer must have a description of 3 or 9 (not supplementals)
  –A layer for DESCRIPTION = 3 cannot be below a layer for DESCRIPTION 4, 5, 6, 7, 8, 11
  –A layer for DESCRIPTION = 4 cannot be below a layer for DESCRIPTION 5, 6, 7, 11
  –A layer for DESCRIPTION = 5 cannot be below a layer for DESCRIPTION 6, 7, 11
  –A layer for DESCRIPTION = 6 cannot be below a layer for DESCRIPTION 7, 11
  –A layer for DESCRIPTION = 8 cannot be below a layer for DESCRIPTION 7, 11
  –A layer for DESCRIPTION = 9 cannot be below a layer for DESCRIPTION 3 - 8, 11
  –A layer for DESCRIPTION = 11 cannot be below a layer for DESCRIPTION = 7
  –For LAYER_NO = 1, the DESCRIPTION must always equal 7

- Layer Compatibility Checks

  –There must be a layer for DESCRIPTION of 3
  –There cannot be two layers with a DESCRIPTION of 3
  –There must be a layer with a DESCRIPTION = 4 or 5 directly beneath the layer with a DESCRIPTION = 3
  –There must be a layer for DESCRIPTION of 5
  –For SHRP_IDs like ?105-?112 and ?117-?124 there must be two layers with a DESCRIPTION = 5
  –There cannot be two layers with a DESCRIPTION = 7
  –For SHRP_IDs like ?101-?106 and ?113-?118, there cannot be a layer with a DESCRIPTION of 8
  –There cannot be two layers with a DESCRIPTION of 9

14 SPS2 CONSTRUCTION

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

Dependency checks (B) are performed on records at level A. These checks are performed to ensure that essential data (data which are required to properly reference all other data) are present and adequate. For SPS2 sections, the dependency checks are performed for specific SPS sections (SINIT).
Four types of checks are performed for the SINIT checks; INIT B - an experiment verification check, INIT C - a minimum data check, INIT D - an expanded range check and INIT E - an intramodular check. Each of these checks are specified below. **A Project record must be at level E in SPS_PROJECT_STATIONS prior to a section passing the level B check for the remaining tables. (See SPS2 Construction Table Dependency Checks at the end of this section.)**

- All records in each Construction table are checked against **SPS_PROJECT_STATIONS**, for matching project level ID. If the corresponding project level records are at level E in **SPS_PROJECT_STATIONS**, the records in the construction tables go to level B.

C. Experiment Verification Checks

- For each SPS2 record in **SPS2_LAYER** the corresponding SPS2 Project record in **SPS_ID** and **SPS_PROJECT_STATIONS** must be at Level E

D. Minimum Data Checks

Minimum data checks for all SPS2 Construction data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

E. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name. Expanded range checks for all SPS2 Construction data tables are specified below.

SPS2_LAYER

DESCRIPTION can only equal: 3, 5, 6, 7, 8, or 11 (not supplementals).

The following ranges are valid for the given DESCRIPTION:

DESCRIPTION	THICKNESS[1]
6	4.0 - 47.9
7	null
8	0.1 - 0.5
11	4.0 - 47.9

The following ranges apply for DESCRIPTION = 3 and 5:

The following ranges apply for each DESCRIPTION:

DESCRIPTION	MATERIAL_TYPE
6	22 - 27, 37, 40 - 44
7	51 - 65
8	74, 75

[1] Thickness above includes the variables MEAN_THICKNESS, MAX_THICKNESS and MIN_THICKNESS. MEAN_THICKNESS is required, therefore if it is null it will not be raised above RECORD_STATUS = B. For the other two thicknesses, the check is valid only if the values exist.

[2] Sections with a "5+5" DESCRIPTION must have two LAYER_NOs with a DESCRIPTION = 5. The thicknesses for these two layers should be summed.

DESCRIPTION	MATERIAL_TYPE
11	51 - 65

The following ranges apply for a DESCRIPTION = 3:

F. Intramodular Checks

Intramodular checks for all SPS2 Construction data tables are specified below.

SPS2_LAYER

- Logical Layering Checks

  – The top layer can only have a DESCRIPTION of 3 (not supplementals)
  – A DESCRIPTION = 3 must not be designated for a layer below a layer with a DESCRIPTION = 5, 6, 7, 8, or 11
  – A DESCRIPTION = 5 must not be designated for a layer below a layer with a DESCRIPTION = 6, 7, or 11
  – A DESCRIPTION = 6 must not be designated for a layer below a layer with a DESCRIPTION = 7 or 11
  – For LAYER_NO = 1, the DESCRIPTION must always equal 7
  – A DESCRIPTION = 8 must not be designated for a layer below a layer with a DESCRIPTION = 7 or 11
  – A DESCRIPTION = 11 must not be designated for a layer below a layer with a DESCRIPTION = 7

- Layer Compatibility Checks

  – There must be a layer with a DESCRIPTION of 3
  – There cannot be two layers with a DESCRIPTION of 3
  – There must be a layer with a DESCRIPTION of 5 directly below a layer with a DESCRIPTION of 3

15 SPS3 CONSTRUCTION

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

Dependency checks (B) are performed on records at level A. These checks are performed to ensure that essential data (data which are required to properly reference all other data) are present and adequate.

Four types of checks are performed for INIT checks; INIT B - an experiment verification check, INIT C -a minimum data check, INIT D - an expanded range check and INIT E - an intramodular check. Each of these checks are specified below. **A Project record must be at level E in SPS_PROJECT_STATIONS prior to a section passing the level B check for the remaining tables. (See SPS3 Construction Table Dependency Checks at the end of this section.)**

- All records in each Construction table are checked against **SPS_PROJECT_STATIONS**, for matching project level ID. If the corresponding project level records are at level E in **SPS_PROJECT_STATIONS**, the records in the construction tables go to level B.

C. Experiment Verification Checks

All Project Level SPS3 records in **INV_AGE**, **INV_GENERAL**, **INV_ID** and **INV_LAYER** are set to B.

D. Minimum Data Checks

Minimum data checks for all SPS3 Construction data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

F. Intramodular Checks

Intramodular checks for all SPS3 Construction data tables are specified below.

Table: INV_AGE

- TRAFFIC_OPEN_DATE >= CONSTRUCTION_DATE

Table: INV_GENERAL

- For PAVEMENT_TYPE = 1, then a MATERIAL_TYPE of 1 for a DESCRIPTION of 3 and a MATERIAL_TYPE of 22 - 26 or 39 - 42 for a DESCRIPTION of 5 must exist within **INV_LAYER**

- For PAVEMENT_TYPE = 2, then a MATERIAL_TYPE of 1 for a DESCRIPTION of 3 and a MATERIAL_TYPE of 28 - 36 or 46 for a DESCRIPTION of 5 must exist within **INV_LAYER**

- For PAVEMENT_TYPE = 7, then a MATERIAL_TYPE of 1 for a DESCRIPTION of 3 and a MATERIAL_TYPE of 27, 37, 38, 39, 43 or 44 for a DESCRIPTION of 5 must exist within **INV_LAYER**

- If SUB_DRAINAGE_TYPE = 7, then SUB_DRAINAGE_TYPE_OTHER must be non null

No Checks Required

Table: INV_LAYER

- If not null, perform the following relational check

  – MIN_THICKNESS≤MEAN_THICKNESS≤MAX_THICKNESS

- Logical Layering Checks

  – For LAYER_NO = 1, the DESCRIPTION must always equal 7
  – The top layer can only have a DESCRIPTION of 2, 3, 9, or 10 (not supplementals)
  – A DESCRIPTION = 2, must not be designated for a layer below a layer with a DESCRIPTION = 3, 4, 5, 6, or 7
  – A DESCRIPTION = 3, must not be designated for a layer below a layer with a DESCRIPTION = 4, 5, 6, or 7

  – A DESCRIPTION = 9 must not be designated for a layer below a layer with a DESCRIPTION = 3, 4, 5, 6, or 7
  – A DESCRIPTION = 10, must not be designated for a layer below a layer with a DESCRIPTION = 3, 4, 5, 6, or 7

- Layer Compatibility Checks

– There must be a layer with a DESCRIPTION of 3
– There cannot be two layers with a DESCRIPTION of 3
– There cannot be two layers with a DESCRIPTION of 5
– There cannot be two layers with a DESCRIPTION of 7
– There cannot be two layers with a DESCRIPTION of 9 (not supplementals)

16 SPS4 CONSTRUCTION

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

SPS4 Construction Table Dependency Checks

- All records in each Construction table are checked against **SPS_PROJECT_STATIONS**, for matching project level ID. If the corresponding project level records are at level E in **SPS_PROJECT_STATIONS**, the records in the construction tables go to level B.

C. Minimum Data Checks

Minimum data checks for all SPS4 Construction data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

Dependency checks (B) are performed on records at level A. These checks are performed to ensure that essential data (data which are required to properly reference all other data) are present and adequate. For SPS5 sections, the dependency checks are performed for the specific SPS section (SINIT).

Four types of checks are performed for the SINIT checks; INIT B - an experiment verification check, INIT C - a minimum data check, INIT D - an expanded range check and INIT E - an intramodular check. Each of these checks are specified below. **A Project record must be at level E in SPS_PROJECT_STATIONS prior to a section passing the level B check for the remaining tables. (See SPS5 Construction Table Dependency Checks at the end of this section.)**

- All records in each Construction table are checked against **SPS_PROJECT_STATIONS**, for matching project level ID. If the corresponding project level records are at level E in **SPS_PROJECT_STATIONS**, the records in the Construction table go to level B.

C. Experiment Verification

Table: SPS5_LAYER

- All records for the project level (PINIT) must have RECORD_STATUS = E

D. Minimum Data Checks

Minimum data checks for all SPS5 Construction data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

[1] DESCRIPTION above includes the LAYER_NO with a DESCRIPTION = 1 and all LAYER_NOs above the LAYER_NO with a DESCRIPTION = 3 that have a DESCRIPTION = 4 (if a LAYER_NO with a DESCRIPTION = 4 exists). It is not mandatory that a LAYER_NO with a DESCRIPTION = 4 exist above a LAYER_NO with a DESCRIPTION = 3. The *_THICKNESS values should be summed for all LAYER_NOs corresponding to the above criteria and compared with the values listed for THICKNESS above.

[2] Similar to note 1 above, the MATERIAL_TYPE should be checked for all LAYER_NOs with a DESCRIPTION = 1 and all LAYER_NOs above the LAYER_NO with a DESCRIPTION = 3 that have a DESCRIPTION = 4 (if a LAYER_NO with a DESCRIPTION = 4 exists). It is not mandatory that a LAYER_NO with a DESCRIPTION = 4 exist above a LAYER_NO with a DESCRIPTION = 3.

[3] THICKNESS above includes the variables MEAN_THICKNESS, MAX_THICKNESS and MIN_THICKNESS. MEAN_THICKNESS is a required data element. For the other two thicknesses, the check is valid only if the appropriate field is not null.

[4] These thicknesses include the experimental design overlay thickness and an additional allowance (over and above the experimental design overlay thickness) of 2 inches for the mill-replacement layer. If milling in excess of 2 inches occurs, the data may fail QC checks. Therefore, this data is to be flagged and commented upon by the RCOC prior to manual upgrading of RECORD_STATUS.

F. Intramodular Checks

Intramodular checks for all SPS5 Construction data tables are specified below.

Table: SPS5_LAYER

- If not null, perform the following relational checks.
  - MIN_THICKNESS <= MEAN_THICKNESS <= MAX_THICKNESS
- Logical Layering Checks
  - For SHRP_ID = ?501, the top layer can only have a DESCRIPTION = 2, 3, 9, 10
  - For SHRP_ID = ?502 - ?509, the top layer can only have a DESCRIPTION = 1, 2, 9, 10
  - A DESCRIPTION = 2 must not be designated for a layer below a layer with a DESCRIPTION = 3, 5, 6, 7, or 8
  - A DESCRIPTION = 9 must not be designated for a layer below a layer with a DESCRIPTION = 3, 5, 6, 7, 8, or 11
  - A DESCRIPTION = 10 must not be designated for a layer below a layer with a DESCRIPTION = 3, 5, 6, 7, or 8
  - A DESCRIPTION = 3 must not be designated for a layer below a layer with a DESCRIPTION = 5, 6, or 7
  - A DESCRIPTION = 4 must not be designated for a layer below a layer with a DESCRIPTION = 5, 6, or 7
  - A DESCRIPTION = 5 must not be designated for a layer below a layer with a DESCRIPTION = 6 or 7
  - A DESCRIPTION = 6 must not be designated for a layer below a layer with a DESCRIPTION = 7
  - For SHRP_IDs like ?506 - ?509, a DESCRIPTION = 10 must not be designated for a layer below a layer with a DESCRIPTION = 3, 5, 6, 7, or 8
  - For LAYER_NO = 1, the DESCRIPTION must always equal 7
- Layer Compatibility Checks
  - For SHRP_ID = ?501, there cannot be a layer with a DESCRIPTION = 1
  - For SHRP_ID = ?502 - ?509, there must be a layer with a DESCRIPTION = 1

- There must be a layer with a DESCRIPTION of 3
- There must be a layer with a DESCRIPTION of 5
- There cannot be two layers with a DESCRIPTION of 3
- There cannot be two layers with a DESCRIPTION of 5
- There cannot be two layers with a DESCRIPTION of 7
- There cannot be two or more layers with a DESCRIPTION of 9 that have MEAN_THICKNESS > 0 for SHRP_IDs like ?506 - ?509
- For sections ?506 - ?509, if a layer with a DESCRIPTION = 9 exists in INV_LAYER, then a layer with DESCRIPTION = 9 and a MEAN_THICKNESS = 0 must exist in **SPS5_LAYER** beneath a layer with DESCRIPTION = 1

E. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name. Expanded range checks for all SPS6 Construction data tables are specified below.

SPS6_LAYER

DESCRIPTION	*THICKNESS[1]	MATERIAL_TYPE
2	0.0 - 1.5	71 - 73, 81 - 83
3	7.0 - 11.0	4, 5

[1] THICKNESS above includes the variables MEAN_THICKNESS, MAX_THICKNESS and MIN_THICKNESS. MEAN_THICKNESS is a required data element. For the other two thicknesses, the check is valid only if the appropriate thickness **field is not null.**

DESCRIPTION	*THICKNESS[1]	MATERIAL_TYPE
4	0.0 - 6.0	1
5	3.0 - 24.0	22 - 46
6	4.0 - 47.9	22 - 46
7	Must be Null	51 - 65
8	0.1 - 6.0	74 - 84
9	0.0 - 2.0	2
10	0.0 - 2.0	11, 12, 71 - 73, 81 - 84

A DESCRIPTION = 11 is not valid.

Also, the following ranges are valid:

SECTION	DESCRIPTION[2]	MATERIAL_TYPE[3]	*_THICKNESS[1]
?603	1 + 4	1	0, 3 - 5
?604	1 + 4	1	0, 3 - 5
?606	1 + 4	1	0, 3 - 5
?607	1 + 4	1	0, 3 - 5
?608	1 + 4	1	0, 7 - 9

[2] DESCRIPTION above includes the LAYER_NO with a DESCRIPTION = 1 and all LAYER_NOs above the LAYER_NO with a DESCRIPTION = 3 that have a DESCRIPTION = 4 (if a LAYER_NO with a DESCRIPTION = 4 exists). It is not madatory that a LAYER_NO with a DESCRIPTION = 4 exist above a LAYER_NO with a DESCRIPTION = 3. The *_THICKNESS values shoud be summed for all LAYER_NOs corresponding to the above criteria and compared with the values listed for THICKNESS above.

[3] Similar to note 1 above, the MATERIAL_TYPE should be checked for all LAYER_NOs with a DESCRIPTION = 1 and all LAYER_NOs above the LAYER_NO with a DESCRIPTION = 3 that have a DESCRIPTION = 4 (if a LAYER_NO with a DESCRIPTION = 4 exists). It is not manatory that a LAYER_NO with a DESCRIPTION = 4 exist above a LAYER_NO with a DESCRIPTION = 3.

F. Intramodular Checks

Intramodular checks for all SPS6 Construction data tables are specified below.

Table: SPS6_LAYER

- If not null, perform the following relational checks:

  _ MIN_THICKNESS <= MEAN_THICKNESS <= MAX_THICKNESS
  _ STD_DEV_THICKNESS <= MEAN_THICKNESS

- Logical Layering Checks

  – For SHRP_ID = ?601, ?602, or ?605 the top layer must have DESCRIPTION of 2, 3, 10 or a DESCRIPTION = 1 or 9 with a MEAN_THICKNESS = 0
  – For SHRP_ID = ?603, ?604, or ?606-?608, the top layer can only have a DESCRIPTION of 1, 2, 9, or 10
  – A DESCRIPTION = 1 with a MEAN_THICKNESS greater than 0 must not be designated for a layer below a layer with a DESCRIPTION = 1 (not supplementals)
  – A layer for DESCRIPTION = 1 cannot be below a layer for DESCRIPTION = 3, 5, 6, 7, or 8

  - A DESCRIPTION = 2 must not be designated for a layer below a layer with a DESCRIPTION = 1, 3, 5, 6, 7, or 8 (not supplementals)
  - A DESCRIPTION = 9 with a MEAN_THICKNESS greater than 0 must not be designated for a layer below a layer with a DESCRIPTION = 1or 4 (not supplementals)
  - A DESCRIPTION = 10 must not be designated for a layer below a layer with a DESCRIPTION = 3, 5, 6, 7, or 8
  - A DESCRIPTION = 3 must not be designated for a layer below a layer with a DESCRIPTION = 5, 6, or 7
  - A DESCRIPTION = 4 must not be designated for a layer below a layer with a DESCRIPTION = 3
  - A DESCRIPTION = 5 must not be designated for a layer below a layer with a DESCRIPTION = 6 or 7
  - A layer for DESCRIPTION = 6 cannot be below layer for DESCRIPTION = 7
  - For SHRP_ID = ?603, ?604, ?606, ?607, or ?608, there must be a layer with DESCRIPTION = 1
  - For LAYER_NO = 1, the DESCRIPTION must always equal 7

- Layer Compatibility Checks

  - A layer with a DESCRIPTION of 3 must exist
  - A layer with a DESCRIPTION of 5 must exist
  - There cannot be two layers with a DESCRIPTION of 3
  - There cannot be two layers with a DESCRIPTION of 5
  - There cannot be two layers with a DESCRIPTION of 7
  - There cannot be two layers with a DESCRIPTION of 9 that have a MEAN_THICKNESS > 0

- For sections ?601, ?602 and ?605, if a layer with a DESCRIPTION = 1 exists in **INV_LAYER**, then a layer with a DESCRIPTION = 1 and a MEAN_THICKNESS = 0 must exist in **SPS6_LAYER**

- For sections ?601, ?602 and ?605, if a layer with a DESCRIPTION = 4 exists in **INV_LAYER**, then a layer with a DESCRIPTION = 4 and a MEAN_THICKNESS = 0 must exist in **SPS6_LAYER**

- For section ?601, ?602 and ?605, if a layer with a DESCRIPTION = 9 exists in **INV_LAYER**, then a layer with a DESCRIPTION = 9 and a MEAN_THICKNESS = 0 must exist in **SPS6_LAYER**

- For section ?603, ?604, ?606 - ?608, if a layer with a DESCRIPTION = 1 exists in **INV_LAYER**, then a layer with a DESCRIPTION = 1 and a MEAN_THICKNESS = 0 must exist in **SPS6_LAYER** beneath a layer that has a DESCRIPTION = 1

- For section ?603, ?604, ?606 - ?608, if a layer with a DESCRIPTION = 4 exists in **INV_LAYER**, then a layer with a DESCRIPTION = 4 and a MEAN_THICKNESS = 0 must exist in **SPS6_LAYER** beneath a layer that has a DESCRIPTION = 1

- For section ?603, ?604, ?606 - ?608, if a layer with a DESCRIPTION = 9 exists in **INV_LAYER**, then a layer with a DESCRIPTION = 9 and a MEAN_THICKNESS = 0 must exist in **SPS6_LAYER** beneath a layer that has a DESCRIPTION = 1

19 SPS7 CONSTRUCTION

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

Dependency checks (B) are performed on records at level A. These checks are performed to ensure that essential data (data which are required to properly reference all other data) are present and adequate. For SPS7 sections, the dependency checks are performed for the specific SPS section (SINIT).

Four types of checks are performed for the SINIT checks; INIT B - an experiment verification check, INIT C - a minimum data check, INIT D - an expanded range check and INIT E - an intramodular check. Each of these checks are specified below. **A Project record must be at level E in SPS_PROJECT_STATIONS prior to a section passing the level B check for the remaining tables. (See SPS7 Construction Table Dependency Checks at the end of this section.)**

- All records in each Construction table are checked against **SPS_PROJECT_STATIONS**, for matching project level ID. If the corresponding project level records are at level E in **SPS_PROJECT_STATIONS**, the records in the Construction table go to level B.

C. Experiment Verification Checks

Table: SPS7_LAYER

- All records for the present level (SINIT_*) must have a DESCRIPTION = 5
- If this is true, set all records for this section to RECORD_STATUS = B

D. Minimum Data Checks

Minimum data checks for all SPS7 Construction data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

E. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name. Expanded range checks for all SPS7 Construction data tables are specified below.

SPS7_LAYER

DESCRIPTION	*_THICKNESS[1]	MATERIAL_TYPE
2	0.0 - 1.5	71 - 73, 81 - 83
3	7.0 - 13.0	4, 5, 6
4	0.0 (not supplementals)	1
5	3.0 - 24.0	22 - 46
6	4.0 - 47.9	22 - 46
7	Must be null	51 - 65
8	0.1 - 6.0	74 - 84
9	0.0 - 2.5	2 (not supplementals)
10	0.0 - 1.5	11, 12, 71 - 73, 81 - 84

A DESCRIPTION = 11 is not valid.

[1] THICKNESS above includes the variables MEAN_THICKNESS, MAX_THICKNESS, and MIN_THICKNESS. MEAN_THICKNESS is a required data element. For the other two thicknesses, the check is valid only if the appropriate thickness field is not null.

Also, the following ranges are valid:

SECTION	DESCRIPTION[2]	MATERIAL_TYPE	*_THICKNESS[3]
?702 - ?705	1	4, 90	2 - 4
?706 - ?709	1	4, 90	4 - 6

[2] These checks are valid only for those layers with a DESCRIPTION = 1 that have a MEAN_THICKNESS > 0.

[3] THICKNESS above includes the variables MEAN_THICKNESS, MAX_THICKNESS, and MIN_THICKNESS. MEAN_THICKNESS is a required data element. For the other two thicknesses, the check is valid only if the appropriate thickness field **is not null.** For example, for the above table, if SECTION = ?702 and DESCRIPTION = 1, then MATL_TYPE = 4 or 90 and *_THICKNESS must be between 2 and 4 inches.

F. Intramodular Checks

Intramodular checks for all SPS7 Construction data tables are specified below.

Table: SPS7_LAYER

- If not null, perform the following relational check
  - MIN_THICKNESS <= MEAN_THICKNESS <= MAX_THICKNESS
- Logical Layering Checks
  - A DESCRIPTION = 1 must not be designated for a layer below a layer with a DESCRIPTION = 3, 4, 5, 6, 7, or 8
  - A DESCRIPTION = 2 must not be designated for a layer below a layer with a DESCRIPTION = 1, 3, 4, 5, 6, 7, or 8 (not supplementals)
  - A DESCRIPTION = 9 must not be designated for a layer below a layer with a DESCRIPTION = 3, 5, 6, 7, or 8 (not supplementals)
  - A DESCRIPTION = 10 must not be designated for a layer below a layer with a DESCRIPTION = 3, 5, 6, 7, or 8 (not supplementals)
  - A DESCRIPTION = 3 must not be designated for a layer below a layer with a DESCRIPTION = 5, 6, or 7
  - A DESCRIPTION = 4 must not be designated for a layer below a layer with a DESCRIPTION = 3
  - A DESCRIPTION = 5 must not be designated for a layer below a layer with a DESCRIPTION = 6 or 7
  - A DESCRIPTION = 6 must not be designated for a layer below a layer with a DESCRIPTION = 7
  - There must be a layer with a DESCRIPTION = 5 directly beneath the layer with a DESCRIPTION = 3
  - For SHRP_ID = ?701 the top layer must have a DESCRIPTION of 2, 3, 10 or a DESCRIPTION = 1 or 9 with a MEAN_THICKNESS = 0
  - For SHRP_ID = ?702 - ?709 the top layer must have a DESCRIPTION of 1
  - A DESCRIPTION = 1 with a MEAN_THICKNESS > 0, must not be designated for a layer with a DESCRIPTION = 1
  - A layer with a DESCRIPTION = 9 with a MEAN_THICKNESS > 0, cannot be below a layer for DESCRIPTION = 1
  - For LAYER_NO = 1, the DESCRIPTION must always equal 7
- Layer Compatibility Checks
  - For SHRP_ID = ?702 - ?709, there must be a layer with a DESCRIPTION = 1 with a MEAN_THICKNESS > 0
  - A layer with a DESCRIPTION of 3 must exist
  - A layer with a DESCRIPTION of 5 must exist
  - There cannot be two layers with a DESCRIPTION of 3
  - There cannot be two layers with a DESCRIPTION of 5
  - There cannot be two layers with a DESCRIPTION of 7
  - There cannot be two layers with a DESCRIPTION of 9 with a MEAN_THICKNESS > 0
- For section ?701, if a layer with a DESCRIPTION = 1 exists in **INV_LAYER,** then a layer with a DESCRIPTION = 1 and a MEAN_THICKNESS = 0 must exist in **SPS7_LAYER**

- For section ?701, if a layer with a DESCRIPTION = 4 exists in **INV_LAYER,** then a layer with a DESCRIPTION = 4 and a MEAN_THICKNESS = 0 must exist in **SPS7_LAYER**

- For section ?701, if a layer with a DESCRIPTION = 9 exists in **INV_LAYER,** then a layer with a DESCRIPTION = 9 and a MEAN_THICKNESS = 0 must exist in **SPS7_LAYER**

- For section ?702-?709, if a layer with a DESCRIPTION = 1 exists in **INV_LAYER,** then a layer with a DESCRIPTION = 1 and a MEAN_THICKNESS = 0 must exist in **SPS7_LAYER** beneath a layer that has a DESCRIPTION = 1 and a MEAN_THICKNESS > 0

- For section ?702-?709, if a layer with a DESCRIPTION = 4 exists in **INV_LAYER,** then a layer with a DESCRIPTION = 4 and a MEAN_THICKNESS = 0 must exist in **SPS7_LAYER** beneath a layer that has a DESCRIPTION = 1 and a MEAN_THICKNESS > 0

- For section ?702-?709, if a layer with a DESCRIPTION = 9 exists in **INV_LAYER,** then a layer with a DESCRIPTION = 9 and a MEAN_THICKNESS = 0 must exist in **SPS7_LAYER** beneath a layer that has a DESCRIPTION = 1 and a MEAN_THICKNESS > 0

- For sections ?702-?709, for the layer with a DESCRIPTION = 3 with a MATERIAL_TYPE = 4 or 5, there must be a layer with a DESCRIPTION = 1 and a MATERIAL_TYPE = 4

- For sections ?702-?709, for the layer with a DESCRIPTION = 3 with a MATERIAL_TYPE = 6, there must be a layer with a DESCRIPTION = 1 and a MATERIAL_TYPE = 90

20 SPS8 CONSTRUCTION

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

Dependency checks (B) are performed on records at level A. These checks are performed to ensure that essential data (data which are required to properly reference all other data) are present and adequate. For SPS8 sections, the dependency checks are performed for the specific SPS section (SINIT).

Four types of checks are performed on each of the four above listed data tables as part of the dependency checks, which include INIT B - an experiment verification check, INIT C - a minimum data check, INIT D - an expanded range check, and INIT E - an intramodular check. Each of these checks are specified below for the data records existing in each of the above four tables. **A Project record must be at level E in SPS_PROJECT_STATIONS prior to a section passing the level B check for the remaining tables. (See SPS8 Construction Table Dependency Checks at the end of this section.)**

- All records in each Construction table are checked against **SPS8_PROJECT_STATIONS**, for matching project level ID. If the corresponding project level records are at level E in PROJECT_STATIONS, the records in the Construction table go to level B.

C. Experimental Verification Checks

Set PROJ_ID(6 characters) to the current STATE_CODE(2 characters) | with the 1st 2 characters of SHRP_ID | with the 2 characters)) (zero, zero).

Table: SPS8_LAYER

- If the MIN(**SPS_ID**.RECORD_STATUS(PROJ_ID), **SPS_PROJECT_STATIONS**.RECORD_STATUS(PROJ_ID) >D then raise the layers to RECORD_STATUS =B for this STATE_CODE and SHRP_ID

D. Minimum Data Checks

Minimum data checks for all SPS8 Construction data tables are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying
field explanation.

E. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name. Expanded range checks for all SPS8 Construction data tables are specified below.

In the following table, range checks are presented for the various data elements in each referenced table. To perform the check, a value must exist in the data field. Therefore, **if not null**, the following range checks apply.

SPS8_LAYER

Flexible Sections

- DESCRIPTION can only equal 3 - 9 and 11 (not supplementals)

For sections like ?801-?806, the following ranges are valid for the given DESCRIPTION:

DESCRIPTION	THICKNESS[1]	MATERIAL_TYPE
6	4.0 - 47.9	22 - 26, 40 - 43
7	24.0 - 240.0, null	51 - 56 where SHRP_ID in ?801 - ?804 57 - 65 where SHRP_ID in ?805, ?806
8	0.1 - 0.5	74, 75
9	0.1 - 1.0	2

[1] THICKNESS above includes the variables MEAN_THICKNESS, MAX_THICKNESS and MIN_THICKNESS. MEAN_THICKNESS is a required data element. For the other two thicknesses, the check is valid only if the appropriate thickness field **is not null**.

DESCRIPTION	THICKNESS[1]	MATERIAL_TYPE
11	4.0 - 47.9	51 - 56, 57 - 65

In addition, for each test section, the following ranges apply for DESCRIPTION = 3, 4[2], AND 5:

SHRP_ID	THICKNESS[1]		MATERIAL_TYPE	
	DESCRIPTION = 3 + 4	DESCRIPTION = 5	DESCRIPTION = 3 + 4	DESCRIPTION = 5
?801, ?803, ?805	3.5 - 4.5	7 - 9	1	23
?802, ?804, ?806	6.5 - 7.5	11 - 13	1	23

Rigid Sections

- DESCRIPTION can only equal 3, 5, 6, 7, and 11 (not supplementals)

For sections like ?807-?812, the following ranges are valid for the given DESCRIPTION:

DESCRIPTION	THICKNESS[3]	MATERIAL_TYPE
5	5.0 - 7.0	23
6	4.0 - 47.9	22 - 26, 40 - 43
7	24.0 - 240.0, null	51 - 56 where SHRP_ID in ?807 - ?810 57 - 65 where SHRP_ID in ?811 - ?812
11	4.0 - 47.9	51 - 56, 57 - 65

In addition, for each test section, the following ranges (if not null) apply for DESCRIPTION = 3:

SHRP_ID	THICKNESS[3]	MATERIAL_TYPE
?807-?809, ?811	7.5 - 8.5	4
?808, ?810, ?812	11.5 - 12.5	4

[2] If DESCRIPTION = 4 exists.

[3] THICKNESS above includes the variables MEAN_THICKNESS, MAX_THICKNESS, and MIN_THICKNESS. MEAN_THICKNESS is a required data element. For the other two thicknesses, the check is valid only if the appropriate thickness field **is not null.**

F. Intramodular Checks

Intramodular checks for all SPS8 Construction data tables are specified below.

Table: SPS8_LAYER

- Logical Layering Checks
  - The top layer can only have a DESCRIPTION of 3 for SHRP_ID = ?801-812 or 9 for SHRP_ID = ?801-?806 (not supplementals)
  - A DESCRIPTION = 3 must not be designated for a layer below a layer with a DESCRIPTION = 4, 5, 6, 7, 8, or 11
  - A DESCRIPTION = 4 must not be designated for a layer below a layer with a DESCRIPTION = 5, 6, 7, or 11
  - A DESCRIPTION = 5 must not be designated for a layer below a layer with a DESCRIPTION = 6, 7, or 11
  - A DESCRIPTION = 6 must not be designated for a layer below a layer with a DESCRIPTION = 7 or 11
  - For LAYER_NO = 1, the DESCRIPTION must always equal 7
  - A DESCRIPTION = 8 must not be designated for a layer below a layer with a DESCRIPTION = 7 or 11
  - A DESCRIPTION = 9 must not be designated for a layer below a layer with a DESCRIPTION = 3, 4, 5, 6, 7, 8, or 11
  - A DESCRIPTION = 11 must not be designated for a layer below a layer with a DESCRIPTION = 7

- Layer Compatibility Checks
  - A layer with a DESCRIPTION of 3 must exist
  - There cannot be two layers with a DESCRIPTION of 3
  - There must be a layer with a DESCRIPTION of 4 or 5 directly below a layer with a DESCRIPTION of 3
  - A layer with a DESCRIPTION of 5 must exist
  - There cannot be two layers with a DESCRIPTION of 7
  - There cannot be two layers with a DESCRIPTION of 9

21 SPS9 CONSTRUCTION

A. Initial Level

Records in the IMS are at Level A when that first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

All records in these tables are set to RECORD_STATUS = B if a matching record (STATE_CODE, SHRP_ID) exists in **EXPERIMENT_SECTION** as SPS9 and CONSTRUCTION_NO = 1.

C. Minimum Data Checks

Minimum data checks for all other SPS9 tables are identified below. Data fields with a condition of X must always contain a non-null value, however, data fields with a condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

D. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name. Expanded range checks for the SPS9 data tables are specified below. The Orange colored S.I. units are provided to aid in future metrification efforts.

E. Intramodular Checks

Intramodular checks for the SPS9 tables are specified below.

Table: SPS9_AC PATCHES

- DATE_BEGAN <= DATE_COMPLETE

  Error message **SPS9_AC_PATCHES**-E-101: {STATE_CODE, SHRP_ID, DATE_COMPLETE} Patching complete {DATE_COMPLETE} before it began {DATE_BEGAN}.

- AIR_TEMP_HIGH >= AIR_TEMP_LOW

  Error message **SPS9_AC_PATCHES**-E-102: {STATE_CODE, SHRP_ID, DATE_COMPLETE} AIR_TEMP_HIGH {AIR_TEMP_HIGH} < AIR_TEMP_LOW {AIR_TEMP_LOW}

- If PRIMARY_DISTRESS = 17, then PRIMARY_DISTRESS_OTHER must be non-null

  Error message **SPS9_AC_PATCHES**-E-103: {STATE_CODE, SHRP_ID, DATE_COMPLETE} PRIMARY_DISTRESS = 17 Requires a non-null entry in PRIMARY_DISTRESS_OTHER

- If SECONDARY_DISTRESS = 17, then SECONDARY_DISTRESS_OTHER must be non-null

  Error message **SPS9_AC_PATCHES**-E-104: {STATE_CODE, SHRP_ID, DATE_COMPLETE] SECONDARY_DISTRESS = 17 Requires a non-null entry in SECONDARY_DISTRESS_OTHER

- If LOC_SIZE_METHOD = 4, then LOC_SIZE_METHOD_OTHER must be non-null

  Error message **SPS9_AC_PATCHES**-E-105: {STATE_CODE, SHRP_ID, DATE_COMPLETE} LOC_SIZE_METHOD = 4 Requires a non-null entry in LOC_SIZE_OTHER

- If PATCH_BOUNDARY_METHOD = 5, then PATCH_BOUNDARY_METHOD_OTHER must be non-null

  Error message **SPS9_AC_PATCHES**-E-106: {STATE_CODE, SHRP_ID, DATE_COMPLETE} PATCH_BOUNDARY_METHOD = 5 Requires a non-null entry in PATCH_BOUNDARY_METHOD_OTHER

- If COMPACTION = 8, then COMPACTION_OTHER must be non-null

  Error message **SPS9_AC_PATCHES**-E-107: {STATE_CODE, SHRP_ID, DATE_COMPLETE} COMPACTION = 8 Requires a non-null entry in COMPACTION_OTHER

- If COMPACTION_2 = 8, then COMPACTION_2_OTHER must be non-null

  Error message **SPS9_AC_PATCHES**-E-108: {STATE_CODE, SHRP_ID, DATE_COMPLETE} COMPACTION_2 = 8 Requires a non-null entry in COMPACTION_2_OTHER

- If PATCH_MATERIAL = 7, then PATCH_MATERIAL_OTHER must be non-null

  Error message **SPS9_AC_PATCHES**-E-109: {STATE_CODE, SHRP_ID, DATE_COMPLETE} PATCH_MATERIAL =7 Requires a non-null entry in PATCH_MATERIAL_OTHER

- SURFACE_PATCHES_NO > 0 if and only if SURFACE_PATCHES_AREA > 0

  Error message **SPS9_AC_PATCHES**-E-110: {STATE_CODE, SHRP_ID, DATE_COMPLETE} SURFACE_PATCHES_NO and SURFACE_PATCHES_AREA should both be zero or both be > 0.

- PARTIAL_BASE_NO > 0 if and only if PARTIAL_BASE_AREA > 0

  Error message **SPS9_AC_PATCHES**-E-111: {STATE_CODE, SHRP_ID, DATE_COMPLETE} PARTIAL_BASE_NO and PARTIAL_BASE_AREA should both be zero or both be > 0.

- FULL_DEPTH_NO > 0 if and only if FULL_DEPTH_AREA > 0

  Error message **SPS9_AC_PATCHES**-E-112: {STATE_CODE, SHRP_ID, DATE_COMPLETE} FULL_DEPTH_NO and FULL_DEPTH_AREA should both be zero or both be > 0.

- At least one of the following fields must be greater than zero: SURFACE_PATCHES_AREA, PARTIAL_BASE_AREA, FULL_DEPTH_AREA

  Error message **SPS9_AC_PATCHES**-E-113: {STATE_CODE, SHRP_ID, DATE_COMPLETE} Invalid value SURFACE_PATCHES_AREA and/or PARTIAL_BASE_AREA, FULL_DEPTH_AREA

Table: SPS9_LAYER

- Logical Layering Checks

  - A layer for DESCRIPTION = 3 cannot be below a layer for DESCRIPTION 6, 7, 11
  - A layer for DESCRIPTION = 4 cannot be below a layer for DESCRIPTION 5, 6, 7, 11
  - A layer for DESCRIPTION = 5 cannot be below a layer for DESCRIPTION 6, 7, 11
  - A layer for DESCRIPTION = 6 cannot be below a layer for DESCRIPTION 7, 11
  - A layer for DESCRIPTION = 8 cannot be below a layer for DESCRIPTION 7, 11
  - A layer for DESCRIPTION = 9 cannot be below a layer for DESCRIPTION 3 - 8, 11
  - A layer for DESCRIPTION = 11 cannot be below a layer for DESCRIPTION = 7
  - For LAYER_NO = 1, the DESCRIPTION must always equal 7

- Layer Compatibility Checks

  - The top layer must have a description of 1, 3 or 9
  - There must be a layer with a DESCRIPTION of 3
  - There cannot be two layers with a DESCRIPTION of 3
  - There must be a layer with a DESCRIPTION of 4 or 5 directly beneath the layer with a DESCRIPTION of 3
  - There must be a layer with a DESCRIPTION of 5
  - There cannot be two layers with a DESCRIPTION of 5
  - There cannot be two layers with a DESCRIPTION of 7
  - There cannot be two layers with a DESCRIPTION of 9

Tables: SPS9_LAYER_THICKNESS, SPS9_LAYER

- For matching SHRP_ID, STATE_CODE, each **SPS9_LAYER_THICKNESS**.LAYER_NO must have a matching **SPS9_LAYER**.LAYER_NO

  Error message **SPS9_LAYER_THICKNESS-**E-101: {STATE_CODE, SHRP_ID} LAYER_NO {**SPS9_LAYER_THICKNESS**.LAYER_NO} does not have a matching layer number in **SPS9_LAYER**

- For matching SHRP_ID, STATE_CODE, LAYER_NO, **SPS9_LAYER**.MIN_THICKNESS -3.0 < **SPS9_LAYER_THICKNESS**.LAYER_THICKNESS < **SPS9_LAYER**.MAX_THICKNESS +3.0

- For matching SHRP_ID, STATE_CODE, LAYER_NO, **SPS9_LAYER**.MIN_THICKNESS - 76 < **SPS9_LAYER_THICKNESS**.LAYER_THICKNESS < **SPS9_LAYER**.MAX_THICKNESS + 76

  Error message **SPS9_LAYER_THICKNESS-**E-102: {STATE_CODE, SHRP_ID, LAYER_NO} depth for layer number {LAYER_NO} inconsistent between **SPS9_LAYER_THICKNESS** and **SPS9_LAYER**.

Table: SPS9_LOAD_TRANSFER

- DATE_COMPLETE >= DATE_BEGAN

  Error message **SPS9_LOAD_TRANSFER**-E-101: {STATE_CODE, SHRP_ID, DATE_COMPLETE} Operation complete {DATE_COMPLETE} before it began {DATE_BEGAN}

- NO_JOINT_IN_SECTION >= NO_JOINT_RESTORE_LOCATIONS

  Error message **SPS9_LOAD_TRANSFER**-E-107: {STATE_CODE, SHRP_ID, DATE_COMPLETE} DATE_BEFORE_RESTORE {DATE_BEFORE_RESTORE} > DATE_AFTER_RESTORE {DATE_AFTER_RESTORE}

- DATE_COMPLETE + 180 >= DATE_AFTER_RESTORE

  Error message **SPS9_LOAD_TRANSFER**-E-108: {STATE_CODE, SHRP_ID, DATE_COMPLETE, DATE_AFTER_RESTORE} Recommended interval between restoration completion and load transfer efficiency testing exceeded.

Table: SPS9_LOAD_TRANS_EFFICIENCY

- DATE_BEFORE_RESTORE < DATE_AFTER_RESTORE

  Error message **SPS9_LOAD_TRANS_EFFICIENCY**-E-101: {STATE_CODE, SHRP_ID, DATE_COMPLETE} Operation complete {DATE_AFTER_RESTORE} before it began {DATE_BEFORE_RESTORE}.

- EFFICIENCY_BEFORE_APPROACH > EFFICIENCY_AFTER_APPROACH

Error message **SPS9_LOAD_TRANS_EFFICIENCY**-E-102: {STATE_CODE, SHRP_ID, DATE_COMPLETE, POINT_DISTANCE} Load transfer efficiency on the approach side before restoration {EFFICIENCY_BEFORE_APPROACH} > efficiency on approach side after restoration {EFFICIENCY_AFTER_APPROACH}.

- EFFICIENCY_BEFORE_LEAVE > EFFICIENCY_AFTER_LEAVE

  Error message **SPS9_LOAD_TRANS_EFFICIENCY**-E-103: {STATE_CODE, SHRP_ID, DATE_COMPLETE, POINT_DISTANCE} Load transfer efficiency on the leave side before restoration {EFFICIENCY_BEFORE_LEAVE} > efficiency on leave side after restoration {EFFICIENCY_AFTER_LEAVE}.

Tables: SPS9_LOAD_TRANS_EFFICIENCY, SPS9_LOAD_TRANSFER

- For matching STATE_CODE, SHRP_ID, DATE_COMPLETE a record must exist in SPS9_LOAD_TRANSFER

  Error message **SPS9_LOAD_TRANS_EFFICIENCY**-E-104: {STATE_CODE, SHRP_ID, DATE_COMPLETE} Load transfer efficiency improvement has no record of joint reconstruction.

22 SMP QC PROGRAMS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

No B level checks defined.

C. Minimum Data Checks

Minimum data checks for all SMP data tables are identified below. Data fields with a Condition of "X" must always contain a non-null value, however, data fields with a Condition of "*" are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

E. Intramodular Checks

Intramodular checks for all SMP data tables are specified below.

Table: SMP_ATEMP_RAIN_DAY

- For matching SHRP_ID, STATE_CODE and CONSTRUCTION_NO SMP_DATE ≥ INSTALL_DATE in **SMP_LAYOUT_INFO** table

  Error message: **SMP_ATEMP_RAIN_DAY**-E-1, No record found in **SMP_LAYOUT_INFO**, or data collection date not ≥ installation date.

- For matching SHRP_ID, STATE CODE, CONSTRUCTION_NO, and SMP_DATE, count the number
  of records in **SMP_ATEMP_RAIN_HOUR** table
  If count ≥ 20 then
  MIN_AIR_TEMPERATURE, AVG_DAY_AIR_TEMPERATURE, and

[1] Manual upgrades should not be permitted for records failing these Level D checks.

MAX_AIR_TEMPERATURE must be non-null

Error message: **SMP_ATEMP_RAIN_DAY**-E-2, Daily statistics missing for day with 20 or more hours of data

- If count < 20 then
  MIN_AIR_TEMPERATURE, AVG_DAY_AIR_TEMPERATURE, and
  MAX_AIR_TEMPERATURE must be null

  Error message: **SMP_ATEMP_RAIN_DAY**-E-3, Daily statistics not permitted for day with less than 20 hours of data

- MIN_AIR_TEMPERATURE ≤ AVG_DAY_AIR_TEMPERATURE ≤ MAX_AIR_TEMPERAUTRE

  Error message: **SMP_ATEMP_RAIN_DAY**-E-4, Daily air temperatures fail minimum air temperature ≤ average daily air temperature ≤ maximum air temperature

- For matching SHRP_ID, STATE_CODE, CONSTRCUTION_NO, and SMP_DATE records in **SMP_ATEMP_RAIN_HOUR** table, compute sum of values in the RAIN_HOUR field (sum_RAIN_HOUR). Compare the value of TOTAL_RAIN from **SMP_ATEMP_RAIN_DAY** to sum_RAIN_HOUR as follows: ABS(TOTAL_RAIN-sum_RAIN_HOUR)≤ 2

  Error message: **SMP_ATEMP_RAIN_DAY**-E-5, Daily rainfall total not equal to sum of hourly rainfall

---

Table: SMP_ATEMP_RAIN_HOUR

- For matching SHRP_ID, STATE_CODE and CONSTRUCTION_NO
  SMP_DATE ≥ INSTALL_DATE in **SMP_LAYOUT_INFO** table

  Error message: **SMP_ATEMP_RAIN_HOUR**-E-1, No record found in **SMP_LAYOUT_INFO**, or data collection date not ≥ installation date.

Table: SMP_DRY_DENSITY

- For matching SHRP_ID, STATE_CODE and CONSTRUCTION_NO, ABS(INSTALL_DATE-**SMP_LAYOUT_INFO**.INSTALL_DATE) ≤ 1

  Error message: **SMP_DRY_DENSITY**-E-1, ABS(install_date - SMP_LAYOUT_INFO.INSTALL_DATE) <= 1, Installation date not close enough to site installation date

- For matching SHRP_ID, STATE_CODE and CONSTRUCTION_NO
  DENSITY_DEPTH > TDR_DEPTH where TDR_NO = 1 and
  DENSITY_DEPTH < TDR_DEPTH where TDR_NO = 10
  in **SMP_TDR_DEPTHS_LENGTH** table

  Error message: **SMP_DRY_DENSITY**-E-2, Density depth exceeded instrument hole depth

Table: SMP_ELEV_AC_DATA

- For matching SHRP_ID, STATE_CODE and CONSTRUCTION _NO, SMP_DATE ≥ INSTALL_DATE in **SMP_LAYOUT_INFO** table

  Error message: **SMP_ELEV_AC_DATA**-E-1, No record found in **SMP_LAYOUT_INFO**, or data collection date not ≥ installation date

E. Intramodular Checks

Each E-type check is separated by a single line. In general, each bullet represents a procedure, action etc.

Table: AWS_COMMENT

- TABLE_NAME must always be a valid AWS table

Table: AWS_DAILY_DATA

- If NUMBER_TEMP_HOURS is not null, then MEAN_DAY_TEMP, MAX_DAY_TEMP and MIN_DAY_TEMP must also be non-null
- If NUMBER_HUMID_HOURS is not null, then MAX_DAY_HUMIDITY and MIN_DAY_HUMIDITY must also be non-null
- If NUMBER_PRECIP_HOURS is not null, then TOTAL_DAY_PRECIP must also be non-null
- If NUMBER_SOLAR_HOURS is not null, then MEAN_DAY_SOLAR must also be non-null
- If NUMBER_WIND_HOURS is not null, then MEAN_DAY_WIND_SPD, MEAN_DAY_WIND_DIR, MAX_DAY_WIND_SPD, MAX_DAY_WIND_SPD_TIME and MAX_DAY_WIND_SPD_DIR must also be non-null
- For matching AWS_ID and AWS_DATE records in **AWS_HOURLY_DATA** table, compute sum of TOTAL_HR_PRECIP (sum_TOTAL_HR_PRECIP). Compare TOTAL_DAY_PRECIP from **AWS_DAILY_DATA** against sum_TOTAL_HR_PRECIP as follows:

  ABS(TOTAL_DAY_PRECIP – sum_TOTAL_HR_PRECIP) $\leq$ 2

Table: AWS_HOURLY_DATA

- MEAN_HR_TEMP, MAX_HR_TEMP and MIN_HR_TEMP must all be either null or non-null
- MAX_HR_HUMIDITY and MIN_HR_HUMIDITY must both be either null or non-null
- MEAN_HR_WIND_SPD, MEAN_HR_WIND_DIR, MAX_HR_WIND_SPD, MAX_HR_WIND_SPD_TIME and MAX_HR_WIND_SPD_DIR must all be either null or non-null

---

Tables: AWS_LINK and AWS_LOCATION

- All records in **AWS_LINK** table must have a matching record in **AWS_LOCATION** for AWS_ID

  Error message: AWS_LINK E-101 {AWS_ID} Matching record does not exist in **AWS_LOCATION** table.

Table: AWS_LOCATION

- If DATUM = 8, then DATUM_OTHER must be non null

  Error message: AWS_LOCATION E-101 {AWS_ID, DATUM} DATUM field is populated with other and there is no entry in the DATUM_OTHER field.

Table: AWS_TEMP_MONTH

- DAYS_ABOVE_32_C must always be ≤ NUMBER_MON_TEMP_DAYS
- DAYS_BELOW_0_C must always be ≤ NUMBER_MON_TEMP_DAYS

Table: AWS_PRECIPITATION_MONTH

- Level E checks on records in **AWS_DAILY_DATA**, including the one above, must be performed prior to this check so that the RECORD_STATUS for records passing these checks have previously been upgraded. For all records in **AWS_DAILY_DATA** with matching AWS_ID, YEAR = right (AWS_DATE, 4), AND month = MID (AWS_DATE, 3,3):

  RECORD_STATUS=E

  Error message: All daily records are not at level E.

  Note: If a record fails this check, its RECORD_STATUS should not be upgraded and none of the following checks should be performed.

- For records in **AWS_DAILY_DATA** with matching AWS_ID, YEAR = right (AWS_DATE, 4), and MONTH = mid(AWS_DATE, 3, 3), Compute sum of TOTAL_DAY_PRECIP (sum_TOTAL_DAY_PRECIP). Compare TOTAL_MON_PRECIP from **AWS_PRECIPITATION_MONTH** against sum_TOTAL_DAY_PRECIP as follows:

  ABS(TOTAL_MON_PRECIP - sum of TOTAL_DAY_PRECIP) ≤ 5

  Error message: Monthly rainfall total not equal to sum of daily rainfall

- For records in **AWS_DAILY_DATA** with matching AWS_ID, YEAR = right (AWS_DATE, 4), and MONTH = mid (AWS_DATE, 3,3), compute sum of NUMBER_PRECIP_HOURS (sum_NUMBER_PRECIP_HOURS). Compare NUMBER_MON_PRECIP_HOURS from **AWS_PRECIPITATION_MONTH** against sum_NUMBER_PRECIP_HOURS, as follows:

  NUMBER_MON_PRECIP_HOURS = sum_NUMBER_PRECIP_HOURS

  Error message: Monthly rainfall hour total not equal to sum of daily rainfall hours

24 DLR QC PROGRAMS

The checks listed in this chapter were written and run when the North Carolina and Ohio data was contained in a single set of tables without the state abbreviation qualifier. The QC program has not been rewritten to reflect the data separation. The checks have been duplicated and named with their associated tables for user convenience. Not all checks can be repeated on the Ohio tables as some of the previously checked fields have been removed and others have been renamed.

E. Intramodular Checks

Intramodular checks for all DLR data tables are specified below. Each E-type check is separated by a single line. In general, each bullet represents a procedure, action etc.

Table: DLR_OH_LVDT_CONFIG_AC, **DLR_OH_MASTER_AC**

- STATE_CODE, SHRP_ID and TEST_NAME must exist in **DLR_OH_MASTER_AC**

  Error Message: Test has not been defined.

Table: DLR_OH_LVDT_CONFIG_PCC, **DLR_OH_MASTER_PCC**

- STATE_CODE, SHRP_ID and TEST_NAME must exist in **DLR_OH_MASTER_PCC**

Error Message: Test has not been defined **DLR_OH_MASTER_PCC**

Table: DLR_NC_LVDT_CONFIG_PCC, **DLR_NC_MASTER_PCC**

- STATE_CODE, SHRP_ID and TEST_NAME must exist in **DLR_NC_MASTER_PCC**

  Error Message: Test has not been defined **DLR_NC_MASTER_PCC**

Table: DLR_OH_LVDT_TRACE_SUM_AC

In the following, (I+1) and (I) are the successive numbers for the variables (I = 1 to 2):

- POINT_TYPE_(I+1) cannot exist without POINT_TYPE_(I) being non-null
- LVDT_VALUE_RAW_(I+1) cannot exist without LVDT_VALUE_RAW_(I) being non-null
- TIME_RAW_(I+1) cannot exist without TIME_RAW_(I) being non-null
- LVDT_VALUE_SMOOTH_(I+1) cannot exist without LVDT_VALUE_SMOOTH_(I) being non-null
- TIME_SMOOTH_(I+1) cannot exist without TIME_SMOOTH_(I) being non-null
- TIME_RAW_(I+1) must be greater than TIME_RAW_(I)
- TIME_SMOOTH_(I+1) must be greater than TIME_SMOOTH_(I)

Table: DLR_OH_LVDT_TRACE_SUM_AC, DLR_OH_MASTER_AC

- For matching STATE_CODE, SHRP_ID and TEST_NAME, a matching record must exist in **DLR_OH_MASTER_AC**

  Error Message: The test has not been defined in **DLR_OH_MASTER_AC**

Table: DLR_OH_LVDT_TRACE_SUM_AC, DLR_OH_LVDT_CONFIG_AC

25 ADMINISTRATION TABLES QC PROGRAMS

Please note that the results of the following **EXPERIMENT_SECTION** checks are recorded in EXP_SECT_RS, not in RECORD_STATUS.

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

There are no Level B checks for **EXPERIMENT_SECTION**. However, the following statements should be performed before continuing with Level C checks:

- If STATUS = 'R', set EXP_SECT_RS = '!' and do not perform any **EXPERIMENT_SECTION** QC on this record
- If EXP_SECT_RS at 'A', set to 'B'

C. Minimum Data Checks

Minimum data checks for **EXPERIMENT_SECTION** are identified below. Data fields with a Condition of X must always contain a non-null value, however, data fields with a Condition of * are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

Table	Field	Condition
EXPERIMENT_SECTION	ASSIGN_DATE	X
	CN_ASSIGN_DATE	X
	EXP_SECT_RS	X
	EXPERIMENT_NO	X
	GPS_SPS	X
	RECORD_STATUS	X
SECTION_COORDINATES	DATUM	X
	COORDINATE_DETERMINATION	X

D. Expanded Range Checks

Expanded range checks are applied to certain fields to identify data element values that fall outside an expected range. Field names are listed below the bolded table name.

E. Intramodular Checks

Before doing QC, **EXPERIMENT_SECTION** should be sorted in ascending order by STATE_CODE, SHRP_ID, CONSTRUCTION_NO order and **MON_CATEGORY** should be in ascending order by STATE_CODE, SHRP_ID, and MON_CAT_ASSIGN_DATE. All records at Level E should be reset to D before running the Level E QC.

Table: EXPERIMENT_SECTION

- If CONSTRUCTION_NO >1, then CONSTRUCTION_NO - 1 must exist for matching STATE_CODE and SHRP_ID

  Error Message: **EXPERIMENT_SECTION**-E-1, If CONSTRUCTION_NO > 1, then CONSTRUCTION_NO - 1 must exist.

- If CONSTRUCTION_NO =1, then CN_ASSIGN_DATE = ASSIGN_DATE

[1] This field cannot be manually upgraded for a value of 99 or null. A new code must be obtained via the SPR process describing the reason to replace the 99.

Error Message: **EXPERIMENT_SECTION**-E-2, If CONSTRUCTION_NO = 1, then CN_ASSIGN_DATE must equal ASSIGN_DATE.

- If STATUS is non-null, then DEASSIGN_DATE must be non-null

  Error Message: **EXPERIMENT_SECTION-E**-3, if STATUS is non-null, then DEASSIGN_DATE must be non-null.

- If DEASSIGN_DATE null, then STATUS must be null

  Error Message: **EXPERIMENT_SECTION**-E-4, if DEASSIGN_DATE is non-null, then STATUS must be non-null.

For any pair of CONSTRUCTION_NO [CN] and CONSTRUCTION_NO+1 [CN+1] (i.e. 1, 2 or 2, 3, etc.) perform the following checks:

- CN_ASSIGN_DATE(CN) < CN_ASSIGN_DATE(CN+1)

  Error Message: **EXPERIMENT_SECTION**-E-5, CN_ASSIGN_DATE(CN) must be less than CN_ASSIGN_DATE(CN+1)

- If STATUS(CN) ! = null, then STATUS(CN+1) ! = null

Tables: EXPERIMENT_SECTION, MON_CATEGORY

These checks do not set an edit flag. They are intended to ensure completeness of the **MON_CATEGORY** table.

- If GPS_SPS = “S” and SHRP_ID does not end in '00', or if GPS_SPS = “G” for maximum CONSTRUCTION_NO, if STATUS=null or DEASSIGN_DATE> 10/1/2000, then a record with matching STATE_CODE, SHRP_ID must exist in **MON_CATEGORY**

  Error message: **MON_CATEGORY** E-101: No monitoring category for section {STATE_CODE, SHRP_ID}; add **MON_CATEGORY** record.

Tables: MON_CATEGORY, EXPERIMENT_SECTION

  Error message: **MON_CATEGORY** E-124: {STATE_CODE, SHRP_ID} is in GPS experiment; monitoring category cannot be S1 or S2.

- For matching STATE_CODE, SHRP_ID if status = ‘O’, using the records with maximum MON_CAT_ASSIGN_DATE, and maximum CONSTRUCTION_NO for respective tables, **MON_CATEGORY**.MON_CAT_DEASSIGN_DATE must be non-null and greater than **EXPERIMENT_SECTION**.CN_ASSIGN_DATE and less than or equal to **EXPERIMENT_SECTION**.DEASSIGN_DATE

  Error message: **MON_CATEGORY** E-120: {STATE_CODE, SHRP_ID} has gone from lower to higher monitoring frequency on {MON_CAT_ASSIGN_DATE}. If this is correct, apply manual RECORD_STATUS upgrade.

---

[2] Sequences in date order like S1, G; S2, C; or S1, S2 would all pass this check. A sequence like S2, S1; C, G, or S2, G, S2 should all bring up the error message. For example, a project is changed from S2 to G because the agency cannot participate in the SPS traffic data collection plan and only sampled WIM will be provided. In summer of 2002 the state joins the national pooled fund study for SPS traffic and the project has at least 5 years of life remaining. The section is approved for upgrade back to S2.

- For a set of records with matching STATE_CODE, SHRP_ID, there can be no gaps or overlaps in the sequence of MON_CAT_ASSIGN_DATE, MON_CAT_DEASSIGN_DATE values

  Error message: **MON_CATEGORY** E-122: {STATE_CODE, SHRP_ID} not all days are included in the monitoring period or some days have multiple monitoring categories.

Table: SECTION_COORDINATES

- If DATUM = 8, then DATUM_OTHER must be non null

  Error message: **SECTION_COORDINATES** E-101: {STATE_CODE, SHRP_ID, DATUM} DATUM field is populated with other and there is no entry in the DATUM_OTHER field.

Tables: SECTION_COORDINATES, EXPERIMENT_SECTION

- All records in SECTION_COORDINATES table must have a matching record in EXPERIMENT_SECTION for SHRP_ID and STATE_CODE

  Error message: **SECTION_COORDINATES** E-102: {STATE_CODE, SHRP_ID} Test section does not exist in EXPERIMENT_SECTION.

F. Guidelines for setting RS fields in the EXPERIMENT_SECTION table

The RS fields in **EXPERIMENT_SECTION** include:
EXP_SECT_RS
CLIMATIC_RS
PAV_STRUCT_RS
TRAFFIC_RS
BASIC_INFO_RS
RECORD_STATUS (This field is set based on the values of EXP_SECT_RS and BASIC_INFO_RS)

EXP_SECT_RS
This field is set based on the QC checks listed earlier in chapter 25.

CLIMATIC_RS
GPS
For CONSTRUCTION_NO = 1 and matching STATE_CODE, SHRP_ID:
If **CLM_SITE_VWS_LINK**.RECORD_STATUS is not null, then
- CLIMATIC_RS = **CLM_SITE_VWS_LINK**.RECORD_STATUS

Else
- CLIMATIC_RS = NULL

For CONSTRUCTION_NO > 1, set CLIMATE_RS = CLIMATE_RS for matching record in **EXPERIMENT_SECTION** with CONSTRUCTION_NO = 1

SPS - Project Level
SPS 1, 2, 7, 8
For matching STATE_CODE, SHRP_ID:
If **CLM_SITE_VWS_LINK**.RECORD_STATUS is not null, then

- CLIMATIC_RS = **CLM_SITE_VWS_LINK**.RECORD_STATUS
  Else
- CLIMATIC_RS = NULL

SPS 3, 4, 5, 6, 9
For matching STATE_CODE, SHRP_ID, find linked **SPS_GPS_LINK**.LINKED_GPS_ID.
If link record found then:
For matching STATE_CODE, SHRP_ID:
If **CLM_SITE_VWS_LINK**.RECORD_STATUS is not null, then
- CLIMATIC_RS = **CLM_SITE_VWS_LINK**.RECORD_STATUS
  Else
- CLIMATIC_RS = NULL
  If link record NOT found then:
  For matching STATE_CODE and Project Level SHRP_ID for original SPS section:
  If **CLM_SITE_VWS_LINK**.RECORD_STATUS is not null, then
- CLIMATIC_RS = **CLM_SITE_VWS_LINK**.RECORD_STATUS
  Else
- CLIMATIC_RS = NULL

SPS Section Level
All SPS
Set equal to matching SPS Project Level CLIMATIC_RS

PAV_STRUCT_RS
For matching STATE_CODE, SHRP_ID, and CONSTRUCTION_NO:
- PAV_STRUCT_RS = MIN(**TST_L05B**.RECORD_STATUS)

TRAFFIC_RS
GPS
For matching STATE_CODE, SHRP_ID:
- TRAFFIC_RS = MAX(**TRF_MONITOR_LTPP_LN**.RECORD_STATUS)

SPS
For matching STATE_CODE and Project level SHRP_ID, find linked **SPS_GPS_LINK**.LINKED_GPS_ID.
If link record found then:
For matching STATE_CODE, and LINKED_GPS_ID
- TRAFFIC_RS = MAX(**TRF_MONITOR_LTPP_LN**.RECORD_STATUS)

Else
For matching STATE_CODE and Project level SHRP_ID
- TRAFFIC_RS = MAX(**TRF_MONITOR_LTPP_LN**.RECORD_STATUS)

BASIC_INFO_RS

If CONSTRUCTION_NO = 1
For matching STATE_CODE, SHRP_ID:
If (INV_AGE.RECORD_STATUS, INV_ID.RECORD_STATUS, INV_GENERAL.RECORD_STATUS) are not null, then
- BASIC_INFO_RS = MIN(**INV_AGE**.RECORD_STATUS, **INV_ID**.RECORD_STATUS, **INV_GENERAL.**RECORD_STATUS)

Else
- BASIC_INFO_RS = NULL

If CONSTRUCTION_NO > 1
For matching STATE_CODE, SHRP_ID, CONSTRUCTION_NO = 1

If GPS_SPS = S then
- Use SPS Section Level Checks to determine BASIC_INFO_RS

Else
If (**INV_AGE**.RECORD_STATUS.INV_ID.RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS) are not null, then
- BASIC_INFO_RS = MIN(**INV_AGE**.RECORD_STATUS, **INV_ID.**RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS)

Else
- BASIC_INFO_RS = NULL

SPS - Project Level

SPS 1, 2, 8

For matching STATE_CODE, SHRP_ID:
If all matching **SPS_ID**.RECORD_STATUS are not null, then
- BASIC_INFO_RS = MIN(**SPS_ID**.RECORD_STATUS)

Else
- BASIC_INFO_RS = NULL

SPS 3, 4, 5, 6, 7

For matching STATE_CODE, SHRP_ID, find linked **SPS_GPS_LINK**.LINKED_GPS_ID.
If linked record found, then:
For matching STATE_CODE, LINKED_GPS_ID:
If (**INV_AGE**.RECORD_STATUS, **INV_ID**.RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS) are not null, then
- BASIC_INFO_RS = MIN(**INV_AGE**.RECORD_STATUS, I**NV_ID**.RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS)

Else
- BASIC_INFO_RS = NULL

If linked record NOT found, then:
For matching STATE_CODE, and Project Level SHRP_ID for original SPS section:
If (**INV_AGE.**RECORD_STATUS, **INV_ID**.RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS) are not null, then
- BASIC_INFO_RS = MIN(**INV_AGE**.RECORD_STATUS, **INV_ID**.RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS)

Else
- BASIC_INFO_RS = NULL

SPS 9

For matching STATE_CODE, SHRP_ID, find linked **SPS_GPS_LINK**.LINKED_GPS_ID.
If linked record found, then:
For matching STATE_CODE, LINKED_GPS_ID:
If (**INV_AGE**.RECORD_STATUS, **INV_ID**.RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS) are not null, then
- BASIC_INFO_RS = MIN(**INV_AGE**.RECORD_STATUS, **INV_ID**.RECORD_STATUS, **INV_GENERAL.**RECORD_STATUS)

Else
- BASIC_INFO_RS = NULL

If linked record NOT found, then:
For STATE_CODE, and Project Level SHRP_ID matching original SPS section, look for record in **INV_ID**:
If record found, then:
If (**INV_AGE**.RECORD_STATUS, **INV_ID**.RECORD_STATUS, **INV_GENERAL**.RECORD_STATUS) are not null, then

- BASIC_INFO_RS = MIN(**EXPERIMENT_SECTION**.EXP_SECT_RS, MIN(**SPS_PROJECT_STATIONS.**RECORD_STATUS))

Else

- BASIC_INFO_RS = NULL

RECORD_STATUS

If BASIC_INFO_RS is null, then

- RECORD_STATUS = A

Else

- RECORD_STATUS = MIN(BASIC_INFO_RS, EXP_SECT_RS)

The last level ”E” check ensures that the RECORD_STATUS of any CN > 1 cannot have a value of RECORD_STATUS greater than that of CN-1. This will ensure that data will not be released for a higher CN if any CN below it is not at level “E”.

- If CN>1, then RECORD_STATUS(CN) = MIN (RECORD_STATUS(CN-1),RECORD_STATUS(CN))

NOTE: After setting the various *_RS values and completion of level E checks, RECORD_STATUS can have the following values:

A - E	Releasable sections (STATUS != ‘R’)
!	Rejected sections (STATUS = ‘R’)

26 SPS MISCELLANEOUS

A. Initial Level

Records in the IMS are at Level A when they first enter the system and are set back to A when changes are made to a given record or to selected related records.

B. Dependency Checks

For each record in SPS_General, the corresponding project level record must be at Level E in **SPS_ID** and **SPS_PROJECT_STATIONS**.

C. Minimum Range Checks

Minimum data checks for the section data tables are listed below. Data fields with a Condition of "X" must always contain a non-null value, however, data fields with a Condition of "*" are only required to contain a non-null value if a particular condition is met as specified in the accompanying field explanation.

TEST SECTION DESIGNATIONS

To provide a logical basis for test section designations, a broad-based experimental approach has been used. Test sections are classified as GPS or SPS. The fundamental difference between these two classifications is that at the start of the LTPP program, the GPS test sections are existing pavements and the SPS projects are sites where multiple test sections of differing experimental treatment factors are constructed. When a GPS or SPS test section is rehabilitated, it can be assigned to a GPS rehabilitation designation.

While the LTPP test section classification methodology is based on experimental concepts, data users are encouraged to develop their own classification methods to meet specific analytical objectives. For example, the SPS-1 experiment is designed to extend the findings from the GPS-1 and -2 studies.

In the published literature, the LTPP projects are designated by experiment designs. A factorial combination approach has been used for the development of the experiment design designation of each GPS and SPS experiment. This approach requires the identification of significant pavement and environmental/loading factors considered to have an influence on pavement performance. Pavement factors include such variables as layer thickness, base type, base thickness, joint spacing, and percent steel reinforcement, which are varied as appropriate for the pavement type being studied. Environmental/loading factors include moisture (wet/dry), temperature (freeze/no-freeze), sub-grade classification (fine/coarse grained), and traffic loading rate (low/high).

The combination of these selected factors form an experimental factorial that is used as the sampling basis for test sections included in each study. Within GPS, these factorials are more properly considered as sampling templates used in the selection of pavement structures included in the studies. Since GPS consists mostly of pavements that were constructed and in service prior to the start of the LTPP program, it is impossible to find pavements with all of the combinations defined within the factorial. SPS is a more controlled experiment requiring construction of the specified pavement structures. While the SPS experimental factorials are closer to a classical experiment design, between-site construction deviations should be considered in many types of statistical analyses.

A.1 General Pavement Studies

The GPS program is a series of studies on selected in-service pavements structured to develop a comprehensive national pavement performance database. These studies are restricted to pavements that incorporate materials and designs representing good engineering practices and that have strategic future importance. Because of the nationwide thrust of the program, the studies are limited to pavement structures in common use across the United States.

The GPS test sections are located on pavement structures constructed up to 15 years prior to the start of the LTPP program. Although detailed research-level measurements on these pavements during the early years of their lives are not available, the GPS test sections offer the potential for development of earlier results than those possible from newly constructed test sections. As the SPS test sections are rehabilitated, they are reclassified into the GPS experiment designations. Table A.1 provides a list of the titles of each of the experiments. A more comprehensive definition is provided in Appendix B of the PPDB User Reference Guide.

It should be noted that the proposed GPS-8 study of bonded portland cement concrete (PCC) overlays on PCC pavements was not pursued because of lack of an adequate number of nominated in-service projects. An SPS study on bonded PCC overlays, SPS-7, was formulated to address this type of rehabilitation alternative.

GPS-9	Unbonded PCC Overlay on PCC Pavement

A.2 Specific Pavement Studies

The SPS program is a long-term study of specially constructed, maintained, or rehabilitated pavement sections incorporating a controlled set of experiment design and construction features. The objective of SPS is to provide a more detailed and complete base of data to extend and refine the results obtained from the GPS studies. The SPS program incorporates nine studies grouped into the five categories as illustrated by Table A.2. Appendix B of the PPDB User Reference Guide provides a more complete definition of each of the experiments.

Essentially, the SPS program involves monitoring newly constructed sections or existing pavement sections subjected to maintenance or rehabilitation treatments. Each SPS experiment requires construction of multiple test sections at each site. The number of test sections may range from two for SPS-8 to twelve for SPS-1 and -2. In addition, a highway agency may construct supplemental test sections on an SPS site to investigate other factors of interest to the agency. The following definitions apply only to the core sections within each experiment. The supplemental sections that may have been constructed by a highway agency are based on the respective agency's research interests and are typically not consistent among highway agencies.

tons	tons
tons/sq ft	tons per square feet
vib/min	vibrations per minute
yr	Year

Appendix C.
DATABASE CONSTRAINTS BY MODULE

Database constraints are integrity constraints that are stored in and enforced by the database. An integrity constraint is a rule specified for a column/field in a database table. The LTPP database utilizes several types of constraints, as described below. This appendix lists constraints for each field in each database table. Only fields with constraints are listed. The tables are organized alphabetically by data module.

Non-null constraints are defined on many database fields. Fields with bolded names are defined as non-null. Therefore, they must have a value in every data record.

Each table in the database also has a primary key constraint defined. Fields identified with (PK) are part of the primary key. This constraint requires that no two rows of a table have duplicate values in the specified field or set of fields, and each primary key field is non-null.

Some fields are constrained to a list of coded values. The fields that have an entry in the CODE LIST column are constrained to the codes identified by that entry. (The entries in the CODE LIST column are the Code Types.) For example, in the COMMENTS table, there is a STATE_CODE field which is constrained to the codes in the STATE_PROVINCE Code Type. The codes defined for each Code Type are provided in Appendix D.

Foreign key constraints, or referential integrity constraints, are also used in a few of the LTPP data modules. A referential integrity constraint requires that for each row of a table, the value of the foreign key matches a value in the parent table. The last column, in this appendix, lists the parent table, if a foreign key constraint has been defined. For example, in the GPR_LINK_LAYER table, there are five fields that have "GPR_MASTER" listed in the PARENT TABLE column. Those five fields make up the foreign key in the GPR_LINK_LAYER table and there must be an exact match of those values in one row of the GPR_MASTER table.

Appendix D.
DATABASE CODE DEFINITIONS

Many fields in the LTPP database are populated with coded values. In other words, a number or a letter will represent a value in a standard list. This appendix lists each code and definition, organized by the Code Type. Where available, the source of the code is included with the Code Type.

0/1 - Identify type and quantity of data collected by installation type. (LTPP Traffic Analysis Software functional specifications)

CODE	DEFINITION
0	Action has not been taken
1	Action has been taken

AASHTO_SOIL_CLASS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	A-1a
2	A-1-b
3	A-3
4	A-2-4
5	A-2-5
6	A-2-6
7	A-2-7
8	A-4
9	A-5
10	A-6
11	A-7-5
12	A-7-6

ACCEPT_FLAG - Identify type and quantity of data collected by installation type. (MON_DEFL_RGD_BAKCAL_POINT table specification)

CODE	DEFINITION
1	Point parameter was included in section statistics.
2	ERROR - Backcalculation process did not converge.
3	ERROR - Deflection basin type is not decreasing.
4	ERROR - Mean absolute relative basin fit error is greater than 2 percent.
5	ERROR - Point location is not within section limits.
6	ERROR - Backcalculated value is out of allowable range.
7	OUTLIER - Point parameter is more than 2 standard deviations from section mean.
8	NUMBER - The number of acceptable basins is less than 30 percent or less or equal to 3.
9	PCC OVERLAY - PCC and base moduli will not be reported.

AC_MATERIAL_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	New
2	Hot Recycled
3	Cold Recycled
4	Other

AGGR_DUR - Identify type and quantity of data collected by installation type. (INVENTORY DCG, Table A.13)

CODE	DEFINITION
1	AASHTO T96 ASTM C131
2	AASHTO T103 ASTM --
3	AASHTO T104 ASTM C88
4	AASHTO -- ASTM C535

AGGR_DUR - Identify type and quantity of data collected by installation type. (INVENTORY DCG, Table A.13)

CODE	DEFINITION
5	AASHTO -- ASTM C342
6	AASHTO -- ASTM C682
7	AASHTO -- ASTM C227
8	AASHTO -- ASTM C289
9	AASHTO T112 ASTM C142
11	AASHTO -- ASTM C586

AGGR_SOURCE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Reclaimed Base
2	Pit

AGGR_TYPE - Identify type and quantity of data collected by installation type. (Field Materials Sampling, Testing, ...)

CODE	DEFINITION
401	Gravel
402	Crushed stone
403	Crushed gravel
404	Crushed slag
405	Blend (several sizes of coarse aggregates)
406	Manufactured
407	Light weight
408	Other (specify)
409	Natural sand
410	Manufactured sand
411	Blend (different sized fine aggregates)
412	Other (specify)

AGG_CLASS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
111	Crushed Gravel, Igneous Extrusive, Andesite
112	Crushed Gravel, Igneous Extrusive, Basalt
114	Crushed Gravel, Igneous Extrusive, Rhyolite
121	Crushed Gravel, Igneous Plutonic, Diabase
122	Crushed Gravel, Igneous Plutonic, Granite
133	Crushed Gravel, Metamorphic, Schist
134	Crushed Gravel, Metamorphic, Metaquartz
141	Crushed Gravel, Sedimentary, Chert
142	Crushed Gravel, Sedimentary, Dolomite
143	Crushed Gravel, Sedimentary, Limestone
144	Crushed Gravel, Sedimentary, Quartzite
145	Crushed Gravel, Sedimentary, Sandstone
211	Crushed Stone, Igneous Extrusive, Andesite
212	Crushed Stone, Igneous Extrusive, Basalt
213	Crushed Stone, Igneous Extrusive, Vglass
214	Crushed Stone, Igneous Extrusive, Rhyolite
221	Crushed Stone, Igneous Plutonic, Diabase
222	Crushed Stone, Igneous Plutonic, Gabbro
223	Crushed Stone, Igneous Plutonic, Granite
231	Crushed Stone, Metamorphic, Gneiss
232	Crushed Stone, Metamorphic, Marble
233	Crushed Stone, Metamorphic, Schist
234	Crushed Stone, Metamorphic, Metaquartz
241	Crushed Stone, Sedimentary, Chert

AGG_CLASS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
242	Crushed Stone, Sedimentary, Dolomite
243	Crushed Stone, Sedimentary, Limestone
244	Crushed Stone, Sedimentary, Quartzite
245	Crushed Stone, Sedimentary, Sandstone
311	Gravel, Igneous Extrusive, Andesite
312	Gravel, Igneous Extrusive, Basalt
314	Gravel, Igneous Extrusive, Rhyolite
315	Gravel, Igneous Extrusive, Trachyte
321	Gravel, Igneous Plutonic, Diabase
322	Gravel, Igneous Plutonic, Gabbro
323	Gravel, Igneous Plutonic, Granite
333	Gravel, Igneous Metamorphic, Schist
341	Gravel, Igneous Sedimentary, Chert
342	Gravel, Igneous Sedimentary, Dolomite
343	Gravel, Igneous Sedimentary, Limestone
344	Gravel, Igneous Sedimentary, Quartzite
345	Gravel, Igneous Sedimentary, Sandstone
346	Gravel, Igneous Sedimentary, Siltstone
401	Blast Furnace Slag

AGG_COND_MOIST - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Very Dry
2	Dry
3	Only Slightly Damp
4	Somewhat Damp
5	Slightly Wet
6	Wet

AGG_REGRADE - Identify type and quantity of data collected by installation type. (Sampling Data Sheet 22)

CODE	DEFINITION
1	Gradation of aggregate was not altered by the lab prior to mix
2	Gradation of aggregate was altered by the lab prior to mix

ANTISTRIP - Identify type and quantity of data collected by installation type. (Table A.21 from the DCG)

CODE	DEFINITION
0	No Antistripping Agent Used.
1	Permatac
2	Permatac Plus
3	Betascan Roads

APPL_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Hand
2	Pressure

APPROACH_LEAVE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
A	Load placed on approach side of joint/crack

APPROACH_LEAVE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
L	Load placed on the leave side of the joint/crack.

AREA_DETERMINATION - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Blanket
2	Deflection Data
3	Visual signs of pumping
4	Other

ASPHALT - Identify type and quantity of data collected by installation type. (Table A.16 from the DCG)

CODE	DEFINITION
1	Asphalt Cements AC-2.5
2	Asphalt Cements AC-5

AVC_METH_COUNT_LENGTH - Identify type and quantity of data collected by installation type. (Traffic Data Sheet 16)

CODE	DEFINITION
1	Time
2	Number of trucks

AVC_METH_VOL_MEASURE - Identify type and quantity of data collected by installation type. (Traffic Data Sheet 16)

CODE	DEFINITION
1	Video
2	Manual
3	Parallel classifiers

AXLE_GROUP - Identify type and quantity of data collected by installation type. (TRF_MONITOR_AXLE_DISTRIB)

CODE	DEFINITION
1	Single axle
2	Tandem axle
3	Tridem axle
4	Quad axle and 5+ axle groups

BACKFILL_MATERIAL - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Cement Based Grout
2	Polymer
3	Epoxy Resin
4	Other

BASE_MAT - Identify type and quantity of data collected by installation type. (Table A.6 from the DCG)

CODE	DEFINITION
21	No Base (Pavement Placed Directly on Subgrade)
22	Gravel (Uncrushed)
23	Crushed Stone, Gravel or Slag

COATING_ABILITY - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Good
2	Fair
3	Poor

COMMENT - Identify type and quantity of data collected by installation type. (Laboratory Material Testing Guide)

CODE	DEFINITION
1	Insufficient size sample
2	Specimen is flawed, not ideal
3	Procedural mistake by lab or some parts not in strict conformance to protocol
4	Test results do not seem reasonable; no explanation
5	Test results do not seem reasonable; explanation provided
6	Test is suspect, sample was misnumbered.
7	Test is suspect, sample was not correctly identified
8	Equipment was not in calibration
9	L/D ratio is not according to the requirement for layer thickness
10	L/D ratio is not according to the requirement for maximum size aggregate.
11	Technician's results are not consistent with the previous technician's results
12	This test is a replacement for the previous test.
13	SHRP has directed a deviation in the test procedure
14	Substantial update in the SHRP protocol.
15	Very thin, untestable, layer.
16	Layer thickness was measured in lab prior to sawing from other bonded layers.
17	Layer thickness not measured in the lab prior to sawing from other bonded layers
18	Insufficient material to perform test. Test was not performed.
19	Insufficient material to perform moisture content test. Test was not performed.
20	Not enough AC for H03L/H04L on separate samp. H03L samp. reused for H04l test.
21	L/D ratio was < 1.0 because layer thickness was < the diameter of the specimen.
22	L/D ratio was = or < 1.0 because specimen was sawed to remove embedded steel.
23	Embedded steel was noted in the specimen near the middle of the diametral plane.
24	Embedded steel was noted at or near the side of the test specimen.
25	Specimen was skewed (see P61).
26	Mr determinations generally done within four minutes
27	Mr determinations were generally not done within four minutes
28	Test performed in a temperature controlled cabinet.
29	Dummy specimen used to monitor temperature.
30	Specimen damaged and not tested. Replacement was used.
31	L/D ratio was = or < 1.0 because layer thickness was < the diameter of specimen.
32	The specimen was trimmed only at the bottom end.
33	The specimen was trimmed only at the top end.
34	The specimen was trimmed at the bottom and top ends.
35	Line of contact was straight & free (see P62).
36	The line of contact described in code 35 was made possible by grinding.
37	Line of contact (see code 35) made possible by capping or by grinding & capping.
38	Line of contact had >0.01 inch tolerance (see code 35) but < 0.1 inch (see P62).

COMMENT - Identify type and quantity of data collected by installation type. (Laboratory Material Testing Guide)

CODE	DEFINITION
39	The projections/depressions on test surface higher or deeper than .1 (see P62).
40	Core did not have any arrow or "T" to show direction of traffic (see P62).
41	L/D ratio < 1.5 because layer was = or < the diameter of the specimen.
42	L/D ratio was = or < 1.5 because specimen was sawed to remove embedded steel.
43	Embedded steel was noted in the specimen near the middle of the diametral plane.
44	Embedded steel was noted at or near the side of the test specimen.
45	The specimen was trimmed only at the bottom end.
46	The specimen was trimmed only at the top end.
47	The specimen was trimmed at the top and bottom ends.
48	Pct. < 0.001 mm could not be determined in 1440 minutes. (24 hrs)
50	Specimen capped
51	Specimen ground
52	Leather shims used
53	Irregular interface between existing and overlay concrete.
54	Failure plane in overlay concrete.
55	Failure plane in existing concrete.
56	Failure plane in interface between existing and overlay concrete.
61	Insufficient size of test sample because of insufficient quantity of bulk sample
62	Roots & other organic material present in bulk sample retrieved from the field.
63	Presence of mica in the bulk sample retrieved from the field.
64	Bulk sample contained cobbles or aggregates passing 12" & retained on 3" sieve.
65	Test sample included shale, claystone, mudstone, siltstone, sandstone (see PP51)
67	PI is reported as "NP" because LL and/or PL cannot be determined.
68	PI is reported as "NP" because PL is = or > LL.
69	Test specimen slipped in the cup of the LL device.
70	Test not completed within 5 addition increments. Additional increments made.
71	Degradation of test sample observed during the moisture-density test.
72	Material taken from other sources in order to complete moisture density test.
73	Free water appeared at the bottom of the mold (i.e., seeped onto the plate).
74	Moisture density test included material passing 1.5" & retained on #4 (see P55)
75	Coarse fraction > 5%. Method D used to perform moisture density test (see P55).
76	Coarse material > 1.5" sieve was removed for the moisture density test (see P55)
77	Moisture density test included material passing 1.5" & retained on .75"(see P55)
78	Coarse fraction > 5%. Sample was sieved with .75" sieve before testing (see P55)
79	A segmental rammer face was used to prepare specimens in the laboratory.
80	Insufficient bulk sample size, sample from P46 was saved for possible future use
81	Separate test sample used for classification and description tests

COMMENT - Identify type and quantity of data collected by installation type. (Laboratory Material Testing Guide)

CODE	DEFINITION
82	Insufficient bulk sample size, sample from P41 or P51 used to complete test
83	Insufficient bulk sample size, sample from P44 or P55 was reused for P46
84	Sample for moisture density test obtained from gradation sample. (see P55).
85	Insufficient bulk sample size, sample was saved & reused for Mr testing.
86	Insufficient size of bulk sample, test sample reused for other tests.
87	The undisturbed thin-walled tube sample was used for the Mr testing (P46).
88	Thin-walled tube sample not suitable; a reconstituted sample used for Mr testing
89	Thin-wall sample not available; sample for Mr test reconstituted from bulk samp.
90	Excess proportion of thin-walled tube sample saved & stored for future use.
91	No compressive strength or Mr tests performed, thickness < 3 inches
92	Compressive strength & resilient modulus tests not performed, no intact cores.
93	Core intact & thickness > 3 inches, tests from either P32 or P33 to be performed
94	Test not performed due to oversize aggs; sample stored until further instruction
95	L/D < 1.0 inch. Correction factor of 0.87 applied to get compressive strength.

DEVICE_CODE_PROFILE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
D	Dipstick
P	Profilometer

DEVICE_CODE_RUT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
D	Dipstick
P	Pasco
S	Straightedge

DEVICE_SOURCE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	SHRP
2	Host state or province
3	Other state
4	Other

DIRECTION_OF_TRAVEL - Identify type and quantity of data collected by installation type. (INVENTORY_DCG)

CODE	DEFINITION
1	East Bound
2	West Bound
3	North Bound
4	South Bound
5	Test sections located in both directions of travel.

DIR_TRAV_LTPP - Direction of travel (LTPP Traffic Data Collection Guide)

CODE	DEFINITION
E	East Bound
N	North Bound
S	South Bound
W	West Bound

DIR_TRF - Identify type and quantity of data collected by installation type. (Traffic Monitoring Guide)

P	Peak
V	Valley

DLR_TRIGGER - Identify type and quantity of data collected by installation type. (DLRCheck documentation)

CODE	DEFINITION
1	CPU Function Key
2	Trigger Value
3	Timer or External Trigger

DOWEL_COAT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Paint and/or grease
3	Plastic
4	Monel
5	Stainless steel
6	Epoxy
7	Other

DOWEL_COATING - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Paint/Grease
2	Plastic
3	Monel
4	Stainless Steel
5	Epoxy
6	Other

DOWEL_PLACE_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Dowel Bar Inserter
2	Dowel Baskets

DRAG - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Burlap
3	Other

DRAINAGE_LOCATION - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Continuous
2	Intermittent
3	None

DRAINAGE_PIPE - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	Clay Tile
2	Concrete Tile
3	Vitrified Clay
4	Perforated Plastic Bituminous Fiber
5	Perforated Corrugated Metal
6	Corrugated Plastic Tubing
7	Drainage Mat
8	Other
9	None

DRAINAGE_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	No subsurface drainage
2	Longitudinal drains
3	Transverse drains
4	Drainage blanket
5	Well system
6	Drainage blanket with longitudinal drains
7	Other

DROP_HEIGHT - Identify type and quantity of data collected by installation type. (LTPP manual for FWD testing)

CODE	DEFINITION
1	Drop height position 1, target load 27KN (6kips) - 380kpa for standard LTPP pavement surface tests.
2	Drop height position 2, target load 40KN (9kips) - 570kpa for standard LTPP pavement surface tests.
3	Drop height position 3, target load 53KN (12kips) - 750kpa for standard LTPP pavement surface tests.
4	Drop height position 4, target load 71KN (16kips) - 1000kpa for standard LTPP pavement surface tests.

DRY_DENSITY_ADJUSTMENT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Adjustment based on vertical variation
2	Adjustment based on vertical variation and air volume

DSR_TEST_CONTROL - Identify type and quantity of data collected by installation type. (Test Data Sheet T27)

CODE	DEFINITION
1	Stress Control
2	Strain Control

DT_FRACTURE_TYPE - Identify type and quantity of data collected by installation type. (Test Data Sheet T29)

CODE	DEFINITION
1	Brittle
2	Brittle-Ductile
3	Ductile

ELASTIC_MODULUS_METHOD - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	Compression Test on Cores
2	Compression Test on Cylinders Molded During Construction
3	Calc. Using ACI Relation Between Elastic Mod & Comp Strength
4	Other

EQUATION_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
0	Linear model
1	Bulk stress model
2	Deviator stress model
3	Minor principal stress model
4	Second stress invariant model
5	Octahedral shear stress model
6	Vertical stress model
7	Major principal stress model
8	Cornell constitutive model

EQUIP_MANUFACTURER - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Pine
2	Instro_Tek
3	Gilson
4	FHWA
5	Unknown

EROSION_CONTROL - Identify type and quantity of data collected by installation type. (Drainage Information Form DI-1)

CODE	DEFINITION
1	Headwall
2	Riprap
3	None
4	Other

ERROR_CODE - Traffic analysis sofware subroutine/module being called. (Software Specifications.)

CODE	DEFINITION
0	No errors encountered
-99	Programmatic error
100	Database connection lost
101	Insufficient disk space
102	Printer error
150	Region not defined

ERROR_CODE - Traffic analysis sofware subroutine/module being called. (Software Specifications.)

ESAL_EST_WGHTSCALE - Identify type and quantity of data collected by installation type. (Traffic Data Sheets 3 and 10.)

CODE	DEFINITION
1	WIM scale.
2	Static scale used for enforcement.
3	Static scale not used for enforcement.
4	Other or Unknown.

ESAL_EST_WGHTSRC - Identify type and quantity of data collected by installation type. (Traffic Data Sheets 3 and 10.)

CODE	DEFINITION
1	Weight data collected at LTPP site this year.
2	Weight data collected at LTPP site prior years.
3	Weight data from system averages this year.
4	Weight data from system averages prior years.
5	Weight data from historic W-4 Tables used.
6	Other or Unknown.

ESAL_SOURCE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Value derived from database
2	Default value

EXIT_DEPTH - Identify type and quantity of data collected by installation type. (Drainage Information Form DI-1)

CODE	DEFINITION
1	< 1 m below pavement surface
2	1 - 2 m below pavement surface
3	> 2 m below pavement surface
4	Pavement surface is below lateral

EXPERIMENT - Identify type and quantity of data collected by installation type.
G - General Pavement Studies

CODE	DEFINITION
1	Asphalt Concrete on Un-bound Granular Base
2	Asphalt Concrete on Bound Base
3	Jointed Plain Concrete Pavement (JPCP)
4	Jointed Reinforced Concrete Pavement (JPCP)
5	Continuously Reinforced Concrete Pavement (CRCP)
9	Unbonded PCC Overlay of PCC Pavement
6A	Existing AC Overlay on AC Pavement
6B	AC Overlay with Conventional Asphalt Cement on AC Pavement, No Milling
6C	AC Overlay with Modified Asphalt Cement on AC Pavement, No Milling

7D	Multiple AC Overlays with Conventional Asphalt Cement on PCC Pavement, with No Pretreatment
7F	AC Overlay on PCC Pavement, with Slab Fracture Pretreatment
7R	Intensive Concrete Pavement Restoration of PCC without Overlay
7S	AC Overlay on PCC Pavement with Pretreatment

EXPERIMENT - Identify type and quantity of data collected by installation type.
S - Specific Pavement Studies

CODE	DEFINITION
1	Strategic Study of Structural Factors for Flexible Pavements, new/reconstructed AC pavements
2	Strategic Study of Structural Factors for Rigid Pavements, new/reconstructed JPCC pavements
3	Preventive Maintenance of AC Pavement
4	Preventive Maintenance of Jointed Concrete Pavement
5	AC Overlay of AC Pavement
6	Rehabilitation of Jointed PCC Pavement
7	Bonded Concrete Overlay on Portland Cement Concrete Pavement
8	Study of Environmental Effects in the Absence of Heavy Loads
9A	Superpave Asphalt Binder Study (Project Level Designation)
9C	Superpave Asphalt Binder Study, AC Overlay on CRCP)
9J	Superpave Asphalt Binder Study, AC Overlay on JCP)
9N	Superpave Asphalt Binder Study, New AC Pavement Construction)
9O	Superpave Asphalt Binder Study, AC Overlay on AC Pavement)
9P	Pilot Superpave Asphalt Binder Study (Project Level Designation)

FACTOR - Element used to expand raw count data to an average estimate. (Original Traffic Analysis software outputs.)

CODE	DEFINITION
1	Axle adjustment factor
2	Seasonal adjustment factor
3	Day of week adjustment factor
4	User defined factor
5	GPS lane distribution factor

FAULT_MEASURE_DEVICE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Straightedge and Ruler
2	GA Faultmeter 1/32" resolution
3	GA Faultmeter 1/20" resolution
4	GA Faultmeter 1-mm resolution
5	FHWA Mechanical Faultmeter 1-mm resolution

FAULT_STATUS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Faulting sect stats calc'd since over 75% of pts have faulting values >= 0
2	Faulting sect stats not calc'd since 25% or more pts have null faulting values
3	Faulting sect stats not calc'd since 25% or more pts have faulting values < -1 mm
4	Faulting sect stats not calc'd since 25% + comb. pts have null or faulting values < -1 mm

FILLER_TYPE - Identify type and quantity of data collected by installation type. (Rehab sheet 54)

CODE	DEFINITION
1	Preformed cellular plastic joint filler for relieving pressure
2	Preformed expansion joint filler for concrete (Bituminous Type)
3	Preformed expansion joint fillers for concrete paving & construction
4	Preformed sponge rubber and cork expansion joint fillers for concrete paving
5	Hot mix asphalt concrete
6	Other

FILTER_MODE - Identify type and quantity of data collected by installation type. (Dynatest FWD Operations Manual)

CODE	DEFINITION
0	Filter off for both peaks and history data
1	120 Hz filter on for peaks, off for history data
2	60 Hz filter on for peaks, off for history data
3	120 Hz filter on for both peaks and history data
4	60 Hz filter on for both peaks and history data

FILTER_TYPE - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	Graded Aggregate
2	Uniformly Graded Aggregate (One Size)
3	Woven Fabric
4	Non-Woven Fabric
5	Porous PCC
6	Porous Bituminous Concrete
7	Other

FINE_AGG_COMP - Identify type and quantity of data collected by installation type. (RHB_03)

CODE	DEFINITION
1	Natural Sand
2	Manufactured Sand (from crushed gravel or stone)
3	Recycled Concrete
4	Other

FINISH_METHOD_A - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Screeding
2	Hand-troweling
3	Machine-troweling
4	Other

FINISH_SEAL - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Overfilled
2	Recessed
3	Level with surface

FLEXURAL_STRENGTH_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Third-point loading
2	Center-point loading

FRACTURE - Identify type and quantity of data collected by installation type. (Protocol P32)

CODE	DEFINITION
11	Cone
12	Cone and split
13	Cone and shear
14	Shear
15	Columnar
16	Other type

FREEZE_STATE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
F	Frozen
N	Not frozen
T	Transitional

FREQUENCY - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Never
2	Sometimes
3	Usually
4	Always

FREQUENCY_DEICE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	<1/yr
2	2-10/yr
3	>10/yr

FRICTION_METHOD - Identify type and quantity of data collected by installation type. (Friction Data Sheet 1)

CODE	DEFINITION
1	Locked wheel
2	Mu-meter
3	Other

FROST_SUSCEPTIBILITY_CODE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Negligible
2	Very Low
3	Low
4	Medium
5	High
6	Very High

FUNC_CLASS - Identify type and quantity of data collected by installation type. (Traffic Monitoring Guide, FHWA)

CODE	DEFINITION
1	Rural Principal Arterial - Interstate
2	Rural Principal Arterial - Other
6	Rural Minor Arterial
7	Rural Major Collector
8	Rural Minor Collector
9	Rural Local Collector
11	Urban Principal Arterial - Interstate
12	Urban Principal Arterial - Other Freeways or Expressways
14	Urban Other Principal Arterial
16	Urban Minor Arterial
17	Urban Collector

FUNC_CLASS - Identify type and quantity of data collected by installation type. (Traffic Monitoring Guide, FHWA)

CODE	DEFINITION
19	Urban Local

GEN_PAVEMENT_RHB_CAUSE - Identify type and quantity of data collected by installation type. (Rehabilitation Form RI-1)

CODE	DEFINITION
1	Pavement distress
2	Roughness
3	Friction
4	Agency condition index
5	Other

GEOL_CLASS - Identify type and quantity of data collected by installation type. (Table A.9 from the DCG)

CODE	DEFINITION
1	Granite
2	Syenite
3	Diorite
4	Gabbro
5	Peridotite
6	Felsite
7	Basalt
8	Diabase
9	Limestone
10	Dolomite
11	Shale
12	Sandstone
13	Chert

20	Quartzite
21	Marble
22	Serpentine
30	Other rock type (specify if possible or unknown)
31	Glacial soils
32	Boulder clay
33	Glacial sands and gravels
34	Laminated silts and laminated clays
35	Varved clays
36	Ground moraine
37	Fluvio-glacial sands and gravels
38	Other glacial soils
40	Plateau gravels
41	River gravels
42	Alluvium
43	Alluvial clays and/or peat
44	Alluvial silt
45	Other alluvial soils
46	Coastal shingle and beach deposits
47	Wind-blown sand
48	Loess (collapsible soil)
49	Shale, siltstone, mudstone, claystone
50	Expansive soils
51	Residual soils
52	Residual soils derived from granites, gneisses, and schists
53	Residual soils developed from limestone, sandstone, and shale

GEOL_CLASS - Identify type and quantity of data collected by installation type. (Table A.9 from the DCG)

CODE	DEFINITION
54	Other residual soils
55	Limerock materials
56	Coquina
57	Shell
58	Marl
59	Caliche
60	Other Limerock Materials

GMG_EXTENT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Entire Section
2	Individual Joints/Cracks
3	Patches only
4	Other

GPS_SPS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
G	General Pavement Studies
S	Specific Pavement Studies

GRINDING_REASON - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Elimination of faulting
2	Elimination of slab warping
3	Improve skid resistance
4	Restoration of transverse drainage slope
5	Other
6	Other

GROUT_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Water/Cement
3	Water/Cement/Sand
4	Epoxy-Resin
5	Other

G_F_P - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
F	Fair
G	Good
P	Poor

HEATER_SCARIF_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Multiple Unit
2	Single Unit

HMA_MIX_DESIGN_METHOD - Identify type and quantity of data collected by installation type. (SPS-9 Construction Datasheet 9 (revised) March 1977.)

CODE	DEFINITION
1	Marshall
2	Hveem
3	Superpave

HMA_MIX_DESIGN_METHOD - Identify type and quantity of data collected by installation type. (SPS-9 Construction Datasheet 9 (revised) March 1977.)

CODE	DEFINITION
4	Other - specify

HOLE_INSTALL_UNDERSEAL - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Coring
2	Impact drill
3	Other

INITIAL_OR_REGROUT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
I	Initial
R	Regrout

INSTALL_FREQUENCY - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Every Joint
2	Every Joint/Working
3	Intermittent Joint/Crack
4	Other

INTERPRETATION_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Manual
2	Mechanical
3	Computer

INTERPRET_BASIS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Freeze state based on temperature data using 0oC freezing isotherm, not forced.
2	Freeze state determined by the analyst after reviewing the temperature, electrical resistivity, and moisture data trends.
3	Temperature data is not available. Freeze state determined by the analyst.

INTERSECT_TYPE - Identify type and quantity of data collected by installation type. (Drainage Information Form DI-1)

CODE	DEFINITION
1	"T"
2	"Sweep"
3	"L"
4	Angle
5	Other

INV_ADMIX_TYPE - Identify type and quantity of data collected by installation type. (INV sheets 8 and 20)

CODE	DEFINITION
8-1	Water-Reducing (AASHTO M194, Type A)
8-2	Retarding (AASHTO M194, Type B)
8-3	Accelerating (AASHTO M194, Type C)
8-4	Water-Reducing and Retarding (AASHTO M194, Type D)
8-5	Water-Reducing and Accelerating (AASHTO M194, Type D)

INV_ADMIX_TYPE - Identify type and quantity of data collected by installation type. (INV sheets 8 and 20)

CODE	DEFINITION
8-6	Water-Reducing, High Range (AASHTO M194, Type F)
8-7	Water-Reducing, High Range and Retarding (AASHTO M194, Type G)
8-8	Air-Entraining Admixture (AASHTO M154)
8-9	Natural Pozzolans (AASHTO M295, Class N)
20-1	Calcium chloride
20-2	Sodium chloride
20-3	Magnesium chloride
20-4	Other
8-10	Fly Ash, Class F (ASSHTO M295)
8-11	Fly Ash, Class C (AASHTO M295)
8-12	Other (Chemical)
8-13	Other (Mineral)

INV_AGGR_COMP - Identify type and quantity of data collected by installation type. (INV sheets 9 and 12)

CODE	DEFINITION
C1	Crushed stones
C2	Gravel
C3	Crushed Gravel
C4	Crushed Slag
C5	Manufactured Lightweight
C6	Recycled Concrete
C7	Other
F1	Natural Sand
F2	Manufactured Sand (from crushed gravel or stone)
F3	Recycled Concrete
F4	Other

INV_TEXTURE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
C	Coarse
F	Fine
M	Mixed

ISD_MOIST_MATL_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
G	Unbound
T	Other
AT	AC Treated

JOINT_LOC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Between Lanes
2	Within Lanes

JOINT_METHOD - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	None
2	Polyethylene strip insert
3	Styrofoam insert
4	Fiberboard insert
5	Sawing
6	Forms
7	Other

JOINT_OPEN_PROCESS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Sealant removed
2	Sealant cut
3	Sealant not effective and left in place
4	Sealant somewhat effective and left in place
5	Other

JOINT_SEALANT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Sealed w/o Providing Reservoir
3	Saw Reservoir & seal
4	Other

JOINT_SEAL_BACKER - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Foam Backer Rod
2	Tape
3	Rope
4	None
5	Other

JOINT_SEAL_TYPE_LS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Poured
2	Preformed

JOINT_TIE_SYSTEM_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Deformed Bars
3	Hook Bolts
4	Other

JOINT_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Tied
2	Butt
3	Keyed
4	Other

L05B_COMMENT_CODES - Identify type and quantity of data collected by installation type. (SPS Pavement Layering Methodology, January 1994..)

CODE	DEFINITION
A	FWD data on section agree best with approach end sample location.
B	FWD data agree best with leave end sample location.
C	Profile and condition data agree best with approach end sample location.
D	Profile and condition data agree best with leave end sample location.
E	Gradations similar at section ends and averaged to determine material code.
F	Gradations different at section ends, material code from approach end used.

L05B_COMMENT_CODES - Identify type and quantity of data collected by installation type. (SPS Pavement Layering Methodology, January 1994..)

CODE	DEFINITION
G	Gradations different at section ends, material code from leave end used.
H	Atterberg limits similar at both section ends and Avg to determine material code.
I	Atterberg limits different at both section ends. Material code from approach used.
J	Atterberg limits different at both section ends. Material code from leave used.
K	This layer absent at approach end.
L	This layer absent at leave end.
M	Layer inadvertently not sampled during drill & sample, but layer does exist.
N	Info from the state DOT indicates that beginning end is more representative.
O	Info from the state DOT indicates that the leave end is more representative.
P	Material code for layer derived from lab. testing of adjacent test section.
Q	Layer thickness derived by measuring same material from adjacent test section.
R	Layer was partially removed by milling.
S	Layer was completely removed by milling.
T	Sampling only occurred at approach end.
U	Sampling only occurred at leave end.
V	No sampling at either end.
Z	Other (Enter description in COMMENT_NOTE field.)

LAB_AGE_TEST_PROC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Thin Film Oven
2	Rolling Thin Film
3	Other

LAB_CODE - Identify type and quantity of data collected by installation type. (Laboratory testing forms)

LAP - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Double Lap
2	Triple Lap

LATERAL_CRUSH - Identify type and quantity of data collected by installation type. (Drainage Information Form DI-2)

CODE	DEFINITION
1	Fully Crushed
2	Partially Crushed
3	Intact

LAYER_TYPE - Identify type and quantity of data collected by installation type. (LTPP Materials Sampling and Testing Protocols.)

CODE	DEFINITION
AC	Asphalt concrete layer
EF	Engineering Fabric
GB	Unbound (granular) base
GS	Unbound (granular) subbase
PC	Portland cement concrete layer
RB	Rigid Layer used for backcalculation
SS	Subgrade (untreated)

LAYER_TYPE - Identify type and quantity of data collected by installation type. (LTPP Materials Sampling and Testing Protocols.)

CODE	DEFINITION
TB	Bound (treated) base
TS	Bound (treated) subbase

LAYER_TYPE_INV - Identify type and quantity of data collected by installation type. (Inventory Sheet 3.)

CODE	DEFINITION
A	HMAC layer
B	Base/subbase layer
G	Subgrade
P	PCC layer

LAYER_TYPE_RES_MOD - Identify type and quantity of data collected by installation type. (P46 Protocol)

CODE	DEFINITION
1	Subgrade
2	Base/subbase

LAYER_TYPE_UNCOMP - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Rut Level-Up
2	Mill Replacement
3	Binder Course
4	Surface Course
5	Surface Friction Layer
6	Other

LENGTH_SECTION_COVERED - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Full Length of Test Section
2	Partial Length of Test Section

LEVEL_UP_LAYER_LOC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Outside rut
2	Inside rut
3	Both ruts
4	Full lane width

LEVEL_UP_MATL - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Hot Mix Asphalt Concrete
2	Plant Mix with Cutback Asphalt, Cold Laid
3	Plant Mix with Emulsified Asphalt, Cold Laid
4	Road Mix with Cutback Asphalt
5	Road Mix with Emulsified Asphalt
6	Other

LIQUID_SOLID - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Liquid
2	Solid

LOAD_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
A	Raw files loaded using LTPP Traffic Analysis Software (LTAS)
C	Copied using data already loaded into the LTAS database
Q	Raw files loaded using the LTPP Traffic Quality Control software (LTQC) and Daily process in LTAS 1.x.

LOAD_TRANS_RESTORATION - Identify type and quantity of data collected by installation type. (Rehab sheet 58. Field #2)

CODE	DEFINITION
1	Retrofit Dowels (Placed in Slots)
2	Compressed Double-Vee Shear Device
3	Uncompressed Double-Vee Shear Device
4	Plate and Stud Connector Shear Device
5	Other

LOCATION - Identify type and quantity of data collected by installation type. (Table A.18 from the DCG)

CODE	DEFINITION
1	Outside Lane (Number 1)
2	Inside Lane (Number 2)
3	Inside Lane (Number 3)
4	Shoulder
5	Curb and Gutter
6	Side Ditch
7	Culvert
8	Other
9	All lanes
10	All lanes plus shoulder.

LOCATION_AT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Joint
2	Crack
3	Midpoint of slab/panel

LOCATION_DESC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Good concrete/Good support
2	Poor/Distressed concrete
3	Poor support

MONITORING_CATEGORY - Identify type and quantity of data collected by installation type. (LTPP Directive GO-21)

CODE	DEFINITION
C	1 ea profile,distress,FWD prior to going out-of-study.
G	Every 2 years profile photographic distress, every 3 years manual distress, every 5 years FWD;responsive photographic distress,FWD.
S1	Core SPS sections: yearly-profile, manual distress; every 2 yrs photographic distress,FWD testing; responsive FWD; monitoring on supplemental sections may differ; continuous WIM required.
S2	Core SPS sections: yearly-profile, manual distress; every 2 yrs photographic distress,FWD testing; responsive FWD;monitoring on supplemental sections may differ; continuous WIM preferred.

MONITORING_CHANGE_REASON - Identify type and quantity of data collected by installation type. (LTPP Directive GO-27 or SPR)

CODE	DEFINITION
1	Data completeness matches monitoring category; monitoring intensity for past two years is less than required for that category.
2	Data completeness matches monitoring category; monitoring intensity being reduced by agency request.
3	Core section data fails to meet minimum for pavement structure, inventory, pavement monitoring, climate or past traffic.
4	Traffic monitoring does not meet or exceed that required for category.
5	Change in experiment designation resulting in different monitoring frequency.
6	Failure to meet minimum monitoring for category C.
7	Test section / project out-of-study.
99	Other

MONITORING_OF_LIFT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Deflection
2	Max Pumping
3	Appearance of Material
4	Other

MR_MATL_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Coarse grained material
2	Fine grained material

NON_DEC_DEFL - Identify type and quantity of data collected by installation type. (MON_DEFL IMS Specifications)

CODE	DEFINITION
1	data set contains non-decreasing deflections from the center of the load

NO_YES - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	No
2	Yes

NUMBER_SEALED - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	All sealed
2	Most sealed
3	Few sealed
4	None sealed
5	None present to seal

OFFSET_FLAG - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Incorrect value for CENTER_OFFSET confirmed, actual or estimated value not available
2	Value for CENTER_OFFSET suspect, not confirmed, estimated location not available
3	Value for CENTER_OFFSET suspect, not confirmed, estimated location is available

OUTLIER_FLAG - Identify type and quantity of data collected by installation type. (MON_T_PROF_INDEX IMS table specifications)

CODE	DEFINITION
1	Referenced field less than 2 standard deviations from section mean.
2	Referenced field GT or EQ to 2 standard deviations from section mean.

P32_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
A	Test Protocol P32A
B	Test Protocol P32B

PARAMETER_NO - Identify type and quantity of data collected by installation type.

P	Positive

PASS_FAIL - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
F	Fail
P	Pass

PATCHING - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	No patching
2	Minor patching
3	Moderate patching
4	Major patching

PATCH_BOUNDARY_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Saw Cut
3	Air Hammer
4	Cold Milling
5	Other

PATCH_MATERIAL - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	Hot mix asphalt concrete
2	Plant mix with cutback asphalt, cold laid
3	Plant mix with emulsified asphalt, cold laid
4	Road mix with cutback asphalt
5	Road mix with emulsified asphalt
6	Portland cement concrete (PCC)
7	Other

PATCH_MATL_AC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	All AC
2	AC/PCC

PATCH_MATL_PCC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	PCC
2	Polymer Concrete
3	AC
4	Epoxy Mortar
5	Other

PAVEMENT - Identify type and quantity of data collected by installation type. (Table A.4 from the DCG)

CODE	DEFINITION

PAVEMENT_BREAKER - Identify type and quantity of data collected by installation type. (Rehab sheet 60. Field #4)

CODE	DEFINITION
1	Roller
2	Pile Driver Hammer
3	Whip Hammer
4	Guillotine Drop Hammer
5	Air Hammer
6	Hydraulic Hammer
7	Other

PAVEMENT_PROCESSING - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Crushed/Screened
3	Pulverized by Hammermill
4	Pulverized by Grid/V-Cleat Roll
5	Other

PAVEMENT_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
F	Flexible
R	Rigid

PAVER_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Slip-form
2	Side-form
3	Other

PAVE_TYPE_ESAL - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	AC original surface with no overlays
2	AC overlay of AC
3	AC overlay of rubblized PCC
4	PCC over rubblized PCC
5	PCC original surface with no overlays
6	AC overlay of PCC

2	Secondary cleaning after cold milling
3	Secondary cleaning after shot blasting
4	Final cleaning to remove dust & free particles
5	Other

REMOVAL_METHOD - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	Not removed
2	Joint plow -- V-shaped
3	Joint plow -- Rectangular
4	High pressure water blasting
5	Diamond blade saw
6	Carbine blade saw
7	Pull-out of old compression sealant
8	Not previously sealed
9	Other

REPLACE_MATL - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Similar
2	AC
3	PCC
4	Other

REPR_GRADATION - Identify type and quantity of data collected by installation type. (Sampling Data Sheet 21)

CODE	DEFINITION
1	Gradation of sample is representative of the gradation of aggregate in AC mix
2	Gradation of sample is not representative of the gradation of aggregate in AC mix

RESERVOIR_MOISTURE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Dry
2	Mostly dry
3	Somewhat damp
4	Wet

ROAD_MOISTURE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Dry
2	Moist
3	Wet

ROLLER_CODE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
A	Steel_wheel Tandem
B	Steel_wheel Tandem
C	Steel_wheel Tandem
D	Steel_whl Tandem
E	Pneumatic-Tired
F	Pneumatic-Tired
G	Pneumatic-Tired
H	Pneumatic-Tired
I	Single-Drum Vibr
J	Single-Drum Vibr

ROLLER_CODE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
K	Single-Drum Vibr
L	Single-Drum Vibr
M	Double-Drum Vibr
N	Double-Drum Vibr
O	Double-Drum Vibr
P	Double-Drum Vibr
Q	Other

ROLLER_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Steel Wheeled
2	Pneumatic

ROUTE_SIGNING - Identify type and quantity of data collected by installation type. (INVENTORY DCG)

CODE	DEFINITION
1	Interstate
2	U. S.
3	State
4	Other

RUT_PREP - Identify type and quantity of data collected by installation type. (SPS9 Construction Data Sheet 22)

CODE	DEFINITION
1	None
2	Broomed
3	Broomed + Asphaltic Tack Coat
4	Asphaltic Tack Coat (only)
5	Wheel Path Milling
6	Other

SAMPLE_LOC_PCC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Batch Plant
2	Hauling Truck before Paving
3	Hauling Truck during Paving
4	Paver
5	Other

SAMPLE_LOC_UNCOMP - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Conveyer Belt
2	Stockpile
3	Haul Truck
4	Funnel Device
5	Roadway
6	Other
7	Bins

SAMPLE_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Fld Mix, Lab Comp
2	Fld Mix and Compacted

SAMPLE_TYPE_ESTAR - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Original Binder
2	RTFO/TFO Aged Binder
3	PAV Aged Binder
4	Field Aged Binder

SEALANT_BONDED_TO_BOTH - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Little bonding
2	Mostly bonded
3	All bonded

SEALANT_TYPE - Identify type and quantity of data collected by installation type. (Rehab sheet 54)

CODE	DEFINITION
1	ASTM D3405
2	Silicone
3	Other

SEAL_CURE_TIME - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	54 hrs
3	4-8 hrs
4	8-24 hrs
5	1-3 days
6	3-7 days
7	>7 days

SEAL_REASON - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Seal cracks
2	Improve skid resistance
3	Bleeding
4	Raveling
5	Unknown
6	Other

SEAL_REMOVAL_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	No Sealant
2	Not Removed
3	Joint plow V-shaped
4	Joint plow rectangular
5	High pressure water blasting
6	Diamond blade saw
7	Carbide blade saw
8	Pull-out of old compression sealant
9	Other

SEAL_ROLLER - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Pneumatic
3	Steel Wheel
4	Unknown

SEAL_TYPE - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	D1850 (ASTM) Cold application type
2	D1190 (ASTM) - M173(AASHTO) Hot poured elastic type
3	D3406 (ASTM) - M282(AASHTO) Hot poured for PCC
4	D3405 (ASTM) - M301(AASHTO) Hot poured for concrete and AC
5	D3542 (ASTM) Preformed Polychloroprene for bridges
6	D2628 (ASTM) Preformed Polychloroprene for concrete
7	Other

SECTION_STAT_INCLUDE_FLAG - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Parameters in record were included in section statistics.
2	Parameters in record were excluded from section statistics.

SENSORS_LTPP_PIEZO_CABLE - Identify type and quantity of data collected by installation type. (Traffic Data Sheet 16)

CODE	DEFINITION
1	Bare Round
2	Bare Flat
3	Channelized Round
4	Channelized Flat
5	Unknown
6	None

SENSOR_TYPE - Code denoting the type of sensor used in the profilometer (LTPP Profile Manual)

CODE	DEFINITION
1	Incandescent
2	Infrared
3	Laser

SEPARATE_METHOD - Identify type and quantity of data collected by installation type. (REHAB sheet 50.)

CODE	DEFINITION
1	Reinforcing Steel Ruptured During PCC Breakup
2	Reinforcing Steel Cut By Torches
3	Reinforcing Steel Cut by Vibrators or Shears
4	Reinforcing Steel Removed by "Rhino Bars"
5	Other

SHOULDER_RESTORE - Identify type and quantity of data collected by installation type. (Rehab sheet 61. Field #8)

CODE	DEFINITION
1	AC Overlay Without Removal Of Existing AC
2	Cold Milling And AC Overlay
3	Complete Shoulder Removal And Replacement
4	In-place Recycling And Overlay
5	Other

SHOULDER_SURFACE_TYPE - Identify type and quantity of data collected by installation type. (SPS-1,2,8 Construction Data Sheet 2)

CODE	DEFINITION
1	Turf
2	Granular
3	Asphalt Concrete
4	Concrete
5	Surface Treatment
6	Other

SHOULDER_SYSTEM_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	JPCC
2	JRCP
3	CRCP
4	Other

SHOULDER_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
I	Inside
O	Outside

SHRP_TEST - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
SS01	Sieve Analysis of Subgrade Soils
UG01	Washed Sieve Analysis of Unbound Granular Base and Subbase Materials
UG02	Sieve Analysis of Unbound Granular Base and Subbase Materials

SH_JOINT_FORMED - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Butt
2	Keyed
3	Sawed Weakened Plane
4	Insert Weakened Plane
5	Tied Concrete Curb
6	Other

SH_JOINT_FORMED_SPS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Butt
2	Sawed Weakened Plane
3	Insert Weakened Plane
4	Other

SH_SURFACE_TYPE - Identify type and quantity of data collected by installation type. (Inventory Sheet 2)

CODE	DEFINITION
1	Turf
2	Granular
3	Asphalt Concrete
4	Concrete
5	Surface Treatment
6	Other (Specify)

SIDEWALL_CLEAN - Identify type and quantity of data collected by installation type. (Maintenance Data Sheet 10)

CODE	DEFINITION
1	None
2	Sandblasting
3	Water blasting
4	Other

SIDEWALL_CLEAN_SPS6 - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Air blast
3	Sand blast
4	Water blast
5	Other

SIDEWALL_CLEAN_SPS7 - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
4	Other
5	Rectangular
6	Diamond Saw Blade

SIDE_LOCATION - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Approach
2	Leave
3	Neither

SILT_DEBRIS - Identify type and quantity of data collected by installation type. (Drainage Information Form DI-2)

CODE	DEFINITION
1	Fully Blocked (Buried)
2	Partially Blocked
3	Free

SITE_LOCATION - Identify type and quantity of data collected by installation type.

CODE	DEFINITION

STATUS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
O	Out-of-study
R	Rejected

STAT_FLAG - Identify type and quantity of data collected by installation type. (MON_DEFL_RGD_BAKCAL_SECT table specification)

CODE	DEFINITION
1	Section statistics are reported.
2	NUMBER - The number of acceptable basins is less than 30 percent or is less than or equal to 3.
3	PCC OVERLAY - PCC and base moduli will not be reported.

STEEL_PLACE_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Chairs
2	Between Concrete Layers

SUBDRAIN_EXTENT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Continuous
2	Intermittent
3	Adj to Full Depth Repairs

SUBDRAIN_PURPOSE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Remove Free Water
2	Cut-off Side Hill
3	Lower Water Table
4	Other

SUBDRAIN_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Transverse
2	Longitudinal

SUBSEAL_MIXTURE - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	Cement-Loam Top Soil Slurry
2	Cement-Limestone Dust Slurry
3	Cement-Pozzolan Slurry
4	Cement-Fine Sand Slurry
5	Asphalt Cement
6	Other

SUBSEAL_MIX_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Cement-loam top soil slurry
2	Cement-limestone dust slurry
3	Cement-pozzolan slurry
4	Cement-fine sand slurry
5	Other

SUB_DRAINAGE_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Long
3	Trans

SURFACE_MOISTURE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Dry
2	Wet

SURFACE_MOISTURE_SPS34 - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Dry
2	Mostly Dry
3	Somewhat Damp
4	Wet

SURFACE_PREP - Identify type and quantity of data collected by installation type. (Data Collection Sheets)

CODE	DEFINITION
1	None
2	Sweep clean only
3	Cold mill
4	Shot blast
5	Other

SURFACE_PREP_CRACK_SEAT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Sweeping
3	Tack coat
4	Leveling course
5	Full depth repair
6	Other

SURFACE_PREP_OVERLAY - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Broomed
3	Broomed and asphaltic tack coat
4	Asphaltic tack coat only

SURFACE_PREP_RHB - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Sweep
3	Air Blast
4	Water blast
5	Sand Blast
6	Cold Mill
7	Shot Blast
8	Other

SURFACE_TEXTURE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Rough and Open
2	Somewhat Rough and Open
3	Somewhat Smooth and Tight
4	Smooth and Tight

SURFACE_TREAT_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Aggregate
3	Fog Seal

TDR_COMMENT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	TDR trace uninterruptible due to lack of negative slope
2	Questionable data due to low dry density value
3	Calibration data from installation activities are unavailable
4	Outlier data based on time series analysis
5	Volumetric moisture content was in transition zone and was adjusted

TEMP_SOURCE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Based on measured
2	Derived using EICM

TEST_NO - Identify type and quantity of data collected by installation type. (Test data sheets)

CODE	DEFINITION
1	Material sample obtained from area adjacent to approach end of test section.
2	Material sample obtained from area adjacent to leave end of test section.
3	Material sample obtained within test section limits.
4	Material sample combined from different areas of a test section.
5	Material sample combined from multiple test sections.
6	First additional sample obtained from area adjacent to approach end of test section.
7	First additional sample obtained from area adjacent to leave end of test section.
8	First additional sample obtained within test section limits.
9	First additional sample combined from different areas of test section.
10	First additional sample combined from multiple test sections.
11	Second additional sample obtained from area adjacent to approach end of test section.
12	Second additional sample obtained from area adjacent to leave end of test section.

TEST_NO - Identify type and quantity of data collected by installation type. (Test data sheets)

CODE	DEFINITION
13	Second additional sample obtained within test section limits.
14	Second additional sample combined from different areas of test section.
15	Second additional sample combined from multiple test sections.

TEST_PURPOSE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Determine need for undersealing
2	Slab stability after initial grouting
3	Slab stability after regrout
4	Post construction monitoring

TEST_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	T221/D1195
2	T222

TEXTURING - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Tine
2	Broom
3	Burlap Drag
4	Grooved float
5	Astro turf
6	None
7	Other

THERM_PROBE_DESIGN - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Standard LTPP temperature probe
2	Other

THICKNESS_CODE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
91	Intact cores Protocol P31
92	Avg from field exploration logs
93	Intact cores >= 3"
94	LD ratio 1.0 correction factor of 0.87

TRACE_TYPE - Identify type and quantity of data collected by installation type. (Specifications for SMP AUTO Computed Parameters)

CODE	DEFINITION
1	Automatically processed using Method of Tangents (TG)
2	Automatically processed using Method of Peaks (PK)
3	Manually identified using Method of Tangents (MT)
4	Manually identified using Method of Peaks (MP)

TRANSFER_DEVICE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None

TRANSFER_DEVICE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
2	Grout Filler
3	Epoxy Filler
4	Other

TRANSFER_SYS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	Dowel Bars
3	Tie Bars
4	Undercutting
5	Aggregate Interlock

TRANS_CONT_JLTS_INV - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Round dowels
2	Aggregate interlock
3	I-beams
4	Star lugs
5	Other

TRANS_CONT_JLTS_RHB - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Round dowel
2	Aggregate interlock
3	I-Beams
4	Star lugs
5	Keyways
6	Other

TRANS_CONT_JLTS_SPS - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Round dowel
2	Aggregate interlock
3	Other

TRANS_JOINT - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	None
2	All Expansion
3	All Contraction
4	Mixture

TRANS_METHOD - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Sawed
2	Plastic insert
3	Metal insert
4	Other

TRANS_SEAL_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Preformed
2	Asphalt

TRANS_SEAL_TYPE - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
3	Rubberized asphalt
4	Low-modulus silicone
5	Other

TREAT_TYPE - Identify type and quantity of data collected by installation type. (Field Material Sampling Guide, Table D.4)

CODE	DEFINITION
180	Treated Subgrade Soil

VISUAL_ACPC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
1	Intact core; excellent condition
2	Hairline cracks on the surface; no visible vertical crack within 1/3 of length
3	Cracks and/or voids visible along with the side of the core.
4	Badly cracked or damaged core; unsuitable for testing.
5	Ridges on the sides of the cores; condition should be recorded if used.
6	Very rough and uneven bottom surface.
7	Core severely damaged from sampling, handling, etc. Unsuitable for testing.
8	Core was sawed in laboratory for removing it from the underlying bonded layer.
9	Core consisted of 2 or more AC layers. Core to be sawed & assigned layer numbers
10	Visible separation of one or more layers. Layers to be sawed & assigned numbers
11	Visible segregation of coarse & fine aggregates over 25% of surface area of core
12	Voids in the matrix of the AC mixture are observed along the sides of the core.
13	Voids due to loss of coarse & fine aggregate observed along the sides of core.
14	Core missing significant portions, unsuitable for testing.
15	Coarse aggregate along face of core contains 50% or more of crushed materials
16	Coarse aggregate along face of core is mix of uncrushed gravel & crushed stone
17	More than 10% of core surface area contains soft aggregate particles/clay balls.
18	Slight stripping.
19	Severe stripping.
20	Slight bleeding.
21	Severe bleeding.
22	Skewed core.
51	Intact core; excellent condition.
52	Hairline cracks on the surface; suitable for testing.
53	Cracks and/or voids visible along the side of the core; suitable for testing.
54	Badly cracked or damaged core; unsuitable for testing.
55	Ridges on the sides of the cores; condition should be recorded if used for test.
56	Very rough and uneven bottom surface.
57	Core severely damaged during handling; unsuitable for testing.
58	Core was sawed in laboratory for removing it from the underlying bonded layer.
59	Core consisted of 2 or more layer. Core was assigned & assigned layer numbers.
60	Visible separation of one or more layers; layers separated and assigned numbers.
61	Segregation of coarse & fine aggregates observed over 25% of core surface area.
62	Voids in the matrix are observed along the sides of the core.
63	Voids due to loss of coarse & fine aggregates observed along sides of core.
64	Core is missing significant portions. Unsuitable for testing.
65	Coarse aggregate are generally crushed stone with predominately fractured faces.
66	Coarse aggregate along face of core is mix of uncrushed gravel & crushed stone.

VISUAL_ACPC - Identify type and quantity of data collected by installation type.

CODE	DEFINITION
67	The exposed aggregates along face of core are lightweight aggregate concrete.
68	More than 10% of core surface area contains soft aggregate particles/clay balls.
69	Cracks are generally across or through the coarse aggregate.
70	Cracks are generally around the periphery of the coarse aggregate.
71	Cracks are associated with embedded steel.
72	Rims are observed on aggregate.
73	Fine aggregate is natural sand.
74	Fine aggregate is manufactured sand.
75	Fine aggregate is a mixture of natural and manufactured sand.
76	Steel is present in the core.
77	Steel is corroded.
78	Core indicates D-cracking.
79	Core indicates deterioration due to freeze-thaw cycles.
80	Core indicates sulfate attack.
81	Core indicates alkali silica reactivity
82	Skewed core.
99	Other comment

VOLUMETRIC_MOISTURE_MODEL - Identify type and quantity of data collected by installation type. (Specifications for SMP AUTO Computed Parameters)

CODE	DEFINITION
1	3rd polynomial model with only Ka as ind var for coarse-grained soil (Coarse-Ka)
2	3rd polynomial model with only Ka as ind var for fine-grained soil (Fine-Ka)
3	3rd polynomial model with only Ka as ind var for all soil types (AllSoil-Ka)
4	Fine-grained soil mdl with ind vars Ka, gradation params, plastic & liquid limit
