The Security Management section monitors Federal partners' progress by implementing Federal cybersecurity directives and statutes, including Office of Management and Budget and National Institute of Standards and Technology guidelines and special publications. In addition, the Security Management section collaborates with the Committee on National Security Systems to ensure best practices are promulgated when appropriate. By ensuring that Federal partners comply with mandatory cybersecurity practices, the Security Management section provides support for cross-government initiatives as necessary. The Security Management section also acts as a liaison between Federal

partners and critical infrastructure and key resources stakeholders by serving as a conduit for information security best practices and trends.

FY 2008 Security Management Accomplishments:

The Security Management section was not established in FY 2008; as such, it does not have accomplishments for FY 2008.

FY 2009 Security Management Planned Accomplishments:

The Security Management section was not established in FY 2009; as such, it does not have accomplishments for FY 2009.

FY 2010 Security Management Planned Accomplishments:

- Monitor implementation of Federal cybersecurity policies by Federal partners, providing coordination, guidance, and tracking the progress in implementation of information security policies. This will creating an environment of improved information security and awareness pertaining to the protection of federal information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction.
- Identify five key best practices that can be shared across the Federal enterprise to aid in the interpretation and implementation of regulations in collaboration with the National Institute for Standards and Technology.
- Assess the viability of a government-off-the-shelf Cyber Security Vulnerability Assessment tool to determine if it is feasible to distribute from a Federal enterprise standpoint as a common standardized tool that will minimize/eliminate the need for each Federal partner to develop or procure its own duplicative capability.

Network Security Deployment Branch

\$ thousands	Activity	FY 2009			FY 2010			Change

The Network Security Deployment branch leads the development and performance of cybersecurity technologies to counter national cyber threats and apply effective risk mitigation strategies to detect and threats in support of the Comprehensive National Cybersecurity Initiative. Collaborating with public and private industry partners, it provides the technological innovation and development that promotes the overall effectiveness of the cybersecurity effort.

Under National Cyber Security Division authorities, the Network Security Deployment branch is responsible for the development, acquisition, deployment, and support required for the Department’s segment of the Comprehensive National Cybersecurity Initiative. It executes this responsibility through the National Cybersecurity Protection System, which is an integrated intrusion detection system that

encompasses the hardware, software, and other components being procured specifically to support the Department's Comprehensive National Cybersecurity Initiative mission.

The National Cybersecurity Protection System is providing intrusion detection and protection capabilities through three discrete increments: Block 1, Block 2, and Block 3. These blocks include the current state, or Block 1, and three follow-on end-to-end system upgrades, including Block 2 through Block 3. Details are as follows:

- Block 1 was deployed at thirty-one sites between 2003 and 2008 and reflects the "as is," or current, state of the National Cybersecurity Protection System. Its capabilities include flow collection at Federal partner site, centralized data storage, visualization, correlation, knowledgebase, flow analysis tools, and contextual data feeds.
- Block 2 will be deployed in four phases at up to a total of 100 sites¹ from the year 2008 to the year 2012. Block 2 includes capability improvements provided via Block 1.0 system upgrades. Block 2 includes three parts: Blocks 2.0, 2.1, and 2.2 that will provide updated visualization and correlation tools and other updated capabilities based on Federal partner-gathered data sets.
 - Block 2.0 includes flow collection and intrusion detection system at federal partner sites, centralized data storage, visualization, correlation, knowledge base/management, flow analysis, intrusion detection system tools, contextual data feeds, and a prototype environment.
 - Block 2.1 includes increased capabilities in event detection and management including data collection, correlation, analysis, and visualization.
 - Block 2.2 includes increased functionality including information sharing environment across multiple agencies. Also includes establishing agreements on the nature of information to be shared via Service Level Agreements/Memoranda of Understanding actions that are needed for collaboration.
 - Block 3 includes classified capability improvements. Its architecture and deployment are completely separate from Blocks 1 and 2. Its capabilities are committed to implementing the Comprehensive National Cybersecurity Initiative. The planned activities under this section can be provided via classified channels.

With enhanced capabilities, Network Security Deployment will be able to implement improvements within the National Cybersecurity Protection System. The end-to-end system upgrades of each block will be deployed in four phases that will add flow collection and intrusion detection system at agency sites, intrusion detection system analysis tools, and a prototype environment. Phase I involves deployment at one Department. Phase II includes plans to deploy systems initially five, and later up to eighty-nine sites. Phase III involves one to five NETWORKX installations, and Phase IV involves all remaining installations.

The National Cybersecurity Protection System helps protect Federal civilian government information technology enterprises through the analysis of network flow information from Federal partners. It provides a high-level perspective from which to observe potential malicious activity in Federal partners' computer network traffic by providing capabilities that support automated processes to collect, correlate, analyze, and share cybersecurity information across Federal government computer networks.

¹ Deployments may change as the NETWORKX environment matures. Federal partners may transition to manage services as opposed to deploying at Federal partner sites.

This will, in turn, provide the United States Computer Emergency Readiness Team and Federal partners with increased situational awareness.

Under National Cyber Security Division leadership, the National Cybersecurity Protection System will:

- Gain expanded near- and real-time situational awareness of current and future threats to the Nation's cyber infrastructure. In particular, it will result in new abilities to identify new threat vectors and other priority areas of concern, including analysis, aggregation, correlation, visualization, and an aggregate intrusion detection system with flow data monitoring.
- Integrate technologies and establish enhanced procedures to expand and automate information sharing on critical cyber incidents for all stakeholders in the Federal civilian government. The enhanced data sharing between Federal partners and National Cyber Security Division provides an advanced cyber view and analysis of the Federal government's critical cyber networks.
- Leverage technology investments in order to accommodate on-site support for multiple Federal government agencies simultaneously. In addition, the enhancements will facilitate precise escalation processes, enable a more effective resource allocation in operational response, prioritize alert monitoring, and create a more rapid standardization incident reporting and alerts.
- Increase its capability to enable the United States Computer Emergency Readiness Team analysts to monitor government agencies' networks, improve network security, increase the resiliency of critical electronically delivered government services, and help enhance the survivability of the internet.

Network Security Deployment, in conjunction with United States Computer Emergency Readiness Team analysts and Federal Network Security compliance assessment teams, will increase operational monitoring and situational awareness of the .gov space, secure network transport of data, centralize data center storage and aggregation, implement a comprehensive and direct metadata research capability, provide enhanced capabilities for micro agencies, and ensure the long-term prevention of attacks against the Federal enterprise by assisting in implementation of information systems security policies and guidelines.

FY 2008 Network Security Deployment Accomplishments:

- Deployed sixty-six Block 1.0 Flow Data Sensors to thirty-one sites in order to provide initial detection capabilities of threats to Federal Department and Agencies.
- Transitioned Block 1.0 to sustainment to ensure capabilities are maintained at the prescribed quality of service needed to ensure detection.
- Developed, tested and deployed flow collection capability.
- Incorporated centralized data storage to support monitoring and analyzing of information which aided in coordinated threat management and response to cyber attacks. The capability for centralized data storage supported information visualization, correlation, and knowledge management across Department and partner sites.
- Completed Block 2.0 deployment to one DHS site in order to validate that the capability/technology is stable enough for enterprise deployment.
- Piloted intrusion detection capability and automated analyst notification.
- Conducted system requirements analysis, trade studies, and proof of concept for the Security Information and Event Management, which provided the National Cybersecurity Protection System with disparate data source event extraction, data normalization, automatic correlation analysis, intelligent event monitoring, and served as an automated enabler to National Cybersecurity Protection System to maintain actionable intelligence.

FY 2009 Network Security Deployment Planned Accomplishments:

- Perform Operations and Maintenance, as required including new security patch management, hardware and software upgrades, and other actions needed to support improved communication.
- Attain Initial Operating Capability at Department level and complete National Cyber Security Protection System Block 2 deployments to five additional Departments/Agencies.
- Provide an initial intrusion detection capability for an expanded set of Departments/Agencies.
- Complete deployments to the awarded NETWORKX Vendors' Trusted Internet Connection locations, which will expand intrusion detection capability to protect future Departments/Agencies that leverage General Services Administration NETWORKX Managed Trusted Internet Protocol Service Trusted Internet Connection services.
- Provide automated near real-time notification of detected intrusion events.
- Stand up a redundant, warm site data center to increase the availability and reliability of the detection and correlation capabilities.
- Establish a Continuity of Operations facility for the United States Computer Emergency Readiness Team Operations to increase the availability and reliability of the analytical services provided to the Federal .gov.
- Baseline the Block 2.0 engineering and programmatic in preparation for entering the Obtain/Deploy/Full Rate Production phase.
- Design, test, and deploy initial Security Information and Event Management and correlation capability.
- Incorporate automated aggregation, data correlation, and visualization of information including sensor data collection, analytics, processing, and action.
- Procure and begin installation of the central Block 2.1 hardware and software at the Services and Operations Center resulting in a decreased analyst workload through automation of data correlation and analysis.
- Aggregate and correlate data feeds from Blocks 1.0 and 2.0 and up to four industry data feeds to provide analysts a more robust capability for targeting threats based on vulnerabilities identified from the National Cybersecurity Protection System inherent sensors and industry data.
- Develop Service Level and Memorandum of Agreements among partners for information sharing and collaboration environment.

FY 2010 Network Security Deployment Planned Accomplishments:

- Reduce potential alerts pool by 70 percent, automatically filtering out false positives, increasing likelihood analysts are examining and mitigating true incidents.
- Increase the ability to aggregate and correlate identified events at deployed locations to 80 percent of events aggregated and correlated daily.
- Perform Operations and Maintenance while phasing out on Block 1.0 equipment as Block 2.0 installations are completed.
- Deploy Block 2.0 data flow collection and intrusion detection system at 16 federal sites.
- Block 2.0 baseline system enhanced to include the following: centralized data storage, visualization, correlation, knowledge base/management, flow analysis and intrusion detection system tools, contextual data feeds, and a prototype environment.
- Block 2.1 baseline system enhanced to increased capabilities in event detection and management including data collection, correlation, analysis, and visualization.
- Block 2.2 baseline system enhanced to include at minimum information sharing environment capability.

- Incorporate interoperable information sharing environment across multiple departments/agencies and data centers to support Continuity of Operations.

Global Cyber Security Management Branch

\$ thousands	Activity	FY 2009			FY 2010			Change		
		FTE	FTP	Enacted	FTE	FTP	Request	FTE	FTP	\$

	<i>Training & Education</i>			\$6,069			\$6,809			\$740
	<i>Supply Chain Risk Management</i>			\$4,582			\$4,463			-\$119
	Program Costs			\$16,776			\$17,219			\$443
Total		11	16	\$18,279	18	22	\$19,792	7	6	\$1,513

Global Cyber Security Management promotes cybersecurity by developing and promulgating sound practices for software developers, information technology security professionals, and other critical infrastructure and key resources stakeholders.

Global Cyber Security Management is organized into four components: Software Assurance, Standards, Best Practices, and Research and Development Coordination, Cyber Education, and Supply Chain Risk Management.

Software Assurance

Global Cyber Security Management seeks to improve software development and acquisition processes by way of forums, working groups, and best practices collaborations. The Software Assurance program reduces software vulnerabilities, minimizes exploitation, and addresses means to improve capabilities that routinely develop and deploy trustworthy software products, enabling more resilient assets within the cyber critical infrastructure.

FY 2008 Software Assurance Accomplishments:

- Updated the “Build Security In” web portal consistent with stakeholder needs in software assurance sound practices for development, acquisition, and sustainment.
- Updated the Software Assurance Acquisition Guide to include due-diligence questionnaires, sample statements of work, templates for acquisition language, procurement and outsourcing, criteria for evaluating capabilities of software suppliers, and began development of a course curriculum based on the Software Assurance Acquisition Guide.
- Updated the Software Assurance Common Body of Knowledge with awareness materials and frequently asked questions guide to inform and educate other Federal agencies, private industry, academia, and international entities.
- Collaborated with the National Institute for Standards and Technology to provide final draft of a base-line source code security analysis tool specifications document and a test plan covering capabilities, weaknesses, and false positive rate.

FY 2009 Software Assurance Planned Accomplishments:

- Update the Software Assurance Community Resources and Information Clearinghouse, “Build Security In” web sites, and online resources consistent with stakeholder needs in software assurance sound practices for development, acquisition, and sustainment.

- Conduct semi-annual Software Assurance forums for other Federal agencies, private industry, academia, and international entities to facilitate the ongoing collaboration to identify methods for improving processes and practices throughout the software development lifecycle.
- Host Software Assurance Working Groups to advance focused portfolio efforts.
- Collaborate with the National Institute for Standards and Technology to further develop final base-line source code security analysis tool specification document and a test plan document, Software Assurance Metrics and Tool Evaluation Reference Dataset test suite, and Web Application Scanner Tool Functional Specifications test suite.
- Collaborate with the National Institute for Standards and Technology to provide Test Case Generator, which will generate thousands of small test programs embodying the weaknesses described in Object Management Group's *Semantics of Business Vocabulary and Business Rules*.

FY 2010 Software Assurance Planned Accomplishments:

- Collaborate with the National Institute of Standards and Technology and tool vendors to create standards and certification mechanisms from which tools can be qualified for software security verification.
- Leverage international standards efforts including those of the Institute of Electrical and Electronics Engineers, Inc., the International Organization for Standardization/International Electrotechnical Commission and in the Software Assurance Program's Working Groups to create deliverables that seek to modify national and international standards that will better address software assurance needs.
- Participate in the Institute of Electrical and Electronics Engineers, Inc. Computer Society and the International Organization for Standardization and International Electrotechnical Commission Joint Technology Council "Software and Systems Engineering" Standards Committees, and contribute to efforts to publish a systems and software assurance standard that could be used to communicate claims about the safety, security, and dependability of software products.
- Conduct semi-annual Software Assurance forums for other Federal agencies, private industry, academia, and international entities to facilitate the ongoing collaboration to identify methods for improving processes and practices throughout the software acquisition and development lifecycles.
- Host Software Assurance Working Groups to advance focused portfolio efforts.
- Facilitate the promulgation, adoption, and enhancement of common indexing and reporting capabilities for malware, exploitable software vulnerabilities, and common attacks which target software by providing standardized schema for naming, indexing, describing, and cataloging. This will support daily update of capabilities which enable the automation, use and evolution of these capabilities within the IT security community.
- Provide criteria for evaluating capabilities of software suppliers, and in collaboration with the Defense Acquisition University complete development of a course curriculum based on the Software Assurance Acquisition Guide that began in FY 2008.
- Provide a repository and on-line resources of Software Assurance material suitable for use in education and training.
- Provide Software Assurance models and outlines to integrate Software Assurance in graduate and undergraduate education along with training through coordination with academia and training and certification organizations in support of Cyber Education and Training.

- Provide Software Assurance outreach through presentations and articles in professional journals, pocket guides, and handouts based on Software Assurance documents for development, acquisition, testing, measurement, and education.

Standards, Best Practices, and Research and Development Coordination

Standards, Best Practices, and Research and Development Coordination promotes sound practices and standards that improve cybersecurity. It sponsors and collaborates with numerous programs, committees, and working groups that seek to improve standardization of information across both public and private industry. Standards, Best Practices, and Research and Development Coordination helps support Federal partners by providing them with cybersecurity research and development requirements to support their missions

Through sponsorship of the Common Vulnerabilities and Exposures and Open Vulnerability and Assessment Language program, Standards, Best Practices, and Research and Development Coordination works to standardize cyber vulnerability nomenclatures. The standardization makes it possible to respond to vulnerabilities more efficiently as information is correlated across vendor products. Standards, Best Practices, and Research and Development Coordination also sponsors the National Institute of Standards and Technology Security Compliance Automation Protocol program, which allows stakeholders to use commercial-off-the-shelf tools to check and map the security status and controls of their systems.

Standards, Best Practices, and Research and Development Coordination collaborates with the National Institute of Standards and Technology on the National Vulnerabilities Database program. The National Vulnerabilities Database program is built on the outputs of the Common Vulnerabilities and Exposures program. It provides stakeholders a comprehensive resource of publicly available United States Government vulnerability resources including industry-specific information. It also collaborates with the Department's Science and Technology Directorate to coordinate cybersecurity research and development priorities conducted through the Department's various programs. Through this collaboration, Standards, Best Practices, and Research and Development Coordination is able to participate in research and development program topic selections, proposal evaluations, vendor selection, and research and development program technical reviews.

FY 2008 Standards, Best Practices, and Research and Development Coordination Accomplishments:

- Promoted common naming conventions for vulnerabilities through sponsorship of the Common Vulnerabilities and Exposures program and Open Vulnerability and Assessment Language to improve standardization of information across security advisories, tools, databases, and services.
- In collaboration with the National Institute of Standardization and Technology, maintained the National Vulnerability Database and the Security Content Automation Protocol, which improves access to standardized vulnerability information and to allow organizations to use commercial-off-the-tools to automatically check their security and map to technical compliance requirements.
- Identified requirements in direct support of the Department's research and development goals and objectives.
- Provided technical expertise to cybersecurity standards committees and to the Institute for Information Infrastructure Protection Consortium Grant Program, in order to promote research and development cyber-related topics of interest to the Department.

- Facilitated updates to the Information Technology Sector Specific Plan, particularly the research and development section.

FY 2009 Standards, Best Practices, and Research and Development Coordination Planned

Accomplishments:

- Share common naming conventions for vulnerabilities through further sponsorship of the Common Vulnerabilities and Exposures program and Open Vulnerability and Assessment Language to improve standardization of information across security advisories, tools, databases, and services.
- Participate in and provide technical expertise to various cybersecurity standards committees including the Department's Standards Committee, the Committee on National Security Systems, the International Organization of Standardization security standards committees, and other associated national research and development standards committees.
- In collaboration with Federal partners, private industries, and international stakeholders, conduct workshops and conferences on innovative cybersecurity standards and requirements topics, as well as best practices.

FY 2010 Standards, Best Practices, and Research and Development Coordination Planned

Accomplishments:

- Develop technologies for the automated analysis of software and systems for exploitable vulnerabilities and malicious code.
- Develop metrics that will be used for economically-informed, risk-based cyber security decision making.
- Develop configuration settings, guidance and tools to reduce exposure to vulnerabilities.
- Participate in appropriate standards committees to ensure the development and promotion of cyber security standards.
- Conduct approximately five cyber security standards workshops that focus on emerging technologies, public forums, and current events occurring throughout the public and private sector.
- Develop automated reconfiguration tools that may be used to recover from attacks.
- Develop standards and policies for the creation, use, and maintenance of identities and privileged information.

Cyber Education

Cyber Education proactively addresses cybersecurity workforce and professional development issues. Through strategic workforce development programs, it facilitates the development of trained professionals to support the Nation's cybersecurity needs, thus preparing the information technology workforce to meet current and future cybersecurity challenges. Cyber Education focuses resources on improving cybersecurity education, increasing the efficiency of existing cybersecurity training programs, and promoting cybersecurity workforce development.

Cyber Education co-sponsors numerous cybersecurity and information assurance education programs, including collaboration with the National Security Agency and the National Science Foundation to sponsor the National Centers of Academic Excellence in Information Assurance Education program and the Federal Cyber Service: Scholarship for Service program, respectively.

Cyber Education also collaborates with stakeholders to promote innovative training programs and best practices to facilitate the availability of qualified professionals in the pipeline for the future Federal cybersecurity workforce.

In accordance with the Comprehensive National Cybersecurity Initiative, the Expand Cyber Education Initiative addressed the need to build a skilled cyber workforce for today's and tomorrow's Federal Government. The Expand Cyber Education Initiative establishes the framework for shaping and delivering a cyber-capable workforce, with a focus on those requiring the specialized skills needed to protect, deter, and respond to threats to United States Government networks. In turn, these priority initiatives will be informed by, and will inform, partnerships with advisory bodies, public, private, academic and other-government circles. These partnerships will form the foundations needed to prepare a skilled workforce for effective performance of cyber missions and promote a continuing pipeline of skilled individuals for future Federal Government employment. After in-depth reviews of cyber-related reports and studies, a high-level survey of current Federal government cyber education opportunities, and interviews with government and non-government actors, the Expand Cyber Education Senior Steering Committee identified three compelling drivers for change without which the proposed strategy will not work.

The drivers for change have been identified as the following:

- Federal Cyber Workforce Development must keep pace with the speed of technological change;
- The Federal government needs a systematic approach for determining the ability of United States personnel to secure and operate safely in cyberspace; and
- A larger pipeline from which to hire cyber workers is required to meet the needs of the Federal government.

FY 2008 Cyber Education Accomplishments:

- Collaborated with the National Science Foundation, the National Security Agency, colleges, and universities to strengthen and expand academic programs aimed at improving information assurance in higher education institutions through the National Centers of Academic Excellence in Information Assurance Education and Centers of Academic Excellence-Research programs.
- Sponsored the National Centers of Academic Excellence representatives' annual meeting and participated in the annual review process to accredit institutions under both the National Centers of Academic Excellence and Centers of Academic Excellence-Research programs.
- Co-sponsored the annual National Collegiate Cyber Defense Competition and encouraged participation of the National Centers of Academic Excellence-accredited programs.
- Co-sponsored with the National Science Foundation, the Office of Personnel Management, and the Federal Chief Information Officer Council, the annual Scholarship for Service Symposium and Job Fair to increase placement of program graduates in Federal positions and internships.
- Conducted agency briefings on the Federal Cyber Service: Scholarship for Service program in order to increase awareness of the program throughout the Federal government to facilitate improved student placement rates.
- Through workshops and professional conferences, implemented mass marketing and messaging campaign, promoted cross-industry acceptance and adoption of the Information Technology Security Essential Body of Knowledge, and refined its content to increase alignment with other Information Technology security industry initiatives.
- Led efforts to develop a state government information security workforce development model based on the Essential Body of Knowledge in collaboration with Chief Information Officers from six states.

- Supported a working group of digital forensic subject-matter experts, Federal Agents and members of academia to move forward in application to the Forensic Science Education Programs Accreditation Commission for accreditation of Bachelor's and Master's degree accreditation.
- Developed a draft program management plan to strengthen and expand cyber Federal-wide education and training programs including baseline results, desired end state and requirements from other Comprehensive National Cybersecurity Initiative initiatives.
- Performed a high-level baseline of current cyber educational capabilities of civilian and military agencies.
- Developed a draft report identifying a strategy and recommendations to prioritize and redirect current educational efforts to build a skilled cyber workforce.
- Drafted a report on findings to improve the Federal Cyber Service: Scholarship for Service and the Information Assurance Scholarship Program.

FY 2009 Cyber Education Planned Accomplishments:

- Continued sponsorship of the National Centers of Academic Excellence in Information Assurance Education program including annual program reviews, annual meeting, the Federal Cyber Service: Scholarship for Service program and annual Job Fair, the Colloquium for Information Systems Security Educators, and the National Collegiate Cyber Defense Competition.
- Further collaborate with the National Science Foundation, the National Security Agency, colleges, and universities to strengthen and expand training and academic programs aimed at improving cybersecurity in higher education institutions, including the development of a framework to recognized community colleges in conjunction with the National Centers of Academic Excellence in Information Assurance Education program.
- Coordinate and vet Information Technology Security Essential Body of Knowledge through sector training and certification vendors and academia to begin collaborative development of information security educational and training standards with all external stakeholders.
- Complete development of a State and local government model for information technology security workforce development based on the Information Technology Security Essential Body of Knowledge framework in order to enhance development of information security core competences in State and local government entities.
- Expanded cyber curriculum and increased student capacity in Department of Defense specialized skills training for National Security Agency and Department of Defense Service Cryptologic Elements:
 - Initiated transition of specialized CNO training from an operations organization to the national Cryptologic School;
 - The Naval Air Station Pensacola/Corry Station began a pilot of an expanded 24-week program in Computer Network Exploitation and Computer Network Defense, intended to replace the current 7-week program.
- Expanded partnerships for more effective delivery of cyber skills training:
 - Established relationship with the Network of Transformation Chairs resident at Department of Defense Service Academies and Schools to leverage expertise and integrate cyber training concepts across the Federal cyber education community of interest.
 - Researched the use of next generation training methodologies to accelerate the learning process for cyber skills (gaming technologies and exercises), and connected with several

Federal Virtual Worlds communities to facilitate partnerships with educators in early stages of implementing the use of gaming technologies and capabilities.

- Lead a competency working group to synchronize skills requirements into a core set of cyber skills to build the foundation for specialized skill communities and promote coherency through skills assessment.
- Improve the availability of learning activities in role-based, specialized skills and increase the throughput of students in cyber-related programs.
- Employ the next generation of training methodologies (games, interactive simulations, formal exercises, on-line learning opportunities) to improve the learning process.
- Support career development through research and development experience, in partnership with other Comprehensive National Cybersecurity Initiative working groups.

FY 2010 Cyber Education Planned Accomplishments:

- Sponsor the National Centers of Academic Excellence representatives' annual meeting, the Federal Cyber Service Scholarship for Service symposium/job fair, the Federal Information Systems Security Educators Association Conference, and the National Collegiate Cyber Defense Competition.
- Complete work started in FY 2009 to memorialize and vet an initial draft of State and local government model for Information Technology security workforce development based on the Information Technology Security Essential Body of Knowledge framework throughout State and local partner governments' planning and programming competencies to facilitate adoption and implementation of the Essential Body of Knowledge State/local government model for information security workforce development.
- Furthering analysis and support to the Expand Cyber Education Initiative under the Comprehensive National Cybersecurity Initiative.

Supply Chain Risk Management

Under the Comprehensive National Cybersecurity Initiative, the Supply Chain Risk Management section works collaboratively with the Department of Defense to develop a method to provide the Federal enterprise the ability to manage and mitigate global information and communications technology supply chain risks.

The Supply Chain Risk Management section provides a set of comprehensive resources that can be used to appropriately manage supply chain risk across the lifecycle of networks, systems, and components. In order to achieve this, the Supply Chain Risk Management section brings together disparate policy, thus providing Federal partners with the necessary guidance to improve their protective posture from vulnerabilities arising out of the information and communications technology supply chain.

The Supply Chain Risk Management section conducts its activities through a principal interagency steering committee and three interagency working groups. The Senior Steering Group coordinates the analysis and recommendations of the three working groups into the Comprehensive National Cybersecurity Initiative. The Threat Information Sharing Working Group recommends processes for sharing vendor threat analysis across the Federal enterprise. The Acquisition Policy and Legal Analysis Working Group recommends enhancement strategies for Federal acquisition policy to address supply chain risk. These recommendations are based on legal evaluations of the application of intelligence community supply chain risk management process to non-intelligence community Federal partners. The

Lifecycle Processes and Standards Working Group recommends criteria for identifying Federal Government systems and networks that would benefit from enhanced supply chain risk management efforts and recommending approaches for enhancing Federal technical expertise, guidance, and standards to manage supply chain risks.

FY 2008 Supply Chain Risk Management Accomplishments:

- Developed an initial Supply Chain Risk Management Strategy and Implementation Plan, which included a legal and policy evaluation of the potential application of all-source counterintelligence risk assessments, an intelligence community all-source counterintelligence risk assessment Concept of Operations to include threat information, vulnerability analyses, technical mitigations, and criteria to identify high priority systems.

FY 2009 Supply Chain Risk Management Planned Accomplishments:

- Implement robust Supply Chain Risk Management projects to establish a body of best practices, guidance, and lessons learned across the Federal enterprise, thus identifying available Federal guidance and industry best practices sufficient for successful and consistent applications.
- Execute pilot Supply Chain Risk Management programs in the civilian government and provide training opportunities to civilian agencies participating in the pilot programs, which involve streamlining and enhancing the execution of Supply Chain Risk Management for civilian agency pilot programs.

FY 2010 Supply Chain Risk Management Planned Accomplishments:

- Develop a training program for key Federal partners in order to provide security systems professionals with a Supply Chain Risk Management capability.
- Review results of Supply Chain Risk Management pilots to analyze potential application of best practices to other departments and agencies.
- Identify Supply Chain Resource Management requirements for National Cybersecurity Protection System integration.

Critical Infrastructure Cyber Protection and Awareness Branch

\$ thousands	Activity	FY 2009			FY 2010			Change		
		FTE	FTP	Enacted	FTE	FTP	Request	FTE	FTP	\$
Salaries & Benefits		17	18	\$2,317	24	33	\$3,425	7	15	\$1,108
	<i>Outreach and Awareness</i>			\$4,424			\$4,245			-\$179
	<i>Control Systems Security</i>			\$22,000			\$27,563			\$5,563
	<i>CIP - Cyber Security</i>			\$5,731			\$8,552			\$2,821
	<i>Cyber Exercises</i>			\$11,595			\$9,976			-\$1,619
	Program Costs			\$43,750			\$50,336			\$6,586
	Total	17	18	\$46,067	24	33	\$53,761	7	15	\$7,694

The Critical Infrastructure Cyber Protection and Awareness branch collaborates with the public and private sectors to assess and mitigate risk to the Nation’s cyber critical infrastructure and key resources. The Critical Infrastructure Cyber Protection and Awareness branch is organized into four sections: Control Systems Security, Critical Infrastructure Protection-Cyber Security, and Cyber Exercises, and Outreach and Awareness.

Control Systems Security

Control Systems Security focuses on reducing the cyber risk to the Nation's critical infrastructure and key resources control systems. It focuses on identification, analysis, and remediation of control systems vulnerabilities. The program also develops partnerships and provides guidance through programs aimed at reducing the likelihood of success and severity of impact of a cyber attack against the Nation's industrial control systems.

Control Systems Security also coordinates with public and private partners to increase capabilities within critical infrastructure and key resources stakeholders to improve vulnerability assessment and mitigation, information dissemination, awareness, training, and tools in the area of control systems security.

FY 2008 Control Systems Security Accomplishments:

- Established and participated in a Federal government-wide Federal Control Systems Working Group to collaborate on creating a control systems strategy to be applied across the Federal enterprise.
- Developed, tested, and deployed a control system cyber security self-assessment tool for Federal government and private industries to include scenarios that illustrate little known vulnerabilities and a standardized catalog of control systems procurement specifications that can be used by any agency or business to ensure that security is built into systems before they are purchased.
- Worked with the United States Computer Emergency Readiness Team to establish a national capability to receive, manage, and respond to incidents and vulnerabilities that affect the Nation's control systems.
- Conducted outreach activities and developed training videos, classes, workshops, and conferences to educate the control systems community on the risk of cyber attacks against control system and mitigation solutions.

FY 2009 Control Systems Security Planned Accomplishments:

- Enhance the control systems testing environment by evaluating additional technologies, such as wireless connectivity.
- Expand control systems malware analysis within the United States Computer Emergency Readiness Team by establishing a malware test bed in conjunction with the existing laboratory facilities, and support it by helping to secure control systems through the production and dissemination of timely situational awareness information about control systems security and through the identification, analysis, and reduction of control system threats and vulnerabilities.
- Recapitalize the existing infrastructure of the control systems test bed in order to conduct scenario verification of control systems to capture the root cause of events and identify and disclose to public and private partners' protective measures and potential mitigation techniques.
- Implement the Federal Coordination Strategy for Securing Control Systems and the Control Systems Security Protection Framework as the central framework for coordinating Federal activities with State and local government, private industries, international entities, and control systems vendors.
- Establish the Industrial Control Systems Joint Working Group and use the forum as the primary outreach mechanism, and consequently expand the development, vetting, and distribution of control systems cyber security best practices, standards, and guidelines.
- In coordination with the appropriate Information Sharing and Analysis Center, identify key vulnerabilities and mitigation strategies to mitigate both previously and newly discovered high-priority weaknesses, and consequently provide control systems vendors with important control

systems security information that can be used to patch or eliminate security holes within products.

- Conduct vulnerability assessments on six legacy or commercial-off-the-shelf control systems components, operating systems, or networks to provide public and private partners with critical information on control security weaknesses, providing vendors with important control systems security information they can use to patch or eliminate security holes within their products, resulting in more secure products and applications.

FY 2010 Control Systems Security Planned Accomplishments:

- Enhance risk and vulnerability assessments on commercial-off-the-shelf control systems components, operating systems, or networks to provide public and private partners with critical information on control security weaknesses, providing vendors with important control systems security information they can use to patch or eliminate security holes within their products, resulting in more secure products and applications.
- In accordance with the Control Systems Security Program Strategy, update and maintain the Federal Coordination Strategy for Securing Control Systems and the Control Systems Security Protection Framework as the central framework for coordinating Federal activities with State and local government, private industries, international entities, and control systems vendors.
- Create and publish a report on next generation control systems security research and development requirements and initiatives for the Department's Science and Technology Directorate.
- Expand the control systems content of the United States Computer Emergency Readiness Team's website, promoting it as a central repository for control systems cyber security information, control system vulnerability reporting, and cross-sector control systems information sharing for public and private partners.
- Review and widely distribute the Control Systems Security Self-Assessment Tool across the control systems community, including public and private partners to further the situation awareness information on the cyber status and health of critical infrastructure and key resources stakeholders' control systems.

Critical Infrastructure Protection-Cyber Security

Critical Infrastructure Protection-Cyber Security strengthens the Nation's preparedness through public and private partnerships that work to improve the security of the Information Technology Sector. The Critical Infrastructure Protection-Cyber Security provides assistance across all critical infrastructure and key resources sectors for cybersecurity.

Critical Infrastructure Protection-Cyber Security works with NPPD/Infrastructure Protection to develop and implement the National Infrastructure Protection Plan Information Technology Sector Specific Plan. It also assists other Sector Specific Agencies in assessing and mitigating cyber risks. As part of its work on the National Infrastructure Protection Plan, Critical Infrastructure Protection-Cyber Security provides support to the National Infrastructure Protection Plan Program Management Office and the National Critical Infrastructure and Key Resources Annual Report. Working on these projects with Sector Specific Agencies permits Critical Infrastructure Protection-Cyber Security the opportunity to enhance cybersecurity in all critical infrastructure and key resources sectors via the cross-sector perspectives and activities on common vulnerabilities and protective measures, interdependencies, and risk assessment methodologies and mitigation strategies.

FY 2008 Critical Infrastructure Protection-Cyber Security Accomplishments:

- Developed a risk assessment methodology for the IT Sector that identifies and assesses vulnerabilities, threats, and consequences to the critical functions of the sector from cyber, physical, manmade and natural threats.
- Developed the automated Cyber Security Vulnerability Assessment tool for use by critical infrastructure and key resources stakeholders.
- Convened a threat product working group with Homeland Infrastructure Threat and Risk Analysis Center and other cross-sector security partners to ensure the incorporation of cybersecurity expertise into products and briefings in order to facilitate the dissemination of high-quality analytical and threat warning products to critical infrastructure and key resources stakeholders.
- Creating and implementing the Information Technology Sector Specific Plan and to address other critical infrastructure and key resources protection initiatives with Information Technology Government and Sector Coordinating Councils.
- Created a Cross-Sector Cyber Security Working Group to focus on assessing and mitigating risk to the networks of all eighteen critical infrastructure and key resources sectors. The Group addressed special projects, shared information, recommended practices and took on projects that included the review of cyber content in the 2007 Sector Specific Plan and next steps for the Internet Disruption Working Group.

FY 2009 Critical Infrastructure Protection-Cyber Security Planned Accomplishments:

- Conduct the Information Technology Sector baseline risk assessment.
- Distribute and implement the automated cybersecurity vulnerability assessment for use by critical infrastructure and key resources stakeholders and conduct on-site assessments in coordination with the PSA program.
- Convene workshop and follow-up meetings on research and development within the information technology sector and share results with public and private sector security partners invested in research and development.
- Lead efforts through the Cross Sector Cyber Security Working Group to enhance information sharing, metrics for success across the 18 sectors, and identify incentives for cyber security, as appropriate.
- Participate in the Committee on Foreign Investment in the United States Interagency Working Group process to provide technical review and assistance on cybersecurity and/or information technology-related cases.

FY 2010 Critical Infrastructure Protection-Cyber Security Planned Accomplishments:

- In close collaboration with Information Technology Government Coordinating Council and Information Technology Sector Coordinating Council, review and update the Information Technology Sector Specific Plan to reflect changes in the information technology and cybersecurity landscape.
- Implement long-term actions as outlined in the Information Technology Sector Specific Plan to manage risk, identify protective programs, enhance information sharing, set the pace for the research and development agenda of the information technology sector, and track its progress.
- Contribute to the development of cybersecurity risk assessment methodologies including provision of cybersecurity content for risk and vulnerability assessment methodologies developed by the Department to assist critical infrastructure and key resources sectors with implementation.

- Develop cybersecurity guidance for the Department's grants programs that promote efforts to enhance the security of State and local governments, which in turn will aid in the development and implementation of State and local critical infrastructure and key resources cybersecurity protection plans.

Cyber Exercises

The Cyber Exercises section plans, coordinates, and conducts cyber-focused exercises that prepare and enhance incident operational capabilities for the Department and its Federal, State, local, regional, international, and private sector partners. Working collaboratively with stakeholders, the Cyber Exercises section develops, designs, and executes cyber exercises that range from policy process exercises that facilitate cybersecurity operations to network simulations that test command and control procedures, response mechanisms, and cross-sector coordination.

The Cyber Exercises Program section manages the bi-annual Cyber Storm exercises series, which involves hundreds of cross-sector critical infrastructure and key resources participants. The construction of a national cyber exercise supports Federal partners and State and local governments in identifying gaps in cybersecurity processes and procedures, demonstrating interdependencies between response organizations and the information technology, and improving cyber preparedness for the delivery of critical government services. By providing an opportunity to strengthen cyber preparedness via active exercises, the Cyber Exercises section presents cyber critical infrastructure and key resources with the change to be an integral part of the Nation's cybersecurity mission and vision.

FY 2008 Cyber Exercises Accomplishments:

- Executed Cyber Storm II National Cyber Exercise including all planning and scenario development conferences and full after-action process and reports for Cyber Storm II.
- Sponsored, planned, and coordinated appropriate cybersecurity scenario content in the Top Officials 4 Full-Scale Exercise conducted through the Cyber Working Group in close collaboration with the Office of Grants and Training.
- Coordinated with the Department's Science and Technology Directorate on the testing and deployment of the Exercise Modeling Tool, CyberSMART, and integrated the CyberSMART tool into the planning of the Massachusetts State Cyber Exercise.

FY 2009 Cyber Exercises Planned Accomplishments:

- Initiate the 18-to-24-month planning process for Cyber Storm III, currently planned for 2010, and integrate aspects of Comprehensive National Cyber Initiative into Cyber Storm III planning and development.
- Develop and deploy Cyber Exercise Technical Assistance and Cyber Exercise Support Program to bolster support and participation in cyber exercises with the full range of critical infrastructure partners, thus enhancing collective cyber security preparedness and identifying interdependencies in cyber preparedness and response.
- Publish, disseminate, and socialize the Cyber Storm II After-Action Report to further develop findings, identify areas for improvement, and formulate a roadmap based on the observations laid out in the Cyber Storm II After-Action Report.
- Begin Prototyping Cyber Exercise Range, which will provide the capability to execute technical level cyber exercises for the Federal government and State and local governments, providing the possibility of eventual expansion into private industries.

- Manage cooperative agreement with University of Texas at San Antonio Center for Infrastructure Assurance and Security to conduct State and local cyber security preparedness assessments and exercise activities.

FY 2010 Cyber Exercises Planned Accomplishments:

- Execute Cyber Storm III National Cyber Exercise and during exercise activities, test and validate Cyber Exercise Range, which will provide the capability to execute technical level cyber exercises for the Federal government and State and local governments, providing the possibility of eventual expansion into private industries.
- Include sponsorship and support of cyber exercises with State, local, regional, and private sector security partners as part of the Cyber Exercise Technical Assistance and Cyber Exercise Support program. Provide technical exercise assistance to the United States, Canada, Australia, New Zealand, and United Kingdom and continue execute an exercise plan to facilitate operational interaction with these nations and continue to work with the International Watch and Warning Network to integrate capabilities into future cyber exercise plans
- As necessary, support National Cyber Response Coordination Group efforts to conduct tabletop and other exercises.

Outreach and Awareness

Outreach and Awareness promotes cybersecurity awareness among and within the general public and key communities, maintains relationships with governmental cybersecurity professionals to share information about cybersecurity initiatives, and develops partnerships to promote collaboration on cybersecurity issues. As part of its role, Outreach and Awareness works closely with other National Cyber Security Division programs to ensure that the public and key stakeholders are aware of the efforts and activities National Cyber Security Division conducts in support of cybersecurity.

Outreach and Awareness is organized into five functional areas:

- Public Affairs focuses on coordination and development of internal and external communications, including the development of messages that support the advancement of Department cybersecurity priorities, and coordinating the channels by which those messages are disseminated to stakeholders. This includes developing talking points and speeches for leadership, coordinating speaking engagements across the Division, and providing support for all public affairs needs, including media engagement.
- Cyber Security Awareness focuses on increasing awareness with small and medium sized businesses, educational institutions, home computer users, and the general public. It also aims to increase knowledge in government—at all levels—about the capabilities, and services that National Cyber Security Division provides.
- Stakeholder Engagement concentrates on building and maintaining information sharing relationships with both internal and external stakeholders (e.g., other Federal agencies, private industry, associations, State and local governments, international partners, etc.).
- International Affairs engages in a number of bilateral, regional, and multilateral relationships to build situational awareness, strengthen operational information sharing, improve incident response capabilities, contribute to cybersecurity capacity building efforts, and coordinate on strategic policy issues.

- Public Policy coordinates cybersecurity policy activities with both internal DHS components and external entities and stakeholders, such as the United States Congress, the Government Accountability Office, and the Office of the Inspector General. Specifically, the Public Policy Program collaborates with DHS and the National Cyber Security Division to: articulate Department cybersecurity policy positions; initiate and engage in information sharing activities within the Department and with external entities and stakeholders; and coordinate responses to cybersecurity policy activities.

FY 2008 Outreach and Awareness Accomplishments:

- Planned, organized, and implemented Departmental participation in the 2008 Rivest, Shamir, Adleman Security Conference to promote cybersecurity and the Department's cybersecurity priorities to over 18,000 information security professionals.
- Sponsored National Cyber Security Awareness Month to educate the American public about cybersecurity preparedness, resulting in over thirty outreach events throughout the month.
- Coordinated activities and messaging with the National Cyber Security Alliance to promote cybersecurity awareness to the general public, small and medium size enterprises, and education community.
- Collaborated with the Multi-State Information Sharing and Analysis Center to engage with state and local government cybersecurity representatives through participation in monthly and annual meetings, working groups on specific topics, and creation of deliverables.
- Held a workshop on the value of cybersecurity exercises at the bi-annual meeting of the Asia Pacific Economic Cooperation Telecommunications and Information Working Group, which includes government representatives from twenty-one member-economies.
- Contributed to the Meridian Programme Committee comprised of over ten nations to advance the work of the Meridian Process and Conference, a forum that seeks to bring together senior policy makers to collaborate on critical information infrastructure protection.
- Coordinated bilateral workshops, briefings, and meetings with officials from Australia, Canada, Sweden, the United Kingdom, Japan, Finland, New Zealand, Norway, Singapore, Israel, and Taiwan to advance information and collaboration sharing on cybersecurity issues of mutual concern.
- Advanced the collaborative work of the Usual 5, Australia, Canada, New Zealand, the United Kingdom, and the United States, which included finalization of a Terms of Reference.
- Spearheaded national public affairs campaign and VIP Visitor Program for the Department's Cyber Storm II Exercise.
- Designed and held the Cyber Storm II Observer Program for twenty-two representatives of International Watch and Warning Network, representing fifteen member-nations.
- Continued engagement in various multilateral forums in collaboration with the U.S. interagency to advance dialogue on cybersecurity and represent the National Cyber Security Division's equities to include the Organization for Economic Cooperation and Development, NATO, the Group of 8 High Tech Crime Sub-Group, the Inter-American Committee against Terrorism of the Organization of American States, the International Telecommunication Union, among others.
- Advance bilateral collaboration through international DHS engagements including the United States-United Kingdom Joint Contact Group and the Security and Prosperity Partnership of North America.

FY 2009 Outreach and Awareness Planned Accomplishments:

- Plan, organize, and implement Departmental participation in the 2009 Rivest, Shamir, Adleman Security Conference and sponsor the 2009 National Cyber Security Awareness Month.
- Coordinate activities and messaging with the National Cyber Security Alliance to promote cybersecurity awareness to the general public, small and medium size enterprises, and education community, to include the creation of a cyber volunteer education program, a K-12 baseline study on cyber education, and lessons plans for educators to promote cybersecurity education.
- Finalize and present report on the value of cybersecurity exercises to the Asia Pacific Economic Cooperation Telecommunications and Information Working Group.
- Lead the Meridian Programme Committee and undertake planning initiative in preparation to host the Meridian Conference in 2009.
- Initiate planning for Cyber Storm III with the fifteen member nations of the International Watch and Warning Network.
- Continue engagement in various multilateral forums in collaboration with the U.S. interagency to advance dialogue on cybersecurity and represent the National Cyber Security Division's equities to include the Asia Pacific Economic Cooperation Telecommunication and Information Working Group, the Organization for Economic Cooperation and Development, NATO, the Group of 8 High Tech Crime Sub-Group, the Inter-American Committee against Terrorism of the Organization of American States, and the International Telecommunication Union, among others.
- Further advance bilateral collaboration through international DHS engagements including the US-UK Joint Contact Group, the US-Germany Security Cooperation Group, and the Security and Prosperity Partnership of North America.
- Coordinate bilateral workshops, briefings, and meetings with officials from Australia, Canada, Sweden, the United Kingdom, Japan, New Zealand, France, Estonia, and others to advance information and collaboration sharing on cybersecurity issues of mutual concern.

FY 2010 Outreach and Awareness Planned Accomplishments:

- Plan, organize, and implement Departmental participation in the 2010 Rivest, Shamir, Adleman Security Conference and sponsor the 2010 National Cyber Security Awareness Month.
- Lead implementation of national public affairs campaign effort initiated in FY 2009 for the Department's Cyber Storm III Exercise.
- Host the biannual "Usual 5" meeting, to advance collaboration with a specific focus on planning for Cyber Storm III.
- Lead the Meridian Programme Committee and host the Meridian Conference in 2010 to bring together senior policymakers to collaborate on critical information infrastructure protection.
- Finalize and present report on cybersecurity awareness to the Asia Pacific Economic Cooperation Telecommunications and Information Working Group.
- Continue engagement in various multilateral forums in collaboration with the U.S. interagency to advance dialogue on cybersecurity and represent the National Cyber Security Division's equities to include the Asia Pacific Economic Cooperation Telecommunication and Information Working Group, the Organization for Economic Cooperation and Development, NATO, the Group of 8 High Tech Crime Sub-Group, the Inter-American Committee against Terrorism of the Organization of American States, and the International Telecommunication Union, among others.
- Continue previous year efforts to further advance bilateral collaboration through international DHS engagements including the United States-United Kingdom Joint Contact Group, the US-Germany Security Cooperation Group, and the Security and Prosperity Partnership of North America.

Plans, Programs, Policies and Administration

\$ thousands	FY 2009			FY 2010			Change		
	Activity	FTE	FTP	Enacted	FTE	FTP	Request	FTE	FTP
Salaries & Benefits	23	23	\$3,085	37	55	\$5,070	14	32	\$1,985
<i>Programs, Policy, Plans & Administration</i>			\$5,674			\$3,768			-\$1,906
<i>Facilities</i>			\$4,954			\$6,012			\$1,058
Program Costs			\$10,628			\$9,780			-\$848
Total	23	23	\$13,713	37	55	\$14,850	14	32	\$1,137

Plans, Programs, Policies and Administration is responsible for supporting the National Cyber Security Division leadership in setting direction to overall cybersecurity strategy and planning; in ensuring appropriate resources are available to support the mission; developing strategic implementation plans, including performance measures and milestones, focusing on the division's priorities, initiatives, and financial processes; and in preparing, justifying, and administering the National Cyber Security Division budget. Plans, Programs, Policies and Administration integrates resource management, human capital, facilities, performance management, and policy development and implementation into the broad array of issues addressed by National Cyber Security Division leadership.

It advises the development of national cybersecurity policy and acts as a liaison for: matters related to the Government Performance and Results Act; the implementation of the President's Management Agenda; the coordination of responses to audit groups, such as the Office of the Inspector General and the Government Accountability Office; and the development of performance measurement and vital information to justify five-year resource requests through the Future Years Homeland Security Program. Additionally, it provides comprehensive responses to Congressional Testimony and other inquiries, as well as informs the Department's internal and external stakeholders about cybersecurity issues and activities. It is responsible for security policy development and oversight and management of the overall security of the Department's information technology systems including the Mission Operating Environment, the National Cybersecurity Protection System and the US-CERT.gov portal.

Plans, Programs, Policies and Administration works to ensure that facilities and real estate profiles accommodate not only the normal office and cubicle requirements for unclassified staff operations, but also the highly specialized requirements supporting secure and classified cyber and communications operations. Interim and long-range plans for improving facilities, infrastructure and communications will permit the National Cyber Security Division to fully execute its responsibilities under the Comprehensive National Cybersecurity Initiative and protect the Nation's critical infrastructure and key resources.

FY 2008 Plans, Programs, Policies and Administration Accomplishments:

- Developed and implemented standard business functions to support human capital, planning, budgeting, and acquisition.
- Captured United States Computer Emergency Readiness Team operations facility requirements and prepared and presented one-time and recurring cost estimates required to cover the build-out of the United States Computer Emergency Readiness Team Watch Center.
- Prepared Concept of Operations to capture newly formulated operational directives.
- Prepared and submitted Statement of Objectives and Independent Government Cost Estimate for procurement processing.

- Prepared and packaged the Information Technology Acquisition Review documents for review and approval by the Department's Chief Information Officer.

FY 2009 Plans, Programs, Policies and Administration Planned Accomplishments:

- Conduct programmatic evaluation of cost, schedule, and performance activities relative to goals and objectives.
- Successfully move the United States Computer Emergency Readiness Team into new space without interruption to service or capability.
- Enhance the United States Computer Emergency Readiness Team's visualization and display capture capability to more effectively handle incidents and response.
- Provide compression and expansion options for key vendors and government staff in order to enhance information sharing.
- Develop and implement process improvements that reduce the time required to develop and process procurement requests.
- Develop and implement new acquisition Department Management Directive requirements for program planning.
- Work with Cybersecurity and Communications Budget and Finance Division to implement standardized budget policies and procedures.

FY 2010 Plans, Programs, Policies and Administration Planned Accomplishments:

- Prepare, with the DHS Chief Administrative Officer, a National Cyber Security Division Facility Blueprint Plan to guide facility short-term, interim, and long-term plans that address real estate, security and infrastructure issues.
- Work with the Cybersecurity and Communications and NPPD human capital leadership to improve the on-boarding of personnel and track all key events within the Department on-boarding cycle.
- Develop a viable Facility Management operation to include analysts, project managers, engineers, and management.
- Enhance internal National Cyber Security Division transparency and efficiency by the establishment of governance, protocols, and standard procedures.

PPA: PRIORITY TELECOMMUNICATIONS SERVICE

	Perm Pos	FTE	Amount
FY 2008 Actual	42	26	\$ 85,932
FY 2009 Enacted	40	40	\$ 58,740
2010 Adjustments-to-Base	1	1	\$ 3,033
2010 Current Services	41	41	\$ 61,773
2010 Program Change	0	0	\$ (5,000)
FY 2010 Request	41	41	\$ 56,773
Total Change 2009-2010	1	1	\$ (1,967)

* In FY 2008, \$3,831,000 and 1 FTE/2 positions for the National Command and Coordination Capability were appropriated in Priority Telecommunications Service PPA.

In FY 2010, NPPD requests \$56,773,000 for the Priority Telecommunications Service, including 41 positions/FTE. This represents a decrease of \$1,967,000 below the FY 2009 enacted budget of \$58,740,000. These funds support the operation of the Government Emergency Telecommunications System, the Wireless Priority Service, Special Routing Agreement Service, and Industry-Government and Interagency Processes, as well as support for the Office of the Assistant Secretary for Cybersecurity.

The FY 2010 request includes adjustments-to-base for pay inflation of \$128,000; 1 additional Federal positions offset by \$133,000 in program/contract dollars; and a \$2,905,000 increase for facilities and rent as a transfer from NPPD Management and Administration. This transfer will support facilities and rent requirements across all four National Communications System PPAs (Priority Telecommunications Service, Programs to Study and Enhance Telecommunications, Critical Infrastructure Protection, Next Generation Networks). Program changes include a \$5,000,000 reduction for the Wireless Priority Service.

	Total	40	40	\$58,740	41	41	\$56,773	1	1	-\$1,967

Priority Telecommunications Service is specially designed telecommunications services to support the national security and emergency preparedness user community during natural or man-made disasters when conventional communications services are ineffective. In addition to enhancing critical infrastructure protection, these telecommunication services are used to coordinate response and recovery efforts and, in severe conditions, to assist with continuity programs.

Specifically, Priority Telecommunications Service enhances the ability of national security and emergency preparedness users to complete calls during crisis or emergency through a degraded public switched network using any of the following three components:

Government Emergency Telecommunications Service. A nationwide landline telephone service that provides priority national security and emergency preparedness telecommunications for the President, Federal, State and local governments, and industry organizations during periods of network stress by utilizing the existing public switched network augmented by national security and emergency preparedness enhancements.

Wireless Priority Service. A nationwide wireless telephone service that complements and interoperates with Government Emergency Telecommunications Service and provides end-to end priority national security and emergency preparedness telecommunications via selected commercial wireless carriers, thereby enhancing the probability of call completion.

Special Routing Arrangement Service. Government Emergency Telecommunications Service for special users that provides for the highest level of non-traceable priority telecommunications service during times of severe public switched network congestion or disruption as may result from acts of war.

Priority Telecommunications Service helps to ensure the preparedness of the Nation to prevent, respond to, and recover from, threatened and actual domestic terrorist attacks, major disasters, and other emergencies in accordance with the National Response Framework and the National Infrastructure Protection Plan, and the National Incident Management System. Enhancements to the preparedness of the Nation's telecommunications infrastructure can effectively and economically address continuity needs while also providing a significant benefit of assured communications during national security and emergency preparedness incidents to the broader Federal, State, local, and non-government national security and emergency preparedness community. The National Communications System successfully

leverages the commercially owned public switched network, an extremely robust and survivable network, to provide Priority Telecommunications Service.

FY 2008 Priority Telecommunications Service Accomplishments

- Identify top 5% of critical users without Government Emergency Telecommunications Service/Wireless Priority Service and assure delivery of services.
- Increased total Wireless Priority Service users to 85,756 and increased total Government Emergency Telecommunications Service cards to 208,944, providing outreach to qualified national security and emergency preparedness personnel.
- Develop and test Wireless Priority Service Code Division Multiple Access Nortel/Motorola Interoperability Specification.
- Test final phased Wireless Priority Service Code Division Multiple Access national security and emergency preparedness carrier enhancements in Verizon Wireless and Sprint Nextel networks.
- Tested Universal Mobile Telecommunications System Directed Retry Handover in cellular Global System for Mobile Communications Wireless Priority Service carriers.

FY 2009 Priority Telecommunications Service Planned Accomplishments

- Increase total Government Emergency Telecommunications Service cards to 229,838 and increase total Wireless Priority Service users to 102,907.
- Ensure that 90% of the Executive Departments and Agencies have Government Emergency Telecommunications Service and Wireless Priority Service cards at their headquarters and alternate operating facilities in support of Continuity of Operations and Continuity of Government requirements.
- Achieve Wireless Priority Service Full Operational Capability.
- Deploy Wireless Priority Service Code Division Multiple Access Nortel/Motorola Interoperability Specification in Verizon Wireless and Sprint Nextel networks to eliminate the ~20% network cellular Wireless Priority Service coverage gaps.

FY 2010 Priority Telecommunications Service Planned Accomplishments

- Increase total Government Emergency Telecommunications Service cards to 252,822 and increase total Wireless Priority Service users to 113,198.
- Achieve 90% GETS call completion rate during emergency communications periods.

Industry-Government and Interagency Processes

Industry-Government and Interagency Processes manages the National Communications System Issuance System and conducts analyses of the ever-changing technological and corporate environments of the communications industry and monitors governmental, legislative, regulatory, and political climates. The activity sustains joint industry-government national security and emergency preparedness and critical infrastructure protection communications strategic planning, coordination and risk reduction. Specifically, this activity supports the National Communications System Committee of Principals chaired by the Under Secretary of National Protection and Programs Directorate by direction of Executive Order 12472, the President's National Security Telecommunications Advisory Committee as directed by Executive Order 12382 and the National Infrastructure Protection Plan and

implementation activities as prescribed in Homeland Security Presidential Directive-7. Additionally, this activity seeks and establishes partnerships and alliances with key industry and government entities associated with homeland defense, critical infrastructure protection, and national security and emergency preparedness communications. It manages a strategic outreach to raise awareness about the National Communications System and its programs and activities.

FY 2008 Industry-Government and Interagency Processes Accomplishments

- Provided support to the National Communications System Committee of Principals, including technical, logistical, executive, planning and managerial support in the identification, development, and analysis of national security and emergency preparedness communications issues and recommended solutions.
- Maintained strong relations with the telecommunications industry and the National Communications System Committee of Principals to facilitate joint planning, operational activities, and coordination of assessments, information sharing, and restoration and recovery of the critical telecommunications infrastructure.
- Provided secretariat support for the National Security Telecommunications Advisory Committee, including quarterly National Security Telecommunications Advisory Committee Principal conference calls, the annual full-committee meeting, monthly Industry Executive Subcommittee meetings, task force, working group, and ad hoc meetings.
- Submitted National Security Telecommunications Advisory Committee membership analysis and recommendations for committee composition to the President.
- Collaborated with the National Infrastructure Advisory Council and other industry and governmental bodies involved in continuity communications, critical infrastructure protection, and homeland security.
- Assisted in the implementation of the National Response Framework, particularly the Emergency Support Functions relating to Communications and Information Technology.
- Developed the 2008 Communications Critical Infrastructure and Key Resources Sector Annual Report and reported on Sector Specific Plan metrics.
- Performed ongoing reporting on the Tier 1, Tier 2 critical asset program to identify and prioritize critical infrastructure and key resources within the Communications Sector, to include the following activities:
 - Ongoing facilitation between DHS Protective Security Advisors with industry partners
 - Establishing a Communications Sector infrastructure taxonomy for the Office of Infrastructure Protection
 - Coordinating sector partner review of state responses to critical infrastructure data calls
 - Facilitating ongoing dialogue with DHS Office of Infrastructure Protection Homeland Infrastructure Threat and Risk Analysis Center and Strategic Homeland Infrastructure Risk Analysis program offices to exchange information on critical infrastructure and threats
 - Submitting approved critical infrastructure lists to DHS Office of Infrastructure Protection
- Managed ongoing critical infrastructure and key resources protection outreach and awareness for the Communications Sector stakeholders, customers, and owners and operators on sector protective programs, best practices and risk reduction capabilities.

FY 2009 Industry-Government and Interagency Processes Planned Accomplishments

- Provide support to the National Communications System Committee of Principals, including technical, logistical, executive, planning and managerial support in the identification, development, and analysis of current national security and emergency preparedness communications issues and recommended solutions.
- Finalize National Communications System Committee of Principals' Communications Dependency on Electric Power Report and deliver to the Executive Office of the President.
- Maintain strong relations with the telecommunications industry and the National Communications System Committee of Principals to facilitate joint planning, operational activities, and coordination of assessments, information sharing, and restoration and recovery of the critical telecommunications infrastructure.
- Provide logistical and technical support to the National Communications System Committee of Principals working groups to address emerging continuity communications matters and minimum essential functions and processes under all circumstances, including crisis or emergency, attack, recovery, and reconstitution.
- Manage National Communications System Committee of Principals' role in evaluating the Presidents National Security Telecommunications Advisory Committee Report Recommendations providing interagency comments to Executive Office of the President.
- Provide Secretariat Support for the National Security Telecommunications Advisory Committee, including quarterly National Security Telecommunications Advisory Committee Principal conference calls, the annual full-committee meeting, monthly Industry Executive Subcommittee meetings, task force, working group, and ad hoc meetings.
- Submit National Security Telecommunications Advisory Committee membership analysis and recommendations for committee composition to the President.
- Update to Memorandum of Agreements with each of the 24 Federal members of the National Communications System as directed by National Communications System Directive 1-1.
- Managing the implementation of the Communications Sector Specific Plan and risk management framework, in response to Homeland Security Presidential Directive-7, and the National Infrastructure Protection Plan.
- Develop the 2009 Communications critical infrastructure and key resources Sector Annual Report.
- Develop and report quarterly Communications Sector Specific Plan implementation metrics to the DHS Office of Infrastructure Protection.
- Perform ongoing reporting on the Tier 1, Tier 2 critical asset program to identify and prioritize critical infrastructure and key resources within the Communications Sector.
- Provide reports on sector plan implementation, as needed, against calls for data from DHS, and the Legislative and Executive Branches of the Federal Government.
- Provide ongoing critical infrastructure and key resources protection outreach and awareness for the Communications Sector stakeholders, customers, and owners and operators on sector protective programs, best practices and risk reduction capabilities.

FY 2010 Industry-Government and Interagency Processes Planned Accomplishments

- Provide support to the National Communications System Committee of Principals, including technical, logistical, executive, planning and managerial support in the identification,

development, and analysis of current national security and emergency preparedness communications issues and recommended solutions.

- Represent National Communications System and DHS interest during Quarterly Committee of Principals meetings and the subordinate working groups.
- Maintain strong relations with the telecommunications industry and the National Communications System Committee of Principals to facilitate joint planning, operational activities, and coordination of assessments, information sharing, and restoration and recovery of the critical telecommunications infrastructure.
- Provide technical and logistical support to the National Communications System Committee of Principals working groups to address emerging continuity communications matters and minimum essential functions and processes under all circumstances, including crisis or emergency, attack, recovery, and reconstitution.
- Provide Secretariat Support for the National Security Telecommunications Advisory Committee, including quarterly National Security Telecommunications Advisory Committee Principal conference calls, the annual full-committee meeting, monthly Industry Executive Subcommittee meetings, task force, working group, and ad hoc meetings.
- Submit National Security Telecommunications Advisory Committee membership analysis and recommendations for committee composition to the President.
- Collaborate with the National Infrastructure Advisory Council and other industry and governmental bodies involved in continuity communications, critical infrastructure protection, and homeland security.
- Implement the Communications Sector Specific Plan and risk management framework, in response to Homeland Security Presidential Directive-7, and the National Infrastructure Protection Plan.
- Develop the cross sector risk assessments to define communications dependencies, corresponding risk mitigation activities, and recommended follow on activities such as research and development, capabilities' development, and protective programs.
- Publish 2010 triennial rewrite of the Communications Sector Specific Plan.
- Develop a 2010 Communications critical infrastructure and key resources Sector Annual Report.
- Develop and report quarterly Communications Sector Specific Plan implementation metrics to the DHS Office of Infrastructure Protection.
- Report on the Tier 1 and Tier 2 critical asset program to identify and prioritize critical infrastructure and key resources within the Communications Sector.
- Provide critical infrastructure and key resources protection outreach and awareness for the Communications Sector stakeholders, customers, and owners and operators on sector protective programs, best practices and risk reduction capabilities.

Total Change 2009-2010	3	3	\$ 4,174

In FY 2010, NPPD requests \$19,274,000 for the Programs to Study & Enhance Telecommunications, including 28 positions/FTE. This represents an increase of \$4,174,000 over the FY 2009 enacted budget of \$15,100,000. These funds support modeling, simulation, technology assessments, National Security and Emergency Preparedness standards, and vulnerability assessments on advanced technologies and converged networks.

The FY 2010 request includes adjustments-to-base for pay inflation of \$82,000 and 2 additional Federal positions offset by \$266,000 in program/contract dollars. Program changes include a \$1,592,000 for a classified program and \$2,500,000 to develop and implement a continuity communications architecture.

CURRENT SERVICES PROGRAM DESCRIPTION

\$ thousands	FY 2009			FY 2010			Change

Modeling, Analysis and Technology Assessment

Modeling, Analysis and Technology Assessment develops models and conducts technical studies and analyses of public communications infrastructures to identify approaches to fulfill national security and emergency preparedness communications objectives and support priority service and Comprehensive National Cyber Initiative programs. The extensive dataset and software-based commercial and government off the shelf analytic tools analyzes natural and man-made disruptions on communications infrastructure, conducts vendor independent analyses, and identifies network effectiveness solutions. Modeling, Analysis and Technology Assessment also conducts communications technology assessments, such as those required by the Committee on Foreign Investment in the United States in

support of the DHS Office of Policy, and studies that quantify the dependence of critical government networks on Internet service provider infrastructure.

FY 2008 Modeling, Analysis and Technology Assessment Accomplishments

- Developed and deployed version 3.2 of the Infrastructure Mapping Tool to improve Emergency Support Function #2 operations.
- Performed cyber and communications modeling and analysis studies in support of emerging requirements, such as the impact of undersea cable infrastructure damage on the communications infrastructure.
- Provided an internal and external network analysis of the Export-Import Bank of the United States in support of the Trusted Internet Connection initiative.
- Analyzed diverse geographic locations for Trusted Internet Connection portals to reduce the potential risk associated with consolidating Government Internet connections.
- Refined communications sector risk analysis methodology and conducted National Sector Risk Assessment for the telecommunications sector.
- Provided subject matter expertise in assessing the technical aspects of Federal Communications Commission applications during the review of Team Telecom cases by DHS Policy.
- Studied and reported on the potential effect of inter-carrier routing policies on national security and emergency preparedness communications.
- Developed proprietary Voice-over-Internet Protocol models to evaluate the survivability and performance of national security and emergency preparedness communications under damage scenarios
- Developed a Network Discovery Tool to map and analyze internal networks in support of the Trusted Internet Connection program
- Participated in the Global Multi-Service Forum Interoperability test to demonstrate multi-vendor interoperability for emerging next-generation architecture.
- Integrated Internet Protocol Multimedia Subsystem infrastructure technologies within a prototype framework to test the effectiveness of potential solutions for optimizing national security and emergency preparedness services within next-generation architectures.
- Developed voice, data, and video prototype capabilities to determine the impact of newly introduced public network technologies on the priority services mission.

FY 2009 Modeling, Analysis and Technology Assessment Planned Accomplishments

- Develop and deploy version 3.3 of the Infrastructure Mapping Tool to improve the Emergency Support Function #2 operations which will integrate the Federal Communications Commission's Disaster Information Reporting System and include an enhanced weather mapping function.
- Develop an enhanced Internet Analysis Capability to improve Emergency Support Function #2 and United States Computer Emergency Readiness Team operations.
- Support the National Cyber Security Division's activities under the Trusted Internet Connection initiative.
- Model and analyze the effectiveness of solutions offered by the Next Generation Networks Access Industry Requirements working group for achieving survivable national security and emergency preparedness services.

- Study and report on the role of Digital Integrated Services Network Real Time Services, call admission control, and Internet Protocol Multimedia Subsystem models within next-generation architectures
- Enhance the Network Discovery Tool with additional software features and improved visualization capabilities
- Provide subject matter expertise in assessing the technical aspects of Federal Communications Commission applications (e.g., the type of telecommunications infrastructure at issue, and the potential effects of changes to that infrastructure) during the review of Team Telecom cases by DHS Office of Policy.
- Analyze physical infrastructure diversity, or “last-mile” connectivity, for National Communications System member agencies to ensure primary mission essential functions are preserved.
- Study the dependence of two other critical infrastructure sectors on the telecommunications sector.
- Develop proprietary network carrier models to evaluate survivability and performance of national security and emergency preparedness communications under damage scenarios.
- Improve National Communications System modeling and analysis capabilities through incorporation of Department of Defense analysis tools and datasets
- Partner with a major carrier to test the effectiveness of inter-network solutions for providing end-to-end national security and emergency preparedness services within next-generation architectures

FY 2010 Modeling, Analysis and Technology Assessment Planned Accomplishments

- Develop and deploy version 3.4 of the Infrastructure Mapping Tool to continue improving Emergency Support Function #2 operations which will integrate a web-enabled platform and contain enhanced security levels.
- Develop the comprehensive Internet Analysis Capability to further improve Emergency Support Function #2 and United States Computer Emergency Readiness Team operations, as well as NPPD’s common operational picture.
- Continue to support the National Cyber Security Division’s activities under the Trusted Internet Connection initiative.
- Model and analyze the effectiveness of solutions offered by the Next Generation Networks Access Industry Requirements working group for achieving survivable national security and emergency preparedness services.
- Enhance the Network Discovery Tool with additional software features based on requirements from the Trusted Internet Connection program.
- Perform cyber and communications modeling and analysis in support of emerging threats and requirements.
- Provide subject matter expertise in assessing the technical aspects of Federal Communications Commission applications (e.g., the type of telecommunications infrastructure at issue, and the potential effects of changes to that infrastructure) during the review of Team Telecom cases by DHS Office of Policy.
- Analyze physical infrastructure diversity, or “last-mile” connectivity, for five National Communications System member agencies to ensure primary mission essential functions are preserved.

- Study the dependence of three other critical infrastructure sectors on the telecommunications sector.
- Develop proprietary network carrier models to evaluate survivability and performance of national security and emergency preparedness communications under damage scenarios.

National Security and Emergency Protection Standards Team

The Standards Team works national and international industry standards organizations to ensure that evolving communications standards address the technical requirements of national security and emergency preparedness communications. The Standards Team performs under Presidential Executive Order 12472 which directs National Communications System to take into consideration the development of evolving industry consensus standards with respect to national security and emergency preparedness communications. The Standards Team is also directed by the OMB Circular A-119 to adapt the products of commercial/industry consensus standards committees for Government needs, and to participate in their development.

Traditional national security and emergency preparedness telecommunications services were designed around the legacy circuit-switched infrastructure of the public switched telephone network. Public networks are now merging with packet-switched infrastructures and converging into Next Generation Networks. As this evolution continues to mature, national security and emergency preparedness telecommunications services will be guided by commercial standards and technologies based on packet-switching Internet Protocol based networks. Wireless public networks have also become increasingly vital during national security and emergency preparedness events. The Standards Team focuses on these changes by working proactively with industry in standards development organizations. The national security and emergency preparedness standards efforts involve a two-pronged approach. The first standards effort is to establish national security and emergency preparedness service requirements within the standards bodies, and the second is to work to develop standards-based technical capabilities to support National Communications System programs and missions.

The Standards Team also provides direct support to the U.S. Department of State by Chairing the International Telecommunications Advisory Committee Telecommunications Sector Study Group 'B'. The Team also serves as senior Government advisors and leaders to a variety of international meetings on communications. When requested, the Standards Team takes specific requirements from North Atlantic Treaty Organization and other member organizations and introduces them into the international standards process. In addition, the Standards Team members actively participate in the work of the following industry groups:

- Alliance for Telecommunications Industry Solutions
- Telecommunications Industry Association
- International Telecommunication Union
- Internet Engineering Task Force
- TeleManagement Forum
- Third Generation Partnership Project
- Third Generation Partnership Project 2
- Multi-Service Switching Forum
- Institute of Electrical and Electronics Engineers

The Government Emergency Telecommunications Service, Wireless Priority Service, Special Routing Arrangement Service and the Telecommunications Service Priority are all international standards based

national security and emergency preparedness services implemented in the public infrastructure. As these services converge, the Standards Team must migrate the functional requirements to the Next Generation Networks.

FY 2008 Standards Team Accomplishments

- Approved Supplement 57 - Signaling Requirements to Support the Emergency Telecommunications Service in Internet Protocol Networks in January 2008.
- Approved Series H, Supplement 9 - Gateway Control Protocol: Operation of H.248 with H.225, SIP, and ISUP in support of Emergency Telecommunications Service/International Emergency (Preference Scheme in April 2008.)
- Approved X.1205 - Overview of Cybersecurity in April 2008.
- Approved Recommendation Y.2701 – Security Requirements for Next Generation Networks (Release 1 in January 2008.)
- Approved Recommendation Y.2205 – Emergency Telecommunications – Technical Considerations. (Approved in September 2008.)
- Approved Recommendation Y.2702 - Authentication and Authorization Requirements for Next Generation Networks. (Approved in September 2008.)
- Approved Recommendation Y.2720 - Next Generation Networks identity management framework was approved.
- Collaborate with Alliance for Telecommunications Industry Solutions on standards:
 - Approved Alliance for Telecommunications Industry Solutions -1000020 in October 2007 - Emergency Telecommunications Service Packet Priority for Internet Protocol Network to Network Interfaces – Requirements for a Separate Expedited Forwarding Mechanism.
 - Approved Alliance for Telecommunications Industry Solutions -1000023.2008 in June 2008 - Emergency Telecommunications Service Phase 1 Network Element.

FY 2009 Standards Team Planned Accomplishments

- Work with Internet Engineering Task Force to develop standards for priority communications during network congestion.
- Incorporate the Resource Priority Header field into Internet Engineering Task Force standards.
- Submit plan to Internet Engineering Task Force on how preferential treatment can be signaled or conveyed to prioritize flows, and exempt them from degraded service during periods of wide-scale congestion.
- Develop baseline Next Generation Networks security and signaling requirements in the Alliance for Telecommunications Industry Solutions technical reports and standards.
- Work with TeleManagement Forum experts on the development of Service Level Agreement application note(s) to aid national security and emergency communications users in acquiring services in a multi-vendor environment.
- Create Emergency Telecommunications Service Internet Protocol Multimedia Subsystem requirements in Third Generation Partnership Project and Third Generation Partnership Project 2.
- Develop Security and Signaling technical requirements within the Next Generation Network.

- Actively engage industry experts to ensure that Emergency Telecommunication Service requirements are included in developing wireless technical standards.

FY 2010 Standards Team Planned Accomplishments

- Define management plane security and the associated security management system functional requirements to contribute to International Telecommunication Union-Telecommunication Sector.
- Approve Next Generation Networks Requirements to contribute to International Telecommunication Union-Telecommunication Sector.
- Develop transport requirements for Emergency Telecommunications Service core Internet Protocol Multimedia Subsystem.
- Develop security contributions for Emergency Telecommunications Service Next Generation Networks and Cyber.
- Work with Alliance for Telecommunications Industry Solutions experts on the development of baseline Emergency Telecommunications Service Next Generation Networks security and signaling technical reports and standards.
- Contribute to TeleManagement Forum guidebook on national security and emergency preparedness management applications in Next Generation Networks.
- Develop Security and Signaling technical Requirements and Specifications for Priority Services.
- Work with voluntary consensus standards organizations on evolving Next Generation Networks related standards; this work will be based on the standards gap analysis completed through the Access Internet Protocol Multimedia Subsystem Industry Requirements process.
- Work with Internet Engineering Task Force to develop standards for priority communications in packet based during network congestion.

Advanced Technologies/Converged Networks

Advanced Technologies/Converged Networks provides a vulnerability assessment of new technologies to Telecommunication Electromagnetic Disruptive Effects and their impact on the infrastructure. The National Communications System is the Federal Government focal point for electromagnetic pulse technical data and studies concerning telecommunications (Code of Federal Regulations Title 47, Part 215). This work includes coordinating and approving Telecommunication Electromagnetic Disruptive Effects tests and studies, communicating timely information to homeland security partners and stakeholders, and developing mitigation techniques to prevent upset of telecommunications equipment from High-Altitude Electromagnetic Pulse attacks.

Advanced Technologies/Converged Networks work also includes identification and assessment of the vulnerabilities of satellite communications systems, coordination with commercial vendors in conducting studies on physical vulnerabilities, development of plans to mitigate interference, leadership and coordination efforts across DHS to ensure that satellite capabilities required to prevent, protect, respond to and recover from acts of terrorism, natural disasters, and other emergencies are available when needed.

FY 2008 Advanced Technologies/Converged Networks Accomplishments

- Reported on the identification of vulnerabilities of Voice-over-Internet Protocol telecommunication systems and Wireless Priority Service to Telecommunication Electromagnetic Disruptive Effects.

- Completed report on “Disruption of Fiber-Optic Telecommunication Links Due To Secondary Effects Associated With X-Ray Illumination.”
- Completed report on “Undersea Cable Vulnerability and Risk Analysis” that examines the current status of undersea cables, identifies vulnerabilities, postulates threat scenarios and proposes mitigations to reduce risk.
- Completed report on “Telecom-Power Dependencies” examines the interdependencies of the telecommunications and power infrastructures.
- Completed report on “Timing and Synchronization Analysis,” which covers the vulnerabilities and possible risk mitigations of Global Positioning System and other synchronization technologies that support wireless networks.
- Completed “Worldwide Interoperability for Microwave Access” report on key activities and developments, describing the technology and network capabilities, evaluates performance projections, identifies vulnerabilities, and examines the need for additional priority capabilities.
- Completed report on “Airborne Passenger Internet Network” that analyzes existing airborne networks, describes the services offered and technology utilized, assesses its security and use for commercial communications and for surveillance monitoring of airplane systems. It offers high-speed, real-time Internet access for email and web browsing applications via satellite communications utilizing a network of Geosynchronous Earth Orbit satellite transponders.
- Completed an investigation of the potential leveraging of Department of Defense and Intelligence Community Transformation Communications Architecture Integration and Final Security Review.
- Completed three Technical Information Bulletin and issued National Communications System Handbook 3-10-1: *Guidance for Improving Route Diversity within Local Access Networks*:
 - “National Security and Emergency Preparedness Mobility” identifies key mobility issues for access to Internet Protocol-based Emergency Preparedness information and communications networks.
 - “Private Integrated Services Network” examines the International Standards associated with the Private Integrated Services Network.
 - Short Messaging Service, Multimedia Messaging Service, and Enhanced Messaging Service traffic Saturation: This Technical Information Bulletin presents the effects of increased mobile data transmissions, including Short Messaging Service, Enhanced Messaging Service, and Multimedia Messaging Service messages, and considers the resulting impact of increased data service usage on the network performance of wireless service providers.

FY 2009 Advanced Technologies/Converged Networks Planned Accomplishments

- Issued National Communications System Handbook 3-10-1 – “Guidance for Improving Route Diversity within Local Access Networks” in February 2009.
- Issued National Communications System Change Notice – “Updates to National Communications System Manual 3-10-1, Guidance for Implementing National Communications System Directive 3-10” in February 2009.
- Recommended updates to the National Communications System Directive 3-10, “Minimum Requirements for Continuity Communications Capabilities” to the Office of Science and Technology Policy in April 2009.
- Concluded IPTV Protocol Technology Studies.

- Concluded Broadband over Cellular Protocol Vulnerability studies.
- Conclude Loran timing variance studies. Report due 4/30/2009
- Conclude Identity Management studies. Report due 6/30/2009

FY 2010 Advanced Technologies/Converged Networks Planned Accomplishments

- Issue revisions to National Communications System Manual 3-10-1 – “Guidance for Implementing National Communications System Directive 3-10”, based upon Office of Science and Technology Policy approval of recommended updates.
- Modify data collection tools to support the data surveys of Federal Executive Branch department and agencies of their “As-Is” continuity communications architecture deployed capabilities.
- Develop a continuity communications architecture (CCA) to ensure, under all conditions, federal executive branch cross-department and agency communications. Developing the architecture will require identifying existing continuity communication capabilities, shortfalls or gaps, and developing technical requirements to improve the overall continuity communications posture. Implementation will ensure agencies can execute primary mission essential functions in support of the eight national essential functions.

Program Performance Justification
(Dollars in thousands)**

PPA: CRITICAL INFRASTRUCTURE PROTECTION PROGRAMS

	Perm Pos	FTE	Amount
FY 2008 Actuals	29	21	\$ 14,654
FY 2009 Enacted	29	29	\$ 11,260
2010 Adjustments-to-Base	0	0	\$ 92
2010 Current Services	29	29	\$ 11,352
2010 Program Change	9	7	\$ 2,500
FY 2010 Request	38	36	\$ 13,852
Total Change 2009-2010	9	7	\$ 2,592

In FY 2010, NPPD requests \$13,852,000 for the Critical Infrastructure Protection programs, including 38 positions and 36 FTE. This represents an increase of \$2,592,000 over the FY 2009 enacted budget of \$11,260,000. These funds support National Coordinating Center; Critical Infrastructure Protection operations, planning, policy; training and exercises; network security information exchange, and the Telecommunications Service Priority program.

The FY 2010 request includes adjustments-to-base for pay inflation of \$92,000. Program changes include an increase of \$2,500,000, 7 FTE and 9 positions to support the Emergency Support Function #2 mission.

Total	29	29	\$11,260	36	38	\$13,852	7	9	\$2,592

The Critical Infrastructure Protection Programs ensure the continued availability of national security and emergency preparedness telecommunications services under all circumstances, including crisis or emergency, attack, recovery, and reconstitution. Initiatives include:

- Operations and maintenance of the National Coordinating Center for Communications;
- Near real-time telecommunication analyses;
- Continuity planning and operational support;
- Training and exercise of communications emergency response personnel;
- Production and maintenance of operational procedures, policies and support tools; and

- Management of a structured forum for Government and telecommunication industry collaboration on national security and emergency preparedness telecommunications policies, procedures and issues.

This Project includes the following Activities: *National Coordinating Center Operations; Critical Infrastructure Protection Operations, Plans, and Policy; Training and Exercises; Network Security Information Exchanges; and Telecommunications Service Priority.*

National Coordinating Center

National Coordinating Center Operations is a joint industry-government body that provides a mechanism to respond to national security and emergency preparedness telecommunications incidents. The mission of the National Coordinating Center is to assist in the initiation, coordination, restoration, and reconstitution of national security and emergency preparedness telecommunications services or facilities under all conditions, crises, or emergencies. Government membership includes 24 Federal departments and agencies with significant national emergency responsibilities or critical telecommunications requirements. The Communications Information Sharing and Analysis Center is made up of industry members representing the country's wireline and wireless service providers, equipment vendors, internet service providers, satellite industry, and cable industry. The strength of the National Coordinating Center lies in the trusted relationship between government and industry. This relationship is critical to the National Coordinating Center in its role as the primary mechanism within the National Communications System for executing Emergency Support Function #2 – Communications under the National Response Framework during an incident.

The National Coordinating Center is governed by Executive Order 12472, which establishes a joint industry-government National Coordinating Center; Homeland Security Presidential Directive-5, which directs the National Coordinating Center to provide support to the National Response Framework; and Section 706 of the Communications Act of 1934, which governs National Coordinating Center engagement in Continuity of Operations and Continuity of Government activities. National Coordinating Center Operations is comprised of three sub-activities:

National Coordinating Center Watch. This sub-activity serves as the operational arm of the National Communications System. The National Coordinating Center Watch provides 24x7 situational awareness of the health of the telecommunications infrastructure and facilitates the initiation, coordination, restoration and reconstitution of national security and emergency preparedness telecommunications services or facilities during emergency events. Senior level information assurance analysts located on site in the National Coordinating Center Operations Center are closely integrated with the Government National Coordinating Center operations staff and resident and non-resident Industry representatives from the National Coordinating Center's member companies. The National Coordinating Center Watch enhances physical and cyber security of the Nation's critical communications infrastructures by facilitating cooperation, information sharing, and system-to-system interaction among critical infrastructures and between the Government and the private sector. On a daily basis, the National Coordinating Center Watch provides:

- Monitoring and situational awareness of essential communications facilities through exchanges with network owners and operators, open source reporting, and the Federal, State, local, and tribal partners,
- Consultation with private industry to exchange status information and develop coordinated action plans; and

- Assessing threats and vulnerabilities to national security and emergency preparedness communications needs of the Federal Government.

National Coordinating Center Programmatic Support. Provides planning and preparedness activities in support of national security and emergency preparedness. This includes internally focused activities for designing, developing, and implementing plans and operating procedures and addressing policy development and implementation. External activities focus on relationship building, information sharing, and operational planning and execution under the joint government/industry Communications Information Sharing and Analysis Center and Government partners of National Communications System.

High Frequency Radio Program. Provides technical, administrative, operational, and readiness support to four emergency High Frequency radio operational activities: SHARed RESources High Frequency Radio Program, National Coordinating Center High Frequency Radio Program, the National Communications System Regional Managers High Frequency Radio Program, and the National Communications System Auxiliary High Frequency Radio Program. These programs support a nationwide radio network of approximately 1,400 high frequency radio stations contributed by 100 Federal, State and industry organizations to form a nationwide emergency message-handling network. SHARed RESources has made a notable contribution to national security and emergency preparedness support in over 42 emergencies since it was formally established in 1989 and serves as a backup high frequency communications vehicle linking key Federal entities with the major telecommunications infrastructure service providers. It was vital for ensuring communications during Hurricane Katrina between isolated emergency operations centers. The National Communications System High Frequency Radio Program supports the National Communications System mission of executing Emergency Support Function #2 under the National Response Framework and is essential in supporting the National Coordinating Center mission.

Critical Infrastructure Protection Operations, Plans, and Policy

Continuity of Operations. The goal of Continuity of Operations is to improve the overall readiness, operations and execution of mission essential functions, including Enduring Constitutional Government, and Continuity of Government operations. It also establishes the framework to ensure all National Communications System staff members are trained to work continuity operations during an all-hazards event or incident. Homeland Security Presidential Directive-20 and the National Continuity Policy require departments and agencies to have plans in place to continue their mission at alternate facilities if their primary facilities become uninhabitable for an extended period.

The Continuity of Operations Plan provides guidance for the organization, its leaders, and all assigned staff, should National Communications System be directed to deploy during a Continuity of Operations event. The Continuity of Operations Plan identifies the mission essential functions of each National Communications System Branch, the order of succession for leadership, Emergency Relocation Group and Advance Relocation team members, mission critical systems, vital records and databases, and required communications for the Relocation Facility.

National Level Planning. Supports the Executive Office of the President and provides operational, technical, and administrative support to the Director of the Office of Science and Technology Policy, who serves as Chairman of the Joint Telecommunications Resources Board. The Joint Telecommunications Resources Board was established under Executive Order 12472 to facilitate the need for Federal Government action in response to a non-wartime or wartime crisis or emergency situation that adversely affects the Nation's communications infrastructure. National Level Planning

assists in resolving competing demands for telecommunications services, discussing telecommunications services policy issues, and providing necessary service reprioritizations resulting from non-wartime emergency situations. This activity supports the requirements in Homeland Security Presidential Directive-20 to develop, implement, and maintain comprehensive continuity communications architecture. The National Communications System leads the Continuity Communications Management Office which oversees Title Globe continuity testing and the implementation of the National Communications System Directive 3-10, *Minimum Requirements for Continuity Communications Capabilities*.

Operational Analysis. Supports the development, documentation, implementation and maintenance of policies, procedures, and capabilities to ensure the conduct of comprehensive, accurate, and rapid analytical assessments of the communications infrastructure. This activity supports all phases of Emergency Support Function #2 execution – from planning and preparedness, to full recovery of the telecommunications infrastructure. During significant disasters or crises, the Operations Analysis activity leads the Analysis Response Team in providing communications analysis support to the National Coordinating Center.

To improve the ability to provide critical communications assessments quickly and accurately during emergency response operations, this sub-activity has conducted a series of in-depth regional characterizations of the communications infrastructure in high-risk areas (e.g. Washington D.C., Philadelphia, etc.). These characterizations significantly reduce the preliminary research and data gathering time normally associated with any analysis in the case of an event and assists in preparedness activities. During an incident, operational analysis models provide critical information to bridge the gap from when the incident occurs to when actual data becomes available post-event.

Training and Exercise Program

The Training and Exercise Program ensures that the National Communications System has a cadre of emergency response personnel prepared to respond across the spectrum of crises and emergencies. These personnel are organized in accordance with the Emergency Support Function #2 Annex of the National Response Framework and are tasked to coordinate the restoration and provisioning of national security and emergency preparedness communications during an incident or disaster. In response to the recommendations of the *Hurricane Katrina After Action Report*, the National Communications System is enhancing its readiness for emergency response operations with an increased tempo of training and exercises for personnel who have Emergency Support Function #2 collateral duties. The National Communications System participates in exercises involving scenarios as varied as continuity of operations, continuity of government, natural disasters, weapons of mass destruction, critical infrastructure protection, and cyber intrusion. The training program will combine distance learning instruction with a periodic conference to provide interaction among the team members.

Network Security Information Exchanges

This activity provides technical and administrative support to both the National Security Telecommunications Advisory Committee and Government Network Security Information Exchanges. The Network Security Information Exchanges consists of two bodies: the Government Network Security Information Exchange which represents Federal agencies that have research, standards, regulatory, law enforcement, or intelligence functions related to the public network, or are major telecommunications users, and the President's National Security Telecommunications Advisory Committee Network Security Information Exchange which includes representatives from telecommunications service providers, equipment vendors, systems integrators, and major users.

Participation also includes representatives from the Canadian and United Kingdom government and telecommunications industry involved in the United Kingdom and Canadian Network Security Information Exchanges. The Network Security Information Exchanges forum provides a trusted environment in which industry and Government representatives exchange information on threats to and vulnerabilities of the public network. These bodies meet jointly on a bimonthly basis to address major technical and operational issues affecting the security of the public network, such as unauthorized penetration or manipulation of the public network software, databases, and other infrastructures supporting national security and emergency preparedness telecommunications services. The Network Security Information Exchanges exchange ideas on technologies and techniques for addressing and mitigating the risks to the public network and its supporting infrastructures.

Emergency Support Function #2 Contingency Planning. The National Response Framework designates the National Communications System as the Primary Agency for Emergency Support Function #2. This sub-activity revises operational plans to align more closely with the National Response Plan and clearly outline the coordination requirements and procedures at all levels (e.g., national, regional, local Emergency Support Function entities, State/local government, and private companies). This sub-activity also continues to develop, implement, and maintain Emergency Support Function #2 plans, policies and procedures in the face of new legislation, changing DHS organizational structure, and lessons learned from Emergency Support Function #2 activations.

Telecommunications Service Priority Program. Established by a Federal Communications Commission Report and Order 88-341, November 17, 1988, Telecommunications Service Priority is the regulatory, administrative, and operational system authorizing and providing for priority treatment of national security and emergency preparedness telecommunications services. The program provides national security and emergency preparedness users with priority restoration and provisioning of telecommunications services that are vital to maintaining readiness or response to an incident. As a result of hurricanes, floods, earthquakes, and other natural or man-made incidents, telecommunications service vendors may become overwhelmed with requests for new telecommunications services and requirements to restore existing telecommunications services. The Telecommunications Service Priority Program provides service vendors with a Federal Communications Commission mandate for prioritizing service requests by identifying those services critical to national security and emergency preparedness. A telecommunications service with a Telecommunications Service Priority assignment is assured of receiving full attention by the service vendor before a non-Telecommunications Service Priority service. The Telecommunications Service Priority Program has two components: restoration and provisioning. A restoration priority is applied to telecommunications services to ensure restoration before any other services. A provisioning priority is obtained to facilitate priority installation of new telecommunications services.

Currently, over 1,000 organizations have over 201,000 active Telecommunications Service Priority assignments in support of national security and emergency preparedness communications. This service directly increases the organizations' ability to recover from an incident or a disaster. The Telecommunications Service Priority Program also plays a critical role in emergency response when new telecommunications service must be provisioned to support response operations.

FY 2008 Critical Infrastructure Protection Accomplishments

- Participated in internal and interagency continuity planning and exercises.
- Completed annual update of the National Communications System Continuity of Operations Plan.

- Completed annual update of the Multi-Year Strategy and Management Plan for Continuity of Operations.
- Tested Continuity of Operations Plan and procedures during National Level Exercise 2008
- Identified the National Communications System Primary Mission Essential Functions Primary Mission Essential Functions and Mission Essential Functions as required by Homeland Security Presidential Directive-20.
- Conducted Continuity of Operations Communications Managers Group meetings. This working group provides a forum for the discussion and exchange of ideas for development of policies and procedures for effective continuity communications.
- Continued development and dissemination of the biannual Continuity of Operations Communications Plan for the Federal Executive Branch Department and Agencies. This multifaceted plan provides essential contact and operational information for effective interoperable communications during emergencies that require the Federal Department and Agencies to operate from Emergency Relocation Facilities.
- Successfully conducted Title Globe testing for continuity communications with Federal Executive Branch Departments and Agencies
- Ensured communications readiness through planning and participation in exercise and training events including the National Level Exercise and CyberStorm II.
- Developed, in coordination with the National Cyber Security Division, plans and procedures to further realize synergies between the highly interdependent communications and information technology sectors. Ensured that there is significant coordination between the Communications Information Sharing and Analysis Center and the Information Technology Information Sharing and Analysis Center.
- Hosted discussions with representatives from the United Kingdom, Canada and Mexico to share ideas and vet appropriate procedures to decrease vulnerabilities. Coordinated next generation network application ideas and issues with Canadian counterparts.
- Conducted and documented in-depth telecommunications assessments of high profile geographical areas.
- Completed an in-depth telecommunication assessment for the 2008 Democratic National Convention in Denver and the 2008 Republican National Convention in Minneapolis.
- Completed an in-depth telecommunications assessment for the New York metropolitan area, the Los Angeles metropolitan area, and the Norfolk/Hampton Roads metropolitan area.
- Completed a telecommunications assessment for the National Level Exercise 2008.
- Developed and orchestrated of cross-sector discussions with other Information Sharing and Analysis Centers for the purpose of identifying interdependencies and cross-sector vulnerabilities.
- Participated in the National Cyber Response Coordination Group and the Internet Disruption Working Group.
- Developed information sharing protocols with industry partners for sharing intelligence information.
- Enhanced information sharing capabilities with other sector Information Sharing and Analysis Centers.
- Provided analytical support during emergency operations, such as with the Midwest flooding.
- Served as the focal point for State and local telecommunication data and analytical requests.

- Continued to pursue enhancements to the National Communications System Telecommunication analytical capabilities to include greater partnership and information sharing with Telecommunications Industry representatives, enhancement of data sets that provide greater insight into the operational components of the telecommunications infrastructure, and enhancement of analytical tools to provide quicker and more detailed analyses.
- Deployed support for temporary 911 calling center and supplemental sandbagging and pumps to ensure continued operation of telecommunications assets providing the disaster area connectivity during flooding in Iowa.
- Provided communications infrastructure threat analysis and situational awareness during California wildfires.
- Assisted with spectrum coordination for urban search and rescue, fuel delivery for broadcast facility, and power restoration prioritization during Hurricane Dolly.
- Prepared personnel to perform Emergency Support Function #2 operations during national and regional exercises. Participated in the exercise development and conduct of CyberStorm II and the National Level Exercise February, 2008.
- Developed documents to assist the Emergency Support Function #2 team members in performance of their team duties; provide knowledge-based training for the team members.
- Provided communications infrastructure analysis, situational awareness, and impact collection after the Mediterranean and Gulf undersea cable cuts in January/February 2008.
- Provided a communications specialist to Homeland Infrastructure Threat Risk and Analysis Center. Actions included providing assessment process improvement recommendations and communications infrastructure risk impact assessment against 15 threat scenarios under the Strategic Homeland Infrastructure Risk Assessment.
- Expanded the Emergency Support Function #2 family of plans to incorporate specific actions for notice and no-notice events.
- Develop and refine operational plans and procedures that execute the Emergency Support Function #2 duties specified in the National Response Framework.
- Targeted Telecommunications Service Priority outreach to State and local emergency response organizations, including the health care sector.
- Established a National Communications System certified Protected Critical Infrastructure Information program to accept, maintain industry-submitted data consistent with DHS Protected Critical Infrastructure Information Program office guidance.
- Expanded outreach efforts for Emergency Cellular protocol.
- Expanded National Coordinating Center Industry partnership to 49 entities with the inclusion of broadcaster representation via the National Association of Broadcasters and enhanced wireline, wireless, and satellite perspectives with the additions of FairPoint, Hughes, INMARSAT, Eutelsat, and Arrowhead. These partner additions provide greater insight into the collective status of communications elements and decision making during times of crisis.
- Hosted and conducted National Coordinating Center Industry Partner conference providing partners with orientation on the information sharing partnership and exchange. This exchange fostered understanding and perspective provided background on roles and responsibilities, response actions, decision making process, situational awareness needs, and prioritization thought processes to better respond for real-world events.

- Created National Communications System Emergency Notification System presence for National Coordinating Center Industry and Government partners, Emergency Relocation Group, and Individual Mobilization Augmentee communities of interest to improve alerting capabilities.
- Initiated monthly testing of National Communications System Emergency Notification System.
- Initiated weekly intelligence exchanges with National Coordinating Center Industry partners providing threats and vulnerabilities against the communications sector.
- Conducted regular video conference with Government of Canada counterparts providing situational awareness and sharing of communications and cyber threats and vulnerabilities.
- Completed installation and certification and accreditation of initial operational capability of secure conferencing capability Crisis Management System allowing for exchange of classified information with other Government locations.
- Initiated daily stand-up routine between National Coordinating Center and the United States Computer Emergency Readiness Team to provide operational awareness of events impacting both the communications and cyber infrastructure and to discuss physical and cyber threats to these inter-related sectors.
- Established the National Coordinating Center Watch as the Global Positioning System coordination focal point for outreach to the communications industry. This action was taken in partnership with United States Coast Guard Navigation Center to assist in understanding extent of visibility of Global Positioning System impacting events and provide situational awareness.
- Incorporated and integrated DHS Homeland Security Information Network capabilities into National Coordinating Center watch functions.
- Ensured SHARed RESources program operational readiness through completion of weekly/quarterly network checks and participation in nationwide exercises.
- Supported backup communications capabilities in response to California wildfires and Chino earthquake.
- Assisted Office of Science and Technology Policy in development of the Draft Joint Technology Requirements Board Standard Operating Procedures.

FY 2009 Critical Infrastructure Protection Planned Accomplishments

- Update and maintain the National Communications System portion of the integrated National Communications System/National Cyber Security Division Continuity of Operations Plan.
- Update Continuity of Operations and Continuity of Government Communication plans, policies and procedures, as required.
- Update emergency response plans, policies and procedures to reflect After Action/Lessons Learned reports from previous events.
- Conduct and document in-depth telecommunications assessments of high profile geographical areas in order to address and mitigate risks to the public network.
- Develop and implement a quantitative methodology to measure effectiveness of telecomm mitigation strategies.
- Produce a 2009 risk assessment of the threat to and vulnerability of the public communications Networks.
- Develop plans, policies and procedures to support Emergency Support Function #2 operations with regard to the 15 National Planning Scenarios and other high interest scenarios.

- Coordinate interagency participation to conduct Emergency Support Function #2 operations in the annual National Level Exercises, and support Emergency Support Function #2 participation in regional exercises.
- Support Emergency Support Function #2 participation in the New Madrid Seismic Zone workshops and exercises.
- Continue sponsorship of an annual Emergency Support Function #2 Training Conference.
- Conduct 6 to 9 distance learning teleconference training sessions for the Emergency Support Function #2 team members.
- Lead communications readiness efforts and outreach to Government and Industry partners in preparation for the communications infrastructure due to the mass gathering of transient users attending the 56th Inauguration activities in the mid-Atlantic region.
- Ensure operational readiness and validate information flow through participation in exercises such as CyberStorm, Top Officials, Pinnacle, Forward Challenge, National Response Framework Exercises, and other continuity readiness events.
- Provide annual review of existing internal National Coordinating Center plans to support national security and emergency preparedness activities; development of new internal plans based on identified requirements; and support external organizations in updating plans, such as the National Response Framework and National Incident Management System.
- Expand the National Coordinating Center and Communications Information Sharing and Analysis Center membership to keep pace with developing technologies and new entrants into communications sector.
- Foster sharing of threats and intelligence through maintenance of National Communications System Homeland Infrastructure Threat and Risk Analysis Center position and increasing the number of industry members with Top Secret/SCI clearances.
- Ensure operational readiness through weekly net checks; planning and coordination of one annual nationwide SHARED RESOURCES exercise; Support ad-hoc exercises as appropriate.
- Expand Radio-over-Internet Protocol network participation with Information Technology certification and deployment of Radio Over Internet Protocol to additional SHARED RESOURCES Control Station sites.

FY 2010 Critical Infrastructure Protection Planned Accomplishments

- Develop annual update of the National Communications System Continuity of Operations Plan
- Develop annual update of the Multi-Year Strategy and Management Plan for Continuity of Operations
- Support Emergency Support Function #2 participation in national security and emergency preparedness exercises before the 2010 Winter Olympics (January-February 2010).
- Provide Emergency Support Function #2 representatives to participate in the exercise development and conduct of the National Level Exercise 2010 (May 2010).
- Continue distance learning, teleconference training sessions for the Emergency Support Function #2 team members
- Plan and conduct the 2009 Emergency Support Function #2 Winter Conference (December 2009)
- Ensure operational readiness through participation in exercises such as CyberStorm, Top Officials, Pinnacle, Forward Challenge, National Response Framework Exercises, and other Continuity of Operations and Continuity of Government readiness events.

- Provide annual review of existing internal National Coordinating Center plans to support national security and emergency preparedness activities, development of new internal plans based on identified requirements, and support external organizations in updating plans such as the National Response Framework and National Incident Management System.
- Expand the National Coordinating Center and Communications Information Sharing and Analysis Center membership to keep pace with developing technologies and new entrants into communications sector.
- Improve information sharing and coordination between Government and Information Sharing and Analysis Center members by increasing members' participation in national security and emergency preparedness communications activities such as the annual National Coordinating Center Industry Partner Conference.
- Foster sharing of threats and intelligence through maintenance of the National Communications System Homeland Infrastructure Threat and Risk Analysis Center position and increasing the number of industry members with Top Secret/SCI clearances.
- Ensure operational readiness through weekly net checks; planning and coordination of one annual nationwide SHARED RESOURCES exercise.
- Expand Radio-over-Internet Protocol network participation with IT certification and deployment of Radio-over-Internet Protocol to additional SHARED RESOURCES Control Station sites.

The National Security and Emergency Preparedness Next Generation Networks Priority Service is a technology initiative to maintain and migrate legacy priority voice telecommunications services (Government Emergency Telecommunications Service and Wireless Priority Service) to the Next Generation Networks as the public switched network evolves from the circuit-based to Internet Protocol packet-based Next Generation Networks.

Since the mid-1990's, Government Emergency Telecommunications Service has provided emergency access and priority processing in the local and long-distance segments of the Public Switched Telephone Network. In order to provide Government Emergency Telecommunications Service on the Public Switched Telephone Network, augmentations and improvements to the network were needed. These were provided as a result of two primary American National Standards Institute standards¹. Government Emergency Telecommunications Service/Wireless Priority Service features have been implemented in both commercial local, wireless, and long-distance networks and inter-operate with international, government and private enterprise networks.

¹ T1.631-1993 Signaling System No. 7 (SS7) - High Probability of Completion (HPC) Network Capability, and ANSI standards T1.111-1996 Signaling System No 7 (SS7) - Message Transfer Part (MTP)

The commercial infrastructure of the Public Switched Telephone Network was built on circuit-switching technology. As the economic viability and technical feasibility of such advances as nationwide fiber optic networks, high-speed digital switching, and intelligent services are implemented in the existing communications infrastructure, the telecommunications industry must transition the communications networks from the legacy circuit-switched technology to the economically-attractive packet-based networks, termed the Next Generation Network.

The emerging network architecture to be used for providing public communications services in the Next Generation Network is provided by the Internet-Protocol Multimedia Subsystem.

The packet-switched Next Generation Network is much more data oriented than the legacy circuit-switched telephony networks. The Next Generation Network is designed to transmit packets of data from source to destination, without regard to the contents of these packets or to the underlying communications service (e.g., voice, video, text, etc.) that the data represent.

Executive Order 12472, *Assignment of National Security and Emergency Preparedness Telecommunications Functions*, (as amended by E.O. 13286, February 28, 2003) assigns the National Communications System the mission to coordinate the, “planning for and provision of national security and emergency preparedness communications for the Federal government under all circumstances, including crisis or emergency, attack, recovery and reconstitution. “In support of this mission, the National Communications System ensures that national communications architecture is developed that is:

- Responsive to the national security and emergency preparedness needs of the President and Federal organizations, including communications in support of national security leadership and continuity of government;
- Capable of satisfying priority communication requirements under all circumstances through use of commercial, government, and privately owned communications resources;
- Consistent, to the maximum extent practicable, with other national communications policies; and
- Incorporates the necessary combination of hardness, redundancy, mobility, connectivity, interoperability, restorability, and security to ensure the survivability of national security and emergency preparedness communications under all circumstances.

The National Communications System is leading the effort to develop and implement priority treatment capabilities in the packet-network environment, similar to the priority treatment capabilities currently available in the circuit-switched public switched telephone network. These efforts extend the Government Emergency Telecommunications Service voice telephony features into the new infrastructure and take advantage of the high bandwidths offered by the next-generation networks. Current priority telecommunications features and services will disappear as circuit-based segments of the networks are phased out, so the Next Generation Networks national security and emergency preparedness investment is needed to maintain current priority services and to eventually add priority data services to support national security and emergency preparedness user requirements.

National Communications System’s objective has been to ensure that national security and emergency preparedness requirements continue to be met through the period of convergence and deployment of these packet-based networks. Ensuring that National Communications System’s priority national security and emergency preparedness communications sessions have a high probability of being established and maintained, particularly in a network that might be damaged and congested, requires special features in each of the network's layers: The authority and identity of the originator of a priority

session are verified by an application server (*service layer*) prior to connecting the session. The session is established with special priority features (*control layer*) and the payload is transported with elevated priority through the network (*transport layer*).

In anticipation of this emerging migration of the public, circuit-switched telephony networks to Internet Protocol-based packet infrastructure, the National Communications System embarked on an effort to develop and implement priority capabilities in the packet-network environment similar to the priority capabilities currently available in the circuit-switched Public Switched Telephone Network. These efforts currently address voice telephony (Voice-over-Internet Protocol), thus extending the existing Government Emergency Telecommunications Service features into the new infrastructure. In recent years the National Communications System has been prototyping and analyzing alternate network configurations designed to achieve these objectives. These prototypes, based on existing and emerging international standards and on commercially-available networking equipment, have been used to test and demonstrate several methods of authorizing and processing priority sessions in the next-generation, Internet Protocol-based network.

FY 2008 Next Generation Network Accomplishments

- Provided proof of Concept Priority for Next Generation Network Video Teleconferencing Demonstrations to establish priority point-to-point video and multi-point video to include priority invocation and methods for user authentication and authorization.
- Developed Global Multi-Service Forum Interoperability 2008 test scripts for national security and emergency preparedness feature interoperability testing in Next Generation Networks via trunks between Europe and Asia.
- Initiated development of Internet Protocol Multimedia Subsystem Access national security and emergency preparedness Industry Requirements necessary to migrate Government Emergency Telecommunications Service/Wireless Priority Service functionality onto carriers' Next Generation Networks.
- Provided contributions leading to standardization of Internet Protocol Multimedia Subsystem Core national security and emergency preparedness features in the Alliance for Telecommunications Industry Solutions, Internet Engineering Task Force, Third Generation Partnership Project, Third Generation Partnership Project 2, and International Telecommunications Union.
- Began contributions leading to standardization of Internet Protocol Multimedia Subsystem Access national security and emergency preparedness features in the Alliance for Telecommunications Industry Solutions, Internet Engineering Task Force, Third Generation Partnership Project, Third Generation Partnership Project 2, and International Telecommunications Union.
- Initiated service engineering requirements development of Internet Protocol Multimedia Subsystem Core national security and emergency preparedness features for Government Emergency Telecommunications Service/Special Routing Arrangement Service and Wireless Priority Service.
- Tested Government Emergency Telecommunications Service/Wireless Priority Service (Segment 3) packet priority enhancements in AT&T's full operating capability internet-protocol Common Backbone network.

FY 2009 Next Generation Network Planned Accomplishments

- Develop NGN Standards in support of NGN priority voice-over-IP.
- Complete industry requirements core document for NGN priority voice services and continue development of Access Industry requirements.
- Develop NGN priority features in nationwide wireline network equipment.
- Develop and implement network design demonstration of priority wireline network equipment features including performance metrics and monitoring plan.
- Plan, test and deploy NGN priority enhancements in a National Wireline Network to reach Limited Capability (Phase I).
- Initiate work with industry to develop and implement NGN security measures, including survivability enhancements, and user identification management and authentication.
- Deploy Government Emergency Telecommunications Service/Special Routing Arrangement Service (Segment 3) packet priority enhancements in AT&T's full operating capability internet-protocol Common Backbone network.
- Complete development of Internet Protocol Multimedia Subsystem Access national security and emergency preparedness Industry Requirements necessary to migrate Government Emergency Telecommunications Service/Wireless Priority Service functionality onto carriers' Next Generation Networks.
- Complete standardization of Internet Protocol Multimedia Subsystem Core national security and emergency preparedness Industry Requirements for priority Voice over Internet protocol.

FY 2010 Next Generation Network Planned Accomplishments

- Develop NGN Standards in support of NGN priority voice-over-IP.
- Complete industry requirements Access document for NGN priority voice services.
- Develop NGN priority features in nationwide wireline network equipment.
- Conduct network design demonstrations of priority wireline network equipment features including performance metrics and monitoring plan.
- Complete planning, testing and deployment of NGN priority enhancements in a National Wireline Network to reach Limited Capability (Phase I).
- Conduct planning, architecture and deployment of NGN priority capabilities in two additional wireline service provider networks in support of the IOC milestone.
- Conduct planning and design of NGN voice-over-IP wireless prototype, and add priority data and video features.
- Conduct planning and architecture of priority NGN voice-over-IP features in nationwide wireless carriers.
- Continue NGN engineering assessments and demonstrations of NGN priority data and video services.
- Work with industry to develop and implement NGN security measures, including survivability enhancements, national security threats, and user identification management and authentication.

Total	9	16	\$5,963	0	0	\$0	-9	-16	-\$5,963

The scope of the National Command and Coordination Capability's mission encompassed a secure and non-secure, networked communications capability to support civil responses for domestic incidents requiring a coordinated Federal response.

This program is being discontinued. The Federal government, under National Communications System 3-10, is already purchasing secure and non-secure communications capabilities for continuity purposes in support of incident response and performance of primary mission essential functions. Additionally, there are considerable Federal communications capabilities in the field that can be leveraged during an event, and these existing, routinely used systems can be leveraged, as they are today, during a major incident.

Total Change 2009-2010	5	10	\$ 5,760

In FY 2010, NPPD requests \$44,060,000 for the Office of Emergency Communications, including 52 positions/FTE. This represents an increase of \$5,760,000 over the FY 2009 enacted budget of \$38,300,000. These funds will support and promote the ability of emergency response providers and Federal Officials to continue to communicate in the event of natural disasters, acts of terrorism, or other manmade disaster.

The FY 2010 request includes adjustments-to-base for pay inflation for \$196,000; annualization of \$675,000 for 5 positions received in FY 2009; 5 additional Federal positions offset by \$665,000 of program/contract dollars, and an increase of \$1,060,000 for facilities and rent as a transfer from NPPD Management and Administration. A program change of \$3,829,000 is requested to support the implementation of the National Emergency Communications Plan.

CURRENT SERVICES PROGRAM DESCRIPTION

Office of Emergency Communications	FY 2009 Enacted	FY 2010 Request
Personnel Costs	\$ 7,690	\$ 9,227
Program Costs	\$ 30,609	\$ 34,834
Total Costs	\$ 38,299	\$ 44,061

In 2007, Congress created the Office of Emergency Communications to work with emergency responders and other stakeholders at all levels of government to improve interoperable communications throughout the emergency response community. The Office of Emergency Communications supports and promotes the ability of emergency responders and government officials to continue to communicate in the event of natural disasters, acts of terrorism, or other man-made disasters, and works to ensure, accelerate, and attain interoperable and operable emergency communications nationwide.

The Office of Emergency Communications' vision was developed through work with Federal, State, local, Tribal, and private sector stakeholders culminating in the National Emergency Communications Plan (July 2008) – the first National plan to coordinate emergency communications efforts. The

National Emergency Communications Plan sets a high-level course and outlines much of the work the Office of Emergency Communications, other DHS components, Federal Agencies, and stakeholders across the Nation will undertake over the next three years to improve emergency communications. The Office of Emergency Communications' strategy is based upon the vision for emergency communications set forth in the National Emergency Communications Plan - to ensure that emergency responders can communicate as needed, on demand, and as authorized, at all levels of government and across all disciplines. Emergency communications encompass operability, interoperability, and the continuity of communications across a full range of current and future capabilities for the exchange of voice, data, and video information.

In order to achieve the vision outlined above and to implement the National Emergency Communications Plan, the Office of Emergency Communications developed six key goals it will pursue to improve emergency communications and to support the broader strategic goals of DHS.

- Goal 1: Foster coordination between Federal, State, local, Tribal, and private sector emergency communications stakeholders.
- Goal 2: To improve emergency communications capability through targeted interaction with Federal, State, local, and Tribal agencies.
- Goal 3: Target Federal grants to the most critical emergency communications needs of States and localities in alignment with the National Emergency Communications Plan.
- Goal 4: Develop policies and plans that guide, promote, and enhance efforts to improve emergency communications nationwide.
- Goal 5: Develop innovative methods for addressing emergency communications gaps.
- Goal 6: Maintain a world-class organization to address the needs of the emergency response community.

To achieve its mission, goals, and objectives, the Office of Emergency Communications organized itself to be flexible and responsive to its users' needs, yet capable of delivering consistent, effective services.

The Office of the Director provides leadership, direction, and oversight for Office of Emergency Communications activities in support of its mission, and serves as the organization's principal advocate before Congress; other Federal, State, local, and Tribal agencies; key stakeholders; and the public. Three Divisions reporting to the Director carry out the Office's programmatic responsibilities, as follows:

Federal Communications Services. This division engages with Federal Departments and Agencies to improve emergency communications coordination, including policy development, investment planning, and direct assistance.

Multi-Jurisdictional Communications Services. This division engages with State, local and Tribal stakeholders to deliver targeted technical assistance.

Policy, Planning, and Analysis. This division identifies and assesses interoperable emergency communications capabilities and encourages Federal grants to be targeted to emergency responder needs, assistance, and capability development efforts to address gaps and challenges.

Crosswalk of FY 2009 Enacted Structure to the FY 2010 Congressional Justification Structure

In FY 2010, NPPD requests a change in budget structure to better align appropriated resources by five service offerings: 1) Coordination, 2) Demonstration Projects, 3) Grants, 4) Policy, and 5) Technical Assistance. NPPD believes that optimal mission success will be reached through a service offering model while maintaining organizational structure. The following exhibit provides a crosswalk of our proposed budget structure.

Policy, Planning, and Analysis identifies challenges facing the advancement of interoperable emergency communications capabilities and develops policies and strategies to meet these challenges. Policy, Planning and Analysis also coordinates and prioritizes Federal grants assistance for the advancement of interoperable emergency communications capabilities. Responsibilities include coordinating with relevant Federal Agencies and Departments, State, local and Tribal governments, emergency response providers, and the private sector to establish national emergency communications policies. Policy, Planning, and Analysis provides a national assessment of existing and emerging emergency communications vulnerabilities in coordination with the Federal and Multi-Jurisdictional Communications Services Divisions. The Division develops and manages the implementation of the National Emergency Communications Plan establishing objectives and methods to address emergency communications challenges and vulnerabilities. Additionally, Policy, Planning, and Analysis works with the Federal Emergency Management Agency to develop emergency communications grant program guidance and evaluate progress achieved through grant programs. Policy, Planning, and Analysis ensures that Federal assistance is optimally targeted at addressing existing and emerging interoperable emergency communications challenges. Policy, Planning, and Analysis also prepares a periodic National Communications Capabilities Report, provides outreach to partners in industry, and manages the creation of a web portal with communications information for emergency responders at Federal, State, and local levels.

FY 2008 Policy Planning and Analysis Accomplishments

- Developed the National Emergency Communications Plan, the Nation's first strategic plan targeted at improving emergency response communications. This Plan complements

overarching homeland security and emergency communications legislation, strategies, and initiatives, and was developed through a collaborative effort with more than 150 public and private sector emergency communications officials at all levels of government and across disciplines.

- Established, in coordination with Federal Emergency Management Agency, the grant selection criteria to reinforce national emergency communications goals and objectives through the release of the grant guidance and application kit for the Interoperable Emergency Communications Grant Program. The FY 2008 Interoperable Emergency Communications Grant Program guidance made progress in governance, standard operating procedures, and training and exercises.

FY 2009 Policy Planning and Analysis Planned Accomplishments

- Develop foundational criteria to demonstrate the accomplishment of National Emergency Communications Plan Goal 1 by 2010 (90 percent of all high-risk urban areas are able to demonstrate response-level emergency communications² within 1 hour for routine events involving multiple jurisdictions and agencies).
- Develop foundational criteria to evaluate progress toward National Emergency Communications Plan Goal 1 by 2010 (90 percent of all high-risk urban areas are able to demonstrate response-level emergency communications within 1 hour for routine events involving multiple jurisdictions and agencies).
- Lead efforts to plan a national conference of Federal, State, local and Tribal emergency responders and government officials.

FY 2010 Policy Planning and Analysis Planned Accomplishments

- Improve emergency communications response relationships and build upon accomplishments of FY 2009 by reviewing local incident after action reports from the FY 2009 and FY 2010 Homeland Security Exercise and Evaluation Program to measure progress in achieving National Emergency Communications Plan Goal 1.
- Develop a self-assessment tool to facilitate measuring nationwide progress in achieving Goal 2 by 2011 (75 percent of non-Urban Areas Security Initiative jurisdictions are able to demonstrate response-level emergency communications within 1 hour for routine events involving multiple jurisdictions and agencies).
- Develop criteria required to measure progress in achieving Goal 3 of the National Emergency Communications Plan by FY 2013 (75 percent of all jurisdictions are able to demonstrate response-level emergency communications in the event of a significant incident, as outlined in national planning scenarios, within 3 hours). Policy Planning and Analysis will develop grant guidance, in collaboration with Federal Emergency Management Agency for Interoperable Emergency Communications Grant Program and other Departmental grant programs for emergency communications, to ensure that grant selection criteria continues to reflect strategic objectives.
- Prepare bi-annual progress reports for Congress on progress in implementing the National Emergency Communication Plan. To demonstrate continual progress achieved by Federal grants on implementation of Statewide Communications Interoperability Plans, the Policy, Planning and Analysis will prepare Statewide Communications Interoperability Plans and Interoperable Emergency Communications Grant Program progress reports for Congress.

²Response-level emergency communications is the capacity of individuals with primary operational leadership responsibility to manage resources and make timely decisions during a multi-agency incident without technical or procedural communications impediments

Multi-Jurisdictional Communications Services

\$ thousands	Activity	FY 2009			FY 2010			Change		
		FTE	FTP	Enacted	FTE	FTP	Request	FTE	FTP	\$

	<i>Technical Assistance</i>			\$10,271			\$13,100			\$2,829
	<i>Demonstration Projects</i>			\$503			\$503			\$0
	Program Costs			\$13,678			\$16,241			\$2,563
	Total	21	26	\$17,579	28	28	\$21,183	7	2	\$3,604

Multi-Jurisdictional Communications Services establishes and administers services delivered to advance State, local, Tribal, and multi-jurisdictional interoperable emergency communications capabilities. Multi-Jurisdictional Communications Services focuses on providing the Office of Emergency Communication’s technical assistance and stakeholder engagement efforts through the Interoperable Communications Technical Assistance Program and SAFECOM programs. Technical assistance provides direct support through the development and delivery of training, tools, and on-site assistance to Federal, State, and local agencies for the implementation of the National Emergency Communications Plan and the advancement of public safety interoperable emergency communications capabilities. Through the SAFECOM program, the Office of Emergency Communications develops tools, best practices, and methodologies that emergency response agencies can use to enhance their interoperability efforts. The stakeholder engagement effort focuses on conducting outreach and consensus building activities with State, local, and Tribal government officials and national practitioner organizations to exchange best-practices and build consensus for common challenges.

FY 2008 Multi-Jurisdictional Communications Services Accomplishments

- Established 56 Statewide Communication Interoperability Plans and drafted 56 Statewide Communication Interoperability Plans Implementation Reports. Supported the development and approval of all 56 Statewide Communication Interoperability Plans —prior to this accomplishment, only eight States had strategic plans for interoperable communications. The implementation reports identify initiatives that States and territories are undertaking to advance interoperable emergency communications and the reports will help the Office of Emergency Communications to prioritize and target technical assistance offerings to fill interoperable emergency communications gaps.
- Completed 144 technical assistance requests to State, local, and Tribal governments with regard to interoperable communications, including support to States and territories in the development of Public Safety Interoperable Communications Grant Program Investment Justifications.
- Coordinated with the SAFECOM Emergency Communications and Emergency Response Council stakeholder groups to validate the National Emergency Communications Plan prior to finalizing publication.

FY 2009 Multi-Jurisdictional Communications Services Planned Accomplishments

- Provide guidance and technical assistance to States and territories to support the implementation of Statewide Communication Interoperability Plans and alignment of Statewide Communication Interoperability Plans to the National Emergency Communications Plan.

- Provide Statewide Communication Interoperability Plan Implementation Workshops to support States and territories in establishing concrete milestones for advancing interoperable emergency communications and identify priorities for the Office of Emergency Communications technical assistance services.
- Deploy Communications Unit Leader Training/Instructor Training that will ensure every State and territory has qualified personnel capable of coordinating on-scene emergency communications during a multi-jurisdictional response.
- Create the Statewide Interoperability Coordinators Council, which will enable Statewide Interoperability Coordinators to leverage each other to improve emergency communications in their respective States and territories by sharing best practices and lessons learned.

FY 2010 Multi-Jurisdictional Communications Services Planned Accomplishments

- Provide guidance and technical assistance to States and territories to support the implementation of Statewide Communication Interoperability Plans and alignment of Statewide Communication Interoperability Plans to the National Emergency Communications Plan.
- Deploy Communications Unit Technician Training in order to ensure that in the event of a multi-discipline, multi-jurisdictional response event, on site response practitioners are trained to a similar baseline. The Communications Unit Technician is responsible for assisting with the technical activities of incident response.
- Coordinate with the Statewide Interoperability Coordinator Council and Metropolitan Area Working Group to collect data related to the National Emergency Communications Plan Goal 1 (90 percent of all high-risk urban areas are able to demonstrate response-level emergency communications within 1 hour for routine events involving multiple jurisdictions and agencies).

Federal Communication Services leads the Office of Emergency Communications efforts to coordinate and align Federal emergency communications programs and initiatives with national emergency communications goals. Through the Emergency Communications Preparedness Center and Joint Wireless Programs, the Office of Emergency Communications is establishing a forum for Federal Departments and Agencies to share information and coordinate related programs with the objectives of increasing awareness and reducing duplication of effort. The Office of Emergency Communications is connecting Federal emergency communications stakeholders with their State, local, Tribal, and private sector counterparts through national and regional-level forums, such as the Federal Partnership for Interoperable Communications and Southwest Border Communications Working Group. In addition, the Office of Emergency Communications is sponsoring workshops in regions critical to homeland security (e.g., northern border Cross-Border Interoperability Workshop) to help develop solutions to cross-border communications interoperability challenges. This collaboration helps to improve

interoperability, while also helping maximize the use of scarce funding resources through the identification of sharing opportunities.

Federal Communication Services provides direct assistance to Federal Departments and Agencies with critical interoperability needs. The Office of Emergency Communications is leading efforts to demonstrate innovative solutions for improving cross-border interoperability through the development of the Cross-Border Security Communications Network and Border Interoperability Demonstration Projects. The outputs of these demonstrations will include repeatable approaches for improving cross-border interoperability, and models for addressing technical, operational, and policy challenges. The Office of Emergency Communications also provides direct, field assistance to Federal Agencies with an expressed interoperability need.

FY 2008 Federal Communications Services Accomplishments

- Finalized the Joint Wireless Programs Memorandum of Understanding among DHS and the Departments of Justice and Treasury, which superseded the previous Integrated Wireless Network Memorandum of Understanding allowing for coordination under Joint Wireless Programs. This program will ensure that common, standards-compliant technologies are procured, thereby fostering communications interoperability among Federal Agencies for more effective and efficient enforcement activities, and enabling communications interoperability with State and local partners.
- Coordinated Federal requirements into the development of key technology standards through the Federal Partnership for Interoperable Communications. The Federal Partnership for Interoperable Communications serves as a coordination body to address technical and operational issues relevant to interoperability within the Federal wireless communications community.
- Facilitated the integration of Federal users onto the Wyoming communications system by developing a low cost technical solution and negotiating effective spectrum use to address frequency gaps. This project provided an innovative solution to sharing scarce spectrum resources that can be duplicated throughout the Nation.
- Developed the Action Plan for Improving Cross Border Communications, which was approved by the High Level Consultative Commission on Telecommunications Principals in May 2008. Federal Communication Services co-chairs the U.S.-Mexico High Level Consultative Commission on Telecommunications Security Communications Task Group, which is tasked with implementing the Action Plan. The solution will transform bi-national emergency response capabilities by establishing 10 permanent microwave links between existing U.S. Customs and Border Protection and Mexican C4 Center sites.
- Facilitated the establishment of the Emergency Communications Preparedness Center Working Group to draft the charter, mission, and scope. The Emergency Communications Preparedness Center is legislatively mandated to serve as the central conduit for intergovernmental emergency communications information sharing.

FY 2009 Federal Communications Services Planned Accomplishments

- Officially establish the Emergency Communications Preparedness Center following final approval of the charter by all 22 member Departments and Agencies.

- Implement the public Emergency Communications Preparedness Center Clearinghouse on DHS.gov. This activity will eliminate duplication of emergency communications efforts and provide users access to a document library and a centralized information source.
- Coordinate with the DHS Wireless Working Group, the Departments of Justice and Treasury to enact the Joint Wireless Program governance structure, determine DHS emergency communications priorities and identify commonalities with external agencies.
- Co-convene the first U.S.-Canada Cross Border Workshop in May 2009. This workshop will address key challenges to cross-border interoperability.
- Coordinate with more than 50 agencies to develop the Integrated Interoperable Communications Plan for the 2010 Winter Olympic and Paralympic Games.

FY 2010 Federal Communications Services Planned Accomplishments

- Implement the final phase of the U.S.-Mexico High Level Consultative Commission on Telecommunications Security Communications Task Group Action Plan. This phase includes completing system implementation and finalization of bi-national and domestic standard operating procedures.
- Coordinate with the DHS Wireless Working Group and the Departments of Justice and Treasury to determine DHS emergency communications priorities, identify commonalities with external agencies, and fund identified priorities through Interagency Agreements with DHS Components.
- Implement the secure Emergency Communications Preparedness Center Clearinghouse. This activity will increase intergovernmental information sharing regarding emergency communications.
- Convene two Border Interoperability Workshops in partnership with Mexican and Canadian officials to address key challenges to cross-border interoperability.

IV. Program Justification of Changes

**Department of Homeland Security
National Protection and Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)**

Program Change 1: Vulnerability Assessments

Strategic Goal(s) & Objective(s): Goal 3: Protect Critical Infrastructure; Objective 3.1 Protect and Strengthen the Resilience of the Nation’s Critical Infrastructure and Key Resources

PPA: Identification and Analysis

Program Increase: Positions: 0 FTE: 0 Dollars: \$3,000,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							16	16	23,522
Program Increase							0	0	3,000
Budget Request	33	33	15,936	33	33	23,409	16	16	26,522

Description of Item

The Vulnerability Assessment Project’s activities are directed by Homeland Security Presidential Directive-7, which call for assessing critical infrastructure and key resource vulnerabilities and consequences. The Vulnerability Assessment Project is an important project required to execute Infrastructure Protection’s risk reduction mission. Current efforts cover the spectrum of field teams conducting single Site Assistance Visits and Buffer Zone Plans to larger-scale assessments of systems and regions via the Regional Resiliency Assessment Program. The Computer-Based Assessment Tool complements these assessment tools by integrating assessment data with geospatial video, providing planners with a computer-based, cross-platform tool that enables informed decisions and quicker incident response. A regionally-based vulnerability assessment capability will provide DHS with the ability to more effectively target grant and other programs ensuring the most effective impact on risk reduction to the region rather than just individual assets. The ability to collect this data in a more holistic manner will provide more accurate information used in sector-based Common Vulnerabilities, Protective Measures, and Potential Indicators of Terrorist Activities reports.

The Energy Policy Act of 2005 (Section 657, Department of Homeland Security Consultations) requires Infrastructure Protection to perform security consultation for Nuclear Regulatory Commission new nuclear reactor license applications. Through the Vulnerability Assessment Project, NPPD provides security consultations for areas where new nuclear reactors will be located. As part of the application process for new nuclear reactor licenses, NPPD provides its findings in reports to the

Nuclear Regulatory Commission that describes assessment results within reviewed areas and identify potential vulnerabilities and threats to proposed new reactors.

Additionally, the Vulnerability Assessment Project established the Regional Resiliency Assessment Program, which is a cooperative government–led, interagency assessment of specific critical infrastructure and key resources and a regional analysis of the surrounding infrastructure. The emphasis for the Regional Resiliency Assessment Program will be on infrastructure “clusters,” regions, and systems in major metropolitan areas, identified through application of risk-based criteria. The goal of the Regional Resiliency Assessment Program is to reduce the Nation’s vulnerability to natural and manmade threats by evaluating critical infrastructure and key resources on a regional level and coordinating protection efforts to enhance the resiliency and security of their surrounding communities and geographic regions.

Justification

The Energy Policy Act of 2005, Section 657, Department Of Homeland Security Consultation, states “that before issuing a license for a utilization facility, the Nuclear Regulatory Commission shall consult with the Department of Homeland Security concerning the potential vulnerabilities of the location of the proposed facility to terrorist attack.” These funds will support Infrastructure Protection’s consultations which are provided in a report to the Nuclear Regulatory Commission to be used in the new reactor license process, ensuring that the Commission has a comprehensive security understanding of the area in which the new reactor will be located.

Reducing the risk to our Nation’s most critical Tier 1 and Tier 2 critical infrastructure and key resource requires the capability to assess systems, interdependencies, and cascading effects. Infrastructure Protection’s current vulnerability assessment methodology is asset centric, focusing on our Nation’s highest risk Tier 1 and Tier 2 critical infrastructure and key resources. During DHS’ initial years of collecting data and conducting assessments, this approach has been logical and sufficient. Infrastructure Protection is now maturing its vulnerability assessment methodology from an asset based approach to a cross-sector, regional approach. This will permit identification and prioritization of vulnerabilities and consequences of multiple assets within the region and coordination of Infrastructure Protection protective programs to reduce risk.

Impact on Performance (Relationship of Increase to Strategic Goals)

Funding will support new Nuclear Reactor Security Consultations while retaining vulnerability assessment activity levels in other programs within this office. The increase in funds will ensure that proper resources are committed to conducting these security consultations and that the requirements are fully met without compromise to the quality or timeliness of support.

Funds also will support the Regional Resiliency Assessment Program and will have an immediately beneficial impact through securing subject matter experts in the fields of civil, structural, petroleum, electrical, and other types of engineering who have the necessary understanding of systems-based vulnerabilities with regional impacts in sectors such as electricity, telecommunications, water, and gas. These subject matter experts will provide the analysis that will be critical to the Regional Resiliency Assessment Program’s ability to evaluate the resiliency of these systems, identify vulnerabilities, and contribute to a regional analysis. Determining the full range of interdependencies and potential effects improves the effectiveness of prevention, protection, response and recovery efforts from the

consequences of a terrorist attack or a natural disaster. These system-based assessments would lead to better multi-jurisdictional planning, targeting of grant funds and other protection programs.

FY2010 Milestone/Schedule

- Conduct approximately 12 New Nuclear Reactor Security Consultations in coordination with the Nuclear Regulator Commission's new nuclear reactor license process. (Dependent on Nuclear Regulator Commission process).
- Conduct 6 Regional Resiliency Assessment Projects in coordination with Federal, State, and local officials, and asset owners and operators.

(Dollars in Thousands)**

Program Change 2: National Infrastructure Simulation and Analysis Center

Strategic Goal(s) & Objective(s): **Goal 3: Protect Critical Infrastructure; Objective 3.1** Protect and Strengthen the Resilience of the Nation’s Critical Infrastructure and Key Resources

PPA: Identification and Analysis

Program Decrease: Positions: 0 FTE: 0 Dollars: (\$4,000,000)

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	20,000
Program Increase							0	0	(4,000)
Budget Request	0	0	20,000	0	0	20,000	50	50	16,000

Description of Item

National Infrastructure Simulation and Analysis Center was established to provide a comprehensive capability to assess the national system of interdependent infrastructures through advanced simulation and modeling. National Infrastructure Simulation and Analysis Center conducts analyses of technical, economic, and national security implications of critical infrastructure and key resources protection, mitigation, response, and recovery options. To do this, National Infrastructure Simulation and Analysis Center conducts gap analysis using modeling and simulation to predict the performance of infrastructure under abnormal conditions (e.g., natural and manmade incidents), the effects of interdependencies, and the dynamics of their interconnections.

Justification

This programmatic decrease reflects a reduction of \$4,000,000 for the National Infrastructure Simulation and Analysis Center efforts.

Impact on Performance (Relationship of decrease to Strategic Goals)

The reduction of \$4,000,000 for the National Infrastructure Simulation and Analysis Center will have no impact on priority modeling activities or on the ability to perform maintenance to maintain existing modeling tools.

(Dollars in Thousands)**

Program Change 3: National Infrastructure Protection Plan Management and Critical Infrastructure and Key Resources Partnerships

Strategic Goal(s) & Objective(s): Goal 3: Protect Critical Infrastructure: Objective 3.1 Protect and Strengthen the Resilience of the Nation’s Critical Infrastructure and Key Resources

PPA: Coordination and Information Sharing

Program Decrease: Positions: 0 FTE: 0 Dollars: (\$11,000,000)

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							50	50	46,724
Program Increase							0	0	(11,000)
Budget Request	37	37	50,364	40	40	46,587	50	50	35,724

Description of Item:

Homeland Security Act of 2002 Title II, Section 201 requires the development of the comprehensive national plan for securing the critical infrastructure and key resources of the United States and the recommendation of measures for protecting them. The Homeland Security Presidential Directive-7 directed the development of a plan to address critical infrastructure and key resources protection. The National Infrastructure Protection Plan was originally published in June 2006, and then reviewed, revised, and reissued in 2009. The National Infrastructure Protection Plan and the supporting Sector-Specific Plans serve as the foundation of the Nation’s long-term critical infrastructure and key resources risk management program.

Justification:

The Office of Infrastructure Protection has achieved several milestones with the National Infrastructure Protection Plan, including a rewrite of the plan in FY 2009. The National Infrastructure Protection Plan partnership has evolved considerably since the plan was first developed in 2006, but the program is largely organized in the same fashion as it was since the plan was created. The Office of Infrastructure Protection is revisiting the internal organization around the National Infrastructure Protection Plan and has identified areas where cost savings can be achieved.

The Office of Infrastructure Protection is evaluating how to more effectively involve its sector-specific partners to utilize existing expertise and sustain service capabilities. The Office of Infrastructure Protection also is evaluating how to more effectively utilize lead sector specific agencies, State and local officials, and private sector critical infrastructure and key resources owners/operators to reduce the reliance on Infrastructure Protection contracted sector subject matter experts. The National Infrastructure Protection Plan Program Management Office and the Sector Partnerships office are also

requesting additional Federal personnel to offset the need for contract staff and increase the number of staff with decision-making authority.

Impact on Performance (Relationship of Increase to Strategic Goals):

Infrastructure Protection's new approach to utilize subject matter experts located internally and within its partner organizations should minimize any potential impact of realigning the support functions for the National Infrastructure Protection Plan.

(Dollars in Thousands)**

Program Change 4: Infrastructure Security Compliance

Strategic Goal(s) & Objective(s): Goal 3: Protect Critical Infrastructure; Objective 3.1 Protect and Strengthen the Resilience of the Nation’s Critical Infrastructure and Key Resources

PPA: Mitigation Programs

Program Increase: Positions: 45 FTE: 23 Dollars: \$19,000,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							223	223	84,363
Program Increase							45	23	19,000
Budget Request	37	21	50,000	123	78	78,000	268	246	103,363

Description of Item:

Section 550 of the DHS Appropriations Act of 2007 gave the Department the authority to regulate the security of “high-risk” chemical facilities. The Chemical Facility Anti-Terrorism Standards were promulgated in 2008 to implement this authority. DHS currently projects this effort will ultimately encompass over 6,500 covered high-risk chemical facilities nationwide, which have been divided into Tier 1-4 facilities, with Tier 1 facilities considered the highest risk facilities and Tier 4 facilities considered the lowest risk facilities within the high-risk designation.

Section 563 of the Consolidated Appropriations Act of 2008 (Section 563), Subtitle J – *Secure Handling of Ammonium Nitrate*, amended the Homeland Security Act of 2002 to provide DHS with the authority to “regulate the sale and transfer of ammonium nitrate by an ammonium nitrate facility...to prevent the misappropriation or use of ammonium nitrate in an act of terrorism”.

This program increase will enable Infrastructure Protection to further implement the mandated regulatory effort of “high-risk” chemical facilities by providing the necessary resources to accelerate the hiring of base line chemical site security personnel, and to expand current capabilities and initiate inspections of designated “high-risk” chemical facilities.

This increase also contributes to the development of an Ammonium Nitrate regulatory office to focus on preventing the theft or misappropriation of Ammonium Nitrate for use in an act of terrorism.

Justification:

Chemical Site Security

In order to carry out the authority granted to the Department by Section 550 of the DHS Appropriations Act of 2007 to regulate the security of “high risk” chemical facilities, the need exists for sufficient

analytical, inspection and support capability to adequately cover approximately 6,500 chemical facilities nationwide. Infrastructure Security Compliance Division proposes to utilize an additional \$7,000,000 in funding primarily to support its 139 Chemical Facility Anti-Terrorism Standards field Inspectors, to ensure that the entire Inspector cadre is trained, equipped and adequately housed to perform their duties. This funding will specifically support the establishment of three permanent field offices located near select areas of tiered high risk chemical facilities.

Ammonium Nitrate

In order to begin implementing the Department's responsibilities under the Secure Handling of Ammonium Nitrate Act, Section 563 of the DHS Appropriations Act of 2008 (Section 563), Infrastructure Security Compliance Division proposes to utilize the additional \$12,000,000 in ammonium nitrate funding to develop the information collection and analytical tools and begin hiring, training, and equipping the inspectors and staff to implement this new regulatory program, while at the same time improving the Chemical Facility Anti-Terrorism Standards implementation process. Many of the activities listed below will depend on the final regulatory language at the completion of the rulemaking process, which has not begun, but the Department anticipates that it will need to perform the following tasks in FY10:

- Hire, train, equip, and house 35 Inspectors and 10 Headquarters support staff, over two years, to perform or oversee Ammonium Nitrate facility compliance inspections required by Section 899C. To maximize efficient use of manpower, these 35 Inspectors will be trained and certified in for Chemical Facility Anti-Terrorism Standards and can assist the existing Inspectors and also gain valuable field experience. This will enable greater inspection coverage of high-risk chemical facilities while the Ammonium Nitrate program regulations are being developed. Ultimately, all Inspectors will be trained to function within both the chemical and Ammonium Nitrate facility inspection regimes.
- Develop secure web portal and associated information technology backbone through which potential buyers and sellers of Ammonium Nitrate can submit applications to the Department for the right to receive a registration number which would allow the individual to buy or sell Ammonium Nitrate. This will support the Ammonium Nitrate user registration process expected to utilized by over 160,000 registrants and required by Section 899B(c) and (d) of Section 563.
- Identify a system to screen information submitted by prospective buyers and sellers of Ammonium Nitrate via the Ammonium Nitrate registration portal against the Terrorism Screening Database, as required by Section 899B(i)(2) of Section 563. The Infrastructure Security Compliance Division currently is working with the Department's Screening Coordination Office to evaluate options for accomplishing this.
- Develop an internal database to manage the assignment and dissemination of registered user numbers to approved buyers and sellers of Ammonium Nitrate, as required by Section 899B(c) and (d) of Section 563.
- Develop a secure web portal through which approved Ammonium Nitrate sellers can submit to the Department identifying information (including Ammonium Nitrate registered user numbers) from prospective Ammonium Nitrate buyers to enable to Department to verify the potential Ammonium Nitrate buyer's identity and registration to purchase Ammonium Nitrate, as required by Section 899B(e).
- Develop, reproduce and disseminate Congressionally-mandated guidance materials and posters. Pursuant to Section 899B(i)(4)(C) and Section 899D(c) of Section 563, the Department is required to develop and disseminate (a) guidance documents informing prospective Ammonium Nitrate registered user number applicants of the procedures for appealing the denial of a registration

application; (b) guidance documents instructing facilities selling Ammonium Nitrate on the identification of suspicious Ammonium Nitrate purchases and appropriate responsive actions to such purchases; and (c) materials suitable for posting at facilities selling Ammonium Nitrate that provide notification of the recordkeeping requirements and the penalties for violating such requirements.

Impact on Performance (Relationship of Increase to Strategic Goals):

This initiative contributes directly to achieving the long-term goals of the DHS and helps to achieve IP's priorities and strategic objectives. Specifically, this requirement addresses Goal 3: "Build and implement a sustainable, national critical infrastructure and key resources risk-management program." This is further refined within Objective 3.5: to "develop and implement regulations that enhance the security of the Nation's high-risk chemical facilities, and ensure that chemical site security compliance plans are developed, implemented, and validated through regularly conducted inspections and audits." The end state goal is that covered facilities will be assessed by an established and well-trained inspector cadre, which will assess covered facilities, and the initiative will incorporate improvements in process, procedures and systems to ensure the security of the Nation's high-risk chemical facilities.

The funding is necessary to support (in terms of training, housing and equipment) onboard Inspectors, and to increase the Infrastructure Security Compliance Division's capability to inspect facilities under the Chemical Facility Anti-Terrorism Standards or the Ammonium Nitrate programs.

Additionally, the Ammonium Nitrate activities are also required by statute and central to allowing the Department to achieve its congressionally mandated mission to prevent the misappropriation or use of Ammonium Nitrate in an act of terrorism. By completing these activities, the Department will achieve an end state where prospective sellers and purchasers of Ammonium Nitrate are vetted by the Department, and Ammonium Nitrate is sold only to individuals whose identity and registration to purchase Ammonium Nitrate has been verified.

Program Change 5: Bombing Prevention

Strategic Goal(s) & Objective(s): Goal 3: Protect Critical Infrastructure; Objective 3.1 Protect and Strengthen the Resilience of the Nation's Critical Infrastructure and Key Resources

PPA: Mitigation Programs

Program Increase: Positions: 0 FTE: 0 Dollars: \$200,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							20	20	14,568
Program Increase							0	0	200
Budget Request	4	4	5,562	8	4	14,000	20	20	14,768

*This program change is equal to Bombing Prevention's requested \$4,200,000 program increase, less the \$3,000,000 earmark for underground critical infrastructure protection and less the \$1,000,000 earmark for the IED Geospatial monitoring tool.

Description of Item

Bombing Prevention's mission is described in the Homeland Security Appropriations Act of 2007 and the Homeland Security Presidential Directive-19, "Combating Terrorist Use of Explosives in the United States", signed February 12, 2007 by President Bush. Homeland Security Presidential Directive 19 mandated the Attorney General, in coordination with the Secretary of Homeland Security, to develop a report to the President, including a national strategy and recommendations, on how more effectively to deter, prevent, detect, protect against, and respond to explosive attacks, including the coordination of Federal Government efforts with State, local, territorial, and tribal governments, first responders, and private sector organizations. This report was completed and approved by the President on December 20, 2007.

This enhancement will allow DHS to provide an enhanced and coordinated national bombing prevention and improvised explosive device security effort, as mandated by the Homeland Security Appropriations Act of 2007 and Homeland Security Presidential Directive 19. Bombing Prevention serves as DHS' focal point for strategic planning, coordination, capacity building, and information sharing in the effort to improve bombing prevention efforts throughout the Federal Government, State and local jurisdictions, and the private sector. Homeland Security Presidential Directive-19 and the National Strategy have entrusted the Office for Bombing Prevention with significant responsibilities, including: (a) increasing information sharing on terrorists tactics and procedures for the use of improvised explosive devices with State, local and private sector security partners, (b) conducting gap analysis of State and local law enforcement across the Nation with regard to bombing prevention in order to focus national efforts to mitigate risk; and (c) coordinating an Improvised Explosive Devices Awareness Campaign across the Nation.

The funding provided in FY 2009 for protection of underground critical infrastructure and for an improvised explosive device geospatial monitoring tool has been removed from the Bombing Prevention Current Services in FY 2010.

Justification:

Bombing Prevention leads the DHS effort to enhance Federal, State, and local capabilities to deter, prevent, detect, protect against, and respond to attacks that use improvised explosive devices against critical infrastructure and key resources and soft targets. To achieve these goals, Bombing Prevention activities consist of three primary mission areas: coordinate national and intergovernmental bombing prevention efforts, to include leadership of the DHS Improvised Explosive Devices Working Group; conduct requirements, capabilities and gap analysis; and, promote information sharing and bombing prevention awareness.

The requested funds are necessary to meet expanding requirements for current bombing prevention activities, including meeting its Executive and Congressional mandates. More importantly, DHS must be able to effectively manage the risk associated with terrorist bombings; the tactic that continues to be our adversary's primary method of attack and the number one terrorist threat, as recognized by the Secretary and the Intelligence Community.

In executing these Congressional and Presidential mandates, Bombing Prevention has led the development of innovative initiatives, including TRIPwire and the National Capabilities Analysis Database. As DHS has evolved, Bombing Prevention has managed growing responsibilities and mandated requirements at both the operational and strategic level, serving as an advocate for the Nation's bombing prevention community and a trusted policy advisor for DHS leadership. Bombing Prevention works closely with DHS components, Federal agencies, State, local and tribal government stakeholders, and the public and private sectors and has leveraged these interagency and intergovernmental relationships in the DHS National Strategy for improvised explosive devices, and the Homeland Security Presidential Directive 19 Report to the President.

Impact on Performance (Relationship of Increase to Strategic Goals):

These additional resources will allow for an accelerated analysis of critical gaps and a more targeted approach. This enhancement will provide the resources to conduct 68 additional capabilities assessments for 25 explosives detection canine units, 18 bomb squads, 10 Special Weapons and Tactics teams and 15 dive teams in high risk urban areas across the Nation. With this enhancement DHS will be able to meet expanding critical requirements for current Bombing Prevention activities, including meeting Executive and Congressional mandates in a timely manner. More importantly, DHS will be able to manage risk associated with the terrorist use of explosives in the homeland. Bombing Prevention will complete 132 National Capability Analysis Data assessments, (32 US bomb squads, 50 explosives detection canine units, 30 dive teams, and 20 Special Weapons and Tactics teams). Bombing Prevention will continue to work with FEMA to ensure that appropriate subject matter and technical expertise inform DHS guidance to grantees to reduce identified gaps.

FY 2010 milestones/schedule

- Planned completion of 16 Homeland Security Presidential Directive-19 Implementation Plan recommendations.

- 200 National Capability Analysis Data assessments; 50 US bomb squads, 75 explosives detection canine units, 45 dive teams, and 30 Special Weapons and Tactics teams completed.
- 10,000 Federal, State, local and private sector entity users registered for bombing prevention information services.

Description of Item

The Philadelphia Infrastructure Monitoring project funding was to purchase cameras for the city of Philadelphia. The cameras are to be placed around critical infrastructure and key resources to enhance the monitoring and protection of these sites.

Justification:

DHS is not requesting any funding for this project in FY 2010.

Impact on Performance (Relationship of Increase to Strategic Goals):

The cameras purchased with the FY 2008 and FY 2009 funding will continue to be operational into FY 2010.

Program Change 7: Cybersecurity Coordination

Strategic Goal(s) & Objective(s): **Goal 3: Protect Critical Infrastructure; Objective3.3: Improve Cyber Security**

PPA: National Cyber Security Division

Program Increase: Positions: 0 FTE: 0 Dollars: \$13,000,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							0	0	\$13,000
Budget Request							0	0	\$13,000

Description of Item:

The Cybersecurity Coordination increase will allow NCSA to more effectively integrate and coordinate information necessary to secure U.S. cyber networks and systems. Analysis of cybersecurity information, and the delivery of timely analytic and mitigating products, will result from more targeted collaboration among cybersecurity stakeholders. In particular, the resources will be used to focus extensively on the coordination and actions among various cyber entities responsible for protecting national cyber networks. Funding will help NCSA deliver meaningful, actionable, and customer-oriented products to Federal cyber stakeholders.

Justification:

These resources will enhance existing capabilities, and develop new capabilities, for protecting and securing our national cyber networks by.

- Enabling US-CERT to interact in a more targeted manner with key stakeholders. The resources will facilitate development of standardized and tailored products.
- Delivering enhanced human analytic inputs essential to leverage new information technology investments.
- Supporting more timely and actionable alerts and warnings and mitigating products covering damaging and fast-moving cyber attacks.
- Providing at least three fully trained and resourced Fly-Away Teams to assist with implementation of cybersecurity solutions during an event.
- Allowing more timely and actionable cross-domain alerts and warnings, each based on information gathered from a wide range of sources, and supported by a robust US-CERT Ops IT system.

Impact on Performance (Relationship of Increase to Strategic Goals):

The funding increase will make US-CERT more effective by providing US-CERT with additional analytic and support capabilities. Through increased information sharing and by making information products more relevant and timely, US-CERT can strengthen partnerships with other departments, agencies, and cyber stakeholders.

Program Increase							22	11	\$16,128
Budget Request	36	24	\$46,962	47	35	\$66,015	98	71	\$83,892

Description of Item

The United States Computer Emergency Readiness Team Operations leads a public-private partnership to protect and defend the Nation’s cyber infrastructure. The United States Computer Emergency Readiness Team coordinates and facilitates information sharing with federal civilian agencies, defense and intelligence agencies, state and local governments, private sector partners, infrastructure owners and operators, international allies, and the public to collect and disseminate cybersecurity threat and attack information.

The United States Computer Emergency Readiness Team disseminates threat, vulnerability, risk, analysis, and mitigation strategies, and works with partner organizations to continually update information assurance policies and technology to defend the Federal computer network space. Through monitoring, communications, and coordination activities, the United States Computer Emergency Readiness Team provides timely and accurate cyber threat mitigation guidance and serves as the focal point for collaborative cyber awareness, mitigation, and reduction for threats and vulnerabilities.

Justification

Funding above current service levels will enhance the United States Computer Emergency Readiness Team capabilities, allowing for fulfillment of the following measurable strategic activities:

- Refine and enhance delivery of the United States Computer Emergency Readiness Team core products and services;
- Improve existing cyber interagency processes and the generation of new customer service support activities for collaborative environments across the .gov community;
- Enhance human capital strategies across all the United States Computer Emergency Readiness Team programmatic pillars, with emphasis on training cyber analysts and managers;
- Increase organizational capital through the development of advanced standard operating procedures and Concept of Operations documents;

- Develop precise, actionable metric programs to supplement Earned Value Management and improve metrics and enhance performance and accountability at the United States Computer Emergency Readiness Team; and
- Support the United States Computer Emergency Readiness Team Operations programmatic goals through targeted external communication and public relations outreach efforts to stakeholders across the Federal government, State and local governments, and the private sector.

In addition to enhancing strategic the United States Computer Emergency Readiness Team goals, enhanced funds will support the following activities:

- Hire an additional eleven Federal FTEs to support prioritized analytical activities and threat mitigation by the United States Computer Emergency Readiness Team.
- Begin implementation of Master Incident Prioritization Tracking Program, which provides enhanced information sharing and analytic and detection capabilities to manage the most critical national cyber activities.
- Procure the United States Computer Emergency Readiness Team Information Services and data feeds to support threat and vulnerability analysis and information sharing the most critical sectors and .gov stakeholders.
- Initiate implementation of interagency processes, such as the Joint Agency Cyber Knowledge Exchange, to facilitate the execution of the United States Computer Emergency Readiness Team requirements with Federal partners and enhance cross-governmental situational awareness.
- Develop and implement a tracking capability to support essential the United States Computer Emergency Readiness Team services for public and private sector partners.

Impact on Performance (Relationship of Increase to Strategic Goals):

The enhancement will fund the deployment of transformative information technologies to accommodate near- and real-time mission requirements. In support of the Comprehensive National Cybersecurity Initiative, the United States Computer Emergency Readiness Team is developing plans to improve technology innovations in order to keep pace with expanding mission requirements.

In support of the United States Computer Emergency Readiness Team dynamic and expansive environment, the following United States Computer Emergency Readiness Team performance goals include:

- Development of foundational programs to identify, recruit, and train skilled cyber personnel;
- Significantly improve relationships between the United States Computer Emergency Readiness Team and its customers to provide a more transparent and focused customer experience that targets their specific needs; and
- Expand human and organizational capital infrastructures to fulfill analytical and incident response requirements.

National Protection and Programs Directorate (NPPD)
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Change 9: Federal Network Security

Strategic Goal(s) & Objective(s): Goal 3: Protect Critical Infrastructure; Objective3.3: Improve Cyber Security

PPA: National Cyber Security Division

Program Increase: Positions: 0 FTE: 0 Dollars: \$4,700,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							20	14	\$14,991
Program Increase							0	0	\$4,700
Budget Request	7	4	\$9,324	9	9	\$14,959	20	14	\$19,691

Description of Item

The Federal Network Security branch utilizes a holistic approach to Federal government network security which enables Federal partners to address cybersecurity challenges in a manner that maximizes value and minimizes risks associated with technology and security investments. The Federal Network Security branch provides the Federal enterprise with leadership, direction, and day-to-day operations support for improving effectiveness and consistency of information systems security across the Federal enterprise. Its purpose is to analyze current conditions in all Federal government sectors, determine immediate and root causes of information security vulnerabilities and gaps, and provide leadership and direction for mitigating risk due to determined vulnerabilities and gaps.

While all Federal partners maintain responsibility for the operations and security of their internal networks, the Federal Network Security branch reduces duplication of individual Federal partner efforts, by providing enhanced capabilities for small Federal partners and increasing the baseline security of Federal Government networks. It also assists Federal partners with implementation and compliance management of information systems security policies and guidelines to ensure enterprise-wide prevention of attacks against the .gov community.

Justification

Federal Network Security funding above the current service level will support the following activities:

- Improve Federal Network Security’s ability to manage reduction and consolidation efforts of external Federal ports, enabling the National Cybersecurity Protection System to more effectively monitor and alert on suspicious activity occurring across the Federal enterprise;
- Conduct Trusted Internet Connection compliance assessments of Trusted Internet Connection Access Providers to ensure agencies have the appropriate operational capabilities in place to meet the Trusted Internet Connection Initiative objectives;

- Improve monitoring Federal cybersecurity policies on implementation of providing day-to-day coordination, guidance, and the tracking of Office of Management and Budget security policy progress.

Impact on Performance (Relationship of Increase to Strategic Goals):

Enhanced Federal Network Security funds will improve the Department's ability to close identified critical capability gaps, resulting in the ability to implement taskings under the Comprehensive National Cybersecurity Initiative.

Specific mission improvements include:

- Improved efficiencies and reduced costs due to the elimination of redundant and uncoordinated security solutions and sustainment activities;
- Development of more cohesive compliance levels throughout the Federal enterprise;
- Expand network security awareness and response capabilities to decrease network intrusion risk;
- Develop strategies to provide a governance process that helps coordinate Federal enterprise activities related to the mitigation of domestic cyber security threats.

In support of the Federal Network Security mission, the following performance goals include:

- Maintain Shared Service Centers target of 100% compliance for scorecard Agencies/Departments. Obtain target of 30% for any new Shared Service Centers in FY2010;
- Implement two acquisition initiatives through the General Services Administration SmartBuy vehicle;
- Establish and implement the Customer Agency Advisory Board and develop a memorandum of agreement between the Federal Information Systems Security and all scorecard Agencies;
- Produce a detailed Cost Benefit Analysis / Feasibility Study on TIC access point reduction;
- Update Trusted Internet Connection Technical Requirements and Architecture to reflect any changes in Federal security strategy and to address the previously identified gaps;
- Produce Trusted Internet Connection Compliance Validation reports for approved and operational Trusted Internet Connections Access Points programs that were not previously assessed in FY2009;
- Adapt NETWORKX contract vehicle as appropriate vehicle to meet evolving needs of the Trusted Internet Connection Initiative;
- Review collection of implementation status reports from agencies/departments to determine compliance with new federal cyber security policies and implementation issues;
- Identify five key best practices through collaboration with National Institute of Standards and Technology and distribute both internally and externally with the Subject Matter Experts; and
- Complete the assessment of Government off the Shelf Software scanning tool to determine gaps and level of capability.

**Department of Homeland Security
National Protection and Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)**

Program Change 10: Network Security Deployment

Strategic Goal(s) & Objective(s): Goal 3: Protect Critical Infrastructure; Objective3.3: Improve Cyber Security

PPA: National Cyber Security Division

Program Increase: Positions: 8 FTE: 4 Dollars: \$40,490,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							24	18	\$155,175
Program Increase							8	4	\$40,490
Budget Request	7	4	\$57,826	10	15	\$154,467	32	22	\$195,668

Description of Item

The Network Security Deployment branch leads the development and operation of cybersecurity technologies to counter cyber threats and apply effective risk mitigation strategies to detect threats in support of the Comprehensive National Cybersecurity Initiative. Collaborating with public and private industry partners, it provides the technological innovation and development that promotes the overall effectiveness of the cybersecurity effort.

The Network Security Deployment branch is responsible to provide intrusion detection and protection capabilities through four discrete increments: Block 1, Block 2, and Block 3. These blocks include the current state, or Block 1, and follow-on end-to-end system upgrades, or Blocks 2-3.

- Block 2.0 measures flow collection and intrusion detection system at Federal partner sites, centralized data storage, visualization, correlation, knowledge base/management, flow analysis, intrusion detection system tools, contextual data feeds, and a prototype environment.
- Block 2.1 incorporates increased capabilities in event detection and management, including data collection, correlation, analysis, and visualization.
- Block 3 provides classified capability improvements. Its architecture and deployment are completely separate from Blocks 1 and 2. Block 3.0 capabilities are being developed and deployed to implementing the Comprehensive National Cybersecurity Initiative. The planned activities under this section will be provided via classified channels.

In FY 2010, \$10,000,000 is requested for the data center development. Funding will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY2010. This includes:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2010;
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts;

- Installation of equipment racks at the DHS Data Centers;
- Migration-related build-out of DHS Data Center infrastructure;
- Transition of disaster recovery/backup/Continuity of Operations capability to DHS Data Centers;
- Installation of infrastructure support as part of system migrations at the DHS Data Centers;
- Migration of NPPD hardware, systems/applications to occupy rack space at the DHS Data Centers.

Justification

The enhancement will enhance Network Security Deployment capabilities, allowing for fulfillment of the following activities:

- Reduce potential alerts pool to 85 percent by automatically filtering out false positives and increasing the likelihood that analysts are examining and mitigating true incidents.
- Decrease the average delivery time of alert summary data reports to the United States Computer Emergency Readiness Team customers down to one business day.
- Increase the ability to aggregate and correlate identified events at deployed locations up to an additional 20 percent, to a total of 60 percent, of events aggregated and correlated daily. The ability to deploy the appropriate subscriber identity module tool to automatically aggregate and correlate events will significantly increase volume of events analyzed.
- Enhancements to Block 3.0 will result in classified enhancements to the baseline system.
- Enhancements to Block 2.1 will result in analytics upgrades to correlate additional cyber information at the 16 Block 2.0 Federal sites in order to provide a more robust threat analysis capability.

In support of private sector outreach initiatives, are the following activities:

- Hire additional Federal and contractor staff for the United States Computer Emergency Readiness Team to develop products tailored to critical infrastructure and key resources stakeholders and to analyze critical infrastructure and key resources vulnerability and incident data submitted to the United States Computer Emergency Readiness Team.
- Procure and implement use of new private-sector focused situational awareness tools.
- Begin and increase production of tailored unclassified United States Computer Emergency Readiness Team products for critical infrastructure and key resources partners.
- Expand information sharing programs to include all 18 critical infrastructure and key resources sectors.
- Begin planning of pilot program that will to leverage the capabilities of cleared information technology, communication products and services providers to protect their critical infrastructure and key resources clients.
- Develop and execute a program plan based on the sector-by-sector study of incentives for increased cybersecurity where market forces yield an insufficient value proposition for investment.
- Provide program management office support for the Enduring Security Framework, which addresses risks and opportunities related to globalization and addresses specific topics such as improved threat and vulnerability information sharing between Chief Executive Officers from major information technology and Defense contractors.

The Data Center consolidation efforts will standardize information technology resource acquisitions across Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS information technology security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

Impact on Performance (Relationship of Increase to Strategic Goals):

To fully implement the requirements under the Comprehensive National Cybersecurity Initiative, National Cybersecurity Protection System, in conjunction with other National Cyber Security Division activities, will increase operational monitoring and situational awareness of the .gov space, secure network transport of data, centralize data center storage and aggregation, implement a comprehensive and direct metadata research capability, provide enhanced capabilities for micro agencies, and ensure the long-term prevention of attacks against the Federal enterprise by assisting in implementation of information systems security policies and guidelines.

In support of the Network Security Deployment mission, the following performance goals include:

- Detect known cyber events through automated intrusion detection at near-real time.
- Provide automated notification within operations center that cyber event took place within one minute of event detection.
- Aggregate and correlate detected cyber events for known indicators within 30 minutes of event notification.³
- Access stored data and automatically generate reports for post-cyber event analysis within 30 minutes of report initialization.

Enhancement funding permits the National Cybersecurity Protection System to deploy end-to-end system upgrades in four phases that will add new capabilities to better protect and defend the Federal government's cyber infrastructure including: flow collection at agency sites; intrusion detection system at agency sites; and intrusion detection system analysis tools. Each block contains segments that will be enhanced to support the advanced technology, process, people, and authority as the end-to-end system upgrades are implemented.

³ Block 2.0 utilizes signature to automate the detection and notification of known threats and malicious events. This is a dramatic improvement to the Block 1.0 system. However, additional processing time is required for analysts to aggregate and correlate detected events. Improvements to this timeline will occur with the Block 2.1 system.

Budget Request	5	5	\$15,322	16	11	\$18,279	22	18	\$19,792

Description of Item

Cyber Education currently addresses cybersecurity workforce and professional development issues in order to support the expanded mission requirements of the Comprehensive National Cybersecurity Initiative. Strategic cyber workforce improvement programs prepare the information technology workforce to meet current and future cybersecurity challenges. This activity focuses resources on improving cybersecurity education, increasing the efficiency of existing cybersecurity training programs, and promoting cybersecurity workforce development.

Justification

The requested enhancement will enhance Global Cyber Security Management’s ability to implement the following activities:

- Staff a National Protection and Programs Directorate training officer for cyber education.
- Develop and implement internal cyber training curriculum and training funds for cyber education for National Cyber Security Division personnel.

Impact on Performance (Relationship of Increase to Strategic Goals):

Cyber Education is establishing a framework for expanding cyber education to deliver a technically adept cyber workforce for today and tomorrow. Additional resources will enhance partnerships with advisory bodies, public, private, academic and other government entities, forming the foundations needed to prepare a skilled workforce for effective performance of cyber missions and promote a continuing pipeline of skilled individuals for future Federal government employment.

Global Cyber Security Management has established the following performance measures:

- Coordinate and conduct quarterly, bi-annually and annually interactive training programs to ensure best practices are consistent with the Divisions' strategic plan that is promoted by the National Cyber Security Division leadership on a regular basis;
- Provide employees with internal training opportunities to increase their knowledge and develop their skills by using innovative and creative methods to deliver cyber education and training to fill skill gaps in achieving the Division's goals;
- Develop necessary tools and surveys to assess the extent staff training initiatives are improving Division operations and staff retention; and
- Implement training and education programs for National Cyber Security Division employees for the development of skills, knowledge, and abilities that will enhance their performance in their areas of expertise.

Program Increase							2	1	\$7,500*
Budget Request	14	13	\$31,244	18	17	\$46,067	33	24	\$53,761
*This program change is equal to the Critical Infrastructure Cyber Protection and Awareness Branch's requested \$15,000,000 program increase, less the \$4,000,000 earmark for Idaho National Laboratory, less the \$3,500,000 earmark for University of Texas-San Antonio. These program decreases are included in the narrative below.									

Description of Item

The Critical Infrastructure Cyber Protection and Awareness branch consists of the following programs:

Control Systems Security Program - Control Systems Security directly supports the DHS priority to reduce America's vulnerability to terrorism and protect critical infrastructure and focuses on the single goal of reducing the cyber risk to our Nation's critical infrastructure control systems. In support of that goal are two interdependent objectives—developing partnerships, assessing vulnerabilities, and providing guidance.

Critical Infrastructure Protection-Cyber Security - Critical Infrastructure Protection-Cyber Security strengthens preparedness by partnering with the public and private sectors to improve the security of the Information Technology Sector and the cyber assets of the other seventeen critical infrastructure and key resources sectors across the Nation's critical infrastructures. Critical Infrastructure Protection-Cyber Security facilitates risk management activities that reduce cyber vulnerabilities and minimize the severity of cyber attacks.

Cyber Exercises - Cyber Exercises plans, coordinates, and conducts cyber-focused exercises in order to develop, evaluate, improve, and refine the capabilities of the DHS and the full spectrum of Federal, State, local, international, and private sector cyber partners to prevent, protect, respond to, and recover from incidents affecting cyber components of the Nation's critical infrastructure (e.g., information, hardware, software, data, networks, etc.). Through participation in and sponsorship of different types of exercises (e.g., workshops, tabletop, functional, full-scale, etc.) the National Cyber Security Division establishes partnerships and cooperation mechanisms for information sharing with other government entities, as well as the private sector.

The funding earmarked in FY 2009 for Idaho National Laboratory and for University of Texas-San Antonio under Critical Infrastructure Cyber Protection and Awareness has been removed from Critical Infrastructure Cyber Protection and Awareness' Current Services in FY 2010.

Justification

Funding above current services will support the following activities:

Control Systems Security Program

- Conduct 50 Site Assistance Visits across the 18 critical infrastructure and key resources sectors in order to identify vulnerabilities in Industrial Control Systems;
- Implement the Coordination Strategy for Securing Control Systems and the Control Systems Security Protection Framework as the central framework for coordinating activities with Federal, State and local government, private industries, international entities, and control systems vendors;
- Enhance the vulnerability analysis capability of the Department's Control Systems Analysis Center in order to identify key vulnerabilities and develop mitigation strategies for both previously and newly discovered high-priority weaknesses, and provide control systems vendors with important security information that can be used to patch or eliminate security holes within products;
- Expand the control systems content of the United States Computer Emergency Readiness Team website, promoting it as a one-stop-shop for control systems cyber security information, control system vulnerability reporting, and cross-sector control systems information sharing for public and private partners; and
- Develop and distribute next generation Self-Assessment Tools across the control systems community, including public and private partners to further the situation awareness information on the cyber status and health of critical infrastructure and key resources stakeholders' control systems.

Critical Infrastructure Protection-Cyber Security

- Develop risks mitigation activities based on Information Technology Risk Assessment studies, to be implemented across the Information Technology Sector as well as across other critical infrastructure and key resources sectors.
- Update and refine the Cyber Security Vulnerability Assessment Tool. The Cyber Security Vulnerability Assessment Tool is in wide use by multiple critical infrastructure and key resources sectors, and as use increases the need to modify and tailor the Cyber Security Vulnerability Assessment Tool increases; and
- Provide cyber security subject matter expertise to the Protective Services Coordination Division Site Assistance Visits to properly trend cross-sector cyber risk at a minimum of 50 cyber Site Assistance Visits per year. Protective Services Coordination Division reduces risk to the Nation's critical infrastructure and key resources by assessing their vulnerabilities and incident consequences; developing, implementing, and coordinating protective programs; and facilitating response and recovery operations at organizations throughout the Nation.

Cyber Exercises

- Provide additional resources to enhance the planning and scenario development of conferences and full after-action process and reports following the execution of Cyber Storm III National Cyber Exercise;

- Incorporate further updates and accelerate redeploys Technical Assistance and Cyber Exercise Support Program to include sponsorship and support of cyber exercises with State, local, regional, and private sector security partners; and
- Provide additional and enhanced technical exercise assistance to the United States, Canada, Australia, New Zealand, and United Kingdom and continue to execute an exercise plan to facilitate operational interaction with these nations and work with the International Watch and Warning Network to integrate capabilities into future cyber exercise plans.

Impact on Performance (Relationship of Increase to Strategic Goals):

Control Systems Security Program

Increased funds will allow Control Systems Security to fully meet its obligation as a leader to secure the control systems of our Nation’s critical infrastructure and key resources. Funds above the current services level will provide for the expansion of vulnerability identification, testing, mitigation, support for malware analysis and common vulnerability evaluations, implementation of a Federal Control Systems Coordinating Strategy, expansion of control systems metrics to additional sectors, and recommended next generation systems.

Critical Infrastructure Protection

A funding increase will enable Critical Infrastructure Protection-Cyber Security to take the long-term actions required under Chapter Two of the Information Technology Sector Specific Plan specifically to “identify threats, vulnerabilities, consequences, and mitigations that are of national significance to the sector” and “define and refine the Information Technology Sector risk profile over time as the risk assessment approach is implemented and repeated. “Moreover, cross-sector cyber assessments and strategies will permit various analyses of cyber security risks and protective activities in each of the eighteen critical infrastructure and key resources sectors, as well as identify and address their interdependencies. The cross-sector dependency on information technology assets and infrastructure requires that cyber security measures be incorporated in all Sector Specific Plans and their implementation.

Cyber Exercises

Cyber Exercises directly support the DHS long-term goal of protecting and strengthening the resilience of the Nation’s critical infrastructure and key resources against all threats. Cyber Exercise activities promote information-sharing and coordination across the Federal government and private sector entities. Through various cyber exercises, the individual and collective preparedness and operational response capabilities of the Nation will be improved. The continued testing and validation of cyber-related plans and procedures will both detect infrastructure vulnerabilities and ensure that public health and safety, and national economic viability are protected.

Critical Infrastructure Cyber Protection and Awareness has established the following performance measures:

Control Systems Security Program

- Increase the percentage of targeted stakeholders who have implemented the Control Systems Cyber Security Self Assessment Tool to conduct assessments;
- Enhance the number of Site Assistance Visits conducted across the critical infrastructure and key resources sectors in order to identify vulnerabilities in Industrial Control Systems; and

- Improve the number of cybersecurity information sharing products and tools distributed to cybersecurity stakeholders.

Critical Infrastructure Protection – Cyber Security

- Increase the percentage of Critical Infrastructure and Key Resource Sectors that incorporate the Cyber Security Vulnerability Assessment or its questions/concepts into their Sector Risk Assessment methodologies.

Cyber Exercises

- Enhance the number of cyber exercises supported or conducted with Cybersecurity stakeholders;
- Increase the number of Cybersecurity and cyber exercise information sharing products, and exercise after action items distributed to Cybersecurity and cyber exercise stakeholders;
- Improve the cyber exercise technical assistance and training sessions conducted with Cybersecurity and cyber exercise stakeholders; and
- Conduct a robust Cyber Storm exercise planning conferences.

Program Change 13: Wireless Priority Service

Strategic Goal(s) & Objective(s): Goal 3: Protect Critical Infrastructure, Objective 3.2 Ensure Continuity of Government Communications and Operations

PPA: Priority Telecommunications Service

Program Decrease: Positions: 0 FTE: 0 Dollars: (\$5,000,000)

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$29,867
Program Decrease							0	0	(\$5,000)
Budget Request	0	0	\$50,876	0	0	\$30,000	0	0	\$24,867

Description of Item

The \$5,000,000 program decrease reflects the achievement of Full Operational Capability of the Wireless Priority Service program. The remaining \$24,867,000 will sustain Wireless Priority Services to the National Security and Emergency Preparedness user community.

Justification

Wireless Priority Services Code Division Multiple Access Interoperability Specification was accelerated and it was the last step in achieving Full Operational Capability in 2009. The main focus now will be on the Next Generation Networks program, which will ensure the Wireless Priority Service program retains its capabilities as carriers migrate from circuit-switched networks to internet-protocol based networks.

Impact on Performance (Relationship of Increase to Strategic Goals)

Wireless Priority Service Interoperability Specification corrects network coverage gaps in Verizon Wireless and Sprint wireless networks, so the goal to provide Wireless Priority Services Nationwide coverage is achieved ahead of schedule in support of Strategic Objective 3.2 to Ensure Continuity of Government Communications and Continuity of Operations.

Budget Request	2	2	\$2,458	2	2	\$2,281	2	2	\$4,784

Description of Item

DHS/National Communications System is requesting an enhancement to develop, implement, and maintain a Continuity Communications Architecture, as required by National Security Presidential Directive-51/Homeland Security Presidential Directive-20.

The Directive tasks the Office of Science and Technology Policy, in coordination with the National Security Council, Homeland Security Council, Office of Management and Budget, and Chief of Staff to the President, with establishing requirements for the architecture, and the National Communications System will work closely with these offices to meet critical continuity communication needs.

Justification

This requirement under National Security Presidential Directive-51/Homeland Security Presidential Directive-20 provides an important step in ensuring that essential communications are available and effective during a continuity event.

Impact on Performance (Relationship of Increase to Strategic Goals)

These funds will allow DHS/National Communications System to develop a comprehensive Continuity Communications Architecture. The Continuity Communications Architecture will enable the Federal Executive Branch department and agencies to incorporate and sustain comprehensive and effective continuity communication capabilities in their daily operations and support the continuing performance of Primary Mission Essential Functions and National Essential Functions under all conditions.

Program Change 16: Contingency Planning/Emergency Support Function #2 Regional Communications Coordinators

Strategic Goal(s) & Objective(s): Goal 3 Protect Critical Infrastructure, Objective 3.2 Ensure Continuity of Government Communications and Operations

PPA: Critical Infrastructure Protection

Program Increase: Positions: 9 FTE: 7 Dollars: \$2,500,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							1	1	\$156
Program Increase							9	7	\$2,500
Budget Request	0	0	0	1	1	\$156	10	8	\$2,656

Description of Item:

An enhancement of \$2,500,000 is requested in FY 2010 to deploy one Regional Communications Coordinator in each of the 10 Federal Regions (10 Regional Communications Coordinators total) to support planning, preparedness and response activities with the private and public sectors associated with Emergency Support Function #2 – Communications of the National Response Framework.

These 10 coordinators will work closely with Federal, State, and local regional personnel, and as well as with the full range of private communications industry (e.g. wireline, wireless, cable, satellite, and broadcast) regional representatives to develop and implement national security and emergency preparedness communications, to include plans, procedures, training, exercises and response capabilities.

Justification:

Communications has become a complex mix of cyber technologies with telecommunications and broadcast technologies that are interdependent and critical to disaster response and restoration. The reliance on communications in today’s world makes it imperative that the National Communications System has communications experts in the Regions who are knowledgeable not only in the technologies, but in the processes, interdependencies, and industry coordination capabilities available at the national and regional levels. Based on the requirements of the position, Regional Coordinators are requested to carry out this regional mission. These coordinators will assist other a range of emergency preparedness organizations in addition to FEMA.

The requested funding will support the following:

- \$1,400,000 for salaries and benefits for Regional Communications Coordinator

- \$850,000 for estimated travel expenses, equipment, and operational support.
- \$250,000 for estimated annual cost for office space including: IT support, communications, office equipment, and services. Office space will be in Regional FEMA offices where space is available (Boston, New York, Philadelphia, Atlanta, Kansas City, Chicago, Denver, Denton, Oakland, and Seattle).

Impact on Performance (Relationship of Increase to Strategic Goals)

Lessons learned in Katrina and other disasters emphasize the importance of communications to first responders and the communities as a whole. The Regional Communications Coordinators will:

- Implement the action items and process improvements identified in after action reports following incidents
- Increase and expedite first responder access to industry critical infrastructure sites during
- Share best practices
- Facilitate and ensure communications scenarios are conducted in State and regional exercises
- Assist States in developing communications preparedness plans
- And deploy during incidents to assist the States and regions in emergency communications and restoration.

Regional Communications Coordinators will orchestrate the rapid restoration of communications services to affected communities in the event of an outage or disaster. This work potentially saves lives, reunites families, and facilitates the overall recovery process. In widespread events, there are many wireline, cyber, cellular, cable, broadcast, and satellite service providers that require consideration and the limited restoration resources need to be prioritized in the best interest of the community. Additionally, the Federal Communications Coordinators will coordinate the private sector carriers and service providers, Federal, State, and local government's to prevent and deter additional failures in communications. Cascading and continuing failures of communications systems hinder restoration and recovery and potentially endangers lives.

Program Change 17: National Emergency Communications Plan Implementation

Strategic Goal(s) & Objective(s): Goal 4: Strengthen our Nation’s Preparedness and Emergency Response Capabilities; Objective 4.2: Strengthen Response and Recovery

PPA: Office of Emergency Communications

Program Increase: Positions: 0 FTE: 0 Dollars: \$3,829,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							52	52	\$40,231
Program Increase							0	0	\$3,829
Budget Request	37	6	\$31,103	47	42	\$38,300	52	52	\$44,060

Description of Item

The Office of Emergency Communications will utilize the additional funds to develop a mechanism to better measure the state of interoperable emergency communications across the Nation. This enhancement will enable the Office of Emergency Communications to implement a measurement process to generate a more comprehensive picture of the gaps and shortcomings in cities and jurisdictions within the 56 States and territories. This, in turn, would allow the Office of Emergency Communications to more efficiently and effectively deliver improvement services to emergency response agencies.

Justification

The ability of emergency responders to establish seamless, interoperable communications is critical to ensuring the Nation can successfully respond to and manage incidents of varying scope and magnitude, including natural disasters and acts of terrorism. The National Emergency Communications Plan is a strategy for improving the emergency communications capabilities of the Nation’s public safety, public health, and emergency management communities. Congress required that the Plan include interim benchmarks for achieving a baseline level of interoperable communications across the Nation. These National Emergency Communications Plan Goals are as follows:

- **Goal 1:** By 2010, 90 percent of all high-risk Urban Areas designated within the Urban Area Security Initiative are able to demonstrate response-level emergency communications within one hour for routine events involving multiple jurisdictions and agencies.

- **Goal 2:** By 2011, 75 percent of non-Urban Area Security Initiative jurisdictions are able to demonstrate response-level emergency communications within one hour for routine events involving multiple jurisdictions and agencies.
- **Goal 3:** By 2013, 75 percent of all jurisdictions are able to demonstrate response-level emergency communications within three hours of a significant event as outlined in national planning scenarios.

To implement and measure achievement of the National Emergency Communications Plan Goals, the Office of Emergency Communications will need to work with emergency response agencies at all levels of Government to demonstrate their ability to achieve response-level communications and, thus, satisfy each Goal requirement. The Office of Emergency Communications will perform the following activities with the additional funding provided.

- Conduct 60 site visits to validate Goal 1 and 40 site visits to sample progress against Goal 2.
- Validate and review data collected from National Emergency Communications Plan Goals reporting tools.
- Provide support to lower achieving Urban Areas and States.
- Support Goal 2 and Statewide Communication Interoperability Plan Implementation by conducting workshops.
- Support all National Emergency Communications Plan goals and develop criteria and the proposed implementation process for Goal 3.

Evaluating the Nation's progress toward the goals of the National Emergency Communications Plan is necessary to demonstrate progress and identify shortfalls. It also helps build a much more comprehensive view of national communications capabilities, which in turn can more effectively inform the DHS grant guidance process.

Impact on Performance (Relationship of Increase to Strategic Goals)

The additional funding for the National Emergency Communications Plan implementation increases DHS' ability to fulfill Objective 4.2, Strengthen Response and Recovery, by building the foundation for effective, coordinated emergency response by enabling the Office of Emergency Communications to identify and measure interoperable emergency communications gaps and shortcomings in cities and jurisdictions within the 56 States and territories. Further, the Office of Emergency Communications would provide needs-driven technical assistance to address each State and territory's specific individual gaps, thereby enhancing communications interoperability and the ability of emergency response providers and Federal officials to communicate in the event of natural disasters, acts of terrorism, or other man-made disasters. Realization of the National Emergency Communications Plan's aforementioned Goals 1, 2, and 3, would further the ability of States / territories to leverage emergency communications to shorten response times to routine events involving multiple jurisdictions and agencies. These efforts would strengthen nationwide response and recovery capabilities, reducing loss of life and property.

PPA Mission Statement

The Information and Analysis mission area includes projects and activities that support identification of the Nation's critical infrastructure and key resources, assessment of critical infrastructure and key resource vulnerabilities, consequences and risks.

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Salaries and Benefits	\$7,160	\$11,128	\$16,504	\$5,376

The FY10 Requests include \$16,504,000 for salaries and benefits for 130 FTE, which represents a \$5,376,000 increase over FY2009. This includes \$284,000 for pay inflation, and \$5,092,000 for 47 positions as part of the Federal Staffing realignment.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Travel	\$447	\$482	\$503	\$21

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY2010 Request represents an increase of \$21,000 over FY2009 as a result of program increase.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Printing	\$13	\$13	\$14	\$1

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 Request represents a program increase of \$1,000 over FY 2009.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$18,010	\$23,550	\$28,155	\$4,605

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 Request represents an increase of \$2,975,000 for program enhancements and the realignment of \$6,723,000 for the PCII activity, and a decrease of \$5,092,000 to fund 47 additional positions Federal positions.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Other Services	\$5,034	\$0	\$0	\$0

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. There is no change from FY 2009 to FY 2010.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Purchase from Government Accounts	\$30,195	\$45,361	\$41,361	(\$4,000)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 Request is a program decrease of \$4,000,000.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Supplies & materials	\$104	\$70	\$73	\$3

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2010 Request represents a program increase of \$3,000.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Equipment	\$812	\$0	\$0	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. There is no change from FY 2009 to FY 2010.

PPA Mission Statement

The Coordination and Information Sharing mission area includes projects and activities that maximize the ability of government and private sector security partners at all levels to assess risks, coordinate programs and processes, and execute risk-mitigation programs and activities.

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Salaries and Benefits	\$9,324	\$9,063	\$10,093	\$1,030

The FY10 Requests include \$10,093,000 for salaries and benefits for 89 FTE, which represents a \$1,030,000 increase over FY2009. This includes \$232,000 for pay inflation and \$798,000 for 6 positions as part of the Federal Staffing realignment.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Travel	\$512	\$980	\$777	(\$203)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. There is a decrease of \$203,000 from the year prior due to a program reduction.

	FY 2008 Actual	Enacted	Request	Change
GSA rent	\$0	\$0	\$5,706	\$5,706

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. FY 2010 request includes an increase of \$5,706,000 for GSA rent due to a transfer from NPPD Management and Administration appropriation.

Total, Programs to Study & Enhance Telecommunications		\$12,941	15,101	\$19,274	\$4,172
Full Time Equivalents		20	25	28	3

PPA Mission Statement

The Programs to Study and Enhance Telecommunications develops models and conducts technical analyses of public communications infrastructures and equipment, and identifies vulnerabilities in new communications technologies due to the Telecommunication Electromagnetic Disruptive Effects. It also works with the international communications industry standards organizations to ensure that evolving commercial standards address the technical requirements of national security and emergency communications.

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Salaries and Benefits	\$3,033	\$3,219	\$3,726	\$507

The FY10 Requests include \$3,726,000 for salaries and benefits for 28 FTE, which represents a \$507,000 increase over FY2009. This includes \$81,500 for pay inflation and \$266,000 for 2 positions as part of the Federal Staffing realignment and a program increase of \$160,000.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Travel	\$0	\$57	\$57	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. There is no budget increase for FY 2010.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Other Rent	\$0	\$459	\$459	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures. There is no budget increase for FY

PPA Mission Statement

OEC supports and promotes the ability of emergency response providers and Federal officials to continue to communicate in the event of natural disasters, acts of terrorism, or other man-made disasters, and to ensure, accelerate, and attain interoperable emergency communications nation-wide.

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Salaries and Benefits	\$863	\$7,690	\$9,227	\$1,537

The FY 2010 Requests include \$9,227,000 for salaries and benefits for 52 FTE, which represents a \$1,537,000 increase over FY 2009. This includes annualization of \$675,000 for 10 positions received in FY 2009, \$196,000 for pay inflation and 5 additional Federal positions offset with \$665,000 of program/contract dollars.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Travel	\$96	\$368	\$368	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. There is no funding increase in FY 2010.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
GSA rent	\$0	\$0	\$1,060	\$1,060

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2010 request includes an increase of \$1,060,000 as a result of a transfer from NPPD M&A appropriation for GSA rent.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$30,110	\$24,258	\$27,421	\$3,163

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 Request represents an increase of \$3,163,000 which includes a decrease of \$665,000 for the Federal Staffing realignment to fund 5 additional positions and a program increase of \$3,829,000.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Purchase from Government Accounts	\$0	\$4,120	\$4,120	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. There is no funding increase in FY 2010.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Supplies & materials	\$34	\$64	\$64	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL PROTECTIVE SERVICE

I. Appropriation Overview

A. Mission Statement for Offsetting Collections:

The Federal Protective Service (FPS) is the federal law enforcement organization responsible for the protection of federal facilities. FPS executes the Department of Homeland Security's responsibility to protect federally owned property, leased property and personnel across the nation, as required by section 1315 of title 40 United States Code. FPS operations focus on security and law enforcement activities that reduce vulnerability to criminal and terrorist threats, while ensuring facilities are secure and occupants are safe. FPS protects federal facilities and the employees within them through measures such as all hazards based risk assessments; appropriate placement of countermeasures, law enforcement response; assistance to stakeholders through Facility Security Committees; and emergency and safety education. FPS also partners with federal agencies to provide additional required security services. FPS is the lead Government Facilities Sector-specific Agency for the National Infrastructure Protection Plan (NIPP). FPS employs approximately 1,225 Law Enforcement Officers (LEO) and non LEO employees and the services of 15,000 contract security guards strategically located throughout the Nation to protect facilities in its purview.

The FY 2010 budget transfers FPS to the National Protection and Programs Directorate (NPPD). This transfer will allow Immigration and Customs Enforcement (ICE), which used to manage the FPS program, to focus on its law enforcement mission of protecting the American people by targeting the people, money, and materials that support terrorist and criminal activities relating to our nation's borders.

FPS should reside within NPPD, given NPPD's responsibility for leadership of the National Infrastructure Protection Plan. As the Sector-specific agency for the Government Facilities sector, FPS has been an active critical infrastructure security partner with IP. FPS will be able to gain synergy by working alongside NPPD's Office of Infrastructure Protection (IP), and having FPS and IP in the same organization further solidifies NPPD as the Department's lead for critical infrastructure protection.

B. Budget Activities:

Basic Security - The Basic Security services include law enforcement on federally-controlled property, preliminary investigations of incidents, limited proactive activities to detect and deter attack on high-risk facilities, and capture and detention of suspects. This security also includes the 24-hour security alarm monitoring, nationwide dispatch services, facility security assessments, assistance to Facility Security Committees, and sharing of current intelligence on domestic and foreign terrorist threats. The rate for these services will remain \$.66 per square foot of GSA controlled property in FY 2010. FPS estimates collections for Basic Security to total \$220 million for FY 2010.

Building Specific Security - Building Specific Security is based on security countermeasure requirements specific to a particular building. The two components are the Contract Security Guard and Security Systems programs. The Contract Security Guard program includes access control to facility entrances and exits, employee and visitor identification checks, monitoring security equipment, and roving patrols of the interior and exterior of federal facilities. The Security Systems program includes the purchase, installation, and maintenance of security equipment, such as cameras, alarms, magnetometers, and x-ray machines. Security equipment is based on identified projects in security assessment and standard replacement schedules. FPS estimates collections for Building Specific Security to total \$420 million for FY 2010.

Security Work Authorizations – FPS enters into Security Work Authorizations with customer agencies to procure security measures beyond those included within Basic Security and Building Specific Security. FPS does not request authority for these collections because the additional security services and contract guards are determined by the operational security needs of the customer agencies (e.g. an additional contract guard and CCTV cameras within a U.S. Citizenship and Immigration Services waiting room in a multi-tenant Federal building). FPS estimates collections for Security Work Authorizations to total \$475 million for FY 2010.

C. Budget Request Summary:

FPS requests 1,225 positions, 1,225 FTE, and new off-setting collection authority to spend its fees for FY 2010.

CURRENT SERVICES PROGRAM DESCRIPTION

National Protection and Programs Directorate requests new authority to spend offsetting collections.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Federal Protective Service (FPS) is the Federal law enforcement organization responsible for the protection and security of Federal buildings, property, and personnel across the Nation. FPS security operations include regular facility security assessments of Federal facilities, nationwide communications, alarm monitoring, and dispatching services, and administration of contract guards within federal facilities.

In FY 2009, FPS continued to realign its mission, workforce, and resources to strengthen Federal physical security measures, procedures, and standards that apply to Federal buildings and enhance oversight and protection activities. FPS is focused on executing the protection of Federal property as required by section 1315 of Title 40 United States Code and as the sector-specific agency for the National Infrastructure Protection Plan (NIPP). Relying on the work of FPS Law Enforcement Security Officers (Inspectors), the protection focus is driven by the guiding principles of stakeholder service, technical expertise and organizational excellence. These include efficient stakeholder-oriented law enforcement and security services; sound standards, consistent compliance, and innovative techniques; strengthening overall organizational performance and business processes; and continuously enhancing the protection of Federal facilities under a risk-based approach.

The FPS strategic goal “*Secure Facilities, Safe Occupants*” continues to focus on the protection of Federal facilities and employees through a comprehensive law enforcement and security program. FPS security operations include regular building security assessments of Federal facilities, nationwide communications, alarm monitoring, and dispatching services, and administration of contract guards within Federal facilities.

The FY 2010 request includes transfer of FPS to the National Protection and Programs Directorate, to further align the critical infrastructure protection missions within the Department.

Significant accomplishments in FY 2008 included:

- Strengthening security standards representing the key elements for reducing threat and vulnerability levels at Federal facilities;
- Improving the strategic methods used in identifying and reducing real and /or perceived threats faced by customers; and
- Providing law enforcement and security services at national security events that pose increased threats at or in the vicinity of Federal facilities, including the Democratic National Convention, the Republican National Convention and related demonstrations and protests.

FY 2009 FPS planned accomplishments include:

- Realigning its mission, workforce and resources to further strengthen the protection of Federal property through collaborative partnerships and effective communication with stakeholders, proactive information and intelligence sharing, efficient stakeholder-oriented law enforcement and security services, sound security procedures with consistent compliance and innovative techniques through a highly skilled and operationally aligned workforce;
- Providing law enforcement and security services at national security events that pose increased threats at or in the vicinity of federal facilities, including the Inauguration, Presidential Transition, demonstrations, and protests; and
- Serving as the sector specific agency for the Government Facilities Sector under the National Infrastructure Protection Plan (NIPP) to coordinate protection and security efforts for designated critical infrastructure and key resources across the sector.
- Developing and implementing a capital plan to utilize current balances to modernize FPS infrastructure.

FY 2010, FPS plans on:

- Continuing to provide maximum protection to ensure facilities are secure and occupants kept safe;
- Improving the strategic methods used in identifying and reducing actual and potential threats directed at FPS-protected facilities;
- Restoring proactive monitoring and law enforcement activities to mitigate the increased risk to FPS-protected facilities noted by the Government Accountability Office;
- Improving the service provided by our contract security guard force multiplier via effective acquisition strategies and intensive monitoring and coaching;
- Developing risk-based security standards tied to intelligence by implementing a robust and improved risk assessment tool to improve threat identification, identify associated risk mitigation countermeasures and provide objective security evaluations to stakeholders;
- Increasing coordination across the government facilities sector in support of the FPS roles as the sector-specific agency under the National Infrastructure Protection Plan (NIPP); and
- Continuing to refine business practices to ensure full collection of revenue through positive stakeholder interface.
- Continuing to implement a capital plan that will result in improved security and customer service.

IV. Program Justification of Changes

Not applicable

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
National Protection and Programs Directorate
Justification of Proposed Changes in Federal Protective Service
Appropriation Language**

The revenues and collections of security fees credited to this account shall be available until expended for necessary expenses related to the protection of Federally-owned and leased buildings and for the operations of the Federal Protective Service[: *Provided*, That the Secretary of Homeland Security and the Director of the Office of Management and Budget shall certify in writing to the Committees on Appropriations of the Senate and the House of Representatives no later than December 31, 2008, that the operations of the Federal Protective Service will be fully funded in fiscal year 2009 through revenues and collection of security fees, and shall adjust the fees to ensure fee collections are sufficient to ensure that the Federal Protective Service [maintains not fewer than 1,200 full-time equivalent staff and 900 full-time equivalent Police Officers, Inspectors, Area Commanders, and Special Agents who, while working, are directly] *is* engaged on a daily basis protecting and enforcing laws at Federal buildings (referred to as `in-service field staff`)]. ([Consolidate Appropriations Act 2009] **Department of Homeland Security Appropriations Act, 2010.**)

Explanation of Changes:

FPS should be allowed to determine the appropriate staffing levels based on developing tools that establish vulnerability, risk, and consequence as opposed to having a set number directed in the Appropriation.

¹Funding in FY 2008 and FY 2009 for Federal Protective Services was requested as part of U.S. Immigration and Customs Enforcement. Funding is now being proposed for transfer to NPPD in the FY 2010 Request.

Mission Statement

Federal Protective Service (FPS) is the Federal law enforcement organization responsible for the protection and security of Federally-owned and leased buildings, property, and personnel across the Nation. The FPS operations focus on law enforcement and reduction of Federal facility vulnerabilities to criminal and terrorist threats, while ensuring that public facilities are safe, secure and remain available as a vital part of every day American life. FPS uses approximately 15,000 contract security guards and 1,225 Law Enforcement Officers and civilian employees who are strategically located throughout the Nation to provide security and law enforcement coverage to all General Services Administration (GSA)-owned and -operated Federal facilities. The FPS currently performs all necessary security and protection functions at more than 8,900 Federally owned and leased locations throughout the Nation, totaling approximately 330 million square feet of space, housing more than 1.1 million Federal personnel.

The FY 2010 FPS security collections cover various types of security services such as the law enforcement response to emergency calls, preliminary investigations of incidents and apprehension of suspects, the FPS Mega Center that maintains 24-hour security alarm monitoring and provides nationwide communication dispatch to enforcement personnel, the physical security initiatives including security awareness programs for tenants, coordination of Occupant Emergency Plans, and consultations with Facilities Security Committees on security countermeasures for Federal facilities are also services provided within the basic security program. In addition, these collections are used to conduct building threat assessments of Federal facilities and the development of action plans to reduce the threats, the acquisition, installation, and maintenance of security countermeasure, and the criminal investigations wherein there is sharing of current intelligence on domestic and foreign terrorist threats.

Summary Justification and Explanation of Changes

	FY 2008	FY 2009	FY 2010	2009 - 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$118,358	\$142,026	\$144,036	\$2,010

Salaries and Benefits includes costs for 1,225 FTEs. Increase is due to cost of living and inflation increases.

	FY 2008	FY 2009	FY 2010	2009 - 2010
	Actual	Enacted	Request	Change
Travel	\$3,629	\$4,223	\$4,307	\$84

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. Funding in the travel area will be used to complete all Building Security Assessments and training requirements. The annual change reflects general cost increases.

	FY 2008	FY 2009	FY 2010	2009 - 2010
	Actual	Enacted	Request	Change
Transportation of Things	\$7,757	\$10,524	\$10,734	\$210

Transportation of things includes all costs of the care of such things while in process of being transported, other services incident to the transportation of things, and the FPS law enforcement vehicle lease costs. The annual change reflects general cost increases.

	FY 2008	FY 2009	FY 2010	2009 - 2010
	Actual	Enacted	Request	Change
GSA rent	\$27,370	\$23,277	\$23,087	-\$190

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. Decrease is due to space reprioritization.

	FY 2008	FY 2009	FY 2010	2009 - 2010
	Actual	Enacted	Request	Change
Other Rent	\$89	\$0	\$0	\$0

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection and Programs Directorate United States Visitor and Immigrant Status Indicator Technology (US-VISIT) Program

I. Appropriation Overview

A. Mission Statement

The mission of the Department of Homeland Security (DHS) United States Visitor and Immigrant Status Indicator Technology (US-VISIT) Program is to provide biometric identity verification services to authorized DHS, Federal, State and local government and law enforcement agencies in support of the DHS mission. Through its use of biometrics, US-VISIT collects, stores and shares digital fingerscans and digital photographs for subsequent verification. This biometric information is paired with biographic information pertaining to that individual used to establish and verify an individual's identity, as well as vet that identity against criminal and immigration violator watchlists.

US-VISIT established four guiding principles to accomplish its mission: (1) enhance the security of our citizens and visitors; (2) facilitate legitimate travel and trade; (3) ensure the integrity of our immigration system; and (4) protect the privacy of our visitors. US-VISIT is a key component of a multi-layered, multi-agency defense that is integral to domestic security. US-VISIT satisfies legislative and DHS mandates; and contributes to DHS immigration and border management goals and provides U.S. citizens and foreign visitors with a safer and more facilitative border security and immigration process.

B. Budget Activities

Systems Operations and Maintenance (O&M) – US-VISIT operates and maintains two major automated identification systems in support of its mission: the Automated Biometric Identification System (IDENT) for biometric data and the Arrival and Departure Information System (ADIS) for biographic data. US-VISIT provides the information technology (IT) support enabling identity verification and screening services through these systems; including the support infrastructure providing the foundation for enhancing and developing new capabilities. O&M includes systems operations and maintenance, developing IT architecture and platforms for user and program interfaces, data center operations support and services, network and data communications integration and support, and technical IT support services.

IDENT processes more than 135,000 transactions per day for DHS and the Department of State, as well as other stakeholders. At the end of FY 2008 IDENT had over 95 million fingerprint records of individuals and contained biometric data for legitimate travelers to the United States, immigration benefit seekers, and immigration violators. IDENT contains biometric watchlists and enrolled fingerprints that are compared to identify persons who should be more closely scrutinized prior to entering the United States or prior to granting visas or immigration benefits. Biometric watchlists contain information on known or suspected terrorists (KSTs), criminals, sexual offenders, domestic and international fugitives, threats to officer safety, military detainees, persons of interest, and immigration violators. Each time DHS encounters an individual, his or her fingerprints are compared against the watchlist and the results returned to the agency fingerprint submitter. At the initial

encounter, the individual is enrolled and his or her biometric data is placed in IDENT. The individual's fingerprints are compared against the enrollment to verify identity on each subsequent encounter. Each time fingerprints are taken, the reason for the encounter—such as entry to the United States at an air, sea, or land port of entry (POE), or application for a visa or immigration benefits—is recorded in IDENT. For example, when a foreign traveler provides fingerprints to a U.S. Customs and Border Protection (CBP) officer at a POE, the identity verification and watchlist check results are provided back to the officer in less than 10 seconds. Identity verification or matches against a watchlist assist decisionmakers in determining admissibility or eligibility for immigration benefits. Using an automated system quickly enables the identification of KSTs, criminal aliens, and repeat immigration violators, even by those who resort to the use of fraudulent documents and aliases.

ADIS contains arrivals, departures, and current immigration status about noncitizens. This information is gathered from Traveler Enforcement Compliance System officer-confirmed arrivals, I-94 forms, and other traveler information. ADIS compares departures with arrivals to create a complete record of events for more than 200 million foreign travelers and identifies whether the traveler has possibly overstayed their admissibility.

Identity Management and Screening Services – US-VISIT is the DHS focal point for providing identity management and screening services, handling a large workload providing diverse assistance and timely responses to DHS in supporting immigration and border management as well as international stakeholders. The IDENT and ADIS systems are supported by fingerprint examiners and analysts in US-VISIT's Identity Services Branch. The fingerprint analyses conducted by examiners in the Biometric Support Center (BSC) provide real-time human biometric verification services, supplementing IDENT automated matching. Data Integrity Group (DIG) analysts work with data from ADIS and other systems to identify and verify overstay violators. Watchlist records are then created for overstay violators and persons of interest with known immigration violations or criminal records. Law Enforcement and Intelligence (LE&I) Section personnel coordinate with law enforcement and intelligence agencies' operational activities to improve US-VISIT data systems accuracy and usefulness. Collectively, these services provide identity management and screening support and reliable information to US-VISIT operational customers and stakeholders.

Program Management Services – US-VISIT provides mission support functions to ensure appropriate planning activities, human capital training and credentialing, budget and financial management services, program-level IT technical support, process improvement, acquisition policies and procedures, facilities, environmental and physical infrastructure, continuity of operations, incident management, and logistics support are in place to effectively execute its mission. These critical functions support overall program direction and control and are crucial to mission accomplishment, including capability development and delivery, operations and maintenance, and program support functions. Program staffing is composed of Federal employees and program support contractors.

Data Center Mirror and Migration – US-VISIT data center operations represent an integral element within the US-VISIT service delivery framework. Presently, US-VISIT systems are hosted in two Department of Justice (DOJ) data centers. This hosting includes physical areas, rack supports, service support, hardware maintenance, memory and storage capacity, data and backup management, operating systems level support, disaster recovery, and network fiber optics and cabling infrastructures. DHS has mandated the consolidation of all component data centers into two DHS enterprise data centers. US-VISIT must migrate its systems by FY 2012. Current US-VISIT data center environments are not 100 percent redundant—they are currently operating at 50 percent redundancy. US-VISIT IDENT and ADIS systems are critical to the Nation's safety and security. Therefore, a "mirroring" step

is required to replicate current data center operations before migration to the two DHS enterprise data centers can occur.

Unique Identity – Full Operational Capability – The Unique Identity – Full Operational Capability includes integrated workstreams for achieving interoperability between IDENT and IAFIS. The use of 10-prints facilitates travel by reducing the number of travelers sent to secondary processing; provides more matchable data, which reduces the likelihood of misidentifying a traveler as being on a US-VISIT watchlist; and increases the opportunities to identify persons of interest, as 10-prints are more likely to be matched to latent fingerprints collected and to be maintained in criminal and intelligence biometric data stores. Interoperability enlarges the biometric database used by border management, intelligence, and law enforcement agencies. In conjunction with 10-prints, enhanced data sharing through interoperability increases the probability of identifying persons of interest and enhances law enforcement actions.

Legislative and Administrative Mandates – The budget requests resources necessary for DHS to meet legislative mandates essential and DHS strategic goals:

The Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), Public Law 104-208, requires the development of an automated entry and exit control system to collect records of departure and to match them with records of arrival.

The Immigration and Naturalization Service Data Management Improvement Act of 2000 (DMIA), Public Law 106-215, amends IIRIRA to require that the entry and exit data system integrate all “authorized or required” alien arrival and departure data; use available data to match an alien’s arrival and departure; assist the Attorney General (now the Secretary of Homeland Security) and the Secretary of State to identify lawfully admitted nonimmigrants who have overstayed their periods of admission; use available data to produce a report of arriving and departing aliens by nationality, classification as an immigrant or nonimmigrant, and dates of arrival in and departure from the United States; and be implemented at all air and sea ports of entry (POES) by December 31, 2003, at all air and sea ports and the 50 land border ports serving the highest numbers of aliens by December 31, 2004, and at all POEs by December 31, 2005.

The Visa Waiver Permanent Program Act of 2000 (VWPPA), Public Law 106-396, requires that the entry and exit data system –

- Contain records of arrival and departure of every alien admitted under the Visa Waiver Program (VWP) who arrives and departs by air or sea;
- Contain sufficient data to permit the Attorney General (now the Secretary of Homeland Security), for each fiscal year, to calculate the percentage of each VWP country’s nationals who are admitted under the VWP and for whom no departure record exists;
- Use available data to produce a detailed annual report to Congress by December 31 of each year containing the numbers of departing aliens with their nationalities, successful arrival/departure matches, and classifications by immigrant or nonimmigrant, VWP, and other immigrants for whom no departure data is available at the end of the alien’s authorized period of stay, among other specific information; and
- Record arrivals and departures of every VWP alien transiting through air and sea ports by October 1, 2001.

The Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT) Act, Public Law 107-56, requires that the entry and exit data system be implemented with all deliberate speed and as expeditiously as practicable, particularly focused on using biometrics and tamper-resistant documents, and be able to interface with law enforcement databases for use by Federal law enforcement to identify and detain individuals who are threats to national security.

The Enhanced Border Security and Visa Entry Reform Act of 2002 (EBSVERA), Public Law 107-173, requires that the entry and exit data system –

- Use technology and biometric standards to be developed by the National Institute of Standards and Technology, in consultation with other agencies, for alien identification and other purposes;
- Be accessible at POEs and overseas consular posts;
- Consist of equipment and software to allow biometric comparison and authentication of all U.S. visas, other travel and entry documents issued to aliens, and the machine-readable, biometric passports required to be issued to nationals of VWP countries at all POEs by October 26, 2005;
- Have database(s) containing alien arrival and departure data from machine-readable visas, passports and other travel and entry documents;
- Use technologies that facilitate the lawful and efficient cross-border movement of commerce and persons without compromising the safety and security of the United States; and
- Be integrated into the new and broader Immigration and Naturalization Data System that fully integrates all the former Immigration and Naturalization Service databases and data systems that process or contain alien information.

The Intelligence Reform and Terrorism Prevention Act of 2004 (IRTPA), Public Law 108-458, Section 7208, specifically addresses biometric entry and exit and calls for the Secretary of Homeland Security to accelerate the full implementation of US-VISIT.

The Implementing Recommendations of the 9/11 Commission Act, Public Law 110-53, Section 711, calls for the creation of a biometric exit system at airports to record the departure of VWP travelers. Such an air exit system must match biometrics against watchlists and immigration information and compare biometrics against the departure manifest to confirm the individual alien's departure from the United States.

C. Budget Request Summary

US-VISIT requests 212 full-time positions (FTPs), 199 full-time equivalents (FTEs), and \$356,194,000. The net program change is a \$56,194,000 increase.

Adjustment-to-Base

- *Annualization of Prior Year Funding* – (0 Positions, 18 FTEs, \$2,430,000 increase). For the annualization of these FTE costs.
- *Annualization of 2009 Pay Raise* – (0 positions, 0 FTEs, \$181,000 increase). Salaries and benefits for FY 2009.
- *2010 Pay Increase* – (0 FTP increase, 0 FTEs increase, \$278,000 increase). Salaries and benefits for FY 2010.

- *GSA Rent* – (0 FTP increase, 0 FTE increase, \$260,000 increase). All payments to the General Services Administration for rental of office space and rent-related services.
- *Working Capital Fund Increase* – (0 FTP increase, 0 FTE increase, \$151,000 increase).
- *Federal Staffing Realignment* – (62 FTPs increase, 62 FTEs increase, \$0 increase). National Protection and Programs Directorate (NPPD) is offsetting the funding for 62 Federal positions from program funds for US-VISIT. The table below summarizes the \$8,618,000 offset in US-VISIT program funds.

PPA	Positions	FY 2010 Personnel	Offset FY 2010 Program Funding	Net Budget Change
US-VISIT	62	\$8,618,000	(\$8,618,000)	\$0

Program Changes:

- *Systems Operations and Maintenance* – (0 FTP increase, 0 FTE increase, \$41,926,000 increase). The requested program change supports identity verification and screening services and includes funds for additional US-VISIT infrastructure technology enhancements and development of new capabilities supporting IDENT and ADIS. US-VISIT will maintain existing service-level agreements with an estimated organic growth of 20–30 million records annually, as well as maintaining processing and response times with internal and external DHS customers and stakeholders at 99.7 percent during FY 2010. US-VISIT expects to maintain current response-time agreements with user agencies; watch list searches completed in less than 10 seconds; enforcement transactions completed in less than 2 minutes; BioVisa initial searches completed below the 15 minute mark; and Border Crossing Card searches completed in less than 24 hours.
- *Identity Management and Screening Services* – (0 FTP increase, 0 FTE increase, \$11,218,000 increase). The requested program change supports biometric identification and watchlist management; overstay management; developing a full-time operational capability to provide integrated, timely information to user agencies; and improved immigration screening capabilities with cooperative foreign immigration services.
- *Program Management Services*: (0 FTP increase, 0 FTE increase, \$17,463,000 increase). These funds will ensure US-VISIT has appropriate strategic and operational planning and support services crucial to mission execution and requirements satisfaction. As US-VISIT continues increasing Federal staffing to meet program requirements, these funds will provide the growing workforce’s salaries and expenses. The funds will allow US-VISIT to maintain its efforts toward increasing the workforce while improving recruiting practices, workforce retention, professional training, and credentialing while ensuring US-VISIT’s human capital needs are strategically and proactively managed.
- *Data Center Mirror and Migration* – (0 FTP increase, 0 FTE increase, \$19,917,000 increase). The requested increase in base funding will support mirroring and migrating US-VISIT systems to two DHS enterprise data centers.
- *Unique Identity* – (0 FTP increase, 0 FTE increase, \$37,630,000 decrease). The requested program change to IDENT and ADIS improves data center redundancy by 25 percent and improves IDENT system capacity utilization from 80 percent to 77 percent; reducing catastrophic transaction queuing failure risks caused by surges when system capacity is exceeded. This interoperability provides real-time services and data sharing that includes a shared-service component, wrap-back functionality, increased accuracy, and full deployment of the immigration data response.

II. Summary of FY 2010 Budget Estimates by Program/Project Activity (PPA)

Department of Homeland Security
National Protection Programs Directorate

National Protection and Programs Directorate**

United States Visitor and Immigrant Status Indicator Technology

Program Performance Justification
(Dollars in thousands)

		Perm Pos	FTE	Amount
2008	Actual	115	93	\$ 338,312
2009	Enacted	150	119	\$ 300,000
2010	Adjustments-to-base*	62	80	3,300
2010	Current Services	212	199	\$ 303,300
2010	Program Change	-	-	\$52,894
2010	Request	212	199	\$356,194
	Total Change 2009-2010	62	80	\$56,194

* Includes 62 additional Federal positions offset from program funds.

US-VISIT requests \$356,194,000 in FY 2010 for ongoing operations, including the implementation of initiatives and deployment of capabilities—an increase of \$56,194,000 from FY 2009.

CURRENT SERVICES PROGRAM DESCRIPTION:

Systems Operations and Maintenance (O&M)

<i>In thousands</i>	FY 2009 Enacted	FY 2010 Request
Systems Operations and Maintenance	\$86,200	\$128,126

US-VISIT operates and maintains the IDENT and ADIS systems, providing essential biometric and biographic identity management services to US-VISIT customers in a reliable and timely fashion. US-VISIT maintains these systems to ensure they meet significant annual increases in transactions and gallery sizes (fingerprints stored within IDENT), and maintain established response times through service-level agreements with customers.

IDENT and ADIS O&M is critical to the immigration and border management enterprise. US-VISIT technologies support the missions of CBP, U.S. Immigration and Customs Enforcement (ICE), U.S. Citizenship and Immigration Services (USCIS), U.S. Coast Guard (USCG), DOD, Department of State (DOS), DOJ, Transportation Security Administration (TSA), and the intelligence community. Failing to maintain deployed systems and capabilities adversely impacts data search and response times critical to stakeholder mission success. O&M includes application support for adaptive, preventive, and perfective maintenance, release management, architecture support, interface support, configuration management, security certifications and accreditations, software licenses, and appropriate technology refreshes. The primary applications are IDENT, ADIS, and US-VISIT equipment and internal use

systems (corporate systems). US-VISIT's IT services are delivered in compliance with the DHS Enterprise Architecture standards and include platforms for users, program interfaces, data center operations, network communications integration and support, and related technical support services. Data center operations include the physical layout of equipment, hardware maintenance, searchable on-line (memory), storage capacity, data and recovery (backups) management, operating system services, and disaster recovery. Network support provides DOJ data centers network and circuit maintenance, controlled access to other DHS components, and specific interfaces to DOS and the US-VISIT program office. A centralized help desk provides support to US-VISIT systems and applications within the US-VISIT program office, as well as database administration, and local area networks at four metropolitan Washington, DC, locations.

US-VISIT operations are a large and complex undertaking requiring uninterrupted operations, maintenance, and application support. US-VISIT currently maintains this operational support at two DOJ data centers (Dallas, Texas, and Rockville, Maryland) that provide logistical support for the deployment of identity verification services. IDENT operation currently is composed of approximately 500 servers, more than 120 highly specialized matchers, and 45 terabytes of data storage. US-VISIT is experiencing a growth rate of two terabytes per month in IDENT operation, which is projected to continue increasing. ADIS operations currently consist of 16 high-end servers across the two data centers and process more than one million transactions a day within a four-terabyte database that is estimated to increase by nearly one terabyte per year.

There are two primary growth drivers associated with the operations and maintenance of the IDENT and ADIS systems: the normal growth in gallery size and transaction volume driven by existing customers, and that arising from new capabilities and new customers. ADIS is currently growing at about 300 million records annually. ADIS intends adding crossing data for the Electronic System for Travel Authorization (ESTA) and the Western Hemisphere Travel Initiative (WHTI); estimated to combine for an additional 300 million records per year—doubling transactions, volume input and throughput, and database storage requirements. As the database grows and the identity-matching candidate pool grows for travelers with duplicative names, ADIS will require faster hardware processing capability both to process twice as many records daily against an ever increasing candidate identity matching pool, and sustaining established customer service levels. ADIS is a real-time system with a 75-year retention policy for all records; necessitating all ADIS data remain online and available to its customers. The customer base is expected to grow with the addition of DOS users in all foreign consulates, as ADIS data is used by DOS to determine visa eligibility and create a robust profile of visa violators and fraudulent activities utilized to obtain visas. These factors will add to the existing field-user base in the US-VISIT Data Integrity Group (DIG), ICE Compliance Enforcement Unit (CEU), and CBP Office of Field Operations.

US-VISIT must invest in leading-edge hardware and software capable of meeting increased performance requirements against a continuously growing database and expanding alien population processed in border crossing operations, while simultaneously sustaining its performance for a widening customer base.

IDENT is experiencing continuing growth in gallery size and transactions driven by increasing service demands from existing customers. The FY 2008 gallery size consisted of approximately 95 million fingerprint records with expected growth (without new capabilities) projected at a minimum 20 million records annually. A 75-year record retention policy also contributes to US-VISIT's data storage and

gallery size growth. The following table illustrates the actual and expected growth in gallery size and transaction volumes.

US-VISIT Current Services O&M Projected Growth	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014
Annual Transaction Volumes (in millions of transactions)	47	60	66	73	80	88	97
Gallery Size (in millions of records)	95	114	132	151	169	187	205

The second primary workload driver is IDENT capabilities expansion and improvement. IDENT has never operated in a true steady-state environment since its transfer to US-VISIT. New requirements, such as 10-print capture and IDENT/IAFIS interoperability initiatives continue to require funding to meet customer service levels.

FY 2008 Accomplishments – O&M

During FY 2008, US-VISIT provided IT support enabling identity management and screening services and new capability enhancement support. US-VISIT provided full-time support that included systems operations and application maintenance, IT architecture and platform development for user and program interfaces, data center operations support and services, network communications integration and support, and technical IT support.

FY 2008 accomplishments among the main mission systems included the following activities:

IDENT

In FY 2008, IDENT operations and maintenance concentrated on maintaining service levels while experiencing a simultaneous 30 percent growth in watchlist records; a 120 percent increase in latent fingerprint processing; a 20 percent growth in gallery size resulting from increasing demands on existing capabilities; and implementing needed systems operations, performance, and capacity monitoring tools.

It is critical that US-VISIT achieve and maintain established service level response times to provide user agencies with timely information while not impeding workload processing. In FY 2008, US-VISIT's average response time of less than two minutes for DOS consular office queries was well within the 15-minute agreement, and better than the internal US-VISIT target of five minutes. Average response times to enforcement users, such as ICE agents and CBP officers, were well within the two-minute target.

The most notable response time achievement is in support to CBP at the POEs. Anticipating the 10-print pilot deployment, US-VISIT analyzed the watchlist matcher subsystem with a specific focus on response time and optimal configuration. This analysis resulted in recommendations to change the watchlist matcher subsystem configuration that allowed US-VISIT to continue meeting the 10-second SLA response time at primary inspections. These recommendations were implemented in time for the anticipated early Easter travel holiday in March 2008. US-VISIT overcame the response-time spike

experienced in the first quarter of FY 2008 and improved performance by fiscal-year end with response times on CBP queries averaging less than 10 seconds.

ADIS

ADIS operations and maintenance concentrated on improving matching arrivals to departures through Release 3.0 implementation, which consolidated multiple overstay records, and implemented improvements in the matching algorithms. ADIS for FY 2008, system availability averaged 99.4 percent; exceeding the 97 percent target.

ADIS tracks and updates nonimmigrant travelers' status reconciliation codes that identify their travel status. In FY 2008, ADIS implementation of a reconciliation code release systematically improved the business logic and reduced false overstay records identification by 28 percent. Matching ADIS arrival and departure records are performed through system logic and algorithms developed and implemented with the assistance of Lawrence Livermore National Laboratory (LLNL). These implementations improved match rates from 91.3 percent in FY 2007, to 92.5 percent in FY 2008; the highest record-matching accuracy levels possible are required to satisfy mission requirements, particularly overstay identifications.

Corporate Systems

In FY 2008, US-VISIT completed a workstation refresh for government employees. This technology refresh facilitates Continuity of Operations Plan implementation and establishes US-VISIT telework viability.

A preliminary plan is complete for the deployment of a new US-VISIT Local Area Network (LAN) that will support US-VISIT's general support systems long-range implementation that cuts across multiple fiscal years. This plan consolidates general support systems from contractor-operated facilities and establishes improved mission-system development and testing environments.

FY 2009 Planned Accomplishments – O&M

IDENT

In FY 2009, US-VISIT will continue supporting existing customers at established service levels as defined in FY 2008. US-VISIT expects to accommodate an estimated growth 10 percent in transactions and 20 percent in gallery sizes. FY 2009 performance targets include:

- *POE Average Search Time* – Average number of seconds it takes the IDENT system to return a response about a traveler at any POE. The target time is 10 seconds or less. This measure is calculated monthly.
- *POE Peak Average Search Time* – Average number of seconds it takes the IDENT system to return a response about a traveler at any POE. The target time is 10 seconds or less. This measure is calculated for the peak hour of each day.
- *BioVisa Average Search Time* – Average number of minutes it takes the IDENT system, when initially queried, to return a response about a visa applicant at any consular office. The target time is five minutes or less and is calculated monthly.

- *BioVisa Peak Average Search Time* – Average number of minutes it takes the IDENT system, when initially queried, to return a response about a visa applicant at any consular office. The target time is five minutes or less. This measure is calculated for the peak hour of each day.
- *Law Enforcement Average Search Time* – Average number of minutes it takes the IDENT system to complete a search of all of IDENT when CBP and ICE agents make an enforcement request. The target time is two minutes or less. This measure is calculated monthly.
- *Law Enforcement Peak Average Search Time* – Average number of minutes it takes the IDENT system to complete a search of all of IDENT when CBP and ICE agents make an enforcement request. The target time is two minutes or less. This measure is calculated for the peak hour of each day.
- *Biometric Interoperability Average Search Time* – Average number of minutes it takes the IDENT system to return a response for a Federal/State/local/tribal user. The target time is 15 minutes or less.
- *IDENT Operational Availability* – Ratio of the time that the IDENT system is available to process end-user transactions during the period divided by the total scheduled up-time for that period. The target is 99.7 percent or greater.
- *Watchlist False Accept Rate* – Probability that a traveler is erroneously identified as being on the watchlist. The target is 0.04 percent or less.
- *Support increased transactions and gallery size* – More than 20 million new individuals are expected to have a first-time encounter resulting in being added to the IDENT database in FY 2009. Transactions processed are expected to see an annual organic (natural) growth of 10 percent. This is a conservative estimate based on State and local law enforcement accessing IDENT through Secure Communities, interoperability, and the Additional Aliens Rule populations. A key growth driver is the continued deployment of 10-print capture devices at the POEs and related backend processing.
- *Deliver Enterprise Reporting Service* – The Enterprise Reporting Service will establish secured, enterprisewide operational reporting for US-VISIT. This service will support efficient generation of required performance measures and provide analytical person-centric results from law enforcement and immigration officer queries. O&M will establish the capability to manage this new service in production and provide ongoing support for these new tools.
- *Complete deployment of systems tools to monitor systems operations, performance and capacity* – The legacy IDENT system inherited by US-VISIT did not have the tools necessary for effective systems performance monitoring.

ADIS

In FY 2009, US-VISIT expects a 15 percent user increase similar to that experienced in FY 2007 and FY 2008. It is imperative to ensure ADIS system availability remains at 97 percent in the face of this continued growth.

An assessment to identify the challenges facing ADIS was completed in the first quarter of FY 2009. Subsequent reporting will provide an independent technical assessment of production system architecture and system revision recommendations.

Continuously expanding data-sharing agreements are fostering increased US -VISIT and other Agency interactions.

Additional ADIS upgrades include a database upgrade (Oracle 9i to Oracle 10g); and continued biographic-matching improvements through refined Lawrence Livermore National Laboratory (LLNL). LLNL suggested matching algorithms that will compare current record-matching performance against others.

US-VISIT expects the results of this analysis to be delivered in second quarter of FY 2009.

Performance targets include:

- *ADIS Operational Availability* – ratio of the time that the ADIS system is available to process end-user transactions during the period divided by the total scheduled up-time for that period. This measure does not include scheduled downtime – maintain 97 percent or better.

Corporate Systems

US-VISIT (DOJ and ICE) support and network agreements will facilitate data center operations and general office communications.

Software maintenance and licenses (Oracle, Microsoft, etc.) for general office and project support, as well as a variety of general support systems used to maintain program and project documentation and reporting, are supported through the O&M’s corporate portion.

ICE is transitioning the Help Desk support to US-VISIT beyond FY 2009. US-VISIT will assume responsibility for corporate (LAN, desktop, and communications) and mission-critical systems (IDENT and ADIS Help Desk activities). This new support requirement extends beyond the simple need for additional contractor support, including developing and implementing processes and procedures allowing US-VISIT to meet the mission requirements formerly provided by ICE.

FY 2010 Projected Accomplishments – O&M

In FY 2010, funds are requested to enable IDENT and ADIS adherence to performance targets presented for FY 2008–2009 in the face of challenges posed by increasing gallery size and transaction volumes. Increased IDENT workload is anticipated as a result of rolling-out additional 10-print/IDENT/IAFIS interoperability, expanding State and local support request, support for the Secure Communities initiative, expansion of mobile capabilities supporting law enforcement interaction with IDENT, and growth in credentialing transactions supporting DHS agency compliance with Homeland Security Presidential Directive 12. The most notable workload driver for ADIS will be incorporating WHTI, ESTA, and DOS data to provide a complete non-immigrant travel record.

Identity Management and Screening Services

<i>In thousands</i>	FY 2009 Enacted	FY 2010 Request
Identity Management and Screening Services	\$20,000	\$31,218

US-VISIT is the DHS central point for providing identity management and screening support. US-VISIT biometric- and biographic-matching functions improve the capabilities to manage and screen

against watchlist records that include KSTs, persons of interest, and immigration violators. These capabilities strengthen national security, Federal, State, local and tribal government collaboration, and meet other user needs.

Identity Management and Screening Services provide IDENT and ADIS systems business management and oversight, real-time human biometric verification services, over-stay analysis, and updates, and maintains the US-VISIT watchlist and lookout records. US-VISIT meets its mission requirements through efforts in four areas: (1) positively confirming biometric identity by operating IDENT, supplemented with fingerprint analyses conducted by examiners in the Biometric Support Center (BSC); (2) operating ADIS and analysis by the DIG enhancing biometric identification through biographic, overstay, and data integrity analysis ; (3) coordinating law enforcement and intelligence operational activities to improve US-VISIT data systems accuracy and usefulness through the Law Enforcement and Intelligence (LE&I) Section; and (4) providing information sharing and technical assistance (a) to other nations engaged in developing biometric capabilities supporting their border and immigration management programs, and (b) supporting DHS efforts ensuring advanced and coordinated research and standards on biometric applications through the leadership of Information Sharing and Technical Assistance (ISTA) Branch staff.

Collectively, these services uniquely identify individuals by providing person-centric, actionable information to US-VISIT operational customers.

FY 2008 Accomplishments - Identity Management and Screening Services

Biometric Support Center (BSC)

US-VISIT's biometric support provides three basic services:

- 10-print verifications that two sets of prints are in fact a match
- Latent-print processing involving the comparison of known 10-prints with previously unidentified latent fingerprints (e.g., prints found at a crime site or a terrorist safe house)
- Enrollment services of lookout candidates submitted by enforcement users for inclusion on the watchlist or in recidivist databases.

On an average day, the BSC verifies over 1,730 fingerprints resulting from unresolved automated system comparisons; completes over 6,800 latent-fingerprint comparisons between known individuals in the US-VISIT database and fingerprints left behind at crime scenes and terrorist incidents; and enrolls nearly 80 individuals' fingerprints onto the US-VISIT watchlist. IDENT watchlist hits can result in ICE and CBP enforcement actions as well as visa denials and denials of immigration benefits, possibly leading to secondary inspections referrals at POEs where CPB officers use all relevant IDENT information and other available sources to make admissibility determinations.

In FY 2008, the BSC:

- Completed 631,533 manual fingerprint verifications
- Completed 2,502,934 latent print verifications
- Completed 230,354 urgent fingerprint verifications submitted by law enforcement in fewer than four minutes on average (below the 10 minute target)
- Completed 28,694 field-submitted IDENT lookout enrollments (enforcement submissions to be added to the IDENT watchlist)

- Completed 4,523 National Security Entry Exit Registration System enrollments
- Identified 333 unknown individuals—deceased, amnesia victims, and others
- Enhanced the Candidate Verification Tool (CVT) to support the transition to 10-print capture and provided improved visualization tools that allowed examiners to better analyze poor-quality prints. CVT is used by US-VISIT fingerprint examiners to compare fingerprints and verify matches.

Data Integrity Group (DIG)

The ADIS database matches arrivals and departures, extensions, changes, or status adjustments to identify individuals having overstayed the terms of their admission. This information supports determinations as to whether nonimmigrant visitors have remained beyond their authorized periods of admission, based on “admit until” dates, and provides the “status indicator” for US-VISIT. Those records are manually validated by the DIG prior to initiating law enforcement action or adverse actions, such as benefit or visa refusals. Overstays fall into two categories: “out-of-country overstays” and “in-country overstays.”

Out-of-country overstays are individuals having left the United States and stayed over 90 days beyond their authorized periods of admission. These individuals are added to the biometric and biographic (IDENT and the DOS Consular Lookout and Support System) “overstay lookout” list, which is automatically checked by CBP officials when an individual attempts to reenter at a POE or by DOS when an individual attempts to obtain a visa at an overseas consulate office. If a traveler is denied admission at a POE or denied a visa, the event is an “adverse action.”

In-country overstays occur when individuals remain in the United States beyond their periods of admission. These identifications result in referrals to ICE and are referred to as “lead recommendations.” ICE then undertakes an investigation to arrest and deport the overstay violator.

The DIG analyzes cases where the admission class (certain visa classes such as ambassadors are exempt) or the individual’s age (under 14 or over 79) suggest the person should not have been fingerprinted and a biometric encounter record created in IDENT. The DIG initiates action to delete the IDENT biometric record if an error is found. In addition, the DIG analyzes cases of multiple identities for potential fraud or system error where multiple fingerprint identification numbers are associated with one person or vice versa. Additionally, the DIG informs USCIS when subjects having pending immigration benefit applications appear to have applied for a benefit when out of status, or who have left the country without authorization and have a benefit application pending; meaning they have abandoned that application.

FY 2008 marked continued advances identifying potential overstay violators. Increases in ICE resources devoted to overstay cases resulted in a doubling of arrests and consulate visa denials. This success corroborates increased emphasis on establishing lookouts to identify persons seeking re-entry or new visas, and having previously overstayed their prior term of admission. These abilities have led to significant increases in adverse actions at POEs and consular offices.

The following table shows the number of cases in which out-of-country lookouts and in-country referrals to ICE have resulted in arrests or denials of visas or admissibility. Over the past three years, DIG efforts resulted in arrests or denials of entry for over 3,000 individuals.

Fiscal Year	Referred to ICE	Arrests Based on Referrals	Out-of-Country Lookouts	Port/Visa Refusals Based on Lookouts
2008	13,343	715	13,276	1,441
2007	12,372	338	7,357	451
2006	4,155	139	457	5

In addition, the DIG achieved operating efficiencies through FY 2008 resulting from improved productivity using a stable and more experienced workforce. Average costs per in-country overstay lead dropped from a high of \$150 per lead in FY 2007, to \$123 in FY 2008. Results for out-of-country overstay leads for the same period of comparison dropped from \$145 to \$114.

Law Enforcement and Intelligence (LE&I)

LE&I reviews biometric watchlist encounters and authorizes the promotion or demotion of persons to the watchlist based on the best biometrics and most current and actionable information associated with those biometrics. Quality assurance reviews are conducted to ensure the watchlist remains accurate and actionable for all US-VISIT stakeholders. US-VISIT provides research and contextual data to law enforcement, intelligence, external agencies, and foreign partners not maintaining access or not having the expertise to interpret the information. In FY 2008, US-VISIT biometrically promoted 379 individuals having previously attempted to enter the United States and had been biographically identified in the Terrorist Screening Center (TSC) Terrorist Identity Datamart Environment as being a KST. In FY 2008, US-VISIT reviewed 41,537 IDENT watchlist matches and demoted 24,286 of those records after determining watch list inclusion was no longer warranted.

In addition to authorizing watchlist promotions and demotions, US-VISIT continues keeping current and accurate persons subject to the watchlist through collaboration with other agencies, including the TSC and DOD. By exchanging data with DOD on high-threat subjects encountered by the United States, primarily in Iraq and Afghanistan, the IDENT watchlist has prevented entry into the United States by individuals having been detained by DOD; attacked U.S. troops or civilian targets; or having possible connections to insurgent activities. US-VISIT's collaboration with the TSC has resulted in identifying a KST's biographic data within the terrorist screening database and corresponding to a biometric in IDENT—further consolidating the biographic and biometric KST watchlists. US-VISIT also reviews the fingerprints of USCIS applicants who are identified on the IDENT watchlist. In one case, an applicant for a USCIS benefit matched the US-VISIT watchlist because the subject had photographed a military installation and tested positive for an unspecified type of explosive residue. US-VISIT continued to work with the National Ground Intelligence Center of DOD to discuss and resolve the architecture and process issues necessary for the regular exchange of watchlist data between DOD and US-VISIT. Tremendous steps have been made to collect fingerprint images to enhance our biometric screening capabilities.

US-VISIT worked with USCIS in formalizing a process placing all applicants denied for fraud on the biometric watchlist so the subjects cannot apply for admission or an additional immigration benefit under another identity. In FY 2008, LE&I placed a denied group of refugee applicants on the US-VISIT watchlist, preventing their obtaining other immigration benefits under assumed identities.

Information Sharing and Technical Assistance

In FY 2008, US-VISIT expanded its information sharing and technical assistance with the governments of the Four Country Conference—a formalized effort by the United States, United Kingdom, Canada, and Australia to improve coordinated immigration efforts—providing a representative to the Australian Government to strengthen cooperative relationships. Additionally, working with USCIS, US-VISIT partnered with the United Kingdom Border Agency group responsible for U.K. worldwide visa issuance. Through this program, applicants for UKvisas who reside in the United States submit their biometrics to a USCIS application support center for subsequent transmission to the UK.

FY 2009 Planned Accomplishments – Identity Management and Screening Services

Biometric Support Center (BSC)

In FY 2009, US-VISIT will employ approximately 80 full-time equivalent contractors providing fingerprint verification services in the two centers on the east and west coasts. These centers provide around-the-clock expert fingerprint matching services to the immigration and border management enterprise and enforcement communities. Although IDENT fingerprint matching technology is among the fastest and most accurate in the world, manual fingerprint verifications are necessary to analyze poor-quality prints and ensure derogatory data is not erroneously associated with an individual.

In FY 2009, the BSC will continue supporting existing end-users at the same service levels achieved in FY 2008. To ensure that legitimate travel is not impeded and officer safety is not negatively impacted, it is critical that the BSC continue to provide fingerprint verification decisions on urgent requests in 10 minutes or less, non-urgent verifications within 24 hours, and enrollment and verification of terrorism-related prints in 2 hours or less. Additional volumes due to unanticipated increases in transactions from ports of entry or other agencies, including latent requests from DOD and DOJ, will put increased pressure on US-VISIT's ability to deliver verification decisions at the current service levels.

Data Integrity Group (DIG)

US-VISIT will employ approximately 38 contractor personnel in the DIG for 2 primary functions: (1) overstay identification through analysis of ADIS data; and (2) analysis of data integrity issues to improve record matching algorithms and systemic data.

The DIG prioritizes its workload according to criteria provided by ICE. The DIG workload will increase in FY 2009 as the DIG expands its coverage from solely reviewing traveler records from ICE priority countries of interest to include visitors from all VWP countries as mandated by Congress. DHS is responsible for verifying visa VWP compliance to validate continued participation in the VWP. These additional categories require the DIG to remain current on a larger population of records, starting with a backlog of more than 750,000 records of potential in-country visa overstay violators. It is likely this additional workload will double the FY 2008 workload. The current plan, based on the current staffing level, is to reduce the backlog by 50 percent in the second quarter with the remainder completed by the fourth quarter.

During FY 2009, the DIG will focus attention on improving ADIS records integrity to achieve a goal of 95 percent exit-to-entry match rate and accurate overstay identification of VWP participants. The

DIG will continue reviewing the age of the travelers on whom records will be maintained (e.g., those under the age of 14 and over the age of 79 are to be excluded) and class of admission.

While handling its expanded workload, the DIG has consistently reduced the cost of producing in-country and out-of-country overstay leads.

DIG performance targets for FY 2009 include:

- *In-Country Overstay Lead Credibility Rate* – Probability that leads submitted by the DIG to ICE CEU represent travelers who are currently in the United States and have overstayed their authorized periods of admission: 25 percent or greater.
- *Out-of-Country Overstay Lead Credibility Rate* – Probability that vetted overstay leads are correctly promoted to the lookout list and actually represent travelers who are overstaying their authorized periods of admission by more than 180 days: 98 percent or greater.
- *Cost per In-Country Overstay Lead* – Average cost to vet an in-country overstay and prepare for the submission to ICE CEU: \$166 or less.
- *Cost per Out-of-Country Overstay Lead* – Average cost to vet an out-of-country overstay lead by the DIG and to prepare it for promotion to lookout status: \$136 or less.

Law Enforcement and Intelligence (LE&I)

US-VISIT provides value-added identity management services focusing on biometrics supporting analytical, investigative, and operational needs.

Available information complexity will increase with the initial deployment of 10-print capture and IDENT/IAFIS interoperability, and the expansion of biometric credentialing screening for critical infrastructure, optimal use of US-VISIT databases will require an integrated and coordinated, near real-time response to all stakeholders. Further, US-VISIT is involved in several global projects with foreign partners to detect and deter malafide aliens from entering the United States and applying for immigration benefits. US-VISIT anticipates additional workload in the coming fiscal year due to the increased review of watchlist hits stemming from further deploying 10-print capture and interoperability with IAFIS, support for DOD initiatives, and assorted projects processes and procedures formalization with DHS components.

In the second quarter, US-VISIT will exchange biometric data with Australia, Canada, and the United Kingdom on a test basis to identify immigration fraud cases and trends.

Expanded deployment of 10-print capture and interoperability with IAFIS will significantly increase the number of hits US-VISIT will analyze in FY 2009. US-VISIT analyzes watchlist hits to verify individuals on the watchlist should remain on the watchlist. US-VISIT estimates that 150,000 additional records will be added to the watchlist in FY 2009; all requiring research and review.

Several initiatives to exchange data to detect and deter high-threat subjects encountered by the U.S. military will occur in the second and third quarters. Requirements for this initiative are under development in the first quarter.

Information Sharing and Technical Assistance (ISTA)

In FY 2009, a multibiometric technology evaluation was completed to inform land exit planning. Evaluation results have been incorporated into the land exit planning document delivered in December 2008. The evaluation incorporates input from independent sources as to the feasibility of potential technical solutions for a land exit capability.

ISTA will deliver a report on its face quality improvement study in the second quarter of FY 2009. This study seeks to improve facial image quality while minimizing the processing time for CBP officers.

ISTA will deliver a final report on multibiometric testing evaluation in the second quarter of FY 2009, which will provide recommendations concerning biometrics capture on exit, drawing on the results from a proof-of-concept demonstration using iris technology, with a series of evaluations conducted in multiple phases along with input from partner agencies.

ISTA will develop an action plan in the fourth quarter of FY 2009 that identifies short- and long-term goals for biometric implementation activities with Mexico as part of DHS efforts to broaden biometric data exchange opportunities with that country.

FY 2010 Projected Accomplishments – Identity Management and Screening Services

With the FY 2010 requested funding level, US-VISIT will ensure existing service levels are maintained.

Biometric Support Center (BSC)

Anticipated organic volume increases (currently estimated at 4 percent annually) and anticipated incremental volumes coming from future investment capabilities into subsequent fiscal years will increase BSC workloads. These increases include future enhanced interoperability with other agencies, including DOJ and other DHS components, and significant increases in latent print workloads. US-VISIT projects that the impact of current and planned future investments, like enhanced interoperability, will increase urgent and non-urgent verifications conducted by the BSC by more than 50 percent between FY 2008 and FY 2010. US-VISIT also projects latent processing will increase by more than 150 percent between FY 2008 and FY 2010. With requested funds the BSC will address the projected workload while continuing to meet performance targets..

Data Integrity Group (DIG)

DIG will use the requested funds to extend overstay calculation to all travelers to the United States while adhering to service targets discussed under FY 2008 accomplishments and FY 2009 planned accomplishments. Efforts to identify and deploy new algorithms improving record-matching performance will continue.

Law Enforcement and Intelligence (LE&I)

US-VISIT's identity and screening services validate and approve all demotions; selects promotions to the biometric watchlist based on entry/exit encounters; and works with internal and external units on

possible identity and other fraud issues. US-VISIT anticipates additional workload growth stemming from the increased review of watchlist hits resulting from further 10-print capture and interoperability deployments, support for DOD initiatives, and formalizing processes and procedures with DHS components for assorted projects such as Secure Communities.

Information Sharing and Technical Assistance (ISTA)

The FY 2010 request supports US-VISIT’s information sharing and technical assistance initiative to engage and establish partnerships with foreign governments toward promoting the adoption and use of common standards for biometric identity management and enabling data sharing arrangements. Such assistance is provided through direct communication with foreign governments and, in some cases, through the temporary onsite duty of US-VISIT experts overseas. The FY 2010 funds will support the continued and expanded use of temporary onsite technical experts (secondments) overseas. In FY 2010, ISTA plans to continue the secondment in Australia and post an additional US-VISIT expert in Warsaw, Poland, or Mexico to assist in integrating biometrics into their immigration and border information systems. Investments provide continued engagement with the migration experts’ subgroup (MESG) of the Group of Eight (G8) in the development of best practices and biometric standards within the context of border control and immigration enforcement. The participation of US-VISIT experts overseas for two to three months in FY 2010 is projected for a joint European Union operation using biometrics collection.

Program Management Services

<i>In thousands</i>	FY 2009 Enacted	FY 2010 Request
Program Management Services	\$102,105	\$122,868

US-VISIT’s program management services provide staffing to all projects and program support-based activities. Staffing constitutes a major expenditure and comprises all Federal staff and program-level contractor personnel. US-VISIT’s program management services provide mission-support resources ensuring appropriate strategic and operational planning activities, human capital, budget and financial management resources, program office IT technical support, acquisition policies and procedures, and administration and logistics are in place. These vital services directly support overall program direction and control.

Program management service funds provide the physical facilities to maintain the program office for Government and onsite contractor personnel. These resources provide funding for program administration and logistics such as rent, building management services, equipment maintenance, communications support, physical security, and DHS central administrative services through the DHS working capital fund.

FY 2008 Accomplishments – Program Management Services

In FY 2008, US-VISIT accomplished the following:

- Completed a revised US-VISIT Strategic Plan based on the new strategic framework expanding US-VISIT’s identity management and screening services to meet the needs of the larger immigration and border management enterprise along with the broader DHS biometric-based

screening and credentialing based services. This revised plan conforms to the Government Performance Results Act of 1993 requirements and best practices accepted by the private sector.

- Ensured that privacy risks were identified and appropriately mitigated in all US-VISIT projects and initiatives and were implemented to reduce the level of privacy risk to the lowest possible level for a Comprehensive Biometric Exit Privacy Impact Assessment, system of records notice, notice of proposed rulemaking, and TRACS Privacy Impact Assessment, and the IDENT/IAFIS Interoperability Memorandum of Understanding to appropriately control the volume and type of data shared between US-VISIT and the FBI's Criminal Justice Information Systems Division.
- Completed a memorandum of understanding with the countries of Canada and the United Kingdom regarding biometric data sharing. US-VISIT continues to work with the Four Country Conference on standards and pilot projects for biometric data sharing.
- Continued as the DHS co-lead in the development of biometric standards with a primary focus on the adoption of international standards to support current and future DHS biometric capabilities and to facilitate interoperable technologies and biometric data sharing.
- Completed a Systems Engineering Institute-led independent assessment (Standard Capability Maturity Model Integrated [CMMI] Appraisal Method for Process Improvement) in January 2008. The findings supported the US-VISIT internal assessments of strengths and process implementations sharpening US-VISIT's focus on specific areas and furthering the deployment and institutionalization of the model's practices.
- Completed all corrective actions associated with a preliminary onsite review of the prime integrator's Earned Value Management System (EVMS) conducted by the Defense Contract Management Agency (DCMA) in June 2007. A comprehensive system review was completed in October 2008.
- Established uniform policies and procedures for coordinating Government Accountability Office (GAO) audits and a GAO recommendation database to track progress, improve communications, and facilitate reporting. US-VISIT created an internal integrated project team (IPT) composed of representatives from all affected offices, which is focused on closing open GAO recommendations. The IPT developed mitigation strategies to address all open recommendations and to assess and report progress against planned actions. The IPT provides a biweekly report on the progress of its mitigation efforts to the Under Secretary, National Protection and Programs Directorate, and meets quarterly with representatives from GAO to review progress on its mitigation strategies and to discuss criteria for closure. US-VISIT has included actions to resolve open GAO audit recommendations in its executives' annual performance plans. As evidence of progress toward addressing open recommendations, GAO has declared that 28 recommendations are now considered implemented and closed.
- Continued progress implementing effective cost estimation. In response to DHS management directives and requirements, US-VISIT has provided independent Government cost estimates (IGCEs) for acquisitions and operational activities. US-VISIT further supported project-level planning, as set forth in the US-VISIT Enterprise Life Cycle Model, through the development of project-level, rough-order-of-magnitude estimates that provide early insight into resource requirements and affordability. The program continued to enhance and update the US-VISIT Program Life Cycle Cost Model, the central repository of cost estimates and estimating relationships, by populating the model with information developed in completed IGCEs and DHS Resource Allocation Plan processes. The model serves as a source and repository for facilitating subsequent cost and budget estimates.

- Revamped US-VISIT cost-estimating relationships and key program performance measures through adoption of a framework that recognizes US-VISIT as a provider of identity management and screening services and supplies value to its customers by efficiently providing accurate, timely, and reliable information. US-VISIT revised the key program measures reported to support this measurement framework and instituted monthly reporting.
- Improved transparency and control concerning the program's capital investments by disaggregating to the project level. This revised capital reporting recognized that US-VISIT is an ongoing provider of identity services as well as a manager of unique projects that adds improved functionality to its stakeholders.
- Awarded a contract in FY 2008 to perform a workforce analysis of Federal and contractor staff with the intent to inform decisionmakers regarding future resources (staffing and funding) and identify areas for the optimization of resources and functions. US-VISIT analyzed all of its functions, capabilities, Federal staff, and onsite contractor support. The workforce analysis provided insight into function alignment across the program, demographics and competency requirements, future workload requirements and trends, and delivered a model that enables US-VISIT to run scenarios based on workload or workforce trend assumptions.
- Improved the vacancy-to-onboard-employee ratio from FY 2007 to FY 2008. In the last quarter of FY 2007, US-VISIT was averaging 20–25 vacancies. In FY 2008, US-VISIT reduced vacancies down to an average of 15 positions. Significant efforts were expended to post vacancy announcements and review certification lists in a timely manner to ensure that individuals were selected as quickly as possible.
- Exceeded the program management bench strength goal of 25 program management certifications, achieving 35 certifications as DHS Acquisition Program Managers. Certificate holders have a common frame of reference, use a common lexicon and an identical acquisition practice model, and develop common organizational practices by creating a direct, positive impact on individual effectiveness and program performance.
- Established training governance for Federal partners in support of 10-fingerprint capture technology. Governance ensured compliance with best training practices and supported the operational objectives of 10-print technology.
- Fulfilled requirements to transition contractors to FTEs. In support of the Secretary's goal to strengthen and unify DHS operations and management, US-VISIT evaluated whether positions are approaching inherently governmental or if the level of discretionary decision-making is inherently governmental. US-VISIT identified positions for conversion and received approval for 47 positions to be converted. Recruitment actions have been initiated to convert contractor positions to Federal staff positions.
- Completed and implemented continuity of operations plan (COOP) and a pandemic influenza plan to align with the NPPD and DHS Plans. US-VISIT participated in the Top Executives Exercise Number 4 and the National Level Exercise in 2008 in concert with NPPD and DHS. The COOP identified US-VISIT mission-essential functions and laid out a five-year plan for COOP training. The pandemic plan is an integrated master plan that identifies and enables mission-essential personnel to perform their activities during an influenza pandemic.
- Initiated an internal American Indian Government-to-Government Relations Policy. The policy will formalize US-VISIT's commitment to working with the Federally Recognized Indian tribes in all US-VISIT environmental projects that may affect tribal interests

- Completed supplementary National Environmental Protection Act (NEPA) procedures. The DHS Chief of Administrative Services is revising departmental guidance on supplementary procedures. US-VISIT will not forward this document for approval until the new guidance has been completed. The supplementary NEPA procedures and signatory authority will allow US-VISIT to act as sole authority for its environmental analyses and documentation.

FY 2009 Planned Accomplishments – Program Management Services

In FY 2009, US-VISIT plans to build on earlier achievements by:

- Developing the business initiation concept, which allows for the efficient intake, assessment, prioritization, and initiation of new US-VISIT projects.
- Providing privacy policy support for new and ongoing projects to ensure the promotion of privacy best practices and the protection of personally identifiable information so that projects are sufficiently planned and developed in accordance with the US-VISIT Enterprise Life Cycle Methodology and Capability Maturity Model Integration (CMMI) principles. US-VISIT will provide business-planning and policy-level support to ensure that new and ongoing projects are properly aligned with existing statutes and regulations and within departmental policy scope and levels.
- Addressing the Defense Contract Management Agency (DCMA) findings from its comprehensive validation review conducted in October 2008 in preparation for DCMA's reevaluation of the prime integrator's Earned Value Management System (EVMS) scheduled for June 2009.
- Supporting DHS-wide policy and management initiatives, such as comprehensive immigration reform, and the Credentialing Framework Initiative. Using established US-VISIT governance, the program will provide effective guidance for its users, stakeholders, and customers within DHS; external stakeholders and at the Federal, State, local, and international levels.
- Completing acquisition actions to include recompetition of the fingerprint examiner contract for the BSC and DIG to provide productivity improvements and increase analytical support. Additional acquisition actions will be initiated regarding the development and execution of a strategy for the US-VISIT prime integrator to support the US-VISIT mission as well as development of an acquisition strategy regarding the program support contractor for the US-VISIT program office.
- Serving as the DHS lead in the development of biometric standards, with primary focus on adoption of international standards to support current and future DHS capabilities.
- Demonstrating progress in addressing GAO open recommendations through active management of responsive mitigation plans.
- Incorporating the GAO Cost Assessment Guide into program cost estimating practices and further refining the US-VISIT planning, programming, and budgeting process, drawing upon the revised strategic plan and improvements in the program's life cycle cost estimates.
- Leveraging the US-VISIT process improvement initiative and progress to date by further strengthening process maturity throughout the organization, specifically by deploying and implementing DHS Directive 102-01 to support continued process improvement, which addresses many identified CMMI-appraisal weaknesses.
- Initiating and establishing a program-level independent verification and validation function for quality assurance.
- Completing training governance for Federal partners in support of 10-fingerprint capture technology. Governance will ensure Federal partners' compliance with training best practices,

which supports the operational objectives of 10-print technologies. US-VISIT is expanding its partnerships among Federal and State agencies to extend IDENT resources and tools in execution of its mission. IDENT users will be notified that biometric data will be collected from in-scope travelers exiting the United States from air or sea ports. For the land border biometric exit project, US-VISIT will provide user training support.

- Maintaining the vacancy-to-onboard-employee ratio at a level that meets US-VISIT's executive performance goals. US-VISIT's goal is to have 85 percent of its positions filled or 98 staff on board. As of April 2008, US-VISIT had 90 staff on board, or 78.3 percent of its positions filled.
- Conducting an annual review of all individual performance plans in the context of the Human Capital Strategic Plan to ensure that employee goals support US-VISIT requirements.
- Reducing the time to hire individuals. The target goal for the average time from initiation of the recruitment process to offer acceptance is 55 days. The current US-VISIT reported average is 125 days. However, US-VISIT is working to ensure the data used to report on the hiring process timeline accurately reflects the measure's purpose.
- Initiating NEPA compliance analysis and documents for land exit.
- Implementing the Environmental Management System, which will comply with Executive Order 13423 and fulfill a commitment made in the Programmatic Environmental Assessment.
- Procuring an alternate operating facility for US-VISIT mission-essential personnel and functions for use during a COOP event. In addition, the program will finalize the US-VISIT COOP and the US-VISIT Pandemic Plan and develop the requisite training for all US-VISIT personnel.
- Implementing a strategic communications plan that will continue to educate stakeholders as US-VISIT evolves further into a biometric identity management service that provides services across Federal, State, local, and tribal agencies, and works in collaboration with global partners. The program will ensure the ongoing awareness and understanding of US-VISIT's capabilities and future offerings to key stakeholders—agencies, officials, organizations, media, and others interested in the program and the issues it helps to address.

FY 2010 Projected Accomplishments – Program Management Services

In FY 2010, US-VISIT plans to build on prior program management accomplishments by:

- Implementing acquisition strategies for the prime integrator support contract and the program management support contractor. In addition, an overall acquisition strategy will be developed to align with US-VISIT's biometric support mission.
- Implementing DHS Directive 102-01 to improve implementation and oversight of acquisition practices for significant investments.
- Implementing Program-level quality assurance and independent verification and validation functions to assess the implementation of program management processes and recommended improvements.
- Demonstrating tangible progress to GAO in addressing open recommendations through active management of responsive mitigation plans.
- Implementing its recruiting program to target the skill sets required and maintaining a diverse working environment. A database will be developed to maintain and track the workforce to include Federal staff, detailees, independent public agents, and contractors. The database will provide vital information necessary to support long-term workforce planning.

- Conducting an annual review of all individual performance plans in the context of the Human Capital Strategic Plan to ensure that employee goals support US-VISIT requirements.
- Implementing a more comprehensive training program to provide US-VISIT with a wider range of skill sets required to support its role as the central biometric identity management service for the Department.
- Further refining the US-VISIT Life Cycle Cost Model, implementing the GAO Cost Assessment Guide, implementing a performance-measurement repository to enable analysis and reporting, and completing/updating the cost-benefit analyses for the Unique Identity and Comprehensive Exit Programs
- Establishing a record management capability in accordance with a DHS/Chief Administrative Officer strategic objective.
- Providing the COOP training and support necessary to maintain existing plans in a readiness state.
- Increasing security measures to ensure a secure working environment. The availability of a secure work area and secure information compartmental facility will ensure secure communications between US-VISIT program leadership and DHS leadership.
- Improving in-house capabilities to develop presentation graphics, outreach materials, and signage for the program to reduce contract services. Large print/copy jobs will be transferred to the Government Printing Office to reduce production costs.
- Implementing a global public education program to maintain and expand awareness, understanding, and acceptance of US-VISIT, and the enhanced border and immigration management system among travelers, the news media, and stakeholders, domestically and abroad.

Data Center Mirror and Migration

<i>In thousands</i>	FY 2009 Enacted	FY 2010 Request
Data Center Mirror and Migration	\$25,327	\$45,244

US-VISIT data center operations represent an integral component of the US-VISIT service delivery framework. Presently, US-VISIT systems are hosted in two DOJ data centers. This hosting includes physical area and rack space, service support, hardware maintenance, memory and storage capacity, data and backup management, operating system level support, disaster recovery, and fiber/cabling. DHS deployed two enterprise data centers to achieve the IT infrastructure consolidation goal. For US-VISIT to assist in the Department’s goal, it must relocate systems and hosting services from the DOJ data centers in Dallas, Texas, and Rockville, Maryland. US-VISIT systems hosted in these data centers are not 100 percent redundant. Therefore, a “mirroring” approach is required before existing operations can be decommissioned. Mirroring requires acquiring and provisioning (i.e., “go-live”) equivalent capabilities presently in the DOJ data centers within one of the two DHS enterprise data centers before a DOJ data center hosting service can be decommissioned.

As US-VISIT occupies 2 of the 17 DHS data centers targeted by the Secretary for the first wave of consolidation. US-VISIT must execute one of the highest priority migration efforts and the requested funding enables US-VISIT to meet baseline requirements and further departmental efforts toward achieving this critical IT infrastructure consolidation goal. Data center funds guarantee this critical initiative is met and redundancy requirements are in place as warranted.

FY 2008 Accomplishments – Data Center Mirror and Migration

In FY 2008, US-VISIT initiated various planning and estimating activities to establish implementation costs and a strategic approach:

- Initiated modernization of the architecture for IDENT and ADIS into the DHS data center facilities by strengthening reliability and availability standards, supporting platforms, and infrastructure.
- Initiated the relocation of US-VISIT computing platforms and resources from the existing DOJ data centers to the new DHS enterprise data centers in Clarksville, Virginia, and Stennis, Mississippi, through the development of a migration and mirroring plan that incorporated a phased approach allowing flexibility in scheduling, while mitigating impacts to service-level agreements and processing. US-VISIT initiated the implementation and deployment of core infrastructure by establishing required processes and procedures for the rollout of production-based infrastructure deployments that included the installation of power and shelving to support equipment installations, as well as an asset tracking system to confirm equipment deliveries. US-VISIT has established preliminary network performance and capacity monitoring, including the development of a statement of work to secure managed services and requirements within existing and new service-level agreements.

FY 2009 Planned Accomplishments – Data Center Mirror and Migration

In FY 2009, US-VISIT plans to accomplish the following regarding the data center mirroring and migration initiative:

- Complete the installation of the two-print matcher subsystem infrastructure, including the hardware and additional capacity to the matcher cluster for connecting these two new DHS enterprise platforms to legacy DOJ production platforms.
- Initiate the building of the core infrastructure and establish required processes and procedures in Clarksville, Virginia, to position this DHS data center for forthcoming production deployment regarding US-VISIT systems and data to achieve performance-balancing objectives.

FY 2010 Projected Accomplishments – Data Center Mirror and Migration

In FY 2010, US-VISIT projects to accomplish the following regarding the data center mirror and migration project:

- Complete the deployment of the US-VISIT matcher cluster from the DOJ Dallas Data Center to Clarksville, Virginia, including the establishment of connectivity between the two DHS data centers and the legacy DOJ data center in Rockville, Maryland.
- Complete the production processing cut-over from the DOJ data center in Dallas, Texas, including decommissioning this data center for US-VISIT processing. Equipment at this DOJ data center will be redeployed to Clarksville, Virginia, to complete the data center activities and US-VISIT data-mirroring requirements.

FY 2010 enhancements for Data Center Mirror and Migration provide a 25 percent improvement to current IDENT and ADIS data center redundancy resulting in the achievement of 75 percent redundancy. This will significantly reduce the risk of jeopardizing multiple DHS and non-DHS user's missions in the event of a service-interrupting disaster. In addition, FY 2010 enhancements improve IDENT system capacity utilization from 80 percent to 77 percent; reducing the risk of catastrophic

transaction queuing failure- the inability to biometrically identify and screen individuals caused by the occurrence of a transaction volume surge when system capacity is exceeded.

Unique Identity (UI) – Full Operational Capability

<i>In thousands</i>	FY 2009 Enacted	FY 2010 Request
Unique Identity	\$66,368	\$28,738

The UI initiative includes integrated workstreams for the national deployment of 10-print capture and achieving interoperability between IDENT and IAFIS. Using 10-prints facilitates travel by reducing numbers of travelers sent to secondary inspection and provides more data on which to match, subsequently reducing false positive identifications. Further, there are greater opportunities to identify persons of interest since 10-prints are more likely to match latent fingerprints in criminal and intelligence biometric data stores of fingerprints collected at crime scenes or terrorist locations. Interoperability enlarges the biometric database used by both border management and law enforcement agencies. When used in conjunction with the 10-print initiative, enhanced data sharing increases the probability of identifying persons of interest and taking appropriate law enforcement actions. US-VISIT seeks funding to continue delivery of 10-print interoperability between the DHS IDENT biometric database and the DOJ IAFIS biometric database. IDENT/IAFIS interoperability is a statutory and Department mandate. Interoperability is being achieved in three phases:

- 2006: interim Data Sharing Model (iDSM) completed
- 2009: Initial Operational Capability (IOC) scheduled for completion
- 2014: Full Operational Capability (FOC) targeted for completion

Once completed, FOC will provide real-time services and data sharing between IDENT and IAFIS and will include the following functionality:

- *Shared-service component.* This functionality provides the ability to fully search IAFIS and IDENT for all FBI Criminal Justice Information System (CJIS) Division and DHS stakeholders. To enable this functionality, software enhancements are implemented to submit, receive, and process shared services messages from IAFIS and IDENT. Additional network functionality is required and system processing needs to be increased to handle the shared services requests. This may include the addition of system processors, storage, and access management controls, and the enhancement or addition of various service-oriented architectures.
- *Wrap-back functionality.* This functionality notifies authorized agencies of subsequent criminal and/or civil data to an existing biometric record. This allows for:
 - authorized agencies to receive notifications of subsequent criminal activities for individuals after the initial encounter with the individual and to notify the responsible agency regarding criminal activity of the individuals in sensitive positions;
 - the automatic transition of files between civil and criminal repositories;
 - the ability to search civil records with remote latent fingerprint submissions
 - expanded and new search and response generation capabilities; and
 - collectively locating civil histories to facilitate the search, addition, consolidation, modification, expunging, response generation, and file maintenance of civil and criminal information.

This work requires designing and implementing new system processes through software enhancements and requires adding IDENT system resources including system processing, storage, and network services.

- *Full deployment of immigration data response.* US-VISIT enables the full immigration data response (IDR) functionality—software enhancements needed to process and send the IDR to IAFIS. Additional network functionality is required and system processing and storage needs to be increased to handle the packaging and submission of immigration data.
- *Maintaining/improving accuracy and timeliness in the face of rising transaction volumes.* As the volume of transactions and the amount of stored biometric data increases, the accuracy of biometric searches needs to be maintained or improved. New biometric search algorithms, system transaction management techniques, and data access methods need to be implemented to support the growth of transactions. This work will include enhancements to current software, the transaction management systems within IDENT, and the design and implementation of additional hardware and network systems to support increased data volumes.

System response times and service-level agreements must be maintained as transaction volumes increase. FOC capabilities include adding improved system service requests, messaging, and compliance with the DHS/DOJ National Information Exchange Model enterprise-wide messaging standard. The FOC functionality will be implemented using the US-VISIT enterprise life cycle methodology, and the FOC project execution will include the plan, analyze, design, build, test, and deploy phases of work.

FY 2008 Accomplishments - Unique Identity

In FY 2008, US-VISIT accomplished the following with the 10-print transition and interoperability initiatives:

- *10-print Transition.* Completed pilots and began national deployment of 3,300 scanners at 292 POEs. In FY 2008, US-VISIT completed the 10-print pilot and evaluated the results. These results provided insights and lessons learned that guided the national deployment of 10-print capability due to be completed in early FY 2009. National deployment consisted of approximately 3,300 devices to the 292 POEs where 2-print scanners are deployed at air, sea, and land POEs. Through these efforts, US-VISIT improved accuracy in matching fingerprints, enabled the immediate identification of high-risk individuals, and facilitated interaction for low-risk individuals.
- *Interoperability - Implemented IOC.* US-VISIT implemented IOC, which improved (1) the ability to match enrollees against latent prints; (2) mitigated concerns about false negatives when matching against poor-quality prints; (3) ensured faster processing time to resolve false positives; and (4) provided the ability to perform a full search of the FBI CJIS Criminal Master File. Interoperability enhanced identity verification capabilities by sharing collected biometric and biographic information and provided coordinated and well-informed decision-making capabilities. FY 2008 investments provided more comprehensive biographic and case data screening, scaled for transaction throughput and gallery size, and provided the ability to access FBI CJIS criminal files.

FY 2009 Planned Accomplishments - Unique Identity

In FY 2009, US-VISIT will complete the deployment of 10-print reader capabilities to the remaining POEs beyond the initial pilot, including the remaining deployment of approximately 3,300 devices to

292 POEs. US-VISIT enables searches of IDENT by IAFIS for State and local law enforcement agencies in support of ICE Secure Communities. IDENT architecture changes enable searches against the complete IDENT database instead of a small subset of selected data. These changes support State and local law enforcement in identifying arrested individuals by providing identity information collected. It provides an IDENT data response for positive matches identified by IAFIS submissions to IDENT. The IDENT response contains biographic identity information (e.g., name, date of birth, and place of birth) on individuals residing within IDENT. This provides State and local law enforcement with biometrically verified identities from up to five encounters between the individual and the IDENT data owner (e.g., USCIS, DOS, and CBP). This service notifies the ICE Law Enforcement Support Center of needed further analysis and potential follow-up action. It will provide real-time hit notifications and automated updates on DHS expedited removals and DOS Category One visa refusals (shared data components) to increase the value and timeliness of data provided. The shared-data repositories contain the biometrics of individuals of highest interest to DHS and DOS. IOC fully automates the process for identifying shared-data components and adds them to the data repository, where available 10-prints will be provided. IDENT provides near real-time notification to CJIS of hits against the CJIS shared-data component, which consists of wants/warrants and KSTs. When an individual with an active warrant is encountered by DHS or DOS, CJIS will be notified immediately for follow up with the owning agency.

US-VISIT begins planning for IOC and FOC deferred capabilities by completing requirements development and schedule analysis in collaboration with CJIS. These include record linking; allowing biometric records existing in both data repositories to be shared based on mission or operational needs and wrap-back capabilities across IDENT and IAFIS to search the fingerprint databases using a one-time identifier as a search criteria within the IAFIS galleries. Other requirement developments include a new service integrated into IAFIS allowing authorized agencies to receive notifications of criminal activity for individuals in a position of trust and to complete full 10-print matching capabilities within IDENT to increase the accuracy and number of fingerprint searches.

FY 2010 Projected Accomplishments – Unique Identity

FY 2010 UI enhancements expand interoperability among IDENT, IAFIS, and DOD's Automated Biometric System (ABIS) by providing the following improved information-sharing capabilities:

- *Expanded Support to ICE Secure Communities.* Enhancements to IDENT/IAFIS interoperability are critical to support the ICE Secure Communities initiative. ICE will use US-VISIT's expanded interoperability and will build on existing relationships with State and local law enforcement agencies to ensure that incarcerated criminal aliens are removed from the country instead of being released into our communities after custody.
- *Wrap-Back Functionality.* Wrap-back provides an automatic notification to end users in the event of an update to an individual's criminal or civil record. This automatic notification reduces risk by providing decisionmakers with the information necessary to make timely decisions and take appropriate actions.
- *Maintain/Improve Accuracy and Response Times.* Increased accuracy will reduce false positives in IDENT that result when individual's biometrics are returned as positive matches when, in fact, their biometrics do not match records on the watchlist. This will avoid sending additional workload to the US-VISIT Biometric Support Center for manual biometric examination.
- *Implementation of the National Information Exchange Model.* Implementation will improve the enterprisewide exchange of data between DHS and DOJ. This will enable a common messaging

structure for interoperability and allow greater access to data by DHS and non-DHS users, delivering information quickly to inform operational decisions.

- *Deployment of the Full Immigration Data Response (IDR)*. IDR will result in an automated process that immediately notifies DHS of suspected immigration violators who have been detained by a State, local, or tribal law enforcement agency. The implementation of IDR will inform DHS operational decisions on encountered individuals.
- *Interoperability with Department of Defense (DOD)*. Continue collaboration with DOD to establish data-sharing and interoperability capabilities. Expanding biometric interoperability through the delivery of improved information-sharing capabilities will increase the probability of identifying persons of interest and will allow users from the immigration and border management, law enforcement, and intelligence communities to make better decisions.

IV. Program Justification of Changes

Program Increase 1: Systems Operations and Maintenance

Strategic Goals & Objectives: 1.3

PPA: US-VISIT

Program Increase: Positions: 0 FTE: 0 Dollars: \$41,926,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$86,200
Program Change							0	0	\$41,926
Budget Request	0	0	\$103,000	0	0	\$86,200	0	0	\$128,126

Description of Item

US-VISIT Systems Operations and Maintenance (O&M) provides operations and support for three O&M investments:

IDENT is the largest fingerprint repository and most efficient matching system in the world. It can process up to 200,000 transactions per day for the Departments of Homeland Security, State, and Defense; Federal, State, and local law enforcement agencies; and other stakeholders. *IDENT* had over 95 million individual fingerprint records at the end of FY 2008 and contains biometric data for legitimate travelers to the United States, immigration benefit seekers, and immigration violators. It contains watchlist data: information on KSTs, criminals, sexual offenders, domestic and international fugitives, officer safety threats, military detainees, immigration violators, other persons of interest, and other egregious offenders. *IDENT* receives a subject's fingerprints, stores them via an enrollment transaction, and compares them against stored fingerprint records. Results are provided to end users to help determine identity in 10 seconds or less against the subsets (highly actionable) of their watchlists. *IDENT* has identified more than 60,000 criminals, immigration violators, and KSTs.

IDENT O&M costs include support for application-related components: servers, matchers, storage required to meet expanding gallery size and transaction volumes and service including a 24/7 Help Desk and system uptime maintenance at 99 percent or better. Gallery size (stored fingerprints) is the primary cost driver. Increased gallery size requires additional data storage and equipment to maintain *IDENT*'s matching speed. O&M costs continue increasing as *IDENT* is adjusted to support fingerprint database expansion and a yearly growth rate of at least 20 million new fingerprints.

ADIS is an electronic system that collects information about noncitizens traveling to the United States. This includes arrival and departure border crossings and immigration status updates for each traveler. *ADIS* receives information from multiple systems, some of which are from government organizations external to US-VISIT, and matches events to a unique person to create a complete record of events during their arrival, stay, and departure from the United States. *ADIS* matches departures with arrivals to ascertain compliance, stores travel and status adjustment records, and provides a range of ad hoc

queries and reporting capabilities. ADIS incorporates additional data elements and transactions associated with all US-VISIT systems and other immigration systems to maintain complete traveler histories. ADIS maintains travel histories for over 200 million alien travelers. The data collected includes key biographic and biometric identifiers and the processing of information provided to law enforcement and other stakeholders. ADIS receives 100 percent of all system-confirmed arrivals and all air/sea arrival and departure manifests, along with I-94/I-94W departure records. ADIS also receives status updates from the USCIS Computer Linked Application Information Management System 3 and the ICE Student and Exchange Visitor Information System on aliens and changes to their immigration status.

ADIS O&M costs include support for infrastructure management (hardware), application management (product support and help desk support), and network and data center support. Services are growing to support more stakeholders and users, including a 24/7 Help Desk and system uptime maintenance at 99 percent or better.

Corporate Systems – IT Infrastructure includes:

- All US-VISIT corporate hardware maintenance including software tools and campus infrastructure upgrades
- Corporate Systems Help Desk
- Corporate Network Services – including the Project Office Network and LAN
- Corporate Systems maintenance agreements for US-VOICE, DOORS, Portfolio Management, IMP/IMS, Microsoft EA, Oracle, and LE&I

Continual O&M support of applications and systems ensures US-VISIT’s functional capability and safeguards the service and performance levels of US-VISIT as a “system of systems.” As a DHS enterprise service provider, US-VISIT currently supports a growing user base, which includes DHS customers as well as interagency and international stakeholders.

Justification

The increase requested in FY 2010 is attributable to the impact of current services growth on the IDENT system and the requirement to refresh aging fingerprint matcher hardware supporting IDENT-provided mission capabilities provided.

Current Services Growth – Three factors contribute to IDENT’s increased O&M: increasing transaction volumes, fingerprint gallery size growth, and maintaining safe levels of system capacity in the face of continuous growth. Approximately one of every three travelers encountered results in an enrollment record (two thirds will already be enrolled). For FY 2010, US-VISIT projects a gallery size growth of 20 million records.

US-VISIT must continue investing in hardware and software allowing consistent search and match performance against an exponentially growing gallery. A growing investment in O&M services is required to meet existing service-level agreements (SLAs).

Fingerprint Matcher Hardware Refresh – The IDENT fingerprint matcher subsystem was developed and implemented prior to the US-VISIT Program’s first major milestone: the January 2004 delivery of biometric identification and screening services to air and sea ports of entry (POEs). The fingerprint

matcher hardware acquired in FY 2004 has a useful life of three to five years. The program is initiating a phased hardware refresh of the matchers and plans to replace 20 percent of the original matcher inventory with the FY 2010 increase—part of a five-year refresh plan. The hardware refresh requires increases in operations support for IDENT database administration, software licenses, and application management support.

Impact on Performance (Relationship of Increase to Strategic Goals)

The requested funds will ensure IDENT meets performance-driven SLAs in the face of growing current services demands and constrained system capacity. As DHS's biometric services provider, US-VISIT's IDENT faces a constantly growing demand for its biometric identification and screening services. As actual transaction demands and gallery sizes grow without a corresponding growth in system capacity, a transaction queuing failure may result. Specifically, instead of the SLA-driven 10-second response time required at POEs, lack of capacity due to O&M shortfalls would increase transaction response times to unacceptable levels and disrupt the travel process. US-VISIT would face trade-offs of either selectively screening travelers through "discretionary loading," or ceasing all traveler processing in the event of a system failure.

The requested budget increase is to enable investments in additional fingerprint matchers, database administration support and labor, and maintenance agreements addressing current capacity issues as well as anticipating workload growth from the deployment of additional 10-print/interoperability capabilities, and supporting State and local requesters, including the Secure Communities initiative.

Program Increase 2: Identity Management and Screening Services

Strategic Goals & Objectives: 1.3

PPA: US-VISIT

Program Increase: Positions: 0 FTE: 0 Dollars: \$11,218,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$20,000
Program Increase							0	0	\$11,218
Budget Request	0	0	\$15,800	0	0	\$20,000	0	0	\$31,218

Description of Item

US-VISIT is uniquely positioned to provide an identity service to stakeholders based on collecting an individual’s biometrics that can be linked with all associated biographic indicators and provide a full identity (actual and aliases). Using state-of-the art decision support systems, manual verifications, and analysis, US-VISIT provides a key element of border protection and interior enforcement activities protecting the United States. As the DHS central point for providing identity management and screening services, US-VISIT offers diverse services and provides timely responses to DHS for immigration and border management and to international, Federal, State, local, and tribal stakeholders. US-VISIT biometric and biographic matching functions improve the capabilities to manage and screen against watchlist records that include KSTs, persons of interest, and immigration violators.

Justification

US-VISIT requests funding to support biometric identification and watchlist management, overstay management, and developing a 24/7 operational capability. These funds will provide integrated, timely information to user agencies; and improved immigration screening capabilities with cooperative foreign immigration services.

Biometric Support Center (BSC) - US-VISIT’s BSC provides human fingerprint analysis support; an integral part of credentialing and identity services for all of DHS and other agencies. As part of US-VISIT’s service offerings, the biometric support workload will significantly increase in three key areas: 10-print identifications/verifications, latent print processing, and data-sharing initiatives (most notably with the FBI).

As IDENT transitions from a 2- to 10-print system as part of the Department’s move to 10-print processing at POEs, and additional IDENT stakeholders begin submitting 10-print sets to IDENT (e.g., enforcement), US-VISIT will begin making identifications on 10-prints, leading to an increase in the number of transactions requiring human verification due to latent processing. Latent processing significantly increases with the Department’s move to 10-print processing. Every 10-print enrollment in the IDENT databases will enable IDENT to compare those prints with a database of latent prints from unsolved cases.

These workload increases add to a current situation in which exists a sizable backlog in the latent fingerprint cases pending BSC action. This backlog significantly increases the possibility that

important identification work offering potential investigative leads to US-VISIT users will not be provided in time to protect and aid criminal and civil investigations. Adding necessary resources to address service backlogs and meet growing workload demands is a major priority.

Overstay Management: In-Country Overstays - US-VISIT is progressively expanding to identify in-country overstays—persons suspected of residing in the United States in violation of their terms of admission. In the FY 2009 President’s Budget Request, US-VISIT requested funding to allow for an additional 1,750 records—25 percent of the total unconfirmed overstays workload—to be reviewed and analyzed each week. This will address visitors from all priority countries, as established by ICE, and travelers from all VWP countries.

With the FY 2010 request, US-VISIT will extend its coverage of potential in-country overstays to all travelers coming to the United States. This expanded coverage will make possible significantly more accurate overstay statistical reporting to support national policy decision-making. The additional resources will reduce the backlog of unvetted overstays by 50 percent—a 25 percent improvement. US-VISIT will validate in-country, ADIS-identified overstays at the end of each week within seven days of being uploaded into the case management system. All validated in-country overstay records are reviewed by Federal staff and provided to ICE weekly. Furthermore, US-VISIT will incorporate error identification system change requests into quarterly ADIS system releases. The resulting information is used by ICE in assessing potential overstay threats through its analysis of unprocessed overstays. US-VISIT will create lookouts for all validated in-country overstay violators daily.

Full-time Operational Support Environment - US-VISIT will establish a full-time stakeholder support capability consisting of law enforcement and intelligence analysts capable of researching biometrically verified hits against IDENT data submitted by the FBI, contributing agencies, DHS entities, critical infrastructure facilities, and others to leverage biometric and biographic capabilities within IDENT. As part of the IDENT/IAFIS Interoperability project, any set of 10-prints collected through the CBP primary inspection process is now also checked against the FBI Criminal Master File database, resulting in more than 100,648 hits to date – all of which require analytical support from US-VISIT Identity Management and Screening Services to determine if the record causing the hit should be promoted and remain on the IDENT watchlist. US-VISIT will increase its support services commensurate with the growing demand for analytical support of CMF-driven inquiries. In an initial phase, US-VISIT establishes a centralized decision center, providing one source of information for operational and tactical support—all linked to a biometric. Consolidating and expanding resources to compile overstay and watchlist encounter research will allow US-VISIT to provide more effective analysis, including trending, fraud detection, and risk-based decision support. This support provides expert fingerprint examiners who process urgent latent fingerprints and provide 10-print matching verifications after normal business hours when required. US-VISIT leverages this support to research and analyze latent hits, compile case files, and coordinate with appropriate stakeholders.

Impact on Performance (Relationship of Increase to Strategic Goals)

US-VISIT provides the daily biometric identity verification, watchlist matching, and overstay management services to immigration and border management and other users to strengthen screening of travelers and workers in fulfillment of the DHS strategic goal to protect our Nation from dangerous people. The budget increase supports efforts addressing a growing workload resulting from 10-print identifications/verifications, latent print processing, and data-sharing initiatives (most notably with the FBI); extends coverage of potential in-country overstays to all travelers to the United States; and provides a full-time operational capability for timely responses to user queries.

Program Increase 3:**Program Management Services**

Strategic Goals & Objectives: 1.3

PPA: US-VISIT

Program Increase: Positions: 0 FTE: 0 Dollars: \$17,463,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							212	199	\$105,405
Program Increase							0	0	\$17,463
Budget Request	115	93	\$115,200	150	119	\$102,105	212	199	\$122,868

Description of Item

US-VISIT's program management services provide staffing to all projects and program support activities. Staffing constitutes a major expenditure and comprises all Federal staff and program-level contractor personnel. US-VISIT's program management services directly support overall program direction and control.

Program management services funds provide the physical facilities to maintain the program office for Government and on-site contractor personnel. These resources provide funding for program administration and logistics, such as rent, building management services, equipment maintenance, communications support, physical security, and DHS central administrative services through the DHS working capital fund.

Justification

These funds will provide for the annualization of the remaining 35 full-time positions requested and approved in FY 2009. Funding also is critical to ensuring that the program has the appropriate strategic and operational planning and support services necessary to execute its mission.

US-VISIT continues increasing Federal Government FTEs to meet existing and emerging program requirements, without negative impacts on existing program-level services. As part of US-VISIT staffing initiatives, the requested funds will support human capital activities ensuring program staffing needs are strategically managed. The increase in resources allows US-VISIT to maintain its efforts to increase the workforce while achieving recruiting milestones, applying best practices, ensuring staff retention, and providing professional training and credentialing to retain a highly effective and efficient workforce.

Impact on Performance (Relationship of Increase to Strategic Goals):

Maintaining the appropriate complement of program personnel consisting of the right skills and capabilities is critical to US-VISIT fulfilling its DHS role as the central biometric identity management service and continuing to meet ever-increasing user and stakeholder service needs. Adherence to the principals of effective strategic human resources management is the foundation for ensuring that personnel goals are attained and maintained. The funding level permits US-VISIT to meet existing mandates and service-level agreements for providing biometric identity management services.

Program Increase 4: Data Center Mirror and Migration

Strategic Goals & Objectives: 1.3

PPA: US-VISIT

Program Increase: Positions: 0 FTE: 0 Dollars: \$19,917,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$25,327
Program Increase							0	0	\$19,917
Budget Request	0	0	\$0	0	0	\$25,327	0	0	\$45,244

Description of Item

US-VISIT systems are hosted in two DOJ data centers, providing physical area and rack space, service support, hardware maintenance, memory and storage capacity, data and backup management, operating system level support, disaster recovery, and fiber/cabling. DHS mandated the consolidation of all component data centers into two DHS enterprise data centers; US-VISIT must migrate its systems from the DOJ data centers to DHS’s data centers by FY 2012. Current US-VISIT data center environments are not 100 percent redundant—they currently have 50 percent redundancy. US-VISIT IDENT and ADIS systems users cannot afford any system outage. Therefore, a “mirroring” step is required to replicate current data center operations before migration to the two DHS enterprise data centers can occur.

Justification

FY 2010 enhancements for Data Center Mirror and Migration provide a 25 percent improvement to current IDENT and ADIS data center redundancy, resulting in achieving the FY 2010 target of 75 percent redundancy. This will significantly reduce the risk of jeopardizing the missions of multiple DHS and non-DHS users in the event of a service-interrupting disaster.

In addition, FY 2010 enhancements improve IDENT system capacity utilization from 80 percent to 77 percent; reducing the risk of system failure, which is the inability to biometrically identify and screen individuals caused by the occurrence of a transaction volume surge when system capacity exceeds IDENT’s upper capacity limit.

Planning for IDENT system capacity optimization requires balancing existing user demand growth with additional user’s demands. As part of long range IDENT capacity planning, FY 2010 Data Center Mirror and Migration investments will allow IDENT to accommodate additional transaction volumes attributable to ICE’s Secure Communities and Additional Aliens Rule user demand.

Impact on Performance (Relationship of Increase to Strategic Goals)

The enhancement ensures data center migration project completion is on schedule. Project delays will require US-VISIT to fund data center operations in three data centers instead of two until migration is 100 percent complete.

The enhancement improves data center redundancy by 25 percent and provides a three percent improvement in system capacity utilization. The performance impact of the FY 2010 increase enhances

the disaster recovery capability of mission systems, reducing risk to the missions of multiple components and Federal agency stakeholders in the event of a service-interrupting disaster. The improvement in system capacity utilization reduces the risk of a critical queuing failure; helping ensure 100 percent mission systems availability to end users. FY 2010 enhancements contribute to the success of DHS's IT infrastructure consolidation goal; resulting in economies of scale made possible by consolidating redundant IT infrastructure services.

Program Increase 5: Unique Identity, Full Operating Capability (IDENT/IAFIS Interoperability)

Strategic Goals & Objectives: 1.3

PPA: US-VISIT

Program Increase: Positions: 0 FTE: 0 Dollars: \$28,738,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$66,368
Program Increase							0	0	\$(37,630)
Budget Request	0	0	\$228,000	0	0	\$66,368	0	0	\$28,738

Description of Item

US-VISIT seeks funding to complete delivering full 10-print interoperability between IDENT, IAFIS, and the DOD’s ABIS. IDENT/IAFIS; interoperability is a statutory and Department mandate. Interoperability is being achieved in three phases: iDSM, completed in FY 2006; IOC, scheduled for completion in FY 2009; and FOC, currently targeted for completion in FY 2014. Once completed, FOC will provide real-time services and data sharing between IDENT and IAFIS and will include a shared-service component, wrap-back functionality, increased accuracy and volumes of biometric data, and the full deployment of immigration data response. The FOC functionality implementation will use the US-VISIT enterprise life cycle methodology. The FOC project execution will include the plan, analyze, design, build, test, and deploy phases of work.

Justification

Funds requested in FY 2010 for Unique Identity reflect the lower activity level for this program, mainly due to the achievement of significant milestones in FY 2009. Partial IOC interoperability between IDENT and IAFIS was achieved in October 2008. US-VISIT will also complete full 10-print deployment to all POEs in FY 2009, marking the end of a large equipment investment in fingerprint readers and deployment costs.

Impact on Performance (Relationship of Increase to Strategic Goals)

The \$28 million in Unique Identity funding requested in FY 2010 is critical toward continuing the path towards FOC, supporting ICE Secure Communities, wrap-back functionality, and improving response times. These activities are necessary in ensuring that US-VISIT can provide the right information to decision-makers in a timely fashion.

**Justification of Proposed Changes in US-VISIT
Appropriation Language**

For necessary expenses for the development of the United States Visitor and Immigration Status Indicator Technology project, as authorized by section 110 of the Illegal Immigration Reform and Immigration Responsibility Act of 1996 (8 U.S.C 1365a), [\$300,000,000] **\$356,194,000** to remain available until expended.

Explanation of Changes:

No substantive change proposed.

PPA Mission Statement

The United States Visitor and Immigrant Status Indicator Technology project provides immigration and travel information on the activities of foreign nationals before they enter, when they enter, and when they exit the United States. The Program has established four goals to accomplish its mission: (1) enhance the security of our citizens and visitors, (2) facilitate legitimate travel and trade, (3) ensure the integrity of our immigration system, and (4) protect the privacy of our visitors.

Summary of Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$13,103	\$18,525	\$30,032	\$11,507

The request includes funding for 199 FTEs, proposed cost of living allowance, medical benefits, and other mandatory personnel entitlements including the annualization of the 2009 cost of living increase of \$181,000, the 2010 cost of living increase of \$278,000, and \$2,430,000 annualization of period year funding using the pay inflation factor, and \$8,618,000 for 62 FTE funded by an offset to program/contract funds.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$451	\$490	\$536	\$46

The request includes an increase of \$46,000 for transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal Travel Regulations.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Transportation of Things	\$37	\$22	\$622	\$600

This request includes an increase of \$600,000 for the transportation of things in support of the US-VISIT mission.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
GSA rent	\$4,668	\$4,300	\$4,560	\$260

The request includes an increase of \$260,000 for all payments to the General Services Administration for rental of office space and rent related services.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Other Rent	\$4,425	\$1,600	\$1,719	\$119

The request includes an increase of \$119,000 for all payments for rental or leases (information technology equipment and services for the US-VISIT Program, and other rental related services).

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Communication, Utilities, and Miscellaneous Charges	\$650	\$500	\$545	\$45

The request includes an increase of \$45,000 for information technology services of data and voice from other Federal agency providers, postal and courier services, utilities such as heat, electricity, and other program office facility type services.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

Advisory and Assistance Services

\$104,288	\$42,000	\$51,494	\$9,494
-----------	----------	----------	---------

The request includes an increase of \$9,494,000 for management and professional support services as a result of the Federal personnel realignment for mission organization support, logistics, project monitoring and reporting, budgeting, accounting, and performance auditing, offset by non-pay inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

Other Services

\$44,669	\$74,373	\$98,087	\$23,714
----------	----------	----------	----------

The request includes an increase of \$23,714,000 for contractual services with non-Federal sources for program office support, interagency agreements for services (equipment staging, data center application hosting and data communications including additional services for development of software applications and operations and maintenance of delivered capability in earlier fiscal years).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

Purchase from Government Accounts

\$5,102	\$21,000	\$22,812	\$1,812
---------	----------	----------	---------

The request includes an increase of \$1,812,000 for interagency agreements for contractual services (data center, applications support, network operations and integrated testing of software applications).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

Operation & Maintenance of Facilities

\$3,258	\$4,395	\$5,995	\$1,600
---------	---------	---------	---------

The request includes an increase of \$1,600,000 for services provided by contract (security of the building, climate control, and general service and routine repair of the facilities).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

Operation & Maintenance of Equipment

\$25,837	\$79,000	\$106,725	\$27,725
----------	----------	-----------	----------

The request includes an increase of \$27,725,000 for storage and care of information technology systems (contract based equipment maintenance and data center operations).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

Supplies & materials

\$324	\$325	\$354	\$29
-------	-------	-------	------

The request includes an increase of \$29,000 for consumable supplies and materials

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

Equipment

\$131,500	\$53,470	\$32,713	(\$20,757)
-----------	----------	----------	------------

The request includes a decrease of \$20,757,000 for the matchers for the 10-print initiative that were funded and deployed in FY 2009 to support new users and increased print processing volume.

FY 2009 PRESIDENT’S BUDGET REQUEST STRATEGIC CONTEXT

NATIONAL PROTECTION AND PROGRAMS DIRECTORATE (NPPD)

TABLE OF CONTENTS

I. STRATEGIC CONTEXT FOR FY 2009 BUDGET	
A. Mission and Description	NPPD-1
B. Major Activities and Key Strategic Goals.....	NPPD-2
C. Resources Requested and Performance Impact.....	NPPD-16
D. Program Performance Highlights, Resources, and Alignment to Strategic Goals	NPPD-18
E. Digest Tables by FYHSP Programs.....	NPPD-22

A. Mission and Description

The National Protection and Programs Directorate (NPPD) is a diverse organization with a vital, cross-cutting, and unifying mission of risk reduction. The Directorate works to reduce risks to the Nation through five mission areas: protect the Nation's citizens and visitors against dangerous people; protect the Nation's physical infrastructure; protect the Nation's cyber and communications infrastructure; strengthen the Department's risk management platform; strengthen partnerships and foster collaboration and interoperability.

Protecting the Nation's Citizens and Visitors against Dangerous People. NPPD works with its Federal, State, local, tribal, territorial and private sector partners to guard against threats posed by terrorists and other criminals intending to do harm to the United States. NPPD works with domestic and international organizations to monitor the status of known individuals or groups that pose a threat to critical infrastructure. NPPD provides biometrics-based information to border officers, law enforcement, and other decision-makers about persons of interest. Additionally, the Directorate helps prevent document and identity fraud that threatens the integrity of the immigration process and the safety of foreign visitors.

Protecting the Nation's Physical Infrastructure. NPPD leads the coordinated effort to reduce risk to the Nation's critical infrastructure and key resources (CIKR) from acts of terrorism, natural disasters, and other devastating emergencies by integrating and disseminating CIKR threat, consequence, and vulnerability information; developing risk mitigation strategies; and overseeing the national plan for protecting the Nation's infrastructure (National Infrastructure Protection Plan). These efforts help ensure that essential government missions, public services, and economic functions are maintained, and that CIKR elements are not exploited for use as weapons of mass destruction against people or institutions.

Protecting the Nation's Cyber and Communications Infrastructure. NPPD collaborates with public, private, and international partners to ensure the security and continuity of the Nation's cyber and communications infrastructures in the event of acts of terrorism, national disasters, and other catastrophic incidents. Additionally, NPPD protects and strengthens the reliability, survivability and interoperability of the Nation's communications capabilities -including those utilized during emergencies- at the Federal, State, local, and tribal levels.

Strengthening the Department of Homeland Security's Risk Management Platform. NPPD leads the Department's effort to establish a common framework to address the overall management and analysis of homeland security risk with a focus on standardizing and integrating risk management approaches used across the Department. NPPD ensures that all individual risk programs utilize common risk approaches and methodologies, lexicon, training standards, and data collection structures.

Strengthening Partnerships and Fostering Collaboration and Interoperability. NPPD engages with public and private sector partners to ensure effective information exchange and collaboration.

B. Major Activities and Key Strategic Goals

The major activities for NPPD in FY 2010 are presented in the structure of the performance based budget as reflected in the DHS Future Years Homeland Security Program (FYHSP). FY 2010 activities include: *United States Visitor and Immigrant Status Indicator Technology Program, Infrastructure Protection, Federal Protective Service, Cyber Security and Communications, and Management and Administration.*

DHS STRATEGIC GOAL 1: PROTECT THE NATION FROM DANGEROUS PEOPLE

OBJECTIVE 1.3: Strengthen Screening of Travelers and Workers

United States Visitor and Immigrant Status Indicator Technology Program. The US-VISIT program is fully aligned to DHS Strategic Objective 1.3 to strengthen the screening of travelers and workers. The program collects, maintains, and shares information, including biometric identifiers, on foreign visitors. This information assists in determining whether an individual should be prohibited from entering the United States; can receive, extend, change, or adjust immigration status; has overstayed or otherwise violated the terms of admission; should be apprehended or detained for law enforcement action; or needs special protection or attention (e.g., refugees).

In FY 2010, NPPD requests \$356,194,000 to strengthen screening of travelers and workers, an increase of \$56,194,000 over the FY 2009 enacted level of \$300,000,000.

FY 2008 Accomplishments

- Maintained an average response time of two minutes for all requests for information from Department of State (consular office inquiries), Immigration and Customs Enforcement, and Customs and Border Protection (carried out through IDENT).
- Completed 631,533 manual fingerprint verifications, 2,502,934 latent print verifications, 230,354 urgent fingerprint verifications submitted by law enforcement through the Biometric Support Center.
- Completed a revised US-VISIT Strategic Plan based on the new strategic framework expanding US-VISIT's identity management and screening services to meet the needs of the larger immigration and border management enterprise along with the broader DHS biometric-based screening and credentialing based services. This revised plan conforms to the Government Performance Results Act of 1993 requirements and best practices accepted by the private sector.
- Initiated modernization of the architecture for IDENT and ADIS into the DHS data center facilities by strengthening reliability and availability standards, supporting platforms, and infrastructure.
- Completed pilots and began national deployment of 3,300 scanners at 292 ports of entry. In FY 2008, US-VISIT completed the 10-print pilot and evaluated the results. These results provided insights and lessons learned that guided the national deployment of 10-print capability due to be completed in early FY 2009. National deployment consisted of approximately 3,300 devices to the 292 ports of entry where 2-print scanners are deployed at air, sea, and land ports of entry. Through these efforts, US-VISIT improved accuracy in matching fingerprints, enabled the immediate identification of high-risk individuals, and facilitated interaction for low-risk individuals.

FY 2009 Planned Accomplishments

- Match 97% of nonimmigrant travelers' arrivals to departures (carried out through ADIS).
- Manage data from all Visa Waiver Program countries beginning with 750,000 record backlog of potential in-country visa overstay violators.
- Complete training governance for Federal partners in support of 10-fingerprint capture technology. Governance will ensure Federal partners' compliance with training best practices, which supports the operational objectives of 10-print technologies. US-VISIT is expanding its partnerships among Federal and State agencies to extend IDENT resources and tools in execution of its mission. IDENT users will be notified that biometric data will be collected from in-scope travelers exiting the United States from air or sea ports. For the land border biometric exit project, US-VISIT will provide user training support.
- Complete the installation of the two-print matcher subsystem infrastructure, including the hardware and additional capacity to the matcher cluster for connecting these two new DHS enterprise platforms to legacy Department of Justice production platforms.
- Deploy of 10-print reader capabilities to the remaining ports of entry beyond the initial pilot, including the remaining deployment of approximately 3,300 devices to 292 ports of entry.

FY 2010 Projected Accomplishments

- Maintain performance targets from FY 2009 and 2010.
- Post temporary onsite technical US-VISIT expert in Warsaw, Poland and Mexico to assist in integrating biometrics into immigration and border information systems.
- Implement acquisition strategies for the prime integrator support contract and the program management support contractor. In addition, an overall acquisition strategy will be developed to align with US-VISIT's biometric support mission.
- Complete the deployment of the US-VISIT matcher cluster from the Department of Justice Dallas Data Center to Clarksville, Virginia, including the establishment of connectivity between the two DHS data centers and the legacy Department of Justice data center in Rockville, Maryland.
- Expand support to Immigration and Custom Enforcement (ICE) Secure Communities. ICE will use US-VISIT's expanded interoperability and will build on existing relationships with State and local law enforcement agencies to ensure that incarcerated criminal aliens are removed from the country instead of being released into our communities after custody.

DHS STRATEGIC GOAL 3: *PROTECT CRITICAL INFRASTRUCTURE*

OBJECTIVE 3.1: *Protect and Strengthen the Resilience of the Nation's Critical Infrastructure and Key Resources*

Infrastructure Protection. Infrastructure Protection (IP) is fully aligned to DHS Strategic Objective 3.1 to protect and strengthen the resilience of the Nation's critical infrastructure and key resources (CIKR). IP leads the coordinated national effort to reduce the risk to the Nation's CIKR posed by acts of terrorism and strengthens preparedness, response, and recovery of infrastructure in the event of an attack, natural disaster, or other emergency.

In FY 2010, NPPD requests \$333,303,000 to reduce risks to the Nation's critical infrastructure and key resources, an increase of \$19,503,000 over the FY 2009 enacted of \$313,800,000. These funds will

support three infrastructure protection mission areas: Identification and Analysis, Coordination and Information Sharing, and Mitigation Programs.

Identification and Analysis. The Identification and Analysis mission area includes IP projects and activities that support the capability to identify the nations CIKR, assess CIKR vulnerabilities and consequences, and analyze and reduce risk. Activities include developing an inventory of CIKR assets; risk analysis, modeling and simulation; and fusing information from field assessments to enable analysis of infrastructure interdependencies.

Coordination and Information Sharing. The Coordination and Information Sharing mission area includes IP projects and activities that enhance situational awareness and maximize the ability of government and private sector security partners at all levels to assess risks, coordinate programs and processes, and execute risk-mitigation programs and activities. Coordination and Information Sharing leads and coordinates the execution of the National Infrastructure Protection Plan, acting as a central clearinghouse for information sharing and coordination activities of individual sectors as well as facilitating development and support of security partner governance models.

Mitigation Programs. The Mitigation Programs mission area includes voluntary and regulatory projects and activities, which enable security partners to identify and mitigate vulnerabilities, implement protective measures, and increase preparedness for facilities, systems, and surrounding communities. They support public awareness efforts and facilitate the sharing of CIKR protection-related best practices and lessons learned as well as enabling IP planning, readiness and incident management.

FY 2008 Accomplishments

- Conducted over 300 vulnerability assessments on Tier 1 and Tier 2 critical infrastructure and key resource assets, National Special Security Events, other special events, and specially directed facilities. These included Site Assistance Visits, Buffer Zone Protection Plans, Comprehensive Reviews, and New Nuclear Reactor assessments.
- Provided operational incident support through NISAC activities during Midwest flooding in June 2008. Examined potential economic losses, outlined affected infrastructure, and projected overall national-level cascading impacts due to floods. Prioritized restoration of infrastructures that may be affected by Hurricane Dolly in July 2008 and conducted analysis of potential cross-border (U.S./Mexico) infrastructure impacts to CIKR due to hurricanes.
- Created the State and Regional CIKR Protection Guide. This guide bridges the gap between National level and State/regional level CIKR protection planning and implementation. It serves as a key resource for new Homeland Security Advisors and other homeland security officials.
- Supported the development of the National risk picture by identifying, assessing, monitoring, and helping to minimize risk to State and local CIKR. In doing so Protective Security Advisors are able to provide situational awareness and information sharing to local law enforcement, and owners and operators at the Federal, State, local, and private sector levels.
- Completed multi-asset and multi-system vulnerability assessments to identify systematic CIKR vulnerabilities and asset interdependencies.
 - Conducted multi-asset assessment pilots in the Lower Manhattan Security Initiative and the District of Columbia Metroplex Initiative.
 - Conducted over 40 vulnerability assessments as part of a comprehensive review of the California Water System.

- Completed establishment of the NIPP Partnership Model. All components of the CIKR Partnership, consisting of Sector Coordinating Councils, Government Coordinating Councils, and the State, Local, Tribal and Territorial Government Coordinating Council, are in place. Most have met at least once in joint session and others have regularly scheduled quarterly or semi-annual joint meetings.
- Registered over 43,000 facilities for access to the Chemical Security Assessment Tool suite of tools (e.g., Top-Screen, Security Vulnerability Assessment, Sector Specific Plan), and completed Top-Screens for over 32,000 facilities.

FY 2009 Planned Accomplishments

- Develop a pre-construction assessment methodology, which can be utilized in the design phase of new CIKR construction. This methodology will assess the vulnerabilities of the design, annotate the protective measures needed to mitigate vulnerabilities, and include a cost analysis of enacting those protective measures.
- Produce the FY 2009 Critical Foreign Dependencies List and Executive Report for FY 2009, a comprehensive inventory of infrastructure located outside the United States that if disrupted or destroyed, would lead to loss of life in the United States, or critically affect the Nation's economic, industrial, or defensive capabilities.
- In coordination with the Sector-Specific Agencies and private sector partners, develop metrics to assess the progress of implementing the National Infrastructure Protection Plan risk management framework and value of critical infrastructure and key resources protection efforts. Develop guidance for and coordinate the Sector Critical Infrastructure and Key Resources Protection Annual Reports. Analyze sector and other annual reports to develop the National Critical Infrastructure and Key Resources Protection Annual Report. Coordinate writing and printing of National Annual Report, and ensure delivery to the Executive Office of the President and Congress.
- Integrate the private sector into the IP incident management planning process, including coordinated planning, readiness, and incident management execution activities. Establish routine ISAC presence at National Infrastructure Coordinating Center watch. Develop concept for Sector Coordinating Council/ Partnership for Critical Infrastructure Security presence in Incident Management Cell when activated.
- Deploy 10 additional Protective Security Advisors to States that currently do not have a Protective Security Advisor located within their boundaries. Field-deployed Protective Security Advisors will be located in Federal Government offices situated to best facilitate information exchange with homeland security officials in each State currently without a Protective Security Advisor. This enhancement will enable stronger relationships between DHS and the State and local government, and the owners and operators of CIKR.

FY 2010 Projected Accomplishments

- Conduct approximately 315 vulnerability assessments (Site Assistance Visits, Buffer Zone Protection Plans, and Comprehensive Reviews) per year on Tier 1/Tier 2 assets, special events projects and as directed by leadership, utilizing the National Guard in coordination and collaboration with Federal, State, local, and private sector partners. Assessment results will be utilized to influence facility security; direct DHS grant dollars to address equipment gaps in local law enforcement; and identify trends across sectors.
- Achieve Initial Operating Capability for the Secret Infrastructure Information Collection System Production Subsystem to expand the infrastructure data accessible and distributed to the regional

homeland security community, integrating numerous data sets into the Infrastructure Information Collection System to improve execution of national risk management for CIKR.

- Move the Information Sharing Maturity Model into full operations for CIKR Regional Coalitions, thereby incorporating them into the CIKR Information Sharing Environment which will support effective coordination and communication among regional CIKR-relevant coalitions, Federal agencies, and the National CIKR sectors.
- Integrate CIKR private sector-IP incident management processes and information flow beyond IP, including the NOC, NPPD, FEMA, and the Sector-Specific Agencies, to fully realize benefits of CIKR incident-specific information sharing in protection and restoration of CIKR during incidents.
- Plan and pilot initial efforts for implementing annual review, assessment, and inspection cycle with Tier 1 facilities, biannual efforts with Tier 2 facilities, and initial efforts with Tier 3 and 4 facilities.

Federal Protective Service. The Federal Protective Service (FPS) is fully aligned to DHS Strategic Objective 3.1 to protect and strengthen the resilience of the Nation's critical infrastructure and key resources. The FPS leads the Department's comprehensive security and law enforcement services to more than 9,000 Federal facilities nationwide, mitigating risk to those facilities and their 1.1 million occupants. FPS operational activities include conducting comprehensive risk assessments of Federal facilities to determine and install appropriate risk mitigation measures. Further, FPS personnel provide regular security awareness training to stakeholders, conduct criminal investigations, respond to critical incidents, and provide support to major events.

In FY 2010, NPPD requests \$640,000,000 to ensure the security of 9,000 Federal facilities nationwide, with no increase over the FY 2009 enacted of \$640,000,000.

FY 2008 Accomplishments

- Provided comprehensive security and law enforcement services to more than 9,000 Federal facilities nationwide to mitigate risk to those facilities and their 1.1 million occupants. FPS operational activities included conducting comprehensive risk assessments to determine, recommend, and install appropriate risk mitigation measures in coordination with facility tenants. Further, FPS personnel provided regular security awareness training to stakeholders, conducted criminal investigations, responded to critical incidents, and provided support to major events, including the Democratic and Republican National conventions.
- Strengthened security standards representing the key elements for reducing threat and vulnerability levels at federal facilities.

FY 2009 Projected Accomplishments

- Provide significant, appropriate law enforcement and security services for the approximately 9,000 facilities to accommodate the FPS mission.
- Receive and respond to reports of law and building rules violations, suspicious or unusual activities on federal property, weapons and explosives violations, demonstrations and disturbance incidents, alarm activations and any fire related incidents.
- Serve as the Sector Specific Agency for the Government Facilities Sector under the National Infrastructure Protection Plan (NIPP), to coordinate protection and security efforts for designated critical infrastructure and key resources across the sector.

FY 2010 Projected Accomplishments

- Develop risk-based security standards tied to intelligence by implementing a robust and improved risk assessment tool to improve threat identification, identify associated risk mitigation countermeasures and provide objective security evaluations to stakeholders.
- Improve the service provided by contract security guard force multiplier via effective acquisition strategies and intensive monitoring and coaching.
- Coordinate with Government Facilities Sector in support of the FPS roles as the sector specific agency under the Nation.

OBJECTIVE 3.2: *Ensure Continuity of Government Communications and Operations*

National Communications System. The National Communications System (NCS) is fully aligned to DHS Strategic Objective 3.2 to ensure continuity of government communications and operations. NCS provides mission-critical communications for Federal, State and local governments, and private industry through homeland security-related telecommunications functions and responsibilities, and provision of national security and emergency preparedness communications for the Federal government under all circumstances.

In FY 2010, NPPD requests \$140,149,000 to ensure continuity of government communications and operations, a decrease of \$1,164,000 from FY 2009 enacted of \$141,313,000. These funds will support four programs: Priority Telecommunications System, Next Generation Networks, Programs to Study and Enhance Telecommunications, and Critical Infrastructure Protection.

Priority Telecommunications System. The Priority Telecommunications System program provides specially designed telecommunications services to the national security and emergency preparedness user community during natural or man-made disasters when conventional communications services are ineffective. These telecommunication services are used to coordinate response and recovery efforts and in severe conditions assist with Continuity of Operations and Government.

Next Generation Networks. A technology insertion initiative to maintain and migrate legacy priority voice telecommunications features (Government Emergency Telecommunications Service and Wireless Priority Service) and to apply priority to data applications as the public switched network evolves to Next Generation Networks.

Critical Infrastructure Protection. Ensures the continued availability of national security and emergency preparedness telecommunications services under all circumstances, including crisis or emergency, attack, recovery, and reconstitution. The Critical Infrastructure Protection program includes National Coordinating Center Operations, Critical Infrastructure Protection Operations, Plans, and Policy, Training and Exercises, Network Security Information Exchanges, and Telecommunications Service Priority.

Programs to Study and Enhance Telecommunications. The Programs to Study and Enhance Telecommunications conduct technical studies and analyses of public communications infrastructures, vulnerability assessments of new communications technologies to Telecommunication Electromagnetic Disruptive Effects, and works with the international communications industry consensus standards organizations to ensure that evolving communications commercial standards address the technical requirements of national security/emergency preparedness communications.

FY 2008 Accomplishments

- Increased total Wireless Priority Service users to 85,756 and increased total Government Emergency Telecommunications Service cards to 208,944 providing outreach to qualified national security and emergency preparedness personnel.
- Initiated development of Internet Protocol Multimedia Subsystem Access national security/emergency preparedness Industry Requirements necessary to migrate Government Emergency Telecommunications Service /Wireless Priority Service functionality onto carriers' Next Generation Networks.
- Maintained strong relations with the telecommunications industry and the NCS Committee of Principals in facilitate joint planning, operational activities, and coordination of assessments, information sharing, and restoration and recovery of the critical telecommunications infrastructure.
- Performed cyber and communications modeling and analysis studies in support of emerging requirements, such as the impact undersea cable infrastructure damage would have on the communications infrastructure.
- Tested Continuity of Operations Plan and procedures during National Level Exercise 2008.

FY 2009 Planned Accomplishments

- Provide support to the NCS Committee of Principals, including technical, logistical, executive, planning and managerial support in the identification, development, and analysis of current national security/emergency preparedness communications issues and recommended solutions.
- Produce a 2009 risk assessment of the threat to and vulnerability of the public communications Networks.
- Analyze physical infrastructure diversity, or "last-mile" connectivity, for two National Communications System member agencies to ensure primary mission essential functions are preserved.
- Ensure operational readiness and validate information flow through participation in exercises such as Cyberstorm, Top Officials, Pinnacle, Forward Challenge, National Response Framework Exercises, and other Continuity of Operations and Continuity of Government readiness events.
- Complete development of Internet Protocol Multimedia Subsystem Access national security and emergency preparedness Industry Requirements necessary to migrate Government Emergency Telecommunications Service/Wireless Priority Service functionality onto carriers' Next Generation Networks.

FY 2010 Projected Accomplishments

- Increase total Government Emergency Telecommunications Service cards to 252,822 and increase total Wireless Priority Service users to 113,198.
- Support Emergency Support Function #2 participation in national security and emergency preparedness exercises before the 2010 Winter Olympics (January-February 2010).
- Deploy one Regional Communications Coordinator in each of the 10 Federal Regions to support planning, preparedness and response activities with the private and public sectors associated with Emergency Support Function #2 – Communications of the National Response Framework.

- Develop and implement continuity communications architecture to ensure, under all conditions, federal executive branch cross-department and agency communications.

OBJECTIVE 3.3: *Improve Cyber Security*

National Cyber Security Division. The National Cyber Security Division (NCSD) is fully aligned to DHS Strategic Objective 3.3 to improve cyber security. NCSD partners with the private sector, government, military, and intelligence stakeholders in risk assessment and threat/vulnerability reduction to critical IT assets for the United States' critical infrastructures. Additionally, NCSD provides cyber threat and vulnerability analysis, early warning, and incident response assistance for public and private sector constituents.

In FY 2010, NPPD requests \$400,654,000 to improve cyber security, an increase of \$87,154,000 over the FY 2009 enacted of \$313,500,000.

FY 2008 Accomplishments

- Assessed over 4,000 current external internet connections in the .gov domain and identified approximately 80 of those as potential consolidated internet access points. Began deploying the National Cybersecurity Protection System (NCPS) to potential consolidated locations, enabling data collection for the detection of potential malicious cyber activities on Federal networks.
- Collaborated with the National Science Foundation, the National Security Agency, colleges, and universities to strengthen and expand academic programs aimed at improving information assurance in higher education institutions through the National Centers of Academic Excellence in Information Assurance Education and Centers of Academic Excellence-Research.
- Developed and delivered the Supply Chain Risk Management Strategy and Implementation Plan, which included a legal and policy evaluation of the potential application of all-source counterintelligence risk assessments, an intelligence community all-source counterintelligence risk assessment Concept of Operations to include threat information, vulnerability analyses, technical mitigations, and criteria to identify high priority systems.
- Established and participated in a Federal government-wide Federal Control Systems Working Group to collaborate on creating a control systems strategy to be applied across the Federal enterprise.

FY 2009 Planned Accomplishments

- Develop and enhance the United States Computer Emergency Readiness Team Alert Level process to ensure threat descriptions and risk thresholds are appropriate and that the process for working with stakeholders and releasing cyber notifications is thoroughly socialized and refined with the stakeholders.
- Collaborate with the National Institute for Standards and Technology to further develop final base-line source code security analysis tool specification document and a test plan document, Software Assurance Metrics and Tool Evaluation Reference Dataset test suite, and Web Application Scanner Tool Functional Specifications test suite.
- Implement robust Supply Chain Risk Management projects conducted across the Federal government that will establish a body of best practices, guidance, and lessons learned across the Federal enterprise, thus identifying available Federal guidance and industry best practices sufficient for successful and consistent applications.

FY 2010 Projected Accomplishments

- Conduct a combined feasibility study and cost-benefit analysis on the optimization of reducing Trusted Internet Connection access points. Explore at least two options for optimization in order to determine the extent to which consolidation efforts will continue to yield cost-effective optimization of Federal security and the point of diminishing returns on investment.
- Continue building out the National Cybersecurity Protection System to identify cyber threats and apply effective analysis and risk mitigation strategies.
- Facilitate the development of common indexing and reporting capabilities for malware, exploitable vulnerabilities, and common attacks which target software. This will support daily updates which enable the automation, use and evolution of these capabilities within the IT security community.
- Update and maintain the Federal Coordination Strategy for Securing Control Systems and the Control Systems Security Protection Framework as the central framework for coordinating Federal activities with State and local government, private industries, international entities, and control systems vendors.
- Execute Cyber Storm III National Cyber Exercise and during exercise activities, test and validate Cyber Exercise Range, which will provide the capability to execute technical level cyber exercises for the Federal government and State and local governments, providing the possibility of eventual expansion into private industries.
- Monitor implementation of Federal cybersecurity policies by Federal partners, providing day-to-day coordination, guidance, and track the progress in implementation of information security policies.
- Create an environment of improved information security and awareness pertaining to the protection of federal information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction.

DHS STRATEGIC GOAL 4: *STRENGTHEN OUR NATION'S PREPAREDNESS AND EMERGENCY RESPONSE CAPABILITIES*

OBJECTIVE 4.2: *Strengthen Response and Recovery*

Office of Emergency Communications. The Office of Emergency Communications (OEC) is fully aligned to DHS Strategic Objective 4.2 to strengthen the Nation's response and recovery capabilities. OEC supports and promotes the adoption of capabilities that enhance interoperability or the ability of emergency response providers and Federal officials to continue to communicate in the event of natural disasters, acts of terrorism, or other man-made disasters.

In FY 2010, NPPD requests \$44,060,000 to strengthen the Nation's response and recovery capabilities, an increase of \$5,760,000 over the FY 2009 enacted of \$38,300,000.

FY 2008 Accomplishments

- Developed the National Emergency Communications Plan, the Nation's first strategic plan targeted at improving emergency response communications. This Plan complements overarching homeland security and emergency communications legislation, strategies, and initiatives, and was developed through a collaborative effort with more than 150 public and

private sector emergency communications officials at all levels of government and across disciplines.

- Established 56 Statewide Communication Interoperability Plans. Provided technical assistance and guidance to States and territories to support the development and approval of all 56 Statewide Communication Interoperability Plans—prior to this accomplishment, only eight States had strategic plans for interoperable communications.
- Finalized the Joint Wireless Programs Memorandum of Understanding among DHS and the Departments of Justice and Treasury, which superseded the previous Integrated Wireless Network Memorandum of Understanding allowing for coordination under Joint Wireless Programs. This program will ensure that common, standards-compliant technologies are procured, thereby fostering communications interoperability among Federal Agencies for more effective and efficient enforcement activities, and enabling communications interoperability with State and local partners.

FY 2009 Planned Accomplishments

- Provide Statewide Communication Interoperability Plan Implementation Workshops to support States and territories in establishing concrete milestones for advancing interoperable emergency communications and identify priorities for the Office of Emergency Communications technical assistance services.
- Validate 56 Statewide Communication Interoperability Plans Implementation reports and provide Implementation Workshops to support States and territories in establishing concrete milestones for advancing interoperable emergency communications and identify priorities for OEC technical assistance services.
- Officially establish the Emergency Communications Preparedness Center following final approval of the charter by all 22 member Departments and Agencies.
- Lead efforts to plan a national conference of Federal, State, local and Tribal emergency responders and government officials.
- Deploy Communications Unit Leader Training/Instructor Training that will ensure every State and territory has qualified personnel capable of coordinating on-scene emergency communications during a multi-jurisdictional response.

FY 2010 Projected Accomplishments

- Deploy Communications Unit Technician Training in order to ensure that in the event of a multi-discipline, multi-jurisdictional response event, on site response practitioners are trained to a similar baseline. The Communications Unit Technician is responsible for assisting with the technical activities of incident response.
- Implement the secure Emergency Communications Preparedness Center Clearinghouse. This activity will increase intergovernmental information sharing regarding emergency communications.
- Implement the final phase of the U.S.-Mexico High Level Consultative Commission on Telecommunications Security Communications Task Group Action Plan. This phase includes completing system implementation and finalization of bi-national and domestic standard operating procedures.

MANAGEMENT AND ADMINISTRATION

Management and Administration (M&A) directs and assists the programs within the Directorate to reduce the risk of attack against the nation by protecting critical physical and cyber infrastructure, guarding against threats posed by foreign travelers to the country, and by standardizing the Department's approach to the analysis and management of potential risks to the Nation. This requires concerted leadership, coordination, outreach and partnerships among multiple Homeland Security agencies, the national preparedness and response community of federal agencies, State and local governments, tribal organizations, the private sector, and the American public

Directorate Administration. Administration directs and assists the Directorate's programs to enhance the protection of America's critical infrastructure and key resources. This appropriation supports activities associated with the Office of the Under Secretary, Office of Budget and Financial Administration, Office of Resource Management, Information Technology Division, Office of Communications and Public Affairs, and Office of Information Management. Together these activities provide Directorate leadership, budgeting, financial execution, human capital, security, program review and evaluation, executive secretariat functions, information technology support, facilities build out, rent and security services.

In FY 2010, NPPD requests \$44,577,000 to perform these functions, a decrease of \$6,773,000 below the FY 2009 enacted level of \$51,350,000.

FY 2008 Accomplishments

- Provided day-to-day fiscal services and financial operations including funds approval, prompt payment of invoices, payroll reconciliations and projections.
- Instituted a hiring tiger team to streamline the hiring process, as well as recruitment and advertising positions.
- Delivered IT services via a Project Management Office in direct support of the NPPD mission, goals, objectives, and programs for major systems.

FY 2009 Planned Accomplishments\

- Initiate an NPPD Internal Controls Program. In accordance with OMB Circular A-123, conduct assessments of internal controls on Funds Control and Budgetary Resource Management.
- Manage the Directorate Table of Organization, which lays out how personnel are aligned within the Directorate and staffing levels to assist in Workforce Planning.
- Develop and implement a robust IT support model for growing number of NPPD Remote (Field) offices to ensure IT capabilities are implemented and maintained for programs with remote personnel.

FY 2010 Projected Accomplishments

- Strengthen the performance measures and performance management process. Evaluate performance measures to ensure the measures align with strategic goals and objectives and the data collected remains relevant and informative to decision makers. Collect and analyze data more effectively to inform corrective actions and program/activity changes that minimize risk.
- Continue to support long range facilities planning efforts.
- Manage and ensure Earned Value periodic reporting for IT investments quarterly.

Risk Management and Analysis. Risk Management and Analysis (RMA) leads the Department's efforts to establish a common framework to address the overall management and analysis of homeland security risk. RMA supports development of a consistent, standardized, coordinated and collaborative approach to risk management, and allows RMA to direct and integrate risk expertise across Department components as well as external stakeholders.

In FY 2010, NPPD requests \$9,895,000 for RMA, an increase of \$395,000 over FY 2009 enacted of \$9,500,000.

FY 2008 Accomplishments

- Completed the first prototype for the Risk Assessment Process for Informed Decision Making (RAPID). Risk Assessment Process for Informed Decision Making supports strategic policy and budgetary decision making, by assessing risk, evaluating risk reduction effects of DHS programs, and evaluating alternative resource allocation strategies.
- Completed first draft of the Interim DHS Integrated Risk Management Framework. The Interim DHS Integrated Risk Management Framework provides a foundation for developing follow-on policy, doctrine and guidance that will institutionalize integrated risk management in the Department. The Interim DHS Integrated Risk Management Framework outlines a vision, objectives, principles and a process for integrated risk management within DHS, and identifies how the Department will achieve integrated risk management by developing and maturing governance, processes, training, and accountability methods.

FY 2009 Planned Accomplishments

- Incorporate the RAPID I prototype results to refine the methodology, broaden the scope, and prepare for application to inform the DHS' annual Planning, Programming, Budgeting, and Execution cycle of resource allocation decisions, including the FY 2011-2015 Integrated Planning Guidance and the process for developing Resource Allocation Plans and Resource Allocation Decisions. Initiate execution of RAPID II as well as detailed assessments within the chemical and biological threat spectrum: 1) providing an analysis of DHS chem./bio programs based on risk reduction across the DHS mission space, 2) evaluating the degree to which DHS chem./bio programs are currently managing the homeland security risk, 3) identifying gaps, and 4) recommending strategies for better allocating resources to manage risk.
- Establish a working group to conduct an assessment of the requirements and resources available, complete a methodological background and implications document, complete a requirements document, and complete an execution plan for the Homeland Security National Risk Assessment. The Homeland Security National Risk Assessment will serve as a comprehensive assessment of risk, leveraging existing risk assessments that empower leaders to make informed decisions to optimize the nation's security. It will show the potential for risk reduction to inform strategies, policies, planning venues, and operations across the homeland security enterprise.

FY 2010 Projected Accomplishments

- Implement Risk Informed Decision Making to inform the Planning, Programming, Budgeting, and Execution cycle of resource allocation decisions, including the FY 12-16 IPG and the process for Resource Allocation Plans and Resource Allocation Decisions.
- Continue to lead the Protect and defend sub-objective related to risk management for the National Implementation Plan Global War on Terrorism.

Strategic Issues Facing the National Protection and Programs Directorate

1. Expanding and strengthening relationships, both within and beyond the Directorate, developing an integrated, national approach to assessing risks and ensuring security of the homeland.
2. Reducing risks to the Nation's critical infrastructure and key resources, both physical and virtual
 - a. Coordinating defense and responses to cyber attacks across the Nation; analyzing and reducing cyber threats and vulnerabilities; disseminating cyber threat warning information; and coordinating incident response activities to cyber threats.
 - b. Implementing the Chemical Facility Anti-Terrorism Standards regulatory program.
 - c. Successfully implementing the National Infrastructure Protection Plan and effectively managing the risks to the Nation's critical infrastructure and key resources.
3. Ensuring emergency response providers and Federal officials have the ability to communicate in the event of natural or man-made disasters.
 - a. Promote the ability of emergency response providers and Federal officials to continue to communicate in the event of natural or man-made disasters, and to attain interoperable emergency communications nation-wide.
 - b. Enhance the communications infrastructure to accommodate next generation technologies and enable national security and emergency preparedness users to communicate when the next generation networks are damaged and congested
 - c. Providing improved crisis management capabilities. This will include robust situational awareness to leadership at all levels and improved collaboration and conferencing capabilities.
4. Executing a continuum of visitor identification and identity document security measures to enhance the security of the United States while facilitating legitimate travel and trade while protecting visitors' privacy.
 - a. Develop and implement a plan for the Comprehensive Biometric Exit Solution.
 - b. Expand available biometric information to State and local law enforcement and intelligence community users to improve the identification of overstay, criminals, national security threats and biometric watch list candidates for subsequent action.

C. Resources Requested and Performance Impact

In FY 2010, NPPD requests \$1,958,937,000 (2,559 FTE), an increase of \$800,674,000 and 1,729 FTE over NPPD FY 2009 appropriated amount of \$1,158,263,000 (830 FTE).

Major Changes within the Base Level

- 2010 pay increase (2.0%) and 2009 pay inflation (3.9%): \$2,825,000
- Annualization of FY 2009 new positions: 114 FTE and \$15,457,000
- A realignment of \$49,724,000 from program dollars fund an additional 450 FTP and 377 FTE.
- Federal Protective Services is requested to be transferred from Immigration and Customs Enforcement to NPPD

Major Program Increases

OBJECTIVE 1.3

US-VISIT Program Management \$17.5M (0 FTE)

Enhancement will support the staffing and program support activities across all of the project. The funding will support the hiring, training and retention of the US-VISIT workforce.

US-VISIT Identity Management and Screening Services \$11.2M (0 FTE)

Enhancement will support efforts to address a growing workload resulting from 10 print identifications/verifications, latent print processing, data sharing initiatives (most notably with the FBI), and support for Secure Communities.

US-VISIT Data Center Mirror and Migration \$19.9M (0 FTE)

Enhancement will improve system capacities for IDENT and ADIS and provide additional system redundancy.

US-VISIT Operations and Maintenance \$41.9M (0 FTE)

Enhancement will provide support that is attributable to the impact of current services growth on the IDENT system and the requirement to refresh aging fingerprint matcher hardware.

OBJECTIVE 3.1

Vulnerability Assessments \$3.0M (0 FTE)

Enhancement will support the identification of vulnerabilities and enhances the security of the Nation's Tier 1 and Tier 2 critical infrastructure and key resources.

Bombing Prevention \$4.2M (0 FTE)

Enhancement will provide an enhanced and coordinated national bombing prevention and improvised explosive device (IED) security effort.

Infrastructure Security Compliance \$19.0M (23 FTE)

Enhancement will support Chemical Site Security and Ammonium Nitrate to enhance current inspection capabilities through the hiring, training, equipping and housing of additional inspectors.

OBJECTIVE 3.2**Continuity Communications Architecture** \$2.5M (0 FTE)

Enhancement will develop a continuity communications architecture (CCA) to ensure federal branch cross-department and agency communications in a continuity event.

Regional Communications Coordinators \$2.5M (7 FTE)

Enhancement will support planning, preparedness, and response activities with the private and public sectors associated with Emergency Support Function #2.

OBJECTIVE 3.3**Cybersecurity: Security of the Federal IT Enterprise** \$75.1M (15 FTE)

Enhancement will support the implementation of the Comprehensive National Cybersecurity Initiative.

Cybersecurity: Security of State/Local/Private Sector IT \$15.0M (1 FTE)

Enhancement will enhance the Control Systems Security, Cyber Exercises and Critical Infrastructure Protection-Cybersecurity programs

OBJECTIVE 4.2**Office of Emergency Communications** \$3.8M (0 FTE)

Enhancement will advance implementation of the National Emergency Communications Plan.

D. Program Performance Highlights, Resources, and Alignment to Strategic Goals

For each major program, the performance goal, alignment to DHS goals and objectives, total dollars and FTE, and main performance measure/s are shown below. For many of the programs, more performance information may be found on the OMB web site Expectmore.gov (program names may differ slightly from those used in this document).

Program: Infrastructure Protection						
Performance Goal: Improve the protection of the Nation's high risk and most valued critical infrastructure and key resources (CIKR) by characterizing and prioritizing assets, modeling and planning protective actions, and building partnerships.						
DHS strategic objectives supported and % allocation of activities: Objective 3.1 - 100%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$311,806	\$311,381	\$299,460	\$251,633	\$328,357	\$344,961
FTE	201	201	338	267	424	760

Performance Plan Measures

Measure: Percent of inspected high-risk chemical facilities in compliance with risk based performance standards.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	0%	75%	85%	70%
Actual:	None	None	None	0%	N/A	N/A

Measure: Percent of Critical Infrastructure and Key Resource (CIKR) sector specific planning protection implementation actions on track.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	N/A	90%	90%	90%
Actual:	None	None	None	93%	N/A	N/A

Measure: Percent of high priority CIKR where a vulnerability assessment has been conducted and enhancement(s) have been implemented.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	N/A	95%	95%	95%
Actual:	None	None	None	100%	N/A	N/A

Program: Cyber Security and Communications						
Performance Goal: Improve the security and interoperability of America's cyber and emergency preparedness communications assets by working collaboratively with public, private, and international entities.						
DHS strategic objectives supported and % allocation of activities: Objective 3.2 - 36% Objective 3.3 - 55% Objective 4.2 - 9%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$234,074	\$261,317	\$298,339	\$331,208	\$515,989	\$605,321
FTE	46	106	155	114	275	379

Performance Plan Measures

Measure: Percent of targeted stakeholders who have implemented the Control Systems Security Self Assessment Tool (CS2SAT) to conduct vulnerability assessments						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	N/A	25%	75%	80%
Actual:	None	None	None	50%	N/A	N/A

Measure: Percent of planned Einstein sensors deployed on-time annually throughout the Federal Government.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	Baseline	100%	100%	100%
Actual	None	None	None	26%	N/A	N/A

Measure: Priority services call completion rate during emergency communications periods.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	90% (Baseline estimate)	90%	90%	90%	90%	90%
Actual:	95.5%	97.8	None	97%	N/A	N/A

Measure: Percent of States and Urban Areas whose current interoperable communications abilities have been fully assessed.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	65%	100%	100%
Actual:	None	None	None	84%	N/A	N/A

Program: US - VISIT						
Performance Goal: Improve the identity and document verification capabilities available to Immigration and Border Management stakeholders to enable them to make timely and accurate risk and eligibility decisions.						
DHS strategic objectives supported and % allocation of activities: Objective 1.3 - 100%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$340,000	\$236,622	\$368,656	\$355,247	\$313,917	\$368,654
FTE	84	102	109	101	131	220

Performance Plan Measures

Measure: Percent of biometrically screened individuals inaccurately identified as being a on a US-VISIT watch list.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	.013%	<.04%	<.04%
Actual:	None	None	None	0.0197%	N/A	N/A

Measure: Percent of in-country overstay leads deemed credible and forwarded to Immigration and Customs Enforcement for further investigation						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	Baseline	23%	25%	27%
Actual:	None	None	21.6%	25%	N/A	N/A

Measure: Average biometric watch list search times for Department of State BioVisa queries						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	5 minutes	<5 minutes	<5 minutes	<5 minutes
Actual:	None	None	2.21 minutes	2.34 minutes	N/A	N/A

Measure: Average biometric watch list search times for queries from U.S. ports of entry						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010

**Department of Homeland Security
Office of Health Affairs**

Fiscal Year	Due Date	Reference/Citation	Requirement	Status
2009	07/23/08	Senate Report 110-396	OHA has been tasked to review healthcare policies at departmental detention facilities and directs OHA, in conjunction with U.S. Immigration and Customs Enforcement and the Division of Immigration Health Services, to brief the Committee within 30 days after the date of enactment of this act on any initial findings.	Briefing is Scheduled
2009	Ongoing	HR 110-862	The Committee directs OHA to notify the Committee 15 days prior to deploying any BioWatch device to new locations.	Ongoing
2009	1/18/2009	HR 110-862	OHA is directed to provide to the Committee, within four months of enactment of this Act, a plan to communicate and enforce medical standard policies across DHS.	Completed
2009	Quarterly	HR 110-862	OHA is directed to brief the Committee quarterly on the National Biodefense Architecture (NBA) efforts to establish a comprehensive framework of Federal, State, local and private sector biodefense responsibilities and capabilities.	Ongoing
2009	11/30/2008	Joint Explanatory Statement (Page 619)	OHA shall submit an expenditure plan on BioWatch base program and an expenditure plan on the BioWatch field testing program.	Ongoing
2009	Ongoing	Joint Explanatory Statement (Page 619)	OHA shall notify the Committees within five days of any deviation from the expenditure plan.	Ongoing
2008	2/3/2008	HR1/House Report 110-259; P.L. 110-53, August 3, 2007	SEC. 316. NATIONAL BIOSURVEILLANCE INTEGRATION CENTER.(c) Deadline for Implementation- The National Biosurveillance Integration Center under section 316 of the Homeland Security Act, as added by subsection (a), shall be fully operational by not later than September 30, 2008;	Ongoing
2008	10/1/2007	Senate Rept 110-84	The Committee requests that OHA provide a briefing on the cooperation between DHS, Agriculture, and HHS and multi-state initiatives on joint preparedness and planning.	Briefed
2008	10/30/2008	House Report 110-181, DHS 2008 Appropriation Bill	The committee provides \$2M for a NAS contract to evaluate the effectiveness of BioWatch; requests report prior to end of FY08.	Ongoing
2007	N/A	H.R. 2206; Conf Rept.110-107	Conduct a nuclear event public health assessment; however, an expenditure plan is to be approved prior to obligation of funds.	Ongoing
2007	Quarterly	FY 07 Supp; Conf Rept 110-107	Quarterly briefings on progress of the assessment	Ongoing

BUDGET REQUEST AND SUPPORTING INFORMATION

OFFICE OF HEALTH AFFAIRS OFFICE OF HEALTH AFFAIRS APPROPRIATION

I. Appropriation Overview

A. Mission Statement for Office of Health Affairs:

The Office of Health Affairs (OHA) serves as the Department of Homeland Security's (DHS) principal authority for all medical and public health matters. Working with all levels of government, non-government organizations, associations, and the private sector, OHA leads the Department's role in developing and supporting a scientifically rigorous, intelligence-based biodefense and health preparedness architecture to ensure the security of our Nation in the face of all hazards.

OHA has four strategic goals that coincide with the strategic goals of the Department:

- 1) Serve as the principal medical authority for the Department of Homeland Security (including all Components);
- 2) Lead the Department's biodefense activities, to include policy, strategy, requirements, operational programs and metrics;
- 3) Lead the Department's public health and medical preparedness and planning activities; and,
- 4) Ensure that DHS employees are supported by an effective Health and Safety Program.

The Secretary of DHS serves as the Principal Federal Official for domestic incident management and coordinates Federal operations that are dedicated to preserving the security of the Nation as mandated by law and under Homeland Security Presidential Directive (HSPD)-5: Management of Domestic Incidents. This mandate is supported by OHA through its coordination with partners across all levels of government and with the private sector. OHA will not duplicate or supplant activities currently being provided by other components or offices within DHS, or among the Departments and agencies of the Executive Branch. Instead, OHA's responsibilities and activities will enhance other programs by ensuring collaborative planning for and response to the consequences of catastrophic incidents, whether naturally occurring or man-made.

OHA staff has extensive training and expertise in public health, epidemiology, medicine, intelligence analysis, policy-making, planning, science of weapons of mass destruction (WMD), agriculture and veterinary medicine, and pre-hospital medicine. This expertise enables OHA to provide critical medical and public health information to DHS components and programs as well as to other Federal agencies including the Department of Agriculture, the Department of Defense, the Department of Health and Human Services, the Department of Transportation, and the Department of Veterans Affairs. OHA provides risk and threat assessments to guide preparedness activities, planning, and incident management. OHA also provides occupational and operational medicine, health, and safety guidance for the DHS HQ Offices and Components,

and coordinates the activities of various Federal government entities to respond to threats to the health security of the Nation.

OHA is also responsible for the Department meeting the requirements in HSPD-9: Defense of the United States Agriculture and Food by ensuring that medical, public health and safety variables are fully considered and accurately addressed.

OHA fulfills biosurveillance requirements established by HSPD-10: Biodefense for the 21st Century via its biodetection capability and role as medical advisor in meeting HSPD-10's essential pillars: threat awareness; prevention; surveillance and detection; and response and recovery.

OHA is led by the Assistant Secretary for Health Affairs, who also functions as the Department's Chief Medical Officer (CMO), and serves as the principal health and medical advisor to the Secretary of DHS and the Administrator of the Federal Emergency Management Agency (FEMA). The Principal Deputy Assistant Secretary for Health Affairs, who serves as the Deputy Chief Medical Officer, is designated as the Chief Operating Officer. OHA is divided into four offices:

Office of the Assistant Secretary: This office is headed by the Chief of Staff and the Director of Operations. The Office of the Chief of Staff provides legal, policy, external affairs, and executive secretariat services to all entities within OHA. The Director of Operations oversees the Chief Financial Officer, the Chief Administrative Officer, and the Chief Human Capital Officer.

- Also within the Office of the Assistant Secretary (OAS) is the **Office of International Affairs and Global Health Security** (OIA). OIA oversees the Department's global health security initiatives, such as: the international aspects of medical readiness pertaining to Avian and Pandemic Influenza, all-hazards emergency public health planning and other global health security concerns. The office also maintains high-level liaisons with senior foreign partners, international private sector representatives, technical and professional associations, and other Federal agencies to ensure sustainable solutions to global health security issues that may have national implications to homeland security and medical preparedness.
- **Office of WMD & Biodefense:** This office is headed by the Deputy Assistant Secretary for WMD and Biodefense and oversees the Department's biodefense and biosurveillance activities, which include BioWatch, the Rapidly Deployable Chemical Detection System, the National Biosurveillance Integration Center, the Department's equities in Project BioShield and the Food, Agricultural, and Veterinary Defense Division.
- **Office of Medical Readiness:** This office is led by an Associate Chief Medical Officer and oversees many programs and activities including medical and public health support to Federal planning, medical first responder readiness, incident coordination and support, preparedness grants coordination, development of the National Biodefense Architecture, and engagement with State and local agencies, non-profit organizations and the private sector.

- **Office of Component Services:** This office is headed by an Associate Chief Medical Officer and is responsible for establishing policy, standards, requirements and metrics for the Department’s Health and Safety programs and Operational Medical Services through support and guidance to the protective and operational medical oversight, credentialing, and medical quality management.

B. Budget Activities:

BioWatch:

The BioWatch Program achieves DHS’ mission of detection against biological attacks by managing an early warning system that can rapidly detect pathogen-specific nucleic acid in the air whether intentionally released into or naturally present in the environment. This program deploys detection devices in over thirty jurisdictions/Urban Area Security Initiative areas throughout the country. The BioWatch Program provides public health experts with a warning of a biological agent release before exposed citizens become clinically symptomatic (“ill”). This “detect-to-treat” approach provides public health officials an opportunity to respond aggressively to eliminate or substantially mitigate the potentially catastrophic impact on the population of a biological agent release.

BioWatch provides emergency personnel with the information they need to respond rapidly and effectively to implement life-saving medical countermeasures. The BioWatch Program works closely with local communities to integrate life-saving medical countermeasures and to integrate response activities into ongoing public health and emergency management activities. Additionally, DHS employs BioWatch to provide biological monitoring and surveillance support for National Special Security Events (NSSEs) and other national and local special events. DHS, in partnership with the Environmental Protection Agency (EPA), Department of Health and Human Services (HHS)/Centers for Disease Control and Prevention (CDC), and the Department of Justice (DOJ)/Federal Bureau of Investigation (FBI) work with BioWatch activities. BioWatch has operated in more than 30 jurisdictions since early 2003, performing approximately seven million assays to date without a false positive.

The Biological Warning and Incident Characterization (BWIC) system works in tandem with the BioWatch detection capability by interpreting warning signals from BioWatch collectors and public health surveillance data using incident characterization tools (e.g., plume and epidemiological models) to assess the potential impact of a release on the population. This system provides emergency personnel with modeling information and analytical tools to respond effectively. Currently, this system is operating only in three jurisdictions.

Rapidly Deployable Chemical Detection System/Chemical Defense Division:

The Rapidly Deployable Chemical Detection System (RDCDS) is only part of a larger effort to provide leadership and direction to a comprehensive chemical defense program. This larger chemical defense initiative [Chemical Defense Division (CDD)] is intended to support the efforts established by HSPD-22: Domestic Chemical Defense. Technology and operations already used for RDCDS will become the nexus for creating an overarching chemical DEFENSE and chemical DETECTION architecture. The architecture will serve as an overarching vision for leading an effort to ensure Federal/DHS/OHA coordination to carry out operations for threatened

or actual domestic chemical attacks. The chemical defense architecture is intended to focus the Nation's vast resources on the critical aspects of a catastrophic chemical event and integrate all of our nation's chemical defense capabilities both horizontally and vertically in order to develop and affect end to end capabilities.

The Chemical Defense Division (CDD) uses the same Four Pillars of the National Biodefense Program outlined in HSPD-10: 1) Threat awareness, 2) Prevention and Protection, 3) Chemical Detection and Surveillance, 4) Emergency Response and Recovery. For the chemical defense division, the first two pillars are aligned with policy formation, strategic planning and preparedness efforts. Operational capabilities of the division address aspects of the 3rd and 4th pillars.

One critical aspect of the overarching chemical defense architecture is development of a chemical detection strategy for deploying reliable chemical detection systems at critical infrastructure nodes. The systems will be tailored to types of venues and fully integrated with the Chemical Terrorism Risk Assessment (CTRA), Chemical Facility Infrastructure Protection risk assessments, local vulnerability risk assessments and local response plans and capabilities. The successful deployment and operations of RDCDS to date serves as a starting point for defining and establishing the larger Chemical Defense Architecture.

The CDD seeks to leverage cutting-edge science to operationally employ state of the art chemical sensing technology to combat emergent threats and acts of nature resulting in catastrophic chemical events. The RDCDS system provides a robust suite of chemical detection capabilities for use at National Special Security Events (NSSE) or DHS Special Event Assessment Rating (SEAR) Level events. The RDCDS system is a detect-to-warn capability that provides situational awareness enabling consequence management assessment and deliberate decision making metrics for Incident Commanders, medical personnel, and the first responder community. Identification, quantification and consequence assessment of TICs, CWAs and other toxic inhalants is a principal capability of the RDCDS architecture.

The RDCDS architecture incorporates an air sensing platform coupled with an array of ground-based chemical detector technologies merged into a fusion cell where the signal is refined for dissemination. The air component provides multi-spectral / hyperspectral air sensor capabilities to ensure standoff detection and quantification of volatile chemical releases. The ground component includes flexible and configurable commercial off the shelf (COTS) chemical detectors and a robust communication infrastructure that may be deployed for outdoor and/or indoor static emplacements. The system is rapidly configured to detect a variety of potential threat compounds depending on the venue and perceived threats. Disparate detection technologies provide a layered, complementary detection capability with a high monitoring coefficient for a wide range of Toxic Industrial Chemicals, Toxic Industrial Material, Chemical Warfare Agents (TIC, TIM and CWA) threats. RDCDS is directed to be prepared to deploy in support of NSSE and SEAR Level I and II events. Support to these events requires: stewardship and regular maintenance for static detection equipment; deployment, sustainment, and redeployment of all operational personnel and equipment; and a critical infrastructure analysis of the venue that incorporates a comprehensive threat and vulnerability probability assessment on a twenty-four hour seven days- per- week readiness posture.

Future missions will have a greater focus on local chemical vulnerability assessments and emergency response planning prior to the event. This enhanced preplanning effort will allow the RDCDS team to build critical relationships with local emergency response leadership and after the event, leave behind an enhanced local emergency response system.

In addition to RDCDS, the CDD is devising a limited overarching chemical defense architecture that will be used to provide the necessary overarching guidance for efforts to prevent and respond to a catastrophic chemical event. To effectively lead such an effort requires intra and interagency relationship building. To that end, the chemical defense division provides subject matter expertise to many policy and planning groups. For example, within the DHS Office of Health Affairs, the CDD provides support to Food, Agriculture and Veterinary Defense Division, National Biosurveillance Integration Center, Office of Medical Readiness and Component Services. It provides SME support to other DHS components such as S&T, IP, and TSA and other federal partners such as HHS, CDC, OSTP, EPA and HSC.

National Biosurveillance Integration Center:

The Implementing Recommendations of the 9/11 Commission Act of 2007 (9/11 Act), P.L. 110-53, established the National Biosurveillance Integration Center (NBIC) to enhance the capability of the Federal government to rapidly identify and monitor biological events of national concern by integrating and analyzing data from human, animal, plant, food, and environmental monitoring systems. The 9/11 Act also tasked NBIC to disseminate alerts to Federal partners, States and localities to better enable them to prepare for and respond to biological threats.

NBIC collaborates with Federal partners to collect, analyze, and share biosurveillance information. NBIC established formal agreements with seven NBIC Member Agencies (NMAs) including the Departments of Health and Human Services (Centers for Disease Control and Prevention and the Food and Drug Administration), Agriculture, Defense, State, Interior, Commerce, and Veterans Affairs. In addition, despite not having formal agreements in place, the Departments of Justice (Federal Bureau of Investigation) and Transportation, the United States Postal Service, and the Environmental Protection Agency support NBIC and routinely provide representation on the Interagency Oversight Council, Interagency Working Group, and its Sub Working Group. All NMAs provide subject matter expertise in the daily production meetings. The 9/11 Act also requires NMAs provide a detailee to work with NBIC to provide in-depth subject matter expertise and analytic perspectives and approaches to analyze and report on biological events. At this time only HHS has provided a detailee to serve at NBIC.

NBIC's mission is to provide a homeland security-relevant biosurveillance common operating picture (BCOP) to senior leaders and partner agencies regarding natural disease outbreaks, accidental or intentional uses of biological agents, and emergent biohazards through the acquisition, integration, analysis and dissemination of information from existing human disease, food, agriculture, water, meteorological, and environmental surveillance systems and relevant threat and intelligence information. HSPD-9 dated January 30, 2004 and HSPD-10 dated April 21, 2004 directs DHS to establish a National Biosurveillance Integration System (NBIS) to provide early detection and situational awareness of biological events of potential national consequence by acquiring, integrating, analyzing, and disseminating data across the biosurveillance domains of interest (human, animal, plant, and environmental). The NBIS, comprising of representatives from all participating agencies, will integrate and analyze all-

source biosurveillance information to recognize unusual biological events and provide situational awareness to the NBIS community and decision-makers. Utilizing this biosurveillance system data, a biological common operating picture (BCOP) that represents a comprehensive depiction of the global biosurveillance security environment can augment the DHS National Operation Center's COP, which provides a consistent, integrated picture of biosurveillance situational awareness throughout the country. Since December 2005, NBIC analysts have provided BCOPs on numerous real-world threats including pet food contamination, Foot and Mouth Disease (FMD), cases of extensively drug resistant tuberculosis (XDR-TB), and the 2008 *Salmonella* saintpaul outbreak. Ultimately, NBIC will ensure that near real-time biosurveillance threat awareness is provided to the Incident Management Group (IMG) and the National Operations Center (NOC) via a BCOP.

NBIC has initiated outreach to State and local partners to encourage participation in NBIC. BCOPs and other analytical information composed by NBIC have the potential to support the preparedness and response efforts taking place at the State and local level. In addition, valuable information will be passed up from the State and local level to provide Federal decision makers enhanced surveillance data. NBIC also works with international partners to obtain a global biological surveillance picture.

Planning and Coordination:

Planning and Coordination is responsible for ensuring the health security and welfare of the Nation before, during and after disasters. The Planning and Coordination PPA is composed of the programs within the Office of Medical Readiness and the Food, Agriculture, Veterinary Defense program. The Office of Medical Readiness is divided into 3 Divisions: Plans and Policy, Incident Coordination and Health Security Coordination. The programs within Medical Readiness (1) provide advice and guidance on health and medical security issues to the Secretary of DHS and the Administrator of FEMA through the Assistant Secretary for Health Affairs/CMO; (2) provide health and medical support for the Department's operations for incident management in accordance with HSPD-5; (3) working with the Federal interagency, states and local officials and the private sector, provide direction on the development of policies and guidance for medical readiness and emergency management; (4) provide direction and subject matter expertise to the Federal interagency planning process to ensure health impacts are fully integrated; (5) provide guidance and direction on Federal emergency preparedness grants requirements for health and medical issues, and on their alignment and synchronization across the Department; and (6) lead the development of the National Biodefense Architecture.

The Food, Agriculture and Veterinary Defense program leads and coordinates the various DHS food, agricultural and veterinary programs and providing technical insight to the Department's efforts to prepare and respond to a food or agricultural catastrophic event.

Salaries and Expenses:

Salaries and Expenses funds all FTEs within the Office of Health Affairs, the program support for the Office of Component Services and the Office of International and Global Health Security programs. Component Services supports the "One DHS" concept by implementing Safety, Wellness, and Occupational and Operational Medicine programs to allow the DHS workforce to be effective in their mission. In conjunction with the Chief Human Capital Officer, Office of

Safety and Environment Protection, Science and Technology, and Component Emergency Medical Services leads, current activities include: 1) Developing consultative services for Component leads on Health Issues; 2) Developing cross-DHS EMS protocols, credentialing and quality assurance standards; 3) Supporting international deployment health and wellness decisions; 4) Supporting DHS/ICE with quality assurance and medical input; 5) Promoting wellness through newsletter and a internet based health information site; and, 6) Advising FEMA on safety and environmental health housing issues.

The Office of International Affairs and Global Health Security (OIA) oversees the Department's global health security initiatives. Efforts include the international aspects of medical readiness pertaining to Avian and Pandemic Influenza, all-hazards emergency public health planning and other global health security concerns. The office also maintains high-level liaisons with senior foreign partners, international private sector representatives, technical and professional associations, and other Federal agencies to ensure sustainable solutions to global health security issues that may have national implications to homeland security and medical preparedness.

C. Budget Request Summary:

OHA requests \$138 million, 84 full-time positions (FTP) and 84 full-time equivalent (FTE) personnel. This request includes a decrease of: \$19.2 million, and adjustments-to-base totaling (4) FTE and \$0.5 million:

- BioWatch (\$94.5 million);
- Rapidly Deployable Chemical Detection System (\$2.6 million);
- National Biosurveillance Integration Center (\$8.0 million);
- Planning and Coordination (\$2.5 million);
- Salaries and Expenses (\$30.4 million, 84 positions, 84 FTE).

II. Summary of FY 2010 Budget Estimates by Program/Project Activity (PPA)

III. Current Services Program Description by PPA

Department of Homeland Security
Office of Health Affairs
Program Performance Justification
(Dollars in thousands)

PPA: BIOWATCH

	Perm Pos	FTE	Amount (\$ 000)
2008 Actual	---	---	78,185
2009 Enacted	---	---	111,606
2010 Adjustments-to-Base	---	---	0
2010 Current Services	---	---	111,606
2010 Program Change	---	---	-17,093
2010 Request	---	---	94,513
Total Change 2009-2010	---	---	-17,093

The BioWatch Program requests FY 2010 funding of \$94.5 million to maintain the baseline capability of the Gen -1/Gen -2 collectors, complete the Gen-3.0 prototype unit field-testing, procure the IT architecture backbone to allow networking between biodetection systems, and begin procurement of initial production units to support the Gen-3.0 Operational Test and Evaluation (OT&E).

CURRENT SERVICES PROGRAM DESCRIPTION:

As the mission of BioWatch capabilities evolves and includes indoor operations, the required timeliness and time resolution of the BioWatch Actionable Results (BAR) by far exceeds that provided by Gen-1 and Gen-2 capabilities. Furthermore, the scope of the BioWatch program is increasing markedly as the population coverage increases and more jurisdictions participate in the surveillance program.

Current detection capabilities, termed Gen-1 / Gen-2, consist of outdoor aerosol collectors whose filters are manually retrieved for transport to and subsequent analysis in a BioWatch Laboratory of the Laboratory Response Network (LRN) facility. This system, while extremely beneficial, is labor-intensive and the data results are significantly time-delayed. It is between 12-36 hours post release before detection occurs. This is not adequate for indoor use. Therefore, it is necessary to augment and ultimately replace the current collection and detection capability with an autonomous biodetection system called Gen-3. This transition will improve time to detect to between 4-6 hours, increase population coverage, and provide greater cost effectiveness.

The location of these indoor biodetectors within a given city or urban area will be based on a comprehensive analysis of the highest risk indoor environments in the Nation, typically high throughput transit environments and large indoor facilities such as sports arenas. The

principal users of BioWatch are the local public health authorities that will use the information generated by the capabilities as an important tool in deciding whether a biological event of public health significance has occurred.

BioWatch Gen-3 detection capability is a fully autonomous networked biodetection system whose function is to monitor the air for agents of biological concern. The primary functions of the Gen-3 detection capability include sample collection, preparation, analysis, reporting, archiving, self-assessment, failure analysis, waste handling and fault isolation. Unlike the collectors currently fielded, Gen-3 collects and analyzes the samples on-site without the labor intensive collection and transport of samples for laboratory analysis required with the older equipment.

BioWatch expenses occur in four areas of activity:

- **Fixed Systems Support Costs**
This program area is responsible for providing overarching system level program guidance, management, modeling and simulation, communications, consequence management, and public health coordination and United States Public Health Service (USPHS) detailees. The activities in this program area are required to maintain and coordinate all the elements in BioWatch.
- **BioWatch Operations and Maintenance**
This program area includes the direct operational elements required to keep the BioWatch monitoring capability functional. The activities included in this program area: field collection activities, lab sample analysis, autonomous detection recurring operations and maintenance costs.
- **Investment and Technology Architecture**
This program area includes functions essential to the establishment of new detection capabilities for improved system architecture, detection instruments, or jurisdictional improvements and expansions. The activities in this program area include: test and evaluation activities, limited detector procurement, limited deployment, and jurisdictional deployment costs.
- **BioWatch Warning and Incident Characterization System**
This program area funds the operation of the BioWatch Warning and Incident Characterization System (BWIC) system. The BWIC system is a suite of web-based computer tools (e.g., plume and epidemiological models) that assist public health officials in interpreting signals from BioWatch and public health syndromic surveillance programs. These tools assist to: 1) develop a common situational awareness; 2) characterize the incident; 3) determine the potential impact a release may have, and 4) inform response and recovery activities.

Significant accomplishments in FY 2008 include:

- Maintained Gen-1 and Gen-2 baseline capability;

- Maintained and deployed capability to support BioWatch jurisdictions for National Security Special Events (NSSEs) and Special Events (SE);
- Maintained subject matter expertise and reach-back support necessary to assist local jurisdictions in the event of a BioWatch Actionable Result (BAR);
- Provided indoor and outdoor guidance for BioWatch Jurisdictions and National BioWatch CONOPS;
- Fielded BioWatch collectors on a military installation in San Diego;
- Developed strategy to integrate/optimize all Federal outdoor biomonitoring capabilities within the National Capitol Region (NCR);
- Fielded the Autonomous Pathogen Detection System (prototype APDS) for three indoor facilities in New York City (NYC).

FY 2009 planned accomplishments include:

- Maintain Gen-1 and Gen-2 baseline capability for detection of biological releases;
- Maintain and deploy capability to support BioWatch jurisdictions for NSSEs and special events;
- Maintain subject matter expertise and reach-back support necessary to assist local jurisdictions in the event of a BAR;
- Initiate a field test program for prototype units for Gen-3 autonomous detectors. This field test program includes characterization testing, assay validation, and operational testing to establish suitability, effectiveness, sustainability, operating characteristics, and performance.
- Initiate and support the development of local response plans to a BAR;
- Perform BioWatch site modeling and simulation, taking into account a variety of attack scenarios, meteorological conditions, detector characteristics, and network configurations; the model will identify optimal network configuration for citing and performance;
- Identify and characterize deployment options for indoor facilities (including estimates of each deployment option's overall benefit to the population);
- Establish laboratory response network system supply requirements for consumables, and reagents to support Gen-1 and Gen-2 current capability.
- Covered the 2009 Presidential Inauguration.

In FY 2010, the BioWatch Program planned accomplishments include:

- Maintain Gen-1 and Gen-2 baseline capability;
- Maintain and deploy capability to support BioWatch jurisdictions for NSSEs and special events;
- Maintain subject matter expertise and reach-back support necessary to assist local jurisdictions in the event of a BAR;
- Complete the Gen-3.0 prototype unit field testing (to include characterization and jurisdictional tests), perform data analysis, and verify the performance of one or more autonomous detection technology platforms in preparation for large scale system wide procurement and deployment; and,

- Commence initial production procurement of up to 63 Gen-3.0 autonomous detectors to be used to conduct operational test and evaluation.
- Initiate planning and long-lead deployment activities required to 1) conduct OT&E on production units, and 2) prepare for the deployment of a large procurement of Gen-3 detectors.

PPA: RAPIDLY DEPLOYABLE CHEMICAL DETECTION SYSTEM

	Perm Pos	FTE	Amount (\$ 000)
2008 Actual	---	---	2,587
2009 Enacted	---	---	2,600
2010 Adjustments-to-Base	---	---	0
2010 Current Services	---	---	2,600
2010 Program Change	---	---	0
2010 Request	---	---	2,600
Total Change 2009-2010	---	---	0

The RDCDS program requests FY 2010 funding of \$2.6 million to operate and sustain the current operations. This funding will facilitate the development of proposed chemical detection architecture & upgrades to the current operational capability of existing systems.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Rapidly Deployable Chemical Detection System (RDCDS) is an essential non-military asset available for detection of potential chemical release against our citizens. OHA requests these resources for RDCDS so the program can maintain operational capability while enhancing the network of its ground-based chemical detectors, which support National Special Security Events (NSSEs) and DHS Special Event Assessment Rating (SEAR) Level I and II Events. DHS capabilities are currently limited to covering a single event at a time due to the limitation of one airborne platform and twelve ground-based chemical detectors.

This program has developed architecture and planning protocols to support NSSEs and DHS Special Event Assessment Rating Level I and II Events such as large assemblies in sports arenas or at outdoor celebrations. Key elements of the RDCDS are detection analysis, communications, meteorology, plume mapping, and hazard prediction. RDCDS can identify specific chemical compounds and swiftly image the impact of a downwind chemical hazard. The detection element consist of a network of chemical, ground-based point detectors (CGPD) and a chemical airborne surveillance platform for 24/7 capability. RDCDS will support two National Security Special Events in 2009 and two DHS SEAR Level 1 Events.

The successful deployment and operations of RDCDS to date serve as a focal point for creating a larger chemical defense architecture that supports the efforts established by HSPD-22: Domestic Chemical Defense.

Significant accomplishments in FY 2008 include:

- Validated intelligence information on chemical compounds believed to be of interest to terrorists. RDCDS then conducted primary field experiments based on findings;
- Enhanced detection capability through procurement and deployment of an additional four chemical ground-based detectors to bring the existing set from 8 to 12;
- Collaborated with the EPA to provide aerial surveillance and support during natural or manmade disasters;
- Participated in four SEAR events: Philadelphia's Fourth of July Celebration, the National Governors' Association Meeting in Philadelphia, the 2008 Rose Bowl, and 2008 Super Bowl; and,
- Participated in one NSSE event: the 2008 Democratic National Convention.

FY2009 planned accomplishments include:

- Continue to validate intelligence information on chemical compounds believed to be of interest to terrorists and conduct primary field experiments based on findings;
- Conduct a market survey and evaluate chlorine gas detection equipment. As seen in Iraq, chlorine gas is a potential WMD and demonstrated terrorist interest;
- Continue collaborative efforts with the EPA to provide aerial surveillance and support during natural or manmade disasters;
- Upgrade surveillance capabilities for National Security Special Events (NSSE) and DHS SEAR Level I and II Events;
- Provide DHS SEAR support of the 2009 Rose Bowl and 2009 Super Bowl; and,
- Provide coverage for the 2009 Presidential Inauguration.

In FY 2010, RDCDS planned accomplishments include:

- Further validate intelligence information on chemical compounds believed to be of interest to terrorists and conduct primary field experiments based on findings;
- Commercialize ground-based chemical detectors;
- Procure, install, and validate equipment for aerial surveillance and detection of chlorine gas;
- Conduct field testing to evaluate the effectiveness and efficiency of the RDCDS system;
- Further enhance surveillance systems to support NSSE and DHS SEAR Level I and II Events;
- Further collaborate efforts with the EPA to provide aerial surveillance and support during natural or manmade disasters; and,
- Provide DHS SEAR support of the 2010 Rose Bowl and 2010 Super Bowl.

PPA: NATIONAL BIOSURVEILLANCE INTEGRATION CENTER

	Perm Pos	FTE	Amount (\$ 000)
2008 Actual	---	---	9,981
2009 Enacted	---	---	8,000
2010 Adjustments-to-Base	---	---	0
2010 Current Services	---	---	8,000
2010 Program Change	---	---	0
2010 Request	---	---	8,000
Total Change 2009-2010	---	---	0

The National Biosurveillance Integration Center requests \$8.0 million in FY10, which will fund NBIC technical support services, NBIS IT operations and improvements, biosurveillance private sector data acquisitions and coordination efforts with Federal, State, local and tribal governments.

CURRENT SERVICES PROGRAM DESCRIPTION:

NBIC is fully operational and has the capability, infrastructure, and personnel in place to successfully work with, analyze and integrate biological surveillance data-streams as well as open source and classified data-streams. NBIC collects and analyzes information from Sensitive but Unclassified, Secret, Top Secret, and Top Secret Sensitive Compartmented Information. The first NBIC situational report was distributed to all eleven (11) Federal partners during the 2008 *Salmonella saintpaul* outbreak (an event involving data sharing between Customs and Border Protection and HHS/Food and Drug Administration).

The NBIC organization is comprised of full-time management employees. The supporting analytical staff, project management support staff and information systems management personnel are contractor positions. Sufficient contractor positions are required to meet the current and growing analytical, operational and information technology (IT) support staff needs.

A primary goal of NBIC is to reduce the impact of a major biological or disease event. Clear and definable metrics support the Center's efforts to provide accurate information on emergent biological events to leaders at all levels of government. Metrics used include:

- a) Growth in access and dissemination of shared biological situational awareness information across the health communities;
- b) Growth in access and dissemination of shared biological situational awareness to leaders at all levels of government and select private sector organizations;

- c) Reduction in process and delivery time of sensitive biological event data and decision support information to senior leaders;
- d) Timely reflection of current biological situational information on the BCOP; and,
- e) Trained and mission driven staff.

Significant accomplishments in FY 2008 include:

- Enhanced biosurveillance exchange with subject matter experts and data streams made possible through Memoranda of Understanding (MOUs) with Federal partners and participating Federal agencies who have not yet entered into a MOU;
- Provided a Homeland Security Information Network (HSIN) based on the Biological Common Operating Picture (BCOP) that provides interagency partners a complete picture of current events to support improved decision-making within the biosurveillance community;
- Began 24/7 biological surveillance monitoring, collection, and collaboration operations to provide interagency partners with effective and timely biological situational awareness;
- Effectively responded to biological events, enhanced by employing and refining NBIC sourced protocols and standard operating procedures (SOPs) with NMAs.
- Exchanged situational awareness in a timely manner through the dissemination of high interest NBIC Spot Reports, NBIC Daily General Disease Reports and NBIC Weekly Avian Influenza Reports to NMAs;
- Entered into an Interagency Agreement with HHS/CDC to support one NMA detailee to serve at NBIC to provide in-depth subject matter expertise and analytic perspectives and approaches to analyze and report on biological events;
- Disseminated post-event analysis capturing lessons learned from significant biological events, such as the 2008 *Salmonella* saintpaul outbreak, FMD and XDR-TB cases;
- Actively participated in responses and decision-making notifications for all BioWatch Actionable Results (BAR) events; and,
- Established an interagency governance process (Interagency Oversight Council (NIOC) and the Interagency Working Group (NIWG)).

FY 2009 planned accomplishments include:

- Encourage all Federal partner agencies to be actively engaged;
- Reach out to State, local, /Local Tribal, and Territorial partners /Territorial via existing DHS relationships, State and local Fusion Coordination Center representatives, and Protective Security Advisors (PSAs);
- Encourage NMAs to enter into Interagency Agreements to support detailees to serve at NBIC to provide in-depth subject matter expertise and analytic perspectives and approaches to analyze and report on biological events;
- Integrate and support State, local, Tribal, and Territorial biological situational awareness through the expansion of the IT System processing capability;
- Engage select private sector agencies and organizations in the public health, food and agriculture, transportation and logistics, and banking and finance;
- Initiate exchanges of information, techniques and analysis with select US Allies and international agencies; and,

- Expand use of DHS Centers of Excellence at the University of Minnesota (Food Defense) and Texas A & M (Visual Analytics) to build tools and decision support processes to improve NBICNBIS production.

FY 2010 planned accomplishments include:

- Significantly evolve and improve the visual analytic and decision support capabilities of the BCOP by providing access to in-depth scientific data, situational awareness, digital and analog depictions, and modeling and simulation results in a User Defined Operational Picture (UDOP). UDOP will provide a full, comprehensive electronic picture with assessments of current biological events and trends and their potential impacts on homeland security;
- Link the BCOP and the Biosurveillance Common Operating Network into an integrated IT architecture, supported by life-cycle management, and make it exportable to NMAs.
- Upgrade systems infrastructure to implement data-sharing services, provide access to additional data resources across the biological and surveillance communities, and offer proper protection of data for all NBIC partners;
- Encourage NMAs to enter into Interagency Agreements to support detailees to serve at NBIC to provide in-depth subject matter expertise and analytic perspectives and approaches to analyze and report on biological events; and,
- Initiate the National Biosurveillance Integration Conference to bring together the biological surveillance Community across all domains (human, animal, plant and environmental) with State, local, and tribal governments and select portions of key private sector elements.

PPA: PLANNING AND COORDINATION

	Perm Pos	FTE	Amount (\$ 000)
2008 Actual	---	---	4,548
2009 Enacted	---	---	5,775
2010 Adjustments-to-Base	---	---	0
2010 Current Services	---	---	5,775
2010 Program Change	---	---	-3,299
2010 Request	---	---	2,476
Total Change 2009-2010	---	---	-3,299

The Planning and Coordination PPA requests FY 2010 funding of \$2.4 million, which \$1.7 million will fund the Office of Medical Readiness (OMR) and \$.7 million of which will fund the Food, Agricultural and Veterinary Defense (FAV Defense) Division. The \$1.7 for the Office of Medical Readiness will fund the Medical First Responder Readiness Program as well as minimal work with incident management and policy and planning, and several Public Health Service Officers. The \$.7 Million request for the Food, Agricultural and Veterinary Defense (FAV Defense) Division will fund FAV Defense Subject Matter Expertise (SME) and development of an Agricultural Security Preparedness and Response Benchmarking Tool Kit.

CURRENT SERVICES PROGRAM DESCRIPTION:

Planning and Coordination works collaboratively with Federal interagency partners, state and local officials, academia, the non-profit sector and the private sector to protect human and animal health from natural or man-made events which includes protection of and reducing vulnerabilities in the Nation's food supply, agriculture, the environment and medical infrastructures; also including sustaining public health and private healthcare operations during significant events in accordance with HSPD-5: Management of Domestic Incidents. These efforts include:

- Providing direction on the development of policies and guidance for medical readiness and emergency management, including interagency alignment of health preparedness grants and identification of gaps in health resources;
- Providing direction and subject matter expertise to the Federal interagency planning process to ensure health and medical impacts resulting from catastrophic incidents, both man-made and naturally occurring, are fully integrated;
- Directing the development of the National Biodefense Architecture (NBA);
- Developing and promoting regionalization within states and between states to ensure community preparedness
- Serving as the DHS point of contact for the Emergency Medical Services community.

The Office of Medical Readiness leads the Department's interagency effort on health and medical issues. OMR develops policies and programs to enhance medical preparedness and response aspects of all-hazards planning, exercises, and training; oversees weapons of mass destruction incident management support; promotes the integration of State and local medical response capabilities; aligns DHS emergency preparedness grants with medical preparedness; and leads the DHS role in addressing medical first responder requirements to prepare for and respond to catastrophic incidents, while serving as the principal DHS representative for the medical first responder community. The three divisions within OMR are:

1. The **Plans and Policy Division** supports medical and public health planning for the National Planning Scenarios in coordination with the Office of Operations Coordination, providing subject matter expertise on health issues to inform the Integrated Planning System through Federal plans development with the Incident Management Planning Team (IMPT). The division assures that health impacts are fully integrated into all Federal plans, and interfaces with State, local, and tribal planning entities to ensure planning consistency. In its role in planning and policy support, the division provides ongoing and 24/7 on-call crisis action planning support to the IMPT to ensure health related aspects of crisis action planning are accomplished. Personnel within this Division also represent the Office and Department on interagency policy councils including councils addressing biological scenarios.
2. The **Incident Coordination - Operations Division** is the primary source for situational awareness for OHA and during incidents of national significance. The division provides incident management and guidance, coordinating the Department's efforts in responding to health-related issues during disasters, mass casualty incidents, and national special security events. The Concept of Operations and Standard Operating Procedures are designed to create a fully functional situational awareness unit to assure that the Assistant Secretary/Chief Medical Officer has constant visibility to situations and incidents which have the potential to impact the health and welfare of the Nation. The division provides health experts at the National Operations Center (NOC) and the FEMA National Response Coordination Center (NRCC), to inform DHS' leadership on all health related issues arising from current operations. The division also provides medical and public health expertise to various exercise and training programs, including departmental and national-level events. Also, personnel from this Division provide support to the FEMA Incident Management Assistance Teams (IMAT) by deploying OHA staff with the teams to provide on the ground situational awareness of medical conditions before and during incidents and to provide any necessary medical care to team members.
3. The **Health Security Coordination Division** integrates OHA's efforts relating to State and local emergency management coordination with health and medical resources. The division is comprised of three primary offices: Emergency Management and Medical Response Integration, Mitigation and Capability Enhancement, and Medical First Responder Coordination.
 - a. *Emergency Management and Medical Response Integration* (EMMRI) facilitates integration of emergency management and medical response capabilities at the regional, State, and local levels as well as the private sector to leverage resources. EMMRI provides subject matter expertise to other DHS programs that foster collaborative regional engagement and community resiliency.

- b. *Mitigation and Capabilities Enhancement (MACE)* leads interagency alignment of health preparedness grants and identifies and addresses gaps in resources. MACE works in coordination with FEMA's Grants Program Division on ensuring health and medical issues are appropriately addressed and incorporated into DHS Grants programs. MACE also works in coordination with DHS components to identify, develop, and refine DHS-relevant public health and medical standards and training programs to enhance preparedness and response capabilities. MACE supports FEMA's efforts to evolve the health and medical target capabilities through the development of clearly articulated performance metrics that are both risk-informed and based on real-world preparedness requirements.
- c. *Medical First Responder Coordination (MFRC)* serves as the principal DHS representative to the external medical first responder and emergency medical services (EMS) communities, and acts as DHS' representative to the Federal Interagency Committee on EMS (FICEMS). Also, MFRC staff provides support to the FEMA United States Fire Administration on medical first responder issues. MFRC leads the Department's role in improving medical first responder readiness for catastrophic incidents.

Since the creation of OHA in April, 2007, Office of Medical Readiness' primary accomplishments have included:

- Implemented the Medical Officer system to provide 24/7 on-call coverage to respond to incidents involving public health and medical security
- In collaboration with the Department of Health and Human Services, developed and disseminated the Pandemic Influenza Vaccination Allocation and Targeting Guidance, which assists state, local, and tribal communities in preparing for the allocation of vaccines to reduce a pandemic's impact
- In collaboration with the Federal Interagency, developed the National Strategy for border management during an Influenza Pandemic
- Stockpiled medical countermeasures and protective equipment for DHS employees in the event of a pandemic outbreak
- Provided support staff to the Federal Emergency Management Agency (FEMA) Incident Management Advance Team during the 2008 hurricane season
- Partnered with the Science and Technology (S&T) Directorate on integrated community-based capabilities to enhance health-related resiliency of communities to better withstand disasters
- Collaborated with the DHS Office of Intelligence and Analysis to develop a Health Security Intelligence Enterprise. This enterprise seeks to integrate public health and healthcare communities into the homeland security and intelligence information sharing process (State Fusion Centers).
- Provided the Department with medical expertise that addressed the concerns related to health services for immigration detainees
- Developed a National Training Resource Clearinghouse, a web-based catalog of emergency preparedness training programs that is now being used to build an IT platform that will include not only training programs, but a catalogue of Federal preparedness grants and medical standards
- Provided medical expertise to the planning for the Democratic and Republican National Conventions, the G-20 Summit, and other National Special Security Events.

Significant accomplishments in FY 2008 include:

- Development of the CONOPS for the watch desk and the medical officer program;
- Drafted Strategic Guidance Statement for Aerosol Anthrax, and completed of medical content for the Draft Federal Strategic Plan for Aerosol Anthrax, in collaboration with DHS Office of Operations Coordination and the Federal interagency;
- Completed EMS Assessment tool (DHS and DOT led interagency activity);
- OHA/OMR participation in all national-level DHS exercises, including TOPOFF 4;
- Completed and disseminated of Pandemic Influenza Vaccination Allocation and Targeting Guidance (DHS and HHS led interagency activity);
- Completed a web-based National Training Resource Clearinghouse;
- Awarded contracts to begin concept development of NBA;
- Engaged the Institute of Medicine to bring together stakeholders and experts to develop multi-disciplinary response and recovery systems; and partner with the Science and Technology Directorate on integrated, community-based capabilities to enhance health-related resiliency for communities to better withstand disasters;
- Developed and Conducted Anthrax Table Top Exercise in collaboration with the City of New York
- Established a Medical Officer on call; and,
- Implemented Medical Officer system to provide 24/7 on-call coverage to respond to incidents involving health and consequences.

FY 2009 planned accomplishments include:

- Complete health subject matter content for Strategic Guidance Statements related to biological events;
- Support the crisis action planning activations by DHS Operations Coordination that have a health related impact yearly;
- Complete an EMS Assessment using new EMS Assessment tool;
- Complete the OHA incident communications plan, OHA incident deployment plan, interagency grants catalogue, and revised health and medical target capabilities;
- Complete CONOPS for Medical Intelligence Program in support of Health Security presence in State Fusion Centers;
- Draft Integrated Community Response Template of the Biodefense Demonstration Project; and,
- Draft Resource Infusion Model of the Biodefense Demonstration Project.

FY 2010 planned accomplishments include:

- Work on health security operations for OHA and DHS incident management in accordance with HSPD-5;
- Continue to provide health subject matter content for Federal strategic plans related to biological events;
- Support the interagency Incident Management Planning Team and the crisis action planning activations by DHS Operations Coordination providing health and medical subject matter expertise;

- Start to implement the Medical Intelligence Program in support of Health Security presence in State Fusion Centers; and,
- Work and support the interagency process for development of policies and guidance related to medical readiness for WMD and natural disasters.
- Initiate a plan to provide guidance and technical assistance to states and local communities on medical and health issues related to medical readiness and response and to provide reachback technical assistance for Occupational Health for intra-DHS first responder forces.

The **Food, Agricultural and Veterinary Defense Division** (FAV Defense), working with all levels of government and the private sector, leads the coordination of the Department's programs to ensure the security of our Nation's food, agriculture, human and animal health in the face of all hazards. FAV Defense programs are based on a Secretarial Delegation of Authority and as assigned through HSPD-9: Defense of U.S. Agriculture and Food. The Chief Medical Officer (CMO) serves as principal medical advisor for all food, agricultural, veterinary and related public health program responsibilities of DHS and is responsible for managing the 18 distinct activities identified within HSPD-9.

FAV Defense focuses on providing technical support to DHS leadership and components to effectively coordinate across the government for a catastrophic food or agricultural incident under the requirements of Homeland Security Presidential Directive 5. The Food and Drug Administration (FDA) and United States Department of Agriculture (USDA) maintain primary technical lead for these incidents as specified within the Food and Agricultural Incident Supplemental Annex to the National Response Framework.

The FAVD is developing a Defense of Food and Agriculture Dashboard and Collaboration Portal on the Office of Management and Budget (OMB) MAX Website. The Dashboard is designed to provide a transparent picture of the implementation of Food, Agriculture and Veterinary Defense initiatives across the U.S. Government at the department and agency level. The development has been supported by an interagency working group to ensure quality metrics and standards are selected. The Dashboard has greater application to the entire national biodefense architecture to include chemical, biological, and public health executive initiatives. The Collaborative Portal is being developed to overcome an inherent lack of transparency and communication between intra/inter agency components across multiple government activities. The Portal provides an effective methodology to resolve and improve efficiency between intra-DHS components working Food, Agriculture and Veterinary Defense issues and is being expanded to assist the communication between DHS, USDA, FDA, EPA, etc.

Food and Agriculture is a Critical Infrastructure to this Nation as evidenced by:

1. Food and agriculture is a \$1.3 trillion Critical Infrastructure representing one-fifth of the Nation's economic activity.
2. It is estimated that a catastrophic event could result in significant loss of life and have long term economic consequences (the *Salmonella* saintpaul event in 2008 cost producers over \$300 million).
3. A catastrophic food and/or agricultural event could result in an increase in vulnerability for the country if food and/or agricultural production moved outside of the CONUS (subsequent to the event).

4. The impact of a food or agricultural catastrophic event on National Security, as demonstrated by exercises such as “Silent Prairie,” could have significant impact on military strength and the ability of the military to operate in infected zones. Significant multi-state food events with high mortality would compromise the government at all levels.
5. History demonstrates that a compromise of the food supply has led to the collapse of governments and/or loss of confidence in political officials secondary to the loss of the public’s trust in government.

Significant accomplishments in FY 2008 include:

- Developed the content of Strategic Guidance Statements (for Federal Bio Planning Against Biological Attacks) for catastrophic Foreign Animal Disease (Foot and Mouth Disease) and Food Contamination Scenarios;
- Initiated an HSPD-9 “Dashboard” (Defense of Food and Agriculture “Dashboard”) that identifies all interagency efforts to protect the Nation’s food and agriculture sectors. This allows better coordination of efforts, and identifies the metrics and deliverables to meet this challenge. The Dashboard is designed to provide a transparent picture of the implementation of Food, Agriculture and Veterinary Defense initiatives across the U.S. Government at the department and agency level. The development has been supported by an interagency working group to ensure quality metrics and standards are selected. The Dashboard has greater application to the entire national biodefense architecture to include chemical, biological, and public health executive initiatives;
- Supported response and analysis of events: Melamine contamination in dried milk products, the *Salmonella* saintpaul outbreak, and the *Salmonella* Typhimurium outbreak;
- Initiated a DHS Collaboration Tool, a portal that seeks to overcome an inherent lack of transparency and communication between intra/inter agency components across multiple government activities. The Portal provides an effective methodology to improve efficiency between intra-DHS components working Food, Agriculture and Veterinary Defense issues and is being expanded to assist the communication between DHS, USDA, FDA, EPA, and others; and
- Identified DHS Food, Agricultural and Veterinary program Intelligence Requirements to inform planning and programs.

FY 2009 planned accomplishments include:

- Complete the development of the Strategic Plan (for Federal Bio Planning Against Biological Attacks) for catastrophic Foreign Animal Disease (Foot and Mouth Disease) and Food Contamination Scenarios;
- Participate in the development of CONOPS, OPS Plan and Tactical Plan (for Federal Bio Planning Against Biological Attacks) for Foreign Animal Disease (Foot and Mouth Disease) and Food Contamination Scenarios;
- Develop a Preparedness and Response Toolkit which will allow State, local, and tribal organizations to measure their preparedness and response capabilities against established food and agricultural catastrophic scenarios, develop exercises to test their response, and facilitate the implementation of lessons learned from exercises and/or events as a means to improve capability. Additionally, the self evaluations will be used to develop national standards that are based in real world experiences of the State, local, and tribal organizations;

- Continue the development of the Defense of Food and Agriculture “Dashboard;”
- Continue the development of the DHS Collaboration Tool;
- Increase coordination with the intelligence community to assure that the threat posture remains current and that mitigating strategies are optimized;
- Continue to integrate and support a comprehensive program and gap analysis specific to FAV Defense arenas across internal, external and Federal, State, local, and private organizations;
- Develop a model State Response Plan for a catastrophic food event;
- Further coordinate with Federal partners and specific international partners to build a collaborative food defense network, building upon the FY 2008 G8 Food Defense Exercise;
- Improve FAV Defense efforts in response to catastrophic events working with Federal, State, local, and tribal Governments and in private industry.

In FY 2010, Food, Agriculture and Veterinary Defense will continue its efforts in coordination with all level of government and the private sector which includes:

- Completion of the development of the Defense of Food and Agriculture “Dashboard” and Collaboration Tool on the Office of Management and Budget (OMB) MAX Website;
- Complete the Preparedness and Response Benchmarking Tool Kit to enhance preparedness at the State and local level;
- Continue to integrate and support a comprehensive program and perform gap analysis specific to FAV Defense arenas across internal, external and Federal, State, local, and private organizations.

Department of Homeland Security
Office of Health Affairs
Program Performance Justification
(Dollars in thousands)

PPA: SALARIES AND EXPENSES

	Perm Pos	FTE	Amount (\$ 000)
2008 Actual	70	35	23,336
2009 Enacted	84	80	29,210
2010 Adjustments-to-Base		4	501
2010 Current Services	84	84	29,711
2010 Program Change	---	---	700
2010 Request	84	84	30,411
Total Change 2009-2010	---	4	1,201

Salaries and Expenses (S&E) requests FY 2010 funding of \$30.4 million, which will fund 84 FTE for the Office of the Assistant Secretary which includes the Office of International and Global Health Security; the Office of Component Services; and houses the funding for all Federal positions within OHA's programs. Additionally, the Working Capital Fund is included in the funding request.

CURRENT SERVICES PROGRAM DESCRIPTION:

Management and Administration:

In FY 2007, OHA was established with funding transferred from the Office of the Chief Medical Officer, and the National Biosurveillance Integration Center (NBIC) from the National Program Preparedness Directorate (NPPD). In addition, OHA received functional responsibility for the BioWatch and RDCDS accounts from the Science and Technology Directorate (S&T). At inception, OHA was minimally staffed and had a Human Capital plan in place for hiring up to its FTP ceiling. As a new component, OHA prioritized the hiring of its core program mission positions in its initial months of operation.

During FY 2008, OHA received an additional 54 FTP/27 FTE. With the full annualization of these 54 FTP in FY 2009, OHA will be able to address mission-related responsibilities. In FY 2008, OHA relied on service agreements with other components of DHS for the provision of financial services, acquisitions and contracting, and human capital services. Contractor personnel predominately staffed the budget, financial and human capital functions as OHA prepared to meet its FTE ceiling. Some of the need for additional administrative personnel was addressed in FY 2009.

OHA requested eight (8) FTP/ four (4) FTE in FY 2009 for personnel to conduct administrative and business functions within OHA. The annualization of the 54 FTP requested for FY 2008 and the additional personnel requested in FY 2009 bring OHA's personnel ceiling to 84 FTP. The requested levels will allow OHA to:

- Strengthen OHA financial reporting activities and internal controls; and,
- Enhance Program Management expertise to assist OHA technical experts with metrics, strategic planning and program management control.

Today, OHA is led by the Assistant Secretary for Health Affairs, who also holds the title of Chief Medical Officer for DHS, and serves as the principal health and medical advisor to the Secretary and the Administrator of FEMA. The Deputy Chief Medical Officer and Principal Deputy Assistant Secretary for Health Affairs is a career member of the Senior Executive Service (SES) and serves as the Chief Operating Officer. OHA includes all personnel in the S&E PPA and is divided into three offices:

1. Component Services
2. WMD & Biodefense
3. Medical Readiness

Office of Component Services

- Occupational Medical Services: The Occupational Medical Services Branch will augment its first staff members to assist the Medical Director, in the development of strategy, policy, requirements and metrics for the medical aspects of a department-wide occupational health and safety program. This will be done in partnership with the Office of Safety and Environmental Programs within the Office of the Under Secretary for Management.
- As the principal medical authority for DHS, OHA's Occupational Medical Services provides health and medical consultation resources and assistance at a leadership level on a 24/7 basis. OHA's consultation services will ensure regulatory compliance and consistency with industry best practices in support of various components' missions with regard to medical, health and safety considerations.
- This branch will assist the Department's Office of the Chief Human Capital Officer (OCHCO) personnel with:
 - Assessing position descriptions;
 - Physical evaluation programs (pre-placement, fitness-for-duty, return-to-work, etc.);
 - Performing post-incident analyses (for example, adding medical analysis to personnel aircraft and motor vehicle mishap investigations); and
 - Working with programs under the Federal Employee Compensation Act to improve return-to-work programs and to facilitate evaluation and treatment activities within Department of Labor guidelines and limitations, thus helping to control growth of workers compensation and continuation-of-pay costs.
- Workforce Health Protection Activities: DHS' ability to protect the Nation in the event of a disaster, natural or terrorist, depends on the safety and health of its workforce. Component Services, in coordination with S&T and OSRP, will work to define the requirements for job appropriate personal protective equipment, vaccinations, and post exposure prophylaxis. Future work will include a gap analysis of components' ability to protect its workforce and procure appropriate equipment. The programs managed by this branch include items that can

be developed and delivered to the employees of the Department, such as: travel medicine, deployment health guidelines and policies; health protection guidelines in dangerous work environments; facilitated health screening programs; and mechanisms to support a physical fitness culture to help ensure that workforces are physically able to support the Department's missions while minimizing health threats and work-related disability.

- Operational Medicine Support: DHS has thousands of medical personnel deployed throughout the country. They provide care for wide-ranging and often remotely deployed personnel, including border agents in the Southwest desert, to DHS aviation personnel engaged in counter-narcotics and counter-smuggling operations through the hemisphere, to rescue swimmers engaged in USCG search and rescue. They are also directly engaged in the humanitarian rescue of migrants who have fallen victim to varying dangerous conditions in an attempt to enter the United States. Under the direction and guidance of the OHA Component Services Emergency Medical Services Program, OHA staff is creating a credentialing and medical oversight framework. Current programs include standardization of Austere Medicine and Tactical Protocols and the purchase of a learning management system and an electronic medical record system. Future goals include standardization and cross training of medical response, guaranteeing integration of the DHS medical assets.

Office of International Affairs and Global Health Security

- IA-GHS enhances OHA's executive decision-support to DHS leadership by coordinating international engagement and ensuring that health related global lessons learned and best practices are applied domestically. These best practices are collected and applied through the *Lessons without Borders Initiative (Lw/oB)*. This initiative provides a framework for information sharing between national and international governmental, non-governmental, academic and private sector organizations to improve knowledge and decision-making on global health security issues. This strengthens the Department's ability to meet its mandate for the emergency management of natural or manmade threats, including Pandemic Influenza, chemical, biological, radiological or nuclear incidents. Additionally, IA-GHS coordinates all international OHA-related activities with the DHS/PLCY Office of the Assistant Secretary for International Affairs. This includes an all-hazard, multi-sector approach to countering trans-border health threats and natural or man-made catastrophic disasters.

Significant accomplishments under this PPA in FY 2008 include:

- Developed a requirements and implementation plan for a comprehensive workers injury and disability management system in conjunction with OCHCO;
- Provided scientific and medical guidance and led the direct interaction with the Centers for Disease Control and Prevention in supporting the Federal Emergency Management Agency on issues related to formaldehyde and mold in emergency temporary housing;
- Developed specialty protocols for Tactical Emergency Medical Personnel, that are currently being vetted throughout the Department and with national experts; and,
- Created an EMS Training Board with input from all the operational components to work collaboratively on training and operational issues and policies.
- Further developed the Office of Health Affairs by transitioning programs from NPPD and S&T in FY 2007 into FY 2008; and,

- Established a full complement of services to the component under the Office of the Assistant Secretary, managed by the Chief of Staff and Director of Operations, that provides a full-range of administrative services to OHA personnel from its Administrative Office, Human Resources Office, Budget Office, Policy Office, External Affairs Office, Executive Secretariat and Legal Counsel.

FY 2009 planned accomplishments include:

- Establish the Virtual Medical Support System (VMMS);
- In cooperation with OSEP, develop a comprehensive set of Safety and Health Policies beginning with existing "best practices" program throughout government;
- Identify key management level health and safety metrics which can drive departmental implementation of occupational health principles. The goal is to shift occupational safety from only a compliance-oriented "cost-center" to ensure a healthier and safer workforce, thus improving productivity and decreasing lost-time costs. Key mechanisms which will be used to accomplish this include:
 - Integration of occupational medicine into the functions of the Department's Occupational Safety Committee to assist in integration and promulgation of occupational medical principles and policies; and,
 - Standardization of health and safety related forms across the Department regarding excess liabilities incurred by current lack of consistency across the various components of the Department.
- Develop workforce health protection and wellness related materials for use throughout the Department including:
 - Model wellness newsletters; and,
 - Policy-based health protection guidelines for situations such as disaster related deployment and international travel.
- Develop Austere Medicine Protocols
- Develop comprehensive requirements for a risk-management information system which will track injury, illness, and safety trends in order to inform management on mechanisms to reduce injuries, occupational illness, and other factors causing lost productivity in conjunction with the Office of Safety and Environmental Programs;
- Create a medical direction committee of federal operational medical directors;
- Create policies, protocols and medical supervisory mechanisms for the operational emergency medical services personnel of the Department; and,
- Develop policies on DHS-wide credentialing and component privileging, in advance of a proposed FY 2010 Working Capital Fund (WCF) activity for a credentialing system.
- Provide enhanced financial reporting and internal controls;
- Develop policy in the areas of budget, performance metrics, strategic planning and internal controls;
- Provide space and facilities management to meet the needs of OHA's personnel ceiling;
- Develop a Human Capital Management hiring strategy to meet OHA's personnel ceiling;
- Improve performance and reporting capabilities for OHA programs that will enhance OHA's ability to track the progress of DHS' medical programs and OHA's partnerships with Federal partners, State, local, and tribal governments; the private sector, and OHA stakeholders, and;
- Coordinate interoperability through EMS training and standards.

In FY 2010, Salaries and Expenses planned accomplishments include:

- Develop a cross training plan for delivery of emergency medical services that will guarantee interoperability throughout DHS components in response to events of significance or disasters.
- Continue development of a common set of standards, policies, and training opportunities for occupational medical aspects of occupational safety and health programs across the Department;
- Implement a risk management information capability throughout the Department. While the office of primary responsibility for the capability is the Office of Safety and Environmental Programs, personnel from OHA will play an integral role in ensuring the success of this program;
- Develop a credentialing program throughout DHS to ensure adequate credentialing of medical personnel in conjunction and partnership with the component agencies. This process will set minimum standards for working as a medical provider within the Department;
- Develop a Quality Assurance Program that will set standards and metrics for measuring quality of care, provide insight into training and certification needs, and reduce the liability risk of the Department; and,
- Work with the Working Capital Fund program to incorporate the credentialing service as a DHS-wide initiative;
- Continue to provide a full range of administrative services to the OHA personnel; and,
- Continue to provide space and facilities management to meet the needs of OHA's personnel.
- Enhance the range of administrative services provided to OHA personnel to strengthen the workforce and install additional internal controls to improve program management.

IV. Program Justification of Changes

Not Applicable

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Office of Health Affairs
Justification of Proposed Changes in Appropriation Name
Appropriation Language**

For the necessary expenses of the Office of Health Affairs, [\$157,191,000] **\$138,000,000**; of which [\$29,210,000] **\$30,411,000** is for salaries and expenses; and of which [\$127,981,000] **\$107,589,000** is for biosurveillance, BioWatch, chemical response, and related activities for the Department of Homeland Security, to remain available until September 30, [2010] **2011**: *Provided*, That not to exceed \$3,000 shall be for official reception and representation expenses.

Explanation of Changes:

OHA was created to effectively carry out the Congressionally mandated duties as authorized in Section 516 of the Homeland Security Act of 2002, as amended (6 U.S.C 321e).

BioWatch Mission Statement

The BioWatch Program achieves DHS' mission of detection against biological attacks by managing an early warning system that can rapidly detect trace amounts of pathogen-specific nucleic acid in the air whether intentionally released into or naturally present in the environment. This program deploys detection devices in over thirty of the country's major metropolitan areas. The BioWatch Program provides public health experts with a warning of a biological agent release before exposed citizens become clinically symptomatic. This "detect-to-treat" approach provides public health officials an opportunity to respond aggressively to eliminate or substantially mitigate the potentially catastrophic impact on the population of a biological agent release.

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change
Special Service Pay	242	368	376	7
The FY 2010 request includes an inflationary increase of \$7,000 (2%) for special service pay of IPAs, detailees, and PHS Officers.				
Travel	33	50	42	(8)
The FY 2010 request reflects a decrease of \$8,000 due to budgetary constraints, which will reduce program travel.				
Advisory and assistance services	29,383	34,358	5,600	(28,758)
The FY 2010 request reflects a decrease of \$28,757,996 in advisory and assistance services associated with procurement and deployment of autonomous detectors.				

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change
Other services	---	15,045	16,238	1,193

The FY 2010 request includes an increase of \$1,193,102 in other services and assistance services associated with procurement and deployment of autonomous detectors.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change
Purchases of goods & svs. from Gov't accounts	30,178	12,537	25,330	12,793

The FY 2010 request includes a increase of \$12,793,000 for purchases of good and services from government accounts, which will be used to fund government agencies, such as the national labs with which BioWatch partners, to develop autonomous detection technology.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change
Operation and maintenance of equipment	---	3,500	---	(3,500)

The FY 2010 request includes a \$3,500,000 decrease in the cost of operation and maintenance of equipment to account for the decommissioning of autonomous detectors in New York City.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change
Equipment	---	10,300	19,773	9,473

The FY 2010 request includes an increase of \$9,473,000 tied to the purchase of autonomous detectors.

National Biosurveillance Integration Center Mission Statement

The National Biosurveillance Integration Center (NBIC) provides early detection, characterization, and situational awareness of biological events of potential national significance by establishing a common operating picture (COP) to depict a global biosurveillance environment and decision-making tools. NBIC operates by acquiring, integrating, analyzing, and disseminating biosurveillance information from human, animal, plant and environmental data. NBIC has formal agreements with seven NBIC Member Agencies (NMAs) including the Department of Health and Human Services (HHS), Department of Agriculture (USDA), Department of Defense, State Department, Department of the Interior, and Department of Transportation (DOT). Beyond collaboration with the NMAs, NBIC collaborates with all 12 Federal Departments to share surveillance information. NBIC combines the surveillance data and reports with relevant intelligence, open-source information, meteorological data, and other observational data to perform integrative analysis of the relevant domains.

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change
Special Service Pay	677	711	725	14

The special service pay is expected to increase by \$14,000 to cover inflationary pay increases of 2% for NBIC Watchdesk operations as well as IPAs and detailees from other Federal agencies who support NBIC.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change
Travel	99	27	40	13

In FY 2010 OHA expects travel support for NBIC to increase by \$13,000.

Rapidly Deployable Chemical Detection System Mission Statement

The Rapidly Deployable Chemical Detection System (RDCDS) is the only non-military asset available in the country for the detection of a potential chemical release against our citizens. The program provides a necessary detection capability with an operational network of chemical detectors, which support National Special Security Events (NSSEs) and DHS Special Event Assessment Rating (SEAR) Level I and II Events. Currently, DHS has the capability to cover a single event due to the limitation of one airborne platform and twelve ground-based chemical detectors

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	FY 2009 - FY 2010 Change

Planning and Coordination Mission Statement

Planning and Coordination is responsible for leading and sustaining a comprehensive, integrated and multi-agency strategy that ensures the health security and welfare of the Nation before, during and after disasters. The various programs within Planning and Coordination:

- (1) lead and coordinate the various DHS food, agricultural and veterinary programs and providing technical insight to the Department's efforts to prepare and respond to a food or agricultural catastrophic event;
- (2) provide advice and guidance on health security issues to the Secretary of DHS and the Administrator of FEMA through the Assistant Secretary for Health Affairs/CMO;
- (3) lead health security operations for incident management in accordance with HSPD-5;
- (4) provide direction on the development of policies and guidance for medical readiness and emergency management;
- (5) provide direction and subject matter expertise to the Federal interagency planning process to ensure health impacts are fully integrated;
- (6) provide guidance and direction on Federal emergency preparedness grants requirements and on their alignment and synchronization across the Department; and
- (7) lead and direct the development of the National Biodefense Architecture.

BUDGET REQUEST AND SUPPORTING INFORMATION

OFFICE OF HEALTH AFFAIRS BIODEFENSE COUNTERMEASURES

I. Appropriation Overview

A. Mission Statement for Biodefense Countermeasures:

The Biodefense Countermeasures program procures medical countermeasures to strengthen the Nation's preparedness against chemical, biological, radiological, and nuclear (CBRN) attacks, including promoting the removal of barriers to development and production processes that the Government undergoes to pre-purchase critically needed vaccines or medications for biodefense. The Project Bioshield Act of 2004 authorized the 10-year program to encourage the development and production of new medical countermeasures for chemical, biological, radiological, and nuclear (CBRN) agents. Provisions of this Act were designed to provide incentive for private companies, which might otherwise be discouraged due to inherent risks in product development and lengthy timelines to licensure, to develop these countermeasures by guaranteeing a government market for successfully developed countermeasures. Biodefense Countermeasures is thus a procurement program, allowing the Federal Government to enter into contracts to acquire countermeasures while they are still in development. Successful countermeasures are delivered to the Strategic National Stockpile (SNS) at an agreed upon price and quantity, as well as at a development stage demonstrating sufficient safety and efficacy. The Biodefense Countermeasures program strengthens the Nation's preparedness against CBRN attacks through acquiring civilian medical countermeasures to CBRN agents for the SNS.

B. Budget Activities:

In FY09 the Biodefense Countermeasures funding supported coordinated efforts to remove barriers to development and production processes and enabled the government to pre-purchase critically needed vaccines or medication for biodefense once production of licensable products that will be safe and effective enough to place in the SNS were judged scientifically feasible. The Department of Health and Human Services (HHS) was the procuring authority.

The Biodefense Countermeasures procurement process requires actions by DHS, HHS, and the President, and relies on interagency working groups. Specifically, the DHS Office of Health Affairs (OHA) coordinates with HHS through interagency working groups to determine program requirements, priorities and acquisitions. DHS is instrumental in the very first stage of this process – identifying and prioritizing programs for the development and acquisition of medical countermeasures – by establishing a relative hierarchy of CBRN threat classes. Each of the threat classes and agents within a given threat class are distinct in their likelihood of use and in their potential medical and public health consequences. DHS' Directorate of Science & Technology (S&T), in conjunction with the Office of Health Affairs, has the lead in considering the best available intelligence, law-enforcement, scientific, and public-health information to identify and prioritize CBRN threats. DHS uses this as the basis for issuing Material Threat Determinations (MTDs) which identify agents presenting a material threat sufficient to affect national security (an MTD issued by the Secretary of DHS is required for procurement using Biodefense Countermeasures funds and authorities.) DHS then conducts a Population Threat Assessment (PTA) (formerly referred to as Material Threat Assessments (MTAs)) to estimate the size of the

population exposed to the agents identified in the MTDs and gauge the impact on the population and national infrastructure if that particular agent was released for a given plausible, high consequence scenario. Once the MTDs are issued and PTAs are completed for any given threat, the results are provided to HHS to inform subsequent medical and public health consequence assessments. These inputs are used to inform medical countermeasure requirements which are developed by interagency working groups as part of the Public Health Emergency Medical Countermeasures Enterprise (PHEMCE), a coordinated interagency effort which HHS created in July 2006 to take a more integrated, systematic end-to-end approach to the medical countermeasure mission – including research, development, acquisition, storage, maintenance, deployment, and guidance for utilization. Upon identification of countermeasures that meet the eligibility requirements to warrant use of the Special Reserve Fund (SRF), the Secretary of DHS and the Secretary of HHS jointly requested that OMB release funds to HHS from the SRF to acquire the countermeasures. Under section 319F-2(c) (7) (C) of the Public Health Service Act, as amended, HHS is ultimately responsible for managing the countermeasure procurement process including the negotiation of terms and entering into contracts for research, development, acquisition, procurement, storage and distribution of countermeasures. The PHEMCE process was the vehicle by which DHS provided input on the medical countermeasure continuum ranging from research and development to storage, maintenance, and deployment.

C. Budget Request Summary:

The Biodefense Countermeasures program was transferred to the OHA from FEMA under the Department's Second Stage Review (2SR) in 2006. Although all the funds for this account were provided in the 2004 Department of Homeland Security Appropriations Act, only a portion became available for obligation upon enactment. The act specified that no more than \$890 million could be obligated in FY04, and no more than \$3.4 billion could be obligated from FY04 through FY08. Any money not obligated within these defined periods would remain available through FY13. Thus, before rescissions were enacted, DHS had \$890 million available as budget authority for this account in FY04. In FY05, an additional \$2.5 billion would have become available. In FY 09, the remaining \$2.175 billion became available for use to purchase the countermeasures. However, in FY 09, Congress transferred \$412 million from the SRF to HHS for advanced development of countermeasures. Given the lower than expected obligation rate, the budget proposes to transfer the remaining balances in the SRF, estimated to be \$1.569 billion in FY 2010, to HHS to boost funding for advanced development of countermeasures and to support countermeasure procurement done by HHS. This action will eliminate the SRF for future procurements and transfer the responsibility to procure next-generation medical countermeasures to HHS.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Biodefense Countermeasures program, provided through advanced appropriations, supported the Government's efforts to secure medical countermeasures to strengthen the Nation's preparedness against CBRN attacks, including promoting the removal of barriers to development and production processes and pre-purchasing critically needed vaccines or medication for biodefense.

To date, ten contracts have been awarded through the Project BioShield program using the Strategic Reserve Fund (SRF). Delivery to the SNS has begun (or been completed) for three of the seven following products:

- Pediatric liquid formulation of potassium iodide (radionuclide blocking agent): \$5.7 million for 1.7 million one-ounce bottles; delivery to the SNS was completed in September 2005. In FY06, contract was modified to provide \$11.8 million for 3.1 million additional bottles; delivery to the SNS is on-going;
- Anthrax Vaccine Adsorbed (AVA): \$122.7 million for 5 million doses; delivery to the SNS has been completed. In FY06 contract modified to provide \$120 million for 5 million additional doses of AVA; delivery to the SNS is on-going. In FY 07, another contract was issued to supply 18.75 million doses of AVA for placement into the SNS \$448 million.
- Calcium and Zinc Diethylenetriaminepentaacetate (DTPA) (chelating agents that remove radioactive particulates from the body): \$21.9 million for 474,739 doses; delivery to the SNS was completed in April 2006.
- Contracts were issued in FY06 for two different anthrax therapeutics (\$309 million) and for botulinum antitoxins \$415 million.
- A contract was awarded in June 2007 for \$500 million to manufacture and deliver 20 million doses of a next generation modified vaccinia Ankara (MVA) smallpox vaccine.

In FY07 the Program completed delivery of second 5 million doses of AVA; completed delivery of second 2.3 million bottles of pediatric potassium iodide (KI) to SNS; began delivery of anthrax immune globulin to the SNS; delivered additional botulinum antitoxin to the SNS; and awarded a contract for modified vaccinia Ankara smallpox vaccine.

In FY08, the Program issued Requests For Proposals (RFPs) for anthrax recombinant Protective Antigen (rPA) vaccine and treatments for Acute Radiation Syndrome; began delivery of the modified vaccinia Ankara (MVA) smallpox vaccine to the SNS; and continued delivery of botulinum antitoxin and anthrax immune globulin to the SNS.

FY 2008 Accomplishments

Planned RFPs and acquisition contracts in FY 2009 that included:

- Anthrax recombinant Protective Antigen (rPA) vaccine; and
- Medical countermeasure(s) for Acute Radiation Syndrome.

FY 2009 initiatives coordinated with HHS

Mid-term (FY 2010-2013) planned acquisitions using the SRF include:

- Diagnostics;
- Broad spectrum antibiotic(s);
- Anthrax antitoxin(s);
- Medical countermeasure(s) for Filoviruses;
- Smallpox antiviral(s);
- Medical countermeasure(s) for Acute Radiation Syndrome;
- Radiological biodosimetry/bioassay(s); and
- Radionuclide-specific agent(s).

In addition, Project BioShield material threat determinations (MTDs) and population (material) threat assessments (PTAs) for all traditional biological agents posing a threat sufficient to affect national security were completed in FY 2007. In FY 2009, DHS will continue to evaluate biological agents, as well as chemical, and issue MTDs and conduct PTAs as appropriate. These determinations and assessments are required to inform medical countermeasure requirement setting and support the use of the Biodefense Countermeasures account for the acquisition and stockpiling of medical countermeasures against the designated agents.

IV. Program Justification of Changes

Program justification changes are not requested for Biodefense Countermeasures.

TABLE OF CONTENTS

1. STRATEGIC CONTEXT FOR FY 2010 BUDGET

A. Mission and Description of Component	OHA-2
B. Major Activities and Key Strategic Goals	OHA-3
C. Resources Requested and Performance Impact	OHA-6
D. Performance Highlights, Resources, and Alignment to Strategic Goals	OHA-9
E. Digest Tables by FYHSP Programs	OHA-11

A. Mission and Description of Component

The Office of Health Affairs (OHA) serves as the Department of Homeland Security's (DHS) principal agent for all medical and health matters. Working throughout all levels of government and the private sector, OHA leads the Department's role in developing and supporting a scientifically rigorous, intelligence-based biodefense and health preparedness architecture to ensure the security of our Nation in the face of all hazards.

OHA has four strategic goals that coincide with the strategic goals of the Department:

- 1) Serve as the principal medical authority for the Department of Homeland Security (including all Components);
- 2) Lead the Department's biodefense activities, to include policy, strategy, requirements, operational programs and metrics;
- 3) Lead the Department's public health and medical preparedness and planning activities; and,
- 4) Ensure that DHS employees are supported by an effective Health and Safety Program.

OHA provides critical medical and public health information to DHS components and programs as well as to other Federal agencies. OHA provides risk and threat assessments to guide preparedness activities, planning, and incident management. OHA also provides occupational and operational medicine, health, and safety guidance for the DHS offices and components. OHA is also responsible for the Department meeting the requirements in HSPD-9: Defense of the United States Agriculture and Food, by ensuring that medical, public health and safety variables are fully considered and accurately addressed.

B. Major Activities and Key Strategic Goals

BioWatch - The BioWatch program provides early detection capabilities to detect pathogen-specific nucleic acid in the air. To reduce detection time (currently estimated at 10-34 hours after collection), FY09 BioWatch funds will support the development, procurement, and testing and evaluation of a next-generation autonomous biodetection system (called Generation-3). Generation-3 will reduce time to detect to between 4-6 hours, increase population coverage, and provide greater cost effectiveness. In FY10, OHA will complete the prototype unit field testing and data analysis for candidate autonomous detection technology platforms in preparation for system procurement, and will complete operational testing on production units in FY 2011. 2012. Testing and evaluation efforts will ensure that a viable next-generation autonomous detection capability is available. This effort supports the Department in strengthening our Nation's preparedness and emergency response capabilities.

Rapidly Deployable Chemical Detection System – The Rapidly Deployable Chemical Detection System (RDCDS) is part of a larger effort to provide leadership and direction to a comprehensive chemical defense program. In FY10, RDCDS will incorporate State and local chemical vulnerability assessments and emergency response planning documents into its deployment operations. OHA will continue devising a chemical defense architecture to provide the necessary overarching guidance for efforts to prevent and respond to a catastrophic chemical event. The long-term goal of RDCDS is to ensure chemical detection systems are in place throughout the Nation to protect the population from chemical events. Through its efforts to coordinate with State and local partners, RDCDS will support the Department in protecting the Nation from dangerous goods and strengthening our Nation's preparedness and emergency response capabilities.

National Biosurveillance Integration Center – The National Biosurveillance Integration Center (NBIC) provides a homeland security-relevant biosurveillance common operating picture (BCOP) to senior leaders and partner agencies regarding natural disease outbreaks, accidental or intentional uses of biological agents, and emergent biohazards. NBIC supports planning, preparedness, and response efforts at the State and local level. Efforts in FY10 will focus on engaging State and local partners to participate in NBIC. OHA will also work with international partners to obtain a global biological surveillance picture. Incorporating critical partners into NBIC will further protect the Nation from dangerous people and goods, and strengthen our Nation's preparedness and emergency response capabilities.

Office of Medical Readiness – The Office of Medical Readiness works collaboratively with Federal interagency partners, State and local officials, academia, the non-profit sector and the private sector to protect human and animal health from natural or man-made events which includes protection of and reduction of vulnerabilities in the Nation's food supply, agriculture, the environment and medical infrastructures; including sustaining public health and private healthcare operations during significant events. Medical Readiness programs support the DHS goals to strengthen our Nation's preparedness and emergency response capabilities, and strengthen and unify DHS operations and management.

Plans and Policy supports medical and public health planning for the National Planning Scenarios in coordination with the Office of Operations Coordination, providing subject matter expertise on health issues to inform the Integrated Planning System through Federal plans development with the Incident Management Planning Team (IMPT). The program assures that health impacts are fully integrated into all Federal plans, and interfaces with State, local, and tribal planning entities to ensure planning consistency.

Incident Coordination - Operations is the primary source for situational awareness for OHA and during incidents of national significance. The program provides incident management and guidance, coordinating the Department's efforts in responding to health-related issues during disasters, mass casualty incidents, and national special security events.

National Biodefense Architecture (NBA) works across local, federal, state, local communities, tribal and territorial governments and with the private sector, to lead the Department in the establishment of a scientifically rigorous, intelligence-based, medical biodefense architecture that ensures the health and medical security of our Nation. The NBA is specified directly within DHS Strategic Goal #2, Protect our Nation from Dangerous Goods, Objective 2.2, Prevent, Detect and Protect Against Biological Attacks. Objective 2.2 states "We will lead efforts to establish an integrated National Bio-defense Architecture."

Regional Programs facilitates integration of emergency management and medical response capabilities at the regional, State, and local levels as well as the private sector to leverage resources. This program provides subject matter expertise to other DHS programs that foster collaborative regional engagement and community resiliency.

Mitigation and Capabilities Enhancement (MACE) leads interagency alignment of health preparedness grants and identifies and addresses gaps in resources. MACE works in coordination with FEMA's Grants Program Division on ensuring health and medical issues are appropriately addressed and incorporated into DHS grant programs.

Medical First Responder Coordination (MFRC) supports the Department's goals as the DHS representative to State, tribal, territorial and local medical first responder and emergency medical services (EMS) and as the DHS representative to the Federal Interagency Committee on EMS (FICEMS). The goal of the MFRC program is to build upon accomplishments by providing authoritative and evidence-based guidance in disaster preparedness to the first responder and EMS communities.

Health Security Intelligence Enterprise integrates Public Health and Healthcare Community (PH/HC) interests into national standards, protocols, and mechanisms for homeland security information and intelligence exchange. These goals will be achieved by promoting PH/HC representation within the national network of State and Local Fusion Centers, and by facilitating the development of a network of existing and emerging PH/HC information and intelligence analysis nodes and affiliate stakeholders. These efforts will foster communication and collaboration among PH/HC organizations and between the PH/HC, the Federal homeland security and intelligence communities, and State, local, and Tribal law enforcement and public safety stakeholders.

Food, Agricultural and Veterinary Defense - The Food, Agricultural and Veterinary Defense Division (FAV Defense), working with all levels of government and the private sector, leads the coordination of the Department's programs to ensure the security of our Nation's food, agriculture, and human and animal health in the face of all hazards. FAV Defense began development of a Defense of Food and Agriculture Dashboard (the Dashboard) and Collaboration Portal on the Office of Management and Budget (OMB) MAX Website in FY09. In FY10, the Dashboard will continue to incorporate Federal partners' work regarding HSPD 9: Defense of U.S. Agriculture and Food. FAV Defense's efforts to promote collaboration and coordination among the interagency support the Department in protecting the Nation from dangerous people and goods and strengthening the Nation's preparedness and emergency response capabilities.

Office of Component Services – Component Services programs support the DHS goal to strengthen and unify DHS operations and management.

Occupational Medical Services assists the Department in the development of strategy, policy, requirements and metrics for the medical aspects of a department-wide occupational health and safety program. The goal of the program is to provide health and medical consultation resources and assistance at a leadership level on a 24/7 basis. OHA's consultation services will ensure regulatory compliance and consistency with industry best practices in support of various components' missions with regard to medical, health and safety considerations.

Workforce Health Protection - DHS' ability to protect the Nation in the event of a disaster, natural or terrorist, depends on the safety and health of its workforce. This program develops and provides to DHS employees deployment health guidelines and policies, health protection guidelines in dangerous work environments, facilitated health screening programs, and mechanisms to support a physical fitness culture to help ensure that workforces are physically able to support the Department's missions while minimizing health threats and work-related disability.

Operational Medicine Support - DHS has thousands of medical personnel deployed throughout the country. They provide care for wide-ranging and often remotely deployed personnel. They are also directly engaged in the humanitarian rescue of migrants who have fallen victim to varying dangerous conditions in an attempt to enter the United States. OHA is creating a credentialing and medical oversight framework. Current programs include standardization of Austere Medicine and Tactical Protocols and the purchase of a learning management system and an electronic medical record system. Future goals include standardization and cross training of medical response, guaranteeing integration of the DHS medical assets.

Office of International Affairs and Global Health Security – This program enhances OHA's executive decision-support to DHS leadership by coordinating international engagement and ensuring that health related global lessons learned and best practices are applied domestically. This includes an all-hazard, multi-sector approach to countering trans-border health threats and

natural or man-made catastrophic disasters. International Affairs and Global Health Security efforts help the Department in strengthening the Nation's preparedness and emergency response capabilities.

C. Resources Requested and Performance Impact

The Office of Health Affairs requests 84 positions, (84 FTE), and \$138 million. The total adjustments to base is 4 FTE and \$.5 million. The FY10 budget request reflects a reduction in the current services level of \$19.2 million. This reduction will affect several programs in the Office of Medical Readiness including the National Biodefense Architecture, the Health Security Intelligence Enterprise and OHA's ability to lead the Department's efforts in Pandemic Influenza (PI) preparedness and coordination.

BioWatch – In FY09 OHA will maintain Generation-1 and Generation-2 baseline capabilities in approximately 30 jurisdictions throughout the Nation, providing early detection of biological airborne agents. OHA will also initiate a field test program for Generation-3 autonomous detectors. The FY10 request will support prototype unit field testing and data analysis for candidate autonomous detection technology platforms in preparation for system procurement, and will complete operational testing on production units in FY 2011. Funds will also support the initial production procurement of up to 63 Generation-3 autonomous detectors for operational testing and evaluation.

Rapidly Deployable Chemical Detection System (RDCDS) – In FY09 OHA will upgrade surveillance capabilities for NSSE and DHS SEAR Level I and II Events (2009 Rose Bowl, 2009 Super Bowl, and the 2009 Presidential Inauguration). OHA will also validate intelligence information on chemical compounds, conduct a market survey and evaluate chlorine gas detection equipment, and collaborate with the Environmental Protection Agency (EPA) regarding aerial surveillance efforts. The FY10 request supports ongoing program operation and maintenance, deployment to NSSE and DHS SEAR Level I and II Events, and the procurement, installation, and validation of equipment for aerial surveillance and detection of chlorine gas.

National Biosurveillance Integration Center (NBIC) – In FY09 NBIC will continue its analysis and collection of biosurveillance data. OHA will reach out to State, local, tribal, territorial, private sector, and international partners to encourage participation in NBIC. The FY10 request supports ongoing program operation and maintenance, integrates the Biosurveillance Common Operating Picture (BCOP) with an information technology architecture, and supports an upgrade of the systems infrastructure to implement data-sharing services and provide access to additional data resources across the biological and surveillance communities.

Office of Medical Readiness

Plans and Policy - The program assures that health impacts are fully integrated into all Federal plans, and interfaces with State, local, and tribal planning entities to ensure planning consistency. In FY09, Plans and Policy will complete health subject matter content for Strategic Guidance

Statements related to biological events. The FY10 request will provide capacity to review health subject matter content for Federal strategic plans related to biological events.

Incident Coordination - Operations – In FY09, the division provided health experts at the National Operations Center (NOC) and the FEMA National Response Coordination Center (NRCC) to inform DHS’ leadership on all health related issues arising from current operations. The program also provided medical and public health expertise to various exercise and training programs, including departmental and national-level events. Also in FY09, personnel provided support to the FEMA Incident Management Assistance Teams (IMAT) by deploying OHA staff with the teams to provide on the ground situational awareness of medical conditions before and during incidents and to provide any necessary medical care to team members. This program provided critical support to the Presidential Inauguration, hurricanes, and other emerging national incidents. On behalf of the Department, this program also conducted two PI exercises, an anthrax exercise with New York City, and conducted an exercise with the National Governors Association. The FY10 request supports medical and public health expertise to incident management, including some support to the NOC and NRCC during incidents, and exercise support.

Mitigation and Capabilities Enhancement (MACE) – In FY09, MACE began development of CoPASS, a database that will make it easier for public health and medical stakeholders to find Federal grant funding, training and exercise opportunities, and standards. MACE also supports FEMA’s efforts to evolve the health and medical target capabilities, an initiative started in FY09 that will continue in FY10.

Medical First Responder Coordination (MFRC) – In FY09, this program provided DHS representation to the Federal Interagency Committee on EMS (FICEMS), and to the external medical first responder and emergency medical services (EMS) communities. MFRC staff also provided support to the FEMA United States Fire Administration on medical first responder issues. The program began work in FY09 on an EMS assessment tool, which will be the basis of an EMS assessment. The MFRC goal is to lead the Department’s role in improving medical first responder readiness for catastrophic incidents, activities that will continue with the FY10 request.

Food, Agriculture, and Veterinary Defense – In FY09 FAV Defense continued to lead the Department’s efforts to ensure the safety and security of the Nation’s food supply. OHA will complete the development of the Strategic Plan for catastrophic Foreign Animal Disease (Foot and Mouth Disease) and Food Contamination scenarios and will continue to develop and encourage collaboration among partners via the Dashboard. In FY10 OHA will continue its efforts to coordinate with all level of government and the private sector, will complete the Dashboard, and will complete the Preparedness and Response Benchmarking Tool Kit to enhance preparedness at the State and local level.

Office of Component Services

Occupational Medical Services – FY09 funding established the Virtual Medical Support System (VMMS). In cooperation with the Management Directorate, the program also developed a

comprehensive set of Safety and Health Policies beginning with existing "best practices" program throughout government. The FY10 request continues development of a common set of standards, policies, and training opportunities for occupational medical aspects of occupational safety and health programs across the Department.

Workforce Health Protection – In FY09, this program will draft workforce health protection and wellness related materials for use throughout the Department including model wellness newsletters and policy-based health protection guidelines for situations such as disaster related deployment and international travel. In coordination with S&T and MGMT, the program will work in FY10 to define the requirements for job appropriate personal protective equipment, vaccinations, and post exposure prophylaxis. The FY10 request will also allow OHA to support implementation of a risk management information capability throughout the Department.

Operational Medicine Support – In FY09, the program began development of credentialing and medical oversight framework, drafted Austere Medicine and Tactical Protocols and advanced a learning management system and an electronic medical record system. The FY10 request will allow the establishment a credentialing program throughout DHS to ensure adequate credentialing of medical personnel in conjunction and partnership with the component agencies. This process will set minimum standards for working as a medical provider within the Department. In addition, the FY10 request will fund a Quality Assurance Program that will set standards and metrics for measuring quality of care, provide insight into training and certification needs, and reduce the liability risk of the Department.

Office of International Affairs and Global Health Security – In FY09, this program collected and applied lessons learned from the International community through the Lessons without Borders Initiative (Lw/oB). The FY10 request will continue to provide a framework for information sharing between national and international governmental, non-governmental, academic and private sector organizations to improve knowledge and decision-making on global health security issues.

Management & Administration - Provide Salaries and Expense funding including annualization of prior years, and annualization of the FY09 pay raise (4 FTEs and \$1.2 million increase). In FY09, OHA provided enhanced financial reporting and internal controls, developed policy in the areas of budget, performance metrics, strategic planning and internal controls, provided space and facilities management to meet the needs of OHA's personnel ceiling, and developed of a Human Capital Management hiring strategy to meet OHA's personnel ceiling. The FY10 request will continue to provide a full range of administrative services to the OHA personnel, continue to provide space and facilities management to meet the needs of OHA's personnel, and enhance the range of administrative services provided to OHA personnel to strengthen the workforce and install additional internal controls to improve program management.

D. Performance Highlights, Resources, and Alignment to Strategic Goals

Program: Medical and Biodefense Programs
Performance Goal: Bolster the Nation's biodefense readiness by enhancing the national architecture to rapidly detect, characterize, and respond effectively to a large-scale biological

event.						
Goal 2 – Protect our Nation from Dangerous Goods – 84%						
Goal 4 – Strengthen our Nation’s Preparedness and Emergency Response Capabilities – 16%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	None	None	12,980	\$118,330	\$157,191	\$138,000
FTE	None	None	22	49	80	84

Performance Plan Measures

Measure: Number of agencies who have agreed to provide information to the National Biosurveillance Integration System (NBIC).						
Description of Measure: The goal of the National Biosurveillance Integration Center (NBIC) is to increase the number of Federal, State, local agencies and private entities that share biological information. This measure demonstrates how many Federal agencies are actively sharing biological information by providing data feeds into the National Biosurveillance Integration System (NBIS). Using the input from these Federal data feeds as well as data feeds from state and local entities, NBIC is able to make potential or emerging biological threat information available to its member agencies to improve response to biological events. NBIC makes this information available to member agencies regardless of whether or not they provide input into the system. Agency participation and information exchange involves adequate consideration of major issues and documentation of the exchange details pertaining to privacy rights, system compatibility issues, and information security.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	Baseline	5	10	10	12
Actual:	None	0	7	7	N/A	N/A

Measure: Number of biological monitoring units employed in high-risk indoor facilities within BioWatch jurisdictions.						
Description of Measure: This performance measure captures the number of monitoring units, designed to detect the release of biological agents, within the facilities or complexes of BioWatch jurisdictions. A BioWatch jurisdiction includes the largest metropolitan areas in the U.S. The higher number of units employed, the larger number of people protected from a potential biological attack.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	66	116	38
Actual:	None	None	None	33	N/A	N/A

Measure: Percent of the population in BioWatch jurisdictions covered by outdoor biological monitoring units.						
Description of Measure: This measure calculates the percent of the population in the BioWatch jurisdictions that is covered by outdoor biological monitoring units. Population covered by these units can be warned and identified for treatment prior to becoming symptomatic as a consequence of an outdoor release of biological agent. A BioWatch jurisdiction includes the largest metropolitan areas in the U.S. This measure is an estimate based on performance (i.e., probability of detection) and range (i.e., protection area) of the monitoring units. This measure includes the population within BioWatch jurisdictions and estimates the coverage provided by biological monitoring units.						

Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	UCI	UCI	UCI
Actual:	None	None	None	UCI	N/A	N/A

Measure: Time between an indoor monitoring unit exposure to a biological agent and the declaration of a confirmed positive sample result.

Description of Measure: This performance measure calculates the time between an indoor monitoring unit exposure to a biological agent and the declaration of a confirmed positive sample result by the local laboratory official. There are a number of factors that influence the time gauged by this measure such as the number of units and the type of technology. For instance, the higher the number of autonomous indoor biological monitoring units employed, the shorter the time will be between the release of a biological agent and the declaration of a confirmed positive sample result. An autonomous indoor biological monitoring unit is a type of sensor that collects airborne particles and performs sample analysis. By performing the sample analysis at the monitoring site, automated detection systems significantly reduce the time between a biological release and detecting confirming that an event has occurred.

Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	< 17 hours	< 33 hours	< 33 hours
Actual:	None	None	None	33 hours	N/A	N/A

Measure: Time between an outdoor monitoring unit exposure to a biological agent and the declaration of a confirmed positive sample result.

Fiscal Year	Due Date	Reference/Citation	Requirement	Status
2009	15-Oct-08	P.L. 110-161	Monthly DRF Report (with amount provided to each federal agency for mission assignments, as per JES, and information related to Hurricanes Katrina, Rita, Wilma, and other disasters, including amounts allocated, obligated, and undistributed as per the House Report)	Submitted to the Hill
2009	15-Nov-08	P.L. 110-161	Monthly DRF Report (with amount provided to each federal agency for mission assignments, as per JES, and information related to Hurricanes Katrina, Rita, Wilma, and other disasters, including amounts allocated, obligated, and undistributed as per the House Report)	Submitted to the Hill
2009	29-Nov-08	H.R. 2638; P.L. 110-329	Firefighter Assistance Grants expenditure plan	Submitted to the Hill
2009	29-Nov-08	H.R. 2638; P.L. 110-329	DRF Expenditure Plan	Submitted to the Hill
2009	29-Nov-08	H.R. 2638; P.L. 110-329	Management and Administration program expenditure plan (State & Local)	Submitted to the Hill
2009	1-Dec-08	H.R. 2638; P.L. 110-329	DHS Secretary, in coordination with FEMA Administrator, shall report that processes to incorporate stakeholder input for grant guidance development have been: (1) developed to ensure transparency and increased consultation about security needs for all-hazards; (2) formalized and made clear to stakeholders; and (3) formalized to ensure future use for each fiscal year	At DHS Level
2009	15-Dec-08	P.L. 110-161	Monthly DRF Report	Submitted to the Hill
2009	29-Dec-08	JES to H.R. 2638	Report on the process put in place to track compliance with the biennial financial statement audits, certify the number of WYO insurance companies in compliance for fiscal year 2008 and that the audits have been reviewed by FEMA program managers, and an explanation for any participating companies not in compliance	Submitted to the Hill
2009	1-Jan-09	JES to H.R. 2638	Plan on outlining completion of conversion to IPAWS per House Report	At DHS Level
2009	15-Jan-09	P.L. 110-161	Monthly DRF Report	Submitted to the Hill
2009	15-Jan-09	H.R. 2638; P.L. 110-329	DRF Quarterly Report on obligations against the expenditure plan and justifications for any changes in spending	Submitted to the Hill

iii. Status of Congressionally Requested Studies, Reports, and Evaluation

**Department of Homeland Security
Federal Emergency Management Administration**

2009	30-Jan-09	JES to H.R. 2638	The Administrator is directed to create an inter-agency task force to make recommendations to the Administrator for the best way to coordinate efforts to measure preparedness and how grant program expenditures contribute to preparedness. The task force shall include FEMA's CFO and CIO, and shall consult with State and local governments through previously established entities such as the National Advisory Council. FEMA is directed to report to the Senate Appropriations Committee on these efforts, including the resources required and the timeframe to be completed	Provided during briefing
2009	30-Jan-09	JES to H.R. 2638	FEMA-USFA to submit a master facilities plan for the maintenance and modernization of the National Emergency Training Center. Per Senate Report: for maintenance and modernization of EMI and USFA campuses, and including any needed infrastructure improvements, building renovations, life-cycle costs, and where efficiencies can be gained through joint efforts	At DHS Level
2009	2-Feb-09	JES to H.R. 2638	Submit 2010 Budget Request by Office	ETA April 2009
2009	2-Feb-09	JES to H.R. 2638	5-year National Flood Map Maintenance Plan for 2010 – 2014	Submitted to the Hill
2009	15-Feb-09	P.L. 110-161	Monthly DRF Report	Submitted to the Hill
2009	3-Mar-09	H.R. 2638; P.L. 110-329	Report on the implications to States for making shelf stable meals an allowable expense under the Homeland Security Grant Program -- to include Lessons Learned and best practices with regard to allowing grant recipients to allocate reasonable funds for critical emergency provisions, such as shelf stable meals	Submitted to the Hill
2009	15-Mar-09	P.L. 110-161	Monthly DRF Report	Submitted to the Hill
2009	20-Mar-09	P.L. 110-329	FY 2009 Assistance to Fire Fighters Grant Program Guidance	At DHS Level
2009	6-Apr-09	JES to H.R. 2638	Report on Limited English Proficiency Populations per House Report	At DHS Level
2009	6-Apr-09	JES to H.R. 2638	Report on disaster preparedness capabilities of Emergency Medical Services per House Report; House Report states report is to include capabilities required to meet future preparedness goals and an analysis of the gap between current and target capabilities	Pending ETA 6/15/2009

iii. Status of Congressionally Requested Studies, Reports, and Evaluation

**Department of Homeland Security
Federal Emergency Management Administration**

2009	6-Apr-09	JES to H.R. 2638	Spend Plan on Trucking Security Grant Program prior to obligation of funds	"Interim Report" Submitted to the Hill
2009	6-Apr-09	JES to H.R. 2638	Report on Training and Response Capabilities in US Territories per House Report	In FEMA Review; ETA 6/15/2009
2009	6-Apr-09	JES to H.R. 2638	Report on utility of adding additional sites for First Responder Training	ETA 4/15/2009
2009	6-Apr-09	JES to H.R. 2638	Report on National Exercise Program per House Report; House Report states report is to contain detailed information on Federal, State, and local issues related to incident management lapses during TOPOFF 4	at DHS for clearance
2009	9-Apr-09	JES to H.R. 2638	Report on possibility of adding new Urban Search and Rescue Team; per House Report. if FEMA determines it is feasible to add a team, the report shall include recommendation for geographical location and cost estimate	at DHS Level
2009	9-Apr-09	JES to H.R. 2638	5-year Capital Improvement Plan for Mt Weather per House Report	In FEMA Review
2009	15-Apr-09	P.L. 110-161	Monthly DRF Report	At DHS Level
2009	15-Apr-09	H.R. 2638; P.L. 110-329	DRF Quarterly Report on obligations against the expenditure plan and justifications for any changes in spending	
2009	15-May-09	P.L. 110-161	Monthly DRF Report	
2009	15-Jun-09	P.L. 110-161	Monthly DRF Report	
2009	15-Jul-09	P.L. 110-161	Monthly DRF Report	
2009	15-Jul-09	H.R. 2638; P.L. 110-329	DRF Quarterly Report on obligations against the expenditure plan and justifications for any changes in spending	
2009	15-Aug-09	P.L. 110-161	Monthly DRF Report	
2009	15-Sep-09	P.L. 110-161	Monthly DRF Report	
2009	15-Oct-09	H.R. 2638; P.L. 110-329	DRF Quarterly Report on obligations against the expenditure plan and justifications for any changes in spending	
2009	30 days after declaration by President	H.R. 2638; P.L. 110-329	Disaster Declarations Report	

iii. Status of Congressionally Requested Studies, Reports, and Evaluation

**Department of Homeland Security
Federal Emergency Management Administration**

2009	No Due Date (see notes section)	P.L. 110-329	DRF to submit Implementation Plan on any funds to be transferred to "Management and Administration" as per House Report. (House Report says The funding shall remain unavailable until the Committee receives and approves an implementation plan that contains an expenditure plan, a hiring schedule, and a list of positions to be filled by Cadre On-Call Response Employees (CORE), including where they will be located. The reduction to the request is based on delays in the planned conversion of employees and the fact that previous funding provided for this effort has been reprogrammed by FEMA.)	At DHS Level
2009	PRIOR TO ACTION	P.L. 110-329	FEMA shall submit a reprogramming report, pursuant to Section 503, prior to the transfer of \$16 million from DRF to OIG	
2009	PRIOR TO ACTION	P.L. 110-329	FEMA shall submit reprogramming reports, pursuant to Section 503, prior to any transfer of more than 10% of allocations among offices	
2009	Prior to Action	JES to P.L. 110-329	FEMA shall report to the Appropriations Committees prior to closing the Florida Long Term Recovery Office.	
2009	Within 15 days of allocation	JES to H.R. 2638	Notify within 15 days of any allocation over 10% from any office

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY OPERATIONS, MANAGEMENT, AND ADMINISTRATION

I. Appropriation Overview

A. Mission Statement for Operations, Management, and Administration:

The FEMA Operations, Management and Administration (OMA) appropriation provides core mission funding for the development and maintenance of an integrated, nationwide capability to prepare for, mitigate against, respond to, and recover from the consequences of major disasters and emergencies regardless of cause, in partnership with other federal agencies, state, local and tribal governments, volunteer organizations, and the private sector. The account supports core operations for all FEMA organizations, providing resources for mission activities and administrative support. OMA resources are directed to both regional and headquarters operations.

B. Budget Activities:

Activities are organized according to the following PPA structure:

- Operating Activities
- National Capital Region Coordination
- Urban Search and Rescue

B.1 Operating Activities

Operating Activities includes the essential functions for all of FEMA's major mission organizations and directly supports FEMA's primary mission to reduce the loss of life and property and to protect the Nation from all hazards including natural disasters, acts of terrorism, and other man-made disasters. Operating Activities leads and supports the Nation through a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

In FY 2010, OMA will support FEMA's continued achievement of requirements set forth within the Post-Katrina Emergency Management Reform Act (PKEMRA) of 2006 and provide a more complete service to the American people and our federal, state, local, and tribal counterparts. FEMA will continue to integrate and support operational and preparedness missions that transferred to FEMA in FY 2007/FY 2008 and aligned all activities with the "Vision for a New FEMA." FEMA will continue to unify strategic planning efforts, build robust disaster operations, disaster assistance, and logistics capabilities, and integrate our grants, training, exercise, technical assistance, and communications platforms.

The Operating Activities also incorporates the Office of the Administrator and the Administrative Management Staff who coordinate between Headquarters and Regional Offices all policy and strategic planning, managerial, resource, and administrative actions; maintain programs to address public information issues; and builds partnerships with and among state and local governments, non-governmental organizations, business, and industry. Management and Administration Activities also

provide the corporate infrastructure (IT, finance, HR, procurement, facilities) essential to FEMA's pursuit of an enhanced business approach to achieving results and providing support capabilities designed and scaled to enhance FEMA's mission success. FEMA will continue to integrate management and administration missions that transferred to FEMA in 2008 and aligned all activities with the "Vision for a New FEMA."

B.1.A Disaster Assistance Directorate (DAD)

The Disaster Assistance Directorate ensures that individuals and communities affected by disasters of all sizes, including catastrophic and terrorist events, are able to return to normal with minimal suffering and disruption of services. Program activities focus on improving efficiency and expediting delivery of disaster assistance to eligible individuals, to state, local, and tribal governments, and to eligible private nonprofit organizations. This is accomplished through a commitment to streamline policy and procedures to improve program performance, to minimize error, and to modernize service delivery technology. Key programs include, but are not limited to: The Individual and Households Program, the Public Assistance Program, Other Needs Assistance, the Crisis Counseling Assistance and Training Program, Disaster Unemployment Assistance, Disaster Legal Services, donations management, voluntary agency coordination, and management of the National Processing Service Centers. Disaster Assistance Directorate is FEMA's agent in the implementation of the National Disaster Housing Strategy, the National Disaster Recovery Strategy, the National Catastrophic Infrastructure Recovery Plan, Emergency Support Function (ESF) #6 (Mass Care, Emergency Assistance, Housing, and Human Services), and Emergency Support Function (ESF) #14 (Long-Term Community Recovery).

B.1.B Disaster Operations Directorate (DOD)

The Disaster Operations Directorate coordinates and supports the core federal disaster response capabilities necessary to save lives, minimize suffering, and protect property in communities throughout the Nation that have been overwhelmed by the impact of a major disaster or an emergency, regardless of cause. The Disaster Operations Directorate develops operational all hazards disaster operations plans, coordinates Federal disaster operational planning activities, executes disaster response programs, integrates Federal, State, Tribal, local government and non-government disaster response programs, and ensures disaster emergency communications capabilities. Core Federal disaster response capabilities are executed by DOD through three primary program areas: Field Operations, Operations Management and Disaster Emergency Communications. Disaster Operations is responsible for several activities that were formerly part of FEMA's Response Program, such as sustaining situational awareness; managing a command, communication and coordination system comprised of national and regional command and coordination centers; and maintaining national and regional rapid support and disaster response teams. Disaster Operations is responsible for the new Incident Management Assistance Teams (IMATS) mandated by the Post-Katrina Emergency Management Reform Act of 2006 (PKEMRA).

B.1.C Logistics Management Directorate (LMD)

Logistics Management Directorate is the major program office responsible for policy, guidance, standards, execution and governance for logistics support, services and operations. LMD's mission is to plan, manage and sustain the national logistics response and recovery operations, in support of domestic emergencies and special events. LMD's focus is to institutionalize command and coordination of strategic logistics planning, operations and management while pushing operational control and execution down to the most effective level of execution. Logistics plans to move the agency beyond simply providing commodities (i.e. meals, water, and tarps) but toward a holistic management approach.

FEMA's Logistics Management capabilities are similar to the Department of Defense's well-recognized logistics (J4) system and organization, including management of the all-source range of assets, teams, equipment, and supplies that may be needed in response to an all-hazards event. The Logistics Management program involves coordination across all federal departments and agencies, FEMA partners, and those in the private sector who plan for and respond to all-hazard disaster events.

B.1.D Grant Programs Directorate (GPD)

The Post-Katrina Emergency Management Reform Act of 2006 mandated the integration of Grants Management Directorate (GPD) within FEMA. Grant Management is responsible for overseeing more than 80 percent of all Federal Assistance and grant resources awarded by the Department of Homeland Security. The majority of GPD activities are funded from management and administrative set-asides in the State and Local Program and Assistance to Firefighter Grants appropriations, with a small portion of funds coming from OMA, so to provide increase transparency, accountability and to effectively align FEMA's resources GPD's OMA resources were realigned to State & Local Appropriation within the Management & Administration PPA.

B.1.E Mitigation Directorate (MIT)

The mission of the Mitigation Directorate is to protect lives and prevent property loss from natural hazard events. Activities are designed to further sound risk management decisions by individuals, private and public sector entities, state, local, and tribal governments, and federal agencies. The Mitigation Directorate's objectives are accomplished through three categories of core activities: risk identification and assessment, risk reduction, and insurance against flood risk. Among the Mitigation programs supported by OMA are: Environmental and Historic Preservation, National Dam Safety, National Earthquake Hazards Reduction, and the National Hurricane Program. OMA resources also provide base funds to the Mitigation Disaster Operations and Management function.

B.1.F National Programs Directorate (NPD)

National Preparedness Program works to ensure that the nation is prepared for disasters of all kinds, regardless of cause. Currently FEMA is focused on improving our core competencies and, with Preparedness, undertaking significant efforts to fully incorporate the elements of Preparedness across the New FEMA. To facilitate the transition, the existing Budget Activities of NPD's OMA activities will be realigned to State & Local Appropriation within the Management & Administration PPA. This include Emergency Management Institute (EMI), Incident Management Systems (IMS) and expanding National Preparedness Initiatives to the Regions

B.1.G National Continuity Programs (NCP)

National Continuity Programs provides Executive leadership for Federal Government Continuity and National Contingency Programs that support enduring Constitutional government. National Continuity administers several activities to ensure and improve emergency communications with the public, including development and implementation of the Integrated Public Alert and Warning System.

B.1.H Office of the Administrator, which includes:

- Law Enforcement Advisor
- Disability Coordinator
- Office of Federal Coordinating Officer (FCO) Operations
- Center for Faith-Based and Community Initiatives

- Office of the Executive Secretariat

B.1.I Office of Policy and Program Analysis

B.1.J Office of the Associate Deputy Administrator, which includes:

- Regional Offices
- Office of Regional Operations

B.1.K Office of the Chief Financial Officer

B.1.L Office of Equal Rights

B.1.M Office of Chief Counsel

B.1.N Management Directorate, which includes:

- Information Technology Services,
- Human Capital Management
- Acquisition Management
- Facilities Management and Support Services
- Security
- Records and Document Management
- Disaster Reserve Workforce
- Occupational Safety, Health and Environment.

B.1.O Office of External Affairs, which includes:

- Legislative Affairs
- Public Affairs
- International Affairs
- Intergovernmental Affairs and Private Sector Initiatives

B.2 National Capital Region Coordination (NCRC)

The Office of National Capital Region Coordination (NCRC) provides leadership in integrating homeland security activities in the National Capital Region (NCR). NCRC also has a critical role in events (e.g., 2009 Presidential Inauguration), drills, and exercises that occur in the NCR. The work of NCRC and its regional partners often serves as a model for multi-jurisdictional efforts across the country.

B.3 Urban Search and Rescue

The Urban Search and Rescue National Response System and the Task Forces across the country provide coordinated, national, and all-risk capability for locating, extricating, and stabilizing victims of structural collapse resulting from natural and man-made causes, including those involving terrorism and weapons of mass destruction. The Urban Search and Rescue Task Forces are among the many specialized teams managed by the Disaster Operations Directorate.

C. Budget Request Summary:

The FY2010 OMA budget request reflects the amounts required to sustain the improvements in operational response and internal capacity approved in FY2009 and to support the Agency's efforts to achieve the mandate of PKEMRA. These increases strengthen the Agency's ability to fund projected disaster assistance requirements, to provide adequate funding to support state and local emergency management functions, and to enhance internal staffing and systems required to support FEMA's ability to fulfill its emergency management mission.

The FY2009 funding increases in OMA have been a significant factor in the Agency's effort to strengthen its operational response and internal capacity. For example, the Disaster Operations Directorate was able to strengthen its operational response capacity by expanding the number of Incident Management Assistance Teams (IMAT), and adding staff and upgrading facilities and equipment to enhance the Agency's 24/7 operational awareness capability. The Logistics Management Directorate has added staff across the regions to institutionalize command and control of strategic logistics planning, operations, and management while pushing operational control down to the most effective level of execution. And FEMA is now able to begin upgrading or replacing outdated business support systems -- including acquisition, human capital, and financial management applications -- to meet the needs of a 21st century Federal agency. These are just a few examples of the significant investments that FEMA has been able to achieve in the effort to fulfill its program mandate under PKEMRA.

As FEMA improves its program capacity, it also is demonstrating stronger fiscal responsibility and financial stewardship. During FY2009, FEMA identified a structural pay shortfall in the OMA appropriation, recognizing that the Agency did not have adequate funding to support all of its authorized OMA positions. The OMA 09 structural pay problem was the result of inadequate position control within FEMA, where incremental staffing and grade increases were not linked to the dollars required to support these requirements. The most essential element in rectifying this problem was for the Agency to strengthen its management controls and business processes for managing hiring actions. The process included a reconciliation of all positions within OMA, to develop a single, accurate, and reliable database of filled and vacant positions. Based on this information, the Agency recently established OMA staffing plans and budgets for each FEMA office. Each office is required to manage within its position and funding constraints, and FEMA is working to expand these improvements in position control to all appropriations.

Moreover, FEMA has been successful in its effort to look within existing resources to address the pay shortfall and implement the new program enhancements authorized in FY2009. During FY2009, FEMA has identified efficiencies and one-time sources of funding to increase staffing and enhance internal capacity. For FY 2010, the Agency has identified \$54.179 million in funding for one-time expenditures and program increases from FY2009 that can be used to support the structural pay issue within OMA without having a deleterious impact on program operations. For example, there is more than \$2 million in FY2009 start-up costs (equipment, facilities, etc.) associated with the IMAT expansion. And while the Agency will see significant benefits from FY2009 funding increases for Mount Weather capital improvements, IPAWS, and Urban Search and Rescue, the magnitude and impact of these increases positions the Agency to request lower amounts in FY2010 without compromising program performance. Exhibit B provides a complete overview of the one-time expenditures and program increases the Agency has proposed using to address the structural pay shortfall in FY2010.

The amount reflected in the proposed OMA appropriation reflects funding that can support a staffing level of 85 percent; \$337,623,780. However, the Administration also proposes a transfer of \$35 million from the Disaster Relief Fund to be used for structural pay, which would provide sufficient funding to enable the Agency to reach the full staffing levels approved in the FY2009 budget. The \$2 billion request for the Disaster Relief Fund reflects an annual requirement based on a 5-year average using only direct disaster obligations not including catastrophic events. And the \$35 million transfer to be used for the structural pay shortfall will not have a material impact on the ability to meet the needs of communities and families affected by disasters.

Operations, Management and Administration: FEMA requests \$852,200,000 3,114 positions and 2,697 FTE, as compared to FY 2009. The change from FY 2009 is explained by a series of adjustments for inflation and annualizations as described below.

(1) PPA – Operating Activities: FEMA requests \$817,205,000 3,086 positions and 2,669 FTE. This represents a net increase of \$18,410,000 and increase of 400 positions and 401 FTE as compared to FY 2009. This includes the realignment of National Programs Directorate (NPD) and Grant Programs Directorate (GPD) programs to the State & Local Appropriation within the Management & Administration PPA.

(2) PPA – National Capital Region Coordination: FEMA requests \$6,995,000, 20 positions, and 20 FTE. This represents a net increase of \$654,000, 0 positions, and 0 FTE as compared to FY 2009.

(3) PPA – Urban Search and Rescue: FEMA requests \$28,000,000, 8 positions, and 8 FTE. This represents a net decrease of \$4,500,000 0 positions, and 0 FTE as compared to FY 2009.

FY 2009 FTE doesn't equal the Budget Appendix, due to the FY 2009 FTE represents 85% S&B sustainment.

FY 2010 FTE doesn't equal the Budget Appendix, due to the FY 2010 President's Budget FTE represent 85% S&B sustainment.

III. Current Services Program Description by PPA

Department of Homeland Security
Federal Emergency Management Agency
Operations, Management, and Administration
Program Performance Justification

(Dollars in thousands)

PPA – OPERATING ACTIVITIES

	Perm Pos	FTE	Amount
2008 Actual	2,322	2,300	\$652,917
2009 Enacted	2,686	2,268	\$798,595
2010 Adjustments-to-Base	388	395	-\$4,635
2010 Current Services	3074	2663	\$793,960
2010 Program Change	12	6	\$23,245
2010 Request	3086	2669	\$817,205
Total Change 2009-2010	400	401	\$18,610

FEMA requests \$817.205 million, 3,086 positions, and 2,669 FTE for this activity in FY 2010. This is an increase of \$18.6 million over FY 2009. This includes the realignment of National Programs Directorate (NPD) and Grant Programs Directorate (GPD) programs to the State & Local Appropriation within the Management & Administration PPA.

CURRENT SERVICES DESCRIPTION

The following activities directly support FEMA’s primary mission to reduce the loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation. Activities reflect the final implementation of FEMA Vision initiatives launched in FY 2007 and FY 2008, including a focus on developing core competencies and the integration of expanded preparedness functions. FEMA Operating activities will continue to build on FY 2008 and FY 2009 successes in the areas of:

- Creating “engaged partnerships” with state and local governments.
- Facilitating and supplying an effective unified command across all levels of government.
- Engaging hurricane-prone states to gain a better understanding of their vulnerabilities.
- Improving logistics and communications capabilities to improve response.
- Enhancing disaster assistance capabilities for recovery efforts.

The Operating activities PPA also incorporates the Office of the Administrator and FEMA-wide Administrative Management who coordinate between Headquarters and Regional Offices all policy, managerial, resource, and administrative activities; maintain programs to address public information issues; and build partnerships with and among State and local governments, non-governmental organizations, businesses, and industries.

OMA provides FEMA with basic mission funding, which is complemented by disaster-specific and readiness resources from the Disaster Relief Fund and other program-specific appropriations.

A) Disaster Assistance Directorate (DAD) - \$61.784 million and 439 positions/373 FTE

The Disaster Assistance Directorate (DAD) ensures that individuals and communities affected by disasters of all sizes, including catastrophic and terrorist events, are able to return to normal with minimal suffering and disruption of services. Program activities focus on improving efficiency and expediting delivery of disaster assistance to eligible individuals, to state, local, and tribal governments, and to eligible private nonprofit organizations. This is accomplished through a commitment to streamline policy and procedures to improve program performance, to minimize error, and to modernize service delivery technology.

The following DAD programs/functions receive core staffing and operating expenses support from the OMA appropriation. Disaster readiness and direct victim assistance requirements are funded from appropriations for the Disaster Readiness and Support Activities account, the Disaster Relief Fund, and the Disaster Assistance Direct Loan Program. Funding is also provided for the Emergency Food and Shelter Program, also under DAD's domain of responsibilities.

• **Disaster Declarations Unit- \$.610 million**

This unit is responsible for processing all gubernatorial requests for Presidential major disaster or emergency declarations and all other related actions to include appeals and cost share adjustments under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121-5206 (Stafford Act)

• **Individual Assistance Programs (IA)- \$8.321 million**

Individual Assistance ensures that individuals and families that have been affected by disasters have access to the full range of FEMA programs in a timely manner and that the best possible level of service is provided to applicants in the administration of these programs. IA programs and functions include:

- The Individual and Households Programs
- Other Needs Assistance
- Disaster Unemployment Assistance
- Crisis Counseling and Training Program
- Disaster Legal Services
- National Family Reunification Locator System
- National Emergency Child Locator System
- Donations Management
- Voluntary Agency Coordination
- Joint Housing Solutions Group
- National Disaster Housing Strategy
- Case Management
- National Shelter System

• **National Processing Service Centers (NPSC)- \$3.922 million**

The NPSCs are FEMA's disaster assistance processing facilities and are responsible for: registering applicants for disaster assistance, verifying losses through on-site inspections; processing applications to determine assistance eligibility; and responding to applicant inquiries. In FY09, approximately 300 temporary positions will become full time positions in the NPSCs. Funding will support these positions as well as other activities, such as technology requirements needed to maintain a call center, equipment, and training.

- **Public Assistance Program (PA))- \$4.000 million**

The PA Grant Program provides assistance to states, local governments, and certain nonprofit organizations to alleviate suffering and hardship resulting from major disasters or emergencies declared by the President. It provides reimbursement for debris removal, emergency protective measures and the repair, replacement, or restoration of disaster-damaged, publicly owned facilities and the facilities of certain private non-profit organizations.

- **Fire Management Assistance Grant Program (FMAGP)- .500 million**

FEMA fire management assistance grants are made available to state and local governments, including tribal nations, to minimize immediate adverse effects, and to manage and control wildland fires that threaten to cause major disasters. FMAGP provides a 75 percent federal cost-share reimbursement to states for actual costs.

- **Catastrophic Planning- \$1.158 million**

FEMA has been actively engaged in Catastrophic Disaster Planning for its Disaster Assistance programs for many years. In the last six years, FEMA has made significant progress in increasing its capability to provide assistance to individuals and public organizations after a large or catastrophic event. FEMA's experience with the very active 2004 and 2005 Hurricane Seasons highlighted a number of critical planning and capability requirements for Disaster Assistance, which are the focus of current and planned catastrophic disaster planning initiatives. Key areas of Individual Assistance program improvements include mass care and emergency assistance procedures and capabilities, donations and volunteer management systems and procedures, registration intake systems and procedures, applicant processing, identity and occupancy verification, controls to limit fraud and abuse, coordination with other agencies, and evaluation and testing of alternative housing solutions.

FEMA continues to further develop and implement priority elements of the National Disaster Housing Strategy. During this time, FEMA has also made strides in interagency planning and coordination to assist communities with long-term recovery, to address contaminated debris, debris volume estimation, and streamlining the Public Assistance Program processing for very large events through planning, training, and technology improvements. FEMA continues to develop, test, and refine the above improvements, as well as continue contingency planning for delivering disaster assistance during and after chemical, biological, radiological, nuclear, pandemic influenza, and cyber events.

- **Program Coordination, Planning, and Support- \$1.950 million**

Program coordination, planning, and support activities include, but are not limited to:

- Exercise Coordination
- Disaster After Actions Reviews (AAR) and Remedial Management Program (RAMP)
- Continuity of Operations (COOP)
- Analysis and Reporting
- Mobile Response Team Development
- Innovation and Technology Development
- Contract Management
- Policy and General Inquiry Correspondence
- Human Resources and Administration
- Professional Development
- Logistics, Resource Management, and Strategic Planning
- Finance and Budgeting
- Equipment

- Regional Funding to Support DAD Activities (1.250 million)

- **Collaboration with Stakeholders - .500 million**

Because the delivery of disaster assistance programs depends on a seamless working relationship with state and local governments, consistent interaction with these stakeholders is essential. To that end, DAD staff participates in a number of annual conferences, meetings, workshops and training venues with internal and external partners on a wide range of initiatives, including activities related to, for example, ESF#6, ESF #14, the National Shelter System, the National Reunification Family Locator System, the PA Pilot, and Donations Management.

- **Management and Other Activities- \$40.823 M**

Resources includes Salaries & benefits and management oversight functions

Disaster Assistance Directorate Recent and Planned Accomplishments

FY 2008 Accomplishments

- Through the Joint Housing Solutions Group, completed two disaster-specific compendia of potential alternative housing solutions with ratings and guidelines for best application of particular units given disaster conditions. Reviewed, assessed, evaluated, and ranked over 43 alternative housing unit models. Initiated contracts with seven alternative housing manufacturers. Each manufacturer has been tasked with delivering one prototype unit.
- Successfully implemented contracts with two manufacturers to provide low formaldehyde two and three bedroom manufactured home models. The selected manufacturers will produce Uniform Federal Accessible Standard and non-UFAS types.
- Continued to work with the states of Alabama, Louisiana, Mississippi, and Texas, affected by the 2005 hurricane season, to establish, populate, and evaluate new forms of alternative housing under the Alternative Housing Pilot Program.
- Led, in conjunction with FEMA's Chief Information Officer, the continued on-target development of Disaster Assistance.gov, the single application system/portal mandated by Presidential Executive Order: *Improving Assistance to Disaster Victims*, and implemented by Dec 31, 2008.
- Developed and published the *2008 Disaster Housing Plan*, which outlined agency capabilities and guided agency housing efforts in response to disasters during the 2008 calendar year.
- Developed the draft National Disaster Housing Strategy, which encompasses the entire continuum of disaster housing, from sheltering through permanent housing.
- Developed a one-day Debris Management Plan Workshop to enhance State and local capacity to manage debris removal operations in a cost-effective and timely manner. The PA Division conducted 83 Debris Management Plan Workshops throughout the United States and Territories.
- Released version 1 of the Emergency Management Mission Integrated Environment (EMMIE). EMMIE PA allows FEMA staff, PA applicants, and States to perform PA grant management activities online.
- Processed and approved more than \$933 million in payments to assist disaster applicants with losses not covered by insurance and property that had been damaged or destroyed.
- Completed software enhancements and testing for a national disaster evacuee tracking system, and made the supporting software available to all states free of charge.
- Completed enhancements to and testing of the National Shelter System and AIDMATRIX to improve system security and user interface, and continue to provide technical assistance and training to users nationwide. Enhanced National Emergency Family Registry and Locator

System (NEFRLS) to be able to receive and process information received from Law Enforcement as well as information on non-US citizens, such as persons on student visas.

FY 2009 Planned Accomplishments

- Continue to improve FEMA's plans and capabilities for managing mass evacuations and the resulting displaced populations, including additional state and local plans and development and expansion of evacuee tracking systems.
- Launch the FEMA National Shelter System. Implementation will begin at the State level. System will have enhanced data sharing capabilities and will provide expanded, accurate data to Federal, State, and local users.
- Train Regional, Federal, State, local, and non-governmental stakeholders on Federal mass care functions and coordination with local mass care efforts. This will include implementation of a mass care sheltering and feeding operational strategies for use at the local level.
- Implement cooperative agreement with the National Center for Missing and Exploited Children.
- Pilot a new in-person recertification protocol for individual assistance. This new protocol will reduce or eliminate the need for often-confusing and less reliable recertification via the postal system, and increase the reliability and surety of the process.
- Enhance existing FEMA database technology to capture and track temporary housing unit installation, maintenance, and deactivation.
- Implement Interagency Agreement with the U.S. Corps of Engineers to provide needed engineering expertise to execute pre-disaster planning and group site selection and design.
- Continue to allocate targeted resources to improve the effectiveness and efficiency of disaster assistance programs as delivered in the numerous disasters occurring annually, and to ensure that individual and public assistance can be provided to victims of the larger and more complex disasters that could occur as the result of terrorism or catastrophic natural events.
- Implement secure, pen-based e-signature software to replace paper-based process of obtaining applicant's signatures on the 90-69 B and D forms. It will ensure speedy response, and avoid delays in payments and further action on behalf of the applicant.
- Implement multi-language letter capability. This will allow non-English speaking disaster victims to receive correspondence in their respective languages. Sending correspondence in a victim's first language will ensure speedy response, and avoid payment delays.

FY 2010 Planned Accomplishments

- Implement EMMIE Version II for Public Assistance including the 2-year development of software for handheld units (notebooks computers, palm pads, etc) that will allow Public Assistance staff to expeditiously capture information on damaged facilities and directly input the data into EMMIE for processing.
- Begin development of the Emergency Assistance Information System (EAIS), which will integrate existing mass care software and information systems and will enable States to manage mass care information requirements (NSS, NECLC, NEFRLS) through one system. System will allow States to deliver comprehensive timely reports on mass care activities and will enable data sharing across Federal, State, local, and non-governmental organizations.
- Implement and deliver special needs training to State partners to ensure life sustaining assistance is provided to disaster victims in congregate care facilities.
- Design and deliver direct housing courses for Regional, Federal, State, and local partners to ensure comprehensive understanding of direct housing mission components, available resources, unit specifications, and limitations.

- Implement Computer Telephony Integration (CTI) technology within the NPSC call center environment. This will provide the ability to pass data from a telephone system to a computer for the purpose of retrieving appropriate applicant information and correctly connecting a telephone call. Improve customer satisfaction and call processing efficiency is expected.
- Implement electronic (E-mail) correspondence with applicants. Adding links to view documents through the Individual Assistance Center (IAC) or sending them through attachments will reduce the amount of paper-production costs FEMA accrues and offer a more secure means of communication with applicants.
- Increase the self-service options that applicants can perform on the IAC. This will allow applicants to request reissue of an inspection, report a lost or stolen check, or other activities that currently have to be performed at helpline.
- Create a link between NSS and Registration Intake (RI) so applicants can access shelter referrals and call center agents can choose the shelter an applicant is living in during the RI process. This will improve FEMA's ability to locate evacuated disaster victims.

B) Disaster Operations Directorate (DOD) - \$117.582 million and 450 positions/381 FTE

FEMA's Disaster Operations Directorate coordinates and supports core federal operational capabilities needed to save lives, minimize suffering, and protect property in a timely and effective manner in communities overwhelmed by acts of terrorism, natural disaster, or other emergencies. Disaster Operations encompasses the following program activities and elements. NOTE: When a disaster threatens or occurs, many costs associated with program functions are supported through the Disaster Relief Fund.

• Operational Direction, Command, and Control- \$24.660

The Operational Direction, Command and Control program area manages and coordinates capabilities in support of emergency and disaster response operations, exercises, and special events to ensure appropriate readiness for response.

Operations Centers- \$3.942 million

- **National Response Coordination Center (NRCC)- \$2.758 million** The NRCC is a multi-agency coordination center that functions as the operational component of the DHS National Operations Center (NOC). The NRCC coordinates Federal disaster response operations and emergency management program implementation for natural and manmade disasters, including catastrophic and significant disaster events. The NRCC maintains situational awareness links with State Emergency Operations Centers (EOC), selected local EOCs, regional DHS components, regional Department and Agency Emergency Support Functions (ESFs), State Fusion Centers, Joint Terrorism Task Forces, regional Department of Defense Operations Centers, and other key Federal, state and local operational nodes. The NRCC supports disaster response and resource planning; monitors potential or developing events that could become significant; supports regional and field component operations; and makes decisions on and coordinates national-level disaster response activities and resource prioritizations and allocations for DHS and FEMA. In addition to maintaining a 24/7 Watch Team, the NRCC is augmented by the ESFs during disaster operations.
- **Regional Response Coordination Centers (RRCC)- \$1.183 million.** The RRCCs are regionally-based multi-agency coordination centers that perform a complementary role to the NRCC at the regional level. Operating in the ten FEMA Regions, each RRCC performs a situational awareness mission, identifies and coordinates response requirements, supports response operations, performs

capabilities analysis, and reports on the status of Federal disaster response operations. The RRCCs deploy liaison officers and the Emergency Response Team-Advanced (ERT-A) to initiate Federal support, facilitate initial delivery of goods and services to save lives and property and stabilize local infrastructures, and facilitate prioritizing “in theater” interagency resource allocation and coordination. The RRCCs can support multiple concurrent disaster operations within their regions.

- **FEMA Operations Network (FON) and FEMA Operations Center (FOC).- \$.770 million.** The FEMA Operations Network supports FEMA and Executive Branch Departments and Agencies with several classified and un-classified programs. The FOC supports the NRCC and implements a myriad of notifications to all Federal Departments and State EOCs as well as activating emergency management staff. The FOC’s multi-faceted communications and operations capabilities enable it to receive, generate, and/or disseminate critical, time-sensitive information to senior decision makers at all government levels. The FOC receives, analyzes, and disseminates all-hazards information within FEMA and DHS and to other Departments and Agencies as well as to disaster response team members. The FON, in coordination with the National Operations Center, facilitates distribution of warnings, alerts, and bulletins to the Federal, State and local emergency management community using a wide variety of communications systems such the National Warning System (NAWAS), the Washington Area Warning System (WAWAS), and the National-level Emergency Alert System (EAS).

Disaster Emergency Communications- \$20.718 million

- DOD is designing, staffing, and maintaining a rapidly deployable, responsive, interoperable and highly reliable emergency communications capability using the latest commercial off-the-shelf voice, video and data technology. Through the Disaster Emergency Communications program activities, Disaster Operations provides an integrated, interoperable emergency communications architecture that can provide immediate restoration of critical command and control platforms within states affected by disaster and real-time “reach-back” connectivity from incident commanders to JFOs, the NRCC, RRCCs, and other operations centers. State-of-the-art capabilities are provided through the following: Tactical land mobile radios and repeater systems; Tactical cellular phones; Space-based satellite systems; High frequency and microwave line-of-sight systems interconnected by fiber optic cables to voice and data switches; Local area networks; and Desktop devices such as PCs and telephones. Among the goals for improving, communications capabilities are simplifying the communications architecture (modularity, portability, security); ensuring seamless user interoperability and user friendly information transfers; using flexible design options taking advantage of satellite/Internet technologies; pushing capabilities forward to state and local responders; increasing bandwidth and connectivity; and tying into public networks as far forward as possible. (**\$4.50 million**)

Mobile Emergency Response System (MERS) – \$16.218 million

- The Disaster Emergency Communications Division’s Tactical Emergency Communications Branch, MERS detachments are mobile, self-sufficient emergency response units designed to support Federal all-hazards response operations by providing operations, logistics, and integrated and interoperable communications and life support to meet the needs for disaster response activities, as well as the

needs for planned special events. The six MERS detachments are managed centrally and are dispersed throughout the U.S. to improve the efficiency and cost-effectiveness of the NRF and to allow staff at the Joint Field Offices (JFOs) to focus on immediate response and recovery activities. Additionally, MERS operates the five MERS Operations Centers as an integral part of the FEMA network of operations centers.

- **Operational Teams- \$16.801 million**

The Operational Teams program area supports field response to disasters and special events, and participates in exercises.

- **Incident Management Assist Teams (IMAT)- \$9.21 million**

- In accordance with PKEMRA, FEMA is developing a next generation of rapidly deployable interagency national and regional emergency response teams, identified as Incident Management Assist Teams (IMAT). These teams are designed to provide a forward Federal presence to better manage and coordinate the national response for catastrophic incidents. The primary mission of an IMAT is to rapidly deploy to an incident or incident-threatened venue, provide leadership in the identification and provision of Federal assistance, and coordinate and integrate inter-jurisdictional response in support of the affected State(s) or U.S. territory(s). The IMATs support efforts to meet the emergent needs of state and local jurisdictions; possess the capability to provide initial situational awareness for Federal decision-makers; and support the initial establishment of a unified command. IMATs will meet the multi-disciplinary needs of emergency management and may include members from the inter-agency community as needed. For events where the Secretary determines, or may determine, that a significant event exists, a national-level team will lead the response, supported by regional-level teams.

The IMATs will have the capability to establish an effective federal presence within 12-hours of notification, to support the State and local officials, coordinate Federal activities, provide initial situational awareness, and to be self sufficient for a minimum of 48-hours to augment potentially scarce local resources. Ultimately, three national-level IMATs and ten regional-level IMATs will be built and will subsume the roles and responsibilities of the Federal Incident Response Support Teams (FIRSTs), the National Emergency Response Teams (ERT-N) and Emergency Response Teams-Advanced (ERT-A). In FY 2008 and FY 2009, two National and five Regional IMATS were established. When not responding to disasters, IMATs will engage in a range of training exercises and other activities strengthening FEMA's critical relationships with state and local partners.

- **Pre-Positioned Equipment and Supplies (\$7.0 million)**

- **Urban Search and Rescue (USAR) Task Forces**

USAR Task Forces provide the coordinated, national, all-risk capability for locating, extricating, and stabilizing victims of structural collapse resulting from natural and man-made causes, including those involving terrorism and Weapons of Mass Destruction (WMD). See the Urban Search and Rescue PPA (\$28.0 million) for more detail.

- **Incident Support Teams (IST)**
- ISTs are pre-existing elements that serve as the management cells for USAR Task Forces.

- **Hurricane Liaison Team**

This team operates at the National Hurricane Center to provide real time analysis and reporting of hurricane and weather-related information and communication between the National Hurricane Center, FEMA and the Federal, State, tribal, and local governments' emergency management and disaster response system components, and provides an additional access point for critical interagency technology transfer to enhance the Agency's hurricane disaster response capability.

- **National Emergency Response Teams (ERT-N) and Emergency Response Teams-Advanced (ERT-A) – (\$0.591 million)**

These teams will ultimately be subsumed by the IMATs, but some will continue to exist in FY 2010 during the transition to IMATs. ERT-N and ERT-A teams are made up of individuals from FEMA Headquarters and Regions who have additional day-to-day responsibilities beyond their team assignments. ERT-N teams are deployed by FEMA Headquarters in response to significant major disasters. Their purpose is to coordinate disaster response activities, coordinate and deploy key national response assets and resources, provide situational awareness, and maintain connectivity with key FEMA and Department of Homeland Security operations centers and components. ERT-N members typically provide the initial staffing cadre for a JFO supporting a major disaster.

ERT-As are located in each of the ten FEMA Regions and can be deployed in the early phases of an incident to work directly with States to assess disaster impact, gain situational awareness, help coordinate the disaster response, and respond to specific State requests for assistance. The ERT-A initially establishes its presence in a State Emergency Operations Center and later staffs the JFO to support the disaster response. The ERT-As deploy with basic communications capabilities including cell phones, wireless laptop computers, and a limited number of satellite cell phones. As needed, they can also be supported by the MERS detachments and their capabilities.

- **Specialized Federal Teams (\$0.722 million)**

- **The Domestic Emergency Support Team (DEST)- \$0.722 million**

- The DEST is a specialized interagency U.S. Government team designed to expeditiously provide expert advice, guidance and support to the FBI On-Scene Commander (OSC) during a Weapons of Mass Effect (WME) incident or credible threat. The DEST is comprised of crisis and consequence management components and augments the FBI's Joint Operations Center with tailored expertise, assessment and analysis capabilities.

- **Improvised Nuclear Device (IND) Response and Recovery- \$6.0 Million**

- **The Nuclear Incident Response Teams (NIRT)**

- NIRT teams are specialized teams managed day-to-day by the Department of Energy (DOE) / National Nuclear Security Administration (NNSA) and the

Environmental Protection Agency (EPA). They are operationally controlled by DHS/FEMA when activated to provide expert technical advice and support in disaster response operations and other needs involving nuclear weapons accidents, radiological accidents, lost or stolen radioactive material incidents, and acts of nuclear terrorism.

Nuclear Preparedness Effort \$6.0 Million

Improvised Nuclear Device (IND) Response and Recovery identified the Federal Emergency Management Agency (FEMA) as departmental lead for response and recovery efforts associated with the terrorist use of an IND. An IND incident resulting in a nuclear detonation would produce several effects that impact the urban environment and people. Effects from a nuclear detonation include blast, thermal, and prompt radiation. Secondary effects include electromagnetic pulse (EMP) and fallout. All of these effects have a major impact on people, infrastructure, and the environment, and they significantly affect the ability to respond to the incident. Funding address response and recovery needs at the Federal, State, and local levels. At each of these levels FEMA plays a critical role as the Nation's coordinator of preparedness, as well as, response and recovery actions.

• Operational Planning- \$16.904 million

In depth operational planning, led by Disaster Operation's current Operational Planning Branch, is a core competency of the agency. Operational planning encompasses the full spectrum of the planning process, ensuring continuity between long-range planning, current operations planning, and field element incident action planning. Planning includes detailed and critical current and future disaster response operational analyses, preparation of contingency and concept of operations plans, and crisis action planning to ensure that the agency can lead and improve national all-hazard disaster responses. More specifically, the Operational Planning Branch will:

- Provide national and regional operational planning guidance and coordination.
- Coordinate at the operational level the execution of all hazard contingency plans.
- Provide forecasting and analysis of potential events.
- Assist FEMA Regions in operational planning at the regional level.
- Lead the development of DHS and FEMA hazard-specific contingency plans.

Operational response planning efforts are closely coordinated with FEMA's National Preparedness Directorate, Disaster Assistance Directorate, Mitigation Directorate, and DHS components, including the DHS Office of Operations Coordination and Planning. FEMA will lead the coordinated planning for the Federal Government consistent with the intent of PKEMRA.

Catastrophic Disaster Response Planning- \$11.608 million

Disaster Operations will continue to develop federal-level catastrophic disaster response plans, in partnership with states and local communities, that take into account the need for a significantly higher level of response assets, the possibility of little or no advance notice or warning, and the need for rapid response times with massive support. A catastrophic incident is defined by a sudden event which results in thousands of casualties and tens of thousands of evacuees, overwhelming the resources of the State and local governments and requiring life saving support from outside the area. Years of successful experience with disaster response operations have clearly demonstrated that positive results are achieved when Federal response efforts are fully integrated with State, tribal and local governments and private sector and critical infrastructure

representatives. These same levels of integration will be continued in the catastrophic disaster response planning initiative in accordance with the principles of the NRF – Catastrophic Incident Annex and Catastrophic Incident Supplement.

Special Events Operations/ Exercise Support - \$5.296 million

Special events activities supports the readiness capabilities and planning for designated National Special Security Events to ensure an effective response to possible emergencies, to ensure public health and safety, and to protect property against threats or acts of terrorism. Support generally consists of activating operations centers and liaisons and is dependent upon the needs identified for each event. Resources will contribute to exercise development and improved disaster response operations and capabilities. Exercises will be coordinated with other agencies and within FEMA to provide interaction and participation in national-level response exercises. This support is dependent upon the needs identified for each exercise, and is closely coordinated with the National Preparedness Directorate's Homeland Security Exercise and Evaluation Program (HSEEP).

- **Management and Other Activities- \$52.495 million**

Resources include Salaries & benefits and management oversight activities.

Disaster Operations Directorate Recent and Planned Accomplishments

FY 2008 Accomplishments

- Operational planning – Initiated hiring of operational planners at FEMA Headquarters to supplement planning in support of 24-hour operations in the National Response Coordination Center; life saving and protection of property decision making by FEMA management during disaster operations; situational awareness; and tactical-level operational contingency planning for present and potential disasters based upon the 15 National Planning Scenarios.
- Catastrophic Disaster Response Planning:
 - New Madrid Seismic Zone Earthquake Planning Initiative:
 - Completed three (out of eight) State Catastrophic Earthquake Annexes and the Draft Federal Interim Contingency Plan for Catastrophic Earthquake.
 - Completed final hazard analysis, modeling and scenario refinement to reflect new data sets and building inventory.
 - South Florida Hurricane Planning Initiative:
 - Draft Herbert Hoover Dike Plans have been crafted for each Florida County adjacent to Lake Okeechobee.
 - Draft Catastrophic Plans, Annexes and Standard Operating Procedures that incorporate key emerging concepts and decision tools are nearing completion for Miami-Dade, Broward, and Palm Beach counties.
- Federal Incident Response Support Teams – The FIRSsTs were subsumed by the Region IV and Region V IMATs in FY 2008, however, before this occurred, team accomplishments were achieved:
 - Improved operational readiness, including establishing funding sources to enable teams to immediately deploy.
 - Successfully deployed to no-notice events and met 12-hour arrival time requirements.
- National Emergency Response Team (ERT-N):
 - Provided training to 75 percent of Red and Blue ERT-N Team members.
 - Successfully deployed and provided essential support to Region I during New England Hurricane exercise.

- FEMA tested new systems and processes for Hurricane Ernesto:
 - Upgraded NRCC at FEMA became functional.
 - Video teleconferences included multiple Federal Departments and Agencies as well as U.S. Northern Command and the National Guard Bureau.
- FEMA Operations Center:
 - Began expansion of the Emergency Notification System (ENS) to support other DHS components.
 - Upgraded capabilities at the NRCC COOP site to include the hiring of a COOP Manager to oversee site operations.
 - Developed a staff cross-training plan with the FEMA Alternate Operations Center (FAOC) which includes a regular exchange of staff to improve efficiency.

FY 2009 Planned Accomplishments

- Realize full staffing of operational planners at FEMA Headquarters and each FEMA Region.
- Catastrophic Disaster Response Planning – Conduct catastrophic scenario-driven workshops for the following site-specific areas:
 - Begin update of the NRF Catastrophic Incident Supplement based on empirical damage and societal impact data collected for the New Madrid Seismic Zone Planning Initiative.
 - New Madrid Seismic Zone – Complete the five remaining State Catastrophic Earthquake Annexes and develop the four Federal Regional Earthquake Annexes.
 - South Florida – Finalize Herbert Hoover Dike Plans and State-level planning documents, and begin development of Federal-level planning documents.
- National Response Coordination Center – Enhance disaster operation capabilities of the NRCC to support 24-hour watch operations, situational awareness, development of the common operating picture during disaster operations, and coordination of interagency response to all type of hazards and Presidentially declared disasters.
- FEMA Operations Center:
 - Expand the Emergency Notification System (ENS) to serve more DHS components.
 - Acquire ENS staff to enable system expansion with no loss of operating efficiency.
 - Initiate Phase 2 planning for upgrades to NRCC COOP site; initiate partial upgrades as budget permits.

FY 2010 Planned Accomplishments

- Incident Management
 - Continue implementation and execution of Incident Management Teams, including professionalizing IMAT members and the National Network of Emergency Managers.
 - Promote the integration and synchronization of preparedness across jurisdictions and all levels of government.
- Catastrophic Disaster Planning
 - Develop Federal plans, both Regionally- and Nationally-focused, that synchronize with Urban Area/regional plans developed from the Homeland Security Grant Program.
 - Prepare for National-level exercise based on the complete suite of New Madrid Seismic Zone Plans.
- Operational Planning
 - Work within FEMA and with state partners to develop local, state, and regional operational plans, including incident-specific catastrophic plans.
 - Support continued tactical-level operational planning for the 15 National Planning Scenarios.
- Emergency Communications

- Work with States to develop state and regional emergency communications plans.
- Establish a template of essential emergency communications capabilities and plan for temporary communications to fill the gaps.
- Assist state offices of emergency communications and ensure the integrity of first responder networks.
- Work with the National Communications System to ensure a smooth transition to long-term restoration.
- Implementation Development of the Public Awareness Strategy
 - Utilizing the developed content, criteria, and resources to help inform and develop state and local plans, training and exercises.
 - Conduct Training and Outreach Programs
 - Conduct of IND Planning Workshops- The initial focus will be jurisdictions participating in National Level Exercise 2010, and expanding to conduct workshops in each of the 10 FEMA Regions.

C) Logistics Management Directorate (LMD) - \$31.017 million and 156 positions/133 FTE

FEMA's Logistics Management Directorate's capabilities include the management of resources such as the logistics cadre, supplies, services, and equipment needed to respond to an all-hazards event. Much of the commodities purchased for a disaster as well as the contracts which help FEMA stand ready to support disaster are funded in the Disaster Relief Fund appropriation. OMA provides resources for the following Logistics Management activities and elements:

- **Logistics Distribution Management (\$0.627 million)** manages a comprehensive supply chain, warehouse, and transportation operation using a strategic alliance of FEMA partner agencies to distribute supplies, equipment, and services rapidly, effectively, and efficiently to support emergencies.
- **Logistics Operations (\$2.562 million)** manages and executes command and coordination, and tracking and reporting for all hazards operations. Logistics Operations serve as the central reporting element for the National Response Coordination Center on all logistics actions and operational activities for HQ and regions.
- **Property Management (\$1.904 million)** provides management oversight, internal control and technical reviews in the areas of property accountability, reutilization and disposal of disaster supplies and equipment. Implements an enterprise-wide property accounting and asset viability system designed and implemented to ensure best value.
- **Logistics Office of Transformation and Initiative (\$6.585 million)** coordinates and manages emerging transformation initiatives and concepts such as the National Logistics Coordinator (NLC) Concept, Key Readiness Contracts and the Demonstration Program: Logistics Capability Calculator (LCC), as well as Logistics Management Transformation Initiatives (LMTI). LMD is the Single Integrator for Strategic Logistics Support and coordinates all domestic emergency logistics planning, management, and sustainment capabilities through the NLC Concept.
- **Logistics Plans and Exercises (\$1.008 million)** develops and determines strategic baseline planning criteria to provide cohesive and synchronized logistics plans and exercises to achieve both short and long term readiness requirements. This LMD element ensures deliberate and coordinated planning efforts, resulting in repeatable processes that optimize national logistics response and recovery operations in support of domestic emergencies and special events.

- **Management and Other Activities- \$18.331 M**

Resources includes Salaries & benefits and management oversight activities

OMA funds for Disaster Logistics are complemented by disaster readiness support through the disaster-specific resources from the Disaster Relief Fund.

Logistics Management Directorate Recent and Planned Accomplishments

FY 2008 Accomplishments

- Continued Logistics Management transformation efforts by recruiting and hiring a permanent workforce to better support current and expanded functions.
- Developed and implemented new internal management controls.
- Created collaborative planning and operational National Response Framework (NRF) partnerships with other Federal agencies.
- Established a Quality Assurance Team for Property Management.
- Developed Professional Credentialing Program jointly with the Emergency Management Institute (EMI).
- Developed the National Logistics Coordinator (NLC) concept, and held the first National Logistics Coordinator forum on March 27, 2008.
- Negotiated and implemented long-term evacuation contracts for rail, bus, and ambulance which were successfully executed during Hurricanes Hannah, Gustav, and Ike.
- Successfully supported major Hurricanes Gustav and Ike by practicing the new LMD business processes, jointly managing the National Logistics Staging Area/Texas Resources Staging Areas and directly managing sixteen of Texas's Points of Distribution (PODs).

FY 2009 Planned Accomplishments

- Develop staffing strategies to augment current FTP staffing in the Regions.
- Validate and document Region Logistics Mission and Functions.
- Continue to train, coach and assist regional logistics personnel.
- Integrate LMD Exercise Program with FEMA National Exercise Program (NEP).
- Refine Regional Logistics Readiness Plans in coordination with State and local logistics partners.
- Align Exercise Planning with the LMD After Action Review (AAR) Improvement Plan and schedule.
- Validate plans through joint regional, HQ and partner participation in tabletop exercises.
- Will transform logistics management of supplies and services by engaging the private sector and incorporating industry best practices. This includes incorporating a Third Party Logistics (3PL) structure into the Logistics Management Directorate as deemed prudent.
- Continue efforts to hire and retain a talented and diverse workforce that supports the national logistics strategy.
- Continue efforts to complete credentialing plans for all job series within LMD.

FY 2010 Planned Accomplishments

- Continue efforts to review and refine the logistics management business processes.
- Continue to retain, recruit, and hire a permanent, professional workforce.
- Continue to promote the National Logistics Coordination doctrine and partnerships with private sector.
- Continue development and expansion of the Total Asset Visibility (TAV) and In-transit Visibility Systems (ITV).

D) Mitigation Directorate (MIT) - \$30.460 million and 67 positions/53 FTE

The Mitigation Directorate creates safer communities by reducing loss of life and property and preventing potential disaster losses. This is accomplished through three core competencies and one support activity:

1. Analyzing Risk through identification and assessment;
2. Reducing Risk through land use, building codes, and the Hazard Mitigation Grant Program;
3. Environmental Planning and Historic Preservation; and
4. Regional and Disaster Support activity

These core competencies and support activity work jointly to create safer communities by reducing the likelihood of future losses, enabling individuals to recover more rapidly from floods and other disasters, and minimizing the financial impact on the U.S. Treasury, states, and local and tribal communities in the event of a disaster. OMA resources for Mitigation activities are complemented by specific appropriations for the National Flood Insurance Fund, Pre-Disaster Mitigation, and Flood Map Modernization. The following Mitigation core competencies and support activity strategies are supported by OMA:

Analyzing Risk

National Hurricane Program (NHP)- \$2.156 million

Established in 1985, the National Hurricane Program (NHP) works to improve the nation's overall hurricane emergency management capability and provides technical information, tools, and products that assist state and local governments in developing effective hurricane emergency management plans. The program is a multi-agency partnership, involving FEMA, the National Oceanic & Atmospheric Association (NOAA), the National Weather Service (NWS), the U.S. Department of Transportation (DOT), the U.S. Army Corps of Engineers (USACE), and other federal agencies. The NHP conducts hurricane evacuation studies that guide the decision-making process for protecting the public when a hurricane threatens an area. These studies help state and local communities establish population protection plans by determining the probable effects of a hurricane, analyzing transportation systems, predicting public response to the threat and advisories, identifying appropriate shelters, and providing clearance times for safely sheltering or evacuating the threatened public.

National Dam Safety Program (NDSP)- \$10.281 million

As the lead federal agency for the National Dam Safety Program, FEMA is responsible for coordinating efforts to reduce risks to life and property from dam failure throughout the United States. The NDSP is a collaborative effort among States, Federal agencies, private sector, and other stakeholders that encourages dam safety and promotes public awareness. The NDSP provides grant assistance to the States, funds training for dam safety staff and inspectors, and funds research to support the improvement of State Dam Safety Programs and increase public awareness on the risks associated with dam failure.

Reducing Risk

National Earthquake Hazards Reduction Program (NEHRP)- \$8.977 million

Established by Congress in 1977, the National Earthquake Hazards Reduction Program (NEHRP) works to reduce risks to life and property resulting from earthquakes. NEHRP is a collaborative effort among FEMA, the National Institute of Standards and Technology (NIST), the National Science Foundation (NSF), and the United States Geological Survey (USGS). The NEHRP agencies work together to reduce the Nation's vulnerability to earthquakes. The agencies research the causes and effects of earthquakes and produce technical guidance to develop earthquake resistant design and construction standards and techniques to educate the public about earthquake hazards and mitigation.

FEMA manages initiatives that reduce the risk of loss of life and damage to buildings and other structures as a result of earthquakes, including the following activities: (1) translating research into technical guidance publications and best practices on seismic safety, building design and construction, building codes and standards, and reducing economic losses; (2) assisting state and local governments in building capabilities for determining potential damage and reducing the effects of earthquakes before they occur; and (3) working with national codes and standards organizations to develop and improve seismic building standards. FEMA also educates the public, design professionals, contractors, building regulators and decision makers at all levels about the risks of earthquakes and how to reduce those risks.

Environmental Planning and Historic Preservation- \$.600 million

The mission of the environmental planning and historic preservation function is to help communities reduce the impact that disasters and emergency management decisions and operations have on the nation's natural and cultural resources. The Office of Environmental Planning and Historic Preservation (OEHP) manages FEMA's compliance with all environmental planning and historic preservation laws, executive orders and regulations, across all FEMA programs. Specifically, OEHP is the functional authority on FEMA's EHP compliance, and must manage all EHP policy, legal sufficiency, systems, human capital (including the EHP Disaster Workforce), outreach and performance management aspects of these requirements.

Regional and Disaster Support- \$.280 million

The Regional and Disaster Support Section of Mitigation incorporates mitigation and insurance opportunities into catastrophic disaster planning, strengthens regions, standardizes tasks carried out in the JFO, develops performance indicators, develops qualifying plans for disaster positions, and creates job aides, curriculum plans and training to ensure a prepared disaster workforce. Systems integration, information sharing across JFOs, and disaster planning for mitigation operations will increase standardization and maximize the potential of rebuilding stronger and safer communities.

The main goals of the Regional & Disaster Support Section are to:

- Maintain an operational disaster response capability to effectively respond to mitigation needs.
- Act as the coordination point for Mitigation disaster operations/activities.
- Develop and integrate disaster operations policies, procedures, training, and cadre development consistent with the National Response Framework.
- Manage the Mitigation Disaster Workforce.

• Management and Other Activities- \$.166 M

Resources includes Salaries & benefits and management oversight activities

Mitigation Directorate Recent and Planned Accomplishments

FY 2008 Accomplishments

- Improved metrics for the National Earthquake Hazards Reduction Program (NEHRP).
- Developed tools and data to document losses avoided through successful mitigation activities.
- Initiated an outreach and awareness project in emergency action planning for dams.
- Completed the digitization and publication of the 21 Training Aids for Dam Safety (TADS) workbooks and videos into DVD format.
- Conducted regional technical seminars on dam safety and sponsored Advanced Technical Seminars and an annual conference that provided extensive training for attendees.

FY 2009 Planned Accomplishments

- Complete the 2009 edition of the NEHRP Recommended Provisions which are the basis of the earthquake design requirements in the Nation's model building codes.
- Conduct business forums in selected communities in areas of high-seismic risk to raise awareness of earthquake risks and encourage mitigation and preparedness in the business community.
- Conduct "listening sessions" with state and local hurricane emergency managers on how best to expand the National Hurricane Program and its suite of technical support products and services. Engage the NEMA's Hurricane Subcommittee to review the listening session findings, and develop a "renewed" National Hurricane Program proposal for the FEMA Administrator.
- Establish a multi-year Interagency Agreement (IAA) with the U.S. Army Corps of Engineers to support post-storm assessment and planning as called for under the amended Stafford Act at Section 402(3)(F). This will reduce the time delay between the event and the post-storm assessment and improve the quality of the assessment.
- Award \$5.0 M to the Office of Geospatial and Technology (GTM), administratively located in the North Carolina Division of Emergency Management (NCDEM) to perform the risk assessment of sea level rise and increased flooding associated with long-term climate change in North Carolina required by P.L. 110-329. Aspects of flooding to be evaluated are: sea level rise and increasing frequency and/or intensity of coastal flooding (surge, wave heights) and erosion. The study will develop reasonable scenarios of potential sea level rise and demographic conditions in North Carolina for four "time slices" through 2100: near term (2025), medium term (2050), long-term (2075), and end of the century (2100). Scenarios are plausible alternative futures – each an example of what might happen under particular assumptions. Scenarios are not specific predictions or forecasts. Rather, scenarios provide a starting point for examining questions about an uncertain future and can help us visualize alternative futures in concrete and human terms. The military and industry frequently use these powerful tools for future planning in high-stakes situations. Using scenarios helps to identify vulnerabilities and plan for contingencies.
- Develop and pilot test training for mitigation and insurance staff serving disaster applicants; develop training and job aides to standardize use of automated systems in providing mitigation information to disaster applicants; and develop qualifying plans for mitigation and insurance disaster workforce positions.
- Develop policies, programmatic agreements, and protocols to facilitate environmental and historic preservation compliance, including specific programmatic guidance for the Preparedness Grant Programs.
- Complete EHP Credentialing Plan for EHP Disaster Workforce and key guidance materials for EHP Disaster Workforce
- Award \$2.425 M to Upper Cumberland and Big Sandy Watershed, KY to demonstrate a wide range of project solutions within the across the multiple disaster preparedness and mitigation programs within FEMA, to include:
 - retrofitting and hardening of existing flood walls and levees;
 - pump refurbishment;
 - transportation infrastructure modifications; and other flood damage reduction projects; and associated land acquisition

FY 2010 Planned Accomplishments

- Complete post-storm assessments for Hurricanes Ike and Gustav.
- Launch a minimum of two (2) pilot studies of hurricane emergency management risk and planning which are not Hurricane Evacuation Studies. Projected studies are for feasibility of real-time

traffic information provided through Intelligent Transportation System technology, and a study in partnership with the Alabama EMA of critical transportation needs population.

- Conduct a series of business forums in selected communities in areas of high-seismic risk to raise awareness of earthquake risks and encourage mitigation and preparedness in the business community.
- Complete hurricane evacuation studies that affect coastal counties in four states (to be determined) by providing technical information in order to safely evacuate those coastal populations that may be impacted by potential storm surge inundation from Category 1-5 hurricanes.
- Develop and implement technologies and tools to identify and prioritize the risk associated with state-regulated high- and significant-hazard potential dams.
- Strengthening regions by adding new Deputy Regional Environmental Officers;
- Develop an EHP human capital plan for all FEMA staff with EHP competencies and an EHP training strategy.
- Develop a system to track disaster field operations training; quantify best practices of mitigation and insurance disaster operations; provide mechanisms to standardize practices across JFOs; and measure the impact of public mitigation information in increasing mitigation measures taken.

E) National Continuity Programs (NCP) - \$131.104 million, 95 positions/82 FTE

FEMA's National Continuity Programs Directorate (NCP) is the lead agent for preparing for and implementing Executive Branch continuity programs, including continuity of government, continuity of operations, and national contingency plans. Today's changing threat environments and recent emergencies, including localized acts of nature, accidents, technological emergencies, and military and/or terrorist attack-related incidents, including the potential for terrorist use of weapons of mass destruction (WMD), have emphasized the need for continuity capabilities and plans that ensure continuity of mission essential functions across the Federal Executive Branch in any crisis or emergency.

- **Continuity Planning and Operations- \$23.414 million**

FEMA leads the effort to coordinate Federal Executive Branch continuity programs to ensure performance of National Essential Functions during a catastrophic emergency. Inherent in FEMA's role as the lead agent for Executive Branch continuity is the responsibility to formulate guidance for agencies to use in developing viable, executable continuity plans; facilitate interagency coordination; and oversee and assess the status of individual and collective department and agency continuity capabilities across the Executive Branch.

The NCP provides plans, procedures, guidance, training, and evaluation resources to ensure the continuation of the essential functions of the Department of Homeland Security (DHS), Federal Emergency Management Agency (FEMA), and Federal Executive Branch departments and agencies in the event key facilities are threatened or become unusable, requiring the relocation of selected personnel and functions. By ensuring these essential government functions continue under all hazard conditions, the program preserves the American way of life.

- **Continuity Readiness Reporting System- \$12.894 million**

NCP operates and maintains the Readiness Reporting System (RRS), which is used to provide the status of the Federal Executive Branch departments and agencies' ability to perform their Priority Mission Essential Functions (PMEFs) in support of the National Essential Functions (NEFs). The RRS is used to conduct assessments and track capabilities at all times under all conditions, including natural disasters, man-made incidents, terrorism, and war. The RRS will ensure senior leadership within the Federal Executive Branch (FEB) have appropriate situational awareness on the status of all FEB departments and agencies and their ability to perform essential functions.

- **Emergency Alert and Communication Functions- \$16.800 million**

Providing the American people with accurate, timely, and actionable information is in increasing demand today. To this end, FEMA's Integrated Public Alert Warning System (IPAWS) leverages modern technologies and methodologies to disseminate a broad spectrum of alerts and warnings across many types of communications platforms, reaching a greater percentage of the population within a shorter period of time.

The IPAWS mission is to support Executive Order 13407, issued on June 2006, which calls for "an effective, reliable, integrated, flexible, and comprehensive system to alert and warn the American people in situations of war, terrorist attack, natural disaster or other hazards to public safety and well being." DHS designated FEMA to lead the executive order implementation. The IPAWS program fulfills the goal of the executive order by testing, developing, and piloting new technologies, standards, and partnerships with Federal, State, and local stakeholders by integrating and improving all aspects of public alerts. The program's scope is summarized by the phrase "one message over more channels to more people at all times and places."

Key Elements:

- Inventory and evaluation of existing capabilities
- Maintenance, protection, and restoration of communications facilities and capabilities necessary for the public alert and warning system
- Conduct training, testing, and exercises of the public alert and warning system
- Digital Emergency Alerting System (DEAS) providing text/voice/video data to radios, TV, and cell phones during emergencies
- Maintain the legacy Emergency Alerting System (EAS).
- Maintain Geo-Targeting Alert System (GTAS) with NOAA's advanced weather input

- **Mount Weather Emergency Operations Center- \$49.913 million**

The MWEOC facility, located in Mount Weather, VA, provides the infrastructure to support COOP, Incident Management, and all hazards activities for multiple Executive Branch Departments and agencies, to include the DHS/FEMA HQ COOP site. In addition, it provides operational space for FEMA Emergency Relocation Group (ERG) members to perform their essential functions. ERG members serve as the FEMA HQ emergency personnel that are responsible for performing the Agency's mission essential function.

- **Management and Other Activities- \$28.083 million**

Resources includes Salaries & benefits, corporate accounts and management oversight activities

National Continuity Programs Recent and Planned Accomplishments

FY 2008 Accomplishments

- Completed facility improvements and infrastructure projects at Mount Weather Emergency Operations Center (MWEOC).
- Established Inter Agency Agreement (IAA) with U.S. Army Corps of Engineers (USACE) to lead the Primary Entry Point upgrades at radio broadcast stations.
- Supported Outreach to educate the public on the Integrated Public Alert Warning System.
- Provided support to the DHS Secretary and Alabama for IPAWS pilot demo in the Gulf Coast.
- Chartered the FEMA IPAWS Federal Working Group (FWG) among FEMA IPAWS, DHS Office of Science & Technology (S&T), FEMA National Incident Management System (NIMS), FEMA

Disaster Management, National Oceanic and Atmospheric Administration, Federal Communications Commission, DHS Office of Emergency Communications, Health and Human Services/Centers for Disease Control, and other federal alert and warning stakeholders.

- Published the Digital Alert and Warning System (DAWS) RFI to assist in research and development (R&D) for implementing standards and protocols, and refined IPAWS requirements.
- Completed IAA with NOAA to perform pilot testing of the Geo-Targeted Alerting System (GTAS).
- Developed, coordinated, and conducted Eagle Horizon 08, the nations' largest and most successful Continuity exercise. The exercise included 12,048 (non-military) participants from fifty-four federal executive branch departments and agencies.

FY 2009 Planned Accomplishments

- Initiate collection of all applicable IPAWS public alert and warning systems data used by Federal, State, Territorial, Tribal, and local agencies.
- Deploy State Digital Emergency Alert System (DEAS) in 8 states and Puerto Rico, to provide Emergency Operation Centers with an alternate means of distributing alerts and warnings
- Execute Memorandum of Understanding (MOU) with 26 new radio broadcast PEP stations and initiate construction.
- Establish a Memorandum of Agreement (MOA) with the DHS Science & Technology and commence efforts to build the Commercial Mobile Alerting System (CMAS) Federal Aggregator.
- Develop and perform initial GTAS application capabilities for pilot testing at State and local Emergency Operations Centers (EOCs).
- Complete deployment, operation, and maintenance of the initial DEAS audio alert capabilities.
- Develop, coordinate and conduct Eagle Horizon 09 interagency continuity exercise.
- Develop the National Continuity Multi-Year Strategy and Program Management Plan (MYSPMP) for Continuity of Operations.
- Conduct Continuity of Operations outreach to all Federal, State, territorial, tribal, and local government jurisdictions and the private.
- Integrate and validate NCP communication systems during National Level Exercises (NLE) and the Department of Defense Interoperability Communications Exercise (DICE).

FY 2010 Planned Accomplishments

- Publish Inventory Assessment Report of the public alert and warning system capabilities and resources.
- Coordinate enhancement of the State DEAS to support states using risk factors such as tornados, wild fires, earthquakes, and blizzards.
- Continue PEP Station Expansion.
- Complete design and development and initiate testing activities for CMAS.
- Complete the deployment of DEAS alert capabilities.
- Develop, coordinate, and conduct Eagle Horizon 2010 national continuity exercise.
- Replace legacy HF radio communications systems in the Regions and the state EOCs.
- Support and conduct continuity preparedness for pandemic to include conduct of the Determined Accord exercise nationwide.
- Build the nation's devolution capabilities for Federal, State, territorial, tribal, and local government jurisdictions through the Vigilant Strategy exercises and template.

F) Office of the Administrator (OA) - \$8.084 million and 39 positions/33 FTE

FEMA's mission is to undertake a broad range of activities involving prevention, protection, response, recovery and mitigation both before and after terrorist events, natural and man-made disasters. The Administrator has the ultimate responsibility for providing the leadership and direction that enables FEMA to accomplish this mission. The Deputy Administrator/Chief Operating Officer is tasked with the overall operational responsibilities at FEMA. To this end, the Office of the Administrator encompasses those resources required to provide a cohesive administrative structure whereby the decisions and mandates of the executive leadership are carried out.

- **Law Enforcement Advisor- \$.150 million**

The Law Enforcement Advisor function was created to nationally enhance communication and coordination between the FEMA and State, local and tribal law enforcement. The Law Enforcement Advisor is a part of FEMA's senior leadership team – participating in our planning meetings and on-hand during times of crisis.

- **Office of Federal Coordinating Officer (FCO) Operations (Funded through the Disaster Relief Fund except five-person support staff- HQ)- \$.100 million**

The Stafford Act directs a Federal Coordinating Officer (FCO) to do the following; 1) make an initial appraisal of the types of relief most urgently needed; 2) establish field offices as the FCO deems necessary; 3) coordinate the administration of relief from other organizations, and; 4) take other such action as directed by the President.

Upon declaration of a major disaster or emergency, the FEMA Administrator appoints an FCO who is charged with initiating all actions necessary to assure that Federal assistance is provided in accordance with the declaration, applicable laws, regulations and the FEMA-State agreement. This may include designation as *Disaster Recovery Manager*, exercising all authority to direct DRF funding in response to a disaster.

The mission of the Office of FCO Operations is to lead, train, equip, and manage FEMA's Federal Coordinating Officers to ensure their availability for rapid deployment in response to any disaster; to deliver training to develop and sustain FCO professional competencies; and to coordinate FCO assignments to meet the on-scene needs of FEMA and its emergency management partners.

The FCO program (funded through the Disaster Relief Fund) consists of forty-five officers (funded through the Disaster Relief Fund) and is administered by a five-person support staff in Washington, D.C. The primary program costs are the travel requirements to attend the training necessary to maintain credentialing and qualifications, and the communication equipment to effectively administer disaster relief from the field.

- **Center for Faith-Based and Community Initiatives- \$.868 million**

The Center of Faith-Based and Community Initiatives (CFBCI) was established by Executive Order 13397, signed by President George W. Bush in March 2006. The Center's role is to coordinate the Department's efforts in eliminating regulatory, contracting and other programmatic obstacles to the participation of faith-based and community organizations in the Department's social and community services programs.

- **Office of the Executive Secretariat - \$.100 million**

The Office of the Executive Secretariat (OES) serves as the primary point of contact for FEMA's Office of the Administrator for coordinating and providing information on departmental tasking, briefing materials and official correspondence. The OES is the central coordination point within

FEMA responsible for ensuring proper and expeditious action on all taskers and correspondence addressed to and from FEMA.

- **Management and Other Activities- \$6.866 M**

Resources includes Salaries & benefits, FEMA Sr. Management oversight activities; National Advisory Council, National Disaster Housing Task Force and the transfer of \$2.021M to the Office of the Secretary; \$2.0M for Intergovernmental Programs and \$21,000 for Secretary's travel.

Office of the Administrator Recent and Planned Accomplishments

FY 2008 Accomplishments

- Implemented the first phase of the "Vision for a New FEMA" that instituted emergency management core competencies, implemented new business approaches for managing risk and significantly increased the permanent workforce.
- Implemented the second phase of FEMA's CORE Conversion project; the transition of FEMA's four-year Cadre On-Call Response Employee (CORE) funded through the Disaster Relief Fund to permanent positions funded through FEMA's Operations, Management and Administration (OMA) appropriation.

FY 2009 Planned Accomplishments

- Implement the second phase of the "Vision for a New FEMA" that will continue the institutionalization of emergency management core competencies, the implementation of new business approaches for managing risk and the continued increase of FEMA's permanent workforce.
- Complete the final phase of FEMA's CORE Conversion project.
- Implement the National Disaster Housing Task Force.

FY 2010 Planned Accomplishments

- FEMA's new administrator will be appointed in FY 2009. The new administrator will determine the FY 2010 plans and priorities for FEMA's continued transformation.

G) Office of Policy & Program Analysis (OPPA) - \$8.732 million and 26 positions/22 FTE

The Office of Policy and Program Analysis is responsible for providing leadership, analysis coordination and decision-making support on agency policies, plans, programs and key initiatives. The Office of Policy and Program Analysis encompasses the following activities and elements:

- **Policy** provides guidance and coordination for the agency's policy system and represents the agency on department-level policy matters as well as coordinating FEMA's GAO/OIG activities.
- **Program Analysis & Evaluation (PA&E)** provides the agency's leadership with objective, comprehensive analyses of current and proposed FEMA programs and provides recommendations concerning program operations and alignment of objectives and resources with strategic priorities.
- **Strategic Planning** provides guidance to help the agency make innovative and informed decisions about FEMA's long term direction, and to facilitate integrated strategic thinking, planning and decision-making.
- **Transformation Management** provides centralized organizational change management across the agency by providing the expertise and structure to execute agency-level projects and the continuity to ensure that change efforts lead to cumulative agency improvements that make FEMA better, stronger, and faster.

- **Defense Production Act (DPA) Program** provides guidance and support for the Department of Homeland Security (DHS) and other Federal agencies to develop plans and programs to expedite and expand the supply of critical resources from the private sector for homeland security, emergency preparedness, response, recovery, and mitigation activities and critical infrastructure protection and restoration.

Office of Policy and Program Analysis Recent and Planned Accomplishments

FY 2008 Accomplishments

- Completed the full integration of Preparedness into FEMA missions and functions, including the three major functions: Grants, Training and Regional activities, as well as the developed plans for the Administration transition in 2009.
- Aligned FEMA's Future Years Homeland Security Program (FYHSP) activities and Office of Management and Budget (OMB) Performance Assessment Rating Tool (PART) measures to increase the agency's focus on quantitative performance measures as a requirement for justifying programs throughout the planning, programming, budget and execution (PPBE) process and the Department's FYHSP process.
- Completed FEMA's Strategic Plan to ensure consistency with the Secretary's goals, Administrator's Vision and the "Post-Katrina Emergency Management Reform Act of 2006," to provide clear strategic direction that guides agency programs, priorities, and resource allocation decisions
- Provided guidance and support for implementation of the Defense Priorities and Allocations System (DPAS) to support timely procurement of resources for emergency preparedness, response, recovery, and mitigation activities and critical infrastructure protection and restoration.
- Developed and coordinated DHS and interagency reports and recommendations to the Homeland Security Council and Congress on the use of DPA authorities for emergency preparedness, response, recovery, and mitigation activities and critical infrastructure protection and restoration.

FY 2009 Planned Accomplishments

- Coordinate full implementation of the transition to a New FEMA including allocating staff resources in FEMA headquarters and the regions.
- Ensure implementation of the FEMA Strategic Plan and assist with the development of FEMA component strategic plans, to include identification of strategic priorities and performance metrics.
- Conduct an analysis of the Grant Programs Directorate to determine the funding level the Directorate requires to operate.
- Support effective implementation of disaster assistance programs through economic analysis of proposed new and revised public and individual assistance rules and regulations and development of a force-sizing model.
- Establish, in coordination with the Office of Management, a comprehensive investment review process for FEMA that reinforces a business discipline and institutionalizes a results oriented, return-on-investment management culture.
- Support DHS efforts to partner with GAO to develop effective protocols, policies and procedures to ensure timely and effective interactions with GAO.
- Institute a Business Intelligence working Group to explore ways to streamline FEMA's data usability and reporting.
- Support the enactment of amendments to the DPA and issuance of Executive Order 12919 to enable more-effective use of DPA authorities in support of emergency preparedness, response, recovery, and mitigation activities and critical infrastructure protection and restoration, and provide coordination support for DPA-related hearings.

- Support DPAS implementation for timely procurement of resources for emergency preparedness, response, recovery, and mitigation activities and critical infrastructure protection and restoration.

FY 2010 Planned Accomplishments

- Monitor implementation of FEMA Strategic Plan and component strategic plans and priorities, and update as necessary to ensure a clear strategic direction for resource allocation and decision making.
- Maintain a program to produce economic analysis of proposed new and revised public and individual assistance rules and regulations that will allow FEMA to support more effectively disaster and emergency victims.
- Review and refine FEMA's investment review process for FEMA to ensure support to the agency's mission and strategic plan, and reinforces accountability to a results oriented, return-on-investment discipline.
- Implement the new protocols, policies and procedures for DHS interactions with GAO.
- Support DPAS implementation for timely procurement of resources for emergency preparedness, response, recovery, and mitigation activities and critical infrastructure protection and restoration.
- Support development of voluntary agreements by FEMA and other DHS components to facilitate private sector involvement in emergency preparedness planning and response activities and critical infrastructure protection and restoration.
- Conduct training on use of DPAS and participate in national-level exercises and support Federal agencies in preparing DPA guidance.

•

H) Office of the Chief Financial Officer (OCFO) - \$46.549 million and 185 positions/157 FTE

The Office of the Chief Financial Officer supports the FEMA mission by providing financial management information, fiscal services and financial policy support to FEMA's management and oversight organizations. The OCFO is comprised of two line operating divisions: Budget Division and Financial Management Division. The operating divisions are supported by four staff functions: Financial Policy Staff; Risk Management and Compliance Staff; Financial Systems and Reporting Staff; and Business Operations Staff. OCFO also have oversight of DHS Working Capital Fund and PCS moves.

- **Budget Division (\$.982 million)** performs an ongoing role in the planning, formulation, justification, analysis, and execution of FEMA's operating, mitigation and disaster budgets. Budget has the primary responsibility for making recommendations to the Administrator and presenting FEMA's budget proposal to the Department, OMB, and Congress. After budgets are approved by the Congress and signed into law by the President, Budget monitors the agency's execution activities for conformance with executive and legislative intent.
- **Financial Management Division (\$.982 million)** performs all accounting services for 116 FEMA Appropriations. The Division reconciles accounts and ensures accuracy of trial balance for the preparation of financial statements and accompanying footnotes. It manages debt collection activities. Division personnel perform the invoice approval and payment processes for all mission assignments, reimbursables, and other intergovernmental payments. They ensure timely and accurate recording of grant obligations and process final closeouts in the financial system. As well as coordinating with internal and external entities to ensure compliance with DHS/FEMA policies, legislation and directives related to financial controls.
- **Financial Policy Staff** develops agency-wide policies, procedures and standards for all financial areas and promulgates these and related government-wide financial management requirements throughout the Agency.

- **Risk Management and Compliance Staff** is responsible for developing and implementing the Agency's Internal Controls program as defined by OMB Circular A-123.
- **Financial Systems and Reporting Staff** Provides technical support to implement and maintain the OCFO financial management systems/interfaces. Furnish accurate, relevant and timely financial information to our clients.
- **Business Operations Staff** (\$6.586 million) supports day-to-day operations of the OCFO through coordinating strategic planning, knowledge management, human capital management, Continuity of Operations (COOP) activities, leadership and staff development coordination, and management of the OCFO operational budget.
- **Management and Other Activities- \$37.999 M**
Resources includes Salaries & benefits, corporate accounts and management oversight activities

FY 2008 Accomplishments

- Completed a reorganization of the OCFO based on the organizational assessment conducted in FY 2007.
- Consolidated transactional accounting for all appropriations at the FEMA Finance Center.
- Conducted, in conjunction with the Office of Policy and Program Analysis, quarterly and special requirements Investment Working Group (IWG) meetings to provide FEMA-wide transparent review and recommendations of resources to support the senior leadership decision making process.
- In conjunction with DHS, defined requirements for a new financial management (accounting) system to replace FEMA's current financial (accounting) system – IFMIS.

FY 2009 Planned Accomplishments

- Resolve the structural pay shortfall within OMA and strengthen management controls for staffing and hiring within the Agency.
- Lead the FEMA effort to remediate known material weaknesses identified in the FY2008 financial statements audit
- Lead an Agency-wide effort to strengthen risk management and internal controls, including a review of management controls for select Agency functions, as outlined by OMB Circular A-123.
- Institutionalize FEMA's internal control process, to include the regions.
- Document and disseminate key financial management policies and procedures to improve service and support for Agency program offices
- Implement an automated Budget Tool within the OCFO and conducted training with other Agency program offices
- Develop pilot Knowledge Management tool for use in OCFO.

FY 2010 Planned Accomplishments

- Strengthen financial management systems, including the implementation of an automated budget system to support budget formulation and execution within FEMA
- Develop and implement a management dashboard to measure and track key financial management performance indicators.
- Improve the quality of financial reporting within the Agency, including the development of a detailed monthly status of funds report for all appropriations.

- Broaden implementation of automated budget tool across program offices and regions to assist in the interpretation and application of program/organizational requirements in the formulation and execution of the budget process.
- Expand Knowledge Management Tool for use across the Agencies distributed financial management community.

I) Office of Chief Counsel (OCC) - \$7.357 million and 42 positions/36 FTE

The Office of Chief Counsel (OCC) provides professional legal services to the Administrator, FEMA senior leadership, and the DHS General Counsel on all legal and policy matters before the agency and its organizational elements to support and facilitate the mission and reducing obstacles to the achievement of DHS and FEMA goals. The OCC provides legal assistance to the agency's diverse mission elements, including services related to acquisition, grants, and property management; alternative dispute resolution; budgetary and fiscal law; ethics and contractor integrity; human capital management, labor relations, and equal opportunity; information, intellectual property and privacy matters; legislation and regulations; litigation and claims; and policy coordination. OCC also provides legal assistance through Field Attorneys, who are located across the United States.

J) Office of Equal Rights (OER) - \$2.595 million and 17 positions/14 FTE

The Office of Equal Rights (OER) serves the agency and the Nation by promoting affirmative employment, and a discrimination-free workplace, and equal access to FEMA programs and benefits. OER encompasses the following activities and elements:

- **Civil Rights Program (\$348 million)** entitles any person eligible to receive disaster aid or other services from FEMA to those benefits without discrimination. The Civil Rights Program provides the following services: Technical Assistance, and Complaints Resolution. Technical assistance is provided through policy guidance to the agency in meeting Civil Rights mandates. In disaster operations, staff works closely with community organizations to resolve tensions and eliminate potential complaints. The office also provides assistance to FEMA and the national emergency management community in the effort to make publications, programs, and facilities accessible to people with disabilities. Complaints resolution is provided for anyone who believes they have been discriminated against in receiving services or benefits from FEMA.
- **Disability Coordinator (\$.260 million)**
The Disability Coordinator integrates consideration for persons with disabilities into all FEMA disaster program applications. The position coordinates with government agencies, and nonprofit disability advocacy groups to insure equal access to FEMA services and benefits for survivors with disabilities. The Disability Coordinator provides guidance and coordination on matters related to individuals with disabilities in emergency planning requirements and relief efforts.
- **Equal Employment Opportunity (EEO) Program (\$.241 million)** enforces Federal discrimination laws that cover all FEMA personnel, including DAEs and applicants for employment. Through the EEO program, OER provides a variety of services, including equal rights training for managers, supervisors, and employees; developing and maintaining an informal and formal EEO discrimination complaint process; increasing resolution of complaints through Alternative Dispute Resolution (ADR); and, proactively recruiting employees and Special Emphasis programs.
- **Management and Other Activities- \$1.746 M**
Resources includes Salaries & benefits, corporate accounts and management oversight activities

Office of Equal Rights Recent and Planned Accomplishments

FY 2008 Accomplishments

- Developed web-based EEO training programs.
- Continued agency guidelines to address Limited English Proficiency problems in emergency assistance and civil rights.
- Continued with plan of action to conduct compliance review focusing on the Katrina disaster.

FY 2009 and FY 2010 Planning Accomplishments

- Conduct management training at all FEMA facilities to help in understanding civil rights laws, the application of the laws in the Federal sector and their responsibilities as managers.
- Develop disability awareness training to ensure managers and supervisors are aware of methods/process of procuring goods and services related to reasonable accommodations.
- Develop a plan of action to conduct a FY 2009 compliance review focusing on a disaster from the previous year.

K) Office of the Associate Deputy Administrator (Regions) - \$101.260 million and 858 positions/780 FTE

The Office of the Associate Deputy Administrator serves as the agency's office through which all policy, managerial, resource and administrative actions that affect or impact the regions receive effective coordination between headquarters and regional offices. The Associate Deputy Administrator also ensures that FEMA policies, programs, administrative and management guidance are implemented in the regions in a manner consistent with the agency's overall goals. The Associate Deputy Administrator encompasses the following activities and elements:

- **Regional Offices \$8.864 million** establish a regional, all-hazards, emergency management system of preparedness, mitigation, response, and recovery through close working relationships with Federal agencies, State, tribal and local governments, business and industry, and volunteer organizations in implementing FEMA's policies and programs. The 10 Regional Offices are the primary vehicle by which the agency's policies and programs are delivered and accomplished at the State and local levels of government. The Regional Offices serve as the implementation arm for the full range of the agency's programs. The Regional Offices, which are augmented by Area Offices in the Caribbean, Hawaii and Alaska, serve all 50 states and U.S. territories. Regional staffs work directly with the States to help develop disaster preparedness plans, develop mitigation programs and respond to disasters when events exceed the capability of the State to effectively meet residents' needs.
- **Office of Regional Operations \$.740 million** serve as the agency's office through which all policy, managerial, resource and administrative actions that affect or impact the regions receive effective coordination between headquarters and the regional office. Regional Operations also ensures that FEMA policies, programs, administrative and management guidance are implemented in the regions in a manner consistent with the agency's overall goals.
- **Management and Other Activities- \$91.656 M**
Resources includes Salaries & benefits, corporate accounts and management oversight activities

Office of the Associate Deputy Administrator Recent and Planned Accomplishments

FY 2008 Accomplishments

- Established Regional Advisory Councils on emergency management issues specific to regions.
- Established Regional Emergency Communication Coordination Working Groups to advise on all aspects of emergency communication.
- Expanded FEMA's capability to work with State partners on operational planning capabilities.
- Continued policy and regulatory review and implementation.
- Continued professional staff development.
- Continued to provide support, coordination and communication between headquarters program offices and the regions.

FY 2009 and FY 2010 Planned Accomplishments

- Develop efficient and effective regional and State partnerships to facilitate a seamless end-to-end logistical system.
- Establish a proactive internal and external outreach program.
- Increase operational awareness with 24/7 Regional Response Coordination Centers.
- Continue to expand FEMA's capability to work with State partners on operational planning capabilities.
- Continue to strengthen core capabilities, competencies and capacities.
- Continue to provide support, coordination and communication between headquarters program offices and the regions.

L) Office of External Affairs (OEA) - \$16.669 million and 78 positions/66 FTE

The Office of External Affairs provides leadership, message coordination, communication, analyses, relationship building and decision-making support on Agency policies, plans, programs, key initiatives and actions that affect stakeholders. The OEA provides operational services to FEMA's mission for Legislative Affairs, Public Affairs, Intergovernmental Affairs, International Affairs, and Private Sector Initiatives.

- **Intergovernmental Affairs \$0.045 million** serves as FEMA's primary national level liaison for tribal, state, and local officials and the associations that represent their interests. The division supports senior FEMA leadership by coordinating meetings with intergovernmental partners and facilitates partner participation in the FEMA policy development process.
- **International Affairs \$0.480 million** works toward developing cross border agreements with international partners to support U.S. domestic all-hazards preparedness, response, recovery, and mitigation. The division's work is currently focused on Canada, Mexico, Israel, Russia, and NATO countries. International Affairs is also responsible for managing the International Assistance System, which is a set of plans, policies, and procedures for managing international assistance following a disaster.
- **Legislative Affairs \$0.370 million** serves as FEMA's primary liaison to congressional committees, members of Congress and their staff. The division responds to congressional committee oversight and other inquiries from individual Members and their congressional staff; notifies Congress about agency initiatives, policies, and programs; and develops and implements strategies to advance the FEMA's legislative initiatives and other interests relating to Congress.
- **Private Sector Initiatives \$0.220 million** is responsible for the initiation, planning and implementation of the activities necessary to build a private sector network and develop functional relationships with major companies and universities across the United States. The division

identifies private sector best practices to improve FEMA processes and to deliver better service to customers, and it establishes partnerships to more effectively engage the private sector, as well as the state, local, and tribal levels, in all phases of disaster management.

- **Public Affairs \$2.500 million** coordinates FEMA's public message and serves as the primary point of contact with the media and the American public to communicate FEMA's actions, activities, responsibilities, and initiatives. Public Affairs coordinates with all FEMA offices to maintain a central pool of information; tracks and manages all contacts with the media; maintains FEMA's public communications, such as press releases and the FEMA web page; and educates FEMA employees through internal communications and meetings.
- **Ready.gov \$2.500 million** is a national public service advertising campaign designed to educate and empower Americans to prepare for and respond to emergencies including natural disasters and potential terrorist attacks. Launched in 2003, the goal of the campaign is to get the public involved and ultimately to increase the level of basic preparedness across the nation.
- **Management and Other Activities- \$10.554 M**
Resources includes Salaries & benefits, corporate accounts and management oversight activities

Office of External Affairs FY 2008 (Recent) and FY 2009 & FY 2010 (Planned Accomplishments)

FY 2008 Accomplishments

- Invested in stronger regional external affairs operations through implementing first phase of establishing regional external affairs directors
- Funded development of National External Affairs training strategy to better support strategic communications efforts
- Fostered outreach to tribal, state and local officials across FEMA program and initiatives, including the Readiness Gap Analysis, IPAWS, and disaster response operations across the country.
- Developed course curriculum for IGA certification training through EMI (Emergency Management Institute, Emmitsburg, MD) and formulated national IGA cadre management for Joint Field Office disaster response and recovery support.
- Developed a pilot Integrated Emergency Management Course (IEMC) between Nogales Mexico and Nogales, Arizona. The effort is geared toward strengthening cross-border communication and information sharing during an emergency.
- Partnered with the U.S. Agency for International Development (USAID) to provide disaster management training and technical assistance to the Government of India via a Disaster Management Support Cooperative Agreement.
- Coordinated with Congressional Authorizing Committees to bring about short-term reauthorization of National Flood Insurance Program
- Established first-of-its-kind Loaned Executive program to bring private sector expertise to FEMA operations
- Coordinated the most successful National Preparedness Month effort to date with more than 3,200 Coalition Members joining the Campaign to educate individuals, families and communities on the importance of emergency preparedness. This was developed, in partnership with Sesame Workshop, a multimedia toolkit targeted to pre-school aged children and their families that aims to encourage this audience to learn about and prepare for emergencies as a family.
- Assisted two states (Pennsylvania and Georgia) and one city (Houston) in localizing the Ready Campaign. This included localizing PSAs and securing local donated media commitments.

- In partnership with Citizen Corps, American Red Cross, and The Humane Society of the United States, developed a pet preparedness toolkit that can assist animal advocates in their planning and outreach efforts as they work toward keeping their community and specifically, the pets and people who care for them, safe from disasters.

FY 2009 and 2010 Planned Accomplishments

External Affairs

- Develop and implement National External Affairs technology strategy to identify, acquire and deploy technology to support External Affairs' mission to communicate with stakeholders and the general public during disasters.
- Standardize credentialing and task books to improve capabilities and consistency in field operations.
- Increase tribal relations efforts and implement tribal liaison credentialing.
- Implement and execute a 5-year US-Mexico Work Strategy and a US-Canada Work Strategy.
- Reenergize US-Israel Working Group.
- Continue to work with NEMA and the Canadian Emergency Managers Association on cross-border mutual aid.
- Complete the exercise with Russia EMERCOM that will allow them to gain UN certification.
- Engage EMI/CDP to create an international training cadre.
- Enhance communications channels to engage private sector partners before, during and after a disaster.
- Enhance Private Sector field operations to provide proactive support to and engagement of private sector stakeholders during response and recovery operations.
- Facilitate annual private sector conference and/or meetings focused on promoting public-private partnerships as well as offering private sector partners a forum to discuss emergency management issues.
- Develop and implement communications strategies and tactics to address the challenge of public complacency in order to foster a national ethic of preparedness.

M) Management Directorate (MD) - \$229.896 million and 634 positions/539 FTE

The Management Directorate provides operational services and leadership oversight to FEMA's mission for Human Capital Management, Acquisition Management, Records and Document Management, Facilities Management and Support Services, Security Services, Information Technology Services, Disaster Reserve Workforce Management, and Occupational Safety, Health and Environment. Management Directorate also has oversight of all corporate account functions; rent, workman's comp, Federal Protection Services (FPS), mail consolidation, printing, postage and IT certification.

- **Human Capital Management \$8.320 million** plays a critical role in managing the agency's most important asset, its people. Human Capital Management is responsible for a broad range of activities, including identifying and recruiting the best available talent, and partnering with managers to retain, develop and motivate FEMA's people to reach their fullest potential. Human Capital Management encompasses workforce planning, employment and recruitment, pay and performance, training, organizational development, employee and labor relations, awards, leave, workplace programs, employee grievances and appeals.
- **Acquisition Management \$8.710 million** is designed to provide a full range of acquisition services and business solutions to FEMA's programs, partners and stakeholders. Acquisition Management is responsible for all contracting and related activities to fulfill the agency's mission.

Acquisition Management supports the procurement and contract management programs' policies, procedures, operations, contract planning, awards, administration and closeouts. Acquisition Management also manages FEMA's Competitive Sourcing Program.

- **Support Services and Facilities Management \$23.912 million** acquires and maintains adequate facilities and space, and provides support services that enable staff to effectively complete their work to achieve FEMA's mission for the National Capital Region (NCR) and Regional Operations. Support Services and Facilities Management encompasses the following activities: Customer Service; Facilities Operations and Maintenance; Repairs and Alterations; Regional Support; Space Management; Real Property Asset Management; Personal Property; Fleet Management; Publishing, Reproduction and Graphics; and Mail Operations.
- **Occupational Safety, Health and Environment (\$3.051 million)** supports and enhances the Agency operations by providing leadership, oversight, guidance and support in the protection of human health and the environment to FEMA programs, facilities and operations throughout the country. This is accomplished through the management and deployment of the National Safety Cadre, Collateral Duty Safety Officer Training, Management Evaluation Technical Assistance Reviews, Life Safety and Fire Engineering Plan Reviews, and Environmental Regulatory Compliance Review.
- **Security Services (\$17.321 million)** provides professional and comprehensive security services, programs and activities designed to protect FEMA personnel, facilities, information and equipment, including national security requirements. Security Services encompasses the following elements: Physical Security, Personnel Security, Disaster Security Operations, Technical Security Countermeasures Program, Administration Security Services, Information Security, Operations Security, Special Security Programs and Security Training.
- **Records and Document Management (\$1.792 million)** administers the Agency's statutory programs that include Records Management, Privacy Act, Freedom of Information Act, Information Quality Act, Paperwork Reduction Act, Federal Advisory Committee Act, and administrative support programs that include Correspondence Management, Forms Management, Directives Management, Research Service, and National Archives and Records Administration (NARA) Reimbursable Program. Records Management also administers and manages the enterprise systems for the collection, preservation, management and safeguarding of records, correspondence and historical research material.
- **Information Technology Services (\$65.201 million)** provides Information Technology Services in support of FEMA's missions and to enhance and maintain Information Technology (IT) infrastructure; develop and enhance key systems to support operating programs; and increase efficiencies and operation across FEMA's divisional and regional lines.
- **Disaster Reserve Workforce, (\$.550 million)** established in March 2008, this new Division grew out of the Disaster Workforce Management section within the Disaster Operations Directorate and is now led by a career Senior Executive. It is FEMA's single accountable program manager for transforming the legacy Disaster Assistance Employee program into an all-hazard Disaster Reserve Workforce. Since 70 percent or more of all FEMA employees who deploy are Disaster Reservists, this Division also coordinates policy affecting Disaster Reservists and the deployment, tracking, and FEMA-specific credentialing and training of all FEMA employees for disaster response and recovery.
- **Executive Office/Business Management Office (1.405 million)** provides Program Management and lifecycle support; assist Organizational Units with: Business process reengineering, knowledge and information management and Program and Project Management; ensure compliance of assigned programs with Agency investment review procedures and lead cross functional teams composed of individuals representing various organizations within an agency for the purpose of performing responsibilities involving program review, oversight and reporting.

- **Management and Other Activities- \$99.634 M**
Resources includes Salaries & benefits and corporate accounts activities

Management Directorate Recent and Planned Accomplishments

FY 2008 Accomplishments

- **Acquisition Management**
 - Established a strategic roadmap for the Office of Acquisition Management that outlines goals, objectives and strategies to build a world-class acquisition organization.
 - Implemented reverse auctioning capability by establishing a partnership with FedBid for the streamlined, competitive acquisition of commercial commodities.
 - Developed interfaces to the financial management system to enable migration to a new contract management and tracking system and designed associated business process improvements.
 - Developed and coordinated the addition of an Acquisition Advisor to the Federal Coordinating Officer under the ICS structure to include improving the quality of business advice and expertise during major disasters and emergencies.
- **Human Capital**
 - Continued the successful operations for staffing and increasing the authorized end strength of FEMA by 78 percent from the FY 2007 level.
 - Provided services for the hiring of approximately 13,600 disaster workforce employees.
 - Successfully completed the transfer of 576 Preparedness employees from the Department of Homeland Security Human Capital Office to FEMA's Human Capital Division.
 - Established the "BEST Workforce" initiative (a 5 year program) that will improve and engage employee professional growth and development to attract and retain a talented workforce for FEMA.
- **Information Technology**
 - Completed a disaster recovery capability for the FEMA financial system of record.
 - Transitioned National Preparedness Directorate (NPD) and Grants Program Directorate (GPD) from the DHS network to the FEMA network resulting in a cost avoidance for NPD/GPD with no negative impact on services.
 - Awarded the Enterprise Application Development, Integration, and Support (EADIS) contract to: 1) improve controls over software development while consolidating development efforts across the agency; 2) standardize architecture, eliminate duplication of efforts, provide readiness stance; and 3) provide an implementation vehicle for MD 0007.1.
 - Placed 75 percent of new FY 08 positions received by ITD into the IT Security Branch, this increased IT security staff by 200 percent resulting in the attainment of "green" on the Agency FISMA score card with a score of 98 percent .
 - Improved Protection of Data by: 1) procuring encrypted thumb drives and distributing them to employees; 2) deployed pilot PC based "Lo-Jack" system for mobile computing assets; and 3) implemented improved data protection through acquisition of encrypted storage devices and mobile encryption solutions.
 - Coordinated with 16 Federal partner agencies to developed and improve an application resulting from Executive Order #13411, which directed agencies to consolidate all Federal disaster assistance available to the victim into one portal. The Disaster Assistance Improvement Program (DAIP) was the end result of this effort.
 - Completed Phase I of IT Depot which centralized the procurement and fielding of IT commodities and provides a dramatically improved level of service.
 - Initiated transition to DHS OneNet, in which planning and circuit orders have been completed, and anticipate operational capability by the 3rd quarter of FY 2009.

- **Facilities Management and Support Services**
 - Established and staffed a new Space Management program office to improve delivery of customer space projects within the NCR.
 - Established and staffed a new Regional Operations program office to better address Enterprise Space Management needs and Regional office requirements.
 - Completed two “built to suit” facilities totaling 207,879 square feet (sf) of space to house 1,025 employees, one of which is a LEED-Silver certified building.
 - Reconfigured and re-occupied 17,000 sf of space in the NCR that houses the Federal Coordination Center, National Exercise Simulation Center, and the National Incident Management Assistance Team.
- **Security**
 - Continued rollout of HSPD-12 (SmartCard) at FEMA Headquarters.
 - Provided security support and services for new NPSC facilities in MD and VA.
 - Hired the first regional Security Officer at FEMA’s Region VIII.
 - Continued fielding of the Electronic Fingerprint System (EFS) to FEMA field locations.
- **Records Management**
 - Implemented a records management support services contract that provides support services to program offices with the development of their unique file plans and organizing their file rooms.
 - Acquired contractual support to augment the FEMA FOIA Program to assist the program with efficient FOIA processing and effective customer service.
- **Disaster Reserve Workforce**
 - Co-sponsored with the Emergency Management Institute (EMI) an 18-month initiative that will produce a standardized, NIMS-compliant credentialing process applicable to FEMA disaster workers and the 230 disaster job titles found in Joint Field Offices (JFOs).
 - Developed and deployed a web portal to provide Disaster Reservists, particularly those located outside of the Agency firewall, to access reserve-specific information while in a non-deployed status.
 - Initiated development of WebADD, a web based deployment system designed to replace the Agency’s legacy ADD system and serve as a bridge to a future Human Capital enterprise information system.
 - Prepared and forwarded through FEMA and DHS leadership, a legislative agenda to improve benefits and recruiting/retention of Disaster Reservists.

FY 2009 Planned Accomplishments

- **Business Management Office**
 - Currently and for the remainder of this FY FEMA is focused on 41 FEMA operational tanks, 200 Underground Storage Tanks and another 30 above ground tanks.
- **Acquisition Management**
 - Sustain and improve business processes by leveraging e-business technologies such as ProTrac, ProDoc, FedBid and other systems.
 - Build upon the COTR program by establishing a tiered COTR development program that provides greater levels of training based on the level of contract management required for a particular program or contract.
 - Facilitate the conduct of two Standard competitions under Circular A-76, one for a function in FEMA IT and one for a function in OCFO.

- **Human Capital**
 - Implement new technology for staffing, recruitment, workflow process and to improve FEMA's performance in comparison to OPM's 45 day hiring model.
 - Establish workforce planning methodologies for FEMA.
 - Convene career development panels to identify the optimum learning and experience paths in critical occupational specialties to ensure continued availability of leaders and technical experts to support succession driven need.
- **Information Technology**
 - Consolidate the Grants Integrated Financial Management Information System (IFMIS) into FEMA's IFMIS and clean-up data.
 - Deploy Resource Management On-line.
 - Acquire solution, build, and deploy the Human Resource System
 - Prepare integration plan to integrate Non-Disaster Grants (ND Grants) and Emergency Management Mission Integrated Environment (EMMIE) Grants System
 - Build and deploy Phase II of the Disaster Assistance Improvement Program (DAIP)
 - Deploy Risk Map
 - Establish initial operating capability for the National Emergency Simulation Center (NESC) in the Federal Coordinating Center (FCC)
 - Build all new Disaster Recovery capabilities into the DHS data centers
 - Design and implement initial operating capability of FEMA De-Militarized Zone to ensure inter-agency data and infrastructure sharing
 - Transition to DHS OneNet and to the DHS Security Operations Center.
 - Design and deploy the modernized VTC initial operating capability for the National Hurricane Center
 - Deploy encrypted thumb drives
- **Occupational Safety, Health and Environment**
 - Update credentialing plan for the National Safety Cadre to support the disaster workforce criteria.
 - Continue to develop mandated safety and health agency wide programs and required training courses.
- **Support Services and Facilities Management**
 - Implement Occupant Emergency Planning (OEP) for all NCR facilities.
 - Comply with Executive Order 13327 by documenting FEMA's Real Property Portfolio using RPMS 270Net inventory database.
 - Begin planning for Regional office relocations for Regions 2, 4, 6, 8, 9, and 10 over the next five years. These relocations are needed due to increased staffing and expiring leases.
 - Support Regional offices by implementing a five-year capital planning process and work with Regions to capture essential data and improve the process.
- **Disaster Reserve Workforce**
 - Work with planners and cadre managers for FEMA's 23 cadres to determine the number and composition of Disaster Reservists required for response and recovery operations.
 - Develop and promulgate policies (e.g. holiday compensation, sick leave, and telework) and any legislative initiatives that address benefits or training for Disaster Reservists.
 - Develop a national strategy and marketing plan to standardize and streamline recruitment of Disaster Reservists in targeted areas.
- **Security**
 - Rollout and issue DHS HSPD-12/SmartCard.
 - Implement security guard reductions at FEMA facilities.

- **Records Management**
 - Assist Directorates and Offices with file plans to prepare for the implementation of FEMA's Enterprise Records Management System (FERMS).
 - Implement the FOIA Backlog Reduction System (FBRS) to aid in the reduction of FEMA's backlogged FOIA request.
 - Provide Records Management Training to Records Liaison Officers (RLOs) to strengthen records management practices agency-wide

FY 2010 Planned Accomplishments

- **Business Management Office**

Repair, replacement, restoration and remediation of underground storage tanks and ensure they are properly maintained and are regulatory compliant FEMA has about 1,200 in its inventory which are scheduled for assessment through the life of the project (3 years approximate).

- **Acquisition Management**

- Continue to implement and refine the OAM strategic roadmap and improve the office's ability to meet customer needs.
- Facilitate the conduct of one Streamline competition (OCFO) and one Standard competition (FEMA IT) under Circular A-76.

- **Human Capital**

- Convene career development panels to identify the optimum learning and experience paths in critical occupational specialties to ensure continued availability of leaders and technical experts to support succession driven need.

- **Information Technology**

- Deploy the new DHS HR system.
- Define reservist workforce requirements for the HR system and build them into the enterprise-wide solution.
- Complete deployment of eCAPS for non-disaster acquisitions.
- Build and deploy phase 1 of EMMIE, the consolidated (disaster and non-disaster) Grants system.
- Transition to the DHS property management system.
- Expand partnerships for the operating capability of FEMA De-Militarized Zone to ensure inter-agency data and infrastructure sharing.
- Design and deploy the initial operating capability for the Hydrologic Prediction Center VTC capability.
- Synchronize Freedom of Information Act management with the new e-Mail storage capability.

- **Occupational Safety, Health and Environment**

- Develop all required safety and health programs as identified during the FY 2007-2008 management evaluation technical assistance reviews.
- Develop and implement a life safety audit and fire protection program.
- Increase the National Safety and Health Disaster Cadre workforce by 50% to maintain a fully staffed Cadre.
- Institute FEMA-wide Environment Management System processes at each applicable location/operation to ensure efficient management of compliance issues.

- **Support Services and Facilities Management**

- Evaluate options for consolidation of NCR facilities.

- Initiate development of office automation tools to enhance accountability, improve reporting and strengthen internal controls.
- Continue to provide facility and support services in support of FEMA's mission.
- Support Regional offices by managing the five-year capital planning process and work with Regions to capture essential data and improve the process.
- **Disaster Reserve Workforce**
 - Complete the standardized credentialing plan project initiated with EMI in FY 2008 and continued in FY 2009.
 - Combine skill-specific workforce requirements determined in FY 2009 with the attainment of credentials earned by Disaster Reservists to target recruitment and compensation activities using a national approach to Disaster Reservist recruiting.
 - Fund, plan, manage and execute a greatly expanded program of regularly scheduled, pre-declaration Disaster Reserve Workforce training in accordance with the newly established Agency wide credentialing plan.
- **Security**
 - Rollout and issue DHS HSPD-12/SmartCard.
 - Develop and expand duties of the Regional Security Officers.
- **Records and Document Management**
 - Improve the Personal Identifying Information (PII) breach assessment and response process by developing FEMA's Privacy Directive and SOPs to include a PII breach mitigation matrix and implementing annual PII training.
 - Develop and implement the FEMA's Enterprise Records Management System (FERMS) which will enable the Agency to quickly identify, store, and preserve records.

PPA – NATIONAL CAPITAL REGION COORDINATION (NCRC)

	Perm Pos	FTE	Amount
2008 Actual	14	12	\$5,861
2009 Enacted	20	20	\$6,342
2010 Adjustments-to-Base	0	0	\$653
2010 Current Services	20	20	\$6,995
2010 Program Change	0	0	\$0
2010 Request	20	20	\$6,995
Total Change 2009-2010	0	0	\$653

FEMA requests \$6.995 million for this activity. This is an increase of \$0.653 million over FY 2009.

CURRENT SERVICES DESCRIPTION

Established by Congress in the Homeland Security Act of 2002, the Office of National Capital Region Coordination (NCRC) advances homeland security, including all hazards preparedness, in the National Capital Region (NCR). NCRC works closely with Federal, State and local partners to sustain a common regional approach to homeland security and address selected priorities, including: (1) Federal integration and participation with National Capital Region partners; (2) catastrophic planning; (3) regional risk-based capability development, and (4) regional governance and coordination. These priorities are based on actual events and regional strategic planning efforts that have underscored the need for greater multi-jurisdictional coordination.

- **Federal Integration**

The high concentration of Federal Government facilities, assets, and personnel in the NCR places a premium on situational awareness and the coordination of Federal preparedness and response activities. NCRC will continue its crosscutting work within FEMA/DHS and with other Federal partners to enable unity of effort, provide decision support, facilitate the sharing of regional situational awareness and enhance integrated planning.

- **Catastrophic Planning**

NCRC will leverage ongoing preparedness activities to maintain and evolve multi-jurisdictional catastrophic planning processes. This includes support to State and local evacuation, sheltering and mass care planning efforts within the NCR and surrounding FEMA Region III areas.

- **Regional Level Risk-Based Capability Development**

NCRC will continue its groundbreaking regional risk analysis efforts to enable NCR leaders to make informed resource allocation and capability development decisions. Additionally, NCRC will continue its efforts to improve functional and technical interoperability, including communications, credentialing, operations center coordination and CBRNE protocols.

- **Regional Governance Participation and Coordination**

NCRC will continue to collaborate with NCR senior leaders in numerous forums, including the NCR Senior Policy Group (homeland security advisors and chief emergency managers), and provide support in sustaining a regional governance structure for homeland security. NCRC will also continue to

participate in the numerous exercises and events (e.g., NSSEs, July 4th, demonstrations, state funerals) that occur in the NCR to enhance planning and “lessons learned” efforts.

National Capital Region Coordination Recent and Planned Accomplishments

FY 2008 Accomplishments

- Improved Federal integration through development of the NCR Federal Coordination Center (NCR FCC) to provide more robust situational awareness, planning, exercise and response coordination. Initiated Presidential Inauguration planning.
- Enhanced catastrophic planning by creating an information sharing forum for Federal emergency managers; conducting Federal evacuation and emergency preparedness tabletops; and, participating in State and local planning efforts, e.g., Regional Catastrophic Preparedness Grant Program.
- Developed the NCR Strategic Hazards Identification and Evaluation of Leadership Decisions (SHIELD) risk assessment and strategic risk management approach.
- Enabled FEMA to meet P.L. 110-53 requirements to begin credentialing Federal Emergency Response Officials (F/EROs), in a manner that supports interoperability and mutual aid needs, via development of an NCR pilot.
- Produced draft NCR bio-detection notification plan, with interagency partners.
- Strengthened interoperability by coordinating agreements between DHS and NCR partners to integrate Critical Information Management Systems, and by conducting selected operations center baseline assistance visits and technology demonstrations.
- Organized award-winning Preparedness Month activities involving Federal, State, local and nonprofit partners to improve regional emergency preparedness.

FY 2009 Planned Accomplishments

- Gained unprecedented levels of information sharing among Federal, State and local agencies for the 2009 Presidential Inauguration. Activities included CONOPs development, tabletop exercises, agency representatives at NCR operations centers and utilization of the NCR FCC.
- Conduct catastrophic planning activities to more firmly establish a Federal Workforce Preparedness program, including an annual evacuation tabletop and analysis of Occupant Emergency Plans at selected Federal buildings.
- Refine NCR SHIELD risk assessment, which was referenced in FY2009 Urban Area Security Initiative (UASI) grant applications by NCR State and local partners.
- Identify and meet technical requirements to more broadly credential F/EROs and hold quarterly demonstrations as FEMA proceeds in fulfilling P.L. 110-53.
- Drill draft bio-detection notification plan, with interagency partners.
- Develop plan to support integration of key regional capabilities (e.g., Federal Regional Intranet, HSIN NCR Community of Interest, Regional GIS and Regional Wireless broadband).
- Facilitate senior leader discussion between the new DHS Secretary, the Governors of Maryland and Virginia, and the Mayor of the District of Columbia.

FY 2010 Planned Accomplishments

- Refine NCR FCC capabilities and support FEMA in formalizing an NCR-specific capability as part of FEMA NRCC operations to enhance situational awareness for Federal, State and local partners.
- Fully integrate the Federal Workforce Preparedness Program with the DHS Interagency Steering Committee and provide support and guidance for federal workforce preparedness.
- Refresh NCR SHIELD risk analysis to assist NCR leaders in making decisions and allocating scarce resources. NCR SHIELD will once again support regional leaders in developing risk-based grant requests.

- Assist FEMA in completing NCR pilot to credential F/EROS in the region, a precursor to FEMA's national roll out of F/ERO credentialing (see P.L. 110-53).
- Finalize bio-detection notification plan, identifying existing information sharing protocols and best practices with regard to CBRNE sensors located in the NCR, in concert with interagency partners.
- Publish an NCR Operations Center Guidelines Manual based on operations center assistance visits conducted in prior years.
- Continue to lead technology integration and interoperability initiatives to enable Federal, State, and local sharing of information, and to enhance regional situational awareness by incorporating best-of-breed applications and leveraging legacy or evolving state-of-the-art technologies.

PPA – URBAN SEARCH AND RESCUE (USAR)

	Perm Pos	FTE	Amount
2008 Actual	8	8	\$32,447
2009 Enacted	8	8	\$32,500
2010 Adjustments-to-Base	0	0	(\$4,500)
2010 Current Services	8	8	\$28,000
2010 Program Change	0	0	\$0
2010 Request	8	8	\$28,000
Total Change 2009-2010	0	0	(\$4,500)

FEMA requests \$28.0 million for this activity. This is a decrease of \$4.5 million from FY 2009.

CURRENT SERVICES DESCRIPTION

The National Urban Search and Rescue (USAR) system is comprised of 28 task forces that provide a coordination, national, all-risk capability to assist State and local governments in responding to structural collapse incidents when the President declares a major disaster emergency under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act). These task forces are highly trained and possess the necessary expertise to extricate and medically treat victims in heavy rescue situations.

Each task force consists of two 31-person teams, four canines, and comprehensive equipment cache. USAR task force members work in four areas of specializations: Search, to find victims trapped after a disaster; Rescue, which includes safely digging victims out of tons of collapsed concrete and metal; Technical, made up of structural specialists who make rescues safe for the rescuers; and Medical, which cares for the victims before and after a rescue.

In addition to search-and-rescue support, FEMA provides hands-on training in search-and-rescue techniques and equipment, technical assistance to local communities, and in some cases Federal grants to help communities better prepare for urban search-and-rescue operations.

Urban Search and Rescue Recent and Planned Accomplishments

FY 2008 Accomplishments

- The USAR National Response System achieved the following:
 - Conducted four Operational Readiness Evaluations to ensure the readiness of the 28 USAR Task Forces and three Corrective Action Reviews.
 - Distributed approximately \$28,982,012 in readiness grants to the USAR Task Forces to provide the USAR system crucial funding for equipment and training.
 - Developed and delivered 12 functional USAR courses.
 - Engaged the White IST and Six USAR Task Forces in support of the DOD Satellite Recovery mission in the spring of 2008.

FY 2009 Planned Accomplishments

- The USAR National Response System plans to achieve the following:
 - Conduct six Operational Readiness Evaluations to ensure the readiness of the 28 USAR Task Forces.
 - Distribute approximately \$30 million in readiness grants to the USAR Task Forces to provide the USAR system crucial funding for equipping and training.
 - Develop and deliver 12 functional USAR courses.

FY 2010 Planned Accomplishments

- The USAR National Response Systems plan to achieve the following:
 - Conduct six Operational Readiness Evaluations to ensure the readiness of the 28 USAR Task Forces.
 - Distribute approximately \$26 million in readiness grants to the USAR Task Forces to provide the USAR system crucial funding for equipment and training.
 - Develop and deliver 12 functional USAR courses.

IV. Program Justification of Changes

**Department of Homeland Security
Federal Emergency Management Agency
Operations, Management, and Administration
Justification of Program Changes**
(Dollars in Thousands)

Above Guidance Change #1 – Tank Remediation

Program Change 1: Tank Remediation

Strategic Goal(s) & Objective(s): DHS Goal 4 – Build a nimble, effective emergency response system and a culture of preparedness, Objectives 4.1 and 4.2

PPA: Operating Activities

Program Increase: Positions: 0 FTE: 0 Dollars: \$10,000

Description

FEMA requests \$10,000,000 for FEMA storage tank management activities for repair, replacement, restoration and remediation efforts. So far FEMA has reviewed its operational Storage Tank inventory. The remaining 1,200 tanks in FEMA’s inventory are currently undergoing assessment to determine status and condition.

Justification

FEMA has an inventory of over 1,000 Underground Storage Tanks, aboveground storage tanks, and rolling stock primarily for the storage of petroleum and petroleum based products to ensure operations during a disaster. Many of these tanks have not been properly maintained and are out of regulatory compliance. Some of these tanks may be leaking and contaminating the soil and groundwater and require remediation and restoration.

FEMA is liable under 40 CFR Part 280, Resource Conservation and Recovery Act and The Energy Policy act of 2005 as well as numerous state and local laws for maintaining and operating existing storage tanks in accordance with regulation, remediation of contamination, restoration of the sites and obtaining regulatory closure where applicable. Under the above listed laws FEMA is susceptible to fines, penalties and operation restrictions which could negatively impact operations and the ability to fulfill the mission. In FY 09, FEMA stood up a Program Management office to effectively manage the storage tank program.

Impact on Performance (Relationship of Increase to Strategic Goals)

This project supports the US Governments goal of each federal agency being a good steward of the environment as well as the Department of Homeland Security’s (DHS) Strategic Goal Number 5 to “Strengthen and unify DHS operations and management.” DHS Occupational Safety and Environmental Programs Strategic Goal Number 1 “Develop integrated policies, procedures, and guidance to provide sustainable program management” and Goal Number 5 “Provide advocacy and oversight to ensure the effective and efficient use of resources.” FEMA’s Strategic Goal Number 5 to “Build public trust and confidence through performance and stewardship.” Additionally the project, contributes to FEMA Management Directorate Strategic Goals 2.3. “Reduce environmental safety regulatory violations annually by 10%; and 2.4, “Ensure that all FEMA facilities, assets, and operations have appropriate safety and environmental management systems.”

**Department of Homeland Security
Federal Emergency Management Agency
Operations, Management, and Administration
Justification of Program Changes**
(Dollars in Thousands)

Above Guidance Change #2 – Data Center Development

**Program Change 2: Data Center Development
 Consolidate to Secure Data Center Environment**

PPA: Operating Activities

Program Increase: Positions: 0 FTE: 0 Dollars: \$7,900

	FY 2008 Actuals			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	
Program Increase							0	0	7,900
Total Request	0	0	\$0	0	0	\$0	0	0	\$7,900

Description

FY 2010 data center development funding will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY 2010. This funding will be managed through the WCF and includes:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2010
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts
- Installation of equipment racks at the DHS Data Centers
- Migration-related build-out of DHS Data Center infrastructure
- Transition of disaster recovery/backup/COOP (Continuity of Operations) capability to DHS Data Centers
- Installation of infrastructure support as part of system migrations at the DHS Data Centers
- Migration of FEMA hardware, systems/applications to occupy rack space at the DHS Data Centers.

Justification

The Data Center consolidation efforts will standardize IT resource acquisitions across Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time

Department of Homeland Security

**Federal Emergency Management Agency

Program Increase							12	6	2,345
Total Request	0	0	\$0	14	14	\$600	26	26	\$2,945

Description

The Office of Environmental Planning and Historic Preservation (EHP) are critical to FEMA mission delivery because it supports all of FEMA’s programs and facility activities in achieving their established goals and metrics. EHP integrates the protection and enhancement of environmental, historic, and cultures resources into FEMA’s mission, programs and activities. EHP ensures that FEMA’s activities and programs related to disaster response and recovery, hazard mitigation, and emergency preparedness comply with federal environmental and historic preservations laws and executive orders. EHP provides environmental and historic preservation technical assistance to FEMA staff, local, State and Federal partners, and grantees and sub-grantees. To continue to meet the program goals for Disaster Assistance, Mitigation, and Preparedness grants, the EHP Office must increase their capability, particularly at the Regional level.

Justification

The EHP Office currently has 14 FTEs; four at Headquarters and one at each of the ten regions. The EHP Office anticipates this baseline to continue in FY 2009. The Office supported EHP reviews for close to 35,000 projects in FY 2007; approximately 9,000 of those required regional staff to conduct a more intensive review and consultation process. Over time, as the workload increases beyond the EHP office’s capacity, the office is becoming less and less effective in assisting with FEMA program delivery through proactive outreach and planning, disaster readiness, and project review.

Regional EHP Staff

The Regional Environmental Officer (REO) position was created in 1997 to provide a single source of EHP support to regions in their implementation of grant programs. There has been no increase in permanent staff in the regions since this time. Although programs have added contract dollars to assist

with the technical reviews, when necessary, there are many requirements that require oversight from a permanent staff. In particular, the following three issues are the primary reasons for the increased regional workload:

1. The increase in the number of disaster declarations, requiring a larger EHP disaster workload back in the regional office as well as requiring longer field deployments to manage the EHP function in disasters.
2. An increase in new grant programs, such as non-disaster Mitigation programs and the large number of Preparedness grant programs. The Preparedness programs lacked an integrated EHP review process and did not transition to FEMA with any EHP staff resources;
3. The need to improve the disaster readiness of the EHP Cadre and meet the new FEMA vision as it relates to the Disaster Workforce.

A staffing analysis completed in the summer of 2007 [the “Environmental and Historic Preservation Staff Resource Needs Analysis”] indicated that in order for the EHP Office to (a) maintain consistency in operations when disasters occur, (b) successfully integrate EHP policies and processes into Preparedness grant projects, and (c) improve the timeliness and quality of existing EHP reviews, each Region would need additional full-time staff members to support the work currently provided by the REO.

HQ EHP Staff

The same three issues driving the increase in workload at the regional level is also impacting the HQ EHP office. The added grant programs (non-disaster Mitigation grants and Preparedness grants) have increased the policy and technical assistance needs within Headquarters. In FY 2008, the EHP Office rolled out a strategic approach to proactively address emerging issues and provide quality customer service to FEMA’s programs. This approach includes establishing program liaisons for program/policy support and disaster operations support (also the EHP Cadre manager). This strategy was implemented to improve management and oversight and help the EHP Office make significant improvements in customer service to the programs, the regions and our stakeholders.

Given all of these changes, the funding request for FY 2010 is for 10 new regional FTE and 2 new FTE for headquarters.

Impact on Performance (Relationship of Increase to Strategic Goals)

The requested funding increase will enhance FEMA’s ability to successfully achieve DHS Strategic Goal 4: Build a nimble, effective emergency response system and a culture of preparedness. This funding increase will strengthen FEMA’s core competencies and move the agency towards its vision of being the Nation’s Preeminent Emergency Management agency.

DHS Preparedness Mission – The following initiative supports achievement of DHS Objective 4.2 – Preparedness: Hazard Mitigation – EHP.

Description

FEMA requests \$3,000,000 for the Gap Analysis Program (GAP). The mission of the Gap Analysis Program is to enhance response and short-term recovery at the federal, state, and local levels. The goal of the Gap Analysis Program is to identify and eliminate shortfalls that exist between estimated requirements, standards, and performance measures and the actual response and short-term recovery capabilities maintained at all levels of government and with nongovernmental organizations and the private sector. Engage local, tribal, and state governments in an on-going process of self-awareness to determine potential disaster requirements and existing capabilities to meet those requirements in pre-defined critical areas. Increase pre-disaster awareness of response and short-term recovery gaps. Facilitate the elimination of response and short-term recovery gaps. Strengthen local, tribal, and state capabilities, thereby reducing reliance on the Federal Government for immediate disaster response and short-term recovery needs. The requested over guidance funding will support FEMA’s efforts to achieve these goals by the end of FY 2010. This is in addition to base funding of \$3,400,000 funded by the Disaster Relief Fund’s Readiness and Support Plan, which will be continued in FY10.

Justification

FEMA Senior Leadership has referred to the Gap Analysis Program (GAP) as the “cornerstone” of the new FEMA. To continue the growth and success of the program, GAP requires a dedicated funding source. GAP’s mission “to enhance disaster response capabilities at the local, state and federal levels by identifying potential shortfalls and building strategic capability to address those shortfalls” is

crucial for FEMA to accomplish its primary mission. By gathering data and analyzing shortfalls state-by-state with an all-hazards lens, GAP is providing critical information so the Agency can be better prepared to reduce the loss of life and property caused by disasters. The Gap Analysis Program is consistent with the Post Katrina Emergency Management Reform Act (PKEMRA) and important to FEMA's FY 2008-2012 Strategic Plan.

Funds from OMA support permanent full-time staff members within FEMA Headquarters and FEMA Regions. Funds would also allow staff members to implement the program by funding travel to states, support state data collection efforts, and support the inclusion on various response partners in the GAP process. Regional staff will work with states to collect and analyze data, and ultimately improve state response capabilities in a time states are faced with budget shortfalls.

Impact on Performance (Relationship to Strategic Goals)

GAP's planning and assessment processes are aligned with the tenets of FEMA's Strategic Goals and the Department of Homeland Security's Strategic Goals and Objectives that call for ensuring preparedness; strengthening and unifying response; and integrating response operations along all functional layers. GAP works to improve the ability of state and local jurisdictions to respond to disasters and to enhance the ability of federal resources to support them in those efforts. GAP supports the implementation of a more flexible, scalable response structure. Through GAP local jurisdictions, states and FEMA Regions are encouraged to share critical information, as well as coordinate operational response planning.

The data collected as a result of GAP enables FEMA and partners at every level to identify potential shortfalls prior to a disaster and develop strategies for mitigating disaster impacts. GAP succeeds through the commitment of multiple and diverse stakeholders, at all levels of government and from the private sector and nongovernmental organizations. At the federal level, DHS/FEMA, the ten FEMA regions, and interagency partners throughout the federal government support and benefit from GAP. The Department of Defense, Department of Health and Human Services, and the United States Army Corps of Engineers all play an active role in gathering, analyzing, and solving issues within their mission areas.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Operations, Management, and Administration
Appropriation Language**

For necessary expenses for management and administration of the Federal Emergency Management Agency, \$852,200,000, including activities authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), up to \$7,200,000 for claims and administrative expenses authorized by the Cerro Grande Fire Assistance Act of 2000 (Div. C Title I, 114 Stat.583), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), the Defense Production Act of 1950 (50 U.S.C. App. 2061 et seq.), sections 107 and 303 of the National Security Act of 1947 (50 U.S.C. 404, 405), Reorganization Plan No. 3 of 1978 (5 U.S.C. App.), the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.), and the Post-Katrina Emergency Management Reform Act of 2006 (Public Law 109-295; 120 Stat. 1394): Provided further, That of the total amount made available under this heading \$28,000,000 shall be for the Urban Search and Rescue Response System, of which not to exceed \$1,600,000 may be made available for administrative costs; and \$6,995,000 shall be for the Office of National Capital Region Coordination. (Department of Homeland Security Appropriations Act, 2010.)

Explanation of Changes:

No significant changes are proposed.

PPA Mission Statement

Operating Activities include the basic functions of all FEMA's major mission organizations. The programs funded through this PPA include: the National Preparedness Directorate, the Grant Programs Directorate, the Mitigation Directorate, the Disaster Assistance Directorate, the Disaster Operations Directorate, the Logistics Management Directorate, and National Continuity Programs. These programs directly support FEMA's primary mission to reduce the loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$244,588	\$256,706	\$341,285	\$84,579

Salaries and Benefits includes costs for 2,618 FTEs. The FY 2010 request includes an increase of \$84,579,000 for the proposed FY 2010 pay increase and inflationary costs. This increase addresses the FY 2009 structural pay issue discussed further in the OMA Congressional Justification.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$9,884	\$24,181	\$24,665	\$484

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request includes an increase of \$484,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Transportation of Things	\$222	\$4,082	\$4,164	\$82

Transportation of Things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2010 request includes an increase of \$82,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Rent	\$48	\$54	\$55	\$1

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2010 request includes an increase of \$1,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Communication, Utilities, and miscellaneous char	\$5,667	\$6,402	\$6,530	\$128

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility service. The FY 2010 request includes an increase of \$128,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Printing	\$857	\$1,371	\$1,398	\$27

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 request includes an increase of \$27,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$20,470	\$27,537	\$27,534	(\$4)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request reflects a decrease of \$4,000.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$152,310	\$213,136	\$165,815	(\$47,321)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The 2010 request reflects an decrease of \$47,321,000.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$59,953	\$80,113	\$66,732	(\$13,381)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 request reflects a decrease of \$13,381,000.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$2,090	\$2,812	\$2,868	\$56

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 request includes an increase of \$56,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$6,865	\$10,064	\$10,265	\$201

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, © used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2010 request includes an increase of \$201,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$31,243	\$50,004	\$50,504	\$500

Equipment includes all costs for the purchases of persona property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request includes an increase of \$500,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Land & Structures	\$63,860	\$58,598	\$59,184	\$586

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to building, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. The FY 2010 request includes an increase of \$586,000 for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$20,185	\$18,533	\$18,904	\$371

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 request includes an increase of \$371,000 for inflation.

PPA Mission Statement

National Capital Region Coordination (NCRC) program advances homeland security, including all hazards preparedness, in the National Capital Region (NCR). The program services as a model for other regions of the country. NCRC focuses on developing and refining a common regional approach to homeland security that results in the integrated strategies and interoperability among Federal, State, local, regional and private/non-profit stakeholders. NCRC's primary responsibilities include coordinating and participating in programs and initiatives aimed at enhancing the homeland security posture of the region. NCRC also plays valuable roles in events, drills, and exercises than occur annually in the NCR. NCRC also serves as a principal in the NCR's regional governance structure and coordinates with the NCR's Regional Emergency Support Function (RESFs) to improve preparedness in the NCR.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change

PPA Mission Statement

The National Urban Search and Rescue System is comprised of 28 task forces that provide a coordinated, national, all-risk capability to assist State and local governments in responding to structural collapse incidents when the President declares a major disaster or emergency under the Rboert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act). These task forces are highly trained and possess the necessary expertise to extricate and medically treat victims in heavy rescue situations. Funding is used to operate and train the existing task forces, maintain the equipment caches, and replace/repair equipment that has been used in training and actual disasters.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) STATE AND LOCAL PROGRAMS

I. Appropriation Overview

A. Mission Statement for State and Local Programs:

Through the appropriation for State and Local Programs, FEMA fulfills its role as the principal component of the Department of Homeland Security (DHS) responsible for preparing State and local governments to prevent, protect against, respond to, and recover from incidents of terrorism and other catastrophic events. The appropriation provides for grants, training, exercises, and other support to assist Federal agencies, States, territories, and tribal and local jurisdictions to prepare for terrorism and major disasters. State and Local Programs funds are administered by two different organizations within FEMA: the Grants Programs Directorate (GPD) and the National Preparedness Directorate (NPD).

B. Budget Activities:

In support of the National Preparedness Guidelines and the National Strategy for Homeland Security of 2007, FEMA's FY 2010 budget for State and Local Programs is divided into three major categories: the State and Regional Preparedness Program; the Metropolitan Statistical Area (MSA) Preparedness Program; and the Training, Measurement, and Exercise Program. A separate line item appropriation is also requested for Management and Administration (M&A) of the State and Local, EMPG, and AFG programs.

Grant Programs Directorate (GPD)

GPD is responsible for administering the State and Regional Preparedness Program, and the Metropolitan Statistical Area (MSA) Preparedness Program.

State and Regional Preparedness Program:

The State and Regional Preparedness Program includes seven grant programs that provide resources to support preparedness projects that build State and local capabilities as outlined in the National Preparedness Guidelines, the Target Capabilities List, and the National Strategy for Homeland Security of 2007:

- *State Homeland Security Grant Program (SHSGP)* - This program awards grants to all 50 States, the District of Columbia, Puerto Rico, and four U.S. territories on the basis of risk and need.
- *Firefighter Assistance Grants Program* – This program is comprised of Assistance to Firefighter Grants (AFG), Staffing for Adequate Fire and Emergency Response (SAFER) Grants, and Fire Prevention and Safety Grants (FP&S). The combination provides support

to fire departments and non-affiliated emergency medical services (EMS) to improve the readiness and capability of local first-responders during all-hazards emergencies including firefighting and EMS operations. Firefighter Assistance Grants are an integral part of the Department of Homeland Security's grant programs that assist Federal agencies, States, territories, tribal, and local jurisdictions protect against, prevent, plan for, and respond to acts of terrorism and other catastrophic events.

- *Driver's License Security Grants Program (DLSGP)* – Formerly known as REAL ID, DLSGP represents the Department's initiative to prevent terrorism and reduce fraud by improving the reliability and accuracy of personal identification documents issued by States and territories.
- *The Citizen Corps Grant Program (CCGP)* - CCGP is the Department's grassroots initiative to actively involve all citizens in hometown preparedness through personal readiness, training, and volunteer service.
- *Interoperable Emergency Communications Grant Program (IECGP)* - The IECGP provides governance, planning, training and exercise, and equipment funding to States, territories, and local and tribal governments to carry out initiatives to improve interoperable emergency communications, including communications in collective response to natural disasters, acts of terrorism, and other man-made disasters.
- *Regional Catastrophic Preparedness Grant Program (RCPGP)* - The FY 2010 RCPGP is intended to support coordination of regional all-hazard planning for catastrophic events, including the development of integrated planning communities, plans, protocols, and procedures to manage a catastrophic event.
- *Medical Surge Grant Program (MSGP)* – This program provides grants that address gaps in regional medical surge capability. MSGP aims to fully utilize the Target Capabilities List (TCL) version 3.0 in award determination; serving as a pilot for use of this type of methodology.
- *Emergency Management Performance Grants (EMPG)* - This program provides grants that address emergency response and recovery activities. The EMPG program provides resources to assist State and local governments to sustain and enhance all-hazards emergency management capabilities.

Metropolitan Statistical Area (MSA) Preparedness Program:

The Metropolitan Statistical Area Preparedness Program includes:

- *Urban Area Security Initiative (UASI)* - This program provides funding to support regional collaboration on enhanced security and terrorism readiness in the Nation's highest-risk urban areas.
- *Transportation Infrastructure Protection* - In support of infrastructure protection efforts, there are three targeted grant programs (Port Security Grants, Rail/Transit Grants, and the Buffer Zone Protection Program). These programs are designed to enhance prevention and protection capabilities at the Nation's critical economic and transportation infrastructure centers. Funding is allocated on the basis of DHS' improved assessment of the risk of terrorist attacks at key mass transit systems, port assets, and other key transportation infrastructure sites.

National Preparedness Directorate (NPD)

NPD is responsible for administering the Training, Measurement, and Exercise Programs, which include exercises, training, technical assistance, and evaluations. In FY 2010, this will include the National Exercise Programs (NEP), State and Local Training Programs, Technical Assistance (TA) Programs, and Evaluations and National Assessments.

Training, Measurement, and Exercise Programs:

Training, Measurement, and Exercise Programs provide resources to support homeland security preparedness activities for State and local capabilities as outlined in the National Preparedness Guidelines and Homeland Security Act of 2002. For FY 2010, there are six programs included in Training, Measurement, and Exercise Programs:

- *National Exercise Program (NEP)* - NEP provides an organized approach to setting priorities for exercises, reflecting those priorities in a multi-year schedule of preparedness-related security exercises that serve the strategic and policy goals of the U.S. Government, and addressing findings from those exercises in a disciplined, interagency process.
- *Continuing Training Grants Program* - This program provides first responders with a comprehensive Weapons of Mass Destruction (WMD) training program that improves their capacity to prevent, protect against, respond to, and recover from acts of terrorism.
- *Technical Assistance (TA) Program* - The TA program is a capabilities-based program structured to build and sustain State and local capacity in priority preparedness activities. The TA services developed and delivered to State and local homeland security personnel address the full spectrum of the goals, priorities, and capabilities outlined in the National Preparedness Guidelines.
- *Center for Domestic Preparedness* - This program provides specialized terrorism preparedness training for emergency responders.
- *National Domestic Preparedness Consortium* - This program identifies training needs for all response disciplines responsible for terrorism and other catastrophic event prevention, deterrence, and incident response.
- *Evaluation and National Assessment Program* - This program provides for the successful performance of preparedness policy, planning, and assessments to synchronize and integrate the preparedness activities conducted across the Federal government and among the State and local stakeholders.

Management and Administration

Management and Administration (M&A) requirements for State and Local Programs (including Firefighter Assistance Grants and EMPG) are funded from a line item within the State and Local Programs appropriation.

This method of providing funds for all GPD and NPD M&A activities replaces the prior combination of respective line items in Operations, Management, and Administration (OMA) and a percentage of the top-line appropriated amounts in State and Local Programs, Firefighter Assistance Grants and EMPG. The move in 2010 to provide M&A funding via line item within the State and Local appropriation will provide additional budgetary discipline by increasing accountability and transparency. Moreover, it makes strategic planning and overall day-to-day operations easier to

accomplish for both GPD and NPD, as funding level consistency and predictability is improved. In addition, M&A provided in this way will facilitate more justifiable increases in the coming years.

Resources included in M&A are distributed to GPD and NPD to support the full range of State and Local Programs (SLP) program administration activities and FEMA's support organizations for infrastructure and administrative activities, including contributions to the Departmental working capital contributions.

C. Budget Request Summary:

In Fiscal Year (FY) 2010, FEMA requests 638 positions, 587 FTE, and \$3,867,000,000 for State and Local Programs, excluding AARA emergency funding provided in P.L. 111-5. The change from FY 2009 is as described below:

PPA 1 – State and Regional Preparedness Program (\$2,045,000,000): In FY 2010, FEMA requests \$2.045 billion for Homeland Security Prevention and Protection Programs, which includes the State Homeland Security Grant Program (SHSGP), Emergency Management Performance Grants (EMPG), Interoperable Emergency Communications Grants Program (IECGP), the Regional Catastrophic Preparedness Grants Program (RCPGP), the Medical Surge Grants Program (MSGP), the Driver's License Security Grants Program (DLSGP), the Citizen Corps Grants Program (CCGP), and Firefighter Assistance Grants (including AFG, SAFER, and FP&S).

PPA 2 – MSA Preparedness Program (\$1,437,000,000): In FY 2010, FEMA requests \$1.437 billion for grants under the Urban Area Security Initiative (UASI), the Port Security Grants Program (PSGP), the Transit Security Grants Program (TSGP), and the Buffer Zone Protection Program (BZPP).

PPA 3 – Training, Measurement, and Exercise Programs (\$210,000,000): In FY 2010, FEMA requests \$210 million for Training, Measurement, and Exercise Programs, which include the National Exercise Program (NEP), Continuing Training Grants Program (CTGP), Center for Domestic Preparedness (CDP), National Domestic Preparedness Consortium (NDPC), Technical Assistance Program, and Evaluations and National Assessment Program.

PPA 4 – Management and Administration (\$175,000,000): In FY 2010, FEMA requests \$175 million for Management and Administration to GPD and NPD to support the full range of grant administration, related preparedness activities, program administration activities, and FEMA's support organizations for infrastructure and administrative activities, including contributions to the Departmental working capital contributions. This also includes programs that were previously funded in Operations, Management and Administration (OMA); Incident Management Systems (IMS); Emergency Management Institute (EMI); Program Development and Administration; and Grants Accountability and Oversight.

Note: FY 2009 total does not match Budget Appendix due to exclusion of \$510M of supplemental funding from American Recovery and Reinvestment Act of 2009 (P.L. 111-5).

III. Current Services Program Description by PPA

Department of Homeland Security
Federal Emergency Management Agency
State and Local Programs
Program Performance Justification
(Dollars in thousands)

PPA 1: STATE AND REGIONAL PREPAREDNESS PROGRAMS

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$0
2009 Enacted	0	0	\$0
2010 Adjustments-to-Base	0	0	\$2,045,000
2010 Current Services	0	0	\$2,045,000
2010 Program Change	0	0	\$0
2010 Request	0	0	\$2,045,000
Total Change 2009-2010	0	0	\$2,045,000

FEMA requests \$2,045,000,000 for this activity. This is an increase of \$2,045,000,000 over FY 2009. In FY 2010 the Firefighter Assistance Grants Program and the Emergency Management Performance Grants Program are realigned into the State and Local Programs appropriation.

CURRENT SERVICES PROGRAM DESCRIPTION:

The State and Regional Preparedness Program include eight grant programs: the State Homeland Security Grant Program (SHSGP), Emergency Management Performance Grants (EMPG), Interoperable Emergency Communications Grants Program (IECGP), Regional Catastrophic Preparedness Grants Program (RCPGP), Medical Surge Grants Program (MSGP), Firefighter Assistance Grants Program (including AFG, SAFER, and FP&S), Driver's License Security Grants Program (DLSGP), and Citizen Corps Grants Program (CCGP).

State Homeland Security Grant Program (SHSGP) - \$950 million

The SHSGP is a primary funding source for building homeland security capabilities that align with the National Preparedness Guidelines (NPG) at the State and local levels. States and localities use SHSGP funds to build a wide range of homeland security capabilities. Most capabilities specific to terrorism are also applicable to large-scale natural disasters and public health emergencies. Grant allocations are based on an analysis of risk and effectiveness, but each State is assured a minimum allocation. Projects funded under SHSGP support building and sustaining capabilities at the State and local levels through planning, equipment acquisition, training, and exercise activities and helps States to implement the strategic goals and objectives included in State homeland security strategies. The SHSGP supports activities within all four homeland security mission areas, as well as the National Priorities identified in the National Preparedness Guidelines. In FY 2010, \$60 million of this funding will be used for the Operation Stonegarden Grant Program.

The accelerated funding cycle, under which guidance and applications must be developed and released in a matter of weeks, has impeded the program's ability to require grantees to develop a coordinated grant allocation strategy that can be used to track program resources. This methodology establishes a more deliberate and up-front planning process. As such, greater time is allotted for State application development and review. DHS anticipates making grant awards by the 3rd quarter of FY 2010, similar to FY 2009.

Operation Stonegarden Grant Program (OPSG)

The OPSG provides funding to designated localities to enhance cooperation and coordination between Federal, State, local, and tribal law enforcement agencies in a joint mission to secure the United States borders along routes of ingress from International borders. Funding for OPSG in 2010 prioritizes State, local, and tribal governments that continue to bear the brunt of the Southwest Border security threat. Local units of government at the county level or equivalent and federally recognized tribes may apply for funding from DHS through the State Administrative Agency (SAA).

Emergency Management Performance Grants (EMPG) - \$315 million

The EMPG program provides resources to assist State and Local governments to sustain and enhance all hazards emergency management capabilities. States have the opportunity to use EMPG funds to further strengthen their ability to support emergency management activities while simultaneously addressing issues of national concern as identified in the National Priorities of the National Preparedness Guidelines. The award allocation method will incorporate risk methodology.

Interoperable Emergency Communications Grant Program (IECGP) - \$50 million

The IECGP provides governance, planning, training and exercise, and equipment funding to States, territories, and local and tribal governments to carry out initiatives to improve interoperable emergency communications, including communications in collective response to natural disasters, acts of terrorism, and other man-made disasters. According to the legislation that created IECGP, all proposed activities must be integral to interoperable emergency communications and must be aligned with the goals, objectives, and initiatives identified in the grantee's approved Statewide Communication Interoperability Plans (SCIP). IECGP will also advance DHS near-term priorities that are deemed critical to improving interoperable emergency communications and are consistent with goals and objectives of the National Emergency Communications Plan.

Regional Catastrophic Preparedness Grant Program (RCPGP) - \$35 million

The FY 2010 RCPGP is intended to support coordination of regional all-hazard planning for catastrophic events, including the development of integrated planning communities, plans, protocols, and procedures to manage a catastrophic event.

Medical Surge Grant Program (MSGP) - \$40 million

The MSGP supports the integration of emergency management, health, and medical systems into a coordinated response to mass casualty incidents caused by any hazard. Successful MSGP grantees reduce the consequences of a mass casualty incident during the initial period of a response by having augmented existing local operational response systems before the incident occurs. This program builds on the gains made by the Metropolitan Medical Response System (MMRS) program and works in conjunction with those MMRS cities. In addition, MSGP will serve as a pilot for the application of version 3.0 of the Target Capabilities List (TCL).

Firefighter Assistance Grants - \$590 million

The Firefighter Assistance Grants program actually consists of three individual programs. The Assistance to Firefighter Grants (AFG) program, the Staffing for Adequate Fire and Emergency Response (SAFER) program, and the Fire Prevention and Safety (FP&S) program are all part of the Firefighter Assistance Grants program.

AFG awards grants directly to fire departments and non-affiliated EMS organizations throughout the United States to support one-year projects improving the effectiveness and safety of the Nation's first-responders in homeland security, firefighting, and EMS operations. Under its authorizing legislation, AFG must also expend a minimum of five percent of appropriated funds for fire prevention activities under FP&S.

FEMA's Grant Programs Directorate (GPD) administers the program, in cooperation with the United States Fire Administration (USFA). The entire AFG process is fully automated in an e-grant system. Applicants apply online, grants are awarded electronically, grantees manage their grants online (payment requests, amendments, etc.), and grants are monitored and closed out electronically.

This year's request includes an increase for the Staffing for Adequate Fire and Emergency Response (SAFER). These grants support the additional costs for salaries and benefits to hire additional firefighters on the ground across the Nation.

For FY 2010, eligible applicants will again be invited to submit an application for assistance in the following program areas most critical to enhancing the capabilities of the fire and EMS services:

- Operations and Safety program, which includes training, equipment, and personal protective equipment.
- Firefighting Vehicles Acquisition program, which includes pumpers, brush trucks, tankers/tenders, rescue vehicles, ambulances, quints, aerials, foam units, and fireboats.
- Fire Prevention and Safety activities, which includes awareness and education, arson prevention, code enforcement, burn prevention, and firefighter safety research and development.

Drivers License Security Grant Program (DLSGP) - \$50 million

Formerly known as the REAL ID program, the purpose of the FY 2009 DLSGP is to prevent terrorism, reduce fraud, and improve the reliability and accuracy of personal identification documents that States and territories issue.

Citizen Corps Program (CCP) - \$15 million

CCP funding supports Citizen Corps Councils with efforts to strengthen collaboration between government and civic leaders. These Councils serve as a collaborative planning body to develop goals and strategies for community resilience tailored to specific community vulnerabilities and populations. Elements of local strategies include: outreach and education on personal preparedness; integration of nongovernmental assets and personnel in preparedness and response protocols; improved plans for emergency notifications, evacuation, and sheltering; and increased citizen participation in community safety. Citizen Corps Councils engage citizens in personal preparedness exercises, ongoing volunteer programs, and surge capacity response in order to better prepare citizens to be fully aware, trained, and practiced on how to prevent, protect/mitigate, prepare for, and respond to all threats and hazards. This program provides funding by formula basis to all 50 States and six territories.

The CCP was established post-9/11 to empower American citizens to take responsibility for their own safety and security against all types of threats and disasters. The CCP works to ensure everyone in the country has a baseline understanding of hazards, has the information they need to prepare for and act in the event of an emergency, has access to preparedness and response training and exercise programs, and has opportunities to volunteer their time towards community preparedness. Currently, there are over 2,300 Citizen Corps Councils in jurisdictions that cover 78% of the U.S. population and is operating in all 50 States and six U.S. territories.

Recent and Planned Accomplishments

FY 2008 Accomplishments

- Interoperable Communications
 - Required States to develop and adopt a Statewide Interoperable Communications Plan (SICP). The Public Safety Interoperable Communication (PSIC) Grant Program utilized the SICP in developing grant program plans and focus areas.
 - PSIC completed its peer review of Investment Justifications in February 2008 and began releasing funding for approved investments in March 2008. Out of \$968 million awarded, over \$902 million has already been released. For investments that were not approved, robust technical assistance was provided to the States to assist with investment justification revisions with a goal of releasing all remaining funds by the end of calendar year 2008.
- In FY 2008, the following grants were made within the State and Regional Preparedness Program PPA:
 - 41 Metropolitan Medical Response System grants awards totaling \$39,831,404.
 - 56 Citizen Corps Program grants awards totaling \$14,572,500.
 - 12 Stonegarden grant awards totaling \$60,000,000.
 - 56 State Formula grant awards totaling \$861,280,000.
- FEMA received an adequate score for the SHSP and UASI Grant Programs in the OMB Program Assessment Rating Tool (PART).
- The agency fully aligned transportation infrastructure components with the SHSGP and UASI to ensure a holistic approach to preparedness in States and high risk urban areas.
- Received approximately 23,000 applications and issued approximately 5,500 grant awards. Of these, 20,739 were applications for AFG including 1,276 (6.2%) from urban jurisdictions, 3,436 (16.6%) from suburban jurisdictions, and 16,027 (77.2%) from rural jurisdictions. Grants awards began in early July 2008 and continued throughout the 2008 calendar year.
- Established a Strategic Planning process based on the results of the National Academy of Public Administration (NAPA) project, which assists in evaluating the future direction of the AFG program.
- Developed and initiated outreach efforts to improve application quality and responsiveness to applicant needs.
- Awarded (to date) 252 SAFER grants totaling \$148 million.
 - This includes 151 hiring grants (\$124 million), 89 recruitment and retention grants (\$17 million), and 12 grants which involve both activities (\$7 million).
 - The grants would result in the hiring of approximately 1,250 FFs (less the returned grants plus approx 300 FFs from the \$30 million yet to be recommended).
- Provided 58 Emergency Management Performance Grants totaling \$291,450,000.

- Established a system of communication that placed strong emphasis on increased interaction and dialogue between State and local entities applying for funds both before and during the

application process. This accomplishment ensured the projects submitted had the potential for reducing risk.

- Developed a Stakeholder Outreach Program, which served as the starting point for the 2008 grant process. This program achieved enhanced dialogue between partners and began soliciting feedback from stakeholders on grant program guidance in the summer of 2007.

FY 2009 Planned Accomplishments

- Institutionalize the program alignment, metrics and reporting system, and capabilities-based planning accomplishments from FY 2008.
- Continue to collect relevant threat and critical infrastructure data from Urban Areas for use in the risk analysis process.
- Monitor and enhance internal evaluation capabilities to further guide program planning and targeting of technical assistance efforts.
- Increase stakeholder involvement throughout the FY 2009 application process.
- Emphasize regional collaboration across multi-model systems.
- Firefighter Assistance Grants
 - Establish performance measures and performance measure reporting as recommended by NAPA in its 2007 report to AFG.
 - Plan on issuing between 120 and 150 recruitment and retention grants totaling about \$25 million.
 - Plan on issuing \$175 million in hiring grants which will equate to approximately 1,750 firefighters.
 - Complete the first stage of the strategic planning and redirection of the AFG program.
- Provide over \$300 million in Emergency Management Performance Grants.
- Develop a de-centralized process that will transition programs and functions to the FEMA regions.
- Establish an internal evaluation system with the capabilities to monitor and enhance program planning guides and technical assistance efforts more effectively.
- Continue emphasis on regional collaboration across multi-model systems.

FY 2010 Planned Accomplishments

- Monitor and enhance internal evaluation capabilities to further guide program planning and targeting of technical assistance efforts.
- Institutionalize the program alignment, metrics and reporting system, and capabilities based planning accomplishments from FY 2009.
- Using version 3.0 of the TCL, develop the Medical Surge Grant Program as a true pilot; incorporating the institutionalization of capabilities-based planning.
- Increase stakeholder involvement throughout the FY 2010 application process.
- Continue emphasis on regional collaboration across multi-model systems.
- Firefighter Assistance Grants
 - Develop and initiate an implementation plan for the use and application of the performance data gathered during FY 2009.
 - Initiate the first phase of the redirection of the AFG program as recommended by NAPA.
 - Work with associations within the fire service to better allocate grant awards strategically.

PPA 2: METROPOLITAN STATISTICAL AREA (MSA) PREPAREDNESS PROGRAM

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$0
2009 Enacted	0	0	\$0
2010 Adjustments-to-Base	0	0	\$1,437,000

2010 Request	0	0	\$1,437,000
Total Change 2009-2010	0	0	\$1,437,000

*The table above excludes ARRA funding of \$300 million provided in P.L. 111-5. FEMA requests \$1,437,000,000 for this activity. There is a change of \$1,437,000,000 from FY 2009.

CURRENT SERVICES PROGRAM DESCRIPTION:

This PPA is made up of grant programs under the Urban Area Security Initiative (UASI), the Port Security Grants Program (PSGP), the Transit Security Grants Program (TSGP), and the Buffer Zone Protection Program (BZPP).

Urban Area Security Initiative Grants (UASI) - \$887 million

The UASI addresses the unique multi-disciplinary planning, operations, equipment, training, and exercise needs of high-threat, high-density urban areas, and assists them in building and sustaining capabilities to prevent, protect against, respond to, and recover from threats of acts of terrorism. This program provides funding to high-risk urban areas based on risk and effectiveness.

In FY 2010, program participants may use UASI funding to achieve or enhance all of the 37 capabilities outlined in the National Preparedness Guidelines and Target Capabilities List, as long as they enhance the capability to prevent, protect against, respond to, or recover from acts of terrorism. Proposed investments under the UASI program should focus on the National Priorities and the most urgent State and local priorities.

Port Security Grant Program (PSGP) - \$250 million

The PSGP provides grant funding to port areas for the protection of critical port infrastructure from terrorism. PSGP funds are primarily intended to assist ports in enhancing port-wide risk management capabilities, enhanced domain awareness, capabilities to prevent, detect, respond to, and recover from attacks involving improvised explosive devices (IEDs) and other non-conventional weapons, as well as training and exercises.

PSGP funds are allocated to the Nation’s highest risk port areas to address priorities identified in National Preparedness Guidelines (NPG), the National Infrastructure Protection Plan (NIPP), and the National Strategy for Maritime Security. The pool of eligible port applicants has been expanded to reflect the changes required by the SAFE Port Act, which states that all entities covered by an Area Maritime Security Plan (AMSP) may submit an application for consideration. PSGP funds support the development of an integrated risk-based decision-making process for each port area patterned after the risk management framework articulated in the NIPP. At the recommendation of the U.S. Coast Guard, in several cases, multiple port areas have been grouped together to reflect geographic proximity, shared risk, and a common waterway.

Rail/Transit Security Grant Program (TSGP) - \$250 million

The TSGP provides grant funding to support mass transit agencies within the Nation's key high-threat urban areas in their efforts to enhance security measures for critical transit infrastructure, including bus, rail, and ferry systems. This program also provides funding to Amtrak for continued security enhancements for intercity rail operations between key, high-risk urban areas throughout the United States. A risk-based approach is used to allocate TSGP funding to eligible mass transit and intra-city bus systems on a regional basis to address priorities identified in the National Preparedness Guidelines, the NIPP, and the National Strategy for Transportation Security (NSTS), with particular focus on high-risk and high consequence transit systems.

Buffer Zone Protection Program (BZPP) - \$50 million

The BZPP provides funds to build security and risk-management capabilities at the State and local levels that will help protect critical infrastructure from acts of terror. Specifically, the program helps to implement Buffer Zone Plans (BZPs) by providing funds to support planning and equipment acquisition. BZPs help identify preventive and protective measures that make it more difficult for terrorists to conduct surveillance or launch attacks within the immediate vicinity of high-risk critical infrastructure assets. BZPs are developed in cooperation between DHS and State and local officials, and help increase the preparedness capabilities of the jurisdictions responsible for the security of surrounding communities.

Recent and Planned Accomplishments

FY 2008 Accomplishments

- Created a new FEMA Directorate from multiple legacy grant management organizations: FEMA Grants Management Branch and DHS Office of Grants and Training (Office of Grant Operations and Capabilities Division).
- Transitioned key grant programs and functions to FEMA's regional offices to establish the FEMA regions as primary liaisons to State and local partners.
- Transparency – FEMA instituted a more transparent process that involves more interaction and engagement with external partners and stakeholders.
- Aggressive outreach – FEMA offered Technical Assistance in both Program Management and Investment Planning to all States and territories prior to applying for the Homeland Security Grant Program.
- Refined critical infrastructure asset list – DHS distilled nationwide data on critical infrastructure to identify approximately 2,100 highly consequential assets to focus on those assets most critical from either a national or regional standpoint. These assets were then validated by States, sector specific agencies (as outlined in the National Infrastructure Protection Plan), and the private sector.
- FEMA began the Cost-to-Capability Grant Assessment process with the goal of providing detailed analysis of selected Target Capabilities (TCL) across all grant programs to determine their effectiveness.
- Program Implementation - the following number of grants were made within this PPA:
 - 60 UASI grant awards totaling \$781,630,000.
 - 20 UASI Non-Profit grant awards totaling \$15,000,000.
 - 150 Port Security grant awards totaling \$388,600,000.
 - 38 Public Transportation Security grants awards, including six Freight Rail Security Grants and the Intercity Passenger Rail Security grant to Amtrak, totaling \$388,600,000.
 - 49 Over-the-Road Bus Security grant awards totaling \$11,172,000.
 - 45 Buffer Zone Protection grant awards totaling \$48,575,000.
 - One Trucking Industry Security grant award totaling \$15,544,000.

FY 2009 Planned Accomplishments

- Institutionalize the program alignment, metrics and reporting system, and capabilities-based planning accomplishments from FY 2008.
- Develop and establish the Cost-to-Capability Grant Assessment and provide detailed analysis of selected Target Capabilities List (TCL) activities across all grant programs to determine effectiveness, as well as develop a requirements definition document that will outline the program plan for an end-to-end system.
- Monitor and enhance internal evaluation capabilities to further guide program planning and targeting of technical assistance efforts.
- Provide additional feedback to State and local partners on the outcome of the above analysis through customized risk and effectiveness profiles.
- Manage the financial and programmatic grant management functions for over 50 grant programs constituting over \$20 billion in total grant funds.
- Support States and territories in creating more informative State Preparedness Reports with a focus on increased specificity in reporting enhanced levels of preparedness.
- Work with State and local jurisdictions to update data and information for the risk methodology, including the collection of critical infrastructure data.
- Continue to transition selected programs and functions to the FEMA Regions.
- Institutionalize the program alignment, metrics and reporting system, and capabilities-based planning accomplishments from FY 2008.
- Continue to collect relevant threat and critical infrastructure data from Urban Areas for use in the risk analysis process.
- Monitor and enhance internal evaluation capabilities to further guide program planning and targeting of technical assistance efforts.
- Increase stakeholder involvement throughout the FY 2009 application process.
- Continue emphasis on regional collaboration across multi-modal systems.

FY 2010 Planned Accomplishments

- Implement the Cost-to-Capability Initiative (C2C) that will assess the effectiveness of FEMA grant programs across the TCL.
- Continue to decrease the burden on grantees by consolidating application and reporting requirements.
- Monitor and enhance internal evaluation capabilities to further guide program planning and targeting of technical assistance efforts.
- Provide additional feedback to State and local partners on the outcome of the above analysis through customized risk and effectiveness profiles.
- Issue final awards in a timely manner.
- Institutionalize the program alignment, metrics and reporting system, and capabilities-based planning accomplishments from FY 2009.
- Increase stakeholder involvement throughout the FY 2010 application process.
- Continue emphasis on regional collaboration across multi-modal systems.

PPA 3: TRAINING, MEASUREMENT, AND EXERCISE PROGRAMS

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$0
2009 Enacted	0	0	\$0
2010 Adjustments-to-Base	0	0	\$210,000
2010 Current Services	0	0	\$210,000
2010 Program Change	0	0	\$0
2010 Request	0	0	\$210,000
Total Change 2009-2010	0	0	\$210,000

FEMA requests \$210,000,000 for this activity. There is an increase of \$210,000,000 from FY 2009.

CURRENT SERVICES PROGRAM DESCRIPTION:

This PPA consists of grants, exercises, technical assistance, and training programs and includes: the National Exercise Programs, State and Local Training Programs, Technical Assistance Program, Center for Domestic Preparedness, and the Evaluation and National Assessment Program.

National Exercise Program (NEP) - \$42 million

The NEP meets the Homeland Security Presidential Directive (HSPD-8) and Homeland Security Act of 2002 requirement to establish a national, interagency-wide program to coordinate homeland security preparedness-related exercise activities. The NEP provides an organized approach to set priorities for exercises, reflect those priorities in a multi-year schedule of exercises that serves the strategic and policy goals of the U.S. Government, and address findings from those exercises in a disciplined interagency process. The White House Homeland Security Council maintains the purview of the NEP, while subcomponent programs within the NEP are managed by the National Exercise Division (NED).

The 9/11 attacks and Hurricane Katrina reinforced the importance of timely and integrated planning, decision-making, strategic coordination, and operational awareness of Federal, State, local, and private sector officials for domestic incidents. HSPD-8 required the Secretary of DHS to establish a national program to conduct homeland security preparedness-related exercises. However, requirements for interagency crisis coordination under other multiple Presidential directives and strategies extend beyond homeland security concerns. On January 26, 2007, the Homeland Security Council’s Deputies Committee, along with the Assistant to the President for Homeland Security and Counterterrorism and the Assistant to the President for National Security Affairs, reached unanimous concurrence to establish the National Exercise Program to enhance the capabilities of the Nation’s leaders to fulfill their responsibilities under any combination of emergencies and crises that may occur. Furthermore, on April 11, 2007, the President signed into action the NEP Implementation Plan, planting an official imprimatur to realize the NEP.

The NEP is based on the following:

- *National Level Exercises:* Cabinet officers and other key officials will be required to participate in five exercise events annually. One of these will be an operations-based exercise (i.e., full scale or functional/command post), the National Level Exercise (NLE). NLEs will test existing policies, plans, and capabilities in concert with intergovernmental, private sector, and international partners where appropriate.
 - *Proposed National Level Exercises:*
 - *FY 09 – International Terrorism – Prevention Focus*
 - *FY 10 – Domestic Non-Terrorism – Major Earthquake*
 - *FY 11 – Domestic Terrorism – Improvised Nuclear Device*
 - *FY 12 – International / Defense Crisis – Cyber Attack*
 - *FY 13 – Domestic Non-Terrorism – Major Hurricane*

In addition, four discussion-based exercises (i.e., tabletops or seminars), known as Principle Level Exercises (PLE), will be conducted each year to address emerging issues.

- *Interagency Ownership:* The Domestic Readiness Group (DRG) Exercise and Evaluation Sub-Policy Coordination Committee (E&E Sub-PCC) will recommend priorities, schedules, and corrective action issues to the Deputies Committee. A multi-agency NEP Executive Steering Committee, chaired by DHS, will provide day-to-day coordination of the program and frame issues for the full E&E Sub-PCC (and the DRG as appropriate).
- *Five-Year Exercise Schedule:* A multi-year schedule of exercises and exercise topics will be presented to the Deputies no later than June 30 of each year, in advance of the budget call. Existing DHS and Department of Defense (DOD) exercise scheduling conferences will be used. The schedule will be driven by U.S. Government-wide strategic priorities.
- *Corrective Action Program (CAP):* To ensure meaningful exercise outcomes, a NEP CAP process will identify, analyze, prioritize, assign, and track progress on issues identified in NEP exercises.
- *Alignment of Other Exercises:* The NEP does not replace other exercise programs, although some individual Department and Agency exercises may be incorporated into NEP exercises where they align closely with the goals and objectives. With only one NLE (rather than two), more schedule time is available for Department and Agency internal preparatory activities, which may be used to prepare for future NEP events, given the Five-Year Schedule, or to address other organizational priorities.

Recent and Planned Accomplishments

FY 2008 Accomplishments

- Conducted the TOPOFF 4 full-scale exercise and Long-Term Recovery Tabletop Exercise, produced after action documentation, and conducted After Action Conference to include a National After Action Conference.
- Conducted over 175 exercises including Federal, State, local, private sector and international partners.
- Refined and improved the Homeland Security Exercise Evaluation Program (HSEEP) Toolkit: developed software life-cycle support documentation; maintained and supported the HSEEP System; provided HSEEP System Outreach, planning, and support; maintained HSEEP Standards and Compliance Guidelines; and supported the HSEEP Website.
- Released prevention-specific HSEEP guidance.

- Identified the location for the National Exercise Simulation Center, initiated construction, and developed a concept of operations for initial operating capability.

FY 2009 Planned Accomplishments

- Conduct the first National Level Exercise focused on Prevention and information sharing (NLE 2009).
- Conduct Tier II (four), III and IV (75-100) exercises in coordination with the National Exercise Program Implementation Plan. This includes Regional Exercise Support Program, Principal Level Exercises and National Special Security Event Exercises.
- Systematize the definition, analysis, and subsequent identification and prioritization of strategic multi-agency recommendations and improvement plans (IPs) from exercises, operations, and real-world events via the Correction Action Program (CAP).
- Refine *LLIS.gov* by generating, validating, and disseminating Lessons Learned, Best Practices, Good Stories, and Practice Notes.
- Continue to refine and improve the HSEEP Toolkit: update software life-cycle support documentation; maintain and support the HSEEP System; provide HSEEP System outreach, planning, and support; maintain HSEEP Standards and Compliance Guidelines; and support the HSEEP Website.
- Continue development of the National Exercise Simulation Center.

FY 2010 Planned Accomplishments

- Conduct the National Level Exercise 2010 focused on response and recovery from an Improvised Nuclear Device.
- Conduct Tier II, III and IV exercises in coordination with the National Exercise Program Implementation Plan. This includes Regional Exercise Support Program, Principal Level Exercises and National Special Security Event Exercises.
- Continue to refine and improve the HSEEP Toolkit: update software life-cycle support documentation; maintain and support the HSEEP System; provide HSEEP System outreach, planning, and support; maintain HSEEP Standards and Compliance Guidelines; and support the HSEEP Website.
- Continue refinement of the National Exercise Simulation Center (NESC).

State and Local Training Programs - \$137 million

The State and Local Training Program provides first responders with a comprehensive Weapons of Mass Destruction (WMD) training program that improves their capacity to prevent, protect against, respond to, and recover from acts of terrorism. In administering this program, the Training and Exercise Integration (TEI) Division within the National Integration Center oversees, coordinates, and strives to institutionalize the development and delivery of comprehensive training that targets members of the responder community, providing WMD knowledge to enhance their skills and abilities. Ensuring the quality and consistency of training of first responders is a key element in FEMA's preparedness mission.

- **Center for Domestic Preparedness (\$62.5 million).** Funds for the Center for Domestic Preparedness (CDP), a component of FEMA's National Integration Center (NIC), are allocated to provide specialized terrorism preparedness training for State, local, and tribal emergency responders on capability-building skills tied to national priorities, especially those related to Weapons of Mass Destruction (WMD), and to sustain and modernize the facilities at CDP. This one of a kind national asset is the only federally chartered WMD training facility. The CDP offers

a unique environment providing advanced, hands-on, all-hazards preparedness training to State, local, and tribal emergency responders. The facilities operated by the CDP offer a unique capability that enables responders to train using toxic nerve agents while ensuring an optimized and safe learning environment for students. Within the funding provided for FY 2010, \$5.5 million is to be used to operate the Noble Training Facility (NTF). The NTF is the only hospital facility in the United States dedicated solely to training hospital and healthcare professionals in disaster preparedness and response operations. The NTF addresses training gaps identified by the healthcare response community and trains healthcare professionals to meet all-hazard threats in a realistic hospital environment. In addition to developing and delivering emergency responder training at various levels for a broad range of emergency response disciplines, the CDP also participates in efforts to standardize and decentralize this training for State, local, and tribal responders, while maintaining training quality and gathering meaningful evaluation data for continuous program improvement and effective program management. The CDP also performs response-focused tests and evaluations of emergency response equipment. The CDP maintains a campus of 124 acres and approximately 900,000 square feet of training and support facilities. The CDP provides one of a kind training facilities and environments for emergency responders to conduct specialized, advanced hands-on training in realistic and challenging training venues that are not typically available at the State, local or tribal level.

- **Continuing Training Grant Program (CTGP) (\$23 million).** Funds for the CTGP are administered through the HSNTP and are managed by the Training and Exercise Integration Division within the National Integration Center (NIC). CTGP programs traditionally meet the continuing training needs of responder communities and consist of current training partners that have previously received grant funding to provide training and education. In addition to providing training across various responder disciplines, CTGP also includes programs that deliver homeland security curricula in the form of executive education programs and accredited master's degree education, such as the Center for Homeland Defense and Security (CHDS) at the Naval Postgraduate School in Monterey, CA.
- **National Domestic Preparedness Consortium (NDPC) (\$51.5 million).** Funds for the NDPC are administered and managed by the Training and Exercise Integration (TEI) Division, a component of the NIC. The NDPC works with other NIC training components to identify training needs for all response disciplines responsible for terrorism and other catastrophic event prevention, deterrence, and incident response. Current NDPC membership is a partnership between universities and the government:
 - The Energetic Materials Research and Testing Center (EMRTC), New Mexico Institute of Mining and Technology (New Mexico Tech), Socorro, NM.
 - The National Center for Bio-Medical Research and Training (NCBRT), Louisiana State University (LSU), Baton Rouge, LA.
 - The National Emergency Response and Rescue Training Center (NERRTC) at Texas A&M University, College Station, TX.
 - The U.S. Department of Energy's (DOE) Nevada Test Site (NTS)/Counter Terrorism Operations Support (CTOS).

Each of the NDPC components focuses on development and delivery of products and services according to their institutional expertise. Under this arrangement, the NDPC demonstrated results in the Nation's unified effort to bring all levels of government, business, and the emergency response community to enhanced levels of preparedness. Initially, the courses were focused on WMD, but Homeland Security Presidential Directive 8 (HSPD-8) expanded the course portfolio of the NDPC to encompass all hazards.

Recent and Planned Accomplishments

Center for Domestic Preparedness

FY 2008 Accomplishments

- More than 114,000 State, local, and tribal emergency responders participated in CDP training courses in FY 2008: 14,171 were through resident training programs; 60,625 were through non-resident training programs; and 39,744 were through indirect/train-the-trainer programs.
- The CDP executed 2,167 on-site training offerings through mobile training teams (MTTs), at no cost to the jurisdiction. This non-resident training increased 60% during FY 2008, reflecting the success of a new grassroots methodology to accomplish “State-based” training. This approach focuses on the unique needs of the local jurisdiction, tailoring training to the responders’ requirements. These MTT events provided critical hands-on training to the local jurisdiction to meet their specialized needs.
- To achieve greater levels of collaboration with, and support to, States and tribes, the CDP expanded satellite training operations using an eastern, central, and western area framework. Increasing our proximity improved coordination and oversight for mobile training events, and assisted the States and FEMA regions in identifying State, local and tribal training needs.
- MTTs delivered “special event” training that included on-scene training for the two 2008 Presidential nomination conventions, with 25 classes supporting the Republican National Convention and 67 classes supporting the Democratic National Convention. More than 4,000 responders trained for these high-visibility events. The CDP’s MTTs also conducted on-scene training for Pennsylvania State police officers in preparation for the 2008 Annual Governors Conference in Philadelphia, PA, and in Tampa, FL in Preparation for Super Bowl XLIII.
- The CDP accelerated the mentorship training delivery initiative for States and locals in 2008. The Mentoring Program was designed to train, qualify, and develop local instructors to provide training to their peers within and surrounding their jurisdictions. This program is similar to the train-the-trainer programs, but it takes instructor development one-step further by providing in-class support as the new trainer delivers initial training sessions in courses beyond the awareness level.

FY 2009 Planned Accomplishments

- Train over 110,000 State, local, and tribal responders per year in resident, non-resident, train-the-trainer, and blended learning programs.
- Build new training partnerships to expand training opportunities by 10% per year with particular focus on the Noble Training Facility for expanded medical and health care professionals training.
- Expand the training operations at the Chemical, Ordnance, Biological and Radiological (COBRATF) by 10% per year to incorporate more diverse and challenging training and exercise activities in a realistic environment not available anywhere else in the United States. Integrate ordnance, biological, and radiological modules, where appropriate, into COBRA.
- Develop a formal relationship with United States Northern Command (NORTHCOM) and the National Guard Bureau to identify appropriate levels of collaboration in support of common missions related to Homeland Security, Homeland Defense, and Civil Support through training.
- Develop and expand the CDP’s unique training venues, to include the 500 Area Training Complexes, to make them more diverse, complex, and realistic to support multiple training, exercise, and evaluation activities in support of CDP and other training partner operations, thus establishing the CDP as the National Training Center for advanced responder education, training, and exercise.

FY 2010 Planned Accomplishments

- Further expand training venues (500 Area, Noble, COBRATF), by adding advanced CBRNE technology to training programs, enhancing scenarios by incorporating simulations as appropriate, and upgrading realistic training venue environments that further challenge the responder students' planning, decision-making skills, and the implementation of operational tactics.
- Identify and further expand training partnerships internal and external to DHS and FEMA that support the mission of the CDP and other agencies focused on State, local, and tribal emergency response capabilities to incidents of terrorism or natural disaster involving CBRNE or mass casualties.
- Increase mobile training capabilities by 10% per year by providing police academies, fire academies, local community colleges, universities, and major metropolitan departments with opportunities to participate in the CDP's mentor program with the intent to institutionalize CDP training and development of a local training delivery capability through partnerships designed to meet annual refresher and sustainment training requirements.
- Expand integrated training exercise opportunities across training courses, disciplines, and target capabilities to add realism based on complex scenarios, incorporating multiple threats, multiple targets, mass casualty incident response, and other facets associated with events involving CBRNE.
- Execute prioritized maintenance, repair, and replacement of facilities addressing critical backlog maintenance and repair to infrastructure in accordance with the CDP Facilities master Plan.

Recent and Planned Accomplishments

Training and Exercise Integration (TEI) Division

FY 2008 Accomplishments

- Administered funding for the FY 2008 Competitive Training Grant Program (CTGP), and the FY 2008 Homeland Security National Training Program (HSNTP), which includes the NDPC, Rural Domestic Preparedness Consortium (RDPC), and the Continuing and Emerging Grant Programs.
- Through the HSNTP and CTGP, TEI trained nearly 111,000 responders in FY 2008 in resident, non-resident, and train-the-trainer programs, and reached out to more than 185,000 responders with preparedness information through satellite broadcasts.
- Completed analysis of 11 target capabilities, conducted analyses on 100% of current TEI/TO approved courses, and produced guidance on aligning applicable courses to those 11 target capabilities.
- Completed 100 instructor audits.
- Conducted site visits and/or attended course pilots for 100% of current training providers.

FY 2009 Planned Accomplishments

- Training: Train an additional 110,000 responders in resident, non-resident, train-the-trainer, and blended learning programs.
- Target Capabilities Course Alignment: Revise 25% of TEI approved courses so that they align to applicable capabilities. Analyze an additional 10 capabilities and align applicable courses to target capabilities. Revise curricula to accomplish alignment.
- CTGP: Conduct detailed review of continuing and emerging training programs, and provide recommendations for funding and implementation to NPD leadership.
- Grant Oversight: Conduct site visits of all new training providers.

- Course Review: Continue conducting course review and certification of 100% of courses developed by TEI Training Partners.

FY 2010 Planned Accomplishments

- Training: Train an additional 125,000 responders in resident, non-resident, train-the-trainer, and blended learning programs.
- Target Capabilities Course Alignment: Revise an additional 50% of TEI approved courses so that they align to applicable capabilities. Ensure that any new courses are fully aligned with applicable target capabilities from inception.
 - Analyze an additional 10 capabilities (given additional funding) and align applicable courses to target capabilities. Rewrite/revise curricula to accomplish alignment.
 - Explore packaging of aligned courses for use by community colleges and universities as part of sustainment efforts.
- Grant Oversight: Conduct site visits of all new training providers.
- Instructor Audit: Conduct course audits in 10% of TEI approved classes.
- Course Review: Continue conducting course review and certification of 100% of courses developed by TEI Training Partners.

Technical Assistance (TA) Program - \$13 million

The Homeland Security Planning & Technical Assistance Program (HSPTAP) is a capabilities-based program structured to build and sustain State and local capacity in priority preparedness activities. Under this vision, the TA services developed and delivered to State and local homeland security personnel address the full spectrum of the goals, priorities, and capabilities outlined in the National Preparedness Guidelines. As capability gaps are identified, the TA program develops services that can address those needs and build priority capabilities in the most critical areas. The TA program is designed to be an agile program that addresses present day areas of greatest State and local need.

The program is committed to transferring and institutionalizing knowledge at the State and local level and provides a dynamic menu of services responsive to national priorities. The TA program is performance-based and effectively leverages limited resources. TA support is provided through lessons learned and best practices, planning guidance and templates, and direct support through workshops, subject-matter expert access, and planner support.

Technical assistance support requirements are characterized into three areas:

- Planning Services
- Prevention
- Grants Management

The Technical Assistance Program's processes will also serve as a conduit for direct support from other Directorates within FEMA, and potentially other components within the Department.

- **Planning Services TA** – The enhancement of planning and planning capabilities at all levels of government is critical to national preparedness. Planning services are provided in support of all threats and hazards, as well as across all Target Capabilities. The programs under this category draw on the subject-matter expertise resident within FEMA and the Department overall, as well as from throughout the emergency response community. The primary focus for this support is on planning for catastrophic events, as well as enhancing overall planning to provide for improved deliberate and crisis action planning at the State and local level. Additionally, these services will support the development of planning guidance and planning standards or measures, to include revision of the Planning Target Capability. Finally, these services will be leveraged to provide

support to specialized planning projects, such as the Regional Catastrophic Preparedness Program and the Task Force for Emergency Readiness (TFER).

- **Prevention TA** - The establishment of a network of fusion centers to facilitate effective nationwide information sharing is a top priority that requires close collaboration among Federal, State, and local partners. To facilitate the development of a national fusion center capability, the U.S. Department of Homeland Security's (DHS) National Preparedness Directorate (NPD) and the U.S. Department of Justice's (DOJ) Bureau of Justice Assistance (BJA) have partnered to develop the *Fusion Process Technical Assistance Program*. This program has been developed in support of the DHS Office of Intelligence and Analysis (I&A) and in coordination with the Office of the Director of National Intelligence (ODNI); the Office of the Program Manager, Information Sharing Environment (PM-ISE); the Federal Bureau of Investigation (FBI); and experts from the State and local community— including the Global Justice Information Sharing Initiative (Global), the Criminal Intelligence Coordinating Council (CICC), and the Global Intelligence Working Group (GIWG). The joint DHS NPD/DOJ Fusion Process Technical Assistance Program provides several direct support and subject matter expert (SME) services focusing on fusion centers. This includes assistance to State and local jurisdictions on developing, implementing, and operating fusion centers.
- **Grants Management TA** - We are requesting that a separate budget line item for Grants Management Technical Assistance be continued. The *Grants Management Technical Assistance Program* facilitates grants management through focused technical assistance for all FEMA's grantees on pressing issues and concerns faced in the management of FEMA grants. The main objectives of the Grants Management Technical Assistance are to: (1) help participants in developing/revising effective policies, procedures, and practices in critical areas of grants management; (2) facilitate problem-solving in addressing specific grants management issues; (3) apply proven business practices that will create greater efficiency in the use of human capital to meet grants management priorities (i.e., monitoring, strategic planning, organization, program implementation, staff training, auditing, performance measurement); (4) improve participants' ability to conduct successful Federal and State programmatic and financial monitoring; (5) prepare participants for performance and financial audits; (6) improve participants' decision-making skills by focusing on more performance-oriented solutions which are consistent with State strategies and priorities; and (7) improve collaboration among policy, program, and financial staff as an effective means to integrate grants management operations.

Recent and Planned Accomplishments

FY 2008 Accomplishments

- Provided over 113 TA deliveries to States and localities addressing all topic areas to support capability enhancement.
- Developed interim Comprehensive Preparedness Guidance (CPG) for all-hazards emergency operations planning (CPG-101), planning for special needs populations (CPG-301), and other preparedness guides.
- Co-sponsored the 2008 National Fusion Center Conference, the Fire Service Intelligence Enterprise Conference, and four regional fusion center workshops.

FY 2009 Planned Accomplishments

- Expand programs and activities to increase planning and technical assistance across all mission areas, to include integrating prevention and protection information into response, recovery, and

mitigation planning. Meet 80% of technical assistance requests with an average response time of three days.

- Continue roll-out and implementation of a National Planning System. Establish National Planning Guidelines which will serve as the basis for all planning guidance. Provide further TA on catastrophic planning based on the results of the Nationwide Plan Review, national priorities, and various assessment tools. Finalize CPG-101, an all-hazards planning guide for State, tribal, local, and territorial governments.
- Complete draft of CPG-302 which provides planning guidance for incorporating household pets and service animals into the planning efforts.
- Complete FY 2007-2008 report for RCPGP; complete FY 2009 guidance package.
- Co-sponsor the 2009 National Fusion Center Conference, the IACP Criminal Intelligence Sharing Summit, the Health Security Intelligence Enterprise Conference, and four regional fusion center workshops. Increase number of technical assistance requests fulfilled by reaching larger numbers at sponsored conferences.

FY 2010 Planned Accomplishments

- Expand national-level planning guidance across all mission areas. Increase direct support programs to expedite the revision of State Emergency Operations Plans and the development of Regional Base Plans. Conduct National Planning Conference to focus on the issues and challenges facing planners at the Federal, State, and local level. Increase number of technical assistance requests fulfilled by meeting demand through sponsored conferences.
- Design, develop, and deliver a new chapter of fusion process TA services to facilitate the development of advanced fusion process capabilities in fusion centers nation-wide.
- Continue to partner with interagency representatives, to include Emergency Support Function leads, to ensure planning requirements are addressed across all mission areas and Target Capabilities.
- Continue to partner with interagency partners, including the FBI, DHS Intelligence and Analysis (I&A), and the Office of the Director of National Intelligence (ODNI) to support development and implementation of new services focused on privacy training, security issues (clearances, classifications, etc.), integration of the health security community in information sharing and fusion center efforts, and coordination between fusion centers and Emergency Operations Centers (EOC).
- Co-sponsor the 2010 National Fusion Center Conference, as well as four regional fusion center workshops.

Evaluation and National Assessment Programs - \$18 million

The National Preparedness Directorate (NPD) Evaluations and Assessments program works to measure the effectiveness of preparedness programs and develop policy in support of its all-hazards preparedness mission. These efforts gather, analyze, and interpret national and program-specific data in the context of national preparedness strategy and guidance documents, as well as supporting threat, vulnerability, and needs assessments. The vast majority of these efforts are conducted to fulfill specific requirements from the Post-Katrina Emergency Management Reform Act (PKEMRA), as well as other legislative and executive requirements.

- **PKEMRA and HSPD-8 Requirements:**
 - **Comprehensive Assessment System.** In support of PKEMRA and HSPD-8 requirements to develop a comprehensive assessment system, in FY 2008 NPD conducted a comprehensive review of six major assessment systems developed by DHS/FEMA in the last decade. The results of this analysis are being used to inform the development and

implementation of a single, nationally-integrated system and process capable of assessing the level of national preparedness. In FY 2009, the Preparedness Policy, Policy, and Analysis division will expand this work to develop a comprehensive assessment system using the technical architecture of several legacy assessment systems.

- **Target Capabilities and Preparedness Priorities.** In support of the Target Capabilities and preparedness priorities, NPD is in the process of developing capability frameworks to help jurisdictions determine how prepared they need to be for large-scale disasters by providing clear objectives, measures, and resource requirements. When completed, the capability frameworks will be incorporated into a revised version of the Target Capabilities List (TCL) and established measures will form the basis for a nationwide assessment comparing current capability levels to target levels identified in the frameworks.
- **Performance Measures and Metrics.** NPD continually tracks data on a large number of program metrics and milestones at the request of DHS, OMB, GAO, and the Congress. These metrics and milestones are reported quarterly and allow FEMA to demonstrate the effectiveness and efficiency of NPD programs and provide data to inform assessment projects.
- **Reporting Requirements.** The Federal Preparedness Report (FPR) is an annual, PKEMRA-mandated report on current national preparedness levels in planning, organization, equipment, training, exercises, and evaluation that includes data drawn from all levels of government.
- The FPR represents an ongoing effort to conduct a comprehensive assessment of national preparedness at the Federal, State, and local levels. NPD is currently reviewing and incorporating comments into the FPR.
 - **State Preparedness Reports (SPRs).** As required by PKEMRA, each State or territory receiving Federal assistance must submit an annual report on its level of preparedness to FEMA. FEMA collects the reports from all 56 States and territories and reviews and analyzes them in order to produce substantive analysis on nationwide trends, identify areas for increased attention, and inform broader assessments of national preparedness.
- **Prevention Preparedness Policy and Analysis.** It is a critical priority for the Nation to help States, local jurisdictions, and Federal partners in achieving prevention-related national priorities identified in the National Preparedness Guidelines. The Prevention Preparedness Policy and Analysis goal is to design and build State and local prevention programs, appropriately allocate prevention resources, and create prevention capabilities. To achieve this goal, the program will identify the major planning tasks, deliverables, priorities, and milestones, as well as provide policy oversight for prevention technical assistance, training, exercises, and evaluations and assessments. The activities within this program also include serving as an executive agent managing and maintaining the Universal Adversary Program, the National Planning Scenarios (NPS), and the NPS Universal Adversary (UA) (prevention) Prequels for DHS on behalf of interagency and intergovernmental clients.

Recent and Planned Accomplishments

FY 2008 Accomplishments

- Developed the first set of six – out of 37 total – capabilities to test the process and format for updating the entire Target Capabilities List (TCL) based on feedback and lessons learned from the user community to be risk-based, measurable, and user-friendly. The initial six capabilities

include: Intelligence, Mass Transit Protection, On-site Incident Command, Emergency Operations Center Management / Multi-Agency Coordination, WMD/HazMat Rescue, and Animal Disease Emergencies. Conducted a series of 12 technical working group (TWG) sessions engaging approximately 500 Federal, State, and local subject-matter experts in FEMA regional locations with practitioners and experts to revise the six selected capabilities.

- Migrated 139 Universal Adversary Program dossiers to the exercise version of the Terrorism Identities Datamart Environment for use in National Exercise Program exercises.
- Initiated design and development of the CAS to be completed at the end of FY09. The choice of this approach was based on an extensive review of existing and legacy capability assessment systems. Our intention is to build upon lessons learned in order to standardize, centralize, and integrate the assessment process and satisfy specific Post-Katrina Emergency Management Reform Act (PKEMRA) requirements for a comprehensive assessment system (CAS). Selected the National Incident Management System Compliance Assistance Support Tool (NIMSCAST) to serve as the technical foundation for the CAS because of its low user burden and national user community.
- Wrote and produced a Federal Preparedness Report for broad distribution to FEMA and DHS and, after adjudication, published the final report in January, 2009.
- Wrote and produced the FY07 SPR Analysis and Findings Report that identified national preparedness trends from aggregated SPR data. Developed 56 SPR State overviews for FEMA regional personnel that captured key messages communicated in each SPR.

FY 2009 Planned Accomplishments

- Release the revised six target capabilities to the stakeholder community following a broad national review. Use the revised capabilities as the basis for state and local capability assessments, investment justifications, and strategy planning efforts.
- Develop a second set of no less than 12 additional capabilities to further revise the TCL based on feedback and lessons learned from the user community to be risk-based, measurable, and user-friendly. Release the revised 12 capabilities at the end of FY09 for a broad national review.
- Utilize UA red analysis, and attack tree scenarios to support and validate planning performed under the National Planning System and National Exercise Program. Complete red-team analysis and provide actionable recommendations for improving strategic and concept plans under the Integrated Planning Systems as needed, within 60 days of plan development.
- Pilot test in the Spring and field nationally in the Fall: (1) the PrepCAST, an online web portal; (2) the PrepCAST's TCL-based survey for gathering quantitative preparedness data from the states, territories, and tribes used to fulfill the SPR reporting requirement; and (3) the analytical tools to provide users with a single, integrated capabilities-based system that will serve as a central repository for assessing national preparedness and to provide senior leadership and Congress quantitative answers to the question, "How prepared are we?" Set a baseline on the number of analyzable data sources in the Comprehensive Assessment System.
- Submit the first NPR to Congress, providing significantly improved preparedness data analysis and creating a more standard preparedness data analytical framework for future reports. Consolidate the requirements of the Federal Preparedness Report, State Preparedness Reports Summation, Catastrophic Resource Report, Emergency Support Functions Report and Emergency Medical Services Report into one common analytical capstone. Set a baseline for the number of ways PPPA is measuring preparedness in the NPR.

FY 2010 Planned Accomplishments

- Revise the remaining 37 target capabilities to reflect stakeholder feedback to be risk-based, measurable, and user-friendly. Conduct series of Technical Working Group sessions and meetings with stakeholders to inform them about the update of the remaining TCL capabilities using NIMS Resource Typing Work Groups, the FEMA Regions, and other forums with subject-matter expertise. Begin using the revised capabilities as the basis for State and local capability assessments, investment justifications, and strategy planning efforts.
- Update attack tree and prequel-scenarios and perform red-team analysis to regularly inform the development of Federal interagency strategic plans, concept plans, and DHS operational plans under the National Planning System. Complete the revision of attack trees and prequel scenarios documentation for the 12 terrorism-related National Planning scenarios.
- Integrate 12 revised Target Capabilities List 3.0 Capability Frameworks, when released by the end of FY 2009, into PrepCAST for the purposes of incorporating capability performance classes into the survey and to develop a more accurate, risk-based mechanism of assessing preparedness.
- Incorporate PrepCast user feedback to improve and make easier collection of information from the States, territories, and tribes. Integrate Cost-to-Capability and Gap Analysis Program requirements into PrepCAST to continue the integration and streamlining of State and local preparedness and grant reporting requirements. Integrate National Incident Management System compliance questions as part of the PrepCAST survey to reduce user burden.
- Submit the second National Preparedness Report (NPR) to Congress, again consolidating the requirements of the Federal Preparedness Report, State Preparedness Reports Summation, Catastrophic Resource Report, Emergency Support Functions Report and Emergency Medical Services Report into one common analytical capstone. Increase the number of analyzable data sources in the Comprehensive Assessment System that feed into NPD's analysis and double the number of ways NPD assess preparedness in the NPR.

PPA 4: MANAGEMENT AND ADMINISTRATION (M&A) **

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$0
2009 Enacted	0	0	\$0
2010 Adjustments-to-Base	638	587	\$175,000
2010 Current Services	638	587	\$175,000
2010 Program Change	0	0	\$0
2010 Request	638	587	\$175,000
Total Change 2009-2010	638	587	\$175,000

FEMA requests \$175,000,000, 638 positions, and 587 FTE for this activity. This is an increase of \$175,000,000 over FY 2009. The FY 2010 request includes 38 Pos/ 38 FTE for FEMA’s support offices that were funded by SLP in previous years.

CURRENT SERVICES PROGRAM DESCRIPTION:

Management and administration (M&A) includes traditional operational and program management support resources. This account covers the salaries and benefits for staff, travel, rent, printing and supplies, related preparedness activities, administration activities, and FEMA’s support organizations for infrastructure and administrative activities; including contributions to the Departmental working capital contributions.

Providing M&A funding via a line item under the State and Local Programs appropriation increases transparency and accountability by doing away with the traditionally indistinct combination of funding sources – one portion coming from the appropriated transferable percentage (up to 3 percent) and another portion coming from the Operations, Management, and Administration (OMA) account. The actual cost of managing and administering the grant programs is not correlated with the amount of grant dollars appropriated, so the past M&A totals do not represent what resources are truly needed to implement the grants within State and Local Programs. A line item M&A amount will appropriately address this issue. Historical data and the proposed 2010 level are presented in the following chart.

(Dollars in thousands)	2006 Enacted	2007 Enacted	2008 Enacted	2009 Enacted	2010 Request
TOTAL Appropriations*	3,359,700	3,393,000	4,227,800	4,775,700	3,867,000
TOTAL Management and Administration	166,800	168,000	196,200	216,000	175,000
GPD - Operations, Management, and Administrative Line	2,000	2,000	8,000	13,600	NA
NPD - Operations, Management, and Administrative Line	50,200	50,200	61,200	74,200	NA
Transfer for Management and Administration[†]	114,600	115,800	127,000	128,200	NA
ACTUAL TOTAL Management and Administration (as percentage of total appropriation)	5.0%	5.0%	4.6%	4.5%	4.5%
* Includes State and Local Programs, Firefighters Assistance Grants, and Emergency Management Performance Grants					
[†] Appropriations language allows for up to 3 percent to be transferred by FEMA for grants management and administration					

In addition to increased transparency and accountability, this move in 2010 makes strategic planning and overall day-to-day operations easier to achieve and execute for both GPD and NPD, as funding level consistency and predictability is improved. In addition, M&A provided in this way will facilitate, if necessary, an improved ability to justify funding increases in the coming years.

National Preparedness Program - \$104 million 391 Pos/ 340 FTE

• Incident Management Systems Integration (IMSI)

NPD serves as the Executive Agent for the National Response Framework (NRF) in support of the National Integration Center. IMS coordinates and brokers agency and interagency planning initiatives in support of operational response and recovery objectives for the NRF and the National Incident Management System (NIMS). The IMS plays a critical role in coordinating the various components of the NRF to ensure that the NRF remains linked to and based upon the NIMS.

• Emergency Management Institute (EMI)

The planning and systems aspects of the National Preparedness Directorate are complemented by the EMI which provides training to Federal, State, local, tribal, volunteer, public and private sector officials to strengthen emergency management core competencies, including incident management, operational planning, disaster logistics, emergency communications, disaster assistance, continuity programs, public disaster communications, integrated preparedness, and hazard mitigation. EMI directly supports the implementation of NIMS, the NRF, and the National Preparedness Guidelines (NPG) by conveying necessary knowledge and skills to practitioners. EMI uses a diverse training delivery system that includes residential on-site training; off-site delivery in partnership with emergency management training systems, colleges, and universities; and technology-based mediums to conduct individual training courses for emergency response personnel across the Nation.

Recent and Planned Accomplishments

FY 2008 Accomplishments

○ IMSI

- Sustained national preparedness doctrine and policy
 - Revision and promulgated the National Response Framework.
 - Initiated revision of the National Incident Management System (NIMS) to include Federal state, local and tribal input.
 - Coordinated with EMI to develop and administer revised emergency management training and education programs.
- Monitored NIMS implementation and compliance at all levels of the government.
- Administered Cooperative Agreements to sustain the NIMS Support Center services at Eastern Kentucky University and with the Emergency Management Accreditation Program (EMAP) where 23 State, local and UASI level emergency management programs were accredited.
- Strengthened and expanded partnerships both in the region and with other federal agencies by providing staffing to oversee outreach and education programs to promote NIMS and NRF doctrine principals.

○ EMI

- EMI continued to develop and deliver its national-level training program and to evaluate the effectiveness and the impact on Federal, State, local, tribal, volunteer, public, and private sector officials, including revision of existing curricula to incorporate recent changes to the NRF and NIMS. EMI's curriculum of over 450 courses trained 14,508 resident students, nearly 2 million independent study course completions, and 38,663 Disaster Field Training Operations (DFTO) participants at Joint Field Offices.
- EMI developed and began conducting several exercise-based NRF Integrated Emergency Management Courses (IEMCs) for regions and States to test an integrated approach to the revised NRF framework which is based on NIMS.

FY 2009 Planned Accomplishments

- IMSI
 - Complete the revision and national distribution of NIMS doctrine and associated guides.
 - Conduct NIMS rollout activities
 - Write and promulgate credentialing guidelines
 - Write and promulgate for law enforcement components to operate within NIMS.
 - Standardize Incident Command Forms
 - Emergency Response Field Operations Guide
 - Resource management standards and typing
 - Initiate design and development of a doctrine and publication management system to include electronic hosting of national documents.
 - Implement the Title IX Program to establish the accreditation and certification processes for the Private Sector Preparedness Voluntary Accreditation and Certification Program.
 - Maintain, update, and revise the National Response Framework and National Incident Management System based on lessons learned and stakeholder input.
 - NRF and NIMS outreach efforts
 - Continue development and implementation of a national mutual aid system to include supporting the creation of formalized, comprehensive, exercised, intrastate mutual aid systems in all 50 States, territories, possessions, and the District of Columbia.
 - Continue to strengthen partnerships in the FEMA regions and provide adequate staffing to oversee the outreach and education program with FEMA, DHS and other Federal components, State, local, tribal, hospital, and healthcare partners.
 - Transition the Responder Knowledge Base (RKB) to a new contract and maintain a high level of website availability and functionality.
 - Additional assessments will be conducted by EMAP to provide IMSI with a detailed report on State, territory, and UASI region compliance with NIMS and TCL integration.

FY 2009 Planned Accomplishments

- EMI
 - EMI will continue to develop and deliver its national-level training program and evaluate the effectiveness and the impact on Federal, State, local, tribal, volunteer, public, and private sector officials. EMI's curriculum of over 450 courses will train an estimated 14,000 resident students, 2 million independent study course completions, and support DFTO requirements. To assure efficacy of effort and parallel alignment with DHS and FEMA goals and activities, EMI will employ assessment tools and peer reviews to measure program outcomes and alignment. EMI will continue to design and deliver 10 exercise-based NRF IEMCs for additional regions and States.
 - EMI will be an active participant in the continued integration of NIC training and exercise programs and incorporate HSEEP doctrine into its exercise-based training programs.

FY 2010 Planned Accomplishments

- IMSI
 - Revise the National Response Framework and National Incident Management System based on lessons learned and stakeholder input in accordance with Integrated Planning Guidelines.

- Continue the revision and national distribution of NIMS doctrine and associated guides.
 - Write and promulgate Incident Management Team training and qualification guidelines.
 - Resource management standards and typing
- Continue efforts on the design and development of a standardized process for preparing, reviewing, publishing, and maintaining National Preparedness doctrine and publications. Complete design and development of an electronic hosting system for national documents.
- Continue the Title IX Program Office support of implementation and outreach activities for the Private Sector Preparedness Voluntary Accreditation and Certification Program
- NRF and NIMS outreach efforts
 - Continue development and implementation of a national mutual aid system to include supporting the creation of formalized, comprehensive, exercised, intrastate mutual aid systems in all 50 States, territories, possessions, and the District of Columbia.
 - Continue to support all Federal departments and agencies in their efforts to become current on NIMS program requirements through training, education, and awareness activities.
 - Provide upgrades to the Responder Knowledge Base (RKB) and develop additional services for the responder community while maintaining the high level of website availability and functionality, to include completing DHS requirements for Certification and Accreditation (C&A).
 - Additional assessments will be conducted by EMAP to provide IMSI with a detailed report on State, territory, and UASI region compliance with NIMS and TCL integration.
- EMI
 - EMI will continue to develop and deliver its national-level training program and evaluate the effectiveness and the impact on Federal, State, local, tribal, volunteer, public, and private sector officials. EMI's curriculum of over 450 courses will train an estimated 14,000 resident students, 2 million independent study course completions, and support DFTO requirements. EMI will analyze financial and programmatic impact of alternate options for training delivery, such as remote delivery of exercise-based training and increased mobile offerings that are not resident facility dependent.
 - EMI will design a training curriculum to educate and certify planners to support implementation of the Integrated Planning System.

Grant Preparedness Program - \$71 million 209 Pos/ 209 FTE

The Grant Program Directorate has three primary functions: 1) Grants Accountability and Oversight; 2) Business Support and Data Analysis; and 3) Program Development and Administration.

- **Grants Accountability and Oversight** – This function manages the business processes necessary for all pre-award activities including the announcing of funding opportunities, accepting and reviewing applications, determining award eligibility, and providing quality control over grants award documents and processing award packages. This function manages all post-award activities, such as monitoring grantees, processing modifications, generating amendments, reviewing grantee financial status reports, and coordinating grant closeout. The function also assists in the coordination and monitoring of key grant-related audit activities, i.e., OIG, GAO, Single Audit Act, and the independent financial auditor.
- **Business Support and Data Analysis** – This function provides a single mechanism to analyze, synthesize, and present grant-related financial data. Responding to increasingly intense security of

FEMA's stewardship of grant and assistance resources, this function will provide the Congress and the White House with information demonstrating accountability and oversight of billions of dollars.

- **Program Development and Administration** – This function serves as the executive agent for development of grant guidance for the annual Homeland Security grant programs; provides programmatic oversight and technical assistance for grant administration, monitoring, and reporting; and is a principal liaison for interagency programmatic collaboration and coordination.

Recent and Planned Accomplishments

FY 2008 Accomplishments

- Awarded more than \$4.5 billion via approximately 5,300 grants to State and local governments, educational institutions, and non-profit organizations.
- Established an intra-agency Grants Task Force to ensure grants knowledge and awareness for all FEMA personnel, including the FEMA regions. The Task Force establishes an ongoing forum of stakeholders to share and evaluate best practices and lessons learned to drive performance improvement.
- Transitioned key grant programs and functions to the regions to establish the FEMA regions as the hub for financial monitoring.
- Provided financial and business grants management technical assistance and customer service for internal and external stakeholders in support FEMA's portfolio of grant programs.
- Developed the *FEMA GPD Grant Program Accomplishments Report: Summary of Initial Findings (FY03-07)*. This was the first study of how grantee spending builds target capabilities and includes analysis of grantee data from seven grant programs over five fiscal years.

FY 2009 Planned Accomplishments

- Continue to manage the suite of FEMA grant programs and track State and local grant administration and spending.
- Continue to provide outstanding customer service to all grantees, as well as internal and external partners via the Customer Service Center.
- Continue to improve grants management systems in an effort to provide grantees with full life-cycle grants administration support using one system for all non-disaster grants.
- Continue building a robust and standardized data analysis capability through the implementation of innovative systems and technology improvements. These activities quantify the benefits we provide and demonstrate the importance of grants management to Homeland Security priorities.
- Develop and deliver the Cost-to-Capabilities (C2C) Pilot 1 to test the C2C Analytic Framework with selected jurisdictions for the State Homeland Security Grant program and the UASI program.
- Develop the Federal Analytic Component to store pilot 1 lessons learned and accomplishments report data.

FY 2010 Planned Accomplishments

- Continue building a robust and standardized data analysis capability through the implementation of innovative systems and technology improvements. These activities quantify the benefits we provide and demonstrate the importance of grants management to Homeland Security priorities.

- Develop and deliver the Cost-to-Capabilities (C2C) Pilot 1 to test the C2C Analytic Framework with selected jurisdictions for the State Homeland Security Grant program and the UASI program.
- Fully integrate the C2C initiative with version 3.0 of the TCL
- Develop the Federal Analytic Component to store pilot 1 lessons learned and accomplishments report data.

PPA 5: ASSISTANCE TO FIREFIGHTER GRANTS PROGRAM

	Perm Pos	FTE	Amount
2008 Actual	48	48	\$557,881
2009 Enacted	54	54	\$565,000
2010 Adjustments-to-Base	-54	-54	-\$565,000
2010 Current Services	0	0	\$0
2010 Program Change	0	0	\$0
2010 President's Budget	0	0	\$0
Total Change 2009-2010	-54	-54	-\$565,000

The FEMA FY 2010 request for the AFG program is 0 positions, 0 FTE, and \$0. This is a decrease of 54 positions, 54 FTE, and \$565,000,000 from the FY 2009 level. The decrease reflects the migration of AFG requirements to the FY 2010 State and Local Programs appropriation.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Firefighter Assistance Grant program awards grants directly to fire departments and non-affiliated EMS organizations throughout the United States to support one-year projects improving the effectiveness and safety of the Nation’s first-responders in homeland security, firefighting, and EMS operations. Under its authorizing legislation, AFG must also expend a minimum of five percent of appropriated funds for fire prevention activities.

FEMA’s Grant Programs Directorate (GPD) administers the program, in cooperation with the United States Fire Administration. The entire AFG process is fully automated in an e-grant system. Applicants apply online, grants are awarded electronically, grantees manage their grants online (payment requests, amendments, etc.), and grants are monitored and closed out electronically.

For FY 2009, eligible applicants will again be invited to submit an application for assistance in the following program areas most critical to enhancing the capabilities of the fire and EMS services:

- Operations and Safety program, which includes training, equipment, and personal protective equipment;
- Firefighting Vehicles Acquisition program, which includes pumpers, brush trucks, tankers/tenders, rescue vehicles, ambulances, quints, aerials, foam units, and fireboats; and
- Fire Prevention and Safety activities, which include awareness and education, arson prevention, code enforcement, burn prevention, and firefighter safety research and development.

The FY 2009 invitation to apply will not include wellness activities or modifications to facilities for firefighter safety. As long as some of the Nation’s first-responders lack personal protective gear, training, and critical response equipment, Federal preparedness funds should be used for these needs rather than personal health or facility alterations.

In FY 2008, FEMA received approximately 23,000 applications under the AFG program. Funding priorities for each of the funding activities are announced by DHS, based on the National Preparedness Guidelines, as well as recommendations from the Nation’s fire service, as represented by nine major

fire service organizations. The applications that most closely relate to these announced priorities are reviewed by peer panels. The peer review panels commence within two weeks of the end of the grant application period and typically take three weeks to complete. The grant awards are based primarily on the results of the peer review panels.

In their applications, applicants must demonstrate financial need, articulate the benefits to be derived from the grant funds, and provide details regarding the effect the grant would have on daily operations. The grants are intended to supplement a fire department's or EMS organization's current budget rather than replace it. To this end, grantees must agree to maintain expenditures in the selected grant category at the organization's average spending rate as determined by the previous two years.

Volunteer and combination departments must receive a portion of the total grant funding that is at least equal to the proportion of the Nation's population that those fire departments protect. In preparation for the 2009 grant cycle, the GPD will use the most current information available to estimate the proportion of the Nation's population protected by volunteer and combination fire departments.

Other legislated restrictions include a ceiling on the cumulative value of vehicle awards set at 25 percent of the total appropriation. Beginning in FY 2005, DHS was directed by Congress to award no less than three and one-half percent of the appropriation for EMS activities, with no more than two percent of the total appropriation going to non-affiliated EMS organizations.

The maximum size of each grant is based on the grantee's population protection. The grantees generally must also share in the cost of the funded project based on the population of their respective jurisdictions.

PPA 6: SAFER GRANTS PROGRAM

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$17,764
2009 Enacted	0	0	\$210,000
2010 Adjustments-to-Base	0	0	-\$210,000
2010 Current Services	0	0	\$0
2010 Program Change	0	0	\$0
2010 President's Budget	0	0	\$0
Total Change 2009-2010	0	0	-\$210,000

*The table above excludes ARRA funding of \$210 million provided in P.L. 111-5. FEMA requests \$0 for this activity in FY 2010. The decrease reflects the migration of the SAFER Grant Program requirements to the FY 2010 State and Local Programs appropriation.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Staffing for Adequate Fire and Emergency Response (SAFER) Grants are managed by the Federal Emergency Management Agency’s Assistance to Firefighters Grants (AFG) Program Office. SAFER Grants provide financial assistance to help fire departments increase their cadre of frontline firefighters. The goal is to assist the local fire departments with staffing and deployment capabilities so they may respond to emergencies whenever they occur, assuring that their communities have adequate protection from fire and fire-related hazards. The SAFER Grants have two activities that will help grantees in this endeavor: (1) hiring of firefighters; and (2) recruitment and retention of volunteer firefighters.

In Fiscal Year 2009, Congress appropriated a total of \$210 million to the Department of Homeland Security (DHS) for SAFER Grants. The authority for SAFER is derived from the Federal Fire Prevention and Control Act of 1974, as amended (15 U.S.C. §2229a et seq.). Appropriated funds are available for award until September 30, 2010. Once awarded, the funds are available for expenditure by the grantee for the full period of grant performance.

The SAFER Grants are an important part of the Administration’s larger, coordinated effort to strengthen homeland security preparedness. The National Preparedness Guidelines and their work products are of particular significance. The National Preparedness Guidelines are an all-hazards guide for meeting the Nation’s four core preparedness objectives: to prevent; protect against; respond to; and recover from terrorist attacks and catastrophic natural disasters.

The goal of the SAFER Grants is to enhance the local fire departments’ abilities to comply with staffing, response, and operational standards established by the National Fire Protection Association (NFPA) and the Occupational Safety and Health Administration (OSHA). Specifically, the grants focus on standards included in the deployment and assembly sections of NFPA 1710 and/or NFPA 1720, and the respiratory protection section of OSHA 1910.

PPA 7: EMERGENCY MANAGEMENT PERFORMANCE GRANTS (EMPG)

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$300,000
2009 Enacted	15	15	\$315,000
2010 Adjustments-to-Base	-15	-15	-\$315,000
2010 Current Services	0	0	\$0
2010 Program Change	0	0	\$0
2010 President's Budget	0	0	\$0
Total Change 2009-2010	-15	-15	-\$315,000

The FEMA FY 2010 request for the EMPG program is 0 positions, 0 FTE and \$0. In FY 2010 EMPG requirements migrate to the FY 2010 State and Local Programs appropriation.

CURRENT SERVICES PROGRAM DESCRIPTION:

The EMPG program provides resources to assist State and local governments to sustain and enhance all-hazards emergency management capabilities. States have the opportunity to use EMPG funds to further strengthen their ability to support emergency management activities while simultaneously addressing issues of national concern, as identified in the national priorities of the *National Preparedness Guidelines*.

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in State and Local Programs
Appropriation Language**

(including transfer of funds)

For grants, contracts, cooperative agreements, and other activities, \$3,867,000,000 shall be allocated as follows:

(1) \$2,045,000,000 shall be for the State and Regional Preparedness Program, of which-

(A) \$950,000,000 shall be for the State Homeland Security Grant Program under section 2004 of the Homeland Security Act of 2002 (6 U.S.C. 605): *Provided*, That of the amount provided by this subparagraph, \$60,000,000 shall be for Operation Stonegarden: *Provided further*, That notwithstanding subsection (c)(4) of such section 2004, for fiscal year 2010, the Commonwealth of Puerto Rico shall make available to local and tribal governments amounts provided to the Commonwealth of Puerto Rico under this paragraph in accordance with subsection (c)(1) of such section 2004.

(B) \$50,000,000 shall be for Interoperable Emergency Communications Grant Program under section 1809 of the Homeland Security Act of 2002 (6 U.S.C. 579).

(C) \$35,000,000 shall be for Regional Catastrophic Preparedness Grants.

(D) \$40,000,000 shall be for Medical Surge Grants.

(E) \$15,000,000 shall be for the Citizen Corps Program.

(F) \$315,000,000 shall be for Emergency Management Performance Grants, as authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), and Reorganization Plan No. 3 of 1978 (5 U.S.C. App.).

(G) \$590,000,000, to remain available until September 30, 2011, shall be for necessary expenses for the Firefighter Assistance Grants program authorized by the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.), of which \$170,000,000 shall be available to carry out section 33 of that Act (15 U.S.C. 2229) and of which \$420,000,000 shall be available to carry out section 34 of that Act (15 U.S.C. 2229a): *Provided*, That notwithstanding any other provision of the law, total funding provided under subsection (c)(4)(A) of section 34 of that Act (15 U.S.C. 2229a), over 4 years for hiring or retaining a firefighter may not exceed \$150,000.

(H) \$50,000,000 shall be for the Driver's License Security Grants Program in accordance with Title 2 of the REAL ID Act of 2005 (Public Law 109-13).

- (2) \$1,437,000,000 shall be for the Metropolitan Statistical Area Preparedness Program, of which-
- (A) \$887,000,000 shall be for the Urban Area Security Initiative under section 2003 of the Homeland Security Act of 2002 (6 U.S.C. 604), of which, notwithstanding subsection (c)(1) of such section, \$15,000,000 shall be for grants to organizations (as described under section 501(c)(3) of the Internal Revenue Code of 1986 and exempt from taxation under section 501(a) of such code) determined by the Secretary of Homeland Security to be at high risk of a terrorist attack.
 - (B) \$250,000,000 shall be Port Security Grants in accordance with 46 U.S.C. 70107.
 - (C) \$50,000,000 shall be for Buffer Zone Protection Program Grants.
 - (D) \$250,000,000 shall be for the Public Transportation Security Assistance and Railroad Security Assistance under sections 1406 and 1513 of the Implementing Recommendations of the 9/11 Commission Act of 2007 (Public Law 110-53; 6 U.S.C. 1135 and 1163): *Provided*, That such public transportation security assistance shall be provided directly to public transportation agencies.
- (3) \$210,000,000 shall be for the Training, Measurement, and Exercise Program, of which-
- (A) \$114,000,000 is for purposes of training in accordance with section 1204 of the Implementing Recommendations of the 9/11 Commission Act of 2007 (6 U.S.C. 1102), of which \$62,500,000 shall be for the Center for Domestic Preparedness, and of which \$51,500,000 shall be for the National Domestic Preparedness Consortium, consisting of \$12,875,000 for the National Energetic Materials Research and Testing Center, New Mexico Institute of Mining and Technology, 12,875,000 for the National Center for Biomedical Research and Training, Louisiana State University, \$12,875,000 for the National Emergency Response and Rescue Training Center, Texas A&M University, and \$12,875,000 for the National Exercise, Test, and Training Center, Nevada Test Site.
 - (B) \$23,000,000 shall be for the Continuing Training Grants Program.
 - (C) \$13,000,000 shall be for Technical Assistance.
 - (D) \$18,000,000 shall be for Evaluations and Assessments.
 - (E) \$42,000,000 shall be for the National Exercise Program:
- (4) \$175,000,000 shall be for program management and administration of the Grant Programs Directorate and the National Preparedness Directorate within the Federal Emergency Management Agency: *Provided*, That for grants under paragraphs (1)(A), (1)(C), (1)(D), (1)(E), and (2)(A), the applications for grants shall be made available to eligible applicants not later than 25 days after the date of enactment of this Act, that eligible applicants shall submit applications not later than 90 days after the grant announcement, and that the Administrator of the Federal Emergency Management Agency shall act within 90 days after receipt of an application: *Provided further*, That for grants under paragraphs (1)(B), (2)(B), (2)(C), and (2)(D), the applications for grants shall be made available to eligible applicants not later than 30 days after the date of enactment of this Act, that eligible applicants shall submit applications within 45 days after the grant announcement,

and that the Federal Emergency Management Agency shall act not later than 60 days after receipt of an application: *Provided further*, That for grants under paragraphs (1)(A) and (2)(A), the installation of communications towers is not considered construction of a building or other physical facility: *Provided further*, That grantees shall provide reports on their use of funds, as determined necessary by the Secretary: *Provided further*, That (a) the Center for Domestic Preparedness may provide training to emergency response providers from the Federal Government, foreign governments, or private entities, if the Center for Domestic Preparedness is reimbursed for the cost of such training, and any reimbursement under this subsection shall be credited to the account from which the expenditure being reimbursed was made and shall be available, without fiscal year limitation, for the purposes for which amounts in the account may be expended, (b) the head of the Center for Domestic Preparedness shall ensure that any training provided under (a) does not interfere with the primary mission of the Center to train State and local emergency response providers. (*Department of Homeland Security Appropriations Act, 2009.*)

Explanation of Changes:

The language combines Firefighter Assistance Grants, Emergency Management Performance Grants, and State and Local Programs into one appropriation. In addition, all resources for grants management and administration are provided via a line item appropriation as opposed to a percentage of the top-line level. Substantive changes are proposed to reflect that resources are distributed to GPD and NPD to support the full range of SLP program administration activities and FEMA's support organizations.

Total, State and Regional Preparedness Pr		\$0	\$0	\$2,045,000	\$2,045,000
Full Time Equivalents					---

PPA Mission Statement

The State and Regional Preparedness Program provides resources to support preparedness projects that build state and local capabilities as outlined in the National Preparedness Guidelines, the Target Capabilities List, and the National Strategy for Homeland Security of 2007. The State and Regional Preparedness Program PPA includes eight grant programs: the State Homeland Security Grant Program (SHSGP), Assistance to Firefighter Grants (AFG) Program, Driver's License Security Grants Program (REAL ID), Citizen Corps Grant Program (CCGP), Interoperable Emergency Communications Grant Program (IECGP), Regional Catastrophic Preparedness Grant Program (RCPGP), Medical Surge Grant Program (MSGP), and the Emergency Management Performance Grants (EMPG) program.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Grants/Subsidies/Contributions	\$0	\$0	\$2,045,000	\$2,045,000

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY RADIOLOGICAL EMERGENCY PREPAREDNESS PROGRAM

I. Appropriation Overview

A. Mission Statement for Radiological Emergency Preparedness Program:

The Radiological Emergency Preparedness Program (REPP) assists State, local, and tribal governments in the development of off-site radiological emergency preparedness plans within the emergency planning zones of Nuclear Regulatory Commission (NRC) licensees of commercial nuclear power facilities. The REPP fund is financed from user fees assessed and collected from NRC licensees to cover budgeted costs for radiological emergency planning, preparedness, and response activities in the following year.

B. Budget Activities:

FEMA requests budget authority of \$28,750,000 in FY 2010 to:

- Conduct activities in conjunction with State, local and industry officials to ensure all elements required to gain and maintain 'reasonable assurance' of required levels for public safety determinations related to sites operating nuclear power generating stations.
- Conduct and Evaluate REPP exercises.
- Support the NRC rulemaking and policy development activities as relates to the safety and security of offsite planning and preparedness.
- Conduct necessary offsite planning and preparedness reviews pertaining to proposed new reactor licensing and construction efforts.
- Conduct radiological courses for federal, state, tribal and local emergency response personnel.
- Develop and maintain guidelines and procedures for alert and notification systems installed around nuclear power facilities. Ensure these efforts are coordinated with emerging National policies pertaining to public alert and notification systems.
- Continuously review and update REP guidelines and regulatory supplements to ensure they are standardized and in conformance with the National Preparedness System. Specifically, publish final Radiological Emergency Preparedness Program Manual and Supplemental to NUREG-0654 incorporating program guidance and policy enhancements.

C. Budget Request Summary:

REPP estimates the Fiscal Year (FY) 2010 offsetting collection authority to be \$28,750,000.

Radiological Emergency Preparedness Program
Program Performance Justification

(Dollars in thousands)

PPA: RADIOLOGICAL EMERGENCY PREPAREDNESS PROGRAM

	Perm Pos	FTE	Amount
2008 Actual	170	170	\$19,891
2009 Enacted	170	170	\$27,980
2010 Adjustments-to-Base	0	0	\$505
2010 Current Services	170	170	\$28,485
2010 Program Change	0	0	-\$28,750
2010 President's Budget	170	170	-\$265
Total Change 2009-2010	0	0	-\$28,245

FEMA requests \$28,750,000, 170 positions, and 170 FTE for the Radiological Emergency Preparedness Program in FY 2010.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Radiological Emergency Preparedness Program plans and executes nationally coordinated, locally executed radiological emergency preparedness and response activities. The program assists State and local governments in the development and conduct of off-site radiological emergency preparedness activities (planning, training, equipping, drilling, and exercising) within the emergency planning zones of NRC licensed commercial nuclear power facilities. REPP's historical success lies in its ability to integrate and enhance Federal, State, tribal, and local governments' preparedness planning and response capabilities for all types of radiological emergencies.

Funds for REPP activities are generated through user fees charged to each participating reactor licensee. Funds that are available for obligation in a given year rely on the level of collections received in the prior fiscal year.

Terrorism-based Initiatives

Since September 11, 2001, REPP has received requests to participate in exercises, drills, roundtable discussions, issue committees, and working groups associated with nuclear power plant security, as well as emergency preparedness planning for incidents involving a radiological dispersal device or improvised nuclear device. REPP provides support to those activities given the highest priority.

In addition, REPP has received a significant number of requests from its Federal department/agency partners and from State, local, tribal, and private sector stakeholders to conduct a comprehensive revision and update of the current REPP policies, guidance, and regulations. REPP prioritizes those requests it deems most urgent and supports those activities.

Ongoing terrorism-based initiatives are increasing the program's nuclear and radiological responsibilities. Examples include the Nuclear/Radiological Annex of the National Response Framework and Radiological Dispersal Device/Improvised Nuclear Device (RDD/IND) planning and exercise activities. In FY 2007, an additional 40 FTE were authorized to help support these initiatives.

In the regional offices, REPP established a 1:1 ratio of site specialists for each plant in order to address the increase in site-specific issues that have surfaced since the 9/11 terrorist attacks. REPP has also noticed that as these plants begin to seek operating license extensions, the number of issues involving opposition from local citizens and intervenor/public interest groups increases dramatically.

New Reactor License Applications

The New Reactor License program provides an off-site emergency preparedness plan review, preparation of documents that will be contained in the official Safety Evaluation Reports, delivery of expert testimony if necessary, and production of interim and final "reasonable assurance" findings for the NRC. In FY 2010, REPP anticipates continuing work on at least 15 new reactor license applications generated since the enactment of the Energy Policy Act of 2005. To support the increased workload associated with these new applications, REPP received 40 additional FTEs, and supporting resources in FY 2008.

Federal Radiological Preparedness Coordinating Committee

As Chair of the Federal Radiological Preparedness Coordinating Committee (FRPCC), REPP coordinates the activities of Federal agencies with responsibilities in the radiological emergency planning and preparedness process. In addition, REPP management provides policy direction with respect to Federal assistance to State, local, and tribal governments in their radiological emergency planning and preparedness activities. REPP management also coordinates research and study efforts of its member agencies to ensure minimum duplication and maximum benefits to State, local, and tribal government stakeholders. The FRPCC establishes subcommittees to aid in carrying out its functions.

Recent and Planned Accomplishments

FY 2008 Accomplishments

- Provided support and oversight to conduct, evaluation, and reported findings to the NRC on 32 required biennial exercises involving affected utilities, States, and local jurisdictions and oversaw any necessary remedial exercises to resolve deficiencies of off-site plans identified during the joint exercises.
- Supported the NRC with emergency preparedness activities and plan reviews associated with six combined operating license applications for new reactors.
- Conducted routine annual reviews of off-site plans and related preparedness activities at all 64 nuclear sites, reviewed annual certifications of State and local governments, and completed periodic reviews of public information materials for all sites.
- Conducted 17 REPP courses to train Federal, State, local, and tribal emergency response personnel in the detection, reporting, assessment, protection against, and reduction of effects of radioactive materials introduced into the environment in the event of nuclear power plant accidents while providing training on the REPP Evaluation Methodology procedures.

- Jointly (with the NRC) led 21 focus groups involving federal, state, local, and industry emergency planners across the United States to present and discuss concepts pertaining to efforts to incorporate Hostile Action Based scenarios into existing radiological emergency response planning, training, equipping, and exercise activities.
- Participated in planning and conduct of 13 pilot HAB exercise activities.
- Updated existing program guidelines to incorporate elements of the National Preparedness System (NRF, NIMS, HSEEP) and began transition activities to fully implement these activities into existing plans and methodologies.
- Analyzed REPP exercises to identify and address problem areas in off-site REPP response planning and preparedness activities.
- Concluded a three-year process by approving the new Alert and Notification System (ANS) located in the communities surrounding the Indian Point Energy Center. In addition, reviewed and approved 11 modifications to ANS design reports for other plants in accordance with FEMA REP-10 guidance.

FY 2009 Planned Accomplishments

- Support the NRC with off-site emergency preparedness activities and plan reviews for 17 combined operating license applications.
- Provide support and oversight to conduct, evaluate, and report findings that will be submitted to the NRC on 31 joint exercises and any associated remedial exercises.
- Continue to support pilot exercise activities in support of the HAB scenario and HSEEP exercise methodology implementation.
- Participated in planning and conduct of 30 pilot HAB exercise activities
- Participate with the NRC, industry, and DHS on the development of an integrated exercise to ensure Federal, State, and local tactical law enforcement operations in response to a security incident at a nuclear power generation facility are properly coordinated, to evaluate the relevant Defense Threat Reduction Agency (DTRA) Site Survey, and to create a framework for future exercises with the same goals.
- Revise programs of instruction to ensure radiological training course materials are consistent with the National Preparedness System. Train federal staff as instructors and initiate transition from contractor-based instructor deliveries to reliance upon Federal staff as primary instructors.
- Conduct up to 25 updated radiological training courses for Federal, State, local, and tribal emergency response personnel.
- Continue efforts to integrate REPP exercise methodologies with DHS' Homeland Security Exercise Evaluation Program (HSEEP) and share program lessons learned with other homeland security initiatives at the Federal, State, local, and tribal levels.

- Coordinate with DHS' Office of Infrastructure Protection and FEMA Regional REPP staff to provide State and local communities' essential information pertaining to comprehensive reviews of the nuclear power plant security.
- Conduct effort to establish a REPP office in FEMA region VIII to support New Reactor Application process.
- Coordinate intensively with the National Integration Center (NIC) to develop effective linkages between the National Exercise Division, National Exercise Simulation Center, and related training and doctrine development activities to further integration of REPP activities into the National Preparedness System.
- Participate with Interagency efforts to develop an Integrated Public Alert and Warning System (IPAWS) to ensure REPP Alert and Notification guidelines, system design reviews, and system operations are (to the degree necessary) consistent with IPAWS.
- Conduct effort to establish a REPP office in FEMA region VIII to support New Reactor Application process.

FY 2010 Planned Accomplishments

- Provide support and oversight to conduct, evaluate, and report findings that will be submitted to the NRC on 31 joint exercises and any associated remedial exercises.
- Continue support to NRC for ongoing new reactor license activities as required.
- Participated in planning and conduct of 12 pilot HAB exercise activities. Begin planning for implementation of HAB scenario based exercises as part of the ongoing biennial evaluated exercise activities.
- Conduct 30 radiological training courses for Federal, State, local, and tribal emergency response personnel (similar to those discussed under FY 2008 accomplishments) and finalize the revision, update, and rollout of the entire REPP curriculum based on enhanced guidance and training practices.
- Incorporate as necessary comments during the 2008 public review of the REPP Manual and other significant policy and guidance documents, finalize and release as appropriate.
- Complete the integration of REPP exercise methodologies with DHS' Homeland Security Exercise Evaluation Program (HSEEP) and share program lessons learned with other homeland security initiatives at the Federal, State, local, and tribal levels.
- Conduct off-site emergency preparedness reviews, preparing Emergency Preparedness documents associated with the anticipated 19 new reactor license applications that will be contained in the official Safety Evaluation Reports, delivering expert testimony, if necessary, and providing the NRC with interim and final "reasonable assurance" findings.

- Coordinate with DHS' Office of Infrastructure Protection and FEMA Regional REPP staff to provide State and local communities' essential information pertaining to comprehensive reviews of the nuclear power plant security.
- Participate with Interagency efforts to develop an Integrated Public Alert and Warning System (IPAWS) to ensure REPP Alert and Notification guidelines, system design reviews, and system operations are (to the degree necessary) consistent with IPAWS.
- Publish final Radiological Emergency Preparedness Program Manual and supplemental to NUREG-0654 incorporating program guidance and policy enhancements.
- Coordinate intensively with the National Integration Center (NIC) to develop effective linkages between the National Exercise Division, National Exercise Simulation Center, and related training and doctrine development activities to further integration of REPP activities into the National Preparedness System.
- Finalize the establishment of a REPP office in FEMA Region VIII to support New Reactor Application process.

IV. Program Justification of Changes

Not applicable

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Radiological Emergency Preparedness Program
Appropriation Language**

The aggregate charges assessed during fiscal year [2009]2010, as authorized in title III of the Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations Act, 1999 (42 U.S.C. 5196e), shall not be less than 100 percent of the amounts anticipated by the Department of Homeland Security necessary for its Radiological Emergency Preparedness Program for the next fiscal year: *Provided*, That the methodology for assessment and collection of fees shall be fair and equitable and shall reflect costs of providing such services, including administrative costs of collecting such fees: *Provided further*, That fees received under this heading shall be deposited in this account as offsetting collections and will become available for authorized purposes on October 1, [2009]2010, and remain available until expended. (*Department of Homeland Security Appropriations Act, 2009.*)

Explanation of Changes:

No substantive changes are proposed.

PPA Mission Statement

The Radiological Emergency Preparedness Program (REPP) assists state, local and tribal governments in the development of off-site radiological emergency preparedness plans within the emergency zones of Nuclear Regulatory Commission (NRC) licensees of commercial nuclear power facilities. The REPP fund is financed from user fees assessed and collected from the NRC licensees to cover budgeted costs for radiological emergency planning, preparedness, and response activities in the following year.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$9,879	\$19,758	\$19,857	\$99

Salaries and Benefits includes costs for 170 FTEs. The FY 2010 request includes an increase of \$99,000 for pay inflation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$979	\$1,040	\$1,040	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Transportation of Things	\$0	\$20	\$20	\$0

Travel and transportation costs of Government employees and other persons, while in an authorized travel status, that are to be paid by the Government either directly or by reimbursing the traveler.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
GSA rent	\$1,132	\$1,466	\$1,466	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Communication, Utilities, and miscellaneous char	\$24	\$42	\$42	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$9	\$526	\$526	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$7,374	\$4,435	\$4,601	\$166

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$5	\$63	\$63	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$0	\$1	\$1	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$89	\$395	\$395	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$361	\$234	\$234	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY UNITED STATES FIRE ADMINISTRATION

I. Appropriation Overview

A. Mission Statement for U.S. Fire Administration:

The mission of the United States Fire Administration (USFA) is to provide national leadership to foster a solid foundation for local fire and emergency services for prevention, preparedness, and response.

B. Budget Activities:

USFA coordinates with other federal, state, and local emergency service agencies, the private sector, and with colleges, universities, and other DHS educational consortium participants. In fulfilling its mission, USFA utilizes the assets of the National Fire Academy (NFA), the National Emergency Training Center (NETC), the National Fire Data Center (NFDC), and USFA's National Fire Programs (NFP) Division.

C. Budget Request Summary:

FEMA requests \$45,588,000, 115 positions and 115 FTE for FY 2010. This represents an increase of \$609,000, as compared to FY 2009, for pay inflation and an increased contribution to the DHS Working Capital Fund.

2010 Program Change	0	0	\$0
2010 Request	115	115	\$45,588
Total Change 2009-2010	0	0	\$609

FEMA requests \$45,588,000, 115 positions, and 115 FTEs in FY 2010 for the U.S. Fire Administration. This amount reflects an increase of \$609,000 to cover pay inflation costs and an increased contribution to the DHS Working Capital Fund.

CURRENT SERVICES PROGRAM DESCRIPTION:

USFA prepares the Nation's fire responders through on-going and, when necessary, expedited training, regarding how to evaluate and minimize community risk, improve protection to critical infrastructure, and be better prepared to react to all hazard and terrorism emergencies. USFA coordinates with other federal, state, and local emergency service agencies, the private sector, and with colleges, universities, and other DHS educational consortium participants. In fulfilling its mission, USFA utilizes the assets of the National Fire Academy (NFA), the National Emergency Training Center (NETC) Facilities and Support Services, the National Fire Data Center (NFDC), and USFA's National Fire Programs (NFP) Division.

A) National Fire Academy (NFA)

NFA promotes the professional development of the fire and emergency response community and its allied professionals. To supplement and support state and local fire service training programs, NFA delivers educational and training courses having a national focus.

Recent and Planned Accomplishments

FY 2008

- Delivered 4,045 training programs to 121,775 fire and emergency response personnel.
- Completed the migration of existing web-based content for NFA Online, the USFA's new web-based learning management system for distance learning training.

- Began development of new preparedness curriculum; 6-day courses and designated 2-week resident courses.
- Began BETA testing the NFA's new web-based long-term evaluation system.

FY 2009

- Increase the number of students receiving NFA training programs through USFA's technology-based distance learning program. The program includes internet course delivery, blended learning courses, web-based graphic simulations, and other on-line formats such as web casts.
- Develop 12 new on- and off-campus courses and update an additional 37 to reflect more modern leadership, management, and technical practices.
- Improve effectiveness and portability and reduce capital investment in the command and control graphic simulation tools by migrating to commercial off-the-shelf operating systems.
- Implement a contract instructor evaluation program to monitor and assure continuation of NFA's highly reputed instructional staff.
- Increase USFA/NFA's national model fire science and EMS management curriculum by working to standardize fire-related education programs in the U.S. schools that have adopted them.
- Increase the number of States who are moving to adopt the National Professional Development Model from 21 to 25, and increase by three the number of major metropolitan fire departments who adopt the National Professional Development Model.

FY 2010

- Continue to expand fire and emergency response training programs through the use of both on-campus and online distance learning programs, and through the expansion of its fire and emergency services higher education partnership agreements.
- Increase the delivery of NFA courses at the state and local level through the use of State fire training assistance partnership agreements and distance learning methodologies.
- Focus NFA curriculum on fulfilling DHS, FEMA, and USFA strategic goals for national preparedness, prevention, response and recovery.
- Continue efforts to standardize fire and emergency services-related curriculums and professional development.

B) National Emergency Training Center (NETC) Management, Operations and Support Services

The NETC Management, Operations, and Support Services operate and maintain the NETC in the most efficient and effective manner providing administrative, operational and emergency services in support of the program activities and special groups at NETC.

Recent and Planned Accomplishments

FY 2008

- Managed, operated, and maintained the NETC, providing administrative, operational, and emergency services in support of the program activities and special groups; student admission, registration, ground transportation, and housekeeping services; and scheduled maintenance, repairs, and replacement of capital assets.
- PREP net developed and implemented continuous video-on-demand via cable, web, and satellite to support efforts to reduce community risks and help first responders and the public prepare for, respond to, and recover from natural and man-made disasters. Enhanced current just-in-time training through surge-high-capacity distribution; identified existing capabilities to support national

preparedness and response; and formed a video working group to exchange information and develop technical solutions.

- Provided administrative support to the Assistance to Firefighter Grant Program peer review and criteria development sessions held at NETC.

FY 2009

- Manage, operate, and maintain the NETC, providing administrative, operational, and emergency services in support of the program activities and special groups; student admission, registration, ground transportation, and housekeeping services; and scheduled maintenance, repairs, and replacement of capital assets.
- Enhance the video-on-demand internal and external distribution capabilities; develop and implement new technology to support training, exercises, simulations and new emerging threats. Expand video support and video conference partnerships with other agencies and FEMA organizational elements.
- Provide administrative support to the Assistance to Firefighter Grant Program peer review and criteria development sessions held at NETC.

FY 2010

- Continue to manage, operate, and maintain the NETC in the most efficient and effective manner providing administrative, operational and emergency services in support of the program activities and special groups held at NETC.
- Support all video and internet components of EAS-15 as it relates to FEMA national and regional programs; implement new high definition video technology systems, distribution, and storage retrieval units; expand high tech distribution including Multi-cast, WIMAX, and GPS interface; and support disaster based daily briefings video mobile systems and devices.

C) National Fire Programs (NFP) Division

NFP is responsible for the collection, analysis, publication, dissemination, and marketing of information related to the Nation's fire problem and USFA programs. It manages both USFA research efforts in fire detection, prevention, suppression, and first responder health, safety, and effectiveness, as well as programs that increase the capacity of the Nation's fire and emergency services and the public to prevent, mitigate, prepare for, and respond to local, regional, and national emergencies.

Recent and Planned Accomplishments

FY 2008

- Launched "Smoking and Home Fires" public education campaign.
- Developed and managed programs that increased capacity of the nation's fire and emergency services and the public to prevent, mitigate, prepare for, and respond to local, regional, and national emergencies.
- Disseminated preparedness, prevention, response, and recovery information to both professional audience and the American public via printed publications, multi-media kits, website hits, library loans, and public education campaigns.
- Completed research studies of responder safety, department communications, residential sprinklers, and cooking fires.
- Initiated development of web-based application for the National Fire Incident Reporting System (NFIRS).

FY 2009

- Disseminate preparedness, prevention, response, and recovery information in a variety of formats to reach both professional audiences and the American public.
- Continue development of web-based application for the National Fire Incident Reporting System (NFIRS).
- Initiate NFIRS system requirements analysis for overall NFIRS system modernization.
- Conduct studies of technologies and operations to improve and enhance responder performance and public safety.
- Develop, manage, and maintain activities designed to enhance fire and emergency services response to incidents and disasters.

FY 2010

- Manage the collection, analysis, publication, and dissemination of information related to the Nation's fire problem and USFA programs; making information available to, and relevant for, fire service strategic decision making.
- Enhance first responder performance and public safety by conducting studies of emergency response technologies and operations.
- Manage programs that increase the capacity of the Nation's fire and emergency services and the public to prevent, mitigate, prepare for, and respond to local, regional, and national emergencies.
- Develop and implement program promoting fire prevention and public education.
- Implement web-based application for NFIRS reporting.
- Begin implementation of NFIRS systems enhancements identified in FY 09 requirements analysis.
- Collaborate with the Assistance to Firefighter Grants (AFG) Program Office to utilize NFIRS in order to assist in a strategic implementation of the grant process for Assistance to Firefighter Grants (AFG) and Staffing for Adequate Fire and Emergency Response (SAFER) Grants such that the grant process addresses national fire problems.

IV. Program Justification of Changes

PPA Mission Statement

The mission of the United States Fire Administration (USFA) is to reduce life and economic losses due to fire and related emergencies through leadership, coordination, and support. USFA prepares the Nation's fire responders through ongoing and, when necessary, expedited training, regarding how to evaluate and minimize community risk, improve protection to critical infrastructure, and be better prepared to react to all-hazard and terrorism emergencies of all kinds.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) **DISASTER RELIEF FUND**

I. Appropriation Overview

A. Mission Statement for Disaster Relief Fund:

Through the Disaster Relief Fund (DRF), FEMA provides a significant portion of the federal response to Presidentially declared disasters and emergencies.

Pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act, the DRF allows FEMA to coordinate and manage response and recovery efforts associated with domestic major disasters and emergencies.

B. Budget Activities:

Major disasters and emergencies are declared by the President in response to gubernatorial requests for assistance as a result of natural or man-made hazards. States request Federal assistance to supplement their available resources and certify that a given disaster is beyond their capacity to respond. The DRF also supports fire management and reconstruction activities for the mitigation, management, and control of fires on public and private lands.

Effective November 4, 2008, FEMA is authorized to transfer DRF funding to the U.S. Agency for International Development (USAID) to implement disaster-specific Relief and Reconstruction Plans in the Federal States of Micronesia and the Republic of the Marshall Islands through the Compacts of Free Association.

FEMA coordinates three major disaster assistance programs: Federal Assistance to Individuals and Households; Public Assistance – including emergency work, and permanent repair and reconstruction of State, local, and nonprofit infrastructure; and Hazard Mitigation programs to reduce damage from future major disasters.

Non-declaration-specific readiness and support activities are also funded under the DRF. These activities provide indirect support across FEMA to Presidentially declared major disasters and emergencies and are managed separately as Disaster Readiness and Support activities (DRS).

C. Budget Request Summary:

FEMA requests 228 fulltime positions, 2,738 FTEs, and \$2,000,000,000 for the Disaster Relief Fund in Fiscal Year (FY) 2010. This represents a gross increase of \$600,000,000 and 0 FTE compared to FY 2009. Coupled with prior year recoveries and carry forward funds, the DRF is projected to support the five-year average obligation level for direct major disaster activity (excluding extraordinary events such as: the 2004 hurricanes in Florida and other states, Hurricanes Katrina, Rita, and Wilma in 2005,

the California Wildfires of 2007, and Hurricanes Gustav and Ike in 2008). In FY 2010, FEMA requests authority to transfer up to \$50 million to the Operations, Management and Administration (OMA) appropriation for management and administration functions.

Total Change 2009-2010	0	0	600,000

¹FY09 Includes \$16M transfer to DHS OIG for disaster related audits and \$105.6 million transfer to OMA pursuant to P.L. 110-329.

FEMA requests \$2.0 billion for this activity, an increase of \$600 million over FY 2009. In FY 2010, FEMA requests authority to transfer up to \$50 million to the Operations, Management, and Administration appropriation (OMA) for management and administration functions.

Note: Permanent positions include the Federal Coordinating Officers (FCO) and fulltime 2-year Cadre of Response Employees (CORE). Non-permanent workforce includes thousands of intermittent FTE, such as the Disaster Assistance Employees (DAE) in the Disaster Reserve Workforce. These FTE are brought on predominately during hurricane season in support of declared disasters and emergencies.

CURRENT SERVICES PROGRAM DESCRIPTION:

The *Robert T. Stafford Disaster Relief and Emergency Assistance Act* (Stafford Act), 42 U.S.C. 5121-5207 (Public Law 93-288, as amended), authorizes the President to provide Federal assistance to supplement state and local governments' disaster response, recovery, readiness, and mitigation efforts. Under Section 504 of the Homeland Security Act, as amended, FEMA's Administrator has been delegated the responsibility for administering the Stafford Act's Federal assistance programs. The Disaster Relief Fund (DRF) provides funding for the following Stafford Act declarations or activities: (1) major disaster; (2) emergency; (3) fire management assistance; (4) pre-declaration; and (5) Disaster Readiness and Support.

FEMA funds Stafford Act programs and disaster support activities in two categories: Direct Disaster Programs and Disaster Readiness and Support (DRS) activities. Direct Disaster Programs are programs by which FEMA prepares for, responds to, recovers from, and mitigates the results of specific major disasters and emergencies. The DRS activities include advanced readiness and infrastructure support activities that provide support across FEMA for disaster activities.

Direct Disaster Programs

Individual Assistance (IA), Public Assistance (PA), and Hazard Mitigation Grant Program (HMGP) are FEMA's primary Direct Disaster programs. These programs are managed and administered by the Disaster Assistance Directorate (DAD) and the Mitigation Directorate (MD) within FEMA.

These programs constitute the majority of the resources provided by the Federal Government (through FEMA) to directly address the short, medium, and long-term impacts of a disaster on individuals and communities. Disaster assistance under the authorities of the Stafford Act can be provided to states (and further provided to local or tribal governments), the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

Individual Assistance (IA)

The DRF provides funding for the following Individual Assistance Programs:

Individual and Households Programs (IHP) – funded at 100% by the Federal government

- Temporary housing (rent and lodging expense): Funding to rent alternate housing or a temporary housing unit when rental properties are not available.
- Repair: Funding is provided for homeowners to repair damage from the disaster that is not covered by insurance. A flood insurance purchase and maintenance requirement may be placed on the home if the home is in a Special Flood Hazard Area. Repair assistance is intended to repair the home to a safe, sanitary and functional living condition.
- Replacement: Funds are made available to homeowners to assist with the replacement of destroyed home that is not covered by insurance. The goal is to help the homeowner with the cost of replacing their destroyed home.
- Permanent Housing Construction: Funds are made available for the construction of a home, or FEMA will provide direct assistance with the construction. This type of assistance only occurs in insular areas or remote locations specified by FEMA, where no other type of housing assistance is possible, or where other temporary housing options are unavailable or infeasible. Construction shall follow current minimal local building codes and standards where they exist, or minimal acceptable construction industry standards in the area. Construction will aim toward average quality, size, and capacity, taking into consideration the needs of the occupant.

Other Needs Assistance (ONA)

Other Needs Assistance is available for necessary expenses and serious needs of victims of the declared disaster. Assistance provided by the ONA program is cost-shared between FEMA (75 percent) and the State (25 percent).

Assistance is provided to individuals contingent on their ability or inability to secure a loan from the U.S. Small Business Administration (SBA). If SBA determines that an applicant cannot afford a loan, SBA will automatically refer the applicant to the ONA program for assistance.

ONA can be provided for disaster-related serious needs in five categories:

- Repair or Replacement of Personal Property:
 - Clothing
 - Household Items (i.e., home furnishings, appliances)
 - Specialized Tools or Job-related Protective Clothing and Equipment
 - Educational materials (i.e. books)
 - Cleaning Supplies (i.e., wet/dry vacuum, air purifier, dehumidifier)
- Transportation: Repair or replacement of a vehicle that is deemed unusable due to disaster-related damage.
- Medical and Dental Expenses: Medical treatment or the purchase of medical equipment required due to physical injuries resulting from a disaster.
- Funeral and Burial Expenses: Funeral services, burial, or cremation and other funeral expenses related to a death caused by the disaster.
- Other Items: The State and FEMA can agree to pay for specific disaster-related costs that are not listed above. Some examples are generators, moving and storage expenses, and the cost of a National Flood Insurance Program Group Flood Insurance Certificate.

Crisis Counseling Assistance and Training Program (CCATP)

The Crisis Counseling Program supports short-term interventions with individuals and groups experiencing psychological effects resulting from large-scale disasters. These interventions involve the counseling goals of assisting disaster survivors in understanding their current situation and reactions, mitigating additional stress, assisting survivors in reviewing their options, promoting the use or developments of coping strategies, providing emotional support, and encouraging linkages with other individuals and agencies that may help survivors recover to their pre-disaster level of functioning. Supplemental funding for crisis counseling is available to State Mental Health Authorities through two grant mechanisms: (1) the Immediate Services Program (ISP); and (2) the Regular Services Program (RSP), which provide funds for up to nine months following a major disaster declaration.

Disaster Unemployment Assistance (DUA)

The Disaster Unemployment Assistance (DUA) program provides individuals who have become unemployed because of a disaster and unable to secure regular unemployment benefits with unemployment benefits and re-employment services.

Legal Services

Legal services may be provided to low-income individuals unable to secure such services adequate to meet their needs as a consequence of a major disaster.

Public Assistance (PA)

The Public Assistance (PA) program offers assistance to state, local, and tribal governments after a declared major disaster or emergency for eligible disaster-related damage. In addition, certain private non-profit organizations that operate facilities and provide services to the public typically provided by a government agency may receive public assistance. PA is a cost-shared (75% Federal, 25% non-Federal) grant program. States may request, and the President may grant a higher Federal cost share in situations in which the disaster has had a significant economic impact on the state.

Public Assistance provides funding to grantees for the repair and restoration of damaged public and eligible private non-profit facilities and for emergency measures taken to protect lives and property. When Public Assistance is authorized, such assistance may be provided under one or more of the following seven categories:

- Category A – Debris Removal
- Category B – Emergency Protective Measures
- Category C – Repair of Roads and Bridges
- Category D – Water Control Facilities
- Category E – Public Buildings
- Category F – Public Utilities
- Category G – Other Facilities

Hazard Mitigation Grant Program (HMGP)

The Hazard Mitigation Grant Program (HMGP) provides state, local, and tribal governments with cost-shared grants (75% Federal, 25% non-Federal) to reduce the risk of potential damage, hardship, loss, and suffering in an area affected by a major disaster. Ultimately, the HMGP reduces future need for Federal disaster assistance by reducing the impact of and increasing the resistance to natural hazards.

HMGP funding is made available to states based on 15% of the total Federal funds spent in the Public and Individual Assistance programs (minus administrative expenses) for each major disaster costing up to \$2 billion; 10% for disasters between \$2 billion and \$10 billion; and 7.5% for major disasters between \$10 billion and not more than \$35.33 billion.

HMGP projects vary and may include the retrofit of structures to resist flood, wind and earthquake; elevations of structures above base flood levels; property acquisition and demolition or relocation for open space; and minor flood reduction and drainage measures.

HMGP grants are required to be cost effective. In 2005, the Multi-hazard Mitigation Council (MMC), a part of National Institute of Building Sciences, published a report that analyzed the overall impact of FEMA's Hazard Mitigation Programs. The findings show that money spent on reducing the potential damage of natural hazards is a sound investment and is cost effective. On average, a dollar spent on hazard mitigation activities will save the Nation approximately \$4 in future payouts for damage caused by natural hazards.

Other Direct Disaster Programs

- **Fire Management Assistance**

FEMA provides assistance to eligible states, territories, tribal or local governments for the mitigation, management, and control of any fire on public or private forest or grassland that threatens such destruction as would constitute a major disaster. Items eligible for funding under Fire Management Assistance Grant Program (FMAGP) include equipment, labor costs, emergency work, and temporary repair work directly related to firefighting activities associated with the declared fire.

- **Compacts of Free Association**

The DRF provides funding for disaster relief and reconstruction activities in the Federated States of Micronesia and the Republic of the Marshall Islands pursuant to the Compacts of Free Association. This funding is provided through a direct transfer of DRF funds to the USAID.

DRF Recent and Planned Accomplishments

FY 2008

- In FY08, the DRF supported 68 major disaster declarations and 17 emergency declarations in 34 states. Fifty-six fire management assistance grants were awarded in 11 states. FEMA's Regional Offices deployed assets to provide overall coordination of the Federal response and recovery. The Midwest floods affected six states, and 2008 was the fourth busiest hurricane season since 1944.
- In FY08, FEMA obligated \$2.854 billion in support of pre-disaster, response and recovery efforts surrounding the three largest events of 2008: The Midwest Floods; Hurricane Gustav; and Hurricane Ike.
- FEMA handled more than 1.5 million disaster assistance applications and provided more than \$1 billion in assistance to individuals.
- FEMA's Logistics Management Directorate coordinated the distribution of more than 42 million liters of water and 41 million emergency meals to more than 32 million people.
- FEMA pre-stocked distribution centers throughout the Gulf Coast with over 2.4 million liters of water, 4 million meals ready to eat, 141 truckloads of tarps, 267 truckloads of blankets and cots, and 478 emergency generators.
- FEMA coordinated the largest evacuation in U.S. history during Hurricane Gustav, with over 90 percent of New Orleans residents leaving the city, including special needs patients. FEMA led the safe evacuation of more than 2 million people from Southeast Texas before Hurricane's Gustav and Ike made landfall.
- FEMA provided more than 4,300 manufactured housing units to disaster victims.
- In the response to Hurricane Gustav, FEMA deployed nine Urban Search and Rescue (US&R) task forces to support Louisiana and Texas and eight US&R task forces to support Georgia, Florida, Alabama, and Mississippi. For Hurricane Ike, nine US&R task forces were deployed to Texas and six to Louisiana.
- Two National and four Regional Incident Management Assistance Teams (IMAT) were operational and deployed to provide on-site situational awareness during the 2008 hurricane and flooding events.
- FEMA implemented 75 pre-positioned contracts in response to the need for advanced planning and preparation for the 2008 hurricane season.
- FEMA established three National Logistics Staging Areas (NLSA) in Texas to support commodity distribution after Hurricanes Gustav and Ike. Cumulative deliveries of

commodities from FEMA to the state distribution sites and shelters included over 16 million liters of water, 5.4 million bags of ice, 17 million meals, and 118,888 tarps.

- In FY08, FEMA improved its disaster assistance registrations process by implementing verification technology to substantiate victims' identities against commercially available data. This system verifies identity and occupancy by checking applicants' names, social security numbers, and addresses.
- FEMA created the Disaster Reservist Workforce Division (DRWD) to manage the development, deployment, and support of a Disaster Reserve Workforce and improved the overall disaster response deployment system. The DRWD, in coordination with the Emergency Management Institute (EMI), initiated a credentialing plan project for all disaster reserve positions.
- Developed the National Disaster Housing Strategy (Strategy) as mandated by the Post Katrina Emergency Management Reform Act of 2006 (Public Law 109-295).

FY 2009

- Supplement state and local efforts to respond to, recover from, and mitigate the results of specific major disasters and emergencies.
- Continue to streamline the major disaster and emergency declaration process.
- Ensure that individual and public assistance can be provided to victims of the larger and more complex disasters that could occur as the result of terrorism or catastrophic natural events.
- Provide a rapidly deployable voice/data communications capability through the use of its mobile disaster recovery centers (MDRC) and mobile registration intake centers (MRIC).
- Provide tactical disaster emergency communications capability to support all Presidentially declared major disasters and emergencies.
- Implement enhancements for the FEMA Advanced Contact Center Network (ACCN) Platform that enables the National Processing Service Centers (NPSC) to provide customers with an "intelligent interaction".

FY 2010

- Supplement state and local efforts to respond to, recover from, and mitigate the results of specific major disasters and emergencies.
- Develop and expand Total Asset Visibility (TAV). This program integrates a suite of systems to provide request, order visibility, order management, in-transit visibility and eventual delivery of assets and commodities. The TAV program is designed to provide enhanced visibility, awareness, and accountability of disaster resources throughout the supply chain
- Right-size the Temporary Housing Support mission.
- Right-size the FEMA managed distribution Storage Network and capabilities.
- Complete the standardized credentialing plan project for all 230 disaster job titles staffed by FEMA disaster workers.
- Redefine requirements and implement an updated Interagency Agreement with the Internal Revenue Service to provide surge Registration Intake staff following a large or catastrophic event.

Disaster Readiness and Support (DRS)

FEMA reassessed its ability to respond to large-scale and complex presidentially-declared major disasters and saw the need for a more robust advance readiness posture rather than waiting for disasters to occur and reacting with costly and inefficient response actions. The successor to the legacy Disaster

Support activities (DSA), Disaster Readiness and Support activities (DRS) was established to bolster FEMA's effectiveness and readiness in advance of disasters and throughout the fiscal year.

FEMA has increased transparency and budgetary discipline of the DRS through the implementation of detailed spending plans and through monthly program reviews. The monthly program review process emphasizes a more efficient program administration and budgetary accountability. As a result, FEMA is better equipped to maintain its critical disaster support activities and infrastructure; and ensure the timely delivery of disaster assistance.

DRS funds key activities and initiatives such as:

- Strategic pre-positioning and management of disaster commodities
- Improved inventory of specialized assets
- Standby support to enable FEMA to increase response and recovery capacity quickly as needed.

DRS activities support FEMA's all-hazards mission. They include initiatives and resources formerly funded from the DRF's legacy DSA, as well as post-Katrina readiness contracts. Many of these costs are predictable on an annual basis and allow FEMA to support a cross-section of disasters utilizing an infrastructure of processing and distribution centers and information technology systems. In addition, the DRS includes certain costs to help FEMA pre-position for disasters, including the establishment of large commodity and transportation service contracts that can be activated in the event of a major disaster.

These efforts will continue to improve the quality of support to disaster victims, including better communications, a more effective intake process, more efficient delivery systems for disaster commodities, and improved oversight of disaster aid through our technical assistance contractors.

FEMA manages disaster readiness support costs throughout the year. These expenses are essential for: (1) timely disaster response; (2) responsive customer service; and (3) cost-effective program oversight and delivery.

FEMA will prepare a comprehensive FY 2010 spending plan for disaster readiness and support upon enactment of the 2010 budget. In FY 2009 FEMA allocated \$297 million for the following program areas:

Disaster Readiness & Support Program Activities	FY 2009 AMOUNT
Management Directorate	\$75,434
Logistics Management Directorate	\$74,489
Disaster Assistance Directorate	\$62,378
Office of the Chief Financial Officer/Centrally Managed Accounts	\$56,951
Disaster Operations Directorate	\$16,600
National Preparedness (EMI)	\$8,000
DRS Activities Under \$3 Million	\$2,737
Total	\$296,589

The activities by office funded through the DRS in FY09 are as follows:

Management Directorate

FEMA's mission, expectations of performance, and need for 21st century business practices for the Agency have substantially changed in today's post-9/11 and post-Hurricane Katrina environment. FEMA established the Management Directorate to improve cross-functionality of distinct internal service providers; synchronize provider efforts, and increase overall administrative program effectiveness, efficiency and cohesiveness.

Management Directorate provides management oversight of Information Technology Services, Security, Disaster Reserve Workforce, Human Capital Planning, Records and Documents, Occupational Health and Safety & Environmental, Acquisition, and Facilities.

Information Technology Services

The Information Technology Division (ITD) provides technical oversight and administrative support to FEMA's mission by maintaining and enhancing the technological infrastructure. The DRS specifically supports several operation and maintenance services key to disaster readiness. Following are the major ITD activities funded by the DRS:

- Disaster Assistance Improvement Program (DAIP)
- Network Support
- Document Management and Records Tracking System (DMARTS)
- Disaster Communications
- Disaster Assistance Technical Services (DATS)
- National Processing Service Center (NPSC) Support
- Disaster Financial support Capability (DFSC)

Disaster Assistance Improvement Program (DAIP)

Post - Hurricane Katrina, more than 800,000 individuals required immediate disaster assistance (shelter, food, clothing, etc.). Federal agencies across the board received millions of requests for assistance – FEMA alone received 2.7 million applications. The influx of applicants ultimately overwhelmed the system requiring FEMA to overhaul its assistance process (pursuant to Executive Order 13411). DRS funds provide support to the DAIP which has created initial operating capacity for a single access point for more than 40 federally funded forms of assistance (FOAs) and streamlines applicants' information into a unified system.

Network Services

Network Services are required throughout the life of a disaster or emergency, specifically, computer hardware and software used by FEMA and other Federal partners supporting an event. The network services program manages, directs, and supports the daily operations and maintenance of the FEMA disaster network mission. It provides a safe and secure network via the Security Operations Center (SOC). It also provides tier-2 restoration support for FEMA's nationwide voice and data network in the event of failure and the 24/7 help desk support. Additionally, network services include communication services that allow two or more computers or other devices to exchange data.

Document Management and Records Tracking System (DMARTS)

DMARTS is an enterprise solution for conforming disaster document and records management to DHS Documents Management standards. Its purpose is to provide an enterprise level application that will provide data capture, document management, correspondence tracking, and records management functionality. This system supports FEMA users in locating, accessing, storing, retrieving, managing, and archiving documents, along with creating consistent streamlined supportable processes for the user community.

Disaster Communications

ITD supports telecommunications services for disaster missions. Specifically, satellite airtime for the Mobile Emergency Response System (MERS) and Mobile Disaster Recovery Centers (MDRCs) and the communication needs for the FEMA National Processing Service Centers (NPSCs) (local & long distance telephone services, circuits, 800-services, 800-translator service, switch maintenance, router maintenance, and satellite services which support the infrastructure needed to provide voice and data connectivity to the NPSC call center agents).

Disaster Assistance Technical Services (DATS)

DATS is the framework that supports a range of services provided to the disaster workforce, disaster victims, and the public. One of the major services provided is the Disaster Assistance Support Center (DASC) which is the primary reception center for new information system requests for FEMA's Disaster Assistance Directorate (DAD).

Information Technology (IT) Support (NPSC & Disaster Response)

IT contractor support and equipment are provided so that the National Processing Service Centers (NPSCs) can provide efficient call center service and timely expedition of disaster victims' applications. ITD also provides: (1) IT contractors to be deployed to the Joint Field Offices (JFOs) as part of the IT Disaster Response Team, (2) hardware and software maintenance for fax servers, (3) maintenance and repair of vehicles deployed to the JFOs; (4) maintenance of the asset management tool, (5) network management and troubleshooting, (6) software maintenance and development of the Gold image to reimage disaster laptops, (7) and UPS Maintenance.

Disaster Financial Support Capability (DFSC)

FEMA's National Emergency Management Information System (NEMIS) provides a comprehensive capability to support the financial elements of the disaster management process in the form of the Emergency Support (ES) Module. The ES Module provides the front end processing of disaster financial management documents and processes financial transactions and services through FEMA's Integrated Financial Management Information System (IFMIS). The ES Module pre-processes financial transactions from other modules and exports them into IFMIS. The ES Module payment system allows users to process disaster-housing payments and perform recoupment and other administrative tasks associated with disaster payments.

Disaster Reserve Workforce (DRW)

The Disaster Reserve Workforce Division was established within the Management Directorate and supports FEMA's Reserve Workforce through a centralized framework that strengthens force readiness, coordinates the direction and management of Disaster Assistance Employees' (DAE) resources, and guides the professional development of DAE members. DRWD initiatives are coordinated with the Human Capital Division, Emergency Management Institute, each Directorate and its Cadre Managers, and other key stakeholders who provide critical DAE program support.

Historically, FEMA has relied on Disaster Assistance Employee (DAE) Reservists to staff the majority of positions in the Joint Field Offices (JFO). The current workforce structure has not kept pace with the changing demands and organizational transitions within FEMA and DHS. Professionalizing the Disaster Workforce seeks to identify and resolve persistent problems in three major areas: workforce structure; automated workforce management systems; and training and credentialing of the disaster workforce. The DRS provides funding for a program management office to emphasize Disaster Reserve readiness and tailor best-practices from successful workforce models.

DRW will assist in the credentialing and deployment of responders from FEMA's full-time workforce and the Surge Capacity Force and;

- Develop policy, allocate Agency resources, and maintain systems that adapt the DRW to the evolving needs of FEMA and Disaster Reservists.
- Coordinate force planning, training, credentialing and deployment of the DRW, full-time FEMA employees and the Surge Capacity Force.
- Prescribe and enforce nationwide standards of Reserve readiness.
- Oversee DRW Advisory Group to achieve unity of effort in DRW management.
- Implement, manage, and improve standardized processes for tracking Reserve availability, deployment, and demobilization.

Security Services

DRS funding for this activity includes background investigation and fingerprint processing for all disaster employees and contractor staff assigned to a joint field offices (JFO) or disaster facility. Funding also supports contractual services for Federal Protective Service (FPS) at FEMA fixed disaster facilities. (Guard services provided at FEMA disaster locations are funded from the disaster declaration).

Other Management Directorate Services

Facilities Management – Express mail, shipping, and maintenance of mail equipment at disaster fixed facilities are among the activities funded from the DRS.

Human Capital Management - Recruitment of staff (DAE, CORE); staff retention, and development activities are funded from the DRS. Human Capital Management encompasses workforce planning, employment and recruitment, pay and performance, training, organizational development, employee and labor relations, awards, leave, workplace programs, employee grievances and appeals.

Records Management Disaster Services – Disaster related Freedom of Information Act (FOIA) requests are funded by the DRS.

Acquisition Management – DRS supports the conduct of Commercial Services Management studies through DHS under the OMB guidance which replaces the guidance for competitions under OMB Circular A-76. DRS also supports a pro-rated share of the maintenance contract for ProTrac FEMA's acquisition processing system.

Logistics Management Directorate (LMD)

FEMA's Logistics Management Directorate's mission is to effectively plan, manage and sustain national logistics response and recovery operations, in support of domestic emergencies and special events, and to serve as the National Logistics Coordinator (NLC).

LMD's Advanced Readiness Initiatives and Property Management Program will continue the development and expansion of the Total Asset Visibility (TAV) and In-transit Visibility (ITV) Systems. TAV integrates a suite of systems to provide oversight and management of: requisitions; orders; goods in transit; and delivery of assets and commodities. The long-term vision for the TAV program is to engage external emergency management stakeholders – from State, local, and Tribal governments and other Federal agencies and vendors – in the entire FEMA supply chain. LMD will also award a restructured Support Camp contract for shelter of Federal emergency response personnel in times of disaster. The Logistics Capability Assessment tool and associated Resource Requirements Calculator will be implemented across a comprehensive cross section of states and regions to assess state logistics capabilities.

The Distribution Centers (DCs) will develop a plan for implementing and integrating the appropriate mix of internal and external support capabilities. The Atlanta and Puerto Rico DCs will be relocated; LMD is currently seeking locations. Moving to a larger and enhanced facility, the Atlanta DC will serve as a prototype for all future Distribution Centers. LMD is currently seeking locations for the relocation of the Atlanta and Puerto Rico DCs.

The THU program will continue closing sites as disposal progresses and formaldehyde testing is completed. Approximately 40 percent of Temporary Housing Staging Areas will be closed to allow focus on core business of THU readiness. The THU program will also institute THU readiness tracking metrics for asset readiness and THU disposal.

Advanced Readiness Initiatives – The Post Katrina Emergency Management Reform Act (PKEMRA) mandates FEMA establish a professional logistics capability as well as a robust logistics capability at the Regional and State level. FEMA must adopt new approaches to disaster logistics management in order to meet its dual responsibility as both the national coordinator and direct provider of these services. To support this endeavor, FEMA must put contracts in place that will ensure the most efficient and effective pre-positioning, distribution, and tracking of supplies and materials. LMD is also working toward development of Regional Logistics Readiness Plans that clearly articulate the proposed logistics approach with defined metrics.

- **Distribution Centers (DCs)** – Essential improvements are underway for a Distribution Centers Strategic Plan and implementation, in response to PKEMRA's mandate to establish a professional logistics capability. LMD is working toward a well thought out and performance-based business model which fully utilizes the capabilities and assets of our business partners and commercial industry. The result is an organic capability that is determined based on a National Inventory Plan, as well as a "virtual capability" from all partners.

During a disaster operation, the DCs support FEMA disaster responders with critical equipment and supplies, including Emergency Meals, bottled water, generators, cots, blankets, tarps, blue roof sheeting and other disaster commodities. These life-saving and life-sustaining resources provided to citizens in times of disaster can be distributed through State and county distribution points in time of need. A portion of these supplies have been pre-positioned in hurricane-prone states in

Regions I, II, III, IV and VI. The DCs also stock pre-positioned medical caches in support of HHS's National Disaster Medical Systems (NDMS). FEMA and HHS work collaboratively to issue the caches when requested.

The DRS supports base costs, including rent and security, for FEMA's eight Distribution Centers (located near Atlanta, GA; Berryville, VA; Ft Worth, TX; Frederick, MD; San Jose, CA (Moffett Field); Hawaii; Guam; and Puerto Rico). Additionally, FEMA stocks commodities in the Temporary Housing and Distribution Center located in Cumberland, MD.

- **Temporary Housing Units (THU)** – The Temporary Housing Unit Storage Sites Program (previously referred to as Emergency Housing Unit Storage Sites), supports Disaster Assistance Directorate's Direct Housing Program. The program is part of a well thought out, life-cycle and performance-based business model and supports 21 sites with contracts for various support services.
- **Property Management** – The DRS supports the management oversight, internal control and technical reviews in the areas of property accountability, reutilization and disposal of the agency's personal property assets, such as disaster supplies and equipment. DRS Property Management implements an enterprise-wide property accounting and asset visibility system designed and implemented to ensure best value. DRS support the Inventory and Logistics System, including the logistics information management system and the Total Asset Visibility (TAV) System, from a stand alone system to being a part of the DHS CIO's overall enterprise system.

Disaster Assistance Directorate (DAD)

The Disaster Assistance Directorate (DAD) works to ensure that individuals and communities affected by disasters of all sizes, including catastrophic and terrorist events, are able to return to normal with minimal suffering and disruption of services. Program activities focus on improving efficiency and expediting delivery of disaster assistance to eligible individuals, to state, local, and tribal governments, and to eligible private nonprofit organizations. This is accomplished through a commitment to streamline procedures to improve program policy, to minimize error, and to modernize service delivery technology.

Annual costs for the following contracts, staff, and activities will be funded through the DRS (actual deployment costs in response to a disaster declaration will continue to be funded from the specific disasters):

- **Staffing**

DRS funding is utilized for the salaries and benefits for approximately 67 temporary employees nationwide that support a wide variety of Disaster Assistance related programs, including, but not limited to: The Individual and Public Assistance Programs; Technical Assistance Contract implementation, long-term community recovery; and disaster information management.
- **Contract Support**
 - Individual Assistance Technical Assistance (IA-TAC)
 - Public Assistance Technical Assistance (PA-TAC)
 - Housing Inspection Services (HIS)
 - Mail Operations
 - Management, Organizational and Business Improvement Services (MOBIS)
 - Corporate Lodging Consultants (CLC)

- National Processing Service Centers (NPSCs)

The DRS supports base costs, including rent and security, for FEMA’s three NPSCs located in Maryland, Texas, and Virginia. The NPSC facilities provide FEMA call center and benefits processing capabilities to register and process disaster victims’ applications.

DRS funding for the NPSCs also supports the following:

- Developers to make continuous updates to IA program changes in the NEMIS system to ensure that processing complements the most up to date policies.
- What is expected to be a one- time cost for an Interagency Agreement with the Internal Revenue Service (IRS) to provide surge staffing for Registration Intake when required. Specifically, meeting FEMA technical requirements for IRS facilities that perform this function. When the IAA is utilized pursuant to a disaster declaration, funding will be charged to the declaration’s costs under the DRF.

- Other Interagency Agreements

- Crisis Counseling Assistance and Training Program (CCATP). The Center for Mental Health Services (CMHS) under the U.S. Department of Health and Human Services provides critical technical support in the management of FEMA’s Crisis Counseling Assistance and Training Program (CCP). FEMA annually funds three PFT positions, contract support, travel, equipment supplies and administrative costs through an IAA. When the program is actually “turned on” pursuant to a disaster declaration, funding will be charged to the declaration’s costs under the DRF.
- Disaster Unemployment Assistance (DUA). The Employment and Training Administration, within the Department of Labor (DOL), administers the Disaster Unemployment Assistance (DUA) Program on FEMA’s behalf. As such, FEMA annually funds DOL through an IAA to perform this function. When the program is actually “turned on” pursuant to a disaster declaration, funding will be charged to the declaration’s costs under the DRF.

- Maintain a Web-based Public Assistance Program

- DRS funding is used to maintain a web-based capability for the Public Assistance Program (PA) that allows FEMA staff, PA applicants, and States to perform all PA grant management activities online in addition to supporting the use of state-of-the art technology such as wireless handheld devices. This includes maintaining the use of handheld devices for Public Assistance staff and contractors to perform inspections on damaged facilities. The information then is automatically uploaded into the web-based system, eliminating a paper based process, improve efficiency, and attain cost savings.

Office of the Chief Financial Officer (OCFO)

The OCFO leads FEMA in financial management and accountability to ensure the effective use of resources and service to stakeholders in the accomplishment of FEMA’s mission.

The OCFO oversees planning and response activities of the financial management members of FEMA’s emergency teams and management of the national Disaster Comptroller cadre.

2-Year CORE Salaries & Benefits

FEMA maintains a class of employees referred to as Cadre of Response Employees (CORE) to perform essential duties that cannot reasonably be attributed on a disaster specific basis. These CORE are hired as Temporary Full-Time (TFT) employees with appointments not-to-exceed 2-years. Based on the distribution of work among all of the programs/offices, for FY 2010, 183 2-Year CORE positions are proposed for funding from the DRS.

Corporate/Centrally Managed (CM) Programs

FEMA will continue to utilize the DRS to maintain critical, ongoing administrative and management (corporate) accounts. These costs include the following: rent/leases for specified FEMA spaces occupied by disaster employees; disaster-related postage and shipping charges; disaster financial operations support; unemployment insurance and workmen's compensation for DAE's; and printing for temporary disaster employees. This account will have oversight within the Office of the Chief Financial Officer (OCFO).

Disaster Operations Directorate (DOD)

The Disaster Operations Directorate coordinates and provides the core Federal disaster response capability needed to save lives, reduce suffering, and protect property in communities throughout the nation that have been overwhelmed by the impact of a major disaster or emergency, regardless of cause. Three core program activities are funded by the DRS: Hurricane Planning Response Team; the GAP Analysis initiative; and Disaster Emergency Communications.

Formerly known as the Gulf Coast Warm Cell, the Hurricane Planning Response Team, in accordance with the Post Katrina Emergency Management Relief Act (PKEMRA), leads the charge to ensure mass evacuation guidelines, standards, and requirements are established and effective.

The GAP analysis initiative was implemented during the 2007 hurricane season. It was established to provide a snapshot of asset gaps at the local, State, and national level and determine the level of Federal support potentially needed to respond to a category 3 hurricane. The initial focus was seven key areas in 18 of the most hurricane prone states. In 2008, the analysis was expanded to strengthen the capabilities of those States to reduce their reliance on Federal support by developing creative solutions that leverage the capabilities of State and local jurisdictions and the private sector.

The Disaster Emergency Communications division is funded to provide tactical disaster emergency communications capabilities to support all-hazards disaster response and national security emergency requirements. The division maintains emergency communications through six Mobile Emergency Response Support (MERS) Detachments.

National Preparedness Directorate

The Emergency Management Institute (EMI) within the National Preparedness Directorate is responsible for training FEMA's Disaster Workforce to perform the tasks as defined in their credentialing plans at the basic, intermediate, and advanced levels. The foundation for the disaster workforce credentialing plans is the individual position task books developed by EMI. These position task books reflect the work to be accomplished for each FEMA disaster position (over 300). These positions are performed at the Joint Field Office, National Response Coordination Center, Regional Response Coordination Center, and in the field (staging areas, command centers, emergency operation centers, etc.). The position task books include an evaluation component to assess performance against tasks performed. EMI works in partnership with FEMA's Disaster Reserve Workforce Division to

ensure that training, credentialing plans, and position task books are in sync to guarantee the readiness of FEMA's disaster workforce.

Other DRS Activities

Office of the Administrator - Primary DRS program costs are travel requirements to maintain credentialing and qualifications, and communication equipment to effectively administer disaster relief from the field. During deployment to disasters, the FCOs are funded by the specific disaster declarations.

External Affairs – The DRS funds Media Monitoring & Contact Management activity. This covers the disaster related portion of the annual media monitoring and analysis service and the media contact management and distribution service. It also provides funding for the Individual Assistance Communications contract.

Mitigation - The DRS supports: 1) reprinting of publications depleted by disaster activities; 2) replenishment of publications that were used by routine disasters.

Equal Rights - Non-disaster specific investigations and EEO activities are funded through the DRS.

DRS (and legacy DSA) Recent and Planned Accomplishments

FY 2008

- Disaster Operations Directorate revised (DOD) its GAP analysis initiative to address all-hazards for each of its ten Regions.
 - Visited all FEMA Regions. Through the regional visits the GAP Management Office documented the FEMA Regions' experiences and suggestions and incorporated their feedback in the development of formal program guidance.
- DOD GAP Management Office formalized relationships with partners including the United States Army Corps of Engineers and Department of Health and Human Services. These relationships improved the analysis of capabilities, requirements and shortfalls at every level, as well as facilitated development of strategies for mitigating the identified shortfalls.
- The DOD Hurricane Planning Response Team - through the Gulf Coast Planning Initiative - implemented its first ever precautionary multi-modal mass evacuation of approximately 33,000 evacuees prior to the landfall of hurricane Gustav.
- The Emergency Management Institute (EMI) added 40 new and revised courses to its curriculum and delivered multiple offerings of approximately 374 different courses in resident, field, and online with over 125,000 course completions.
- EMI completed over 250 Position Specific Task Books for JFO positions and began development of task books for IMAT, NRCC and RRCC positions.
- EMI provided technical assistance to the Disaster Reserve Workforce Division to begin development of credentialing plans.
- Disaster Assistance Directorate (DAD) implemented the Disaster Assistance Technical Services (DATS) contract and Program Support Services contract that offers assistance to: the Fair Market Rent Calculator; the Debris Removal Contractor Registry; the National Emergency Family Registry and Locator System; the Debris Removal Tracking System; Temporary Housing Unit Air Quality Testing; and the Housing Portal, among others.

- DAD implemented the Housing Inspections Services contract that is necessary to document and validate damages reported by disaster victims. The resulting inspections are utilized to make final eligibility determinations.
- DAD implemented the Individual Assistance Technical Assistance Contract (IA-TAC) that supports among other things: haul and install of temporary housing units; housing coordinating resources; disaster victim needs assessments; applicant pre placement interviews; preliminary damage assessments; and shelter and mass care operations and management.
- DAD implemented the Public Assistance Technical Assistance Contracts (PA-TAC) that provides architect-engineer and professional support services. PA-TAC provides specialists to evaluate the damage of public facilities caused by a disaster develop a scope of work and cost estimate for: repair; replacement; or relocation of the facilities. The information collected is used to make eligibility determinations and process grants for public assistance applicants.
- DAD contracted for mail operations at the National Processing Service Centers to efficiently handle all incoming and outgoing mail related to disaster applicants.
- FEMA IT Division (IT) enhanced Mission Support Systems:
 - Coordinated with 16 Federal partner agencies to develop and improve an application resulting from Executive Order #13411, which directed agencies to consolidate all Federal disaster assistance available to the victim into one portal. The Disaster Assistance Improvement Program (DAIP) was the end result of this effort.
 - Implemented software improvements to WebADD, Individual Assistance applications, and Disaster Grants applications (EMMIE).
- IT Transitioned the National Preparedness Directorate (NPD) and Grants Program Directorate (GPD) from the DHS network to the FEMA network without a negative impact on services.
- IT established a Program Management Office to define and build standard processes and tools for the Human Capital and Asset Management program offices.
- IT/DHS Data Center Discovery Project: Awarded a contract to EDS to scope the transition effort and assist in prioritization of systems to be moved to DHS Data Center.
- IT initiated transition to DHS OneNet. Planning and circuit orders were completed. Anticipated to be operational by the 3rd Quarter of FY 2009.
- Logistics Management Directorate (LMD) began development of the Total Asset Visibility (TAV) program. This program integrates a suite of systems to provide request, order visibility, order management, in-transit visibility and eventual delivery of assets and commodities.
- LMD began development of Key Readiness Contracts. These contracts and Interagency Agreements (IAA) provides an enhanced logistics readiness capability including supplies and services, transportation and asset visibility.
- LMD created an interagency Emergency Transportation Center (ETC) Transition Working Group to support the transition of *Transportation Services / Evacuation Support* roles from the Department of Transportation (DOT) and assist LMD in developing its in-house capabilities to acquire transportation services through the General Services Agency's (GSA) freight tenders program via an Interagency Agreement (IAA).

FY 2009

- DOD will expand its all hazards GAP analysis program across FEMA
 - The GAP Management Office released a formal guidance document to assist FEMA Regions and states with the implementation of GAP. With the release of this guidance, the program rolled out to all states with a risk-based, all-hazards approach.

- DOD GAP Management Office developed and released a new user-friendly GAP Data Collection and Analysis Tool. The tool reduces subjectivity and provides standardized data, from which the GAP Management Office can produce ad-hoc reports and support response operations.
- FEMA’s Disaster Operations Directorate Hurricane Planning Response Team (Gulf Coast Warm Cell) will establish a Mass Evacuation Program Office to:
 - Expand the concept, process and procedures established in Gulf Coast Planning Initiative to the Atlantic Coast.
 - Incorporate aspects of the Mitigation hurricane evacuation studies and risk assessment modeling into plans & programs
 - Refine organizational constructs such as the Evacuation Liaison Team, Movement Coordination Branch (aviation, bus, and rail) into the National Incident Management System (NIMS).
- EMI anticipates adding 30 new and revised courses to the curriculum while delivering multiple offerings of approximately 413 different courses in resident, field, and online with over 127,000 course completions.
- EMI will maintain the over 300 Position Task Books to reflect changing tasks and provide technical assistance in the development of Phase 1 credentialing plans for Logistics, Disaster Field Training, Security, External Affairs, Operations, Public Assistance, Acquisitions, Planning, and Information Technology.
- Established the Disaster Reserve Workforce Division to improve the readiness capability of FEMA’s disaster workforce by strengthening administrative training and developing credentialing plans.
- DAD solicited competitive bids for new award of the Individual Assistance-Technical Assistance Contract (IA-TAC III) to incorporate Government best practices.
- DAD enhanced the FEMA Advanced Contact Center Network (ACCN) Platform that enables the National Processing Service Centers (NPSC) to provide customers with an “intelligent interaction”.
- DAD awarded four new technical assistance contracts (TACs) to provide architect–engineer, consultant, and other related professional services in support of the Public Assistance (PA) Program.
- IT built/deployed/upgraded various Information Systems to improve processes:
 - Build and deploy Phase II of the Disaster Assistance Improvement Program (DAIP).
 - Assess the design and architect a new solution for the National Emergency Management Information System (NEMIS).
 - Prepare integration of the Non-Disaster Grants (ND Grants) and Emergency Management Mission Integrated Environment (EMMIE) Grants Systems.
 - Perform an analysis of alternatives for the Total Asset Visibility (TAV) logistics system.
 - Upgrade the ProTrac acquisition management system to version 7.2.
 - Build and deploy the Enterprise Coordination and Approval Processing System (eCAPS) for non-disaster acquisitions.
 - Transition to DHS OneNet.
- LMD will field operation Phase I of TAV to include provisions for disaster surge support personnel.
- LMD will complete formaldehyde testing of Temporary Housing Units (THUs).
- LMD will institute THU readiness tracking metrics for asset availability and THU disposal.
- LMD will sustain Mobile Disaster Recovery Center (MDRC) program consisting of 100 strategically pre-positioned support vehicles. This program provides disaster response capability of “stand alone” operations in the initial phase of a disaster, providing communications and registration capability for both victims and emergency response personnel within hours.

FY 2010

- DOD will complete the expansion of the GAP analysis program and engage all US states and territories.
 - Continue improving data collection and analysis process by transitioning to a web-based system.
 - Create an online independent study course to provide consistent program guidance to stakeholders at all levels.
- DOD's Hurricane Planning Response Team Mass Evacuation Program office will:
 - Expand the program across all FEMA Regions
 - Update evacuation studies and risk assessments
 - Develop sophisticated transportation modeling programs
 - Exercise organizational constructs in National Level Exercises
- EMI will add 30 new and revised courses to the curriculum while delivering multiple offerings of approximately 420 different courses in resident, field, and online with over 130,000 course completions.
- EMI will maintain the over 300 Position Task Books to reflect changing tasks and provide technical assistance in the development of credentialing plans for the Phase 2 cadres.
- FEMA will implement the Disaster Reserve Workforce initiative that focuses on four major problem areas: workforce structure; automated workforce management systems; credentialing and training; and standardization of workforce policies.
- FEMA will implement credentialing plans for disaster field task positions in accordance with Joint Field Office (JFO) standard operating procedures
- Conduct a detailed gap analysis to align EMI's disaster workforce curriculum with credentialing requirements.
- DAD will solicit competitive bids for a new award of the Housing Inspection Services contract that will improve accountability, allow FEMA to identify gaps in service delivery, impose clear penalties to failed performance, and clearly define administrative requirements such as HSPD-12.
- DAD will redefine requirements and implement an updated Interagency Agreement (IAA) with the Internal Revenue Service to provide surge Registration Intake staff following a large or catastrophic event.
- DAD will continue implementation of technology solutions and application development at the National Processing Service Centers for Individual Assistance Programs to support Disaster Housing Operations and streamline the housing inspection service process to increase accuracy and customer service.
- IT will continue to build/deploy/upgrade various Information Systems to improve processes:
 - Build and deploy Phase III of DAIP
 - Assess DHS Transformation and Systems Consolidation (TASC) solution for acquisitions
 - Deploy TAV pilot
- LMD will award restructured Support Camp contract for shelter of 300 to 2,000 Federal emergency response personnel. The contract(s) include: design; equipment; mobilization; site preparation; installation; management and operation; and demobilization of the camps.
- LMD will complete relocation of Puerto Rico Distribution Center. Additionally, the Atlanta Distribution Center will be relocated, including integration of future personnel structure, processes, and technology. The Atlanta Distribution Center will serve as a model for all future Distribution Centers.
- LMD will close 40 percent (6 of 15) Temporary Housing Unit (THU) staging areas to reduce costs and allow greater focus on THU oversight.

IV. Program Justification of Changes

**Department of Homeland Security
Federal Emergency Management Agency (FEMA)
Disaster Relief Fund
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Direct Disaster Requirements (Adjustment to estimate)

Strategic Goal(s) & Objective(s): **Goal 1:** An integrated approach that strengthens the Nation’s ability to address disasters, emergencies, and terrorist events.
Objective 1.1 Build a culture of preparedness across the Nation for all hazards

PPA: Disaster Relief Fund

Program Increase: Positions 0 FTE 0 Dollars \$600

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							228	2,735	\$1,400
Program Increase							0	0	600
Total Request	45	7,061	\$10,978	228	2,738	\$1,400	228	2,738	\$2,000

Description of Item:

FEMA requests an additional \$600,000 to sustain the five-year average obligation level for direct disaster activity.

Justification:

Historically, calculations are based on a 5-year average – using only direct disaster obligations. The calculation does not include large events greater than \$500 million and assumes \$1 billion will be available through recoveries.

Impact on Performance (Relationship of Increase to Strategic Goals):

Without these funds, the FEMA would not be able to support the 5-year average obligation level.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Disaster Relief Fund
Appropriation Language**

For necessary expenses in carrying out the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), [\$1,400,000,000]\$2,000,000,000, to remain available until expended: [Provided further, That up to \$50,000,000 may be transferred to the Federal Emergency Management Agency “Management and Administration appropriation for management and administration functions”.] Provided, That [the Federal Emergency Management Agency shall submit an expenditure plan to the Committees on Appropriations of the Senate and the House of Representatives detailing the use of the funds for disaster readiness and support within 60 days after the date of enactment of this Act: Provided further, That the Federal Emergency Management Agency shall provide a quarterly report detailing obligations against the expenditure plan and a justification for any changes in spending: Provided further, That the Federal Emergency Management Agency shall submit the monthly “Disaster Relief” report, as specified in Public Law 110-161, to the Committees on Appropriations of the Senate and the House of Representatives, and include the amounts provided to each Federal agency for mission assignments]:[Provided further,] [That] for any request for reimbursement from a Federal agency to the Department of Homeland Security to cover expenditures under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), or any mission assignment orders issued by the Department for such purposes, the Secretary of Homeland Security shall take appropriate steps to ensure that each agency is periodically reminded of Department policies on:

- (1) the detailed information required in supporting documentation for reimbursements; and
- (2) the necessity for timeliness of agency billings. (Department of Homeland Security Appropriations Act, 2009.)

Explanation of Changes:

No substantive changes are proposed

PPA Mission Statement

Through the Disaster Relief Fund (DRF), DHS provides a significant portion of the total Federal response to victims in Presidentially declared major disasters and emergencies. The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), 42 U.S.C. 5121-5206 (Public Law 93-288, as amended), authorizes the President to provide Federal assistance to supplement State and local governments' disaster response, recovery, readiness, and mitigation efforts. Under Executive Order 12148, as amended by Executive Order 13286, FEMA's Director, formerly DHS' Under Secretary for the Emergency Preparedness and Response Directorate, has been delegated the responsibility for administering the Federal Government's disaster assistance programs. The Stafford Act authorizes five types of declarations or actions: (1) Major Disaster, (2) Emergency, (3) Fire Management Assistance, (4) Defense Emergency, and (5) Pre-declaration activities.

Coupled with funding from recoveries of prior year obligations and unobligated funds carried forward, the appropriation request for Disaster Relief is designed to fund disaster support and readiness costs and the five-year average for direct disaster activity (excluding large and catastrophic events, such as major hurricanes, the terrorist attack of September 11, 2001, the 2004 hurricanes in Florida and other States, Hurricanes Katrina and Rita in 2005, the California Wildfires of 2007, and Hurricanes Gustav and Ike in 2008).

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$616,160	\$411,000	\$411,000	\$0

Salaries and Benefits includes costs for 2,735 FTEs. There is no change in the FY 2010 funding level as compared to FY 2009.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$175,904	\$136,000	\$52,000	(\$84,000)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 Request includes decreases of \$84,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Transportation of Things	\$77,739	\$78,000	\$16,000	(\$62,000)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2010 Request includes decreases of \$62,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
GSA rent	\$19,011	\$18,000	\$18,000	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. There is no change in the FY 2010 funding level as compared to FY 2009.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Other Rent	\$99,441	\$100,000	\$1,000	(\$99,000)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2010 Request includes decreases of \$99,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	Actual	Enacted	Request	Change
Communication, Utilities, and miscellaneous char	\$37,390	\$30,000	\$30,000	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. There is no change in the FY 2010 funding level as compared to FY 2009.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Printing	\$4,676	\$8,000	\$8,000	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. There is no change in the FY 2010 funding level as compared to FY 2009.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$32,305	\$66,000	\$15,000	(\$51,000)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 Request includes decreases of \$51,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$1,319,833	\$1,898,000	\$695,000	(\$1,203,000)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 Request includes decreases of \$1,203,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$1,157,912	\$1,200,000	\$324,000	(\$876,000)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 Request includes decreases of \$876,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & maintenance of facilities	\$130,905	\$131,000	\$35,000	(\$96,000)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2010 Request includes decreases of \$96,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$201	\$1,000	\$0	(\$1,000)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2010 Request includes decreases of \$1,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Medical Care	\$722	\$7,000	\$0	(\$7,000)

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. The FY 2010 Request includes decreases of \$7,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$3,981	\$11,000	\$0	(\$11,000)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 Request includes decreases of \$11,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Subsistence & Support of Persons	\$2,752	\$3,000	\$0	(\$3,000)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2010 Request includes decreases of \$3,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$360,539	\$301,000	\$67,000	(\$234,000)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2010 Request includes decreases of \$234,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$92,882	\$35,000	\$35,000	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. There is no change in the FY 2010 funding level as compared to FY 2009.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Land & Structures	\$3,249	\$7,000	\$6,000	(\$1,000)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. The FY 2010 Request includes decreases of \$1,000, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$6,842,677	\$6,619,506	\$1,914,000	(\$4,705,506)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 Request includes decreases of \$4,705,506, reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY DISASTER ASSISTANCE DIRECT LOAN PROGRAM

I. Appropriation Overview

A. Mission Statement for Disaster Assistance Direct Loan Program:

The Disaster Assistance Direct Loan Program account provides loan authority and subsidy budget authority for disaster assistance direct loans.

B. Budget Activities:

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) authorizes two types of direct loans: 1) Section 319 (State Share) loans to States for the non-Federal portion of cost-shared Stafford Act programs and 2) Section 417 (Community Disaster) loans to local governments that incurred substantial losses of tax and other revenues as a result of a major disaster and require financial assistance in order to perform governmental functions. In accordance with the Federal Credit Reform Act of 1990, this account supports subsidy budget authority and authorizes loan levels for the direct loan programs; however, in FY 2010, no funds are requested for section 417 (Community Disaster) loan subsidy.

C. Budget Request Summary:

Loan subsidy of \$295,000 and a direct loan limitation of \$25 million for section 319 (State Share) loans are requested for FY 2010. No funds are requested for section 417 (Community Disaster Loans) loan subsidy in FY 2010.

Note: The Loan Limitation amount above does not reflect the loan limitation carryover associated with the supplemental appropriation for Section 419 Special Community Disaster Loans.

FEMA requests \$25 million in loan authority and \$295,000 in subsidy budget authority for section 319 loans for FY 2010. This represents no change from FY 2009.

CURRENT SERVICES PROGRAM DESCRIPTION:

Under the Stafford Act, FEMA may make two types of direct loans:

State Share Loans: Under section 319 of the Stafford Act, FEMA may lend or advance to a State or an eligible applicant the portion of assistance for which the applicant is responsible under cost-sharing provisions of the Stafford Act. To be deemed eligible for a loan, the governor of the affected State must demonstrate, where damage is overwhelming and severe, that the State is unable to assume immediately its financial responsibility to meet the cost-share because (1) the State is responding to concurrent, multiple disasters/emergencies or has incurred extraordinary costs as a result of a particular disaster or emergency; and (2) the damages caused by such disaster or disasters are so overwhelming and severe it is not possible for the State to assume immediately its financial responsibility. \$217 million in State Share loans have been approved, with the last loan issued in 1996. There are no outstanding State Share loans.

Community Disaster Loans (CDLs): Under section 417 of the Stafford Act, loans may be authorized to local governments that have suffered a substantial loss of tax and other revenues as a result of a major disaster, and have demonstrated a need for financial assistance in order to perform their municipal operating functions. The loans, not to exceed 25 percent of the annual operating budget of that local government for the fiscal year in which the major disaster occurred, are made at the current Treasury rate for a term of 5 years and may not exceed \$5 million. All or part of such loans may be canceled to the extent that revenues of the local government during the full 3 post-disaster fiscal years are insufficient to meet its operating budget as the result of the disaster. A local government is not eligible for further CDLs during any period in which the jurisdiction is in arrears with respect to required repayment of an existing loan. \$238 million in Community Disaster loans have been approved, with the last loan issued in 2001.

Special Community Disaster Loans (SCDLs): The Community Disaster Loan Act of 2005 (PL 109-88) authorized FEMA to transfer \$750 million from the Disaster Relief Fund to provide up to \$1 billion in loan authority to assist communities impacted by Hurricanes Katrina and Rita. For these Special Community Disaster Loans, three elements were added to the traditional program under section 417: 1) It removed the \$5 million limit on individual loans; 2) the loans were restricted “to assist local governments in providing essential services;” and 3) the loan cancellation provision of section 417(c)(1) of the Stafford Act was inapplicable.

The Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006 (PL 109-234) appropriated an additional \$278,800,000 to support \$371,733,000 in SCDLs. However, certain eligibility criteria were different from those in the 2005 Act: 1) the maximum loan amount was increased to 50 percent of the applicant’s operating budget the fiscal year of the disaster; 2) the loan analysis could only consider “tax revenue” loss and not “other revenues” as allowed for in the 2005 Act; and 3) applicants were required to demonstrate actual loss in tax revenues of 25 percent or greater. The loan cancellation provision continued to be inapplicable.

The U.S. Troop Readiness, Veterans’ Care, Katrina Recovery, and Iraq Accountability Appropriations Act, 2007 (PL 110-28) removed the loan cancellation prohibitions contained in the 2005 and 2006 Acts. This statutory change now gives FEMA discretionary authority, limited by the language in section 417(c)(1) of the Stafford Act, to cancel SCDLs issued pursuant to either the 2005 or 2006 Acts.

FEMA approved 152 SCDLs totaling \$1,270,501,241 to 109 eligible applicants in Mississippi and Louisiana.

In accordance with the Federal Credit Reform Act of 1990, three accounts are used to record cash flow data for direct loans:

- Disaster Assistance Direct Loan Program Account. This is the budget account into which an appropriation is made to cover the subsidy costs of a direct loan, and from which such costs are disbursed into the financing account.
- Disaster Assistance Loan Liquidating Account. This budget account records all cash flows to and from FEMA for pre-1992 direct loans made under the State Share and Community Disaster loan programs. There is no longer any activity in this account.
- Disaster Assistance Direct Loan Financing Account. The loan financing account is a non-budgetary account that records all cash flows to and from FEMA resulting from CDLs and State Share direct loans obligated in 1992 and beyond. This account holds balances, receives the subsidy cost payment from the program account, and includes all other cash flows resulting from post-1991 direct loans. The funds in this account are a means of financing and are not included in the budget totals. Loans are obligated from this account, using the subsidy budget authority from the Disaster Assistance Direct Loan Program Account and borrowing authority from the Department of the Treasury.

IV. Program Justification of Changes

Not applicable

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Disaster Assistance Direct Loan Program
Appropriation Language**

For activities under section 319 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5162), [\$295,000] \$295,000 is for the cost of direct loans: *Provided*, That gross obligations for the principal amount of direct loans shall not exceed \$25,000,000: *Provided further*, That the cost of modifying such loans shall be as defined in section 502 of the Congressional Budget Act of 1974 (2 U.S.C. 661a). (*Department of Homeland Security Appropriations Act, 2009*).

Explanation of Changes:

No substantive changes are proposed.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) **RISK MAPPING, ASSESSMENT, AND PLANNING FUND (FORMERLY FLOOD MAP** **MODERNIZATION FUND)**

I. Appropriation Overview

A. Mission Statement for Flood Map Modernization Fund:

In 2004, FEMA launched a federally funded initiative to implement a technology-based, cost effective, long-term process for updating, maintaining, storing, and distributing the flood hazard and risk information portrayed on Flood Insurance Rate Maps (FIRMs). The Flood Map Modernization Fund (FMMF) provides for updating and maintaining the inventory of over 100,000 flood maps and to modernize the Nation’s flood hazard data records. These flood maps are used to determine appropriate risk-based premium rates for the National Flood Insurance Program (NFIP); to complete flood hazard determinations required of the Nation's lending institutions; and to develop appropriate disaster response plans for Federal, State, and local emergency management personnel.

Part of FEMA’s Risk MAP strategy is to invest more in monitoring the validity of published flood hazard information. The Risk MAP Multi-Year Plan: Fiscal Years 2010-2014 builds on the strong foundation of Map Modernization that is in place. The multiyear plan addresses flood hazard data update needs and preserves the success of the Flood Map Modernization investment.

B. Budget Activities:

FEMA manages several risk analysis programs that assess the impact of natural hazards that lead to effective strategies for reducing risk. These programs support the Department of Homeland Security objective to “strengthen nationwide preparedness and mitigation against natural disasters.” FEMA is beginning Risk Mapping, Assessment, and Planning (Risk MAP) in FY 2009 with funding from the National Flood Insurance Fund and Congressional appropriations for flood hazard mapping. Risk MAP will integrate and align the individual risk analysis programs into a more effective unified strategy. The vision for Risk MAP is to deliver quality data that increases public awareness and leads to action that reduces risk to life and property.

Risk MAP Vision
Through collaboration with State, local, and tribal entities, Risk MAP will deliver quality data that increases public awareness

FEMA’s Risk MAP Multi-Year Plan: FY 2010 – FY 2014 outlines the goals, objectives, and strategies for Risk MAP. The major objectives of Risk MAP are:

- Assess the Nation’s flood risk and use this information to increase public awareness of risk. This consistent, quantitative flood risk assessment will be used to track progress toward reducing flood risk and to target resources.

- Increase public awareness of risk from natural hazards and establish a baseline of local knowledge and understanding of risk management concepts.
- Ensure 80% of the Nation's flood hazards are current – the flood hazard data are new, have been updated, or deemed still valid.
- Provide updated flood hazard data for 100% of the populated coastal areas in the Nation.
- Evaluate levee status information to ensure the appropriate flood hazards are depicted on Digital Flood Insurance Rate Maps for counties with levees, including those impacted by expiring Provisionally Accredited Levee status.

C. Budget Request Summary:

FEMA requests \$220.0 million in FY 2010 for the Flood Map Modernization Fund. Risk MAP will build on the flood hazard data and maps provided in Flood Map Modernization, and provide updated flood hazard data to preserve the Map Mod investment. In FY 2010, FEMA will focus on reviewing and updating flood hazard data and maps to accurately reflect flood hazards. Flood hazard data and mapping efforts will support the goals identified in FEMA's Risk MAP Multi-Year Plan: Fiscal Years 2010-2014 and specifically address gaps in flood hazard data to form a solid foundation for flood risk assessments, floodplain management, and actuarial soundness of the National Flood Insurance Program.

FEMA requests \$220.0 million, 43 full time permanent positions and 43 FTE for this activity. This request represents no change from FY 2009 levels.

CURRENT SERVICES PROGRAM DESCRIPTION:

Flood Hazard Mapping (FHM)

Flood Map Modernization will produce flood maps in a geographic information system format for areas with high flood risk. Flood Map Modernization was funded from 2004 through 2008 and map production will continue through 2011. In addition, the modernization effort incorporates the latest technology in order to provide the flood hazard data in the most usable format with advanced tools and techniques that will enable FEMA and its State and local partners to produce high-quality data while managing cost and schedule constraints. FEMA's current approach for Flood Map Modernization is to update maps using the most current information so they reflect physical changes that have occurred since the original mapping. In addition, the updated maps will be compliant with the Floodplain Boundary Standard described in the Multi-Year Flood Hazard Identification Plan (MHIP).

The Flood Map Modernization Program will accomplish the following for over 100,000 flood maps by 2011, based on appropriations through FY 2008 (*note that the final flood hazard maps take approximately two to three years to complete after appropriations have been made, to allow due process for communities impacted by changes to flood hazard elevations and designations*):

- Build a digital Geospatial Information System (GIS) platform for flood hazard map production and accessibility.
- Develop flood hazard maps for 92% of the Nation's population available through the new platform.
- Ensure 75% of the flood hazard boundaries meet the standards for horizontal accuracy.
- Refresh 30% of the flood hazard data, ensuring that the maps represent current conditions.

FEMA has created a premier digital flood hazard data platform for the NFIP with floodplain boundaries that are reliable and trusted by stakeholders. The new digital maps are easier to use and provide increased capabilities for automation and analysis. The maps are used an estimated 30 million times each year in making critical decisions by local community officials, emergency managers, homeowners, and financial institutions.

The success of the initial program brought to the forefront a larger need for new flood hazard engineering analyses, improved quality of the flood hazard data, and a level of detail that extends beyond fixing the floodplain boundaries.

Some examples highlighting the utility of modernized maps include:

- **Miles City, Montana** conducted pilot projects with FEMA to demonstrate the value of risk assessment and communication when combined with the use of new technologies (e.g., Map Mod Digital Flood Insurance Rate Maps (DFIRMs), geographic information systems technology, Lidar elevation mapping technology, and FEMA’s risk assessment tool - Hazus). For Miles City, the modernized flood map (preliminary DFIRM data showing the effects of a de-accredited levee) and the Hazus tool were used together to develop and display water depth and loss estimation information. The depth grid overlaid with enhanced site-specific building data and HAZUS loss estimations illustrates the variations in risk across the community. This type of information begins to clearly communicate risk, as well as potential mitigation strategies that are being incorporated into the communities’ planning efforts.
- **Mecklenburg County, North Carolina**, a Cooperating Technical Partner (CTP) with FEMA in Flood Map Modernization, developed revised flood maps that more accurately show the location of areas likely to flood along major streams and creeks throughout the City of Charlotte and Mecklenburg County. Mecklenburg County also mapped floodplain boundaries based on future conditions hydrology. A Hazus pilot study was conducted to measure the losses avoided by using future conditions hydrology and enforcing stricter building restrictions. The results of the study showed that in one watershed alone, an estimated \$16 million in structural damages were avoided by investing \$250,000 in enhanced analyses for mapping future conditions. A complete study was conducted for all watersheds and determined that \$2 million invested in enhanced mapping prevented \$300 million in losses for a single, 100-year flood event.
- **Maricopa County, Arizona** has experienced recent and rapid development. Partnering with FEMA as a CTP, the Flood Control District of Maricopa County converted their FIRM and Flood Insurance Study into digital format using orthophotos for the base map and incorporated Letters of Map Revision into the maps. The District’s efforts have resulted in more accurate mapping of the flood zones in the county, and a reduction in flood insurance premiums for some residents in Special Flood Hazard areas.

Risk Mapping, Assessment, and Planning (Risk MAP)

The Risk MAP Multi-Year Plan (FY 2010-2014) builds on the strong foundation of the Map Modernization program. This plan will significantly improve the integrated flood risk management approach by weaving county-level flood hazard data into watershed-based risk assessments that serve as the basis for local Hazard Mitigation Plans and targeted risk communication activities. Risk assessments systematically analyze the people and property in a community or watershed potentially

impacted by flood hazards to quantify physical, social and economic losses. Targeted risk communication activities include prioritizing flood map updates for highest risk areas and highlighting areas where mitigation activities are most needed based on the results of the watershed risk assessments.

FEMA will build on the benefits of digital flood hazard data by instituting easy web-based access to a powerful data analysis tool that quantifies flood risk in ways that facilitate improved mitigation planning and measure flood risk reduction. The overall goals in the FEMA Risk MAP Multi-Year Plan are:

- 1) Risk MAP Goal 1: Address gaps in flood hazard data to form a solid foundation for flood risk assessments, floodplain management, and actuarial soundness of the National Flood Insurance Program.
- 2) Risk MAP Goal 2: Ensure that a measurable increase of the public's awareness and understanding of risk management results in a measurable reduction of current and future vulnerability to flooding.
- 3) Risk MAP Goal 3: Lead and support States, local and tribal communities to effectively engage in risk-based mitigation planning resulting in sustainable actions that reduce or eliminate risks to life and property from natural hazards.
- 4) Risk MAP Goal 4: Provide an enhanced digital platform that improves management of limited Risk MAP resources, controls information produced by Risk MAP, and enhances communication and sharing of risk data and related products to all levels of government and the public.
- 5) Risk MAP Goal 5: Align Risk Analysis programs and develop synergies to enhance decision-making capabilities through effective risk communication and management.

FY 2009 planned accomplishments include:

- Risk MAP Goal 1: Initiate approximately 400 Risk MAP projects addressing highest priority engineering data needs, including 70 coastal and 120 levee projects which affect over 2,000 communities.
- Risk MAP Goal 2: Produce an average loss study for the one-percent annual chance flood level for the Nation.
- Risk MAP Goal 3: Ensure 70% of the Nation's population (excluding territories) will be covered by local Hazard Mitigation Plans that are approved or approvable pending adoption.
- Risk MAP Goals 1 – 5: Develop a multi-year plan for implementing Risk MAP and addressing the remaining unmet flood hazard data and engineering needs.
- Provide Congress with the "Risk Mapping, Assessment, and Planning Multi-Year Plan: FY 2010-2014" as required under the FY 2009 DHS Appropriations Act (P.L. 110-329).

Funding in FY 2010 for Risk MAP will be used to produce improved flood hazard mapping for the NFIP. FEMA expects that a more fully-informed public coupled with more focused actions will reduce flood risks. The following accomplishments are planned for FY 2010, aligned with each Risk MAP goal:

- Risk MAP Goal 1: Initiate additional 400 - 500 Risk MAP projects affecting up to 2,500 communities and addressing highest priority engineering data needs, including coastal and levee areas.
- Risk MAP Goal 2: Create a baseline of local understanding of flood risk and produce a national annualized flood loss study (for multiple flood levels).
- Risk MAP Goal 3: Ensure 75% of the Nation's population (excluding territories) is covered by local Hazard Mitigation Plans that are approved or approvable pending adoption.

- **Risk MAP Goal 4:** Transition flood hazard data distribution from a paper-map-focused system based on high-volume offset printing, to a nearly all digital distribution with limited paper copies printed as needed for affected local governments.
- **Risk MAP Goal 5:** Develop requirements for new integrated Risk MAP products that augment the Digital Flood Insurance Rate Map delivered in Flood Map Modernization with additional flood risk information to enable broader risk communication.

During the implementation of Risk MAP, sustainable partnerships will continue to be vital. FEMA will maintain and seek out partnerships based on the affiliate's ability to provide additional resources for the Risk MAP program. Resources in the form of "cash match" or new data as identified in FEMA's Bluebook, are highly valued and are the most beneficial contributions. When targeted at known flood risk data needs and included in the Partnership Agreement, FEMA will give its highest investment priority to capable partners who provide a 25% cash match. FEMA typically receives these partner contributions through existing successful partnerships within the Cooperating Technical Partners (CTP) Program. While contributions from multiple sources are valuable, FEMA will consider establishing a partnership under the CTP Program in flood map update prioritization and will support those partnerships that are mutually beneficial.

Furthermore, these investments will produce accurate flood hazard data, integrated watershed flood risk assessments, and stronger hazard mitigation plans. There are three areas of primary focus: coastal flood studies, mapping of levee areas, and other Significant Flood Hazard Engineering and Mapping Needs.

A. Coastal Flood Studies: In FY 2010, FEMA will continue the effort started in 2009 to update the Nation's coastal flood hazard studies.

In FY 2010, FEMA will use \$51.0 million to initiate updated coastal flood hazard studies in those areas determined to be in most need. This investment will fund hazard data updates for 15% of the Nation's populated coastline, representing approximately 3,000 miles of open coast. Future coastal hazard analyses and mapping needs will be selected based on risk, community and State cost share, and cost efficiencies using a consistent hazard study approach.

B. Mapping of Levee Areas: Providing the public with accurate and timely information regarding flood risk enables people to make informed decisions on how best to avoid or mitigate that risk. The identification of current flood hazards in and around the Nation's levee systems, which are located in over one-quarter of the counties for which FEMA is providing new digital flood hazard mapping, is an important element of Risk MAP.

In FY 2010, FEMA will utilize \$31.0 million to continue to review the status of levee systems, ensuring they comply with NFIP regulatory requirements. The funding will allow FEMA to update and preserve the accuracy of existing data within the Mid-Term Levee Inventory for more than 150 counties and continue linking these data to the United States Army Corps of Engineers' (USACE's) National Levee Database. FEMA will also review and initiate the update of the levee-related flood hazard data for maps in more than 275 counties where levees exist. The review and update will include counties impacted by the expiration of Provisionally Accredited Levee status as well as counties facing significant flood hazards impacted by levees.

FEMA does not implement or fund the design, construction, operation, maintenance, or certification of levee systems. Therefore, the funding utilized in FY 2010 will not be used to perform activities related to certification of levee systems, such as structural and geotechnical

analyses. Rather, the funding will be used to update the flood hazard maps to depict the appropriate risk premium rate zone based on whether levee owners provide the necessary technical data needed to determine if they can be accredited. To update the flood hazard maps affected by levees, FEMA will perform hydraulic modeling based on the revised certification status of the levee and issue updated Flood Insurance Rate Maps. Where necessary, funding will be used to analyze and map interior drainage hazards within the levee systems.

Coordination efforts with USACE have intensified and will continue to be important in the future as USACE establishes the National Levee Safety Program.

C. Other Significant Flood Hazard Engineering and Mapping Needs: In FY 2010, FEMA will use \$49.0 million to update hazard engineering analyses beyond those related to levees and coastal areas. The principal factors that drive the need for updated flood hazard analyses are:

- Physical changes: such as manmade influences which may include new bridges, culverts, levees, and development in the floodplain.
- Climate changes: such as recent flood disasters or additional stream gauge data.
- Engineering methodology changes: such as improved computer models and better understanding of the physics of water flow.

Keeping pace with these changes is important and failing to do so could lead to unwise land use decisions and construction standards, thereby putting homeowners at increased risk while providing a false sense of security. Conversely, overstated hazards can result in potentially unnecessary construction costs and incorrect insurance rating decisions. Sound reliable flood hazard information is a necessary component of ensuring the fiscal soundness of the National Flood Insurance Program.

In FY 2010, FEMA will continue to implement a Watershed Validation Evaluation Strategy for reviewing flood hazard engineering data and map update needs. This strategy evaluates FEMA's flood hazard mapping inventory to determine if changes have occurred that will require a flood hazard data update or if the existing flood hazard information is valid. The principal factors that drive the need for updated flood hazard analyses are physical changes, climate changes, and engineering methodology changes. The results of these evaluations and other flood hazard data update needs identified throughout the mapping lifecycle will be managed systematically and allow FEMA to effectively quantify the inventory maintenance required.

IV. Program Justification of Changes

Not applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Flood Map Modernization Fund
Appropriation Language**

For necessary expenses under section 1360 of the National Flood Insurance Act of 1968 (42 U.S.C. 4101), \$220,000,000 [\$220,000,000,] and such additional sums as may be provided by State and local governments or other political subdivisions for cost-shared mapping activities under section 1360(f)(2) of such Act (42 U.S.C. 4101(f)(2)), to remain available until expended: Provided, That total administrative costs shall not exceed 3 percent of the total amount appropriated under this heading. (Department of Homeland Security Appropriations Act, 2010.)

Explanation of Changes:

No substantive changes are proposed.

Full Time Equivalents		27	43	43	

PPA Mission Statement

The Flood Map Modernization Fund supports the effort to update and modernize the Nation's flood hazard data inventory. Map Modernization will produce flood maps in geographic information system format for every area where there is flood risk. In addition, the modernization effort is incorporating the latest technology in order to provide the flood hazard data in the most usable format and also to provide modern tools and techniques that will enable FEMA and its State and local partners to produce high-quality data while managing cost and schedule constraints. FEMA's current approach for Flood Map Modernization assumes that a large percentage of the existing flood hazard data is still valid and that revising map information and boundary adjustments are the necessary changes needed to update the flood hazard maps.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$2,715	\$4,324	\$4,346	\$22

Salaries and Benefits support 43 full time permanent positions in FY 2010. The increase above the FY 2009 level will provide for the annualization of the 2009 pay increase and the cost of living adjustment effective January 2010.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$242	\$81	\$59	(\$22)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 reflects a decrease of \$22,000 due to efficiencies and non-recurring costs associated with the initial purchase of equipment.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) NATIONAL FLOOD INSURANCE FUND

I. Appropriation Overview

A. Mission Statement for National Flood Insurance Fund:

The National Flood Insurance Fund (NFIF), which was established by the National Flood Insurance Act of 1968 (42 U.S.C. 4001), is a premium revenue and fee-generated fund that supports the National Flood Insurance Program (NFIP). The Act, as amended, authorizes the Federal government to provide flood insurance on a national basis to owners of properties located in vulnerable areas. The National Flood Insurance Reform Act of 1994 (P.L.103-325) made flood insurance mandatory for all federally backed mortgages of properties located in the special flood hazard areas (SFHA). Currently, the NFIP insures more than 5.6 million private commercial and residential policyholders totaling approximately \$1.1 trillion in insurance coverage.

B. Budget Activities:

Flood insurance premiums collected are deposited into the NFIF, which is used to pay out claims as well as the operating and administrative costs associated with maintaining the program.

In return for the availability of flood insurance, communities agree to adopt and enforce floodplain management measures to reduce losses from future flooding. Communities must participate in the program within one year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, federally regulated lending institutions cannot provide loans to non-participating communities for properties within an identified special flood hazard area. Certain forms of disaster assistance also are restricted in these non-participating communities.

C. Budget Request Summary:

Offsets from the collection of policy fees provide the discretionary portion of the NFIF. FEMA requests fee authority in the amount of \$159.5 million for the FY 2010 NFIF discretionary. This is an increase of \$2.87 million from the FY 2009 Enacted.

FEMA estimates mandatory premium fee collections of \$3.086 billion in FY 2010. These funds will be used to pay claims of the National Flood Insurance Program (NFIP) in addition to operating expenses. These funds will also support: the Repetitive Flood Claims Program, the Severe Repetitive Loss Program, and the Flood Mitigation Assistance Grants Program. This fee authority represents an adjustment of \$48.0 million above FY 2009 from additional revenue based on estimated incremental increases in the number of flood insurance policies.

II. Summary of FY 2010 Budget Estimates by Program/Project Activity (PPA)

	Perm Pos	FTE	Amount
2008 Actual	330	238	\$38,188
2009 Enacted	330	330	\$49,418
2010 Adjustments-to-Base	0	0	\$2,731
2010 Current Services	330	330	\$52,149
2010 Program Change	0	0	\$0
2010 Request	330	330	\$52,149
Total Change 2009-2010	0	0	\$2,731

FEMA requests \$52.1 million, 330 full time permanent positions and 330 FTE for this activity. This represents an increase of \$2.7 million from the FY 2009 level.

CURRENT SERVICES PROGRAM DESCRIPTION:

The National Flood Insurance Fund (NFIF) supports numerous functions, programs, and activities, including the salaries and expenses of program management and implementation staff at FEMA’s national and ten regional offices that administer these programs. The responsibilities of these offices include the following:

- Analyzing the impact of flood risk by providing flood hazard map maintenance and distribution activities that complement the Flood Map Modernization Fund activities.
- Reducing flood risk through floodplain management and flood hazard reduction efforts, and through grants and assistance such as Flood Mitigation Assistance, Repetitive Flood Claims, and Severe Repetitive Loss.
- Providing an insurance mechanism for flood risk by supporting various aspects of the flood insurance business, including underwriting, operations, and claims payments.

In FY 2009, FEMA’s Mitigation Directorate will align all four pre-disaster mitigation programs into a unified Hazard Mitigation Assistance (HMA) program guidance and application cycle. This comprehensive approach will accomplish HMA objectives of efficiency and standardization, thus creating a platform for future updates and refinements of program policies and practices to make them more unified and user-friendly.

PPA: FLOODPLAIN MANAGEMENT AND FLOOD MAPPING

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$58,213
2009 Enacted	0	0	\$107,181
2010 Adjustments-to-Base	0	0	\$139
2010 Current Services	0	0	\$107,320
2010 Program Change	0	0	\$0
2010 Request	0	0	\$107,320
Total Change 2009-2010	0	0	\$139

FEMA requests \$107.3 million in FY 2010 for this activity. This represents an increase of \$139,000 from the FY 2009 level.

CURRENT SERVICES PROGRAM DESCRIPTION:

Floodplain Management programs are designed to identify and assess risk and to reduce risk through land use and building code regulations. Through these programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Structures built to NFIP standards experience 80% less damage than structures not built to these standards, and resulted in over \$1.4 billion in reduced flood losses in 2008 alone.

In addition to various Floodplain Management programs, FEMA also provides operational and administrative support for the Community Rating System. The Community Rating System (CRS) is a voluntary program implemented in 1990 as an incentive-based program designed to recognize and encourage community floodplain management activities that exceed the minimum NFIP standards. Under the CRS, flood insurance premium rates are adjusted to reflect the reduced flood risk resulting from community activities that meet CRS goals, including reduction of flood losses, accurate insurance rating, and promotion of flood insurance awareness. Participating communities are rated by Class from 1 to 10, with Class 1 communities receiving the greatest premium rate reductions. Non-participating communities are rated as Class 10. Credits can be applied toward a community’s CRS classification for various activities under the following floodplain management headings:

- Public Information
- Mapping Regulations
- Flood Damage Reduction
- Flood Preparedness

Significant accomplishments in FY 2008 include:

- Ensured that 97% of communities adopted new flood insurance rate maps by the Flood Insurance Rate Maps (FIRM) effective date, thus avoiding suspension from the NFIP.
- Reviewed over 100 floodplain management related recommendations from the NFIP and developed a plan to implement many of the recommendations.
- Enrolled, reinstated, or converted 406 communities into the NFIP.

- Increased Community Rating System (CRS) participation and class improvements. Total CRS community participation increased from 1,055 communities at the end of FY 2007 to 1,089 at the end of FY 2008.
- Provided technical assistance and an environment at the State and local levels that is conducive to applying those techniques and processes. Mitigation uses the Community Assistance Program-State Support Services Element (CAP-SSSE) Grant program and provides various forms of on-going training.
- Provided financial assistance to States to support State National Flood Insurance Program (NFIP) implementation and compliance activities. Mitigation awards more than \$100.0 million annually to support State NFIP programs.
- Supported development of incentives and disincentives that make application of mitigation techniques and processes a social, political, and economic priority. Risk MAP and other programs provide support grants to communities to initiate and implement the NFIP. The straightforward disincentive is the withholding of Federal flood insurance.

FY 2009 planned accomplishments include:

- Continue to develop a variety of outreach materials to assist all entities of Federal, State, and local governments to effectively maintain sound floodplain management practices, and educate the general public on mitigation actions that may be taken in a pre-disaster environment.
- Provide ongoing map maintenance activities, issue map revisions, and enhance distribution services, including provisions for digital products, subscription services, and links to other hazard data. FEMA will also provide funding to States for the development of the capability and capacity to manage the production of and to maintain flood hazard data. These efforts complement and support the Flood Map Modernization Fund activities.
- Provide technical assistance to the 20,500 plus communities participating in the NFIP and monitor the compliance with program requirements; provide grant funds to States and territories to help furnish this technical assistance and monitoring; and develop policy, guidance, and regulations to improve implementation of floodplain management at the State and community levels, and to enhance compliance by communities with NFIP requirements.
- Reduce potential annual flood losses by nearly \$1.5 billion through NFIP insurance and floodplain management activities.

FY 2010 planned accomplishments include:

- Increase Community Rating System (CRS) participation and class improvements.
- Publish proposed rule-strengthening floodplain management in over 20,800 participating communities.
- Reduce potential annual flood losses by \$1.6 billion through NFIP insurance and floodplain management activities.

PPA: NFIF MANDATORY

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$2,552,069
2009 Enacted	0	0	\$2,911,300
2010 Adjustments-to-Base	0	0	\$53,700
2010 Current Services	0	0	\$2,965,000
2010 Program Change	0	0	\$0
2010 Request	0	0	\$2,965,000
Total Change 2009-2010	0	0	\$53,700

FEMA requests \$2.965 billion in FY 2010 for this activity. This represents an increase of \$53.7 million from FY 2009 levels based on estimated increases in the number of flood insurance policies.

CURRENT SERVICES PROGRAM DESCRIPTION:

The National Flood Insurance Act of 1968 (42 U.S.C. 4001), as amended, authorizes the Federal government to provide flood insurance on a national basis. Flood insurance may be sold or continued in force only in communities that enact and enforce appropriate floodplain management measures. Communities must participate in the program within one year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, federally regulated funding institutions cannot provide loans to non-participating communities with an identified flood hazard.

The NFIP limits the impact of disasters by encouraging property owners and others to manage their risk through flood insurance and other hazard insurance mechanisms. More than 20,500 communities in all States and territories participate in the NFIP. Structures built to NFIP criteria experience 80% less damage through reduced frequency and severity of losses. The floodplain management program requirements are estimated to save over \$1.4 billion per year in flood losses avoided.

The American Institutes for Research completed an independent evaluation of the NFIP in October 2006. The 14 evaluation reports addressed the occupancy and use of floodplains, the cost and consequences of flooding, the role of actuarial soundness in the NFIP, compliance with floodplain management requirements, hazard identification in flood-prone areas, insurance market penetration, and the mandatory purchase requirement. In FY 2008, the recommendations arising from the NFIP evaluation were thoroughly reviewed and a plan to implement the recommendations was initiated. The plan includes a comprehensive approach to increase floodplain management compliance and flood hazard reduction nationwide. The following initiatives are underway:

- Revisions to the minimum floodplain management regulations contained in 60.3 of 44 CFR.
- Modifications to floodplain management guidance materials and manuals.

- Changes to the Community Assistance Program-State Support Services Element (CAP-SSSE) grant mechanism to States to emphasize increased enforcement of minimum floodplain management standards nationwide.

The program has continued its growth in policies, exceeding the five million mark. FEMA uses three strategies to increase the number of flood insurance policies in force: lender compliance, program simplification, and expanded marketing. For example, FEMA is educating financial regulators about the mandatory flood insurance requirement for properties that are located in floodplains and have mortgages from federally regulated lenders to strengthen lender compliance which may result in policy growth.

Flood Insurance Operations activities include:

- Actuarial management to analyze insurance risks, claims data, and financial models in order to evaluate and communicate all aspects of the financial solvency of the program and to set the appropriate premium rates.
- Operations management for more than 5.6 million NFIP flood policies with over \$1.1 trillion of insurance in force, to include issuance, renewal, claims, and resolution of claims appeals.
- Underwriting management to set policy and develop regulations regarding insurance coverage eligibility and the classification of risks.
- Claims management to set policy and develop regulations regarding the adjustment and payment of claims.
- Management of the private insurance companies that write flood insurance policies and adjust claims for the NFIP, including conducting periodic operational reviews.
- Education, training, and technical assistance for private insurance company agents and adjusters.
- Management of the vendors that supply services to the NFIP, such as the Bureau and Statistical Agent and the Direct Servicing Agent.
- Management of flood insurance marketing and public communications, including advertising, community outreach programs and publicity.
- Partnering with stakeholders in the private sector and other government agencies, including lenders who require the purchase of flood insurance for certain loans.

FY 2008 significant accomplishments include:

- Saved an estimated \$1.4 billion in annual flood disaster losses.
- Increased flood insurance policies by 1.39 percent.
- Reduced subsidies of pre-Flood Insurance Rate Map (FIRM) properties to 22.7%.
- Implemented new financial audit management controls for the 85 private insurance companies that sell and service NFIP policies.

FY 2009 planned accomplishments include:

- Begin implementation of NFIP modernized systems (NextGen) that build an information technology infrastructure which streamlines the insurance process, provides faster and more accurate access to NFIP data, and provides the capability to increase policy sales and improve responsiveness to customers' claims through the use of a centralized rating engine and online claims module that is available via the Internet.

- Increase the number of NFIP policies by five percent by developing program partnerships and continuing marketing activities.
- Modernize program operations to incorporate state-of-the-art business practices and technologies to assure that operating integrity, cost efficiency, and customer service standards are met or exceeded.
- Develop and manage programs for increasing program participation incentives and improving enforcement where mandatory participation is warranted.
- Expand program management and oversight of the 85 insurance companies and the thousands of insurance agents and claims adjusters who deliver the insurance program to individual customers.

In FY 2010 planned accomplishments include:

- Fine tune the NFIP IT system and incorporate necessary enhancements.
- Increase the number of NFIP policies by five percent with the active assistance of new and existing program partners.
- Reduce subsidies to pre- Flood Insurance Rate Map (FIRM) properties.
- Achieve progress in operating efficiency by improving the NFIP income to combined loss and expense ratio by 1%.

PPA: SEVERE REPETITIVE LOSS MITIGATION

	Perm Pos	FTE	Amount
2008 Actual	14	7	\$35,764
2009 Enacted	14	14	\$80,000
2010 Adjustments-to-Base	0	0	-\$10,000
2010 Current Services	14	14	\$70,000
2010 Program Change	0	0	\$0
2010 Request	14	14	\$70,000
Total Change 2009-2010	0	0	-\$10,000

FEMA requests \$70.0 million, 14 full time permanent positions, and 14 FTE for this activity in FY 2010. Though this reflects a decrease of \$10.0 million from the FY 2009 Enacted, there is no change to the overall program funding level due to the availability of \$10.0 million in carryover.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Severe Repetitive Loss Mitigation (SRL) Program is a mandatory program which provides funding to reduce or eliminate the long-term risk of flood damage to severe repetitive loss residential structures insured under the NFIP. Section 1361A of the National Flood Insurance Act (42 U.S.C. § 4102a) defines an SRL property as a residential property that is covered under an NFIP flood insurance policy and:

- (a) That has at least four NFIP claim payments (including building and contents) over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or

(b) For which at least two separate claims payments (building payments only) have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building.

For both (a) and (b) above, at least two of the referenced claims must have occurred within any 10-year period, and must be greater than 10 days apart. There are approximately 8,800 properties meeting the legislative definition of severe repetitive loss.

The long-term goal of the SRL program is to reduce or eliminate claims under the NFIP through project activities that will result in the greatest savings to the NFIP in the shortest period of time. FEMA may contribute up to 75% Federal funding for the amount approved under the grant award to implement approved activities. Any State or federally recognized Indian Tribal government that has taken actions to reduce the number of repetitive loss properties, including severe repetitive loss properties, and has a FEMA-approved State Mitigation Plan that specifies how it has and how it intends to reduce the number of such repetitive loss properties, is eligible to receive an increased Federal cost share of up to 90% Federal funding for SRL grants.

FY 2008 significant accomplishments include:

- The initial program application period closed on July 31, 2008, and FEMA obligated \$40.4 million to assist in the mitigation of SRL properties by September 30, 2008. These mitigation efforts are expected to reduce losses to the NFIP by more than \$80 million.

FY 2009 planned accomplishments include:

- In FY 2009, FEMA expects to obligate \$40.0 million to assist in the mitigation of SRL properties by September 30, 2009.

FY 2010 planned accomplishments include:

- In FY 2010, FEMA expects to obligate approximately 50% of its request in the first year to assist in the mitigation of SRL properties by September 30, 2010.

PPA: REPETITIVE FLOOD CLAIMS

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$9,158
2009 Enacted	0	0	\$10,000
2010 Adjustments-to-Base	0	0	\$0
2010 Current Services	0	0	\$10,000
2010 Program Change	0	0	\$0
2010 Request	0	0	\$10,000
Total Change 2009-2010	0	0	\$0

FEMA requests \$10.0 million in FY 2010 for the Repetitive Flood Claims program. This provides no change from the FY 2009 Enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Repetitive Flood Claims (RFC) grant program was established by the Flood Insurance Reform Act of 2004 (P.L. 108-264) as a mandatory program that provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under the NFIP that have had one or more flood claim payments. The long-term goal of the RFC program is to reduce or eliminate claims under the NFIP through mitigation activities that are in the best interest of the NFIP. Residential and commercial properties with one or more claims to the NFIP are eligible to receive RFC funds. RFC funds may only mitigate structures that are within a State or community that cannot meet the cost share or management capacity requirements of the FMA program.

RFC grants are awarded on a national basis without reference to State allocations, quotas, or other formula-based allocations of funds. Funding is restricted to a maximum of \$1.0 million for minor localized flood reduction projects.

FY 2008 significant accomplishments include:

- The RFC program application period for FY 2008 closed on January 31, 2008, and FEMA obligated \$9.1 million to assist in the mitigation of RFC properties by September 30, 2008. These mitigation efforts are expected to reduce losses to the NFIP by more than \$18.0 million.

Repetitive Flood Claims – Award Summary for FY 2008			
		Award	
		Federal Share	Properties
Pennsylvania	Upper Makefield Township	\$483,500	1
State Total		\$483,500	1
Virginia	City of Chesapeake	\$583,650	2
State Total		\$583,650	2
Florida	City of Dunedin	\$405,000	1
	City of Lynn Haven	\$830,742	3
	City of New Port Richey	\$494,079	1
State Total*		\$1,902,803	5
North Carolina	City of Winston-Salem	\$211,709	1
	Craven County	\$106,721	1
	Beaufort County	\$175,746	2
	Edgecombe County	\$223,180	1
	Town of Grifton	\$345,960	1
State Total*		\$1,160,098	6
Ohio	City of Shelby	\$338,600	2
	Village of Valley View	\$59,900	1
State Total*		\$437,107	3
Texas	City of Pearland	\$987,903	7
	City of Lindsay	\$381,776	4
	Ellis County	\$559,642	2
	City of Arlington	\$2,031,107	6
State Total*		\$3,970,980	19
Missouri	City of Fenton	\$71,900	1
State Total		\$71,900	1
Total		\$8,610,039	37

* State total awards include State management costs

FY 2009 planned accomplishments include:

- FEMA will continue efforts to streamline the grant award process for all hazard mitigation assistance program grants, including RFC. Guidance will again be issued early in the fiscal year so as to open and close the application period earlier.
- FEMA expects to make approximately 15 awards to communities for the mitigation of 35 to 40 properties through elevation, acquisition, flood proofing, and minor physical flood reduction projects.
- Efforts to engage partners and coordinate the RFC program with the expanded SRL program will be continued.

FY 2010 planned accomplishments include:

- Provide opportunities for transparency and partnership with State, territory, tribal, and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups, and training courses.
- Reduce potential annual losses to the NFIP by \$20.0 million through the RFC grants.

PPA: FLOOD MITIGATION ASSISTANCE

	Perm Pos	FTE	Amount
2008 Actual*	0	0	\$17,450
2009 Enacted	8	8	\$35,700
2010 Adjustments-to-Base	0	0	\$4,300
2010 Current Services	8	8	\$40,000
2010 Program Change	0	0	\$0
2010 Request	8	8	\$40,000
Total Change 2009-2010	0	0	\$4,300

**Funded under the National Flood Mitigation Fund in FY 2008.*

FEMA requests \$40.0 million, eight full time permanent positions, and eight FTE in FY 2010 for the Flood Mitigation Assistance program. This amount is \$4.3 million above the FY 2009 Enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Flood Mitigation Assistance (FMA) grant program is a mandatory program which provides funding to States, federally recognized Indian tribal governments, and communities so that cost-effective measures can be taken to reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other structures insured under the NFIP. The goal of FMA is to reduce or eliminate claims under the NFIP through mitigation activities.

The total amount of FMA grant funds provided during any 5-year period will not exceed \$10.0 million to any State agency or \$3.3 million to any community. The total amount of FMA grant funds provided to any State, including all communities located in the State, will not exceed \$20.0 million during any 5-year period. However, the Administrator may waive these limits for any 5-

year period when a major disaster or emergency is declared pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act for flood conditions.

FY 2008 significant accomplishments include:

- The FMA program application period for FY 2008 closed on March 31, 2008, and FEMA obligated \$16.8 million to assist in the mitigation of NFIP insured properties by September 30, 2008. These mitigation efforts are expected to reduce losses to the NFIP by more than \$32.0 million.

FY 2009 planned accomplishments include:

- FEMA's Mitigation Directorate will align all four pre-disaster mitigation programs into a unified Hazard Mitigation Assistance (HMA) program guidance and application cycle. This comprehensive approach will accomplish HMA objectives of efficiency and standardization, thus creating a platform for future updates and refinements of program policies and practices to make them more unified and user-friendly.
- FEMA expects to obligate \$15.0 million to assist in the mitigation of NFIP-insured properties by September 30, 2009. These mitigation efforts are expected to reduce losses to the NFIP by more than \$30.0 million.

FY 2010 planned accomplishments include:

- Provide opportunities for transparency and partnership with State, territory, tribal and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups, and training courses.
- Reduce potential annual losses to the NFIP by \$80.0 million through the FMA grants.

IV. Program Justification of Changes

No new initiatives are proposed for the FY 2010 President's Request for the programs under National Flood Insurance Fund.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in National Flood Insurance Fund
Appropriation Language**

For activities under the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), and the Flood Disaster Protection Act of 1973 (42 U.S.C. 4001 et seq.), [\$156,599,000] **\$159,469,000**, which shall *remain available until September 30, 2011 and shall* be derived from offsetting collections assessed and collected under section 1308(b)(3) of the National Flood Insurance Act of 1968 (42 U.S.C. 4015(d)), which is available as follows: (1) not to exceed [\$49,418,000] **\$52,149,000** for salaries and expenses associated with flood mitigation and flood insurance operations; and (2) [no less than \$107,181,000] *up to \$107,320,000* for flood plain management and flood mapping[, which shall remain available until September 30, 2010]: *Provided*, That any additional fees collected pursuant to section 1308(b)(3) of the National Flood Insurance Act of 1968 (42 U.S.C. 4015(d)) shall be credited as an offsetting collection to this account, to be available for flood plain management and flood mapping: *Provided further*, That in fiscal year [2009] **2010**, no funds shall be available from the National Flood Insurance Fund under section 1310 of that Act (42 U.S.C. 4017) in excess of: (1) \$85,000,000 for operating expenses; (2) [\$869,905,000] **\$969,370,000** for commissions and taxes of agents; (3) such sums as are necessary for interest on Treasury borrowings; and (4) [\$125,700,000] **\$120,000,000**, which shall remain available until expended for flood mitigation actions, of which [\$80,000,000] **\$70,000,000** is for severe repetitive loss properties under section 1361A of the National Flood Insurance Act of 1968 (42 U.S.C. 4102a), of which \$10,000,000 is for repetitive insurance claims properties under section 1323 of the National Flood Insurance Act of 1968 (42 U.S.C. 4030), and of which [\$35,700,000] **\$40,000,000** is for flood mitigation assistance under section 1366 of the National Flood Insurance Act of 1968 (42 U.S.C. 4104c) notwithstanding subparagraphs (B) and (C) of subsection (b)(3) and subsection (f) of section 1366 of the National Flood Insurance Act of 1968 (42 U.S.C. 4104c) and notwithstanding subsection (a)(7) of section 1310 of the National Flood Insurance Act of 1968 (42 U.S.C. 4017): *Provided further*, That amounts collected under section 102 of the Flood Disaster Protection Act of 1973 and section 1366(i) of the National Flood Insurance Act of 1968 shall be deposited in the National Flood Insurance Fund to supplement other amounts specified as available for section 1366 of the National Flood Insurance Act of 1968, notwithstanding 42 U.S.C. 4012a(f)(8), 4104c(i), and 4104d(b)(2)-(3): *Provided further*, That total administrative costs shall not exceed 4 percent of the total appropriation. (*Department of Homeland Security Appropriations Act, 2009.*)

Explanation of Changes

The FY 2010 NFIF Request provides an increase for commissions and taxes of agents based on a projected increase in the number of policies in force and the associated increase in premium revenue.

Commissions, Write-Your-Own (WYO) program costs, and taxes are based on the premium revenue generated by the projected number of policies in force. FY 2010 policy growth is predicted to continue at a moderate rate which will determine the increases in WYO program costs. The property and casualty insurance companies including agents that sell and service federally-underwritten flood insurance policies under their own names retain a percentage of the premium for the cost of administration and production. This percentage is based on the average industry expense ratios for selected categories of expenses as published in *Best's Aggregates and Averages*.

PPA Mission Statement

Resources under this activity support the salaries and expenses of FTE managing the National Flood Insurance Program (NFIP) and flood mitigation programs. In FY 2010, FEMA will continue to support the NFIP and to provide operational and administrative support for the Community Rating System and will enhance oversight of the program.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$29,943	\$40,950	\$43,631	\$2,681

Salaries and Benefits includes costs for 330 full time permanent positions. The FY 2010 Request increase provides for the annualization of the 2009 pay increase and the anticipated 2010 pay act.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$1,413	\$1,952	\$2,002	\$50

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 Request includes an increase to fund NFIP Regional Staff to be assistant instructors for NFIP Floodplain Management Courses taught at DHS/FEMA National Emergency Training Center.

PPA Mission Statement

Through Floodplain Management programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Through the delivery of mitigation programs, FEMA leads a national effort to: identify and improve the understanding of communities' hazards and their risks; develop and improve techniques and planning processes which mitigate those risks; provide an environment at the State and local levels that is conducive to applying those techniques and processes; provide financial and technical assistance to facilitate application of those techniques and processes; and support development of incentives and disincentives which make application of those techniques and processes a social, political and/or economic priority.

The FY 2010 request allows FEMA to: develop a variety of outreach materials to assist all entities of Federal, State, and local governments to effectively maintain sound floodplain management practice, and educate the general public on mitigation actions that may be taken in a pre-disaster environment; provide ongoing map maintenance activities, issue map revisions, and enhance distribution services, including provisions for digital products, subscription services, and links to other hazard data; provide funding to States for the development of the capability and capacity to manage the production of and to maintain flood hazard data (these efforts complement and support the Flood Map Modernization Fund activities); and provide technical assistance to the 20,000 communities participating in the NFIP and monitor the compliance with program requirements

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
GSA rent	\$0	\$831	\$833	\$2

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2010 increase is due to inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Printing	\$1,702	\$1,657	\$1,663	\$6

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 increase is due to inflation and additional reproduction and distribution costs for materials.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$252	\$2,822	\$2,832	\$10

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 increase is due to inflation and adjustments to support additional requirements.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$32,163	\$70,304	\$70,319	\$15

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 increase reflects adjustments for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$458	\$1,515	\$1,621	\$106

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 increase reflects adjustments for inflation and additional requirements.

Full Time Equivalents					---

PPA Mission Statement

The National Flood Insurance Act of 1968, as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued in force only in communities that enact and enforce appropriate floodplain management measures. Communities must participate in the program within 1 year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, Federally regulated funding institutions cannot provide loans to nonparticipating communities with an identified flood hazard.

More than 20,000 communities in all States and Territories participate in the NFIP. Structures built to NFIP criteria experience 80 percent less damage through reduced frequency and severity of losses. The flood mitigation program requirements are estimated to save in excess of \$1 billion per year in flood losses avoided. The NFIP limits the impact of disaster by encouraging property owners and others to manage their risk through flood insurance and other hazard insurance mechanisms.

In FY 2010, FEMA will continue to pay claims, issue policies, pay interest on borrowing from the Treasury, and pay operating expenses of the NFIF.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Printing	\$2,100	\$2,205	\$2,227	\$22

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 increase is due to inflation and additional reproduction and distribution costs for materials about the flood insurance program.

Total, Severe Repetitive Loss Mitigation		\$35,764	\$80,000	\$70,000	(\$10,000)
Full Time Equivalent		7	14	14	---

PPA Mission Statement

The Flood Insurance Reform Act of 2004 introduced several new requirements and program initiatives. This included the establishment of the Severe Repetitive Loss Pilot Program, initially authorized at \$40 million annually. The Program provides technical and financial assistance to State and local governments to mitigate severe repetitive loss properties under the National Flood Insurance Program (NFIP). The Program focuses on a subset of the repetitive loss properties – severe repetitive loss properties - that have the largest impact on claims paid from the NFIP. Mitigating potential damages to these properties will result in savings to the NFIP. This program is funded from mandatory, premium collections.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$880	\$1,693	\$1,727	\$34

Salaries and Benefits includes costs for 14 full time permanent positions. The FY 2010 Request increase provides for the annualization of the 2009 pay increase and the anticipated 2010 pay act.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$1,944	\$1,645	\$1,661	\$16

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 increase is due to inflation and adjustments to support additional requirements.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$0	\$0	\$20	\$20

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 increase provides for routine maintenance and operational integrity for existing equipment.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$50	\$93	\$22	(\$71)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 decrease is due to a reduction in equipment requirements. The funding has been realigned to support the operation and maintenance of existing equipment.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$32,868	\$76,544	\$66,544	(\$10,000)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 decrease will be offset by the same amount in FY 2009 carryover funds.

Full Time Equivalents					---

PPA Mission Statement

The Flood Insurance Reform Act of 2004 introduced several new requirements and program initiatives. This included the establishment of a grant program which provides a mechanism to mitigate properties that have experienced repetitive losses where the State or community does not meet eligibility requirements under the Flood Mitigation Assistance program. Although not necessarily focused on Severe Repetitive Loss Properties, the Act does direct FEMA to give priority to "Worst-Case Properties" that would result in the greatest savings to the NFIF. This program will be funded from mandatory, premium collections.

Total, Flood Mitigation Activities		\$17,450	\$35,700	\$40,000	\$4,300
Full Time Equivalents			8	8	---

PPA Mission Statement

The Flood Mitigation Activities (FMA) support activities to eliminate at-risk structures that are repetitively flooded. Through fee-generated discretionary funds transferred from the National Flood Insurance Fund (NFIF), FMA supports activities to eliminate at-risk structures that are repetitively flooded, and provides flood mitigation assistance planning support to States and communities. In FY 2008, these activities were funded from the National Flood Mitigation Fund appropriation.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$0	\$977	\$996	\$20

Salaries and Benefits includes costs for eight full time permanent positions. The FY 2010 Request increase provides for the annualization of the 2009 pay increase and the anticipated 2010 pay act.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$0	\$50	\$51	\$1

Travel includes all cost of persons, subsistence of travelers, and incidental expenses in accordance with Federal travel regulations. Travel is conducted for the purposes of Program coordination meetings with FEMA Regions and to support our partnerships with the States, Territories, and Tribal groups. The FY 2010 increase of \$1,000 provides for inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$640	\$673	\$680	\$7

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Prior to FY 2009, this activity was funded by the NFMF Appropriation. The FY 2010 increase is due to inflation and adjustments to support additional requirements.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$16,810	\$34,000	\$38,273	\$4,273

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. Prior to FY 2009, this activity was funded by the NFMF Appropriation. The increase shown above will provide for additional grant awards as authorized in the National Flood Insurance Reform Act of 2004.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) **NATIONAL PRE-DISASTER MITIGATION FUND**

I. Appropriation Overview

A. Mission Statement for the National Pre-Disaster Mitigation Fund:

Section 203 (42 U.S.C. 5133) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (P.L. 93-288) established a federal program that provides “technical and financial assistance to State and local governments to assist in the implementation of pre-disaster hazard mitigation measures that are cost-effective and designed to reduce injuries, loss of life, and damage and destruction of property...” The Pre-Disaster Mitigation Fund (PDM) was created under FEMA as the vehicle for disseminating these grants to State and local governments. Operating independently of the Disaster Relief Fund (DRF), which provides *post*-disaster mitigation funding, the PDM program offers an annual funding source for qualified mitigation activities that are not dependent upon a declaration of disaster activity by the President.

B. Budget Activities:

FEMA’s PDM program provides technical assistance and Federal funding to State, local, and tribal governments to support the development and enhancement of hazard mitigation plans aimed at instituting policies and practices, and mitigation projects that involve physical measures to avoid or reduce damage from natural disasters.

C. Budget Request Summary:

FEMA requests \$150.0 million in FY 2010 for the National Pre-Disaster Mitigation grant program.

Total Change 2009-2010	0	0	\$60,000

FEMA requests \$150.0 million, 15 full-time permanent positions and 15 FTE for the Pre-Disaster Mitigation Fund in FY 2010. This represents an increase of \$60.0 million from the FY 2009 level. The additional funding will enable the program to further reduce the Nation's vulnerability to future hazard events by increasing the level of technical assistance and the number of grants awarded to State, local, and tribal governments for pre-disaster mitigation planning and project activities.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Pre-Disaster Mitigation Fund (PDM) program assists State, local, and tribal governments in implementing cost-effective hazard mitigation activities that complement a comprehensive mitigation program. This program provides a funding resource for State, local, and tribal governments seeking to initiate or complete plans and projects that ensure immediate risk reduction to the population, to property, and for at-risk structures, including critical facilities. Often, funding is the primary obstacle that States and local governments must overcome in order to be more proactive in the prevention or reduction of the damage caused by natural hazards. PDM Federal cost share is up to 75% for all eligible proposals except for small and impoverished communities which can be up to 90% of the cost.

The PDM fund supports efforts to raise risk awareness and reduce disaster losses before disasters strike. Grants are awarded to States, territories, tribal governments, and communities for the purposes of hazard mitigation planning and hazard mitigation projects. Grants awarded for mitigation planning are limited in funding levels based on whether the application supports a new plan or updates an existing plan. Grants awarded to support mitigation projects must fall within one of the eligible categories.

Grants for mitigation projects vary and include activities such as: retrofitting structures to resist flood, wind, and earthquake; elevating structures above base flood levels; property acquisition and demolition or relocation for the creation of open space; and minor flood reduction and drainage measures.

Communities that participate in the PDM program are able to identify, plan for, and mitigate repetitive loss situations that negatively impact their residents or present a threat to life and property. Approved projects go through an extensive review process to verify cost effectiveness, engineering feasibility, and environmental and historic preservation site reviews. The final approved projects may eliminate the risk of flooding, reinforce critical infrastructure to protect against damage during a seismic event, or mitigate repetitive damage to homes in a flood prone area. PDM projects specifically related to flood mitigation may provide an additional cost savings by reducing future claims on the National Flood Insurance Program for insured structures.

Beginning in FY 2010, FEMA will eliminate the nationally competitive grant program and replace it with a base-plus-risk allocation program to increase the program's effectiveness. The base-plus-risk grant funding approach includes providing a "base" allocation of funding to each State of \$500,000 in accordance with 42 U.S.C. 5133, plus additional funding determined through a national level risk analysis with priorities established based on risk. PDM will also work with State, local, and tribal governments to establish a process to pre-qualify their pre-disaster mitigation proposals for funding. Each State will be able to maintain a portfolio of pre-qualified proposals that are: (1) consistent with State, local, and tribal mitigation plans and priorities; (2) determined technically feasible for reducing losses to identified hazards; and (3) deemed cost-effective. Once a State receives its base-plus-risk allocation each year, these pre-qualified proposals will be finalized to meet other Federal requirements, such as the National Environmental Protection Act (NEPA), so that funds can be obligated and projects initiated soon after the enactment of appropriated funds. This will not only accelerate the obligation of funds, but ensure projects are cost-effective and risk-based.

Hazard mitigation is the most proactive and successful method for reducing the physical, financial, and emotional losses caused by disasters. In December 2005, the Multihazard Mitigation Council (MMC), a part of the National Institute of Building Sciences, released the findings of an independent study commissioned by FEMA to assess future savings from mitigation activities. The results provided Congress with quantitative data to support the long-term benefits of investing Federal dollars to reduce the total costs associated with natural and other related hazards. The study examined grants over a 10-year period (1993-2003) aimed at reducing future damages from earthquake, wind, and flood and determined that mitigation saves society an average of \$4 for every \$1 spent on pre-disaster activities. In September 2007, the Congressional Budget Office (CBO) released a report, "Potential Cost Savings from the Pre-Disaster Mitigation Program," that found the total dollar value of the expected reduction in disaster losses from the projects funded from 2004 through 2007 exceeds the projects costs. Furthermore, CBO indicated that, on average, future losses are reduced by about \$3 for each \$1 spent on those projects, including both federal and non-federal spending.¹

Since FY 2003, FEMA has received \$754.0 million in Enacted appropriations for the Pre-Disaster Mitigation Grant Program. Grant awards from FY 2003 to FY 2006 were determined through a nationally competitive program leveraging the flexibility included in enacted legislation to allocate grant funds based on this competition. Grant proposals were subject to a national technical review process to ensure project applications met technical guidelines, and a national evaluation process to score and rank applications. In addition to FEMA and other Federal employees, staff from States, territories, tribes, and local communities served as peer reviewers in the national evaluation.

In FY 2007, FEMA began allocating grant funds in accordance with Section 203(f) of the Stafford Act (42 U.S.C. 5133) but continued to use the national competition as the mechanism for the awards

¹ CBO also noted that "Significant uncertainty surrounds that estimate, however, and the information available on past projects may not reliably indicate the effectiveness of additional mitigation projects in the future."

program. In addition to the funds appropriated each year, the PDM program reinvests unused funds returned by the grant recipient back into the program to support the next cycle of grant awards.

Pre-Disaster Mitigation Program¹

¹ This report refers only to awards made under the competitive PDM program, and not to any congressionally-directed or earmarked awards

² Projects identified as "obligated" were selected for further review and completed all pre-award requirements prior to receiving federal funding. Some projects are still under review for eventual award. Dollars represent awarded Federal Share.

³ "Wind" category includes tornado and hurricane hazards. "Other" category includes severe storm, ice, snow, coastal surge, mud/landslide and related projects.

In FY 2008, FEMA accomplished the following risk reduction activities:

- Provided technical assistance through Internet-Based Webinars, instructor led courses, and telephone and email helpdesks.
- Provided training for the E-grants systems for application submissions.
- Launched a SharePoint website to improve communication and collaboration with FEMA Regional Staff in the review, development, and implementation of program efforts.

In FY 2009, FEMA will accomplish the following:

- Align all four pre-disaster mitigation programs into a unified Hazard Mitigation Assistance (HMA) program guidance and application cycle. This comprehensive approach will help FEMA to accomplish the HMA objectives of efficiency and standardization, thus creating a

platform for future updates and refinements of program policies and practices to make them more unified and user-friendly.

- Make available to State and local communities the Benefit Cost Analysis Toolkit 4.1.3.0. This software package uses the most up to date computer and software technology and risk information to calculate benefits of performing specific mitigation activities. The software operates with any Windows based computer system and is made available free of charge. Some of the major software features include on demand help functions, tutorial videos imbedded in the software, and instant access to FEMA's websites for additional information. The software was developed with the assistance of local and State mitigation staff, as well as other government agencies such as the US Army Corp of Engineers, the National Institute of Building Sciences, and the Congressional Budget Office.

In FY 2010, planned accomplishments include:

- Implement a base-plus-risk allocation program that will assist States, territories and tribes to establish and maintain a portfolio of pre-qualified mitigation proposals that are: consistent with State and local mitigation plans and priorities; determined technically-feasible to reduce losses to the identified hazard(s); and cost-effective.
- Provide opportunities for transparency and partnership with States, territories, and tribal and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups and training courses.
- Use an enhanced Benefit Cost Analysis Ratio tool that streamlines and modifies the benefit cost analysis program to make it easier for State and local communities to meet the benefit cost analysis requirements of the mitigation grant programs and meet the Office of Management and Budget Circular A-94.

Description of Item

The PDM Grant Program is authorized under Section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act to “provide technical and financial assistance to States and local governments to assist in the implementation of pre-disaster hazard mitigation measures that are cost-effective and are designed to reduce injuries, loss of life, and damage and destruction of property, including damage to critical services and facilities under the jurisdiction of the States or local governments.”

Justification

In recent years, the national grant competition has resulted in a list of eligible “pending” but unfunded PDM projects. To date, FEMA has identified that \$228.9 million in projects were previously determined to be eligible and could be funded once validated. It is anticipated that some of these projects may not require funding due to a variety of reasons, such as they were already funded by the State, local, or tribal government. FEMA proposes that this list of unfunded projects be considered for priority funding in FY 2010 up to \$150.0 million, consistent with the risk-based allocation to the States, so that the funds can be quickly obligated and the work initiated.

These projects will reduce the Nation’s vulnerability to future hazard events by reducing the loss of life and property and reducing the Nation’s costs of responding to and recovering from natural hazard events. FEMA fully expects to add more eligible but unfunded projects to the list in future years.

State	Primary Hazard									Total Eligible	Total Federal Share
	Plan	Flood	Hurricane	Tornado	Wind Storm	Severe Storm	Snow	Earthquake	Fire

Impact on Performance (Relationship of Increase to Strategic Goals)

Performance Goal:

Reduce the impact of natural hazards on people and property through the analysis and reduction of risks and the provision of flood insurance.

Performance Plan Measures:

Potential property losses, disasters, and other costs avoided.

Description of Measure:

This measure reports the estimated dollar value of losses to the American public which are avoided or averted through a strategic approach of natural hazard risk management. Losses are avoided to property (buildings and infrastructure) through the provision of: 1) Financial and technical assistance to States, territories, tribes, and communities to implement pre-identified, cost effective mitigation measures (via Hazard Mitigation Assistance grants); 2) Sound floodplain management; and 3) State-of-the-art building science technologies, and guidance and expertise for natural hazards (Disaster Resistant Building Sciences), thus protecting American citizens from disasters through assistance, education, and technology.

Impact on other DHS components or on other agencies outside of DHS:

The impact of this program is that it reduces the disaster losses that lead to requests for Federal assistance which demands a variety of resources across the Federal Government. State and local governments are directly impacted by this program in that it enables them to initiate or complete plans and projects that ensure immediate risk reduction to the population, property, critical facilities, and other at-risk structures.

PPA Mission Statement

Funding requested through this account is dedicated to competitive grants for pre-disaster mitigation (PDM). Operating independently of the Disaster Relief Fund (DRF) assures that funding remains stable from year to year and is not subject to spikes in disaster activity. FEMA's PDM program provides technical assistance and Federal funding to State, local, and tribal governments to support the development and enhancement of hazard mitigation plans aimed at instituting policies, practices, and mitigation projects that involve physical measures to avoid or reduce damage from disasters.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$810	\$1,503	\$1,551	\$48

Salaries and Benefits support 15 full time permanent positions in FY 2010. The increase above the FY 2009 level will provide for the annualization of the 2009 pay increase and the cost of living adjustment effective January 2010.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
GSA rent	\$84	\$125	\$128	\$3

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2010 increase of \$3,000 provides for the inflation adjustment to the lease for office space.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Other Services	\$9,025	\$6,943	\$7,022	\$79

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Increase in FY10 is due to an increase in administrative costs associated with grants, inflation, and additional assistance needs for the program.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Grants/Subsidies/Contributions	\$64,852	\$81,000	\$140,870	\$59,870

Grants include cash payments to States, other political subdivisions, corporations, associations, and individuals for projects. The FY 2010 increase from FY 2009 will help meet the demand from State and local governments for financial support of their pre-disaster mitigation activities.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Indemnity	\$0	\$0	\$0	\$0

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Unvouchered	\$0	\$0	\$0	\$0

Unvouchered includes expenditures made lawfully for confidential purposes, including authorized payments made by law enforcement personnel to informants, which are not subject to detailed vouchering or reporting.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY EMERGENCY FOOD AND SHELTER

I. Appropriation Overview

A. Mission Statement for Emergency Food and Shelter (EFS):

The Emergency Food and Shelter Program provides grants to nonprofit and faith-based organizations at the local level through the National Board to supplement their programs for emergency food and shelter.

B. Budget Activities:

EFS funds are used to supplement food, shelter, rent, mortgage, and utility assistance programs for people with non-disaster related emergencies.

The EFS program is administered via a national board of volunteer agencies chaired by FEMA. The National Board qualifies jurisdictions for annual EFS funding awards based on criteria involving current population, unemployment, and poverty levels. Grants are awarded to nonprofit community and government organizations that are chosen by local boards in the qualifying jurisdictions.

C. Budget Request Summary:

The FEMA FY 2010 request for the EFS program is 0 positions, 0 FTE and \$100,000,000. This request represents a decrease of \$100,000,000 from FY 2009. There are no adjustments to base.

Total Change 2009-2010	0	0	-\$100,000

*The table above excludes ARRA funding of \$100 million provided in P.L. 111-5. FEMA requests \$100 million for this activity. This is a decrease of \$100 million from FY 2009.

CURRENT SERVICES PROGRAM DESCRIPTION:

The EFS program provides grants to nonprofit and faith-based organizations at the local level to supplement their programs for emergency food and shelter. Nearly 12,000 nonprofit and local government agencies in over 2,500 cities and counties across the United States receive awards.

Funding for this program is distributed by the National Board which consists of designees from six charitable organizations – United Way of America, The Salvation Army, the National Council of Churches of Christ in the USA, Catholic Charities USA, United Jewish Communities, and the American Red Cross. The National Board is chaired by a representative from FEMA.

Local jurisdictions (city or county) are eligible for EFS support when they have the highest need for emergency food and shelter services as determined by unemployment and poverty rates. In FY 2008, the National Board established three measures to determine highest need eligibility: (1) Those with 13,000 or more residents unemployed and an unemployment rate of at least 3.5 percent; (2) Those with between 300 and 12,999 residents unemployed and an unemployment rate of at least 5.5 percent; or (3) Those with 300 or more unemployed and a poverty rate of at least 11 percent.

Funding may also be provided to jurisdictions that do not meet the initial eligibility requirements through a state set-aside. The National Board reserves a portion of appropriated funds and distributes funding to states based on a discretionary determination that allows for a constant level of funding based on a ratio of per capita state set-aside to per capita direct funding. The state set-aside allows states to address pockets of homelessness and poverty or address the immediate needs of a locality that might be going through a high economic impact event, such as a plant closing.

Recent and Planned Accomplishments

FY 2008 funds have provided 66.7 million meals and 4.1 million nights of lodging. The funding was also used to provide 110,588 rent/mortgage payments, and 138,281 utility bills to those in the most desperate need of assistance. All 50 states, the District of Columbia, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and the Virgin Islands, received funds in FY 2008.

In FY 2009, the services rendered are estimated to be 43.6 million meals and 2.6 million nights of lodging. In FY 2009, the funds will also be used to provide approximately 72,325 rent/mortgage payments and 90,436 utility bill payments. Due to the reduced budget request in FY 2010, the services rendered will be less than in FY 2009. In FY 2010, the services rendered are estimated to be 21.8 million meals and 1.3 millions nights of lodging. The FY 2010 funds will also support approximately 36,000 rent/mortgage payments, and 45,000 utility bill payments.

IV. Program Justification of Changes

**Department of Homeland Security
Federal Emergency Management Agency
Emergency Food and Shelter
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 1: Adjustment to Support Greater Focus on Core Mission Activities

Program Decrease							0	0	(100,000)
Total Request	0	0	\$153,120	0		\$200,000	0	0	100,000

Description of Item

FEMA requests a reduction of \$100,000,000 in the EFS program for FY 2010.

Justification

The FY 2010 request reflects a refocus of resources on the primary mission of preparing for and coordinating disaster response and recovery efforts while still providing substantial support for the EFS program.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Emergency Food and Shelter
Appropriation Language**

To carry out an emergency food and shelter program pursuant to Title III of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11331 et seq.), [\$200,000,000] *\$100,000,000*, to remain available until expended: *Provided*, That total administrative costs shall not exceed 3.5 percent of the total amount available under this heading. (*Department of Homeland Security Appropriations Act, 2010*).

Explanation of Changes:

No substantive changes are proposed.

Full Time Equivalents		---	---	---	---

PPA Mission Statement

The Emergency Food and Shelter (EFS) Program provides grants to nonprofit and faith-based organizations at the local level through the National Board to supplement their programs for emergency food and shelter.

In FY 2009, the estimated services rendered will provide 43.6 million meals and 2.6 million nights of lodging. The funds will also be used to provide approximately 72,325 rent and mortgage payments and 90,436 utility bill payments.

The FEMA FY 2010 request will continue to provide funding to supplement local efforts to provide meals, shelter, and emergency assistance for mortgage, rent, and utility payments.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$153,120	\$200,000	\$100,000	(100,000)

The FY 2010 request includes a decrease of \$100 million. The FY 2010 request reflects a refocus of resources on the primary mission of preparing for and coordinating disaster response and recovery efforts while still providing substantial support for the EFS program.

PPA Mission Statement

The Office of Cerro Grande Fire Claims was established by Public Law 106-246 to provide consideration and settlement of claims arising from the Cerro Grande Prescribed Fire. Funds for administration of the compensation process and for the payment of claims are available until expended. Carryover funds will be used for administration of the compensation process and for any outstanding claims. No additional funding is requested for FY 2010.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$89	\$0	\$0	\$0

Salaries and Benefits includes regular salaries and wages, and personnel benefits paid to the employees.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$0	\$0	\$0	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Transportation of Things	\$2	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Other Rent	\$2	\$0	\$0	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$0	\$0	\$0	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Indemnity	\$1,434	\$0	\$0	\$0

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act.

C. Resources Requested and Performance Impact.....	FEMA -8
D. Performance Highlights, Resources, and Alignment to Strategic Goals.....	FEMA -9
E. Digest Tables by FYHSP Programs	FEMA -17

A. Mission and Description of Component

The Federal Emergency Management Agency was created in 1979 by Executive Order of the President and in 2003 became an essential component of the Department of Homeland Security (DHS). FEMA's primary mission is to reduce loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

FEMA manages and coordinates the Federal response to domestic disasters of all types in accordance with the Robert T. Stafford Disaster Relief and Assistance Act, its primary authority. The agency works proactively to anticipate disaster assistance needs that may arise and responds to requests for support from governors of affected states. While many significant emergencies are capably managed with local and state resources alone, FEMA stands ready when greater assistance is needed, prepared to act as both leader and partner to address each community's needs.

In the 30 years since its creation, FEMA has responded to more than a thousand disasters across all fifty states, the District of Columbia, Puerto Rico, Guam, the Pacific Island Trust Territories, and the U.S. Virgin Islands.

FEMA also administers the National Flood Insurance Program (NFIP) in accordance with the National Flood Insurance Act of 1968, as amended, that authorizes the Federal Government to provide flood insurance on a national basis. Currently, there are over 5,300,000 policyholders and over 20,300 communities participating in the program.

In October 2006, the President signed into the law the Post-Katrina Emergency Management Reform Act of 1996 (PKEMRA). The Act brought additional functions into FEMA, including National Preparedness Programs and the U.S. Fire Administration. The Act also called for FEMA to:

- Improve the Agency's core capabilities and strengthen the regions
- Expand FEMA's mission to include preparedness and protection along with the Agency's traditional missions of mitigation, response and recovery
- Engage new constituencies such as the law enforcement community
- Establish a national emergency management system
- Implement a national preparedness system

FEMA's major mission components include Disaster Assistance, Disaster Operations, Logistics Management, National Continuity Programs, Mitigation, National Preparedness, Grant Programs, and the U.S. Fire Administration. In addition to its headquarters in Washington, D.C., FEMA has ten regional offices, three area offices, six Logistics Distribution Centers, five Mobile Emergency Response Support detachments, three National Processing Service Centers, and various disaster-related facilities/sites that carry out the agency's operations throughout the United States and its territories.

B. Major Activities and Key Strategic Goals

The investments made in FEMA in recent years have significantly improved the Agency's ability to fulfill its mission. During FY 2008, the improved operational and response capability of the Agency was clearly revealed. FEMA effectively and aggressively responded to the fourth busiest hurricane season since 1944, with Hurricane Ike alone causing between \$25 billion to \$30 billion in damages. In addition, the Agency responded to record flooding in the Midwest affecting a six-state area. In total, FEMA successfully responded to 90 declared disasters and provided critical assistance to 36 states during FY 2008. The Agency's rapid and effective response to the wide range of disaster requirements in FY 2008 demonstrates the value of the increased investments in the Agency's response capability.

The FY 2010 President's Budget request reflects continued commitment on the actions required by PKEMRA. During FY 2008, the Agency made significant progress in increasing its operational capacity to manage all aspects of disasters and emergencies. In FY 2010, the Agency will continue this effort and expand its emergency preparedness, response, recovery and mitigation capabilities and facilitate a robust coordinated response to all hazards. As part of this effort, FEMA will improve coordination between headquarters and regional offices in all aspects of disaster management, including disaster response. And FEMA is continuing to strengthen its business support elements – acquisition, finance, human capital, technology, and facilities – functions that are an essential component of the Agency's ability to fulfill its disaster management mission.

Disaster Assistance

FEMA's Disaster Assistance Program works to ensure that individuals and communities affected by disasters of all sizes, including catastrophic events and terrorist attacks, receive rapid, situation appropriate, and accurately targeted disaster assistance through FEMA's Individual Assistance and Public Assistance programs. In addition, FEMA leads Federal agencies, state and local governments, and representatives of non-governmental organizations in developing, coordinating, and implementing the National Disaster Recovery Strategy and the National Disaster Housing Strategy.

During FY 2008, FEMA demonstrated its increased operational capacity by managing significant amounts of disaster assistance activity efficiently and effectively. FEMA obligated more than \$1.4 billion in public assistance, and initiated over 40,000 projects to assist state and local governments in their disaster recovery efforts. In addition, FEMA provided more than \$913 million to help repair or replace damaged or destroyed property, and handled more than 1.5 million applications for individual assistance. And as the Agency works to provide timely assistance to families and communities in serious need of assistance, it also has strengthened management controls to improve stewardship of taxpayer funds. Using an identity proofing and occupancy verification process that checks an applicant's name, social security number, and address against commercially available data, FEMA can restrict certain types of non-traditional assistance such as Expedited Assistance (EA) to only those applicants that have verified identity and occupancy.

For FY 2009, FEMA is updating technology systems and improving the key business processes that support the Agency's disaster assistance programs. The Agency is enhancing its capabilities

for managing mass evacuations and displaced populations, including additional state and local plans and improvement of evacuee tracking systems. Through the FEMA National Shelter System (NSS), the Agency will have enhanced data sharing capabilities and provide expanded, accurate data to Federal, state, and local users. The Agency is also enhancing the National Emergency Family Registry Locator System (NEFRLS) to facilitate the reunification process and enable non-U.S. citizens to utilize the system. And FEMA is working to train regional, Federal, state, local, and non-governmental stakeholders on Federal mass care functions and coordination with local mass care efforts. And to improve the intake of applications for individual assistance, FEMA is piloting a new in-person recertification protocol to reduce or eliminate the need for often-confusing and less reliable recertification via the postal system, and increase the reliability and surety of the process.

FEMA will continue to strengthen its disaster assistance management infrastructure in FY 2010. FEMA will implement Emergency Management MIE Version II for Public Assistance, which will allow Public Assistance staff to capture information on damaged facilities quickly and directly input the data into Emergency Management Mission Integrated Environment (EMMIE) for processing. The Agency will also begin development of the Emergency Assistance Information System (EAIS), which will integrate existing mass care software and information systems and enable states to manage mass care information requirements (NSS, NECLC, NEFRLS) through one system. FEMA also will implement electronic (E-mail) correspondence with applicants. And by adding links to view documents through the IAC or sending them through attachments, the Agency will reduce costs and offer a more secure means of communication with applicants.

Disaster Operations

FEMA's Disaster Operations Program provides the core Federal operational capabilities needed to save lives, minimize suffering, and protect property in a timely and effective manner in communities overwhelmed by acts of terrorism, natural disaster, or other emergencies. Disaster Operations offers a unique capability that ensures that Federal emergency response systems and capabilities are properly poised to support Federal decision makers and immediately receive and react to requirements necessary to support states overcome by an emergency or major disaster.

FEMA demonstrated its improved operational response during the disaster activity of FY 2008. The Agency's national and regional Incident Management Assistance Teams (IMAT) were instrumental in providing on-scene situational awareness during last year's hurricane season. During Hurricanes Gustav and Ike, FEMA deployed more than 30 Urban Search and Rescue task forces throughout the Southeast to support the states in critical search and rescue operations. In addition, technology and equipment upgrades in FEMA's national and regional operations centers now allow for seamless connectivity with other Federal agencies and state governments.

In FY 2009, FEMA is improving its operational response capacity in several important ways. First, the Agency is working with its regional offices to implement Incident Management Assistance Teams (IMAT) to improve management and coordination of the National response for catastrophic incidents. FEMA will also continue the effort to improve disaster workforce management by standardizing hiring, training, and credentialing all disaster responders. And to enhance catastrophic disaster response planning, FEMA is updating the National Response Framework (NRF) Catastrophic Incident Supplement based on empirical damage and societal impact data collected for the New Madrid Seismic Zone Planning Initiative, and will complete the five

remaining state Catastrophic Earthquake Annexes and develop the four Federal Regional Earthquake Annexes.

In FY 2010, Disaster Operations will continue efforts to expand the emergency management body of knowledge and strengthen emergency management education to improve FEMA's incident management capability. FEMA will use its enhanced operational planning capacity to develop vertically and horizontally-integrated response plans compliant with the National Incident Management System and the NRF. FEMA will expand its focus on catastrophic disaster planning through Federal plans, both Regionally- and Nationally-focused, that synchronize with Urban Area/regional plans developed from the Homeland Security Grant Program, and preparing for National-level exercise based on the complete suite of New Madrid Seismic Zone Plans.

Logistics Management

FEMA's Logistics Management Directorate (LMD) provides property management, logistics systems, and logistical operations for FEMA and its emergency management partners. LMD provides FEMA with the foundation to re-define disaster logistics and move beyond simply providing commodities to a more comprehensive management approach.

In FY 2008, LMD continued its transformation efforts by recruiting and hiring a permanent workforce and establishing new internal management controls. The impact on this expansion in internal capacity was clear during the 2008 hurricane season. As the single coordinator for all domestic emergency logistics planning, management, and sustainment capabilities, FEMA implemented 75 pre-positioned contracts to prepare for last year's disaster activity. And for Hurricane Gustav, FEMA activated its ground and air ambulance evacuation services contract and its rail evacuation services contract. Moreover, by pre-positioning supplies in three locations in Louisiana, and by establishing three National Logistics Staging Areas (NLSA) in Texas, FEMA quickly provided much needed commodities -- including cots, meals, bottled water, and other essentials -- to families and communities affected by Hurricanes Gustav and Ike.

In FY 2009, FEMA received \$10.3 million in additional funding to help institutionalize command and control of strategic logistics planning, operations, and management while pushing operational control to the most effective level of execution. This includes additional logistics planners at regional offices and at headquarters, logistics operational specialists, and National Emergency Housing Unit Site Managers. Additional resources also support the development of a robust logistics capability by incorporating a comprehensive Third Party Logistics environment into the FEMA logistics structure. In addition, LMD will continue to implement the next phase of the Total Asset Visibility (TAV) system, to develop expanded asset visibility of inventories and requests across all FEMA regions and asset categories.

In FY 2010, the Logistics Management Directorate will continue to improve as the National Logistics Coordinator. The organization will enhance the capability to provide transparent supply chain visibility and accountability by pre-positioning, pre-event procurements through key readiness concepts such as Inter-Agency Agreements (IAA). The organization will also conduct assessments of current logistics core competencies, implement industry best practices in addition to demonstration programs such as the Logistics Capability Calculator (LCC) which helps improve readiness.

National Continuity Programs

FEMA's National Continuity Program (NCP) provides Executive Agent leadership to guarantee the survival of an enduring constitutional government by ensuring continuity of national operations in response to national emergencies. In this role, NCP is responsible for ensuring Federal, state, local, tribal, and territorial governments are capable of performing their essential functions during any situations that may disrupt normal operations.

During FY 2008, FEMA made significant progress in developing Integrated Public Awareness System (IPAWS). FEMA demonstrated the integration of new alert and warning technologies into state emergency operations centers in Alabama, Louisiana and Mississippi. In addition, the Agency tested the Digital Emergency Alert System (DEAS) and awarded a contract to maintain DEAS national implementation through FY 2011. Moreover, the Agency conducted operational testing of the IPAWS Mobile Emergency Alert System (EAS), which further positioned IPAWS to provide emergency communications restoration in the event of a communications disruption.

During FY 2009, FEMA received additional funding to support the modernization of the Emergency Alert System (EAS), including the conversion of EAS to digital capability. As part of the conversion to IPAWS, FEMA has initiated collection of all applicable IPAWS public alert and warning systems data used by Federal, state, territorial, tribal, and local agencies on the inventory and evaluation work at 1,932 Emergency Operations Centers (EOCs). Also, FEMA deployed state DEAS in 8 states and Puerto Rico, to provide Emergency Operation Centers with an alternate means of distributing alerts and warnings

During FY 2009, FEMA also received \$10.4 million in additional funding to support upgrades to the Mount Weather Emergency Operations Center (MWEOC) critical and essential infrastructure. These upgrades include mechanical infrastructure improvements, safety enhancements, information technology site improvements, and utility distribution systems. The increased funding helps support the immediate readiness of facilities that house FEMA disaster response support activities, 24 hour watch centers, centralized automated data processing, protected telecommunications infrastructure as well as national security missions and capabilities.

FEMA has several significant initiatives planned for FY 2010 that continue its efforts to ensure continuity of national operations. As part of the IPAWS implementation plan, the Agency will publish an Inventory Assessment Report of the public alert and warning system capabilities and resources. Moreover, FEMA will make major systems upgrades to the National Radio System (FNARS) to replace logistically unsupportable legacy equipment and improve interoperability. And FEMA will develop, coordinate, and conduct the Eagle Horizon 2010 National Continuity exercise to assess department and agency continuity programs.

Mitigation

FEMA's Mitigation Program works to strengthen mitigation nationwide to reduce the Nation's risk to natural disasters or other emergencies, and to facilitate adoption and enforcement of up-to-date design and construction practices through state and local building codes. Mitigation supports activities that result in sound risk management decisions by individuals, private-sector, and public-sector entities. The Mitigation programs are conducted through three core activities: risk

identification and assessment, risk reduction, and insurance against flood risk. These programs work together to reduce the loss of life and property, to enable individuals to recover more rapidly from floods and other disasters, and to lessen the financial burden on taxpayers.

FEMA helps protect lives and prevent property loss from natural hazard events through activities designed to further sound risk management decisions. In FY 2008, FEMA provided \$114 million to communities through the Pre-Disaster Mitigation (PDM) grant program, which helps grantees implement cost-effective hazard mitigation planning and projects before disasters occur. Under the Flood Map Modernization program, FEMA developed modernized maps for over 70 percent of the Nation's population and refreshed 30 percent of the flood hazard data to meet current conditions. And through the National Flood Insurance Program (NFIP), FEMA saved an estimated \$1.4 billion in annual flood disaster losses; increased flood insurance policies by 1.4 percent, and implemented new financial management controls for the Write-Your-Own insurance companies that sell and service NFIP policies.

FEMA received an additional \$4 million and to expand its mitigation efforts during FY 2009. The additional funding allows FEMA to increase grant funding to support state earthquake mitigation activities. These additional resources support improvements in risk assessment and risk prioritization of our national dam infrastructure, further the development of a web-based repository for mitigation plans, as enhance critical activities within Mitigation's Building Science programs.

In FY 2010, FEMA will continue to transition to a multiyear mapping effort that requires a review of each flood hazards map every five years to update and refine the data. This revitalized effort will provide sound flood hazard data, align flood map updates with flood risk assessments to support stronger hazard mitigation planning, and enable broader flood risk communication crucial to a national reduction in flood risk. And for the NFIP, FEMA will continue the NFIP systems modernization effort (NextGen) to build an information technology infrastructure which streamlines the insurance process, provides faster and more accurate access to NFIP data, and provides the capability to increase policy sales and improve responsiveness to customers' claims through the use of a centralized rating engine and online claims module available via the Internet.

National Preparedness

The National Preparedness Directorate (NPD) works to ensure that the Nation is prepared for disasters of all kinds. The organization's activities reflect FEMA's expanded role in preparedness established by PKEMRA (2006). NPD houses management and administrative support functions associated with training and national exercise programs funded through the state and Local Programs appropriation. It also implements Homeland Security Presidential Directive #8 (HSPD-8) by establishing policies that strengthen national preparedness for terrorist attacks, major disasters, and other emergencies.

During FY 2008, NPD led FEMA's expanded role in National Preparedness. The Center for Domestic Preparedness (CDP) marked its tenth anniversary as a Federal training center, and trained more than 114,000 state, local and tribal emergency responders during the year. During this period, the Emergency Management Institute (EMI), revised its existing curricula to incorporate recent changes to the NRF and NIMS, and also began conducting several exercise-based NRF Integrated Emergency Management Courses (IEMCs) for regions and states to test an integrated approach to the revised NRF. FEMA developed the first set of six capabilities to test the process

and format for updating the entire Target Capabilities List (TCL) based on feedback and lessons learned from the user community to be risk-based, measurable, and user-friendly. The initial six capabilities include: Intelligence, Mass Transit Protection, On-site Incident Command, Emergency Operations Center Management / Multi-Agency Coordination, Weapons of Mass Destruction (WMD)/HazMat Rescue, and Animal Disease Emergencies.

During FY 2009, NPD continues to enhance the Nation's preparedness efforts. For example, CDP is focused on establishing new training partnerships to expand training opportunities—particular focus on the National Emergency Training Center (NETC) for expanded medical and health care professionals training. In addition, as EMI continues to develop and deliver its national-level training program and evaluate the effectiveness and the impact on public and private sector officials, it will review and realign training courses to the target capabilities listing. And Radiological Emergency Preparedness Program (REPP) to provide support and oversight to conduct, evaluate, and report findings to the Nuclear Regulatory Commission on 33 joint exercises and any associated remedial exercises.

In FY 2010, NPD is focused on improving the Nation's ability to plan, train, exercise, evaluate and improve. The nation's planning system took a significant leap forward with the development of the Comprehensive Preparedness Guide 101 for state, tribal, local planning and the Integrated Planning System for Federal planning. NPD is focused on implementing these planning systems in a coordinated manner through the FEMA Regions, and ensuring their effectiveness in the field. NPD is also prioritizing the assessment of Federal, state and local preparedness levels by developing and implementing a Comprehensive Assessment System (CAS) which will use the Target Capabilities List (TCL) to assess the nation's performance through qualitative and quantitative metrics. These assessments will be published in a National Preparedness Report (NPR), which will consolidate several reporting requirements and lessen the burden on Federal, state and local jurisdictions.

Additionally, NPD will contribute to the development of a national strategy that will guide the Nation's approach to recovering from disasters. Finally, NPD will continue to enhance its training, exercise, technological hazards and community preparedness programs to implement the National Preparedness System

Grant Programs

The Grant Programs Directorate (GPD) awards and administers funds to thousands of grant recipients annually. GPD grant programs serve the public by providing support to assist Federal, state, and local governments to prepare, prevent, plan for, and respond to acts of terrorism and major disasters. GPD also serves as the executive agent for development of grant guidance including the formulation of the risk methodology used to support grant allocations. The grant programs administered by GPD include the Homeland Security Grant Program (HSGP), Infrastructure Protection Program (IPP), Public Safety Interoperable Communications (PSIC) Grant Program, Assistance to Firefighters Grant Program (AFG), and Emergency Management Performance Grants (EMPG).

In FY 2008, FEMA awarded over \$3 billion dollars in Homeland Security Grants. This included more than \$844 million in grant funding to protect the nation's ports, rail and mass transit systems, trucking, inter-city bus systems, and other critical infrastructure from acts of terrorism. Grant awards were based on a national homeland security planning process that aligns resources with the national priorities and target capabilities established by the National Preparedness Guidelines.

FEMA also began the Cost-to-Capability (C2C) Grant Assessment process with the goal of providing detailed analysis of selected Target Capabilities across all grant programs to determine their effectiveness.

During FY 2009, FEMA is initiating several important activities to strengthen its partnership with state and local stakeholders. The Agency intends to provide additional feedback to state and local partners through customized risk and effectiveness profiles. Moreover, FEMA is launching the C2C grant assessment and providing detailed analysis of target capabilities across all grant programs to determine their effectiveness and to develop a requirements definition document that establishes a blueprint for an end-to-end system. FEMA is expanding its outreach efforts to engage stakeholders in a dialogue on its Grants Management programs and processes throughout the FY 2009 application cycle.

A significant focus for FY 2010 is the consolidation of the non-disaster grants management system and other DHS grants and financial assistance management systems into a single grants management system. This effort will improve customer service, increase standardization and streamlining of business processes and technologies and reduce overall grants management costs. DHS is completing an integration plan that includes establishing a grants management system Program Management Office (PMO) and preparing an Office of Management and Budget (OMB) Capital Asset Plan and Business Case Summary (Circular A-11, Exhibit 300).

National Capital Region Coordination

The Office of National Capital Region Coordination (NCRC) advances Homeland Security, including all hazards preparedness, in the National Capital Region. NCRC serves as a model for other regions of the country. NCRC focuses on developing and refining a common regional approach to homeland security that result in integrated strategies and interoperability among Federal, state, local, regional and private/non-profit stakeholders. NCRC's primary responsibilities include coordinating and participating in programs and initiatives aimed at enhancing the homeland security posture of the region.

U.S. Fire Administration

The U.S. Fire Administration (USFA) prepares the Nation's first responders training that focuses on evaluating and managing community risk, improving protection of critical infrastructure, and preparing for all-hazard and terrorism emergencies. During FY 2008, USFA delivered more than 4,000 training programs to 121,775 fire and emergency response personnel through its diverse delivery system and network of national training partners. In addition, USFA completed the migration of existing web-based content for NFA Online, the new web-based learning management system for distance learning training. USFA also began development of a new preparedness curriculum (6-day courses and designated 2-week resident courses) and began BETA testing the NFA's new web-based long-term evaluation system. In FY 2009 and FY 2010, USFA programs and activities will capitalize on the NFA online web-based Learning Management System (LMS) distance learning training to maximize the impact of the USFA training funding.

Key Strategic Issues

Recognizing the compelling need to improve the Nation's ability to respond to major disasters and, in particular, those of catastrophic magnitude, FEMA has worked diligently with our Federal, state, and local partners and the voluntary agency community to establish stronger partnerships, a much higher level of preparedness, and improved levels of coordination. The Agency also has reinforced the critical and enduring need for personal preparedness, to encourage individuals to prepare themselves adequately for disaster events, recognizing that better individual preparedness translates into better community preparedness and situational resilience. At the same time, we continue to work with our partners to develop a more sophisticated culture of preparedness in America.

Improved capability and performance does not just happen. It is the product of experienced leaders, necessary investments in resources, engaged and supportive partnerships at every level of government and with the public and private sectors, and the dedicated efforts of thousands of emergency management professionals across the country. It also is the product of a very clear vision and a commitment by FEMA to lead a National effort that will demonstrably enhance the practice of Emergency Management. In support of that mission, the Agency will continue to focus on partnerships across Federal departments and agencies, with states and local communities, with non-governmental and volunteer agencies, with the private sector, and with individual citizens – all to ensure a more effective national response through cooperation and collaboration.

FEMA regions continue to have an expanded role in executing the broad national mission entrusted to FEMA because their operations provide an invaluable perspective to properly shape policy and planning performed at headquarters. Regions are also uniquely situated to facilitate continuous coordination with other Federal counterparts, state and local governments, the public and private sectors, and individual citizens. Together, the enhancement of core functions combined with new missions gained through PKEMRA will enable FEMA and the Federal government to fulfill its emergency management mandate.

FEMA will capitalize on the requirements set forth within PKEMRA to exercise national leadership and provide more complete service to the American people and Federal, state, local, and tribal counterparts. Never before has such a broad scope of homeland security prevention, protection, response, and recovery missions for all hazard events resided within a single component of the Department of Homeland Security. A successfully integrated and supported FEMA will result in a nation that is prepared to reduce the loss of life and property.

C. Resources Requested and Performance Impact

The FY 2010 FEMA budget request reflects the funding required sustaining the improvements in operational response and internal capacity, supporting the Agency's efforts to achieve the mandate of PKEMRA. The FY 2010 budget request reflects \$7.3 billion in net discretionary budget authority, which is an increase of \$300 million (four percent) above the FY 2009 enacted level. These increases strengthen the Agency's ability to fund projected disaster assistance requirements, to provide adequate funding to support state and local emergency management functions, and to enhance internal staffing and systems required to support FEMA's ability to fulfill its emergency management mission.

- **Disaster Relief Fund (DRF): \$600.0M (0 FTE)**

FEMA requests an increase of \$600,000,000 for the DRF. The DRF funds the Federal response to Presidentially declared major disasters and emergencies, enables FEMA to coordinate the Federal response and reimburse agencies for their efforts through mission assignments, and otherwise enables the Federal government to respond to, recover from, and mitigate the results of specific disasters and emergencies. The following grants are awarded from the DRF to mitigate or recover from the damage of a disaster: Individual Assistance; Public Assistance; and Hazard Mitigation. This initiative will allow replenishment of the DRF to funding levels consistent with historical average for non-catastrophic disaster activity.

- **Staffing for Adequate Fire and Emergency Response (SAFER): \$210.0M (0 FTE)**

FEMA requests total funding of \$420 million, which would double the funding devoted to SAFER grants. These grants help fire departments increase the number of frontline firefighters. The goal is for fire departments to increase their staffing and deployment capabilities and ultimately attain 24-hour staffing, thus assuring that these communities have adequate protection from fire and fire-related hazards.

- **Pre-Disaster Mitigation (PDM) Grants: \$60.0M (0 FTE)**

FEMA request an additional \$60 million for the PDM grant program. This program provides technical and financial assistance to state and local governments to help implement pre-disaster hazard mitigation measures designed to reduce injuries, loss of life, damage and destruction of property. Operating independently of DRF (which provides *post*-disaster mitigation funding), the PDM program offers an annual funding source for qualified mitigation activities that are not dependent upon a declaration of disaster activity by the President. The additional funding will implement a base-plus-risk allocation program that will assist states, territories and tribes. FEMA will establish and maintain a portfolio of pre-qualified mitigation proposals that are consistent with state and local mitigation plans and priorities, deemed as technically-feasible to reduce losses to the identified hazard(s), and cost-effectiveness.

- **Underground Storage Tanks: \$10.0M (0 FTE)**

FEMA requests an additional \$10 million for repair, replacement, restoration and remediation of underground storage tanks. FEMA has an inventory of over 1,000 underground storage tanks, above-ground storage tanks, and rolling stock primarily for the storage of petroleum and petroleum based products to ensure operations during a disaster. Many of these tanks have not been properly maintained and are out of regulatory compliance. FY 2009, FEMA is systematically reviewing its entire inventory of storage tanks to determine the extent of the environmental problem, and will remediate the environmental issues as any problems are identified.

- **Data Center Migration: \$7.9 M (0 FTE)**

FEMA requests an additional \$7.9 million for its share of the FY 2010 data center development funding, which will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY 2010. This effort includes

discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2010. It also funds the purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts, as well as the transition of disaster recovery/backup/Continuity of Operations (COOP) capability to DHS Data Centers.

- **Environmental Planning and Historic Preservation (EPHP): \$2.3 M (6 FTE)**

FEMA requests an additional \$2.3 million for increased staffing dedicated to EPHP. EPHP ensures that FEMA's activities and programs related to disaster response and recovery, hazard mitigation, and emergency preparedness comply with Federal environmental and historic preservations laws and Executive Orders. EPHP provides environmental and historic preservation technical assistance to FEMA staff, local, state and Federal partners, and grantees and sub-grantees. To continue to meet the program goals for Disaster Assistance, Mitigation, and Preparedness grants, the EPHP Office must increase their capability, particularly at the Regional level for proactive outreach and planning, disaster readiness, and project review.

- **Gap Analysis Program(GAP): \$3.0 M (6 FTE)**

FEMA requests an additional \$3.0 million for the GAP to supplement programs that look at the strengths and weaknesses of each state's emergency plans and evacuation plans and expand beyond earlier focus on hurricane-prone regions and rural and suburban areas.

D. Performance Highlights, Resources, and Alignment to Strategic Goals

For each major program, the performance goal, alignment to DHS goals and objectives, total dollars and FTE, and main performance measure/s are shown below.

Disaster Assistance Program Performance Goal – Help individuals and communities affected by federally declared disasters return to normal function quickly and efficiently, while planning for catastrophic disaster recovery operations.

Goal 4 - Strengthen our nation's preparedness and emergency response capabilities
Objective 4.2 - Response and Recovery

Disaster Operations Program Performance Goal – Ensure the capability and readiness of all FEMA disaster response teams and logistics capabilities to respond quickly and effectively to provide assistance when and where needed.

Goal 4 - Strengthen our nation's preparedness and emergency response capabilities
Objective 4.2 - Response and Recovery

Logistics Management Program Performance Goal – Ensure Logistics Management capabilities to include management of all-source range of assets, teams, equipment and supplies are available to respond to federally declared disasters quickly and efficiently.

Goal 4 - Strengthen our nation's preparedness and emergency response capabilities
Objective 4.2 - Response and Recovery

National Continuity Program Performance Goal - Ensure all Federal Departments and Agencies have fully operational Continuity of Operations (COOP) and Continuity of Government (COG) capabilities.

Goal 3 – Protect critical infrastructure

Objective 3.2 – Ensure continuity of government communications and operations

Mitigation Program Performance Goal - Reduce the impact of natural hazards on people and property through the analysis and reduction of risks and the provision of flood insurance.

Goal 4 - Strengthen our nation’s preparedness and emergency response capabilities

Objective 4.1 – Preparedness

Grants Program Performance Goal – Enhance the Nation's preparedness by increasing the capability of states, territories, and local jurisdictions to prevent, protect against, respond to, and recover from terrorism and all-hazard events through the provision of grants, first responder training, technical assistance, and exercises.

Goal 4 - Strengthen our nation’s preparedness and emergency response capabilities

Objective 4.1 – Ensure preparedness

National Preparedness Performance Goal – Help ensure the nation is ready to respond to and recover from acts of terrorism, natural disasters, or other emergencies through implementation of the National Incident Management System (NIMS) and the provision of emergency management training.

Goal 4 - Strengthen our nation’s preparedness and emergency response capabilities

Objective 4.1 – Ensure Preparedness

Fire and Emergency Assistance Performance Goal – Maximize the health and safety of the public and firefighting personnel against fire and fire-related hazards by providing assistance to fire departments and by training the Nation’s fire responders and health care personnel to prevent, protect against, respond to, and recover from fire-related events.

Goal 4 - Strengthen our nation’s preparedness and emergency response capabilities

Objective 4.1 – Ensure Preparedness

For each major program, the performance goal, main performance measures, indicators, budget, including allocation of non-programmatic overhead, and FTE are shown below. A complete listing of performance measures may be found at Expectmore.gov. In a few instances program names in PARTweb may differ slightly from those used in the Performance Budget.

Program: Disaster Assistance						
Performance Goal: Help individuals and communities affected by federally - declared disasters return to normal function quickly and efficiently, while planning for catastrophic disaster recovery operations.						
DHS strategic objectives supported and % allocation of activities: 4.2 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$33,812,600	\$20,730,361	\$5,104,310	\$11,595,049	\$1,886,121	\$1,942,724
FTE	4,406	6,995	3,191	3,227	3,520	3,643

Performance Plan Measures

Measure: Percent of customers satisfied with Public Recovery Assistance						
Description: This measure reflects the percent of communities affected by disaster or other emergencies who indicate satisfaction with the Public Disaster Recovery Assistance provided by FEMA on a customer survey. Disaster Recovery Assistance includes debris removal, emergency protective measures, and repair or replacement of damaged infrastructure. FEMA conducts a series of Program Evaluation and Customer Satisfaction Surveys each Fiscal Year to gather data on customer satisfaction with performance in specific program areas, including Public Recovery efforts that are used to track improvement in operations and identify areas in need of attention. These areas surveyed include: Overall Program and Process, Project Worksheet Process, Information Dissemination, Public Assistance Administrative Burden, Timely Service and Staff Performance						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	87%	88%	88%	90%	90%	90%
Actual	Data Not Available	88%	88%	90%	N/A	N/A

Measure: Percent of customers satisfied with Individual Recovery Assistance						
Description: This measure indicates the percent of Americans affected by disaster or other emergency who express satisfaction with the Individual Disaster Recovery Assistance provided by FEMA. Recovery assistance helps individuals affected by disasters and emergencies return to normal quickly and efficiently.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	90%	90%	91%	92%	93%	94%
Actual	93%	91%	92.2%	92.7%	N/A	N/A

Program: Disaster Operations						
Performance Goal: Provide the core Federal operational capabilities needed to save lives, minimize suffering, and protect property in a timely and effective manner in communities overwhelmed by acts of terrorism, natural disaster, or other emergencies.						
DHS strategic objectives supported and % allocation of activities: 4.2 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$9,468,000	\$1,115,945	\$465,967	\$223,181	\$224,199	\$230,927
FTE	1,554	801	986	1,070	1,058	1,100

Performance Plan Measures

Measure: Percent of response teams reported at operational status.						
Description: The percent of FEMA's response teams indicating they are ready to respond quickly and effectively to acts of terrorism, natural disasters, and other emergencies. This measure tracks the readiness of three types of teams: the 28 task forces of Urban Search and Rescue (USR); the five Mobile Emergency Response Support (MERS) detachments; and the two Federal Incident Management Assist Teams (IMATs).						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	50%	85%	88%	91%	94%	97%
Actual	50%	85%	88%	93%	N/A	N/A

Program: Logistics Management						
Performance Goal: Improve the response to domestic emergencies and special events by ensuring logistics management capabilities exist to provide the full - range of necessary assets.						
DHS strategic objectives supported and % allocation of activities: 4.2 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	None	\$4,062,146	\$33,831	\$171,265	\$192,977	\$198,768
FTE	None	1,566	155	168	166	173

Performance Plan Measures

Measure: Percent of complete - site inventories conducted at pre - positioned disaster response storage locations						
Description: This measure demonstrates the percentage of inventories completed annually at the Federal Emergency Management Agency distribution centers and temporary housing unit sites. These inventories are whole - site inventories and include all items at each location. Items to be inventoried include classified, sensitive or consumable items regardless of value that are in storage.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	None	None	90%	92%
Actual	None	None	None	None	N/A	N/A

Program: National Continuity Programs						
Performance Goal: Ensure all Federal Departments and Agencies have fully operational Continuity of Operations and Continuity of Government capabilities.						
DHS strategic objectives supported and % allocation of activities: 3.2 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$60,600	\$129,342	\$157,770	\$165,770	\$190,099	\$195,804
FTE	132	227	309	335	332	345

Performance Plan Measures

Measure: Percent of fully operational Continuity of Government (COG) capabilities						
Description: The percentage of federal departments and agencies that have developed and exercised plans to ensure the continuity of government operations and essential functions in the event of crisis or disaster.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	80%	70%	80%	90%	90%	90%
Actual	20%	70%	80%	72%	N/A	N/A

Measure: Percent of Federal departments and agencies with fully operational Continuity of Operations (COOP) capabilities						
Description: The National Continuity Program works with Federal departments and agencies to develop and exercise plans that ensure the continuation of federal operations and the continuity and survival of an enduring constitutional government. COOP capable is being able to perform essential functions from an alternate location. Agencies perform self - assessments of COOP plans using the COOP self - assessment tool. This ensures the agencies are aware of their COOP capability. The program collects the results of exercises and self - assessments to measure the percentage of departments and agencies that have in place the necessary plans and capabilities.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	90%	95%	100%	100%	100%	75%
Actual	90%	95%	100%	100%	N/A	N/A

Program: Mitigation						
Performance Goal: Reduce the impact of natural hazards on people and property through the analysis and reduction of risks and the provision of flood insurance.						
DHS strategic objectives supported and % allocation of activities: 4.1 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$6,389,315	\$4,648,200	\$3,701,083	\$1,365,069	\$782,655	\$806,143
FTE	936	1,322	962	1,044	1,033	1,073

Performance Plan Measures

Measure: Percent of the national population whose safety is improved through the availability of flood risk data in Geospatial Information System (GIS) format.						
Description: This measure reports the cumulative percent of the national population that has updated digital flood risk data available online for their community. This digital data replaces old - fashioned paper flood maps. There are some communities representing eight percent of the population, with little to no flood risk that will not be mapped.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	50%	50%	60%	70%	80%	92%
Actual	38.6	47.7%	60%	71%	N/A	N/A

Measure: Potential property losses, disasters, and other costs avoided						
Description: This measure reports the estimated dollar value of losses to the American public which are avoided or averted through a strategic approach of natural hazard risk management. Losses are avoided to property (buildings and infrastructure) through the provision of: 1) Financial and technical assistance to States, territories, tribes, and communities to implement pre - identified, cost effective mitigation measures (via Hazard Mitigation Assistance grants); 2) Sound floodplain management; and 3) State-of-the-art building science technologies, guidance and expertise for natural and man - made hazards (Disaster Resistant Building Sciences), thus protecting American citizens from disasters through assistance, education, and technology. A Multi - Hazard Mitigation Council reported that mitigation saves society an average of four dollars for every dollar spent.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	\$1.757	\$2.27B	\$2.40B	\$2.10B	\$2.2B	\$2.3B
Actual	\$1.895	2.30B	2.61B	2.53B	N/A	N/A

Program: National Preparedness						
Performance Goal: Improve the Nations ability to prepare for, respond to, and recover from acts of terrorism, natural disasters, or other emergencies through exercise facilitation, implementation of the National Incident Management System, and the provision of emergency management training.						
DHS strategic objectives supported and % allocation of activities: 4.1 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$136,300	\$210,551	\$393,238	\$487,152	\$389,568	\$401,259
FTE	620	340	517	561	555	577

Performance Plan Measures

Measure: Percent of respondents reporting they are better prepared to deal with disasters and emergencies as a result of training						
Description: This measure reports the percent of students attending training at the Emergency Management Institute (EMI) and FEMA's Employee Development program who responded to a survey						

indicating that they are better prepared to deal with disasters and emergencies as a result of the training they received. Training is conducted at the EMI dedicated training facility in Emmetsburg, MD, and also at the Noble Training Center in Anniston, AL, as well as online. This training provides Federal, State, local and tribal officials having key emergency responsibilities with the knowledge and skills needed to strengthen nationwide preparedness and respond to, recover from, and mitigate against acts of terrorism, natural disasters, and other emergencies.

Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	91%	90%	92%	93%
Actual	None	None	89%	92.9	N/A	N/A

Measure: Percent of analyzed capabilities performed acceptably in preparedness and response exercises.

Description: This measure indicates the percent of Federal, State, and local entities that were rated acceptable on Homeland Security Exercise and Evaluation Program (HSEEP) preparedness and response exercises. The Office of Grants and Training (GT) funds and supports national emergency preparedness exercises at the Federal, State, and local levels following HSEEP guidance and processes. During an exercise, a jurisdiction is required to implement its critical capabilities under circumstances as close as possible to an actual emergency. Exercises are evaluated using capabilities as described by the Homeland Security Exercise and Evaluation Program. Exercises expose areas of strength, weaknesses in plans and abilities, and areas of possible improvement, and are the most cost - effective and accessible means of demonstrating whether or not a jurisdiction has attained a desired level of emergency capabilities.

Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	None	40%	78%	81%
Actual	None	None	None	65.3%	N/A	N/A

Measure: Percent of Radiological Emergency Preparedness Program communities with a nuclear power plant that are fully capable of responding to an accident originating at the site.

Description: This measure reports the percent of U.S. communities surrounding a nuclear power plant that are prepared and capable of responding to and recovering from an accident or terrorist attack. This assessment is based on first responder performance in exercises conducted at the facilities.

Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	89%	100%	100%	100%	100%	100%
Actual	None	100%	100%	100%	N/A	N/A

Measure: Percent of Federal, State, local and tribal governments compliant with the National Incident Management System (NIMS)

Description: This measure tracks the percent of critical partners who are compliant with the National Incident Management System (NIMS). Critical partners include Federal agencies, State, local and tribal governments. Federal Agencies are required to identify a point of contact within their agency to act as a liaison with NIMS Integration Center, create a NIMS Implementation Plan, incorporate NIMS into their respective Emergency operations Plans, and train all appropriate personnel in the NIMS standard training curriculum. States are required to submit self - certification of compliance based on 23 compliance requirements in the NIMCAST system. FEMA's Headquarters office monitors and verifies NIMS compliance for the States and U.S. Territories.

Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	100%	100%	100%	100%	100%	100%
Actual	82%	100%	100%	95%	N/A	N/A

Measure: Percent increase in knowledge, skills, and abilities (KSAs) of State and local homeland security preparedness professionals receiving training

Description: This measure evaluates the gain in knowledge, skills, and abilities (KSA) of students through pre and post course assessments of State and local homeland security professionals after the completion of training, which demonstrates strengthened first responder preparedness and mitigation with

respect to acts of terrorism, natural disasters, and other emergencies. Measuring these improvements indicates the impact of training services on the Nation's preparedness level.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	37%	38%	27%	27%	28%	28%
Actual	38.5%	27%	25%	27%	N/A	N/A

Program: Grants Program						
Performance Goal: Enhance the Nation's preparedness by increasing the capability of States, territories, and local jurisdictions to prevent, protect, respond, and recover from terrorism and all - hazard incidents.						
DHS strategic objectives supported and % allocation of activities: 4.1 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$2,871,718	\$2,683,809	\$3,354,555	\$3,825,286	\$3,425,412	\$3,573,339
FTE	62	184	216	234	232	241

Performance Plan Measures

Measure: Percent of States and territories accredited by the Emergency Management Accreditation Program						
Description: The Emergency Management Accreditation Program (EMAP) is a voluntary review process for State and local emergency management programs. The goal of EMAP is to provide a meaningful, voluntary accreditation process for State, territorial, and local programs that have the responsibility of preparing for and responding to disasters. By offering consistent standards and a process through which emergency management programs can demonstrate compliance, EMAP will strengthen communities' capabilities in responding to all types of hazards and encourage an examination of jurisdictions strengths and weaknesses, pursuit of corrective measures, and communication and planning among different sectors of government and the community.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	None	Baseline	40%	45%
Actual	None	None	None	None	N/A	N/A

Measure: Percent of grantees reporting significant progress toward the goals and objectives identified in their State homeland security strategies						
Description: This measure reflects grantees' progress toward the goals and objectives identified in their State homeland security strategies. These strategies detail jurisdictions' plans to strengthen their preparation for and response to acts of terrorism, as well as natural and man - made threats. Grantees can also provide written comments on the program and highlight "best practices" and major initiatives in the State as a result of grant funding. Progress toward homeland security strategies provides an over - arching assessment of grantees' ability to coordinate emergency management efforts.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	Baseline (25%)	26%	69%	71%
Actual	None	None	67%	26%	N/A	N/A

Measure: Percent of significant progress toward implementation of National Preparedness Priorities.						
Description: Outcome measure which indicates the degree of progress states are making on national priorities set forth in the National Preparedness Goal. States will make progress on different priorities at different rates. An increase indicates improvement and also indicates an improvement in the area of building the culture of preparedness based on progress against a common set of priorities. Implementation is monitored by Preparedness Officers.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	Baseline	25%	73%	76%

Actual	None	None	77%	51.6%	N/A	N/A
---------------	------	------	-----	-------	-----	-----

Measure: Percent reduction in firefighter injuries in jurisdictions receiving Assistance to Firefighter Grants funding compared to the national average.						
Description: This measure compares the percent reduction in fighter injuries in jurisdictions that receive Assistance to Firefighter Grants (AFG) to the average percent reduction in firefighter injuries nationwide. The measure assesses improvements in firefighter safety in jurisdictions that receive AFG funding. Comparing AFG - funded jurisdictions to the national average shows the impact of AFG awards on reducing firefighter injuries. The measure specifically focuses on line - of - duty firefighter injuries, not any injury that a firefighter may have.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	None	15.5%	18%	21%	24%
Actual	None	None	44.3%	18%	N/A	N/A

Program: U.S. Fire Administration						
Performance Goal: Reduce the effect of fire and all hazard emergencies by supporting and enhancing the delivery of state and local fire and emergency services and promoting public preparedness.						
DHS strategic objectives supported and % allocation of activities: 4.1 - 100%						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$715,000	\$699,109	\$41,349	\$43,300	\$44,979	\$45,588
FTE	None	148	114	43	43	44

Performance Plan Measures

Measure: The per capita loss of life due to fire in the U.S.						
Description: This measure analyzes the reduction in the rate of loss of life from fire - related events by one percent per year. It examines the fatalities in the U.S. per million population using modified targets based on the review of historical data. The National Fire Protection Association (NFPA) reports data in September for the previous year. NFPA Survey data are analyzed to produce the report on fire related civilian fatalities.						
Fiscal Year	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target	None	13.5	13.1	13.0	12.9	12.7

1/ FY 2009 revised enacted reflects reprogramming level.

2/ Proposed name change in FY 2010 from Asylum, refugee and international operations to International operations based on proposed fee reform initiative which will fund asylum and refugee operations out of appropriations.

3/ Proposed name change in FY 2010 to combine National Customer Service Center and Information Services to Information and Customer Service.

Justification

The primary purpose of the proposed restructuring is to eliminate the depicted breakout between pay and non-pay line items. Combining pay and benefits lines with general expenses lines will reduce the need to seek reprogrammings for smaller, inconsequential movements of resources. These movements in the recent past related mostly to re-estimates of costs for either category which had virtually no significant effect on program or policy direction such as updated estimates on payroll costs or the reclassification of employees between PPA line items. USCIS fully intends to continue to execute and monitor annual resources with breakouts between pay and non-pay. For changes that have a significant program, resource, or policy implications, USCIS will continue to keep the Committee apprised irrespective of the line item breakout.

In addition to the pay/non-pay change, some of the titles of individual lines are adjusted to reflect current budget proposals. Finally, the restructuring proposes to combine the current "National Customer Service Center" and "Information Services" line items into a single line for "Information and Customer Services", which mirrors the name of the current organization within USCIS which utilizes the funding within both lines.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. CITIZENSHIP & IMMIGRATION SERVICES SALARIES AND EXPENSES

I. Appropriation Overview

A. Mission Statement for Salaries and Expenses:

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals: (1) ensure the security and integrity of the immigration system, (2) provide efficient customer-oriented immigration benefits and information services, (3) increase understanding of citizenship and its privileges and responsibilities, (4) ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade, (5) strengthen the infrastructure necessary to achieve USCIS' mission, and (6) operate as a high-performance organization and position USCIS as an employer of choice.

USCIS is a component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving over six million immigration benefits each year. These immigration benefits range from work authorization documents to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States.

The Salaries and Expenses account encompasses the organization's discretionary funding, including support for the E-Verify program. E-Verify is an automated system that allows U.S. employers to electronically verify names, dates of birth (DOB), and social security numbers (SSN), along with immigration information for non-citizens, against Federal databases to ensure the employment eligibility of both citizen and non-citizen new hires.

Starting in FY 2010, the Budget requests funding in this account for the operations of the Refugee and Asylum Divisions, five percent of the International Operations Division, Military Naturalizations, the cost of processing Adjustment of Status (I-485) applications for refugees, which are exempt from fees by law, the Benefit Parole Program, and an associated share of indirect overhead expenses as determined by the biannual fee review. In FY 2010, USCIS is requesting appropriated resources to eliminate the Asylum/Refugee and Military Naturalization surcharge on non-exempt applications and petitions in the Immigration Examinations Fee Account.

B. Budget Activities:

The salaries and expenses appropriation funds activities related to maintaining operational support of E-Verify as well as expanding staffing levels to monitor and ensure compliance with U.S.

immigration and employment laws. Funding is also requested to support the information sharing and verification requirements of the REAL ID Act, an Immigrant Integration initiative designed to help immigrants adjust to life in the United States, and support for DHS Data Center Development. In FY 2010, USCIS is requesting appropriated resources to fund the Asylum/Refugee surcharge and the cost of Military Naturalizations.

C. Budget Request Summary:

USCIS requests 1,084 positions, 1,043 FTE and \$364,000,000 for the FY 2010 Salaries and Expenses Request. The total change from FY 2009 enacted is an increase of 808 FTE and \$212,260,000. This amount includes one-time decreases of \$25,000,000 to the REAL ID program and \$1,200,000 for the Citizenship Education grants. Program increases include 80 positions, 40 FTE and \$10,000,000 for enhancements to E-Verify. USCIS is also requesting \$206,000,000 in new funding to cover the estimated current services cost for 744 positions/FTE, principally performing asylum, refugee, and humanitarian parole activities, military naturalizations, and five percent of international operations. These activities were previously funded through the Immigration Examinations Fee account. The FY 2010 request also includes 3 positions, 2 FTE, and \$10,000,000 for a new Immigrant Integration initiative. Finally, \$11,000,000 is included in the request to support DHS data center development.

D. Proposed PPA Structure:

The revised PPA structure proposed by USCIS does not impact the Salaries and Expenses account.

III. Current Services Program Description by PPA

Department of Homeland Security
U.S. Citizenship and Immigration Services
Salaries and Expenses
Program Performance Justification
 (Dollars in thousands)

PPA: E-VERIFY

	Perm. Pos.	FTE	Amount
2008 Actual ^{/1}	255	126	\$62,480
2009 Enacted	255	228	\$100,000
2010 Adjustments-to-Base	0	27	\$2,000
2010 Current Services	255	255	\$102,000
2010 Program Change	80	40	\$10,000
2010 President's Budget	335	295	\$112,000
Total Change 2009-2010	80	40	\$12,000

1/ FY 2008 Actual includes emergency funding of \$60M provided in P.L. 110-161 for this activity.

USCIS requests \$112 million, 335 positions, and 295 FTE for this activity. The adjustment-to-base increase is \$2 million. This reflects the funding necessary to maintain current service levels from the FY 2009 enacted, and includes \$748,000 for pay inflation. In addition, there is an increase of 80 positions, 40 FTE, and \$10 million for enhancements.

CURRENT SERVICES PROGRAM DESCRIPTION:

USCIS re-branded the Employment Eligibility Verification Basic Pilot program in August 2007 and the program is now called E-Verify. E-Verify is a program within USCIS' National Security, Records and Verification Directorate that allows employers to use a free, automated system to run employment authorization checks for newly hired employees against DHS, Social Security Administration (SSA) and Department of State databases.

The E-Verify program was established by the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA) and is based on the Employment Eligibility Verification Form (Form I-9). The Form I-9 was created for employers to use when verifying the identity and employment eligibility of employees in accordance with the Immigration Reform and Control Act of 1986 (IRCA), which mandated that all U.S. employers verify that employees hired after November 6, 1986 are both work-eligible and in possession of valid work authorization documents. With a few exceptions, the Form I-9 must be completed for all newly-hired employees regardless of citizenship or national origin.

E-Verify is the best available means for confirming an employee's authorization to work in the United States. Employers enter information from the Form I-9 into the internet-based E-Verify program and electronically check that information against Federal Government databases. This is accomplished through use of the Verification Information System (VIS) database. VIS consists of an integrated database that both pulls verification data from other related agency systems as well as processes

verification requests. USCIS has added database system capacity to match anticipated future query growth and developed a plan to migrate VIS to a government controlled data center.

In September 2007, E-Verify launched a photo tool feature to combat false positives related to identity theft through immigration document fraud. The tool allows an employer to match the employee-provided document photo (for the Form I-9) to the photo on file with that document's issuing agency. The photo tool prevents counterfeit or photo-substituted documents from being used to verify employment eligibility through E-Verify. The photo tool currently includes Permanent Resident Card ("Green Card") and Employment Authorization Document (EAD) photographs, both DHS-issued identity documents.

Over the last few years, voluntary program use has increased significantly. E-Verify maintains an outreach and advertising campaign to increase the number of employers using the program and developed a customer contact center to provide additional channels of communication for E-Verify users. Employer participation estimates predict 132,000 registered employer MOUs with 528,000 hiring sites using the system with a planning estimate of approximately 12.4 million E-Verify queries in FY 2009.

To detect and deter improper system use E-Verify created a Monitoring and Compliance (M&C) unit. M&C staff identify behaviors that indicate potential system misuse, such as document fraud (multiple social security numbers or A-Numbers in the system), discrimination (prescreening, verifying existing workforce), privacy compromise (password sharing), and procedural non-compliance (failure to complete training). M&C reviews this data to identify pertinent incidences and patterns. In addition, M&C has developed Standard Operating Procedures (SOPs) to conduct compliance through a series of escalating actions ("touches") to include emails, letters, calls, desk audits, site visits, and referrals to enforcement agencies. E-Verify has established relationships with our enforcement partners—U.S. Immigration and Customs Enforcement (ICE) and the Office of Special Counsel for Immigration Related Unfair Employment Practices (OSC) in the Department of Justice—and refers cases of immigration related non-compliance that fall under their jurisdiction. USCIS signed an MOU with ICE in December 2008 formalizing an information exchange for enforcement and partnership assistance involving egregious cases. USCIS drafted an MOU with OSC, but prioritizes building a significant evidentiary case for discrimination case referrals. The E-Verify program has responded to over 50 external data requests from ICE and OSC to date.

While current monitoring and compliance efforts are primarily ad hoc and dependent upon a manual process, E-Verify is actively developing ways to augment this current process by implementing a Compliance Tracking and Management System (CTMS) tool, and establishing business requirements for a Data Analysis System (DAS) capable of automatically detecting discrimination and fraud patterns using data discovery techniques. CTMS will allow M&C staff to assign cases to field staff, group cases by incident, employer and other identifiers, and safely store Personally Identifiable Information (PII) in compliance with the Privacy Act. The DAS tool will employ complex algorithms and statistical techniques to detect incidents of potential misuse, abuse, fraud, discrimination, and other types of non-compliant behavior. DAS will generate initial compliance actions (emails and letters to employers) and record the data in the CTMS to develop cases and maintain auditable data on instances of system misuse.

The E-Verify M&C unit is also leveraging other compliance assistance techniques such as a call center, outreach, and education. These techniques will give employers the tools and information they

need to self-monitor their E-Verify usage. The E-Verify program receives an average of 2,000 calls per week via the toll-free call center. In addition, E-Verify's strategic marketing plan includes advertising and outreach events geared toward educating prospective employers about correct E-Verify usage. The program is also partnering with the DHS Office of Civil Rights and Civil Liberties to develop a bilingual video for employers and employees on proper E-Verify use.

To accommodate E-Verify employer growth, M&C has developed a staffing plan based on the number of non-compliant employers that they project to touch. The staffing formula is also adjustable and determines staffing levels based on the touch rate proportion and types of touches (emails, desk audits, etc.) proposed. The touch rate for FY 2009, benchmarked at 2 percent, is a key E-Verify M&C metric. Presently, there are 18 M&C personnel in the metropolitan Washington, DC area and five in Buffalo, NY. The Buffalo regional office will accommodate 31 M&C personnel once fully staffed by late FY 2009.

FY 2008 Accomplishments

- The E-Verify Operations branch, in cooperation with the Social Security Administration (SSA), developed and implemented a case management system called EV-Star. EV-Star now allows SSA to work field office cases across the country and send responses back to the E-Verify employer electronically. This improvement to the E-Verify system has significantly reduced confusion and the burden on workers and employers.
- Two significant enhancements to E-Verify were:
 - **Natz Phase I:** To reduce the number of SSA tentative non-confirmations (TNC) issued to naturalized citizens, E-Verify implemented an electronic process that checks USCIS naturalization databases before SSA issues a TNC due to a citizenship status mismatch. The databases included in this initial automated check include Computer Linked Application Information Management System (CLAIMS4), Reengineered Naturalization Automated Casework System (RNACS) and Central Index System (CIS). CLAIMS4 and RNACS were added to the VIS on May 5, 2008. This initiative has resulted in an approximated 39 percent decrease in SSA TNC incidence for naturalized citizens.
 - **Natz Phase II:** If a naturalized citizen receives an SSA TNC after the Natz Phase I process is complete, Natz Phase II allows employees to resolve their case by simply calling a toll-free number. This effort, in addition to reducing E-Verify mismatches for naturalized citizens already reduced by Natz Phase I, will reduce SSA field office "walk ins." Of the people that choose to contest their TNC and contact the government, over 50 percent opt to call DHS rather than visit a SSA field office. This enhancement allows employees to resolve their SSA tentative non-confirmations with a simple phone call, reduces the burden on SSA field offices, and therefore decreases costs to SSA to resolve SSA tentative non-confirmations.
- E-Verify also implemented a Pre-TNC check. This new process gives the user an additional opportunity to correct any data input errors seconds before running a query through the E-Verify system that would have otherwise resulted in a TNC. The implementation of this new process has reduced TNCs by 28 percent for such cases.

- A recent study conducted by Westat, an independent social science firm, found that between April and June 2008, approximately 96.1 percent of all cases queried through E-Verify were automatically verified as work authorized. Additionally, about 99.6 percent of all work-authorized employees verified through E-Verify did not receive a TNC or need to take any type of corrective action.
- In August 2007, OMB issued a memo to all Federal Government Agencies requiring them to register with and begin using E-Verify to verify their newly hired citizens by October 1, 2007.
- The Department of Labor strongly encouraged the State Workforce Agencies (SWAs) to use E-Verify for their referred workers. Since the SWAs will use the system prior to employment, this represents a departure from the mandate that only newly hired employees be verified. To accommodate this recommendation, we developed a new enrollment process along with several different instructional materials and letters. The new process and supporting materials were posted on the DHS/E-Verify website.

FY 2009 Planned Activities

E-Verify will develop a plan to implement the Data Analysis System (DAS) that analyzes the Verification Information System (VIS). DAS system implementation and customization will be essential for monitoring activities. Without this automated system, E-Verify estimates that either monitoring personnel would have to be tripled, or the touch rate of the suspected non-compliant employers would have to be dramatically reduced.

The E-Verify program will implement the Compliance Tracking and Management System (CTMS). CTMS will be a key tool in incident communication, case tracking, workflow or operating procedure management, and M&C branch activity results tracking.

The E-Verify program will develop a plan to augment contact center services to support the Verification Division. The contact center contract will provide and manage customer support staff; offer multiple contact methods for program participants; provide telephone and IT infrastructure; provide Interactive Voice Response System (IVR), transaction processing, management information, and decision support systems; and supply the facilities necessary to operate an inbound/outbound contact center. In addition, the funding will allow the E-Verify program to leverage the latest in contact center technologies to maximize the customer's experience.

E-Verify will expand advertising and marketing to increase public and employer awareness of the E-Verify program. Traditional advertising methods, including newspaper/magazine, radio, outdoor (billboard), and direct mail advertisements, as well as online banner advertisements and Internet keyword searches will be used where appropriate. Marketing activities will build upon lessons learned during the test phase, spanning from October 1, 2007 to March 3, 2008, in which E-Verify program enrollment increased by approximately 20,000.

In December 2008, DHS and the Department of State (DOS) signed an MOU allowing passport data to be included in the E-Verify system. As of February 2, 2009, any new hire providing a U.S. passport for Form I-9 documentation who later receives an SSA TNC due to SSA record issues (citizenship, etc.) will have his/her passport records checked to avoid a false negative.

E-Verify will continue to work with DOS to implement a capability that provides U.S. passport photos through the E-Verify photo tool usage. DOS signed an MOU with DHS in late 2008 agreeing to share passport photos with E-Verify for a phased-in photo tool implementation. Passport photo integration will help prevent passport document fraud aimed at obtaining E-Verify employment authorization.

E-Verify is working with the American Association of Motor Vehicle Administrators (AAMVA), an IT resource for nearly all DMVs, to augment its IT system with driver's license data and photograph verification from state DMVs that voluntarily participate. System design and implementation are in progress and will be in place in FY 2010. The E-Verify program is determining which state DMVs are interested in serving as "pilot" states for E-Verify driver's license verification.

In June 2009, E-Verify is planning to introduce a new effort called "JobLock." JobLock will enable identity theft victims to "lock" their social security number from further use in E-Verify. As this effort is assessed, JobLock capability will be considered for expanded use beyond victims of identity theft.

FY 2010 Planned Activities

In FY 2010, the E-Verify program will focus on enhancing the program's monitoring and compliance capability, and continuing to improve program technology and business practices.

E-Verify will build on FY 2009 Data Analytics System (DAS) plans for development, and aim to automate the monitoring and compliance process by the end of FY 2010, thereby improving the ability to detect non-compliance patterns and trends. DAS employs algorithms and statistical techniques to detect incidents of potential misuse, abuse, fraud, discrimination, and other types of non-compliant behavior. DAS implementation will interface with the Case Tracking and Management System (CTMS) and reduce overall monitoring staff requirements, but will not eliminate the need for human monitors to review and intervene in the analytical process.

Other FY 2010 technology enhancements will focus on identity management and identity assurance (for both the employer and the employee), photo tool enhancement and document assurance, data source expansion, and aging hardware replacement.

E-Verify will continue to explore several potential developments aimed at reducing false negatives. One example is the eventual inclusion of data from the updated ICE system that processes student visa data in order to decrease false negatives for foreign students. ICE's current system, SEVIS, is planned for upgrade. SEVIS II is currently being developed and will be available to E-Verify in FY 2010.

To build on the photo tool's success, the E-Verify program plans to access more photos within its functionality. This would prevent one possible avenue of identity theft currently used to "game" the system. Incorporating driver's license photos into the photo tool would represent a significant system enhancement, since new hires most often present a driver's license.

PPA: REAL ID

	Perm. Pos.	FTE	Amount
2008 Actual	0	0	\$0
2009 Enacted	2	2	\$50,000
2010 Adjustments-to-Base	0	0	(25,000)
2010 Current Services	2	2	\$25,000
2010 Program Change	0	0	0
2010 President's Budget	2	2	\$25,000
Total Change 2009-2010	0	0	(25,000)

USCIS requests USCIS requests funds to sustain the 2 positions and 2 FTE provided in FY 2009, for management of the verification system capabilities project, and \$25 million to continue activities, primarily the verification systems capability project, associated with the implementation of REAL ID. This is a total decrease of \$25 million from the FY 2009 request. The project was designed as a \$50 million one-time request with a follow on of \$25 million to develop and build out the verification system capabilities required under current law, to include structured testing and system connectivity for participating states. Some FY 2010 funds will also be used to support establishment of a concept of operations for REAL ID audits of the states after implementation. The concept of operations will be developed in collaboration with the Department of Transportation (DOT) and will consider relevant DHS and DOT assets and interactions with state departments of motor vehicles (DMV).

CURRENT SERVICES PROGRAM DESCRIPTION:

The REAL ID Act requires that a state must first verify the issuance, validity, and completeness of source documents presented by an applicant before it can issue a REAL ID-compliant driver's license or identification card.

The FY 2009 funding and the follow on request for FY 2010 for REAL ID specifically aim to continue the development and build toward initial operations of verification system capabilities allowing states to verify data presented by applicants against other state and federal databases. DHS will work with the states to develop this capability. Once operational, the states will manage the centralized connectivity to support federated querying of federal verification databases and the capability to verify REAL ID driver's licenses and identification cards with the state of issuance. Federal agencies will continue to manage their existing systems and data. Specifically, verification system capabilities will provide connectivity to the following:

- Social Security On-line Verification System (SSOLV) – verifies social security numbers
- Systematic Alien Verification for Entitlement (SAVE) system – verifies evidence of lawful immigration status
- National Association of Public Health Statistics and Information Systems (NAPHSIS) – verifies birth record information
- U.S. Department of State data such as those tied to passports, Consular Report of Birth Abroad, and visas – verifies citizenship, birth records, and/or lawful immigration status

USCIS plays a key operational role in driver's license security by supporting state DMVs in verification of immigration status through SAVE. Its program management capacity is essential to moving this project forward. DHS Policy continues to provide operational guidance and support in assisting the states toward more secure identification and managing compliance with REAL ID. In addition, grant funds to assist states in improving the overall security of their driver's licenses and identification cards has been requested within the Federal Emergency Management Agency.

PPA: CITIZENSHIP EDUCATION GRANTS

	Perm. Pos.	FTE	Amount
2008 Actual	0	0	\$450
2009 Enacted	0	0	\$1,200
2010 Adjustments-to-Base	0	0	(1,200)
2010 Current Services	0	0	\$0
2010 Program Change	0	0	\$0
2010 President's Budget	0	0	\$0
Total Change 2009-2010	0	0	(\$1,200)

FY 2009 funding levels provided for citizenship grants were one-time and will not recur in FY 2010.

CURRENT SERVICES PROGRAM DESCRIPTION:

The \$450,000 in FY 2008 provided funding to support citizenship education and training between the Department of Homeland Security and two organizations: the Citizens Advice Bureau and the Northern Manhattan Coalition for Immigration Rights. The purpose of this opportunity was to provide services to immigrants with legal status in the United States. These services included but were not limited to English and Citizenship/Civics instruction, training sessions, educational resources (books, language software, and computers for use in providing services), case management, volunteer outreach and tutoring.

In FY 2009, \$1.2 million made available through the Citizenship Grant Program being offered through the Office of Citizenship, will provide monetary support to community-based organizations (CBOs) that serve immigrant populations. The funds shall be used to support citizenship preparation programs incorporating activities to assist naturalization applicants (or potential naturalization applicants) to improve English language skills, gain knowledge of U.S. history and government (civics), prepare for the naturalization application and interview process, and expand awareness of available information and resources related to U.S. citizenship and the naturalization process. The funds may only be used to provide direct services to immigrants with legal status in the United States. Specific services to be provided may include but are not limited to, English as a Second Language (ESL), English Language/Civics/Citizenship instruction, educational resources (textbooks, language software, computers, etc), assistance with preparing and completing the naturalization application process (including case management), citizenship-focused community outreach, and staff and volunteer training.

PPA: BENEFIT PAROLE PROGRAMS

	Perm. Pos.	FTE	Amount
2008 Actual	5	5	\$519
2009 Enacted	5	5	\$540
2010 Adjustments-to-Base	(5)	(5)	(540)
2010 Current Services	0	0	\$0
2010 Program Change	0	0	\$0
2010 President's Budget	0	0	\$0
Total Change 2009-2010	(5)	(5)	(\$540)

Funding provided in FY 2009 for Benefit Parole Programs was intended to be funded through the Immigration Examinations Fee Account in FY 2010. However, as a result of the proposed fee reform, costs for these programs are now included under the new appropriation request in FY 2010 for Asylum and Refugee Services and Military Naturalizations.

CURRENT SERVICES PROGRAM DESCRIPTION:

In FY 2008 the Humanitarian Affairs Branch (HAB) previously located at ICE was transferred into the USCIS Refugee, Asylum and International Operations Directorate. HAB is responsible for the adjudication of approximately 1,500 requests for humanitarian parole and significant public benefit paroles each year, as well as for management of the Cuban Haitian Entrant Program (CHEP) that provides reception, processing, and resettlement assistance to Cuban and Haitian parolees. To date, CHEP has processed over 9,000 Cuban and Haitian Parolees and HAB has processed over 1,250 parole requests.

In FY 2010, the HAB will be funded through the new appropriation request for Asylum and Refugee Services and Military Naturalizations. Resources will continue to support current operations, including five positions for management and administration of these programs.

IV. Program Justification of Changes

**Department of Homeland Security
U.S. Citizenship and Immigration Services
Salaries and Expenses
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: **E-Verify**

Strategic Goal & Objective: Protect our nation from dangerous people
 Strengthen screening of travelers and workers

PPA: E-Verify

Program Increase: Positions 80 FTE 40 Dollars \$10,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							255	255	\$102,000
Program Increase							80	40	\$10,000
Total Request	255	126	\$62,480	255	228	\$100,000	335	295	\$112,000

Description of Item

USCIS requests 80 additional positions, 40 FTE, and \$10 million in new funding to support continued expansion of the employment eligibility verification system, E-Verify in FY 2010. The resources will principally be used to detect and deter improper system use that is not compliant with E-Verify program guidance and to detect and prevent employer misuse of the system that discriminates against and/or harms work-authorized individuals.

Additional Staffing. Funding will provide for 40 additional Monitoring and Compliance (M&C) positions, 16 Status Verification Operations (SVO) support positions, 18 Customer Relations and Learning Management (CRLM) positions, and 6 Mission Support positions.

- The M&C positions (21 for Monitoring and 19 for Compliance), will directly support an estimated 192,000 E-Verify registered employers by FY 2010 (an increase of 60,000 from FY 2009) as well 14,900,000 queries (an increase of 2,500,000 from FY 2009). The 19 Compliance positions are based on 192,000 registered employers covering 576,000 hiring sites in FY 2010, and a 2 percent touch rate of those sites. The additional 19 positions plus the 31 existing positions will total 50 Compliance staff positions in FY 2010. The 21 additional Monitoring positions, also based on 192,000 registered employers, were derived using estimated compliance rates and percentage of manual versus automated analysis. These enhancements will bring the M&C staffing level to 89 total positions.

- The staffing increase for SVO adds 16 positions to the current 19 on-board, for a total of 35 positions in FY 2010. Based on the projected queries of 14,900,000 for FY 2010, a total of 21 positions overall will be required for secondary verification, 10 positions for quality assurance and case resolution duties, and 4 positions for other related activities.
- The additional 18 positions within CRLM will be for outreach to employers and employees on proper system usage, and the remaining 6 positions will provide mission support.

In addition to increased funding for staffing, there are several IT-related business initiatives under consideration, including:

- Redesign of Status Verification Workflow Management Tool: Includes developing business requirements for a workflow management tool to replace the current Status Verification System (SVS). The SVS is used by status verifiers to resolve E-Verify and SAVE cases not confirmed immediately after submission. SVS is a web-based application developed in the mid-1990s for the Immigration and Naturalization Service and is used by Status Verifiers to route and process second and third step verification referrals for both SAVE and E-Verify. The new tool will increase the Status Verifiers' ability to analyze caseloads and improve internal processes and production training. The new system will benefit E-Verify and SAVE by significantly reducing processing times.
- Temporary Protected Status (TPS) Verification Initiative: This initiative will enable most TPS applicants to be immediately verified rather than requiring secondary verification. TPS is granted to citizens of several countries who are possibly benefit and employment eligible. However, the current Verification Information System (VIS) lacks the capability to verify TPS status during the initial verification process and TPS applicants need to have their employment authorization renewed periodically. The solution will include automatic system updates to confirm employment for anyone from Honduras, El Salvador, or Nicaragua who has an expired EAD and is within the auto-extension time period.
- Electronic I-9: E-Verify plans to offer an "Electronic I-9" option to participating employers that will allow employees to enter biographical information electronically and populate the fields necessary to generate an E-Verify query. This new feature reduces employer paperwork and data entry requirements/input errors. The proposed Electronic I-9 will allow employees to enter online the biographic information requested in Section 1 of the form. Once the biographic information is entered, the employee uses a "Click to Accept" signature feature to sign the form. The employer will then enter the employment eligibility and identity verification information found in Section 2 of the form. Afterwards, the employer representative uses the "Click to Accept" signature feature to certify the information. The E-Verify system will then provide the employer with electronic confirmation, which the employer can save as paper copy or as a computer file.

Justification

Employer compliance is essential to E-Verify's ability to effectively reduce unauthorized employment. Prior E-Verify program evaluations have recommended monitoring and compliance efforts to increase program efficacy, particularly in light of legislative or regulatory proposals in which E-Verify participation is mandatory.

The growth of the E-Verify program and the anticipated increase in registered employers increases the need for monitoring, protecting employees from discriminatory practices, and safeguarding privacy information. M&C will prevent discrimination and violations of civil liberties and personal privacy through growth in four key areas: data analysis (rigorous monitoring and evaluation of E-Verify activity to detect potential misuse), audit activities (including visits to employer hiring sites to identify misuse), communication (with customers to correct administrative misuse), and referral activities (to coordinate investigation and enforcement with ICE and the Department of Justice).

Business enhancements are essential to E-Verify's growth and the ability to effectively reduce unauthorized employment and mismatches. Previous E-Verify program evaluations have recommended increased technical functionality to enhance program efficacy, particularly if E-Verify becomes mandatory. These investments will help ensure that E-Verify data is accurate, trustworthy, consistent and reliable.

Impact on Performance (Relationship of Increase to Strategic Goals)

The E-Verify program's mission is to provide employers with tools and technologies to verify that their new employees are authorized to work in the United States. Increased funding for staffing, system and process improvements will support continued improvement in the employment eligibility verification program that promotes compliance with U.S. immigration and employment laws.

Program Increase 2: **Asylum, Refugee, Humanitarian Parole, and Military Naturalizations**

Strategic Goal & Objective: Protect our nation from dangerous people
Improve security through enhanced immigration services

PPA: Asylum, Refugee, Humanitarian Parole, and Military Naturalizations

Program Increase: Positions 744 FTE 744 Dollars \$206,000,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							---	---	\$---
Program Increase							744	744	\$206,000
Total Request	---	---	\$---	---	---	\$---	744	744	\$206,000

Description of Item

USCIS is requesting a total of 744 positions/FTE and \$206 million. The appropriation will cover the estimated current service cost of carrying out international programs, principally asylum, refugee, humanitarian parole, and a small percentage of international activities that support these programs, as well as funding the cost of military naturalizations and an associated share of indirect overhead expenses. These activities for FY 2009 were funded through the Immigration Examinations Fee Account as a surcharge on the fees that USCIS charges to process immigrant benefit applications and petitions. Approximately half of this funding is associated with pay and benefits, and the other half non-pay general expenses.

The total funding level was determined using an activity-based cost model (“ABC model”) which divides costs among activities and helps USCIS develop its fee structure. The ABC model not only allocates direct budgetary costs for each activity, but also an appropriate share of administration and agency overhead which are allocated to all activities.

Based on the ABC model, an estimated \$200 million and 744 positions are necessary to fully support the Refugee, Asylum, Humanitarian Parole and a small percentage of International Operations along with a share of administration and overhead. The largest portion of staff includes both a Refugee Corps responsible for adjudicating refugee claims overseas to determine eligibility for U.S. resettlement, and an Asylum Officer Corps which determines eligibility for asylum and conducts protection screenings for certain individuals either in, or subject to, removal proceedings.

An estimated \$5 million is necessary to support the cost of military naturalizations. USCIS currently charges a fee of \$595 to fully adjudicate a naturalization applicant, which is based on allocated costs for naturalization adjudication under the ABC model. Estimated workload for FY 2010 is between 8,600 and 9,500 applications.

An additional \$1 million is requested to implement a case management tracking capability to track workloads, backlogs, and productivity for USCIS offices overseas.

Justification

These activities are currently funded within the Immigration Examinations Fee Account (IEFA), the account which finances the majority of USCIS fee-based activities. However, persons receiving services and benefits through these programs are exempt under law from paying fees. As a result, costs for the activities are added to the fees of non-exempt applicants receiving other immigration benefits as a surcharge. Under the FY 2007 fee rule, the asylum-refugee surcharge alone totaled \$40 per application. While USCIS has the authority to charge other applicants the cost of providing benefits which are exempt from fees, this cost unduly burdens such applicants; particularly as the fees for the services and benefits they do receive rises.

The Fee Reform proposal is an essential first step in providing greater linkage between fees and the actual costs necessary to adjudicate a specific application and petition. Near term and future business process and system improvements through Transformation will further support this goal by improving operational efficiency leading to refinements in operational costs. Over time, the USCIS fee structure will closely match a focused and more efficient operational structure.

Impact on Performance (Relationship of Increase to Strategic Goals)

This request reflects the full cost of current services. Key workload measures include serving at least 80,000 refugees and as many as 9,500 military naturalizations. The additional funding will also help to improve security through enhanced immigration services. We will increase security by denying immigration benefits to persons wishing to do us harm and integrating our information with that of other Federal agencies with an aim of keeping out dangerous individuals.

Program Increase 3: Immigrant Integration

Strategic Goal & Objective: Protect our nation from dangerous people
Improve security through enhanced immigration services

PPA: Immigrant Integration

Program Increase: Positions 3 FTE 2 Dollars \$10,000,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							3	2	\$10,000
Total Request	---	---	\$---	---	---	\$---	3	2	\$10,000

Description of Item

Resources are requested for 3 positions, 2 FTE and \$10 million to fund activities associated with improving the integration of immigrants into the United States. The proposed initiative will build in large part on promising efforts at the state and local level, including:

- o Providing grants to community-based organizations for citizenship preparation;
- o Expanding English language learning aids;
- o Supporting a training framework for local literacy organizations to prepare volunteers to teach English and citizenship to immigrants; and,
- o Promoting citizenship through targeted integration messages.

Key to the success of this new program is establishing partnerships with state and local governments, U.S. businesses, non-profits, faith-based organizations, and academia as all have important roles to play in improving integration. USCIS will also work with other federal agencies to coordinate efforts aimed at integration.

Justification

The proposed Integration Program allows USCIS and the Office of Citizenship to impact targeted sectors of society with grant-making and outreach programs.

Impact on Performance (Relationship of Increase to Strategic Goals)

The integration program will help us achieve our goals to promote education and training on fundamental civic principles and the rights and responsibilities of citizenship, provide federal leadership and support collaboration on civic integration issues, and celebrate the meaning of citizenship.

Program Increase 4: **Data Center Development: Consolidate to Secure Data Center Environment**

Strategic Goal & Objective: Protect our nation from dangerous people
Improve security through enhanced immigration services

PPA: Data Center Development

Program Increase: Positions 0 FTE 0 Dollars \$11,000,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 President's Budget		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							0	0	\$11,000
Total Request	---	---	\$---	---	---	\$---	0	0	\$11,000

Description of Item

FY 2010 data center development funding, to be managed through the DHS Working Capital Fund (WCF), will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY 2010. This includes:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2010
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts
- Installation of equipment racks at the DHS Data Centers
- Migration-related build-out of DHS Data Center infrastructure
- Transition of disaster recovery/backup/COOP (Continuity of Operations) capability to DHS Data Centers
- Installation of infrastructure support as part of system migrations at the DHS Data Centers
- Migration of USCIS hardware, systems/applications to occupy rack space at the DHS Data Centers.

Justification

The Data Center consolidation efforts will standardize IT resource acquisitions across DHS Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

Impact on Performance (Relationship of Increase to Strategic Goals)

If funding is not provided, USCIS will not have the additional capability to operate critical systems in multiple geographic locations, replicate and perform maintenance without impacting the mission,

reduce our dependency on legacy architectures, or make our data more readily available to DHS and our intelligence partners.

Migration of USCIS systems will enable DHS to fulfill its mission, strategic goals and business objectives to create “One Network, One Infrastructure, and One DHS.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

For necessary expenses for citizenship and immigration services, [\$101,740,000]**\$364,000,000**, of which [\$100,000,000]**\$112,000,000** is for the E-Verify program to assist United States employers with maintaining a legal workforce: Provided, **That of the amount provided for the E-Verify program, \$10,000,000 is available until expended for E-Verify process and system enhancements: Provided further,** That notwithstanding any other provision of law, funds available to United States Citizenship and Immigration Services may be used to acquire, operate, equip, dispose of and replace up to five vehicles[, of which two are for replacement only,] for areas where the Administrator of General Services does not provide vehicles for lease: Provided further, That the Director of United States Citizenship and Immigration Services may authorize employees who are assigned to those areas to use such vehicles between the employees' residences and places of employment. (Department of Homeland Security Appropriations Act, [2008]**2009**.)

Sec. 534. Sections 143 and 144 of division A of the Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009 (Public Law 110329; 122 Stat. 3580 et seq.), as amended by section 101 of Division J of Public Law 111-5, are further amended by striking “September 30, 2009” and inserting “September 30, 2012”.

Explanation of Changes:

A new General Provisions proposal (Sec. 534) extends both the authorization for the Basic Pilot program, currently called “E-Verify”, and the EB- 5 Immigrant Investor Pilot Program for three years beyond the current expiration date of September 30, 2009.

PPA Mission Statement

The E-Verify Program, a key component of the Department's Secure Border Initiative, involves electronic verification checks of the Social Security Administration and DHS databases, using an automated system to verify employment authorization.

The potential for system abuse grows with an increase in registered employers. By increasing and expanding aggressive monitoring and compliance initiatives fraudulent, discriminatory or misinformed use of E-Verify will be minimized, specifically, fraudulent use of Social Security numbers or Alien numbers. Aggressive monitoring and compliance will also deter prescreening of job applicants and adverse action against employees who receive tentative non-confirmation notices.

The requested amount will allow E-Verify to continue to support and operate a comprehensive electronic employment verification program, and initiate a phased-in expansion and improvement of existing employment verification systems, to ensure compliance with U.S. immigration and employment laws.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$13,628	\$26,796	\$34,632	\$7,836

Salaries and Benefits includes costs for 295 FTEs. The FY 2010 request includes an increase of \$454,000 for the proposed January 2010 2.0 percent increase in personnel compensation, \$293,000 for annualization of the FY 2009 pay raise, \$3,438,000 for annualization of prior year part year funding (partially offset through a realignment of funds from non-pay), and \$3,650,000 in program increases for for the increased staff to expand the E-Verify monitoring and compliance program.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change

PPA Mission Statement

This program will fund activities associated with improving the integration of immigrants into the United States including: grants to community-based organizations for citizenship preparation; expanding English language learning aids; supporting a training framework for local literacy organizations to prepare volunteers to teach English and citizenship to immigrants; and, promoting citizenship through targeted integration messages. Key to the success of this new program is establishing partnerships with state and local governments, U.S. businesses, non-profits, faith-based organizations, and academia as all have important roles to play in improving integration. USCIS will also work with other federal agencies to coordinate efforts aimed at integration.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$0	\$0	\$148	\$148

Salaries and Benefits includes \$148,000 for 3 positions and 2 FTEs in FY 2010.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$0	\$0	\$234	\$234

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request includes \$234,000 for this new initiative.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Communication, Utilities, and miscellaneous charges	\$0	\$0	\$2	\$2

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2010 request includes \$2,000 for this new initiative.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Printing	\$0	\$0	\$68	\$68

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 request includes \$68,000 for this new initiative.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$0	\$0	\$3,500	\$3,500

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request includes \$3,500,000 for this new initiative.

Total, REAL ID		\$0	\$50,000	\$25,000	(\$25,000)
Full Time Equivalents		---	2	2	---

PPA Mission Statement

The REAL ID Act requires a State to verify the issuance, validity, and completeness of each document required to be presented by the person seeking to obtain a REAL ID compliant driver's license or identification card before issuing a driver's license or identification card to the person.

The funding provided through USCIS is aimed specifically at the development of an information sharing and verification hub that will allow States to verify data against Federal and other State databases as well as improve state-to-state information sharing. USCIS is the core operating agency within DHS that will facilitate through its verification systems State compliance with the REAL ID Act. Operational guidance and support will be provided by DHS Policy.

The integrity of the immigration system is facilitated if State efforts through REAL ID discourage the use of false immigration information to unlawfully obtain benefits.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$0	\$293	\$300	\$7

Salaries and Benefits includes costs for 2 FTEs. The FY 2010 request includes an increase of \$4,000 for the proposed January 2010 2.0 percent increase in personnel compensation, and \$3,000 for annualization of the FY 2009 3.9% pay raise.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. CITIZENSHIP & IMMIGRATION SERVICES IMMIGRATION EXAMINATIONS FEE ACCOUNT

I. Appropriation Overview

A. Mission Statement for Immigration Examinations Fee Account:

The Immigration Examinations Fee Account (IEFA) is the primary program funding source for USCIS, comprising approximately 95 percent of the total USCIS budget. Fees collected from the filing of immigration benefit applications are deposited into the IEFA and used to fund the cost of processing immigration benefit applications and associated support benefits and the cost of similar benefits provided to other immigrants where fees are waived.

B. Budget Activities:

Adjudication Services

Through a network of 230 local offices, Application Support Centers, Service Centers, and Asylum Offices, USCIS is responsible for the timely and quality processing of:

- *Family-based petitions* - facilitating the process for close relatives of U.S. citizens and permanent residents to immigrate, gain permanent residency, work, etc.
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or work in the U.S. temporarily
- *Asylum and Refugee petitions* - adjudicating asylum applications and processing refugees
- *Naturalization petitions* - processing applications of those who wish to become U.S. citizens

Premium processing revenues collected into this account also fund the Business Transformation Program which is a multi-year effort to modernize USCIS business processes and supporting systems.

Information and Customer Services

Through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments, these services make it easier for customers to get the information they need, when they need it. On an annual basis, USCIS:

- Serves more than 16 million customers via the National Customer Service Call Centers
- Serves approximately 3 million customers through information counters at local offices

Administration

The Administration activity supports a variety of headquarters offices including Administration, Chief Financial Officer, Chief Counsel, Communications, Congressional Relations, Policy and Strategy, Chief Human Capital Officer, and Security and Integrity.

Systematic Alien Verification for Entitlements (SAVE)

The SAVE program assists organizations by providing a non-citizen applicant's immigration status, in order to determine eligibility for federal, state, or local public benefits. SAVE also supports implementation of the requirements of the REAL ID Act of 2005 by making it easier for states to verify immigration status for the issuance of driver's licenses and identification cards.

C. Budget Request Summary:

USCIS is committed to conducting a fee study every two years in order to ensure that immigration fees are set at a level to recover costs and these fees reflect productivity improvements resulting from process changes and technology upgrades. A fee review for FY 2010 and FY 2011 was initiated and USCIS plans to update this study to account for decisions made in this Budget.

USCIS requests 9,471 positions, 9,471 FTE, and \$2,451,884,000 for FY 2010. The total adjustments-to-base is a net decrease of 739 positions, 476 FTE, and \$43,302,000. This includes \$36,614,000 for pay inflation, \$25,733,000 for annualization of prior year part year funding, an upward adjustment of 243 FTE and a net increase of \$58,808,000 for annualization and non-recurring costs of prior year part-year funding. In addition, \$34,264,000 in premium processing fees is assumed to be collected above current levels through a Consumer Price Index (CPI) adjustment permitted under current law.

The reduction resulting from the fee reform proposal is 739 positions, 719 FTE and \$199M and is based on the FY 2009 enacted level. The FTE and associated costs are annualized and inflated in building to FY 2010 total requirements. After applying the annualization and inflationary adjustments, the reduction to IEFA in FY 2010 associated with the fee reform proposal would be 739 positions, 739 FTE and \$205M. In addition, 5 positions and 5 FTE funded under the Salaries and Expenses account in FY 2009 were planned to be funded through IEFA in FY 2010. However, these positions and FTE were incorporated into the fee reform proposal. As a result, the total FY 2010 requirements funded through appropriations is 744 positions, 744 FTE and \$205M.

To address resource needs and improve the equity and fairness of the USCIS fee system, the budget requests appropriated funding for costs associated with Refugee and Asylum, Humanitarian Parole, the cost of processing Adjustment of Status (I-485) applications for refugees, which are exempt from fees by law, and Military Naturalizations. These costs are currently recovered as a surcharge on the fees that USCIS charges on unrelated immigrant applications and petitions and the costs are included within the IEFA budget. Costs include both direct and indirect costs of these activities and the associated share of indirect overhead costs.

The Fee Reform proposal is an essential first step in providing greater linkage between fees and the actual costs necessary to adjudicate a specific application and petition. Near term and future business process and system improvements through Transformation will further support this goal by

improving operational efficiency leading to refinements in operational costs. Over time, the USCIS fee structure will closely match a focused and more efficient operational structure.

D. Proposed PPA Structure:

The primary purpose of the proposed restructuring is to eliminate the depicted breakout between pay and non-pay line items. Combining pay and benefits lines with general expenses lines will reduce the need to seek reprogrammings for smaller, inconsequential movements of resources. These movements in the recent past related mostly to re-estimates of costs for either category which had virtually no significant effect on program or policy direction such as updated estimates on payroll costs or the reclassification of employees between PPA line items. USCIS fully intends to continue to execute and monitor annual resources with breakouts between pay and non-pay. For changes that have a significant program, resource, or policy implications, USCIS will continue to keep the Committee apprised irrespective of the line item breakout.

In addition to the pay/non-pay change, some of the titles of individual lines are adjusted to reflect current budget proposals. Finally, the restructuring proposes to combine the current “National Customer Service Center” and “Information Services” line items into a single line for “Information and Customer Services”, which mirrors the name of the current organization within USCIS which utilizes the funding within both lines.

Revised PPA Crosswalk Proposal

III. Current Services Program Description by PPA

**Department of Homeland Security
U.S. Citizenship and Immigration Services
Immigration Examinations Fee Account
Program Performance Justification
(Dollars in thousands)**

PPA: ADJUDICATION SERVICES

	Perm. Pos.	FTE	Amount
2008 Actual	8,303	7,333	\$1,839,968
2009 Enacted	8,224	8,051	\$1,954,676
2010 Adjustments-to-Base	(691)	(518)	(\$53,183)
2010 Current Services	7,533	7,533	\$1,901,493
2010 Program Change	0	0	\$0
2010 Request	7,533	7,533	\$1,901,493
Total Change 2009-2010	(691)	(518)	(\$53,183)

USCIS requests 7,533 positions, 7,533 FTE and \$1.901 billion to process millions of immigration benefit applications while maintaining backlog goals, and ensuring the security and integrity of the immigration system. The adjustments-to-base include 156 FTE and \$46.2 million in pay adjustments/annualizations, \$4.1 million for annualization of prior year part year funding, and \$11 million for GSA rent. The requested level also includes adjustments for one-time non-recurring decrease related to Freedom of Information Act (FOIA) Backlog (\$5.7 million), an increase of \$30 million for information technology upgrades related to USCIS transformation, and an upward adjustment of \$34.3 million for CPI inflationary adjustments to the premium processing fee.

In addition, 691 positions, 674 FTE, and \$173 million previously funded within this area will be funded through an appropriation within the Salaries and Expenses Account. The positions and funding are associated with a Fee Reform proposal that will remove the cost of Military Naturalizations and Refugee and Asylum Operations from USCIS fees. Currently, the costs for Military Naturalizations and Refugee and Asylum Operations are being funded within IEFA, the account which finances the majority of USCIS fee-based activities. However, persons receiving services and benefits through these programs are exempt by law from paying fees. As a result, costs for the activities are added to the fees of non-exempt applicants as a surcharge. The asylum-refugee surcharge on each application and petition was estimated in 2007 to be \$40. While USCIS has the authority to charge other applicants the cost of providing benefits which are exempt from fees, this cost unduly burdens such applicants particularly as costs rise for these services.

CURRENT SERVICES PROGRAM DESCRIPTION:

FY 2010 planned funding for Adjudication Services includes \$779.6 million for payroll, \$527.6 million for District Operations, \$298.6 million for Service Center Operations, \$45.7 million for Refugee, Asylum, and International Operations, \$76.7 million for Records Operations, and \$173.3 million for Business Transformation.

Each year, millions of people apply for various types of immigration benefits from the U.S. Government. Immigration Services Officers (ISO) determine eligibility for a wide variety of benefits. They review applications and often conduct interviews of the applicants. ISOs have the dual responsibility of providing courteous service to the public while being alert to the possibility of fraud and misrepresentation and national security concerns. ISOs are assigned to one of 60 field offices located in 26 Districts nationwide; in one of four Service Centers located in St. Albans, VT, Lincoln, NE, Dallas, TX, and Laguna Niguel, CA; or in the National Benefits Center located in Lees Summit, MS.

In coordination with DHS and other federal agencies, USCIS combats immigration benefit fraud through the Office of Fraud Detection and National Security (FDNS). FDNS staff analyze and identify fraud patterns and trends, and document evidence of fraud for administrative action. USCIS will continue to implement fraud detection measures in Service Centers, field offices, and Refugee and Asylum programs and train adjudications staff to proactively identify fraud/security profiles while considering an application. Also, USCIS works in coordination with other components of DHS, and with agencies such as the Departments of Labor and State, and the Federal Bureau of Investigation (FBI) to conduct background checks.

Adjudication Services also includes funding for business transformation efforts and the Office of Information Technology. The Office of Transformation Coordination (OTC), and its primary component, the Transformation Program Office (TPO), oversee a multi-year effort to transform USCIS' current paper-based data systems into a modern, world-class digital processing resource that will enhance customer service, better prevent future backlogs, and improve USCIS efficiency while also strengthening security.

OTC coordinates transformation initiatives across USCIS and with other immigration enterprise partners at DHS and other federal agencies. TPO manages multiple contracts including pilot projects in support of USCIS' transformation, along with a Solutions Architect (SA) contract to assist with acquiring, integrating, and delivering the services to transform business processes; a Program Management Office support contract; a Federally Funded Research and Development Center contract to assist in program oversight functions; and other specialized contracts as needed to assist in overall implementation.

The Transformation Program will simplify, improve, and automate end to end USCIS business processes. An initial SA task order was awarded on November 3, 2008 to International Business Machines, Inc. (IBM) and publicly announced on November 6,

2008. The solution includes two increments spanning seven releases to be deployed over five years. The transformed USCIS processes will address security/integrity gaps of the immigration system by effectively collecting, analyzing, and sharing information used to verify identity, eligibility, and status. These processes will address service gaps by providing timely and accurate information online to customers 24 hours a day.

The Office of Information Technology supports USCIS operations with technology services and solutions to transform our Nation's immigration system. To create a disciplined organization focused on delivering strategic business value and high quality IT service through our people, processes, and technology.

Significant accomplishments in FY 2008 include:

- Revised the naturalization exam to improve civic content and to make the test an instrument of civic learning for immigrants. Naturalization applicants will now have a uniform, consistent experience nationwide.
- Implemented a pilot in July 2008, of the Secure Mail Initiative (SMI) at the Nebraska Service Center where Travel Documents are personalized. All re-entry permits and refugee travel documents are now being mailed using U.S. Postal Service Priority Mail with delivery confirmation.
- The Domestic Operations Directorate:
 - Processed 1.4 million employment authorization applications.
 - Processed 740,000 adjust status applications.
 - Processed over 1.1 million naturalization applications.
 - Processed 447,000 applications to replace permanent resident cards.
 - Processed 460,000 nonimmigrant worker petitions.
 - Processed nearly 30,000 orphan petitions.
 - Personalized 1.76 million Permanent Resident Cards, 1.36 million Employment Authorization Documents, and 126,085 Travel Documents.
- The Transformation Program Office:
 - Awarded an SA contract to IBM who will develop and in coordination with OIT, implement USCIS' Business Transformation.
 - Integrated Digitization Document Management Program (IDDMP) – Records Digitization Facility (RDF) and Enterprise Document Management System (EDMS) capabilities are operational. USCIS is able to scan, store, and view immigration paper files and related documents making electronic information available to USCIS and other partners.
 - EDMS successfully digitized and captured nearly 500,000 files.
 - With version 2.1 and 3.0 deployed in 2008, the user base increased to 12,000 bringing total capacity to 15,000, and the system now has the capability to watermark documents printed from the system along with enhanced search and editing capabilities.
 - Release 4.0 is scheduled for deployment in August 2009 and will deliver lockbox receipt functionality and provide multi-domain authentication.
- The Refugee, Asylum and International Operations Directorate:

- Adjudicated more than 99,000 I-590 refugee applications worldwide.
 - Note: Approximately 50 percent of the workload was accomplished by temporary duty assignments of permanent staff.
- Interviewed more than 23,000 Iraqi refugee applicants, which supported the admission of 13,823 Iraqi refugees; this exceeded the Administration's goal of 12,000 admissions.
- Launched the Cuban Family Reunification Parole Program, which permits Cuban beneficiaries of I-130 petitions to be paroled into the U.S. without the need for a current visa number.
- Coordinated the largest overseas military naturalization ceremonies since the implementation of the National Defense Authorization Act of 2004: 252 military service members naturalized in Balad, Iraq, on November 11, 2007; and 259 military service members naturalized in Baghdad, Iraq, on April 12, 2008; and 44 military service members naturalized in Bagram, Afghanistan on May 26, 2008.
- Fraud Detection and National Security (FDNS):
 - Hired over 150 new immigration officers and analysts, primarily in the field, to expand anti-fraud efforts.
 - Awarded the Administrative Site Visit Program (ASVVP) contract to provide a comprehensive and flexible verification tool for FDNS officers.
 - Reengineered and delivered a four-week FDNS Officer Basic Training Program to 185 FDNS personnel.
 - Enhanced the FDNS Data System (FDNS-DS) to support better data collection and reporting capabilities for both Fraud and National Security work.
 - Implemented a centralized Law Enforcement Support Operations Unit (LESO) to support law enforcement and intelligence organizations who need specialized assistance in sensitive immigration cases or operations.
- Office of Information Technology
 - Achieved a Federal Information Security Management Act (FISMA) score of 91 (exceeded DHS goal of 90).
 - Based on an independent assessment, USCIS achieved Federal Enterprise Architecture (FEA) level III compliance with USCIS Enterprise Architecture pending TPO alignment. Based on a zero to five scale, level III compliance indicates an agency has a well defined Enterprise Architecture.
 - Completed deployment of National File Transfer System (NFTS) to the last three USCIS sites (California, Nebraska and Vermont), resulting in global tracking and file accountability.
 - Initiated technology improvements to the naturalization business process.

Planned activities for FY 2009 include:

- Work with GSA to complete construction and/or build-out of space at the site selected for the second full service card production facility.

- Send all Permanent Resident Cards, Employment Authorization Documents and Travel Documents via the new secure mail process.
- Complete 100,000 refugee I-590 applications to support 75,000 admissions worldwide.
- Implement a comprehensive refugee standard operating procedure and expand and improve capacity to capture and check biometrics to all applicants for refugee resettlement.
- Achieve a six-month cycle time measured in real time for affirmative asylum.
- Begin executing the ASVVP with up to 1,600 site visits.
- Deploy FDNS Regional Special Operations Teams targeting fraud trends and emergent migration trends posing a threat to the national security.
- Establish an overseas presence of FDNS Officers in an effort to enhance verification processes as well as target fraud perpetrated by persons exploiting vulnerabilities in the immigration system at American Embassies and Consulates worldwide.
- Continue to work with the FBI to reach the goal of processing all name checks within a six month timeframe.
- Improve ability to collect, maintain, analyze, and report data and use that information to inform or refine program direction.
- Continue to support the development of the National Immigration Information Sharing Operation (NIISO) at the National Records Center, working jointly with DHS and its various components.
- Mature Federal Enterprise Architecture (FEA) Level III compliance with USCIS Enterprise Architecture and incorporate into the USCIS Transformation.
- Successfully deploy technology solution for H-1B pre-registration lottery.
- Initiate DHS data center migration.

During FY 2010, USCIS plans to:

- Identify any additional U.S. Government and non-government databases that can be used for security screening purposes.
- Increase the number of ASVVP site visits with a target goal of 5,000.
- Achieve FEA level IV compliance with USCIS Enterprise Architecture.
- Successfully re-host CLAIMS3 LAN.
- Continue migration of USCIS Department of Justice (DOJ)-hosted applications (E-Verify from Rockville and all mainframe applications from Dallas) from the DOJ data centers to DHS data centers.
- Begin migration of production systems in the Technology Engineering Consolidation Center (TECC), including CLAIMS 4, National File Tracking System (NFTS), Federal Information Processing Standards (FIPS) and Microfilm Digitization Application System (MIDAS) to one of the DHS data centers.
- Begin development of the first increment of Transformation – Citizenship – and the associated releases. Release 1 and 2 are anticipated to be completed prior to the end of FY 2010. Services will begin to encompass end-to-end adjudication and will include web-based account setup and electronic filing by customers;

identity management; a new case management system; electronic workflow; and expansion of on demand scanning.

PPA: INFORMATION AND CUSTOMER SERVICES

	Perm. Pos.	FTE	Amount
2008 Actual	1,115	895	\$136,042
2009 Enacted	1,117	1,070	\$149,058
2010 Adjustments-to-Base	47	0	\$5,130
2010 Current Services	1,070	1,070	\$172,266
2010 Program Change	0	0	\$0
2010 Request	1,070	1,070	\$154,188
Total Change 2009-2010	47	0	\$5,130

USCIS requests \$154.2 million to provide timely, consistent, and accurate information to our customers. The net adjustment-to-bases include increases of 45 FTE and \$12.3 million for pay adjustments/annualizations, \$330 thousand for annualization of prior year part year funding, and \$29 thousand for GSA rent.

In addition, decreases of 47 positions, 45 FTE, and \$7.5 million previously funded in this area will be funded through an appropriation within the Salaries and Expenses Account for FY 2010 under the Fee Reform proposal. The positions and funding are associated with agency-wide overhead allocated through an activity-based cost system to this category of funding.

CURRENT SERVICES PROGRAM DESCRIPTION:

FY 2010 planned funding for Information and Customer Services (ICS) includes \$88.1 million for payroll, and \$51.7 million for National Customer Service Centers, and \$14.4 million for Information Services.

Through ICS, USCIS reduces the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. USCIS makes it easier for our customers to get the information they need, when they need it, through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments.

On an annual basis, USCIS:

- Serves more than 16 million customers via the National Customer Service Call Centers
- Serves approximately 3 million customers through information counters at local offices

Each year millions of people apply for various types of benefits under the Immigration and Nationality Act. Immigration Services Officers (ISOs) provide information about immigration and nationality law and regulations. They assist with a wide variety of requests, including questions on how to complete required forms, and explain the

administrative procedures and normal processing times for each application. ISOs offer a range of service activities from providing information on applicant cases to problem resolution assistance on applications and petitions. ISOs also review and make decisions on a limited array of applications and petitions. ISO positions are located throughout the country in Districts, Field Offices, and Service Centers.

Through the National Customer Service Center's six telephone centers, USCIS provides toll-free nationwide assistance to customers calling from within the U.S. Customers can access live assistance from 8:00 AM until 6:00 PM local time, Monday through Friday. They can also access recorded information (including information about the status of their specific case) 24 hours a day/7 days a week. Both live and recorded service is available in English and Spanish.

USCIS receives about 1.4 million direct information and customer service related contacts each month, or more than 16 million contacts per year. Today, over 72 percent of all information and customer service interactions are self-service. The self-service options give customers new choices that are simpler and more effective to both customers and USCIS. This option also results in significant cost avoidance when compared to what it would cost USCIS to provide live assistance to all these customers.

In-person service continues to be a critical component of the USCIS service model. To improve service levels, USCIS shifted to offering most in-person service by appointments scheduled via website. This has helped mitigate long lines and wait times, while addressing customer concerns and inquiries.

Accomplishments for FY 2008 include:

- Completed customer queuing systems in remaining 14 local offices.
- Upgraded customer queuing system to allow interface with appointment scheduling software, created a knowledge management system, and displayed presentations geared to educating customers in the information waiting rooms.
- Introduced a pilot program to initiate adjudication appointment customers into the customer queuing system to enable the capture of adjudicator performance metrics.
- Reviewed and revised Inter-Active Voice Response (IVR) system to improve efficiency of the system and the effectiveness of the information provided.
- Developed strategies and launched "How Do I" information on the web for external customer use.
- Improved Customer Processing Times Matrix.

Planned activities for FY 2009 include:

- Enhance self-service through improved online scripts, continue enhancements with the automated appointment scheduler, and enhance call center efficiencies and improve customer service
- Deploy Service Request Management Tool (SRMT) online for external customer use, thereby improving self-service

PPA: ADMINISTRATION

	Perm. Pos.	FTE	Amount
2008 Actual	661	467	\$335,691
2009 Enacted	686	665	\$372,634
2010 Adjustments-to-Base	0	21	\$2,222
2010 Current Services	686	686	\$382,442
2010 Program Change	0	0	\$0
2010 Request	686	686	\$374,856
Total Change 2009-2010	0	21	\$2,222

USCIS requests \$374.9 million to strengthen key management processes, systems, and administrative support activities; and to facilitate mission success and enhance the timeliness, accountability, efficiency and effectiveness of service delivery. The adjustment-to-base increase includes 21 FTE and \$8.4 million for pay adjustments/annualizations, \$1 million for annualization of prior year part year funding, and \$9.3 million for GSA rent. The requested level also includes a decrease of \$1 million for one-time non-recurring costs.

In addition, a decrease of \$15 million previously funded in this area will be funded through an appropriation within the Salaries and Expenses Account in FY 2010 under the Fee Reform proposal. The positions and funding are associated with agency-wide overhead allocated through an activity-based cost system to this category of funding.

CURRENT SERVICES PROGRAM DESCRIPTION:

FY 2010 funding for Administration is comprised of \$98.7 million for payroll and \$276.2 million for operating expenses. Outside of the offices of the Director and the Deputy Director, core offices include the following:

Office of Administration plans, develops, implements, and evaluates agency-wide policies, procedures, and programs for Acquisition, Asset, and Facilities Management, for the operation of centrally managed, agency-wide support activities, and for the direct delivery of administrative support to Headquarters.

Office of Chief Counsel (OCC) consists of dedicated legal divisions advising and representing USCIS Operations both at Headquarters and in the field. Divisions include Adjudications Law, Refugee and Asylum Law, Commercial and Administrative Law, Ethics, Field Operations, Training, and Liaison. Each division is responsible for reviewing, interpreting, and providing legal advice and guidance to USCIS operational components and OCC field staff.

Office of Communications oversees and coordinates communication to both internal and external stakeholders to empower employees with the tools needed to perform their jobs,

educate the public regarding USCIS benefits and services, and facilitate consistent messaging and imaging for USCIS.

Office of Congressional Relations (OCR) maintains communication with Congress through responding to constituent concerns, promoting USCIS' priorities, proactive outreach on issues of interest, and ongoing educational activities for Members of Congress and their staff.

Office of Ombudsman Liaison serves as the Director's representative to the DHS CIS Ombudsman and provides customer relationship management oversight and evaluation.

Office of Equal Opportunity and Inclusion (OEOI) ensures individuals are not denied opportunities in employment or program-services delivery because of their race, color, religion, sex, national origin, age, disability, sexual orientation, status as a parent, genetic information or reprisal.

Office of Policy and Strategy directs, prioritizes, and sets the agenda for agency-wide policy, strategy, and long-term planning activities, as well as for the conduct of research and analysis on immigration services issues.

Office of Security and Integrity (OSI) leads a multi-disciplined security and integrity program to protect and safeguard USCIS personnel, facilities, information and assets. OSI manages the personnel and industrial security, administrative/special security, communications security, and physical security programs and oversees the security awareness training program. OSI also manages a comprehensive internal management review program of USCIS functions and protects the integrity of USCIS programs by investigating allegations of employee misconduct related to waste, fraud, abuse or mismanagement.

Office of the Chief Human Capital Officer (CHCO) leads the strategic management of human capital in organizationally aligning and integrating workforce planning, recruiting, orientation, training, leadership and career development, and performance standards in achieving USCIS' mission. CHCO is responsible for establishing an enterprise-wide environment for continuous learning and a culture of professional excellence and includes the Human Capital Management Division and the Training and Career Development Division.

Office of Emergency Management and Safety (EMS) develops, maintains and enhances USCIS' Emergency Preparedness and Continuity of Operations, and Occupational Safety and Health programs to protect our employees, ensure a safe and healthy work environment, mitigate and minimize damage or destruction of property and vital records, and ensure the continued performance of USCIS' essential functions during unexpected emergencies and/or catastrophic events.

PPA: SYSTEMATIC ALIEN VERIFICATION FOR ENTITLEMENTS (SAVE)

	Perm. Pos.	FTE	Amount
2008 Actual	182	107	\$13,376
2009 Enacted	182	161	\$18,818
2010 Adjustments-to-Base	0	21	\$2,529
2010 Current Services	182	182	\$21,347
2010 Program Change	0	0	\$0
2010 Request	182	182	\$21,347
Total Change 2009-2010	0	21	\$2,529

USCIS requests \$21.3 million to fund existing operations. The SAVE program assists organizations by providing a non-citizen applicant's immigration status, in order to determine eligibility for federal, state, or local public benefits. The adjustment-to-base increase includes \$2.6 million for pay adjustments, and \$18 thousand for annualization of prior year part year funding.

In addition, a decrease of \$92 thousand previously funded in this area will be funded through an appropriation within the Salaries and Expenses Account in FY 2010 under the Fee Reform proposal. The positions and funding are associated with agency-wide overhead allocated through an activity-based cost system to this category of funding.

CURRENT SERVICES PROGRAM DESCRIPTION:

The SAVE program helps state, local, or federal agencies determine a non-citizen's eligibility for public benefits by checking their immigration status. In total, about 269 agencies use SAVE services. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles.

REAL ID is a nationwide effort intended to prevent terrorism, reduce fraud, and improve the reliability and accuracy of identification documents that state governments issue. The SAVE program helps support implementation of the requirements of the REAL ID Act of 2005. Specifically, the Act requires routine verification of lawful status through the SAVE program of all non-citizen applicants for a driver's license or state-issued identification card.

Planned activities for FY 2009 include:

As of February 21, 2009, the SAVE program had a total 269 registered agencies. This included 155 state agencies, 29 DMVs, 59 local agencies, and 26 federal agencies.

The planning estimate for SAVE queries in FY 2009 is approximately 10.9 million and the planning estimate for agencies enrolled in the SAVE program in FY 2009 is 277.

The FY 2009 SAVE program budget includes status verification operations, monitoring and compliance, and program management staffing costs. Funding is split between status verification monitoring/compliance staff, and program management.

In FY 2009, the SAVE program plans to provide a training DVD to its user community; the DVD would include SAVE basic and advanced training. The training would also be available on the SAVE public website. Currently, training is provided by government employees traveling to various sites performing demonstrations and hands-on training. Additionally, the SAVE program plans to partner with the American Association of Motor Vehicle Administrators (AAMVA) to continue in-state the operations and maintenance of the connectivity built over the last year. The AAMVA connectivity allows DMVs another avenue to connect to the SAVE program and facilitate REAL ID requirements.

Planned activities for FY 2010 include:

In FY 2010, USCIS will also reduce SAVE secondary verifications through technological enhancements to the Verification Information System (VIS) and improvements to the database's accuracy. SAVE secondary verification reduction would reduce usage costs of using SAVE for participating entities. The planning estimate for SAVE queries in FY 2010 is approximately 13.3 million and the planning estimate for the number of agencies enrolled in the SAVE program in FY 2010 is 303.

IV. Program Justification of Changes

Not applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

Sec. 536. Temporary Protected Status Fee Clarification.

(a) In general. Section 244 of the Immigration and Nationality Act (8 U.S.C. 1254a), as amended, is further amended in subsection (c)(1)(B) by:

(1) striking the second sentence ; and

(2) striking in the third sentence "a separate, additional fee" and inserting in lieu thereof: "separate, additional fees for reregistration, for fingerprinting or other biometric services regardless of whether such services may relate to an initial or renewed registration for temporary protected status, and".

(b) Effective date. The amendment made by this section is effective as of the date of enactment of Pub. L. No. 102-232.

Explanation

The provision removes the current statutorily-set registration fee of \$50 on Temporary Protected Status (TPS) applicants to permit USCIS to match future fees to estimated actual cost. The provision also clarifies the law on biometric fees assessed on past and current applicants. It also supports the Administration's overall goal to reform immigration fees and ensure that fees are set at the level to recover costs for providing a specific benefit.

 2009 to 2010 Total Change	 (739)	 (476)	 (43,302)

1/ FY08 Actual FTE includes Surge workhours

2/ FY 2009 enacted excludes \$170M in additional spending authority approved in the reprogramming.

3/ The Fee Reform reduction of 739 positions, 719 FTE and \$199M is based on the FY 2009 enacted level. The FTE and associated costs are annualized and inflated in building to FY 2010 total requirements. After applying the annualization and inflationary adjustments, the reduction to IEFA in FY 2010 associated with fee reform would be 739 positions, 739 FTE and \$205M. In addition, 5 positions and 5 FTE funded under the Salaries and Expenses account in FY 2009 were planned to be funded through IEFA in FY 2010. However, these positions and FTE were incorporated into the fee reform proposal. As a result, the total FY 2010 requirements funded through appropriations is 744 positions, 744 FTE and \$205M.

PPA Mission Statement

The funds from the Immigration Examinations Fee Account (IEFA), Adjudication Services Program, is the primary funding source and Program supporting USCIS' mission. USCIS requests \$2 billion to process millions of immigration benefit applications; maintaining backlog goals achieved at the end of FY 2006, and ensuring the security and integrity of the immigration system. \$174 million will also be used for the Business Transformation Program.

Summary Justification and Explanation of Changes

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$723,299	\$800,763	\$779,583	(\$21,180)

Salaries and Benefits includes costs for 7,533 FTEs. The FY 2010 request includes an increase of \$10,878,000 for the proposed January 2010 2.0 percent increase in personnel compensation, \$11,139,000 for within-grade and step adjustments, \$7,092,000 in annualization of the FY 2009 pay raise, plus 156 FTE and \$17,110,000 for annualization of prior year part-year funding. There is also a reduction of 674 FTE and \$67,394,000 for pay adjustments related to the fee reform proposal, and a reduction of \$5,000 in non-pay funding for benefits associated with the fee reform adjustments.

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$23,415	\$28,083	\$15,826	(\$12,257)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request includes a decrease of \$12,336,000 for costs related to the fee reform adjustments, and an increase of \$79,000 for annualization of prior year part-year funding.

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change
Transportation of Things	\$5,447	\$1,160	\$939	(\$221)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2010 request includes a decrease of \$226,000 for costs related to the fee reform adjustments, and an increase of \$5,000 for annualization of prior year part-year funding.

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change
GSA rent	\$86,403	\$98,599	\$100,817	\$2,218

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2010 request includes a decrease of \$8,811,000 for costs related to the fee reform adjustments, and an increase of \$11,029,000 for annualization of prior year part-year funding.

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change
Other Rent	\$3,742	\$1,513	\$1,521	\$8

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2010 request includes an increase of \$8,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Communication, Utilities, and miscellaneous charges	\$28,317	\$22,958	\$22,604	(\$354)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2010 request includes a decrease of \$466,000 for costs related to the fee reform adjustments, and an increase of \$112,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Printing	\$14,478	\$7,082	\$7,078	(\$4)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 request includes a decrease of \$39,000 for costs related to the fee reform adjustments, and an increase of \$35,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Advisory and Assistance Services	\$394,933	\$267,916	\$236,025	(\$31,891)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request includes a decrease of \$32,982,000 for costs related to the fee reform adjustments, and an increase of \$1,091,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Other Services	\$298,327	\$616,442	\$645,516	\$29,074

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 request includes a decrease of \$31,747,000 for costs related to the fee reform adjustments, a one-time decrease of \$5,729,000 for cost reductions in the FOIA Backlog program, an increase of \$2,286,000 for annualization of prior year part-year funding, an increase of \$30,000,000 for information technology upgrades in support of USCIS transformation, and an increase of \$34,264,000 for CPI adjustments to the premium processing fee.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Purchase from Government Accounts	\$142,678	\$11,376	\$11,432	\$56

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 request includes an increase of \$56,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Operation & Maintenance of equipment	\$36,881	\$32,062	\$28,927	(\$3,135)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 request includes a decrease of \$3,279,000 for costs related to the fee reform adjustments, and an increase of \$144,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Supplies & materials	\$19,174	\$33,325	\$32,507	(\$818)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2010 request includes a decrease of \$980,000 for costs related to the fee reform adjustments, and an increase of \$162,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Equipment	\$62,765	\$22,324	\$18,588	(\$3,736)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request includes a decrease of \$3,828,000 for costs related to the fee reform adjustments, and an increase of \$92,000 for annualization of prior year part-year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Grants/Subsidies/Contributions	\$30	\$10,976	\$32	(\$10,944)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 request includes a decrease of \$10,944,000 for costs related to the fee reform adjustments.

2/ FY 2009 enacted excludes \$170M in additional spending authority approved in the reprogramming.

PPA Mission Statement

The funds from the Immigration Examinations Fee Account (IEFA), Information and Customer Services Program, are used to provide timely, consistent, and accurate information to its customers that will reduce the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. Through multiple channels of available assistance, including the USCIS website, toll-free call center (National Customer Service Call Center), and face-to-face appointments; USCIS will make it easier for our customers to get the information they need, when they need it.

Summary Justification and Explanation of Changes

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$65,731	\$78,935	\$88,063	\$9,127

Salaries and Benefits includes costs for 1,070 FTEs. The FY 2010 request includes an increase of \$1,177,000 for the proposed January 2010 2.0 percent increase in personnel compensation, \$1,206,000 for within-grade and step adjustments, \$768,000 in annualization of the FY 2009 pay raise, plus 45 FTE and \$9,128,000 for annualization of prior year part-year funding. There is also a reduction of 45 FTE and \$3,152,000 for pay adjustments related to the fee reform proposal.

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. CITIZENSHIP & IMMIGRATION SERVICES H-1B NONIMMIGRANT PETITIONER ACCOUNT

I. Appropriation Overview

A. Mission Statement for H-1B Nonimmigrant Petitioner Account:

The H-1B Visa Reform Act of 2004 requires employers who participate in the H-1B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base-processing fee of \$320 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives five percent of these funds, as well as the entire base-processing fee. However, this account only includes funding associated with the fee stipulated in the H-1B Visa Reform Act of 2004 it does not include funding associated with the base processing fee. These funds comprise less than one percent of the total USCIS budget.

B. Budget Activities:

Funding from the H-1B Nonimmigrant Petitioner Account primarily supports the Domestic Operations Directorate. Fee revenues primarily fund contract activities (mail, filing, biometric and data entry) and facility rent expenses related to the processing of immigration benefit applications at USCIS Service Centers.

Domestic Operations manages four regionally based Service Centers which receive, process, and adjudicate applications, petitions and their related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary. This office also oversees the operations of USCIS document production operations at the production facility in Corbin, KY, and at two of the Regional Service Centers. The Service Centers also provide data entry and card production support for some District Office and Asylum Office workloads, as well as processing of immigrant visas for incoming immigrants.

C. Budget Request Summary:

The USCIS requests \$13,000,000 in FY 2010 to maintain current service levels. These funds will continue to support contract activities and facility rent expenses for the processing of immigration benefit applications.

D. Proposed PPA Structure:

The revised PPA structure proposed by USCIS does not impact the H-1B Nonimmigrant Petitioner Account.

^{1/} FY 2009 enacted levels exclude \$2M in additional spending authority approved in the reprogramming.

USCIS requests \$13 million for contract activities and facility rent expenses that support the processing of immigration benefit applications. The requested amount is set by Congressional statute providing USCIS with five percent of the fees collected for the H-1B visas (Nonimmigrant Petitioner), in addition to the base-processing fee to file a Petition for a Nonimmigrant Worker (Form I-129).

CURRENT SERVICES PROGRAM DESCRIPTION:

USCIS Domestic Operations receives, processes and adjudicates applications, petitions and their related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary, which includes:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily.

Domestic Operations also provides data entry and card production support for some District Office and Asylum Office workloads, as well as processing of immigrant visas for incoming immigrants.

USCIS annually processes millions of immigration benefit applications at its Service Centers. The \$13 million for contract activities and facility rent expenses is a portion of the total operations contract support and Service Center rent. The difference is covered by fees collected into the Immigration Examinations Fee Account.

In FY 2008, funding was used to:

- Support ongoing mail, data entry and file room functions performed by contractor staff at the USCIS Service Centers located in St. Albans, VT and Laguna Niguel, CA.
- Finance the payment of a portion of the rent costs associated with housing the contractor staff within the Service Centers.

In FY 2009 and 2010, USCIS plans to:

- Ensure that the mail, filing and data entry functions being performed by contractors located within the Service Centers continues uninterrupted.
- Continue funding for Service Center facility rent expenses.

PPA Mission Statement

The funds from the H-1B Nonimmigrant Petitioner Account, comprising less than one percent of the total USCIS budget request, are specifically targeted to contracting activities and facility rent expenses related to processing immigration benefit applications. These funds are the result of the H-1B Visa Reform Act of 2004, which requires employers who participate in the H-1B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base processing fee of \$320 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives five percent of these funds, as well as the entire base processing fee. However, this account only includes funding associated with the fee stipulated in the H-1B Visa Reform Act of 2004 it does not include funding associated with the base processing fee.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. CITIZENSHIP & IMMIGRATION SERVICES FRAUD PREVENTION AND DETECTION ACCOUNT

I. Appropriation Overview

A. Mission Statement for Fraud Prevention and Detection Account:

Funding in the Fraud Prevention and Detection Account is used for activities related to preventing and detecting fraud associated with immigration benefit applications as stipulated in the L-1 Visa Reform Act of 2004 (later amended by Public Law 109-13, Section 403). The law requires petitioners to pay \$500 toward this purpose for a beneficiary's initial grant of H-1B or L nonimmigrant classification, as well as if they are changing a beneficiary's employer within these classifications; and pay \$150 for H-2B benefit in addition to the base-processing fee for a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives a one-third share of these fees.

B. Budget Activities:

Funding supports Fraud Detection and National Security (FDNS) efforts related to the H-1B, H-2B, or L nonimmigrant classifications. FDNS develops, coordinates and leads national anti-fraud operations for USCIS and oversees and enhances policies and procedures pertaining to the performance of law enforcement (background) checks on applicants and petitioners.

C. Budget Request Summary:

USCIS requests 186 positions, 186 FTE, and \$38,348,000 to fund USCIS requirements for FY 2010. Adjustments-to-base include an increase of 6 FTE and \$7.3 million from FY 2009 enacted levels. This increase includes \$5.2 million in carryover funds used in FY 2009 to support additional payroll requirements (\$1.5 million) and to begin a new activity to help focus anti-fraud activities through the use of private sector business information (\$3.7 million). An additional \$2.1 million is included in pay adjustments and \$80,000 for annualization of prior year part year funding.

D. Proposed PPA Structure:

The primary purpose of the proposed restructuring is to eliminate the depicted breakout between pay and non-pay line items. Combining pay and benefits lines with general expenses lines will reduce the need to seek reprogrammings for smaller, inconsequential movements of resources. These movements in the recent past related mostly to re-estimates of costs for either category which had virtually no significant effect on program or policy direction such as updated estimates on payroll costs or the reclassification of employees between PPA line items. USCIS fully intends to continue to execute and monitor annual resources with breakouts between pay and non-pay. For changes that have a significant program, resource, or policy implications, USCIS will continue to keep the Committee apprised irrespective of the line item breakout.

In addition to the pay/non-pay change, some of the titles of individual lines are adjusted to reflect current budget proposals. Finally, the restructuring proposes to combine the current “National Customer Service Center” and “Information Services” line items into a single line for “Information and Customer Services”, which mirrors the name of the current organization within USCIS which utilizes the funding within both lines.

Revised PPA Crosswalk Proposal

2010 Program Change	0	0	\$0
2010 Request	186	186	\$38,348
Total Change 2009-2010	0	6	\$7,348

^{1/} FY 2009 enacted levels exclude \$12.5M in additional spending authority approved in the reprogramming.

USCIS requests 186 positions, 186 FTE, and \$38.4 million for this activity. This is an increase of 6 FTE and \$7.3 million from FY 2009 enacted levels. This increase includes \$5.2 million in carryover funds used in FY 2009 to support additional payroll requirements (\$1.5 million) and to begin a new activity to help focus anti-fraud activities through the use of private sector business information (\$3.7 million). An additional \$2.1 million is included in pay adjustments and \$80,000 for annualization of prior year part year funding. The requested level reflects USCIS' projected H & L visa fraud prevention and detection requirements for FY 2010.

In FY 2009, USCIS anticipates a transfer to the U.S. Immigration and Customs Enforcement (ICE) to address H & L visa fraud enforcement efforts. USCIS and ICE previously agreed that USCIS would provide \$7 million to support ICE for FY 2009. Of the \$6 million that was provided to ICE in FY 2008, \$3.5 million was obligated, leaving a balance of \$2.5 million which will be used to offset the total cost of sustaining ICE activities in FY 2009. As a result, there will be a \$4.5 million transfer for FY 2009.

CURRENT SERVICES PROGRAM DESCRIPTION:

FDNS, in partnership with ICE's Office of Investigations, has dual missions: detecting and combating fraud; and identifying threats to national security and public safety posed by those seeking immigration benefits. FDNS is also an active member of the ICE-led interagency Document and Benefit Fraud Task Forces (DBFTFs). The cooperative work between ICE and FDNS promotes the efforts to combat H & L visa fraud more effectively and to identify and pursue solutions.

FDNS has completed a Benefit Fraud and Compliance Assessment (BFCA) for the H-1B (specialty occupation) benefit category and is in the process of conducting an assessment of the L-1A (multi-national executive or manager) nonimmigrant visa classifications. With respect to L-1A specifically,

FDNS is reviewing and analyzing data, identifying possible fraud trends and indicators, and conducting overseas verification requests.

FDNS is in the process of establishing overseas H & L Anti-fraud Officer positions at eight high volume H & L posts. By the end of FY 2009, it is anticipated that there will be 6 FDNS Immigration Officer positions and 7 Foreign Service National positions established at overseas locations. These units will help develop FDNS's capacity to conduct H & L visa inquiries based upon requests for verification of information from USCIS officers.

In addition, FDNS has developed an Administrative Site Visit Verification Program (ASVVP). This program utilizes contractors to conduct site visits on select cases. The ASVVP will be the vehicle used to conduct post-adjudication compliance site visits on select H & L visa petitions. The ASVVP is expected to become a major element of the agency fraud prevention, deterrence and abatement management.

As part of the overall joint anti-fraud strategy and in partnership with ICE, FDNS identifies vulnerabilities in the benefit fraud system and works to eliminate the potential for exploitation of those vulnerabilities and prosecute the violators. Information on trends in fraud and criminal behaviors are shared between USCIS and ICE so that both are better able to identify and prevent potential abuse of the nation's immigration system.

Recognizing the need to better focus our integrated fraud efforts, FDNS and ICE signed a new Memorandum of Agreement (MOA) discontinuing the practice of referring all suspected fraud to ICE. This MOA refines criteria for referrals to the following:

- Major fraud conspiracies
- Fraud cases involving nationals from countries designated in writing by ICE
- Corrupt attorneys and form preparers

Fraud referrals made for any of these reasons will be accepted or declined by ICE within 60 days of referral. Irrespective of ICE action, USCIS can continue administrative actions to address fraud.

In FY 2008, USCIS used funding from the Fraud Prevention and Detection Account to:

- Fund 71 additional FDNS Officer FTE's to add significant productive hours dedicated to H & L fraud related leads and cases.
- Develop an anti-fraud operational strategy focused specifically on identifying fraud in H & L petitions.
- Award the ASVVP contract in the fourth quarter of FY 2008, to provide a comprehensive and flexible verification tool to USCIS officers.
- Complete a comprehensive review of all FDNS business requirements for the development of a new, user-friendly FDNS Case Management System.
- Augment the current anti-fraud efforts within USCIS by dedicating more staff and contractor support to conducting system checks that identify known (previously proven) fraud conspirators and their associations with future filings.
- USCIS referred 4,516 cases to ICE, of which 1,050 were accepted for investigation. It is expected that USCIS has processed or will process approximately 3,466 FY 2008 fraud cases.

In FY 2009 and FY 2010, USCIS will continue using funding received from the Fraud Prevention and Detection Account to:

- Develop a proactive anti-fraud program that bounces key fraud indicators from past (proven) conspiracies against all incoming applications and petitions.
- Support security-related initiatives and continue contractor assistance to support ongoing efforts to develop a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.
- Begin executing the ASVVP during FY 2009, including 6,000 site visits to be funded from the Fraud Account.
- Increase the number of government and contract personnel dedicated to gathering and analyzing referral, lead, and case data to identify fraud trends and the means by which to eliminate the fraud most effectively.
- Increase the use of private sector information services to identify fraudulent business entities. In FY 2009, USCIS received a spending authority increase of \$4.9M through a reprogramming to implement a capability to review financial and other business characteristics of organizations submitting employment-based petitions. This effort will continue into FY 2010 with approximately \$3.7 million in planned funding.

IV. Program Justification of Changes

Not applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

Sec. 535. Sections 286(v)(2)(A), (B), and (C) of the Immigration and Nationality Act, as amended (8 U.S.C. 1356(v)(2)(B)) are amended to read as follows: “(A) Secretary of State – One-third of the amounts deposited into the Fraud Prevention and Detection Account shall remain available to the Secretary of State until expended for programs and activities (i) to increase the number of consular and diplomatic security personnel assigned primarily to the function of preventing and detecting fraud by applicants for visas described in subparagraph (H)(i), (H)(ii), or (L) of section 101(a)(15) of this Act; (ii) otherwise to prevent and detect visa fraud, including fraud by applicants for visas described in subparagraph (H)(i), (H)(ii), or (L) of section 101(a)(15) of this Act; as well as the purchase, lease, construction, and staffing of facilities for the processing of these classes of visa, in consultation with the Secretary of Homeland Security as appropriate; and (iii) upon request by the Secretary of Homeland Security, to assist such Secretary in carrying out the fraud prevention and detection programs and activities described in subparagraph (B). “(B) Secretary of Homeland Security – One-third of the amounts deposited into the Fraud Prevention and Detection Account shall remain available to the Secretary of Homeland Security until expended for programs and activities to prevent and detect immigration benefit fraud, including but not limited to fraud with respect to petitions filed under paragraph (1) or (2)(A) of section 214(c) to grant an alien nonimmigrant status described in subparagraphs (H) or (L) of section 101(a)(15). “(C) Secretary of Labor – One-third of the amounts deposited into the Fraud Prevention and Detection Account shall remain available to the Secretary of Labor until expended for wage and hour enforcement programs and activities otherwise authorized to be conducted by the Secretary of Labor that focus on industries likely to employ nonimmigrants, including but not limited to enforcement programs and activities described in section 212(n), and enforcement programs and activities related to section 214(c)(14)(A)(i).

Explanation

The proposal describes and clarifies the permitted uses of Fraud Account fees for the Departments of State, Labor, and DHS. For DHS, the proposal would change current law to permit Fraud Account funding to be used to combat any type of fraud, not just fraud limited to H and L nonimmigrant categories. This would give DHS enhanced flexibility to “follow the fraud” across immigration benefit product lines.

PPA Mission Statement

The funds from the Fraud Prevention and Detection Account, comprising approximately two percent of the total USCIS budget request, primarily support the USCIS goal to ensure the security and integrity of the immigration system. These funds are specifically for activities related to preventing and detecting fraud of H & L immigration benefit applications.

Summary Justification and Explanation of Changes

	2008 Actuals	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$11,038	\$16,203	\$22,293	\$6,090

Salaries and Benefits includes costs for 186 FTEs. The FY 2010 request includes \$325,000 for the proposed January 2010 2.0 percent increase in personnel compensation, \$303,000 for within grade and step adjustment increases, \$204,000 in annualization of the FY 2009 pay raise, \$1,257,000 in annualization of prior year part-time funding, a technical realignment of \$1,672,000 from non-pay approved in the FY 2009 reprogramming, and retains \$2,329,000 in additional funds provided for payroll in the FY 2009 reprogramming.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Travel	\$158	\$2,555	\$1,792	(\$763)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request reflects a net decrease of \$763,000, which includes \$9,000 for annualization of prior year part year funding, and a realignment of \$78,000 from Other Services approved in the FY 2009 reprogramming, and a maintains a decrease of \$850,000 from the FY 2009 approved reprogramming .

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
GSA rent	\$1,926	\$1,926	\$1,964	\$38

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2010 request reflects an increase of \$38,000 for annualization of prior year part year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Other Services	\$4,886	\$8,604	\$10,578	\$1,974

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 request reflects a total increase of \$1,974,000, which includes \$24,000 for annualization of prior year part year funding, a realignment of \$1,750,000 to support travel and payroll approved in the FY 2009 reprogramming, and retains \$3,700,000 as follow-on costs for the VIBE project approved and funded through the FY 2009 approved reprogramming.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Purchase from Government Accounts	\$111	\$206	\$207	\$1

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 request reflects an increase of \$1,000 for annualization of prior year part year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Operation & Maintenance of equipment	\$4	\$1,000	\$1,005	\$5

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 request reflects an increase of \$5,000 for annualization of prior year part year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Supplies & materials	\$74	\$366	\$368	\$2

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2010 request reflects an increase of \$2,000 for annualization of prior year part year funding.

	2008	2009	2010	2009 to 2010
	Actuals	Enacted	Request	Change
Equipment	\$256	\$140	\$141	\$1

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request reflects an increase of \$1,000 for annualization of prior year part year funding.

A. Mission and Description of USCIS.....	CIS-1
B. Major Activities and Key Strategic Goals.....	CIS-2
C. Resources Requested and Performance Impact.....	CIS-4
D. Performance Highlights, Resources, and Alignment to Strategic Goals.....	CIS-8
E. Digest Tables by FYHSP Programs	CIS-14

A. Mission and Description of Component

United States Citizenship and Immigration Services (USCIS) is the largest immigration service in the world. USCIS processes millions of immigration benefit applications every year through a network of 230 domestic and foreign offices.

USCIS secures America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system.

USCIS has established six goals in support of its mission:

- Strengthen the security and integrity of the immigration system,
- Provide effective customer-oriented immigration benefits and information,
- Support immigrants' integration and participation in American civic culture,
- Promote flexible and sound immigration policies and programs,
- Strengthen the infrastructure supporting the USCIS mission, and
- Operate as a high-performance organization that promotes a highly talented workforce and a dynamic work culture.

USCIS ensures that citizenship and immigration information and decisions on immigration benefits are provided to customers in a timely, accurate, consistent, courteous, and professional manner. Over fifty different types of immigration benefits are processed through USCIS. Every case is unique and requires specialized attention from experienced USCIS immigration officers. USCIS is also responsible for strengthening the effectiveness of national security efforts; enhancing the integrity of our country's legal immigration system by deterring, detecting, and pursuing immigration related fraud; and combating unauthorized employment in the workplace. In addition, USCIS provides protection to refugees, both inside and outside of the United States, in accordance with USCIS' laws and international obligations.

Every day, on average, USCIS:

- Processes 30,000 applications for immigration benefits
- Issues 7,000 Permanent Resident Cards (green cards)
- Adjudicates 200 asylum applications
- Naturalizes 3,000 new civilian citizens, and 27 new citizens who are members of the United States Armed Forces
- Conducts 135,000 national security background checks
- Captures 11,000 sets of fingerprints at 129 Application Support Centers
- Remains ready to answer one of the 41,000 phone inquiries it receives or to assist one of the 12,000 customers at our 87 local offices

B. Major Activities and Key Strategic Goals

USCIS activities are organized into five program areas:

- Immigration Status Verification
- Adjudication Services
- Citizenship
- Immigration Security and Integrity
- Information and Customer Services

These programs facilitate the Department of Homeland Security's (DHS) strategic goal to "Protect our Nation from Dangerous People (Goal 1)." Specifically, USCIS activities support DHS objectives:

1.3: Strengthen Screening of Traveler and Workers

1.4: Improved Security through Enhanced Immigration Services

Immigration Status Verification

The Immigration Status Verification program area encompasses: the E-Verify program (formerly the Employment Eligibility Verification program), the Systematic Alien Verification for Entitlements program (SAVE), and the REAL ID Act programs. The program performance goal for these activities is to provide efficient and accurate immigration status and employment eligibility information, which supports the DHS objective to strengthen screening of travelers and workers.

- E-Verify is a Web-based system that electronically verifies the employment eligibility of newly hired employees. USCIS administers E-Verify, in partnership with the Social Security Administration.
- SAVE is an intergovernmental information-sharing initiative designed to aid eligibility workers in determining a noncitizen applicant's immigrant status by providing immigration status information and ensuring that only entitled noncitizen applicants receive federal, state, or local public benefits and licenses.
- REAL ID is a nationwide effort intended to prevent terrorism, reduce fraud, and improve the reliability and accuracy of identification documents that State governments issue. The REAL ID Act requires that a state must first verify the issuance, validity, and completeness of each document required before it can issue a REAL ID-compliant driver's license or identification card to applicants.

The Immigration Status Verification program will enhance DMV photo tool capability and continue to migrate verification applications to the Enterprise Service Bus in FY 2009. The Verification Information System (VIS) can currently handle up to 40 million queries per year, with anticipated growth in employer registration and query volume, VIS capacity will be increased in FY 2010 to accommodate up to 65 million queries per year; and the system will be transitioned to the new DHS data center.

Adjudication Services

The Adjudication Services program area is divided into three sub-programs: Adjudication Services; Asylum, Refugee and International Operations; and, Business Transformation. The program performance goal for these activities is to provide immigration benefit services in a timely, consistent, and accurate manner, which supports the DHS objective to improve security through enhanced immigration services.

- Adjudication Services encompasses functions, operations, policies and activities related to the processing and decisions on immigration applications and benefits.
- Asylum, Refugee, and International Operations is responsible for overseeing, planning, and implementing policies and activities related to asylum and refugee issues as well as immigration services overseas.
- Business Transformation is a multi-year effort to modernize USCIS business processes and supporting systems. Funding is provided primarily through premium processing revenues.

The Adjudication Services program is working to eliminate the backlog of Naturalization (N-400) Applications and reduce the estimated average cycle time for processing the following:

- Form N-400 – 5 months in all offices
- Form I-485 (Adjustment of Status) – 4 months in all offices
- Form I-140 (Immigration petition for Alien Worker) – 4 months in every office

The Asylum, Refugee, and International Operations program is working to award a multi-source contract for interpreter services, and once finalized, will implement a rule regarding professional interpreters at affirmative asylum interviews. The program is also working with refugee partners to examine ways to capture and screen fingerprints prior to refugee status determination interviews at certain processing locations.

The Business Transformation Program awarded a Solutions Architect task order on November 3, 2008 to International Business Machines, Inc. (IBM). The solution includes two increments spanning seven releases to be deployed over five years. The transformed USCIS processes will address security/integrity gaps of the immigration system by effectively collecting, analyzing, and sharing information used to verify identity, eligibility, and status.

Citizenship

The Citizenship program area primarily encompasses the activities under the USCIS Office of Citizenship (OoC). The program performance goal is to promote education and training on fundamental civic principles and the rights and responsibilities of citizenship, provide federal leadership and support collaboration on civic integration issues, and celebrate the meaning of citizenship. This goal supports the DHS objective to improve security through enhanced immigration services.

The OoC develops educational products and information resources to foster immigrant integration and participation in American civic culture and enhances training to promote an understanding of and appreciation for U.S. civic principles.

Current activities under the Citizenship program include expanding existing adult educator training programs and providing technical assistance on the naturalization test curriculum for classroom study tools. The new naturalization test will be fully implemented by FY 2010.

Immigration Security and Integrity

The Immigration Security and Integrity program area encompasses activities under the Fraud Detection and National Security Division and the Domestic Operations Directorate. The program performance goal for this program area is to enhance the security and integrity of the legal immigration system, which supports the DHS objective to improve security through enhanced immigration services.

Activities primarily include detecting, pursuing, and deterring fraud; ensuring law enforcement (background) checks are conducted on all persons seeking benefits; identifying systemic vulnerabilities and other weaknesses that compromise the integrity of the immigration system; performing as USCIS' primary conduit to and from the law enforcement and intelligence communities; and coordinating interagency policies, procedures, and other issues with Customs and Border Protection (CBP) and Immigration and Customs Enforcement (ICE).

Information and Customer Services

The Information and Customer Services program area encompasses information and customer service functions, operations, policies and activities, and customer service call center operations. The program performance goal for this program area is to provide timely, consistent, and accurate information to our customers, which supports the DHS objective to improve security through enhanced immigration services.

Through the Information and Customer Services Program, USCIS reduces the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. USCIS makes it easier for our customers to get the information they need, when they need it through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments.

Current activities include implementing a revised notice printing process, and expanding the Service Request Management Tool (SRMT) functionality to include customer self service. In FY 2010, USCIS plans to pilot modified kiosk access to USCIS web services through local USCIS offices.

C. Resources Requested and Performance Impact

USCIS requests a total of 10,700 FTEs and \$2.9 billion. This is an increase of 338 FTE and \$176 million over FY 2009 enacted levels. This includes a \$25 million programmatic reduction to Real-ID and adjustments to base for pay and non-pay inflation to sustain programs at current levels. Program changes include: \$10 million for E-Verify, \$10 million for Immigrant Integration, and \$11 million to support Data Center Development.

In addition, newly appropriated resources are being requested in FY 2010 to cover approximately \$206 million in costs for Military Naturalizations (\$5M) and Refugee and Asylum Operations (\$201M, 744 FTE), previously funded through fee revenue collected under the Immigration Examinations Fee Account. Persons receiving services and benefits through these programs are exempt under law from paying fees. As a result, costs for the activities are added to the fees of non-exempt applicants as a surcharge. While USCIS has the authority to charge other applicants

the cost of providing benefits which are exempt from fees, this cost unduly burdens such applicants particularly as costs rise for these services.

The Fee Reform proposal is an essential first step in providing greater linkage between fees and the actual costs necessary to adjudicate a specific application and petition. Near term and future business process and system improvements through Transformation will further support this goal by improving operational efficiency leading to refinements in operational costs. Over time, the USCIS fee structure will closely match a focused and more efficient operational structure.

USCIS is committed to conducting a fee study every two years in order to ensure that immigration fees are set at a level to recover costs and these fees reflect productivity improvements resulting from process changes and technology upgrades. A fee review for FY 2010 and FY 2011 was initiated and USCIS plans to update this study to account for decisions made in this Budget.

Immigration Status Verification

The FY 2010 budget request includes 479 FTEs and \$158.4 million for Immigration Status Verification. The requested amount includes \$137 million in appropriated funding and \$21 million in estimated fee revenue.

Through the activities of E-Verify, SAVE and Real-ID the Immigration Status Verification program is leading initiatives to:

- Increase outreach and training assistance to local, state and federal agencies to encourage use of E-Verify and SAVE.
- Improve system data sources to safeguard privacy information, minimize identity theft and fraud, and ensure accountability and compliance.
- Promote partnership with Departments of Motor Vehicles to facilitate sharing of photos and records with E-Verify and accomplish REAL ID verification needs.

As of April 18, 2009, E-Verify has over 121,000 employers enrolled, representing over 468,000 locations. Employers have run over 4.2 million queries in fiscal year (FY) 2009 to date, and the volume of queries doubled from FY07 to FY08 from 3.27 million to 6.6 million. According to an analysis of Bureau of Labor Statistics data, over 14 percent of all non-agricultural new hires in the U.S are run through E-Verify.

As of February 21, 2009, the SAVE program has a total 269 registered agencies. This includes 155 state agencies, 29 DMVs, 59 local agencies, and 26 federal agencies. The planning estimate for SAVE queries in FY 2009 is approximately 10.9M and the planning estimate for agencies enrolled in the SAVE program in FY 2009 is 277.

E-Verify will enhance systems, improve compliance and monitoring, and continue marketing activities. USCIS will also continue working to reduce SAVE secondary verifications through technological enhancements to the Verification Information System (VIS) and improvements to the database's accuracy.

Working with the DHS Office of Policy, USCIS is facilitating state compliance with the REAL ID Act through its verification systems. The SAVE program plans to partner with the American Association of Motor Vehicle Administrators (AAMVA) to continue in-state an operations and

maintenance of the connectivity built over the last year. The AAMVA connectivity allows DMVs another avenue to connect to the SAVE program and facilitate REAL ID requirements.

Funding is also requested to complete the development of the REAL ID information sharing hub which will allow states to verify data among each other and against Federal databases as required under the REAL ID Act.

In addition, the FY 2010 Budget request includes \$10 million in new resources to increase E-Verify staff and implement several technology-related initiatives. Funding will provide for 40 additional monitoring and compliance positions, 16 status verification operations (SVO) support positions, 18 customer relations and learning management (CRLM) positions, and 6 mission support positions. USCIS will also use the funding to:

- Develop business requirements for a workflow management tool to replace the current Status Verification System (SVS), which will significantly reduce processing time by increasing the Status Verifiers' ability to analyze caseloads and improve internal processes and production training.
- Provide automated system updates for any new hire with Temporary Protected Status (TPS) who has an expired Employment Authorization Document (EAD) but is within an auto-extension time period. This system enhancement will decrease the number of new hires with TPS who receive an initial mismatch.
- Implement an electronic Form I-9. The first phase of this enhancement includes developing a stand alone Form I-9 in portable format that will allow employers to electronically create, sign, and store the completed forms. In a future enhancement, the electronic Form I-9 will pre-fill the fields in E-Verify, eliminating the need for employers to input the data into the system after it was already recorded on the Form I-9.

Adjudication Services

The FY 2010 budget request includes 7,787 FTEs and \$1.89 billion. The requested amount includes \$161 million in appropriated funding and \$1.73 billion in estimated fee revenue.

Under the Adjudication Services program, USCIS:

- Processed 1.4 million employment authorization applications
- Processed 740,000 adjustment of status applications
- Processed over 1.1 million naturalization applications
- Processed 447,000 applications to replace permanent resident cards
- Processed 460,000 nonimmigrant worker petitions
- Processed nearly 30,000 orphan petitions
- Personalized 1.76M Permanent Resident Cards, 1.36M Employment Authorization Documents, and 126,085 Travel Documents.
- Adjudicated more than 99,000 I-590 refugee applications worldwide
- Interviewed more than 23,000 Iraqi refugee applicants, which supported the admission of 13,823 Iraqi refugees; this exceeded the administration's goal of 12,000 admissions

In FY 2010, the Adjudication Services program plans to maintain the reduced estimated average cycle times achieved in FY 2009. The Asylum, Refugee, and International Operations program

plans to assess fraud detection and national security resource needs both at headquarters and for overseas refugee processing circuit rides and establish a knowledge management system that provides overseas offices with ready access to International Operations documents.

USCIS plans to begin development of the first increment of transformation – Citizenship – and the associated releases. Release 1 and 2 are anticipated to be completed prior to the end of FY 2010. Services will begin to encompass end-to-end adjudication and will include web-based account setup and electronic filing by customers; identity management; a new case management system; electronic workflow, and expansion of on demand scanning.

Citizenship

The FY 2010 budget request includes 20 FTEs and \$18 million. The requested amount includes \$10 million in appropriated funding and \$8 million in estimated fee revenue based on projected fee levels.

In FY 2008, USCIS led over a dozen outreach events to promote citizenship and civic integration initiatives. USCIS also launched a public service campaign to promote volunteerism and the New Americans Project by producing foreign language broadcast announcements to reach a combined circulation of eight million individuals. Educational efforts included hosting training conferences and workshops for volunteers and adult educators on the revised naturalization test, techniques for teaching civics and citizenship, and the naturalization process in general. To date, USCIS has trained more than 2,000 individuals in over 25 conferences and workshops nationwide.

Resources provided in FY 2009 and FY 2010 will continue support for outreach to immigrant communities, training conferences around the country, and coordination with a variety of organizations and groups to encourage volunteerism among both U.S. citizens and new immigrants. The OoC will administer and manage programmatic aspects of the new Citizenship Grants Program, and evaluate educational publications and outreach resources.

Resources are also requested for 3 positions, 2 FTE and \$10 million to fund new activities associated with improving the integration of immigrants into the United States. The proposed initiatives will build in large part on existing and promising efforts at the state and local level, including:

- Providing grants to community-based organizations for citizenship preparation;
- Expanded English language learning aids;
- Supporting a training framework for local literacy organizations to prepare volunteers to teach English and citizenship to immigrants; and,
- Promoting citizenship through targeted integration messages.

Key to the success of this new program is establishing partnerships with state and local U.S. businesses, non-profits, faith-based organizations, and academia as all have important roles to play in improving integration. USCIS will also work with other federal agencies to coordinate efforts aimed at integration.

Immigration Security and Integrity

The FY 2010 budget request includes 1,258 FTEs and \$574 million to operate a program of comprehensive quality assurance and security measures to ensure that benefits are granted only to

eligible individuals. The requested amount includes \$44 million in appropriated funding and \$530 million in estimated fee revenue based on projected fee levels.

FDNS has completed a Benefit Fraud and Compliance Assessment (BFCA) for the H-1B (specialty occupation) benefit category and is in the process of conducting an assessment of the L-1A (multi-national executive or manager) nonimmigrant visa classifications. In addition, FDNS is in the process of establishing overseas H and L Anti-fraud Officer positions at 8 high volume H & L posts.

In FY 2009 and FY 2010, USCIS will continue using funding to further ongoing efforts to develop a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud. This includes developing a proactive anti-fraud program that bounces key fraud indicators from past (proven) conspiracies against all incoming applications and petitions; and conducting post adjudication compliance site visits through the Administrative Site Visit Verification Program (ASVVP).

Information and Customer Services

The FY 2010 budget request includes 1,156 FTEs and \$224 million. The requested amount includes \$11 million in appropriated funding and \$213 million in estimated fee revenue.

In FY 2009 and FY 2010, USCIS will continue using funding to advance self-service through improved on-line scripts, continue enhancements with the automated appointment scheduler, further develop SRMT on-line for external customer use, and enhance call center efficiencies and improve customer service with the implementation of Computer Telephone Integration (CTI).

D. Performance Highlights, Resources, and Alignment to Strategic Goals

For each major program, the performance goal, alignment to DHS goals and objectives, total dollars and FTE, and main performance measure/s are shown below.

Performance Budget Highlights by Program

USCIS
2010 Congressional

Program: Immigration Status Verification						
Performance Goal: Provide efficient and accurate immigration status and employment eligibility information.						
DHS strategic objectives supported and % allocation of activities: 1.3 - 100%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	None	\$20,500	\$143,000	\$78,504	\$168,818	\$158,439
FTE	None	174	365	437	391	479

Performance Plan Measures

Measure: Percent of E-Verify queries in comparison to annual hires recorded by the Bureau of Labor Statistics
Description of Measure: E-Verify provides an automated link to federal databases to help employers who have voluntarily decided to determine if a new hire is legally authorized to work in the United States. This measure assesses the use of the E-Verify program by comparing the

number of E-Verify queries to annual hires recorded by the Bureau of Labor Statistics. It is calculated by excluding agricultural workers and assumes a 10% duplicate and invalid query percentage, which is also excluded.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	None	11%	12%
Actual:	None	None	None	None	N/A	N/A

Measure: Percent of Systematic Alien Verification for Entitlements (SAVE) queries requiring manual review that are later resolved as lawful status.						
Description of Measure: This measure reflects the percent of Systematic Alien Verification for Entitlements (SAVE) queries on the immigration status of government - benefit applicants that require manual review to determine lawful status. When SAVE is used by government agencies to check the immigration status of an applicant for a government - issued license or benefit, immediate confirmation is usually received. If the records retrieved from the SAVE query are inconclusive, manual review is required. The percent of manual reviews that find an applicant has lawful immigration status is a reflection of the effectiveness of SAVE automation and the quality and completeness of records; a low percentage indicates effective automation and records.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	15%	12%	<=3%	<=6%

Performance Plan Measures

Measure: Average cycle time to process form I - 129 (Petition for Nonimmigrant Worker).						
Description of Measure: The amount of time it takes for U.S. Citizenship and Immigration Services to provide a decision regarding an I - 129, Petition for Nonimmigrant Worker, that an employer has filed to petition for an alien to come to the U.S. temporarily as a nonimmigrant worker. To provide immigration benefit services in a timely manner, on a monthly basis, the USCIS collects performance data on applications received, completed, and pending through its Performance Analysis System. Estimated Average Cycle Time is calculated by counting back the number of preceding months until the sum of the monthly receipts equals the current month's End Pending (e.g. if 100 cases are pending and case receipts were 20, 30, 15, 25, and 10 over the past 5 months, then cycle time is 5 months). Applications that exceed the cycle time target for their type are generically identified as backlog.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	<=2 months	<=2 months	<=2 months	<=2 months	<=2 months
Actual:	None	2 months	1.9 months	1.9 months	N/A	N/A

Measure: Average cycle time to process form I - 485 (Application to Register for Permanent Residence or to Adjust Status).						
Description of Measure: The amount of time it takes to provide a decision regarding an I - 485, Application to Adjust Status. On a monthly basis, performance data on applications received,						

<p>completed, and pending is collected via the Performance Analysis System. Estimated Average Cycle Time is calculated by counting back the number of preceding months until the sum of the monthly receipts equals the current month's End Pending (e.g. if 100 cases are pending and case receipts were 20, 30, 15, 25, and 10 over the past 5 months, then cycle time is 5 months). Applications that exceed the cycle time target for their type are generically identified as backlog. Applications for which no visa number is available are considered pending, but not part of the backlog. Cases are also removed from the backlog calculation if a Request For Evidence is pending for the regulatory period with the applicant, the applicant has requested a later appearance date, or the required name check is pending with the FBI.</p>						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	<=6 months	<=6 months	<=4 months	<=4 months	<=4 months
Actual:	None	5.93 months	5.2 months	13.6 months	N/A	N/A

Measure: Average cycle time to process form N - 400 (Application for Naturalization).						
Description of Measure: The amount of time it takes to make a decision on an N - 400, Application for Naturalization. USCIS collects monthly performance data on applications received, completed, and pending. Estimated Average Cycle Time is calculated by counting back the number of preceding months until the sum of the monthly receipts equals the current month's End Pending (e.g. if 100 cases are pending and case receipts were 20, 30, 15, 25, and 10 over the past 5 months, then cycle time is 5 months). Applications that exceed the cycle time target for their type are generically identified as backlog. Cases are removed from the backlog calculation if the applicant has failed the English/Civics requirement and is waiting the statutory period between testing attempts, is awaiting a judicial oath ceremony for more than one month, the required name check is pending with the FBI, or if a Request For Evidence is pending for the regulatory period with the applicant.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	<=6 months	<=7 months	<=5 months	<=5 months	<=5 months
Actual:	None	5.58 months	6.2 months	8.7 months	N/A	N/A

Measure: Percent of ineligible asylum applicants (at local offices) referred to an immigration court within 60 days						
Description of Measure: Since asylum reform, work authorization is obtained only if asylum is granted or no negative decision has been made within 180 days. If the program finds an applicant ineligible for asylum and the applicant is not in valid/legal status, the program refers the application to an immigration judge for final determination in the course of removal proceedings. Immigration courts require approximately 120 days to complete adjudications. To meet the 180 - day threshold for a decision, the program aims to refer 75% of ineligible applications to immigration courts within 60 days of filing. The Asylum Division recognizes that some cases should be exempt from timeliness goals due to their complexity, the need to coordinate the adjudication with other USCIS or DHS entities, or the unavailability of staff at certain times. In order to balance timely completions and quality adjudications, the program has exempted 25 percent of its workload from this requirement.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	75%	75%	75%	75%	75%	75%

FTE	14	14	21	19	17	20

Performance Plan Measures

Measure: Number of significant citizenship outreach events						
Description of Measure: This measure describes the number of significant outreach events designed to support immigrant integration. These actions serve a multitude of purposes to assist in accomplishing this goal, such as educating immigrants and encouraging their civic integration, informing stakeholders about the Offices mission and the importance of promoting civic integration, educating counterparts from outside the U.S. government about federal integration efforts, and bringing on new partners to help encourage integration. Significant outreach events include conferences, ceremonies, meetings, media appearances, press conferences, trainings, and presentations. They do not include internal DHS/USCIS meetings and strategy sessions. Strategic outreach provides immigrant - serving organizations and other stakeholders with a better understanding of the importance of immigrant integration and raises awareness of federal initiatives currently in place to strengthen efforts across the country.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	N/A	75	80	85
Actual:	None	None	None	109	N/A	N/A

Measure: Percent of targeted language populations with access to citizenship educational materials in their native language.						
Description of Measure: The percent of targeted language populations with online access to "Welcome to the United States: A Guide for New Immigrants" in their native language. This guide contains information to help immigrants settle into life in the U.S., and basic civics information that introduces immigrants to the U.S. system of government. The guide gives immigrants tips on getting involved in their communities, meeting their responsibilities, and exercising their rights as permanent residents. First distributed in English in 2004, the guide is now available in 11 languages (English, Spanish, Chinese, Vietnamese, Korean, Russian, Arabic, Tagalog, Portuguese, French, and Haitian Creole). Outreach to three additional populations (speakers of Polish, Urdu, and Basic Literacy English) is planned through FY 2009. This measure is used as a proxy outcome due to the economic and logistic difficulties associated with using a more direct outcome measure, such as level of community involvement and volunteerism.

Performance Plan Measures

Measure: Percent of routine referrals with national security implications completed within targeted processing time						
Description of Measure: This measure reflects the percent of routine requests for technical support on National Security cases or concerns that are responded to within 2 business days. Requests received from the field, counsel, etc. are received and recorded by the Field Support unit (FSU) in the National Security Branch (NSB). Requests are normally received by mail, but may also be received by phone.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	None	80%	85%
Actual:	None	None	None	None	N/A	N/A

Measure: Percent of site visits that verify information provided in petition is in compliance with immigration laws						
Description of Measure: This measure gauges the percent of site visits that verify information provided in a petition is in compliance with immigration laws. A site visit verifies petitioners' and/or beneficiaries' compliance with immigration laws regarding information provided in their visa application. A compliance review is initiated by Fraud Detection and National Security and is to be completed within 90 days of referral receipt. This program is currently only applied to religious worker visas (I - 360) and will subsequently be expanded to other visa categories.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010

Actual:	None	None	None	5.43 minutes	N/A	N/A

Measure: Customer satisfaction rate with U.S. Citizenship and Immigration Service phone centers						
Description of Measure: This measure reports the percent of people who were satisfied with the information obtained on immigration services and benefits from United States Citizenship and Immigration Services (USCIS) over the telephone. A USCIS contractor selects a random group of customers who have called the phone centers on a monthly basis to participate in a phone survey to rate their overall experience with the service received from the USCIS phone center. A standardized USCIS and General Accountability Office approved survey tool is used to collect customer responses. This satisfaction rate measures our performance in providing timely, consistent, and accurate information regarding immigration services and benefits to immigrants, U.S. employers, and the American public over the telephone.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL LAW ENFORCEMENT TRAINING CENTER SALARIES AND EXPENSES

I. Appropriation Overview

A. Mission Statement:

We train those who protect our homeland.

B. Budget Activities:

The Federal Law Enforcement Training Center (FLETC) is the leading service provider for federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 80 Federal agencies with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized and refresher training for federal law enforcement personnel.

FLETC provides services to state, local, international and other federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides export training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to cost-effectively emphasize training program excellence and shared experiences in cooperative training. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a federal law enforcement career. New federal hires and journey level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, they also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative federal law enforcement effort.

FLETC's Partner Organizations have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum review and development conferences, and participate in the development of FLETC policies and directives. This relationship is characteristic of a "true partnership", which is responsive to the training mission.

C. Budget Request Summary:

The Federal Law Enforcement Training Center requests 1,130 positions, 1,103 FTE and \$245,356,000. The total adjustments-to-base is -53 positions, -43 FTE and -\$11,274,000. The program changes are \$4,100,000 for TRAIN21 and \$6,000,000 for Data Center Migration.

Total Change 2009-2010	(53)	(43)	(1,174)

FLETC requests \$245.356 million for this activity. Base decrease of 53 positions, 43 FTE, and \$11.274 million includes termination of one-time costs, annualization and pay inflation. One time costs decreases include \$1.950 million for leveraging of DoD Modeling Technologies and \$12.512 million for decreased training requirements related to FY 2009 hiring increases for Border Security. For these new hires, FLETC assumes a 20% attrition rate resulting in a corresponding increase in base training requirements. The program changes are \$4.100 million for TRAIN21 and \$6.000 million for the Data Center Migration.

CURRENT SERVICES PROGRAM DESCRIPTION:

Law Enforcement Training: FLETC's services to its three major client groups underscore its homeland security support mission in promoting intergovernmental cooperation in law enforcement preparedness.

Federal – FLETC provides law enforcement training to over 80 federal agencies having enforcement responsibilities. FLETC prepares new and experienced law enforcement professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. The average basic student spends 12 weeks training at FLETC, and receives a combination of classroom instruction and hands-on practical exercise training in all phases of law enforcement from firearms and high-speed vehicle operations to legal case instructions and defendant interview techniques. Students must apply their classroom knowledge during exercises that simulate typical situations encountered on the job. To add realism these exercises often involve contract role players who act as victims, witnesses or suspects. Each of the basic programs provides core knowledge essential for new federal officers or agents to carry out their duties in a safe and efficient manner.

In addition to basic training, FLETC offers advanced and specialized training for career-long law enforcement preparation in subjects that are common to two or more of its Partner Organizations. Examples include Antiterrorism Port Security Boat Operations, Cyber Counterterrorism Investigator Training, Covert Electronics Surveillance, Critical Infrastructure Protection, Financial Forensics Techniques, Intelligence Analysts Training and Land Transportation Antiterrorism Training.

State and local – The National Center for State and Local Law Enforcement Training trains personnel from state and local law enforcement agencies in advanced topics designed to develop specialized law enforcement skills. The participants benefit from Federal expertise, specialized training, and receive instruction specific to their needs. Additionally, the program offerings are in subjects not generally available from state and local police academies or colleges and universities.

International – In the interest of combating global crime and protecting U.S. interests abroad, FLETC offers a range of training programs to foreign law enforcement agencies. Training focuses on three main areas: the U.S. Government's Law and Democracy Program, the Antiterrorism Assistance Program, and the International Law Enforcement Academy operations in Europe, Asia, Africa, and other regions in the world. In cooperation with the Department of State, FLETC operates two International Law Enforcement Academies: Gaborone, Botswana and San Salvador, El Salvador. Additionally, FLETC provides training and technical assistance at locations worldwide in collaboration with and support of the US Embassies located within country.

IV. Program Justification of Changes

Program Increase 1: TRAIN21

Strategic Goal(s) & Objective(s): Strategic Goal 4: Build a Nimble, Effective Emergency Response System and Culture of Preparedness
Strategic Objective 4.1: Ensure Preparedness

PPA: Law Enforcement Training

Program Increase: Positions 0 FTE 0 Dollars \$4,100

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							0	0	\$4,100
Budget Request	0	0	\$2,816	0	0	\$0	0	0	\$4,100

Description of Item

TRAIN 21, a business operations and training transformation initiative, will use a phased approach that enables FLETC to move ahead in a responsible manner by verifying tangible results at a reasonable cost. The end state will be an implementation of the best training and business practices across the enterprise. Plans for Fiscal Year 2010 funding as follows:

- Completion of a needs assessment for FLETC business operations and training transformation.
- Development of a blueprint for the implementation of the transformation.

Justification

There are two practical justifications supporting the FLETC request to fund TRAIN21: First, the need to transform our business model in order to reduce training costs and increase FLETC's market share, particularly in advanced law enforcement training, and second, the vital need to leverage technology to increase FLETC's training capacity.

Impact on Performance (Relationship of Increase to Strategic Goals)

In FY 2010, approximately 73% of FLETC's estimated training workload will come from components of DHS and 27% will come from other Executive, Legislative and Judicial law enforcement agencies. TRAIN 21 contributes to DHS Strategic Objective 4.1 - Ensure Preparedness by delivering faster, better, anytime and anywhere training support and learning to the law enforcement officers and agents carrying out that important mission. In the 21st Century, threats and other emergencies can emerge rapidly and present unexpected requirements. FLETC must have the modern operational capability required to ensure that the law enforcement community is prepared to protect our nation by using the latest knowledge, skills, and best practices.

Program Increase 2: Data Center Migration

Strategic Goal(s) & Objective(s): Strategic Goal 4: Build a Nimble, Effective Emergency Response System and Culture of Preparedness
Strategic Objective 4.1: Ensure Preparedness

PPA: Law Enforcement Training

Program Increase: Positions 0 FTE 0 Dollars \$6,000

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							0	0	\$6,000
Budget Request	0	0	\$0	0	0	\$0	0	0	\$6,000

Description of Item

FY 2010 data center consolidation funding will be used to continue ongoing system and application migration to the two existing DHS Enterprise Data Centers. The Data Center consolidation efforts will standardize IT resource acquisitions across components, streamline maintenance and support contracts, resulting in an enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

Justification

The Data Center consolidation efforts will standardize IT resource acquisitions across Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

Impact on Performance (Relationship of Increase to Strategic Goals)

This initiative is in support of Strategic Goal #4 – Build a Nimble, Effective Emergency Response System and Culture of Preparedness, and the FLETC mission to train law enforcement officers and agents who protect our homeland.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Law Enforcement Training Center
Justification of Proposed Changes in Salaries and Expenses
Appropriation Language**

For necessary expenses of the Federal Law Enforcement Training Center, including materials and support costs of Federal law enforcement basic training; the purchase of not to exceed 117 vehicles for police-type use and hire of passenger motor vehicles; expenses for student athletic and related activities; the conduct of and participation in firearms matches and presentation of awards; public awareness and enhancement of community support of law enforcement training; room and board for student interns; a flat monthly reimbursement to employees authorized to use personal mobile phones for official duties; and services as authorized by section 3109 of title 5, United States Code; [\$246,530,000] **\$245,356,000**, of which up to [\$48,611,000] **\$47,751,000** shall remain available until September 30, [2010] **2011**, for materials and support costs of Federal law enforcement basic training; of which \$300,000 shall remain available until expended for Federal law enforcement agencies participating in training accreditation, to be distributed as determined by the Federal Law Enforcement Training Center for the needs of participating agencies; and of which not to exceed \$12,000 shall be for official reception and representation expenses: *Provided*, That the Center is authorized to obligate funds in anticipation of reimbursements from agencies receiving training sponsored by the Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available at the end of the fiscal year: *Provided further*, That section 1202(a) of Public Law 107-206 (42 U.S.C. 3771 note), as amended by Public Law [110-161 (121 Stat. 2068)] **110-329 (122 Stat. 3677)**, is further amended by striking “December 31, [2010] **2011**” and inserting “December 31, [2011] **2012**”: *Provided further*, That the Federal Law Enforcement Training Accreditation Board, including representatives from the Federal law enforcement community and non-Federal accreditation experts involved in law enforcement training, shall lead the Federal law enforcement training accreditation process to continue the implementation of measuring and assessing the quality and effectiveness of Federal law enforcement training programs, facilities, and instructors: *Provided further*, That the Director of the Federal Law Enforcement Training Center shall schedule basic or advanced law enforcement training, or both, at all four training facilities under the control of the Federal Law Enforcement Training Center to ensure that such training facilities are operated at the highest capacity throughout the fiscal year. (Department of Homeland Security Appropriations Act 2009.)

Explanation of Changes:

Extension of Public Law 107-206 as amended by Public Law 109-295 (relating to FLETC’s authority to hire federal annuitants) until December 31, 2012 is requested at this time.

Summary Justification and Explanation of Changes

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Salaries and Benefits	\$111,640	\$130,034	\$124,909	(\$5,125)

Salaries and Benefits includes costs for 1,103 FTEs. The FY 2010 request includes an increase of \$1,896,000 for pay inflation, \$1,292,000 for annualization, and a decrease of \$8,313,000 for termination of one-time costs.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Travel	\$7,331	\$8,767	\$7,352	(\$1,415)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request includes a decrease of \$134,000 for termination of one-time costs and a decrease of \$1,281,000 for carryover adjustment.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Transportation of Things	\$795	\$1,084	\$925	(\$159)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2010 request includes a decrease of \$159,000 for carryover adjustment.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Other Rent	\$11	\$11	\$9	(\$2)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2010 request includes a decrease of \$2,000 for carryover adjustment.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Communication, Utilities, and miscellaneous	\$10,500	\$10,278	\$8,439	(\$1,839)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2010 request includes a decrease of \$336,000 for termination of one time costs and a decrease of \$1,503,000 for carryover adjustment.

	FY 2008 Actual	FY 2009 Enacted	FY 2010 Request	2009 to 2010 Change
Printing	\$1,455	\$1,742	\$1,344	(\$398)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 request includes a decrease of \$143,000 for termination of one time costs and a decrease of \$255,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$1,857	\$10,054	\$8,584	(\$1,470)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request includes a decrease of \$1,470,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$17,072	\$7,373	\$14,247	\$6,874

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 request includes a program increase of \$6,000,000 for Data Center Migration, a program increase of \$2,750,000 for TRAIN 21, decrease of \$797,000 for termination of one-time costs and a decrease of \$1,079,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & maintenance of facilities	\$32,015	\$33,560	\$27,612	(\$5,948)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2010 request includes a decrease of \$1,041,000 for termination of one-time costs and a decrease of \$4,907,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Medical Care	\$3,249	\$3,672	\$3,009	(\$663)

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. The FY 2010 request includes a decrease of \$126,000 for termination of one-time costs and a decrease of \$537,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$9,424	\$5,770	\$4,935	(\$835)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 request includes a net increase of \$8,000 for termination of one-time costs and a decrease of \$843,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Subsistence & Support of Persons	\$553	\$853	\$686	(\$167)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2010 request includes a decrease of \$42,000 for termination of one-time costs and a decrease of \$125,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$16,575	\$25,056	\$20,317	(\$4,739)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2010 request includes a decrease of \$1,076,000 for termination of one-time costs and a decrease of \$3,663,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$18,151	\$33,673	\$27,638	(\$6,035)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request includes a program increase of \$1,350,000 for TRAIN21, a decrease of \$2,462,000 for termination of one-time costs and a decrease of \$4,923,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Land & Structures	\$814	\$117	\$100	(\$17)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. The FY 2010 request includes a decrease of \$17,000 for carryover adjustment.

	FY 2008	FY 2009	FY 2010	2009 to 2010
	Actual	Enacted	Request	Change
Indemnity	\$858	\$292	\$250	(\$42)

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. The FY 2010 request includes a decrease of \$42,000 for carryover adjustment.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL LAW ENFORCEMENT TRAINING CENTER ACQUISITION, CONSTRUCTION, IMPROVEMENTS AND RELATED EXPENSES

I. Appropriation Overview

A. Mission Statement:

We train those who protect our homeland.

B. Budget Activities:

The Federal Law Enforcement Training Center (FLETC) is the leading service provider for federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 80 Federal agencies with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized and refresher training for federal law enforcement personnel.

FLETC provides services to state, local, international and other federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides export training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to cost-effectively emphasize training program excellence and shared experiences in cooperative training. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a federal law enforcement career. New federal hires and journey level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, they also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative federal law enforcement effort.

FLETC's Partner Organizations have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum review and development conferences, and participate in the development of FLETC policies and directives. This relationship is characteristic of a "true partnership", which is responsive to the training mission.

C. Budget Request Summary:

The Federal Law Enforcement Training Center requests \$43,456,000. The adjustment-to-base is -\$43,000,000 for non-reoccur funding. There are no program changes.

II. Summary of FY 2010 Budget Estimates by Program/Project Activity (PPA)

III. Current Services Program Description by PPA

Department of Homeland Security
Federal Law Enforcement Training Center
Acquisition, Construction, Improvements & Related Expenses
Program Performance Justification
(Dollars in thousands)

PPA: Acquisition, Construction, Improvement & Related Expenses

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$50,850
2009 Enacted	0	0	86,456
2010 Adjustments-to-Base	0	0	(43,000)
2010 Current Services	0	0	43,456
2010 Program Change	0	0	0
2010 Request	0	0	43,456
Total Change 2009-2010	0	0	(43,000)

FLETC requests \$43.456 million for this activity. The adjustment-to-base is a decrease of \$43.000 million for non-reoccur funding, including \$40.000 million for a dormitory in Charleston, S.C. and \$3.000 million for infrastructure improvements in Artesia N.M. There are no program changes.

CURRENT SERVICES PROGRAM DESCRIPTION:

Acquisition, Construction, Improvement & Related Expenses: This account provides for the acquisition and related costs for the expansion and maintenance of FLETC, to include funding for the Facilities Master Plan, Minor Construction and Maintenance, Environmental Compliance, and Communications Systems. The Master Plan provides the long range blueprint for expansion of facilities to meet the training requirements of over 80 Partner Organizations. Minor Construction and Maintenance provides alterations and maintenance funding for approximately 300 buildings at four locations. These locations include Glynco, Georgia which had utilization rate of 87% in FY 08; Artesia, New Mexico which had a utilization rate of 100% in FY 08; Charleston, South Carolina which had a utilization rate of 63% in FY 08; and Cheltenham, Maryland which had a utilization rate of 22% in FY 08. Environmental Compliance funding is to ensure compliance with the EPA and State environmental laws and regulations. Communications Systems funding is to maintain and repair or replace the fiber optics telecommunications cable system.

Current Services includes \$9.381 million funding for construction and maintenance of the Practical Applications/Counterterrorism Operations Training Facility (PA/CTOTF). The PA/CTOTF is a multi-year construction project funded in FY07-FY11 that is dedicated to providing the “hands-on” training necessary to meet the expanding needs of law enforcement in the post-9/11 environment. The 220 acre PA/CTOTF site will be composed of five training environments: international, intermodal, rural, urban and suburban – all designed to replicate both foreign and domestic settings.

IV. Program Justification of Changes

Not Applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Law Enforcement Training Center
Justification of Proposed Changes in Acquisitions, Construction, Improvements, and Related
Expenses
Appropriation Language**

For acquisition of necessary additional real property and facilities, construction, and ongoing maintenance, facility improvements, and related expenses of the Federal Law Enforcement Training Center, [\$86,456,000] **\$43,456,000**, to remain available until expended: *Provided*, That the Center is authorized to accept reimbursement to this appropriation from government agencies requesting the construction of special use facilities[: *Provided further*, That \$3,000,000 is for construction of training and related facilities at Artesia, New Mexico].

A. Mission and Description of the Federal Law Enforcement Training Center

The mission of the Federal Law Enforcement Training Center (FLETC) is to train those who protect our homeland. The FLETC is the Federal government's leader for and provider of world-class law enforcement training. The FLETC prepares new and experienced law enforcement professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. Training consists of all phases of law enforcement instruction, from firearms and high-speed vehicle operations, to legal case instructions and defendant interview techniques. Through consolidated training the FLETC can respond quickly to emerging training needs, readily adapt to new requirements and focus exclusively on training, which is FLETC's only mission. The FLETC delivers interagency training with optimal efficiency through the government-wide sharing of facilities, equipment and expertise which produces economies of scale available only from a consolidated law enforcement training organization.

The FLETC currently operates four training sites throughout the United States for multiple agency use. FLETC's headquarters and training site in Glynco, Georgia has classrooms, dining and residence halls, and state-of-the-art facilities for firearms, physical techniques, driver, marine and computer based training activities. Two field locations that provide both basic and advanced training are located in Artesia, New Mexico, and Charleston, South Carolina. The fourth training site, Cheltenham, Maryland, primarily provides firearms, drivers and tactics re-qualification training for officers and agents in the metropolitan Washington, DC area. The U.S. Capitol Police is co-located at Cheltenham and conducts Pre and Post Basic Training along with an array of advanced training. In cooperation with the Department of State, the FLETC operates International Law Enforcement Academies in Gaborone, Botswana and San Salvador, El Salvador. Additionally, the FLETC provides training and technical assistance at locations worldwide in collaboration with and support from the U.S. Embassies located within country.

B. Major Activities and Key Strategic Issues

FLETC's services to its three major law enforcement client groups underscore its homeland security support mission in promoting intergovernmental cooperation in law enforcement preparedness. The FLETC: 1) serves over 80 Federal Partner Organizations having law enforcement responsibilities; 2) provides training and technical assistance to state and local law enforcement entities; and 3) plans, develops, and presents formal training courses and practical exercise applications related to international law enforcement training in the interest of combating global crime and protecting U.S. interests abroad.

In FY 2009, the FLETC received \$332,986,000 to provide law enforcement training and re-qualification to a projected 80,000 students from Federal, state and local and International law enforcement agencies. There have been 30,350 graduates in FY 2009 as of March 31, 2009.

FY 2008 Accomplishments

- Provided training to over 60,000 law enforcement students (208,000 student weeks).
- The FLETC received Federal Law Enforcement Training Accreditation (FLETA) program accreditation for the Uniformed Police Training Program (UPTP), the Land Management Police Training Program (LMPT) and the Firearms Instructor Training Program (FITP).

- In support of the SBI, FLETC Office of Artesia Operations (OAO) implemented a revised basic training program for Border Patrol agents, reducing the length of the program from 91 days to 55 days. The revised program allows newly trained Spanish speaking agents to reach the field faster. Non-Spanish speaking agents attend a 40-day Tasked Based Language Training Program follow-on. This program has received excellent reviews from the USBP Sector Chiefs, who reported that their trainees arrived at their duty stations with a higher level of proficiency.
- Completed construction of the Situational Training Complex (STC) portion of the Practical Application/Counterterrorism Operations Training Facility (PA/CTOTF). The STC is an 88,000 square foot building designed for practical applications/scenario based law enforcement training.
- The FLETC Office of Charleston (OCH) facilitated the permanent relocation of seven agency advanced programs and two agency specific basic programs for Customs and Border Protection (CBP) from Glynco to Charleston. Five agency advanced and one agency specific basic program were also relocated from Glynco to Charleston for Immigration and Customs Enforcement (ICE). The relocation of these programs required significant FLETC Charleston facility enhancements to enable both CBP and ICE to quickly start up operations while continuing to meet mission requirements.
- In August 2008, FLETC upgraded its Financial Accounting and Budgeting System (FABS) from Momentum Financials Software Version 3.7 to Version 6.1. The new FABS software includes numerous application and system enhancements.
- Provided increased training to Border Patrol and Immigration and Customs Enforcement (ICE) in support of the Secure Border Initiative (SBI).
- Continued the construction of the multi-phased Practical Application/Counterterrorism Operational Training facility.

Planned FY 2009 Accomplishments

- Provide training to over 80,000 law enforcement students (262,000 student weeks).
- Receive academy re-accreditation and receive program re-accreditation for the Boat Operators Anti-Terrorism Training Program (BOAT), the Driver Instructor Training Program (DITP), the Law Enforcement Instructor Training Program (LEITP), the Marine Law Enforcement Training Program (MLETP), and the Law Enforcement Control Tactics Instructor Training Program (LECTITP).
- Continue to provide increased training to Border Patrol and ICE in support of the SBI.
- Continue construction of the multi-phased Practical Application/Counterterrorism Operational Training facility.

Projected FY 2010 Accomplishments

- Provide training to over 85,000 law enforcement students (272,000 student weeks).
- Receive program re-accreditation for the Law Enforcement Fitness Coordinator Training Program (LEFCTP), the Law Enforcement Instructor In-Service Training Program (LEIISTP), the Criminal Investigator Training Program (CITP), and the Inland Boat Operators Training Program (IBOT).
- Continue construction of the multi-phased Practical Application/Counterterrorism Operational Training facility.

The key strategic issues and priorities of the FLETC for the next five years will focus on expanding training programs through partnerships, emerging state-of-the-art training technology, sharing increased capacity in the most cost-effective manner using the consolidated law enforcement concept of training, and providing federally accredited law enforcement training. The law enforcement officers trained at FLETC are the primary resources used to make the homeland more secure. In particular, during FY 2010 through FY 2014, FLETC will concentrate our efforts on:

- *Ensuring state of the art technology:* The FLETC continues its partnership with Naval Air Warfare to integrate modeling and simulation technology to support driver and firearms training. The simulation technology emulates highly dangerous law enforcement scenarios while enabling student learning in a safe and controlled environment. FLETC will also focus on TRAIN21, a business operations and training transformation initiative that will integrate classroom instruction and real-world situation and decision-making practical exercises with technology-based training.
- *Partnering with state and local law enforcement entities:* The FLETC continues to revise and develop training programs for export delivery to state, local, tribal and campus law enforcement agencies. This partnership fosters cooperation, provides technology, improves response coordination and maximizes recovery between these agencies and Federal law enforcement agencies in emergency-related situations in the United States. Emerging programs for this area of training include domestic violence training and anti-terrorism intelligence training. The Rural Policing Institute was established in FY 2009 to address more fully the training needs of law enforcement officers from small town and rural agencies, which comprise 95% of the state, local, tribal and campus law enforcement population.
- *Law enforcement training capacity:* The FLETC evaluates facilities requirements based on Partner Organization training requests and the facilities needed to provide the training. The FLETC is currently modifying its Strategic Master Plan for Facilities to provide for capacity associated with long term training needs. The FLETC continues to explore and apply training alternatives such as the use of technology-based solutions, including computer modeling and simulation, Web-based training and computer based training in order to provide the most up-to-date training.

C. Resources Requested and Performance Impact

Major Changes within the Base Level

FLETC's FY 2010 request is \$288,812,000. The adjustment to base includes \$57,462,000, 53 positions and 52 FTE for one time cost decreases, consisting of \$1,950,000 for leveraging of DoD Modeling Technologies and \$12,512,000, 53 positions and 52 FTE for decreased training requirements related to FY09 hiring increases for Border Security, \$40,000,000 for a dormitory in Charleston, S.C. and \$3,000,000 for infrastructure improvements in Artesia, N.M., an increase of \$1,292,000 and 9 FTE for annualization, and an increase of \$1,896,000 for pay inflation.

Increments Over Current Service Levels

- \$4,100,000 increase for TRAIN21, a training and business operations transformation initiative.
- \$6,000,000 increase for migration to the two DHS Enterprise Data Centers for central DHS management.

D. How FLETC Programs and Their Performance Goals Align to and Support the DHS Strategic Plan Objectives.

Law Enforcement Training program performance goal – Provide law enforcement agents and officers, skilled in the latest techniques, to enforce laws and regulations, protect the Nation, and interact with the public with respect for individuals and civil liberty.

Goal 4 – Build a Nimble, Effective Emergency Response System and Culture of Preparedness.
Objective 4.1 – Ensure Preparedness

E. Performance Based Budget Highlights by Program

For each Future Years Homeland Security Program (FYHSP), the performance goal, performance measures, indicators, budget including allocation of non-programmatic overhead, and FTE are shown below. A complete listing of performance measures may be found on the OMB web site Expectmore.gov. In a few instances program names in PARTweb may differ slightly from those used in the Performance Budget.

Program: Law Enforcement Training						
Performance Goal: Provide law enforcement agents and officers, skilled in the latest techniques, to enforce laws and regulations, protect the Nation, and interact with the public with respect for individuals and civil liberty.						
DHS strategic objectives supported and % allocation of activities:						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$225,925	\$290,765	\$275,279	\$288,666	\$332,986	\$288,812
FTE	940	932	1,047	1,056	1,146	1,103

Performance Plan Measures

Measure: Percent of Partner Organizations that respond "agree" or "strongly agree" on the Partner Organization Satisfaction Survey to their overall satisfaction with the training provided by the Federal Law Enforcement Training Center.						
Description of Measure: This performance measure reflects the percentage of Partner Organizations that responded on the Partner Organization Satisfaction Survey agree or strongly agree to the overall satisfaction with the training the Federal Law Enforcement Training Center (FLETC) provides their officers or agents to prevent terrorism and other criminal activity against the U.S. and our citizens. The results of the measure provide on-going opportunities for improvements that are incorporated into FLETC training curricula, processes and procedures.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	Baseline	92%	87%	89%	89%
Actual:	None	91%	87.8%	87.8%	N/A	N/A

Measure: Percent of Partner Organizations that respond "agree" or "strongly agree" that Federal Law Enforcement Training Center training programs address the right skills needed for their officers/agents to perform their law enforcement duties.						
Description of Measure: The performance measure reflects the percent of Partner Organizations that responded on the Partner Organization Satisfaction Survey agree or strongly agree that FLETC training programs address the right skills needed for their officers/agents to perform their law enforcement duties to prevent terrorism and other criminal activity against the U.S. and our citizens. The results of the measure provide on-going opportunities for improvements that are incorporated into FLETC training curricula, processes and procedures.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	73%	73%	74%	75%	79%	80%
Actual:	90%	71%	79.75%	79.75%	N/A	N/A

Measure: Percent of students that express "excellent" or "outstanding" on the Student Feedback - Program Survey.						
Description of Measure: This measure reflects the percent of Federal Law Enforcement Training Center students who, on the student feedback survey, indicate the degree of training quality received was excellent or outstanding. Results from the survey are used to improve						

training to ensure students receive the right skills and knowledge, presented in the right way and at the right time to prevent terrorism and other criminal activity against the US and our citizens.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	64%	66%	67%	68%	69%	70%
Actual:	64%	62%	76%	59%	N/A	N/A

Additional Measures

Measure: Percent of requested training classes conducted (Capacity Measure).						
Description of Measure: This performance measure is an indicator of the percent of training classes requested by Partner Organizations that are successfully scheduled by the FLETC. This measure enables the FLETC to determine if sufficient capacity (facilities, instructors & support) is available to meet the present and projected future FLETC training requirements.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	98%	98%	98%	98%	98%	98%
Actual:	98.55%	98.98%	99.01%	98.87%	N/A	N/A

Measure: Total number of programs accredited and re - accredited through Federal Law Enforcement Training Accreditation (FLETA)						
Description of Measure: The number of federal law enforcement programs accredited through the Federal Law Enforcement Training Accreditation process. This process provides standards to ensure that graduates have the knowledge and skills to fulfill their responsibilities to prevent terrorism and other criminal activities against the U.S. and our citizens in a safe and proficient manner.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	None	24	33
Actual:	None	None	None	None	N/A	N/A

iii. Status of Congressionally Requested Studies, Reports, and Evaluation

**Department of Homeland Security
Science and Technology Directorate**

Fiscal Year	Due Date	Reference/Citation	Requirement	Status
FY 2008	1/20/2008*	S. Rept. 110-84, to accompany the reports the bill Department of Homeland Security Appropriations Bill, 2008, (S. 1644)	Transportation Security Laboratory Costs and Benefits Report -- The Committee is aware of the need to expand laboratory space at the Transportation Security Laboratory (TSL) in order to safely house the Independent Test and Evaluation (ITE) program. Furthermore, the Committee is aware that product certifications provided at no charge by the TSL are a valuable service for vendors who send their products for evaluation, and that the product certification system encourages the development of newer security technology. The Committee directs S&T to report on the costs and benefits of charging companies for certification of their products in light of the potential to provide enhanced certification services and the capital improvement needs of the laboratory housing the ITE program. S&T is directed to report to the Committee on this cost-benefit analysis by February 5, 2008.	The report is in OMB review and is expected to be transmitted to the Committee in early May.
FY 2008		S. Rept. 110-84, to accompany the reports the bill Department of Homeland Security Appropriations Bill, 2008, (S. 1644)	C-MANPADS -- The Committee was disappointed to learn that additional funding provided in fiscal year 2007 for a comprehensive passenger aircraft suitability assessment resulted in a decision by the administration to push back its report and recommendation on deployment of these systems until fiscal year 2010. While the additional resources allowed a greater number of aircraft to be assessed, the major concerns about these systems such as effectiveness and reliability should soon be well characterized. The Committee directs the Department to report on the first portion of Phase III testing by the end of fiscal year 2008 and provide a recommendation on whether these systems are suitable for deployment or not.	C-MANPADS program was extended. DHS transmitted an interim white paper on the first portion of Phase III testing in August 2008. A final, comprehensive Phase III C-MANPADS report is anticipated for delivery to DHS in December 2009.
FY 2008		H.Rept. 110-181, to accompany the Department of Homeland Security Appropriations Bill, 2008 (H.R. 2638)	Air Cargo Pilot Report -- In fiscal year 2006, Congress appropriated \$30,000,000 for S&T to conduct three air cargo screening pilots programs to test different concepts of operations. Results to date from the three airports participating in the pilots appear promising. The Committee eagerly awaits the results of this work, which is scheduled to be completed in December 2007, with a final report due in the spring of 2008. In the interim, the Committee encourages S&T, in conjunction with TSA, to share any promising results with other airports seeking to improve their air cargo screening procedures. For example, an air cargo screening prioritization model was developed as part of one pilot that may permit the pilot airport, as well as other airports, to substantially increase the amount of air cargo it screens. FY 2006 Language -- "The conferees direct S&T to begin all pilots in fiscal year 2006, to report on the initial results of the pilots every six months after initiation of the first pilot, and to report on the final results four months after the last pilot is completed."	DHS submitted the 4th interim report to Congress in August 2008. The final report is in review and S&T anticipates delivery to the Committee this spring.

BUDGET REQUEST AND SUPPORTING INFORMATION

SCIENCE AND TECHNOLOGY DIRECTORATE MANAGEMENT AND ADMINISTRATION

I. Appropriation Overview

A. Mission Statement for Management and Administration:

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 274 full time equivalent (FTE) personnel in Washington, D.C. This appropriation provides for the operation of the Science and Technology (S&T) Directorate's Washington, D.C., headquarters, including business operations, contributions to the DHS Working Capital Fund, and other administrative functions associated with the management of the S&T Directorate and its resources.

B. Budget Activities:

The M&A appropriation provides for salaries and benefits related to 274 FTE at the S&T Directorate headquarters. The 274 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management and guidance formulation. FTE's also conduct program management, program execution oversight, program analysis, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation additionally provides for all business operations and financial management activities, including those covered by the DHS Working Capital Fund. The Business Operations functions include paying for rent, office supplies, utilities, and other operational functions associated with the S&T Directorate's Washington DC headquarters. This account pays for the training and travel associated with senior management of the S&T Directorate, and contractor staff who support the execution of headquarters functions, such as financial management, facility planning and maintenance, and other administrative functions. M&A also funds the administration of the S&T Directorate's regulatory and treaty compliance activities, the management of the Small Business Innovation Research (SBIR) program and the financial and programmatic databases. The M&A appropriation does not fund the contractor support or travel associated with the direct execution of Research, Development, Test and Evaluation (RDT&E) programs across the S&T Directorate.

C. Budget Request Summary:

The S&T Directorate requests 274 positions, 274 FTE, and \$142,200,000 for M&A in FY 2010, an increase of \$10,100,000 from FY 2009. The total adjustments-to-base of \$10,100,000 include funding for a 2.0 percent pay raise and to cover salaries and rent expenses for new employees hired in FY 2008 and FY 2009. In FY 2010 there are no program increases for the S&T Directorate M&A.

	Perm Pos	FTE	Amount
2008 Actual	346	323	138,138
2009 Enacted	257	257	132,100
2010 Adjustments-to-Base	17	17	10,100
2010 Current Services	274	274	142,200
2010 Program Change	
2010 Request	274	274	142,200
Total Change 2009-2010	17	17	10,100

The S&T Directorate requests \$142.200 million for this activity. This is an increase of \$10.100 million over FY 2009 for pay inflation, as well as, adjustments to cover additional salaries, working capital fund expenses, and rent expenses.

CURRENT SERVICES PROGRAM DESCRIPTION:

The M&A appropriation provides for salaries and benefits related to 274 FTE at the S&T Directorate headquarters. The 274 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management and guidance formulation. These FTE also conduct program management, program execution oversight, program analysis, and operations and maintenance support for all S&T Directorate programs. Included within this request is a current services adjustment of \$2.500 million to cover the increased space S&T has occupied to accommodate the recent increase of federal staff. S&T has also included a current services adjustment of \$6.000 million to cover the federal salaries and benefits associated with the new staff to be hired in FY 2009. In FY 2010 S&T is requesting an increase of 17 FTE (for a total of 274 FTE) to the authorized FTE level; this increase in FTE will not require additional funds and will be offset within the appropriation by reducing the level of contract staff and realigning funds from object class 25.1 Advisory and Assistance to Personnel Compensation and Benefits. This realignment of staffing funds to increase federal employees is an ongoing effort to reduce reliance on contractor staff within S&T.

The M&A appropriation provides all of the corporate-level functions in the S&T Directorate that allow the technical divisions to manage the Research and Development Testing and Evaluation (RDT&E) programs. Those functions include the Strategy, Policy and Budget Division, which includes the functions of Chief Financial Officer; the Business Operations Division, which manages the facilities, personnel and the information technology infrastructure; the Operations Analysis Division, which provides science-based risk analyses and other tools; and the Corporate Communications Division, which coordinates internal and external information dissemination.

The DHS Working Capital Fund provides for those shared services that the components rely on to execute their missions, such as contracting officers and the DHS-wide information technology infrastructure.

Division Support

The Directorate has six divisions and four key offices, each of which has an important role in implementing RDT&E activities. The M&A appropriation provides for the federal salaries and business operations of these divisions.

Borders and Maritime Security Division - The Borders and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers.

Chemical and Biological Division - The Chemical and Biological Countermeasure Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

Command, Control and Interoperability Division - The Command, Control, and Interoperability Division focuses on operable and interoperable communications for emergency responders, security and integrity of the Internet, and development of automated capabilities to recognize potential threats.

Explosives Division - The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation and critical infrastructure.

Human Factors/Behavioral Sciences Division - The Human Factors/Behavioral Sciences Division applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements. It supports the preparedness, response, and recovery of communities impacted by catastrophic events and it advances homeland security by integrating human factors into homeland security technologies.

Infrastructure and Geophysical Division - The Infrastructure and Geophysical Division develops capabilities to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

Crosscutting Offices:

Innovation - The activities within the Innovation offices focus on homeland security priority research and development initiatives that could lead to significant technology breakthroughs that would greatly enhance DHS operations. The Office of the Director of Innovation oversees the Homeland Security Advanced Research Project Agency (HSARPA). HSARPA funds R&D of homeland security technologies to support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security

technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities.

Test & Evaluation and Standards - The Test & Evaluation and Standards programs provides policy and oversight of the Department's test and evaluation program and technical support and coordination to assist the Nation's emergency responders in the acquisition of equipment, procedures, and mitigation processes that are safe, reliable, and effective.

Transition - The Transition Office focuses on delivering near-term products and technology enhancements by working with the Department's components, industry, and other agencies to expedite the technology transition process.

Research – Laboratory Facilities - Office of National Laboratories (ONL) executes Laboratory Facilities programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Research – University Programs - University Programs engage the academic community to conduct research and analyses and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

The six technical Divisions and additional offices are linked to three research and development investment portfolio directors in a matrix managed structure. The three portfolio directors – Director of Research, Director of Transition, and Director of Innovation – provide crosscutting coordination of the investment strategy within the technical Divisions. The matrix structure allows the S&T Directorate to provide more comprehensive and integrated technology solutions to its customers by appropriately bringing all disciplines together in developing leading-edge research solutions.

Strategy, Policy and Budget Division

The Strategy, Policy and Budget Division provides the S&T Directorate with high-quality, efficient, and cost-effective financial management services through four branches. The Program Analysis and Evaluation (PA&E) Branch develops long-term plans for resource allocation, execution plans, Congressional Justifications, and management of financial resources within the S&T Directorate. The Strategy, Planning and Integration (SPI) Branch manages and provides training for the S&T Directorate's Planning, Programming, Budgeting, and Execution (PPBE) system and associated processes, including PPBE database development and implementation. SPI also develops and implements internal and external performance metrics for S&T Directorate programs, as well as risk assessment methodologies to help inform programming decisions. The Acquisition Branch develops the S&T Directorate's acquisition strategy, and manages the travel and purchase card programs. The Financial Operations Branch is dedicated to sound fiscal stewardship of the S&T Directorate's appropriations and reimbursable funding; timely and accurate budget execution, financial management and financial reporting; and a sound monitoring process of programs and activities to provide reasonable assurance about the adequacy of the internal controls program within the S&T Directorate.

Business Operations Division

The Business Operations Division provides critical infrastructure support to the S&T Directorate and is composed of eight components: Facilities, Human Capital Office (HCO), Office of the Chief Information Officer (OCIO), Executive Secretariat, Office of the Chief Administrative Officer (CAO), Office of Administration and Audits, Central Security Office (CSO), and Readiness and Operational Coordination (ROC). In compliance with Presidential Directives, Federal Regulations and Department guidance, the Business Operations Division provides support and continuous process improvement through problem identification and solution, sound policy and procedure development, and high-quality service.

Facilities Branch - The Facilities Branch focuses primarily on the S&T Directorate's headquarters offices and is dedicated to providing its customers with a facility that is fully operational, well maintained and conducive to business operations, while focusing on and providing excellent customer service. This branch also funds rent and Federal Protective Services for S&T Directorate headquarters facilities.

Human Capital Office (HCO) - The HCO leads, manages and coordinates the delivery of the full range of human capital services in support of the S&T Directorate. The S&T Directorate supports the Department's initiatives to enhance employee satisfaction and motivation. Consistent with the Department's goals, the S&T Directorate is committed to a human capital management approach that achieves the following goals: recruit, train, and retain a workforce skill set mix focused on research and transition; maintain a personnel evaluation system that is based on performance and is fair; and recognize the contributions by personnel at all levels.

HCO provides a full range of human resource services in support of staffing: recruitment; labor and employee relations; position management and classification; performance management; compensation and benefits; employee and workforce development; manpower and strength management; in and out processing; awards management; and internal management controls. HCO implements DHS Human Capital policies and acts as a liaison with the DHS Management Directorate, Chief Human Capital Office.

HCO maintains the S&T Directorate's Staffing Management System (SMS). It maintains real-time information regarding the S&T Directorate's staffing positions, the details regarding its staff (Federal, contractors, detailees), and resources used by the staff, such as offices and government-issued equipment. The system assists in developing workforce plans, facility plans, equipment acquisition plans and future-year budgets.

HCO has enacted policies concerning Tele-work/Tele-commute and Alternate Work Schedules to establish a family-friendly workforce environment. HCO is responsible for Workforce Development and external training and education. This includes coordinating courses for managers and supervisors that discuss current human resource issues and policies and the implementation of the e-pilot tool for performance management and evaluation and DHScovery, an on-line learning management system.

Office of the Chief Information Officer (OCIO) - The S&T Directorate's OCIO advises senior leadership and program offices on all aspects of Information Technology (IT) business

processes, policies, standards and guidelines for the development of IT and compliance with DHS and Federal policies. OCIO ensures the delivery of information technology services to support the S&T Directorate's mission, goals and objectives, and represents S&T Directorate priorities on DHS and cross-agency IT initiatives, which support distributed and centralized technical and business operations to increase cost-effectiveness. OCIO accomplishes this by: (1) Business Planning – efficient and cost effective management of the S&T Directorate's IT investments, oversight & maintenance of the IT budget, capital planning and investment control, and Enterprise Architecture; (2) IT Engineering and Technology – technical service and guidance in IT infrastructure design and build-out of core systems and applications to improve timeliness, accuracy, and comprehensiveness of the S&T Directorate's RDA&O investments; (3) IT Systems Standards and Interoperability – standard data structures, databases, communications security, and solutions engineering to improve the collection, access, analysis, and dissemination of systems and data; (4) IT Infrastructure – infrastructure to ensure reliability, security and asset management; and (5) IT Security – information assurance services, oversees and coordinates security planning, testing, certification, and routine monitoring of S&T Directorate systems, and Federal Information Security Management Act of 2002 (FISMA) compliance.

Executive Secretariat (S&T Exec Sec) - The Office of the S&T Exec Sec oversees official communications to and from the Under Secretary for Science and Technology and ensures compliance with the roles and responsibilities stated in DHS Management Directive 10100. The S&T Exec Sec is a critical communicative instrument between the S&T Directorate and DHS components and other S&T Directorate customers. The S&T Exec Sec works with S&T Directorate staff on behalf of the Under Secretary to respond to congressional requests, Government Accountability Office (GAO) and DHS Office of Inspector General (DHS OIG) requests, general public requests and other inquiries. The S&T Exec Sec provides administrative support on behalf of the Under Secretary to include record management, forms management, document control and establishing correspondence procedures for the S&T Directorate. Additionally, the S&T Exec Sec interfaces with DHS components and external customers.

Office of the Chief Administrative Officer (CAO) - The CAO provides and manages quality services and assets that enable the S&T Directorate to achieve its mission. The CAO provides services, policy and oversight to the S&T Directorate and works with the DHS Management Directorate for real and personal property, environmental management, compliance and planning, historic and cultural preservation, employee health and safety, emergency preparedness and energy management. In addition, it maintains a liaison with the DHS Management Directorate for mail management, records management, printing and library services.

Office of Administration & Audits - The Administration & Audits office works as a liaison for the S&T Directorate to DHS OIG and GAO, and the general public regarding the Freedom of Information Act (FOIA). All three areas require policy and procedures to keep in compliance with specific Presidential Directives, Federal regulations and Congressional oversight.

Central Security Office (CSO) - The S&T CSO supports and provides the government and contractor personnel the security information and expertise to perform the S&T Directorate's mission. The CSO implements and adheres to policies, management directives and regulations

implemented by DHS Headquarters, and ensures the protection of facilities and of critical information from unauthorized disclosure.

Operations Analysis Division

The Operations Analysis Division provides the S&T Directorate with a wide range of scientific and technical tools to inform planning and management activities. The division provides information to decision-makers and program managers resulting from research, studies, operational analyses, risk analyses, analytic and computational models, simulations, war-games, and experimentation events that it oversees. The division uses these technical and analytical support activities to establish baseline operational capabilities and goals, integrate policy and program planning, and inform management decisions and the development of strategic objectives. The Operations Analysis Division has primary oversight of the activities of the Homeland Security Institute (HSI), other S&T Directorate sponsored Federally Funded Research and Development Centers (FFRDCs), and the Homeland Security Science and Technology Advisory Committee (HSSTAC), in addition to managing gaming and simulation and other experimentation activities.

Corporate Communications Division

The Corporate Communications Division communicates the objectives and status of homeland security technology programs, disseminates information regarding opportunities for private sector entities (corporate and academic), and ensures that DHS technologies and programs are understood and accurately represented by the media. The Corporate Communications Division holds conferences and manages the S&T Directorate's presence at other information sharing events to improve contact among technology developers, vendors, and acquisition personnel. They also promote the participation of colleges, universities, private research institutes, and companies (and consortia thereof) in the research process by disseminating information regarding research conducted or sponsored by the Department, and provide public communication support to the S&T Directorate sponsored FFRDCs. This is achieved through the S&T Directorate's business-based web presence, which provides information for persons seeking guidance on how to pursue proposals to develop or deploy technologies that would enhance homeland security.

Working Capital Fund

Funds provided within the M&A appropriation are also used to acquire services through the DHS Working Capital Fund, which includes: IT services, human resources, procurement operations, and financial systems. Other services provided are consolidated subscriptions, government-wide mandated services and DHS crosscutting activities.

PPA Mission Statement

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 274 full time equivalent (FTE) personnel in Washington, D.C. This appropriation also provides for the operation of the S&T Directorate's Washington, D.C., headquarters including business operations, contributions to the DHS Working Capital Fund, and other administrative costs associated with the management of the S&T Directorate and its resources.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$48,131	\$45,779	\$53,944	\$8,165

Salaries and Benefits includes costs for 274 FTEs. The FY 2010 request includes an increase of \$924,000 for the proposed January 2010 2.0% increase in personnel compensation, \$492,000 for annualization of the prior-year pay raise, a transfer of \$2,450,000 from the Advisory and Assistance object class to cover salaries of contractor conversions and an increase of \$4,299,000 to annualize additional staff hired in FY 2009 to meet S&T's goal of 274 Federal Employees.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$1,016	\$920	\$1,203	\$283

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. An increase of \$212,000 is included to cover travel expenses for new federal employee's hired in FY 2009 and an increase of \$71,000 is included for the 17 contractor conversions.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Transportation of Things	\$67	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
GSA rent	\$4,933	\$6,445	\$6,887	\$442

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. An increase of \$126,000 is included for GSA Rent inflation of 2% and an increase of \$316,000 is included to cover rent expenses associated with new space acquired for new employees hired in FY 2008 and FY 2009. A portion of S&T's rent costs are included in WCF charges reflected in object class 25.3.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Communication, Utilities, and miscellaneous charges	\$0	\$431	\$526	\$95

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. An increase of \$95,000 is required to cover utilities expenses associated with new space rented by S&T.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Printing	\$71	\$50	\$50	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$28,442	\$31,968	\$29,597	(\$2,371)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. A decrease of \$2,771,000 is transferred to Salaries, travel and other services to cover costs of converting 17 contractor staff to federal employees. Also included is an increase of \$400,000.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Other Services	\$3,845	\$1,649	\$1,965	\$316

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. An increase of \$66,000 is included for additional training expenses associated with new hires in FY 2009 and an increase of \$250,000 is included to cover training and other expenses for the 17 contractor conversions in FY 2010.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Purchase from Government Accounts	\$39,843	\$37,876	\$41,023	\$3,147

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. An additional \$3,147,000 is included to cover additional expenses in WCF including the increase in WCF Rent.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Operation & maintenance of facilities	26	---	\$0	\$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Research and Development	\$1,466	\$0	\$0	\$0

Research and Development includes costs for contracts for the conduct of basic and applied research and development.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$717	\$0	\$0	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$771	\$805	\$805	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$8,810	\$6,177	\$6,200	\$23

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. An increase of \$23,000 is included to cover increased costs associated with IT equipment.

BUDGET REQUEST AND SUPPORTING INFORMATION

SCIENCE AND TECHNOLOGY DIRECTORATE RESEARCH, DEVELOPMENT, ACQUISITIONS, AND OPERATIONS

I. Appropriation Overview

A. Mission Statement for Research, Development, Acquisitions, and Operations:

The Science and Technology (S&T) Directorate is the primary research and development (R&D) arm of the Department of Homeland Security (DHS). The S&T Directorate will improve homeland security by providing our customers, the operating components of DHS and State, local, tribal, and territorial emergency responders and officials, state-of-the-art technology that helps them accomplish their missions.

The S&T Directorate will fulfill its mission by:

- Developing and deploying state-of-the-art, high performance, low-operating-cost systems to prevent, detect, and mitigate the consequences of chemical, biological, and explosive attacks;
- Developing equipment, protocols, and training procedures for response to and recovery from all-hazards, including chemical, biological, and explosive attacks;
- Enhancing the technical capabilities of the Department's operational elements and other Federal, State, local, and tribal agencies to fulfill their homeland security related missions;
- Developing methods and capabilities to test and assess threats and vulnerabilities, and prevent technology surprise and anticipate emerging threats;
- Developing technical standards and establishing certified laboratories to evaluate homeland security and emergency responder technologies, and evaluate technologies for SAFETY Act certification; and
- Supporting U.S. leadership in science and technology.

The S&T Directorate is customer-focused and delivers capabilities that DHS components can rely on to meet their operational needs. To accomplish this, the S&T Directorate facilitated customer-led Capstone Integrated Product Teams (IPTs) charged with identifying functional capability requirements across the Department. The S&T Directorate uses the outcomes of these IPTs to identify the highest priority needs and allocate resources to those programs that support the priorities established by its DHS customers. The S&T Directorate's business model of structured Capstone IPTs ensures that product transition investments align to customer mission requirements.

Senior leadership from DHS Components lead the Capstone IPTs in the following 12 major Homeland Security functional areas:

- Border Security;

- Cargo Security;
- Chemical/Biological Defense;
- Counter-Improvised Explosive Devices;
- Cyber Security;
- Incident Management;
- Information Sharing/Management;
- Infrastructure Protection;
- Interoperability;
- Maritime Security;
- People Screening; and
- Transportation Security.

The S&T Directorate established a 13th IPT for First Responder Technologies to address capability gaps identified by Federal, State, local and Tribal First Responders.

Each Capstone IPT works to identify, validate, and prioritize capability requirements across the Department (within a functional area) that the S&T Directorate can address. The interaction of technologists and operators has improved the prioritization of efforts and the focus on relevant, cost-effective solutions that make a significant difference. The S&T Directorate's transition process ensures that appropriate technologies are harvested and integrated into the DHS acquisition system for our customers. Outputs from the IPTs continue to drive the S&T Directorates programs in the FY 2010 budget request. As part of this process, the Homeland Security Studies and Analysis Institute provides capability gap analysis and quick-response studies on topics that arise during the S&T Directorate's capstone IPT process.

B. Budget Activities:

Borders and Maritime Security

The Borders and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation's borders and waterways, without impeding the flow of commerce and travelers.

Chemical and Biological

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

Command, Control, and Interoperability

The Command, Control, and Interoperability Division develops interoperable communication standards and protocols for emergency responders; cyber security tools for protecting the integrity of the Internet; and automated capabilities to recognize and analyze potential threats.

Explosives

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure.

Human Factors

The Human Factors/Behavioral Sciences Division applies the social and behavioral sciences to improve detection, analysis, and understanding and response to homeland security threats.

Infrastructure and Geophysical

The Infrastructure and Geophysical Division's increases the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

Innovation

Innovation focuses on homeland security R&D that could lead to significant technology breakthroughs that would greatly enhance DHS operations.

Laboratory Facilities

Laboratory Facilities provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

Test & Evaluation and Standards

The Test & Evaluation and Standards Division provides technical support and coordination to assist the Nation's emergency responders in the acquisition of equipment, procedures and mitigation processes that are safe, reliable, and effective.

Transition

The Transition Office focuses on delivering near-term products and technology enhancements by working with the Department's components to expedite the technology transition process.

University Programs

University Programs engages the academic community to conduct research and analyses and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

C. Budget Request Summary:

The S&T Directorate request for Research, Development, Acquisitions, and Operations is \$826.191 million for FY 2010. This is an increase of \$25.704 million above the FY 2009 Enacted level, which supports the development of additional technologies for specific high-priority, customer-identified needs identified during the S&T Capstone IPT process, specifically:

- Borders and Maritime Security:
 - Maritime Security, and
 - Urban Tunnel Detection.
- Command, Control and Interoperability:
 - Cyber Security
- Explosives:
 - Vehicle-Borne Improvised Explosive Device/ Person-Borne Improvised Explosive Device (VBIED/PBIED) to improve large threat mass detection in such areas as the transit environment, special events and other large areas

- Additional efforts in Air Cargo
- Human Factors:
 - Suspicious Behavior Detection to provide a culturally independent, real-time, multi-modal (behavioral, physiological, and auditory), automated capability to detect suspicious behavior that indicates the intent to cause harm.
- Infrastructure and Geophysical
 - Additional efforts to improve the Nation's disaster response system so agencies and private partners at all levels have situational awareness of the resources being applied to the last mile where disaster victims are located.
 - Addressing high-priority technology gaps to improve Critical Infrastructure resiliency and first responder survivability.
- Labs and Facilities:
 - National Bio and Agro-Defense Facility (NBAF) site preparation including central utility plant (CUP) construction,
 - Pacific Northwest National Laboratory (PNNL),
 - Infrastructure upgrades, starting with the addition of storage space, including explosives bunkers, at Transportation Security Laboratory (TSL),
 - Operations costs for the National Biodefense Analysis and Countermeasures Center (NBACC).
- Transition:
 - First Responder Technologies IPT - Federal, State, local and Tribal First Responders will identify science and technology requirements and prioritize technology solutions proposed by the S&T Directorate's divisions

Net, Enacted Appropriations and Budget Estimates	---	\$833,926	124	\$800,487	130	\$826,191	6	\$25,704	---	\$95,825	6	(\$70,121)

III. Current Services Program Description by PPA

PPA: BORDER AND MARITIME

	<u>Perm</u>	<u>FTE</u>	<u>Amount</u>
	<u>Pos</u>		
2008 Actual			\$ 28,664
2009 Enacted			33,050
2010 Adjustments-to-Base			0
2010 Current Services			33,050
2010 Program Change			7,131
2010 Request			40,181
Total Change 2009-2010			7,131

The Science and Technology (S&T) Directorate requests \$40.181 million for Border and Maritime in FY 2010, of this amount \$1.005 million supports the Small Business Innovative Research (SBIR) Program. This includes \$7.131 million for high-priority maritime security requirements identified by the Maritime Security Integrated Product Team (IPT) and for Urban Tunnel Detection basic research.

CURRENT SERVICES PROGRAM DESCRIPTION

The Borders and Maritime Security Division develops and transitions technical capabilities that enhance U.S. border security without impeding the flow of commerce and travelers. The division works closely with its operational customers to identify and generate the best technologies for securing U.S. borders. The division's area of responsibility encompasses all air, land, and maritime borders, including U.S. ports-of-entry and inland waterways. The division provides customers with new and/or better options to accomplish their mission.

The primary Federal customers and end-users for the Borders and Maritime Security Division are the Department's Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE), U.S. Coast Guard (USCG), and Transportation Security Administration (TSA). FY 2009 and FY 2010 activities reflect requirements from these customers. Successful transition of these capabilities and technologies will improve the Department of Homeland Security (DHS) components' performance and support the Secretary's goals of:

- Protecting the Nation from dangerous people, and
- Protecting the Nation from dangerous goods.

Border Watch Thrust Area – Develops and applies technologies and tools that:

- increase detection of illegal land and maritime border activity while requiring less manpower;
- reduce agent response time and increase officer safety;
- provide connectivity to law enforcement officers working in remote locations where it currently does not exist; and
- provide real-time, relevant information to DHS component command centers and various levels of law enforcement.

Border Watch is developing a network of advanced sensor and communication technologies that will provide law enforcement officers critical information about illegal activities along the U.S. border. Currently, border operations, both at and between ports-of-entry, depend highly on a professional's institutional knowledge and aging technology. Border Watch aims to deliver advanced detection, classification and localization technologies that will enhance law enforcement officers' ability to secure the borders efficiently and effectively.

Activities in the Border Watch thrust area support the Secure Border Initiative (SBI), a comprehensive multi-year plan to secure America's borders and reduce illegal migration, and the Interagency Operation Centers, an initiative to enhance command-and-control capabilities for the maritime entities. The thrust area includes the following programs: Border Technologies, Maritime Technologies, and Border Officer Tools and Safety.

Border Technologies Program – FY 2009: \$9.798 million; FY 2010 estimate: \$13.199 million
Delivers technologies to provide advanced detection, identification, apprehension and enforcement capabilities along land and maritime borders. The program develops:

- Detection, classification, and localization sensor technologies to monitor illegal border activity with a wider range and greater accuracy than current technologies;
- Command and control systems that deliver more comprehensive information about real time to different levels of law enforcement; and
- Communications systems that provide connectivity to law enforcement officers working in remote locations.

These technologies and systems will help ensure efficient use of border security assets and effectively give law enforcement officers access to robust and reliable information when they need it. The following projects are within the Border Technologies program:

Border Detection Grid Project – Provides a grid of advanced sensors and detection, classification, and localization technologies to detect and classify cross-border movement (e.g., friendly forces, animals, weather, or illegal activity). This technology will revolutionize border control by providing a way for a single Border Patrol officer to effectively monitor more than 10 miles of border. In FY 2008, the project conducted an integrated concept test along the southern border, and developed and designed an implementation plan for unattended ground sensors (UGS). In FY 2009, the project plans to pilot a tripwire capability that can locate activity anywhere along many miles of the border. FY 2009 plans also include finalizing all project-related activities and starting planned FY 2010 transitions of select technology to the operational end-user.

BorderNet Project – Develops a wireless data network that will connect law enforcement officers in the field to real-time, tactical, scene-awareness information, including geographic features, sensor data, and agent location data; as well as provide access to law enforcement databases. In FY 2008, the project installed a Northern Border testbed demonstration in a northeast Border Patrol sector that will provide technology insertion and lessons learned to the Secure Border Initiative Network (SBI*net*), and deployed a 10-fingerprint mobile capability for enrolling detainees into immigration databases. In FY 2009, the project plans to transition select technologies to the operational end-user. The Division requests no project funding for FY 2010.

BorderTech Project – Develops, demonstrates, and tests unproven technologies to reduce risk for the SBI Network (SBI*net*). The division will initiate this project in FY 2009 to develop, integrate, and test sensor technologies in an operational environment to provide in-the-field capabilities, improving mission effectiveness and agent safety. This project will include:

- North East Testbed (NET-B) – provides a test platform for evaluating technologies in an operational environment, enabling acquisition decisions, agent training and tactics development;
- Unattended Ground Sensors (UGS) Testbed – provides NET-B advanced technology to enable test and evaluation of new UGS units as well as new system capabilities;
- Camera Evaluation – assesses the performance characteristics of a variety of imaging systems in their ability to detect and classify contacts at ranges, analyze life-cycle costs, and make recommendations;
- Advanced Sensor Technologies – investigates technologies and methods for improving operational performance of unattended ground sensors, tunnel activity sensors, electro-optical/infrared (EO/IR) devices and associated sensor signal processing; and
- Advanced Ground Surveillance Radar – assesses active and passive technologies and develops/ demonstrates a system for detecting and tracking humans.
- Renewable Energy Basic Research - assesses energy scavenging, power sources and management for remote areas or areas with minimal infrastructure (remote islands, inland waterways).

In FY 2009, the project will install and prove-out the baseline capabilities of the North East Test Bed (NET-B); initiate engineering and systems testing for camera evaluation for all border environments; perform proof-of-concept tests on tunnel activity technology; conduct study on renewable energy sources for sensors; and complete systems testing of the UGS testbed on the southern border. In FY 2010, the project plans to begin developing Advanced Sensor Technologies; conduct source-selection for advanced ground surveillance radar; conduct operational evaluation of land-border tripwires; and perform imaging systems technology assessment for cameras.

Sensors/Data Fusion and Decision-Aids Project – Develops systems to enable law enforcement officers and commanders to have full situational awareness, enabling effective decision making and execution in complex and dynamic operational environments. Current operations rely mostly on verbal coordination for real-time operational knowledge and situational awareness. This project will:

- Provide the capability to fuse tactical information from multiple data sources such as sensors and databases (both law enforcement and commercial databases);
- Provide real-time situational awareness;
- Eliminate scene clutter;
- Automatically identify and track high-risk targets (e.g., people, vehicles, and vessels);
- Provide decision aids;
- Facilitate multi-agency coordination for rapid response; and
- Enable Unmanned Aerial Systems (UAS) to sense other air traffic and maneuver as needed to avoid a mid air collision.

In FY 2008, the project developed Automated Scene Understanding (ASU) and visualization tools for maritime and inland waterways, and completed the prototype demonstration and operational assessment of Visualization Tools. In FY 2009, the project will install an updated sensor/data fusion capability for land Border applications, install advanced fusion technologies into a Port Security Testbed, and assess the performance of current national system capabilities to assist operational components in the interdiction of self-propelled semi-submersibles. In FY 2009/2010, the project plans to deliver modeling and simulation results that incorporate parameters from the current DHS UAS. In FY 2010, the project plans to demonstrate and transition initial ASU maritime capabilities to CBP & USCG.

SBI Systems Engineering and Modeling & Simulation Project – Helps border enforcement agencies make informed decisions in immigration/border security policy and operations using systems engineering tools and models. It provides systems engineering, analysis, and trade-off studies to SBI. In FY 2008, the project developed an immigration model that supports immigration reform decision making and performed the model verification and validation requirements. In FY 2009, the project will start to transition an immigration model and transportation of people model to operational components, completing the transition in FY 2010. The Division requests no project funding for FY 2010.

SBI Systems of Systems Engineering (SoSE) Capability Development Project – Assesses multiple, disparate factors affecting leadership decision making that could enhance SBI decision-making capabilities. In FY 2008, the project conducted research to understand how to extend SBI capabilities to deal with multivariate complex situations. In FY 2009, the project plans to continue research and begin developing a conceptual design to effectively deal with complex problem domains. In FY 2010, the project plans to include ICE and Citizenship and Immigration Services (CIS) studies and analysis on immigration issues.

Urban Tunnel Detection Basic Research – Investigates the geophysical characteristics of urban border regions including the uniqueness of all types of tunnels and underground voids as well as the overall detection effectiveness of each. Detection of tunnels requires a combination of both direct and indirect methods to determine the shape, size, and position of the tunnel. This basic research will identify the best methods for tunnel detection success. In FY 2010, the project plans to research and distinguish the geology of the different key urban border regions and will identify technologies and methods with the greatest potential for detecting tunnels.

Maritime Technologies Program – FY 2009: \$2.750 million; FY 2010 estimate: \$ 5.000 million. Develops technological solutions to a wide range of capability gaps identified during the Capstone IPT process. USCG, CBP, TSA, and ICE identified the majority of the capability gaps. The program's objectives are to develop:

- Advanced detection, identification, apprehension and enforcement capabilities along the maritime borders; and
- Technologies that support a framework for rapid, coordinated responses to maritime anomalies and threats.

This investment will provide significant risk mitigation and complement proposed major acquisition efforts, such as the USCG's Interagency Operation Centers and CBP's SBInet. These technologies and systems will ensure efficient and effective use of border security assets

and provide law enforcement access to robust and reliable information when they need it. The Maritime Technologies program includes the following projects: Sensors and Surveillance, and Situational Awareness and Information Management.

Sensors and Surveillance Project – Develops and demonstrates visual and non-visual technologies for monitoring the maritime border. Visual technologies provide capabilities that help agents identify illegal activities. Non-visual technologies provide low-cost, long-endurance monitoring to detect and track objects not captured by cameras. The project includes the following technologies:

- Affordable Wide-Area Surveillance (WAS) Capability – demonstrates persistent WAS commercial off-the-shelf/government off-the-shelf (COTS/GOTS) technologies to explore Concept of Operations (CONOPS) and data integration issues associated with the detection, tracking and classification of vessel traffic 12-120 nautical miles (nm) offshore;
- Advanced Geospatial Intelligence (AGI) Technical Exploitation – demonstrates data processing and exploitation to provide wide-area surveillance of the offshore maritime environment;
- Port and Coastal Radar Improvement – tests and evaluates the performance of a COTS radar using advanced signal processing to detect, track and identify large and small vessels from 0-12 nm in Port and Coastal regions under a variety of operational and environmental conditions;
- Small Boat Harbor Surveillance Study/Pilot – develops and tests near-term technologies for tracking small boats in port environments and demonstrates the improved situational awareness through an operational test/pilot program;
- Inland Waterway Maritime Security System (IWMSS) – develops and delivers technologies that improve maritime security on inland waterways by providing advanced law enforcement capabilities

In FY 2009, the project plans to perform a market survey for potential technologies and produce technology development and demonstration plans for providing better security for inland waterways and improved, more persistent maritime surveillance in ports, harbors and offshore (12 -120 nm). The project plans to test and evaluate a potential radar solution for the USCG's Interagency Operations Center acquisition program. The project also plans to investigate current and emerging AGI technologies for detecting small boats. In FY 2010, the project plans to conduct technology development and demonstrations of promising technologies for the IWMSS effort, demonstrate affordable WAS capability, and conduct a small boat harbor surveillance technology assessment.

Situational Awareness and Information Management Project – Provides information management technology to quickly identify threats at the maritime border and to provide required information to decision makers and security forces. In FY 2009, the project will complete an initial assessment of a prototype line-of-sight boarding team communication capability, complete an initial assessment of a team-to-command center, Over-The-Horizon (OTH) gateway communication, and perform a study of feasible solutions that can covertly track illegal contraband to their final destination. In FY 2010, the project plans to transition the OTH

prototype for boarding team communications, and an initial Advanced Automated Scene Understanding maritime capability to CBP and USCG.

Border Officer Tools and Safety Program – FY 2009: \$3.851 million; FY 2010 estimate: \$5.350 million. Provides tools and technologies to border-security, law-enforcement officers to improve effectiveness and safety when conducting vehicle and vessel inspections. The division will leverage technologies from other Departments, when possible, that could be adapted for CBP, ICE, and USCG.

Border Officer Tools Project – Improves law enforcement agents' effectiveness and enhances officer/agent safety while searching vessels/vehicles. Many of these tools will leverage technology currently being developed by DHS or Department of Defense (DOD) for other purposes. These tools will provide:

- Secure communications (e.g., voice and data) between field operators, and between field operators and their command centers;
- Intrusive (i.e., requires contact) as well as non-intrusive, non-destructive technologies to aid in the identification of contraband; and
- resolution versus bandwidth solutions for 24-hour, Real-Time Image Transmission of high-definition images and documents.

In FY 2009, the project will conduct a technology survey to identify efficient solutions for the Real-Time Image capability. In FY 2009/2010, the project plans to develop a CONOPS, and evaluate current devices for a man-portable chemical, biological, and explosives detector. In FY 2010, the project plans to demonstrate a real-time image transmission capability.

Border Officer Safety Project – Integrates technologies that will enable border-security, law-enforcement agents to more safely perform their mission. These technologies include, but are not limited to:

- Enhanced Ballistic Protection – delivers lighter weight, more durable and higher strength materials and equipment to increase the level of a field agent's ballistic protection while reducing his equipment load;
- Automatic Facial Recognition – captures images of individuals and compares them to law enforcement databases;
- Hidden Compartment Inspection Device – allows agents to non-intrusively detect, from greater stand-off ranges, people and contraband hidden behind walls and other barriers;
- Pursuit Termination-Vehicle/Vessel Stopping – provides user-safe, non-lethal means of stopping uncooperative vehicles and vessels attempting to evade apprehension;
- Covert Officer Safety Transmission System – allows for undercover agents to transmit own location and capture audio/images of interest;
- Gunfire Location – identifies the location of gunfire, classifies the type of weapon, alerts targeted enforcement of incoming gunfire, and creates forensic data; and
- Less-Lethal Compliance Measure for Personnel – provides lighter-weight, more energy efficient, more robust, hand-held less-lethal devices that safely neutralize and assure compliance of uncooperative individuals.

In FY 2009, the project will determine ballistic vest performance requirements for border security use; investigate facial recognition requirements and solutions, determine gunfire location requirements for law enforcement officers; determine less-lethal vehicle/vessel stopping requirements, and complete an assessment of a hidden compartment inspection device. In FY 2010, the project plans to complete the ballistics protection prototype demonstration; complete the gunfire location specification and transition to customers; upgrade hidden compartment inspection device design for vessels and vehicles; investigate electromagnetic pulse approaches for stopping vehicles and vessels; demonstrate the covert officer safety transmission system prototype; and conduct market survey to identify potential solutions for less lethal compliance measures.

Cargo Security Thrust Area – Develops technologies to ensure the integrity of cargo shipments, including sea, air, and land conveyance, and enhances the end-to-end security of the supply chain – from the manufacturer of goods to final delivery. This work will reduce the risk of terrorist manipulating cargo as it conveys across various transit modes in the international supply chain.

These technologies include:

- Container Security Devices
- Composite Containers with embedded security devices
- Devices that communicate Cargo Status and Security Alert Information
- Secure packaging for air cargo
- Improved Non-Intrusive Inspection Technology
- Improved targeting technology

Cargo and Conveyance Security Program – FY 2009: \$15.825 million; FY 2010 estimate: \$15.627 million. Improves supply chain security to protect the Nation’s borders and cargo – reducing illegal immigration and preventing the transport of illegal drugs, contraband, and weapons of mass destruction into the United States. The program develops advanced systems and communication technologies within the architecture that encompasses the world’s supply chain. Some technologies developed in this program will enable Government officials to identify and locate tampering events, track shipping containers, and ensure that alarm data is communicated reliably and securely. Other technologies include containers of composite materials to improve scanning and thwart undetected entry; tamper-evident packaging materials such as cartons and wrap; targeting systems using advanced software and algorithms to identify high-risk cargo and shipments; next-generation non-intrusive inspection systems incorporating radiography, material discrimination, and operator aids and tools such as automatic target recognition. The program carries out its activities through the following projects:

Advanced Container Security Device (ACSD) Project – Develops an advanced sensor system for monitoring containers’ integrity from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. The ACSD is a small unit that attaches to the inside of a container to monitor all six sides and report any intrusion or door opening or the presence of human cargo. If ACSD detects an intrusion, breach, door opening, or human, it transmits alarm information through the Marine Asset Tag Tracking System (MATTS) to CBP. The ACSD will also build in

a standard plug-and-play interface so that other security or commercial sensors (e.g., radiological/nuclear, chemical/biological) can be easily integrated through the standard interface. In FY 2008, the project delivered 40 prototype systems. In FY 2009, the project will test and evaluate these prototype systems in operational settings. In FY 2010, the project plans to remedy shortfalls discovered during prototype testing and integrate system improvements.

Container Security Device (CSD) Project – Develops a security device with sensor(s) that can detect the opening of container doors from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. The CSD will provide an interim capability to monitor the status of container doors until the ACSD is available. The CSD is a small, low-cost device mounted on or within a container that detects the opening or removal of container doors and reports its status to CBP. In FY 2008, the project delivered, tested, and evaluated 20 CSD prototypes. In FY 2009, the project will operationally test the CSDs. In FY 2010, the project plans to remedy shortfalls discovered during prototype testing, integrate system improvements, and deliver improved prototypes for future field-testing. The project will also transition the CSD test and evaluation assessments and finalized specifications to CBP and DHS Policy.

Marine Asset Tag Tracking System (MATTS) Project – Establishes a remote, global communications and tracking network that works with ACSD from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. MATTS communicates security alert information globally through the use of radio frequency (RF), cellular and satellite technology. In addition, the commercial shipping industry can track and monitor cargo as it moves through the supply chain. In FY 2008, the program integrated MATTS into ACSD, and initiated test and evaluation of the MATTS-Lock (M-Lock) configuration of the MATTS tag (a chain of custody tool incorporating a MATTS tag into a lock enclosure). In FY 2009, the project plans to conduct worldwide cellular interoperability tests, and demonstrate chain-of-custody tracking using M-Lock. In FY 2010, the project plans to test Local Area Network (LAN) communications, meshing reliability in stacked environments and satellite communications, and produce a MATTS technical requirements document and transition the MATTS technology.

Hybrid Composite Container Project – Develops a next-generation International Standards Organization (ISO) composite shipping container with embedded security sensors to detect intrusions from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. Composites are stronger than steel, 10-15% lighter than current shipping containers, and are easier to repair (which decreases life-cycle costs). Weight savings can benefit shippers by allowing them to load more goods per container within weight limits. In FY 2008/ 2009, the project plans to build one full-size ISO compliant composite container prototype and initiate a design review. In FY 2010, the project plans to test and evaluate the manufactured prototype and conduct structural ISO testing.

Air Cargo Composite Container Project – Expands upon the composite material developed in the Composite Container project to determine whether it is effective in the air-cargo supply chain. The air cargo composite container must be comparable to existing aluminum containers and be interoperable with existing aircraft loading infrastructure. In FY 2008, the S&T Directorate initiated design feasibility and evaluation of this effort. In FY 2009, the project will conduct requirements analysis for expansion of the Hybrid Composite Container effort for Air

Cargo Composite Containers. In FY 2010, the project plans to conduct requirements and critical design reviews with the air cargo community; complete security sensor system development; complete structural system design and weight optimization. The project plans to field test, demonstrate an air cargo composite container; and deliver final performance requirements to CBP and TSA in FY 2010.

Secure Carton Project – Develops technology to detect any shipping carton tamper event and transmit an alert to authorities after it leaves the point-of-manufacture to the point that it is delivered in the supply chains. This project provides improved supply chain visibility, chain of custody, and security. It is scalable and applicable across the various shipping modalities including trucking, rail, maritime and air cargo. In FY 2008, the project delivered and started testing prototype systems. In FY 2009, the project will conduct prototype field experiments and perform testing in an air cargo environment. In FY 2010, the project plans to address any system deficiencies noted during testing along with improvements suggested during field-testing.

Secure Wrap Project – Provides a transparent, flexible, and tamper-indicative wrapping material to secure and monitor palletized cargo after it leaves the point-of-manufacture to the point-of-delivery in the land, maritime and air-cargo supply chains. The wrap will provide a visible and/or fluorescent tamper indication and is deployable with little or no impact to current supply chain logistics and processes. Subsequent iterations of this wrap will support increasing levels of automated monitoring, thereby reducing manpower required to ensure cargo integrity. In FY 2009, the project will further develop the Small Business Innovative Research (SBIR) initiative to complete the feasibility study and prototype design. In FY 2010, the project plans to deliver prototype systems for operational testing in the supply chain.

Supply Chain Security Architecture (SCSA) Project – Maps the international supply chain including: all nodes (e.g., point-of-stuffing, port-of-entry), participants (e.g., shippers, CBP, foreign Customs), and information flow (e.g., container manifests). This security architecture will provide DHS the framework to incorporate near-term and future container-security technologies into supply chain operations. In FY 2008, the project completed the maritime environment architecture. Also in FY 2008, the project defined requirements and architecture for the air cargo domain. In FY 2009, the project will complete the architecture, validate the architecture through testing of supply chain security technologies under development (e.g. Secure Carton), and transition the final performance requirements to TSA.

Advanced Screening & Targeting (ASAT) Project – Provides enhanced risk assessment through development of computer algorithms and software that will provide next-generation risk assessment and targeting tools to complement the CBP Automated Targeting System (ATS). In FY 2008, the program delivered Phase 1 (ASAT I) to CBP to provide automated anomaly detection and pattern discovery algorithms to target high-risk cargo. For ASAT II, starting in FY 2009, the program will further advance computer algorithms and software that will automatically collect data from a broad spectrum of sources, combine and analyze shipping information to find suspicious relationships and patterns. Starting in FY 2010, the project plans to perform an evaluation of pattern analysis tools, develop advanced algorithms, and initiate software Beta testing.

CanScan Project – Develops a next-generation non-intrusive inspection (NII) system that will be used to detect terrorist materials, contraband items (e.g., drugs, money, illegal firearms), and stowaways at border crossings, maritime ports, and airports. These new systems may provide increases in penetration, resolution, and throughput and will support marine containerized cargo as well as airborne break-bulk, palletized, and containerized cargo. CanScan will provide improved cargo screening. In FY 2009, the project will perform requirements analysis, and initiate concept studies and analysis of alternatives. In FY 2010, the project plans to initiate concept selection and system design. Beginning in FY 2010, the program plans to assess the Automatic Target Recognition (ATR) for potential integration into the CanScan system.

Automatic Target Recognition (ATR) Project – Develops an automated imagery detection capability for anomalous content (e.g., persons, hidden compartments, contraband) for maritime, land, and air cargo for existing and future Non-Intrusive Inspection (NII) systems. This ATR capability is broadly applicable to the scanning and imaging systems used by CBP and TSA, providing an operator-assisted decision aid for target discrimination within low-resolution images. Further, the ATR will be scalable to accommodate advanced NII systems with higher resolution imagery and material discrimination capability. In FY 2010, the project plans to develop and finalize requirements, conduct business planning, and perform concept studies and analysis of alternatives.

PPA: CHEMICAL AND BIOLOGICAL

	Perm Pos	FTE	Amount
2008 Actual			\$260,273
2009 Enacted			200,408
2010 Adjustments-to-Base			1,392
2010 Current Services			201,800
2010 Program Change			5,000
2010 Request			206,800
Total Change 2009-2010			6,392

The Science and Technology (S&T) Directorate requests \$206.800 million for the Chemical and Biological Division, of this amount \$5.170 million supports the SBIR Program. The increase in FY 2010 includes \$1.392 million to maintain current services to increase preparedness against chemical and biological threats and \$5.000 million to meet a high priority capability gap identified in the Chemical and Biological IPT to identify key areas for improvement in laboratory analytical methods for high-throughput and on site analysis of suspect food products.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Chemical and Biological Division increases the Nation’s preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures. The division carries out its activities through three thrust areas: Biological Countermeasures, Agriculture, and Chemical Countermeasures.

Biological Countermeasures Thrust Area – Provides the understanding, technologies, and systems needed to protect against possible biological attacks on the Nation’s population or infrastructure. The thrust area focuses on those biological attacks that have the greatest potential for catastrophic damage. These include – but are not limited to – aerosolized anthrax and smallpox. Where appropriate, the program incorporates biodefense as part of an integrated chemical, biological, radiological, nuclear, and explosive (CBRNE) defense across civil and military agencies. This thrust area supports the President’s *Biodefense Strategy for the 21st Century*, Homeland Security Presidential Directive (HSPD-10), which provides a comprehensive framework for our Nation’s biodefense. This thrust area carries out its activities through six main programs:

- Systems Studies and Decision Support Tools;
- Threat Awareness;
- Surveillance and Detection Research and Development;
- Surveillance and Detection Operations;
- Forensics; and
- Response and Restoration.

Systems Studies and Decision Tools Program – FY 2009: \$9.001 million; FY 2010 estimate: \$7.306 million. Conducts system studies and net assessments to identify and assess effective

measures for deterrence, detection, and mitigation of biological terrorism acts against the U.S. population and infrastructure. This provides the analysis and tools that help refine requirements for program execution within the Chemical and Biological Division. A portion of this work supports system design and systems tradeoffs for future systems. In addition, Federal, State, and local emergency responders are intended users of tools developed in this thrust area.

Biodefense Net Assessments Project – Conducts net assessments of this Nation’s overall biodefense strategy every four years, as required by HSPD-10, *Biodefense for the 21st Century*, to provide “recommendations for re-balancing and refining investments among the pillars of our overall biodefense policy.” In 2008, the project delivered the first of these Biodefense Net Assessments (BNAs) to the Homeland Security Council (HSC). The BNAs addressed ten fundamental questions related to the strategy contained in HSPD-10. In FY 2009, the project will initiate the second round of BNAs. These BNAs will take a longer-range strategic perspective that focuses on our existing and potential adversaries’ competitive strengths, tipping points and probable responses to our actions. In FY 2010, the project plans to continue with in-depth analysis of the questions posed by the second round of BNAs.

Decision Support Tools Project – Develops fully integrated operational tools for surveillance, detection, incident characterization, and response systems, including improved models of transportation systems and their associated response options and concepts of operations (CONOPS) for chemical and biological attacks. These tools provide architecture design and operational response capability for detection, incident characterization, response, and training simulations. Starting in FY 2009, the project will transition tools and data to the Department of Homeland Security (DHS) Interagency Modeling and Atmospheric Assessment Center (IMAAC) to provide real-time, high-resolution meteorological data feeds from existing National Oceanic and Atmospheric Administration (NOAA) radars deployed across the Nation to enhance IMAAC’s current hazard prediction capabilities. The project plans to extend its Washington DC subway system tracer studies, to New York City or Boston to further support subway model validation and support architecture analysis for detection, incident characterization, and response systems for the transit sector. The project plans to use real-world data gathered from these tracer releases to support the validation of subway models currently used in both the systems studies project and deployed in operational systems. The project will also develop an algorithm for IMAAC and the Transportation Security Administration (TSA) to understand transport of dense gases better. In FY 2010, the project plans to initiate the integration of CB transport and health effects modules into Secret Service training tools to support their operational training needs.

System Studies Project – Performs studies that use reference scenarios to assess the capability of the Nation’s current biodefense posture, identify critical gaps, and perform cost-benefit tradeoffs of different options for addressing those gaps. The Office of Health Affairs (OHA) uses the results of system studies to help coordinate DHS-led biodefense for the Nation, such as operation of the third-generation (Gen 3) BioWatch system. In FY 2008, the project transitioned the final Gen 3 BioWatch system architecture design and deployment strategy to OHA, which operates the BioWatch system. The project developed a Biological Autonomous Network Detector (BAND) validation test plan to support current BAND extended field tests. The project also performed an architecture analysis for defending against five antibiotic-resistant biological threats. In FY 2009, the project will shift its focus from detect-to-warn systems to detect-to-

protect systems supporting indoor facility/critical infrastructure protective architectures, and their CONOPS. In FY 2010, the project plans to perform a preliminary architecture analysis of food and agriculture systems for defending against biological threats. This analysis will lay the foundation for prioritizing future studies in this sector.

Threat Awareness Program – FY 2009: \$39.860 million; FY 2010 estimate: \$40.062 million
Characterizes threats posed by biological weapons, anticipates future threats, and conducts comprehensive threat and risk assessments to guide prioritization of the Nation's biodefense investments. The *Project BioShield Act of 2004* launched an effort to develop modern, effective medical countermeasures to protect Americans against attack by chemical, biological, radiological, or nuclear weapons. It assigned DHS the lead in conducting threat analyses to determine what constitutes a significant material threat to public health and national security. The primary deliverable is an intelligence-informed, scientific characterization and prioritization of bio-terrorist risks to the Nation. OHA, the HSC, and other agencies such as the Department of Health and Human Services (HHS), Environmental Protection Agency (EPA), U.S. Department of Agriculture (USDA), and the Intelligence community use this deliverable to support their efforts in enhancing the Nation's biodefense. The Threat Awareness Program carries out these activities through two main project areas: the Biological Threat Characterization Center (BTCC) and the Biodefense Knowledge Center (BKC).

Biological Threat Characterization Center (BTCC) – Conducts two major activities: (1) biennial, systematic end-to-end risk assessments on both traditional and advanced biological agents, known as Bioterrorism Risk Assessments (BTRAs); and (2) laboratory studies to close major scientific gaps that could significantly impact how the nation structures its defenses.

The biennial Bioterrorism Risk Assessments (BTRAs), required under HSPD-10, drives the focus of the analytical studies. The BTRA provides the basis for risk-informed investments for National strategic biodefense planning while identifying key knowledge gaps and defining critical vulnerabilities. Through thorough analyses, the BTRAs assess the likelihood and consequence of biological attacks. The process focuses on the acquisition and production of an agent, its dissemination in a broad range of scenarios, and the human health and economic impacts of those attacks. The resulting information is used to prioritize the risks posed by various agents, to identify vulnerabilities, and to identify associated major scientific knowledge gaps.

In FY 2008, the BTCC delivered the second BTRA report and an associated risk assessment tool to HSC. In comparison to the initial 2006 BTRA, this BTRA expands the agents of concern in the risk assessment to include enhanced biological threat agents and agricultural threats while also providing an assessment of the associated economic and public health consequences. The utility and success of the BTRAs conducted to fulfill HSPD-10 requirements has led to an HSPD-18, *Medical Countermeasures Against Weapons of Mass Destruction*, requirement for a biennial integrated risk assessment that encompasses chemical, biological, radiological and nuclear (CBRN) threats. In FY 2008, the S&T Directorate delivered the first such integrated CBRN risk assessment (iCBRN RA) to the HSC, and will update the assessment every two years thereafter. In FY 2009, the project will focus activities on the BTRA and the iCBRN Risk Assessments due in 2010 – including improved assessment of the intelligent adversary,

simplified modeling tools that allow a greater range of ‘what if’ exercises, and inclusion of economic affects for all the threats. In FY 2010, the project plans to deliver the third BTRA and the second iCBRN RA reports and tools, expanded to include enhanced and advanced agents and a prototype desktop tool.

The BTCC also conducts laboratory studies that help to answer key knowledge gaps identified in the BTRAs and reduce associated uncertainties with biological agents of interest. In FY 2008, the BTCC conducted laboratory studies that close key knowledge gaps for traditional agents (i.e., agent infectious doses and survivability in various environmental matrices). In FY 2009, the BTCC will close the remaining gaps on most of the classical, known agents. In FY 2010, BTCC plans to address future threats. The project also plans to perform laboratory studies to determine an approach for defending against enhanced/advanced threats and develop an approach for defending against engineered threats.

Biodefense Knowledge Center (BKC) – Provides multiple levels of analysis about biological threats to DHS and other Federal agencies – including 24/7 science and technology reach back for the DHS National Operations Center (NOC) and other stakeholders, as well as tailored assessments and in-depth analyses of biodefense issues and biotechnologies. For example, Awareness Bulletins provide information to analysts and decision makers about technologies that can be used for peaceful or, with a little alteration, nefarious ends. Population Threat Assessments (PTAs) provide an estimate of the number of people exposed to different dose levels of an agent in a plausible high consequence scenario, and are used by HHS to inform its health effects modeling in support of defining requirements for new medical countermeasures. The BKC also develops and supports knowledge discovery tools for data integration, analysis, and understanding, as well as software pilots for DHS customers to rapidly characterize and understand biological threats. In FY 2008, the BKC piloted the web-based Biodefense Knowledge Management System (BKMS), allowing users easier access to data sources and integrated data analysis capabilities. Customers of the BKMS include OHA, I&A, and Customs Border Protection (CBP). In FY 2009, the BKC will perform PTAs for new material threats identified in the FY 2008 BTRA and iCBRN Risk Assessment, and provide an improved BKMS with additional curated data sources and enhanced analysis capabilities. In FY 2010, the BKC plans to enable BKMS to search online for research and technology developments in synthetic genomics.

Food Defense Basic Research – Performs fundamental basic research through the National Center for Food Protection and Defense (NCFPD) that addresses agent/matrix interactions and the resulting implications for contaminant viability, detection, decontamination, and disposal. In FY 2009, the project will enhance fundamental knowledge of select agent interaction in complex food matrices and expand capabilities in the areas of rapid detection and characterization. In FY 2010, the project plans to explore and develop new concepts and approaches to prevent, respond to, or recover from the intentional contamination or disruption of the Nation’s complex food system.

Surveillance and Detection R&D Program – FY 2009: \$35.099 million; FY 2010 estimate: \$41.404 million. Develops next-generation detectors for biological threat agents, including fully autonomous detection capabilities for the third generation (Gen 3) BioWatch system. These

detectors will operate with lower costs and faster detection times – thus significantly increasing the protected portion of the U.S. population. In addition, this program works to develop the assays (i.e., signatures or fingerprints of biological agents) needed to enable detectors to accurately recognize a biological agent. This project is also developing detect-to-protect systems specifically for use indoors.

BioWatch Generation 3 (Gen 3) Detection System Project – Develops the Gen 3 BioWatch detection system, including development of: (1) the Bio-Agent Autonomous Networked Detector (BAND), an automated, fully integrated “lab-in-a-box” that is capable of aerosol collection, molecular analysis, identification, and reporting of results with networking capability for real-time control of the entire sensor network; and (2) Deployable Aerosol Collection Systems (DACS), remotely programmable, automated samplers that can preserve viable samples for one to three days. The automated detection capabilities provided by BAND and DACS will significantly reduce BioWatch operational costs, thereby allowing expanded and more frequent monitoring of the U.S. population. In FY 2008, the project initiated the commercialization phase of Gen 3 BioWatch detection systems. The S&T Directorate requested no funding for BAND beyond FY 2008; however, in FY 2009 the project will be prepared to transition the detection system and initial assays to OHA for the operational test and evaluation of Gen 3 BioWatch.

Bioassay - Near Term Project – Develops assays (fingerprint signatures of biological agents) employed within detectors to recognize biological agents, and provides bioinformatics resources and nucleic-acid signatures for use on commercial instruments. This effort develops bioassays for use in U.S. Government-deployed systems to provide an extremely high confidence that the detection warrants further action and investigation. These government-specific operational assays will allow Generation 2 and Generation 3 BioWatch to detect the top-twenty aerosolized biological threats identified in the 2008 BTRA. This project is also establishing a mechanism to independently evaluate and validate assays for first-responders and the private sector. In FY 2008, the project developed and transitioned assays to detect 10 biological threat agents and began the pilot evaluation of the Public Safety Actionable Assay (PSAA) process. The PSAA process should qualify biological identification systems that an array of government and responder entities may use. In FY 2009, the project will transition characterized assays to OHA through CDC for use and support of the BioWatch laboratory network. In FY 2010, the project plans to transition the PSAA process to establish initial operational capability. In FY 2010, the project also plans to transition additional Gen 3 BioWatch characterized assays to OHA through CDC to support Gen 3 BioWatch assays.

BioAssays – Next Generation Project – Develops new approaches for detecting the broad range of possible future threats. The current strategy is to use basic biological building blocks – the subsystems that enable an agent to infect a person, to grow, and to multiply – as a way to identify future threats. This project is identifying fundamental building blocks, such as infectivity, virulence, and antibiotic resistance-mechanisms, and developing appropriate assays for them. The S&T Directorate will use these new assays and their associated detection platforms to create novel sensing technologies consistent with the national architecture. In FY 2008, the project began laboratory studies to provide an initial proof-of-concept for novel sensing technologies. The project also developed performance requirements, based on the performance characteristics of current operational systems and input from DHS customers, and identified a number of

possible approaches for meeting those requirements. Because this is a difficult problem, the S&T Directorate must conduct research on a number of these approaches before determining which is the most likely to succeed. In FY 2009, this project will initiate multiple research efforts aimed at identifying the most promising approach for detecting a broad range of possible future threats. In FY 2010, this project plans to identify assays for use in conjunction with the concepts being developed by the Next Generation Biological Detection project.

Detect to Protect (DtP): Remote Sensors and Triggers and Confirmers Projects – Develops low-cost, bio-aerosol sensors and triggers to detect biological agents within one minute (acting as reliable ‘bio smoke alarms’) for protection of high-value facilities and their occupants. This project will provide commercially available detection systems that could enable transportation, entertainment, and other high-value facilities to monitor for airborne hazards and take low-regret precautions (e.g., turning off ventilation systems) to protect people by preventing mass exposure. In FY 2008, the project developed prototypes suitable for extended field-testing, with plans to subsequently transition the systems to the private sector through product commercialization. There is no funding requested for this project beyond FY 2008; however, in FY 2009, project will complete the final round of prototype evaluations in operational environments.

National BioSurveillance Integration System (NBIS) Project – Provides decision makers early identification of biological events of national significance, such as disease outbreaks, the potential use of biological agents, and emerging biohazards. The S&T Directorate supports OHA’s operation of NBIS by providing subject matter expertise and developing modeling tools. NBIS acquires, integrates, analyzes, and disseminates information from existing human disease, food, agriculture, water, meteorological, and environmental surveillance systems and relevant threat and intelligence information. NBIS is currently developing a robust, domestic system that will assist with biosurveillance and provide a core, permanent, open-source biosurveillance capability. This project significantly improves information sharing and situational awareness for decision-makers and provides a common operating picture for all participating agencies to enable timely response to biological events. In FY 2008 through FY 2010, the S&T Directorate will provide subject matter expert (SME) support for bioinformatics, information technology systems, and NBIS operations. In FY 2009, the project will support model development to provide additional operating capability to the development and deployment of the Biosurveillance Common Operating Picture (BCOP) and to continue to provide subject-matter-expert support in bioinformatics and information technology systems. In FY 2010, the project plans to continue model development and platform enhancements to support an operational NBIS capability.

Next Gen Biological Detection Project – Starting in FY 2009, this project will develop technologies and systems to detect enhanced, emerging, and advanced biological threats. The project will explore universal detection technologies that do not require prior knowledge of the biological threat target, working to develop an automated, fully integrated, end-to-end (collection, identification, and reporting) system. This system will indicate the presence of a novel agent, provide rough quantification of the amount of that agent, and preserve samples for further analysis. This project will both draw on and inform the BioAssay – Next Generation project described above. The S&T Directorate will initiate the Next Generation Detection project in FY 2009 with the solicitation of fundamental research in support of technology concepts, selection of performers, and initiation of laboratory studies to demonstrate technical

feasibility. In FY 2010, the project plans to support the technology feasibility demonstration of chosen concepts.

Portable Bio Detector Project – Starting in FY 2009, this project will develop a hand-held biological detector/identifier in a spiral development process, beginning with a target to classify unknown samples as potential biological threats and culminating in approaches that identify (at species level) across an array of known agents. Target users are customs/border agents and responders. In FY 2009, the project will deliver several trade studies to assess the requirements to fully understand the required capabilities. In addition, based on the trade studies, a technology assessment will explore current technology and determine the best path forward. In FY 2010, the project plans to identify technology solutions for the rapid, on-site discrimination of potential biological agents and initiate development of concepts of operation for these technologies in target application environments.

Viable Bioparticle Capture Project – Develops an automated sampler compatible with laboratory analysis, sealed for safe handling of potential positives, providing preservation of sample viability for one to three days. The final system will augment BioWatch information by characterizing the viability of a threat during an attack and enable more definitive post-event characterization of bioterrorist events. Starting in FY 2009, the project will solicit technology concepts and select performers. In FY 2010, the project plans to identify concepts for improvements to deployed aerosol collection systems.

Multi-Application Multi-Plex Technology Platform – Develops a single technology platform in which assay cartridges may be changed based upon facility/agency specific needs. The project will ensure that different assay cartridges are validated for use by specific agencies. Assay cartridges can be immediately shipped to supporting agencies that have the same platform in order to provide surge capacity support for event mitigation. This technology will test for traditional agents, enhanced agents, emerging agents and advanced agents with the ability to perform up to 100 tests or detect 100 targets simultaneously within a single sample. The project started in FY 2009 and plans to conduct a technology feasibility demonstration in FY 2010.

Rapid Test Methods for High Volume Analysis project - Identifies key areas for improvement in laboratory analytical methods for high-throughput and on-site analysis of suspect food products. The overall project will target contamination concerns, including chemical, biological, and radiological contaminants that pose high risk to the American public or economy by undermining the safety of the agriculture/food infrastructure and supply. Investment in this area will enable more rapid detection of food contamination; provide prompt assessment of the scope of risk presented during a food contamination incident; support enhanced ability for epidemiological trace-back investigations, and will ultimately minimize the impact of food contamination events to both public safety and the economy. In FY 2010, the project plans to develop a systems study report identifying highest leverage investments.

Forensics Program – FY 2009: \$28.370 million; FY 2010 estimate: \$28.348 million. Operates the National BioForensics and Analysis Center (NBFAC) and conducts bioforensics research in support of criminal investigative cases, with the ultimate goal of attribution, apprehension, and prosecution of the perpetrator to fulfill the mission established by Homeland Security

Presidential Directive (HSPD) – 10, *Biodefense for the 21st Century*. These activities provide facilities, tools (e.g., assays, protocols, and strain libraries), analyses, and rigorous chain-of-custody controls needed to support the Federal Bureau of Investigation (FBI) and others in their investigation of potential biocrimes or acts of bioterrorism. The center analyzes a large number of samples for the FBI and other national security partners in secure, contamination-free, biocontainment laboratories.

National BioForensics Operations (NBFAC) Project – Provides the Nation with a unique capability to conduct forensic analysis of evidence from biocrimes or bioterrorism. This helps prevent and deter biocrimes and terrorism by providing unimpeachable data for attribution. As designated in HSPD-10, NBFAC is the Nation's lead facility for technical analysis of samples from potential biocrimes or bioterrorism. As an operational facility, NBFAC provides:

- Secure, state-of-the-art, contamination-free, biocontainment space for the analysis of evidentiary material;
- Validated protocols for the biological, chemical and physical 'fingerprints' that those samples may contain;
- Rigorous chain-of-custody and quality-control procedures to ensure the integrity of the sample and its analysis; and
- Spoke laboratories to provide specialized capabilities.

The NBFAC plans to continue to provide scientific analysis and support to the FBI to analyze biological threat evidence. In FY 2008, the NBFAC completed ISO validation of an additional 20 assays for top bio-threat agents (BTAs) for operational use. In FY 2009, NBFAC plans to transition to its new facility and complete validation of forensic assays for Centers for Disease Control and Prevention (CDC) Category A biological threat agents. In FY 2010, the program plans to initiate validation of bioforensic assays from the research and development program to close gaps on CDC Category A and B biological threat agents.

Bioforensics R&D - Near Term & Long Term Projects – Develops improved methods for extracting genetic materials and proteins from samples for biological, chemical, and physical characterization. Provides scientific foundation for material attribution, develops protocols for characterization and identification of Biological Threat Agents (BTAs), and develops a robust sample management, molecular signatures, and physical/chemical analysis research program to address FBI/NBFAC requirements. Bioforensics R&D - Near Term provides NBFAC with tools to analyze the CDC Category A and B biological threat agents of concern and methods for analyzing enhanced and engineered threats. Bioforensics - Long Term advances forensics science, establishes an inter-disciplinary approach to the Bioforensics problem, and engages academia in basic scientific research that supports bioforensics technical gaps. In FY 2008, the project provided identification to the sub-strain level for the CDC Category A biological threat agents (excluding viruses). The project also initiated a bacterial population genetics study on a microbial clonal propagation, genetic dynamics, and implications for match criteria of samples. Additionally, the project transitioned assays supporting CDC Category A biological threat agents to NBFAC. In FY 2009, the project is providing identification and drill down capabilities for the Category B agents (excluding viruses). The project is also initiating improved genotyping schemes for Category A viral agents, with emphasis on smallpox (variola major) and viral hemorrhagic fevers. In FY 2009 and 2010, the project will launch a viral genetic stability study

on all Category A and B viruses to identify knowledge gaps in viral population genetics and the requirements for match criteria in viral samples. The program will also initiate phase 2 of the bacterial population genetics study focusing on filling knowledge gaps and improving match criteria of samples through wet chemistry experimentation. The S&T Directorate also plans to launch a Small Business Innovation Research (SBIR) study to determine knowledge/capability gaps for culturing trace amounts of fastidious select agent bacteria. Furthermore, the project will begin planning for new molecular markers/genotyping or whole genome sequencing methods to more rapidly identify enhanced and advanced threats.

Response and Restoration Program – FY 2009: \$6.467 million; FY 2010 estimate: \$6.849 million. Provides advanced planning, develops concepts-of-operation, and funds exercises and training for responding to and recovering from a large-scale biological attack. Biological agents have the potential to contaminate large portions of a city, covering multiple city blocks and the facilities therein. This project will provide a more rapid and cost effective post-attack cleanup and restoration in such situations by developing a systems approach for the restoration of citywide areas. Restoration demonstrations, which bring together Federal, State, and local partners to develop, test, and then share the concepts-of-operations for key scenarios, are at the heart of this approach. The S&T Directorate partners with EPA, who has the overall lead in this area, to carry out these efforts.

Systems Approaches for Restoration Project – Develops a coordinated systems approach to the restoration of wide urban areas, to include high-traffic areas (transit/transportation facilities) and Department of Defense (DOD) infrastructures, following the aerosol release of a biological agent. Prior activities focused on guidelines and protocols for protecting and restoring airports and other critical transportation hubs (e.g., subways). The S&T Directorate is now focusing on restoring wide urban areas, like city neighborhoods, following a biological attack using the Interagency Biological Restoration Demonstration (IBRD), in collaboration with DOD's Defense Threat Reduction Agency (DTRA) and in partnership with the EPA, DHHS, Seattle, and county authorities and agencies. When completed, IBRD will provide a set of concepts, protocols, and tools that other communities can then adopt and modify to develop their restoration plans. In FY 2008, the project developed restoration plans and templates; conducted technology readiness assessments; established requirements; and developed policy and implementation guidance. The project completed and delivered the interim restoration plan to HSC. In FY 2009, the project will conduct an exercise and demonstration of wide-area decontamination methods and restoration system tools. The project will also develop a Seattle Urban Area (SUA) specific plan. In FY 2010, the project plans to perform final exercises and demonstrations through a series of tabletops, field exercises, and workshops for the SUA plan. In FY 2011, the project plans to develop restoration plans and frameworks for a partner urban area with co-located military installations for validation of the overall concepts, protocols, and tools for recovering from an outdoor biological attack.

Operational Tools for Response and Restoration Project– Develops a suite of state-of-the-science indoor-outdoor predictive tools to characterize the extent and degree of contamination, incorporating the best-available deposition, degradation, and surface viability data. This project will provide validated interagency sampling plans and improved statistical sampling design to support characterization and decontamination planning. In FY 2009, this project will deliver an

initial decision tool to support event mitigation and characterization. In FY 2010, this project plans to develop sampling design/plan tools and validate a sampling plan design for anthrax.

Agriculture Thrust Area – Expands current capabilities and develops state-of-the-art countermeasures for foreign animal and zoonotic diseases, consistent with the roles and responsibilities articulated in *Defense of United States Agriculture and Food* (Homeland Security Presidential Directive, HSPD-9). This includes current research programs conducted at the Plum Island Animal Disease Center (PIADC), plans for the expanded capabilities the National Bio and Agro-defense Facility (NBAF) will provide, and support for inter-agency strategic planning and coordination for R&D programs provided by the Joint Agro-Defense Office (JADO).

Foreign Animal Diseases Program – FY 2009: \$23.670 million; FY 2010 estimate: \$24.237 million. In partnership with the U. S. Department of Agriculture (USDA), develops next-generation veterinary vaccines and other countermeasures to protect against natural and/or intentional introduction of high-priority foreign animal diseases (FAD), and develops models and simulations of the spread of FADs and their economic impact to evaluate control and response strategies. The program includes the following projects:

Ag Screening Tools Project – Develops portable protocols and tools that provide minimally trained users' assistance in sampling (e.g., maritime containers and unprocessed samples), rapid detection, and field identification of illegal product, high-consequence pathogens and toxins that threaten U. S. agriculture and the food industry. Starting in FY 2010, the project plans to identify and prioritize component needs for protocols, screening, and inspection tools as well as develop a strategy to address their needs.

Foreign Animal Disease (FAD) Modeling Project – Supports the development and use of Multi-scale Epidemiologic and Economic Simulation Analysis (MESA), to provide inter-agency partners and analysts with a platform to explore control strategies for FAD outbreaks at multiple scales, and to support Division strategic planning and the formulation of countermeasure requirements.

Initially focused on foot-and-mouth disease (FMD), the Division has worked with USDA partners since FY 2006 on the use of MESA to examine scenarios for FMD and Highly Pathogenic Avian Influenza (HPAI); extensions for other high priority diseases are planned. In FY 2008, the USDA Animal and Plant Health Inspection Service (APHIS) instantiated JMAC (Joint Modeling and Analysis Center) to enable inter-agency teams to more effectively collaborate on shared analysis products using multiple epidemiological and economic models. The NIH Fogarty International Center established RAPIDD (Research and Policy for Infectious Disease Dynamics) to engage the broader community of experts to address major unsolved challenges in the field of infectious disease modeling. In FY 2009, with USDA APHIS, the project will use multiple epidemiological and economic simulations and models to populate a scenario database to support planning and analysis for select high consequence FADs, such as FMD and HPAI. In FY 2009 and 2010, with RAPIDD, the project plans to address two central, linked questions in the implementation and efficient use of infectious disease models. Also in FY 2010, with USDA APHIS, the project plans to leverage RAPIDD insights as well as the shared experience of DHS and USDA analysts to enhance collective understanding of the

requirements and necessary verification and validation for the models and simulations used for strategic planning and reach-back support for policy and decision makers.

FAD Vaccine and Diagnostics – Near & Long Term Projects – Develop more effective vaccines and biotherapeutics for high priority FAD pathogens, with the goal of providing vaccines that are more effective to differentiate infected from vaccinated animals (DIVA). DIVA vaccines cause an animal to develop protective antibodies that can be differentiated from antibodies that are associated with the presence of disease or infection. Ultimately, DIVA vaccines will allow animals to be vaccinated against a disease without the fear that, once vaccinated, healthy animals will test positive for disease due to the presence of protective antibodies in their bloodstream. This project will additionally research vaccines for FADs for which no vaccine exists. In FY 2008, the project conducted pilot tests on next-generation DIVA vaccines for one new FMD serotype (i.e., major FMD variants, such as type A24, Asia, and O1; FMD has multiple serotypes and sub-serotypes), in coordination with the USDA Center for Veterinary Biologics (CVB), which provides the required conditional license for new vaccines. The project plans to conduct pilot tests on additional vaccine serotypes on a 12-month schedule, with CVB approval required for each new serotype-specific vaccine. In FY 2009, the project will determine how quickly this generation of serotype-specific FMD vaccines provides immunity, and how long that immunity lasts. The project also will deliver proof-of-concept studies using different vaccine and biotherapeutic countermeasure platforms for other non-FMD FADs. In FY 2010, the project plans to complete licensure testing with CVB for the first next-generation DIVA vaccine for FMD.

Agrodefense Basic Research – Performs fundamental basic research and addresses critical knowledge gaps for foreign animal and zoonotic diseases, in collaboration with federal and academic partners. In FY 2009 and 2010, the project is addressing critical knowledge gaps for high-priority FADs, and assessing the efficacy of detection platforms for select foreign animal and zoonotic diseases.

Joint Agro Defense Office (JADO) – Provides coordination and staff support for the development and maintenance of an integrated inter-agency research and development (R&D) strategy for foreign animal disease defense. The National Science and Technology Council (NSTC) Foreign Animal Disease Threat Subcommittee facilitates the overall inter-agency coordination to better leverage and integrate inter-agency R&D efforts, including programs on veterinary countermeasures, basic research, FAD modeling, and disposal and decontamination. Initially the project will focus on preparing an integrated R&D roadmap for FY 2008-2012, and enhancing inter-agency coordination of FAD modeling programs. In FY 2009 and 2010, the project will assess strategic R&D opportunities for the planned National Bio and Agro-Defense Facility.

Chemical Countermeasures Thrust Area – Develops technology to reduce the Nation's vulnerability to chemical warfare agents (CWAs), commonly used toxic industrial chemicals (TICs) and emerging non-traditional chemical threat agents (NTAs). The program's objectives are to:

- Provide a comprehensive understanding and analyses of domestic chemical threats;
- Develop pre-event assessment, discovery, and interdiction capabilities for chemical threats;

- Develop warning, notification, and timely analysis of chemical attacks;
- Optimize technologies and processes for recovery from chemical attacks; and
- Enhance capability to identify chemical attack sources.

The S&T Directorate coordinates with interagency partners, such as DOD and EPA, to maximize resources and minimize duplication. While DOD's program focuses on the needs of the battlefield, the S&T Directorate's program actively seeks to incorporate DOD technologies where they have relevant impact against domestic threats. DHS investments provide amplification to EPA's program to ensure we address major operational gaps in domestic chemical defense.

Analysis Program – FY 2009: \$16.212 million; FY 2010 estimate: \$15.737 million. Develops a robust and enduring analytical capability to support chemical countermeasures development. Activities include: (1) developing a fundamental understanding of toxic chemical threat properties and conducting risk and vulnerability assessments based on those properties; (2) developing and sustaining expert reach-back capabilities to provide rapid support in domestic emergencies; and (3) developing and validating forensic methodologies and analytical tools, such as chemical signatures, which are used to help identify the nature and origin of chemical threats used by terrorists and criminals. In addition, the S&T Directorate supports maintenance of infrastructure, consisting of receipt, laboratory, and storage spaces to accommodate highly toxic chemicals and associated evidence, to provide a fully operational capability. This includes trained and fully certified scientific and technical staff available to process this type of evidence. To ensure a cohesive effort to describe threats and countermeasures, the Chemical Security Analysis Center (CSAC) conducts key analytical assessments, such as Population Threat Assessments (PTAs), Chemical Terrorism Risk Assessment (CTRA) and Chemical Infrastructure Risk Assessment (CIRA). The Office of Infrastructure Protection (OIP), OHA, TSA, and Office of Intelligence and Analysis (I&A) are the primary DHS customers for the CSAC. CSAC provides completed PTAs to DHHS to fulfill BioShield requirements.

Chemical Security Analysis Center (CSAC) – Develops and sustains expert reach-back capabilities to provide rapid support in domestic emergencies. The CSAC serves as the Nation's first centralized repository of chemical threat information (hazard and characterization data) for analysis of the Nation's vulnerabilities to chemical agent attacks. This will assist the Department and the interagency community with planning for responses to chemical threats. The CSAC assesses risk and consequence due to chemical attacks on population and infrastructure. In FY 2008, the CSAC delivered the first Chemical Terrorism Risk Assessment (CTRA) to the HSC. The CTRA contributes the chemical component of the Integrated CBRN Risk Assessment. The CSAC also completed selected hazards papers related to specific chemical threats. In FY 2009, the CSAC will define end-to-end systems studies for OIP and TSA. In FY 2010, CSAC plans to deliver the Integrated Chemical Reactions Database to I&A. CSAC also plans to deliver the biennially updated CTRA to OHA.

Chemical Infrastructure Risk Assessment Project – Carried out by CSAC, this project develops tools to help assess risk presented by attacks on the chemical industry by identifying and quantifying various infrastructure gaps, vulnerabilities, potential key hazardous chemicals, and associated processes. It also maintains a fully operational reach-back capability in support of the

development of Office of Infrastructure Protection (OIP) chemical security regulations. The project began in FY 2008, with a comprehensive assessment of chemical dispersion models' validity and user benefit. OIP uses such models to measure the downwind hazard and downstream impacts from sabotage or disruption of hazardous chemicals passing through chemical infrastructure. In FY 2009, the project will complete an assessment of chemical dispersion models and downstream impacts from infrastructure disruptions. The project will also assess the potential for safer alternative processes that may reduce risk to a select subset of high-volume toxic chemicals. In FY 2010, the project plans to develop a scenario-driven approach for assessing the hazard due to a release from the chemical supply chain. The project plans to develop objectives for improved models.

Large-Scale Chemical Transport Release Modeling Project – Develops an improved understanding of the consequences of release of large volumes of hazardous chemical in transport (e.g., rail cars or tankers). CSAC will execute this effort. Starting in FY 2009, the project will conduct a critical assessment of existing dispersion models compared to observations made during and following releases from rail car accidents. Subsequent efforts will identify improvements in models that more closely approximate the actual effects of large-scale releases and validate those improvements through test and comparison with existing field data. In FY 2010, the project plans to target development of improved source terms for incorporation into models.

Increase Safety of Hazardous Chemicals Project – Develops an understanding and identifies solutions to improve the safety of hazardous chemical formulations for their intended uses. Additionally, develops an understanding and scientific basis for alteration of changes in hazardous chemical formulations during transit to minimize overall risk due to accidents or intentional disruption of hazardous materials transport devices. Starting in FY 2010, this project plans to review current industry use of hazardous materials and formulations and initiate a study to identify hazardous materials with highest volume use whose formulations may be changed to increase safety without undermining value to industry and consumer. The project also plans to assess which, if any, of the most commonly used toxic and explosive chemical formulations can be modified to increase their safety during its use and transport while minimizing implications on cost and effectiveness toward intended purpose. Plans are to identify hazardous chemical products that can be modified during transport and permit reversion back to original formulation at point of distribution or use.

Chemical Forensics and Attribution (FAP) Project – Develops and maintains a robust and enduring national capability for the collection, preservation, and processing of chemical threat agents (CTAs) and associated evidence for the purpose of comprehensive and timely forensic analysis and attribution. CTAs include Chemical Warfare Agents (CWAs), Non-traditional Agents (NTAs), Toxic Industrial Chemicals (TICs) and Toxic Industrial Materials (TIMs). This capability supports the investigation of terrorist and criminal incidents involving CTAs by enabling their association with people, places, and other events, as well as their potential attribution to their original source. This information is a critical component of criminal prosecutions and intelligence analysis activities, which serve to prevent, deter, detect, disrupt and respond to chemical terrorists and chemical incidents. In FY 2008 and FY 2009, the project evaluated chemical forensic analytical methods for several nerve and blister agents, Ricin, and

TICs, and studied their chemical attribution signatures extracted from an initial set of common materials. In FY 2009, the project is evaluating forensic analytical methodologies for V-series nerve agents, other CWAs and TICs, as well as techniques for the collection, preservation and analysis of samples recovered at the scenes of chemical incidents. In FY 2010, the project plans to evaluate collection, preservation and analytical methods for additional CTAs, prioritized by risk and intelligence.

Chemical Infrastructure and Supply Chain Model – Develops a chemical infrastructure analytical capability that will enable DHS to look at policy analysis of the chemical sector as a whole, consequence analysis of the impacts of natural and man-made events on the chemical industry and chemical-dependent sectors of the economy, and analysis of individual chemical assets.

Detection Program – FY 2009: \$17.021 million; FY 2010 estimate: \$18.992 million. Develops technology to warn and notify of a chemical threat release. It includes technologies responders need to survey potentially contaminated scenes, while limiting their exposure to chemical agents. This program aims to provide technologies that can, in a single package, sense chemical agents and more commonly monitored chemicals, at costs that will support dual-use application. Developing this capability requires a leap forward in technology for next-generation systems. Due to the various physical properties associated with detecting high-vapor pressure versus low-vapor pressure chemical threats, an array of technologies is required to ensure that the full spectrum of chemical hazards is adequately addressed. This program will develop the detection systems described below.

Two of the detection systems – The Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) and the Lightweight Autonomous Chemical Identification System (LACIS) – are the first-generation chemical detection systems for facility monitoring and handheld use, respectively. Current systems are unable to detect a wide range of CWAs and TICs and often exhibit high false-alarms rates. ARFCAM and LACIS address these gaps.

ARFCAM Project – Develops a low-cost, fully autonomous, networkable chemical monitor that will “detect-to-warn” the presence of up to 17 CWAs and high-priority TICs simultaneously within a single device at both Immediately Dangerous to Life and Health (IDLH) and Permissible Exposure Limit (PEL) concentrations. This project will improve protection of facility occupants by detecting a wide range of agents with increased reliability. In FY 2008, the project refined the ARFCAM prototype detectors (software and hardware) using results from independent testing and evaluation (IT&E). Also in FY 2008, the project initiated testbed trials and additional independent test and evaluation (IT&E) of prototype detectors. In FY 2009, the project will complete test bed trials and expand the IT&E. In FY 2010, the project plans to conduct a critical design review to down-select successful prototype detectors for developmental field-testing in FY 2011. The IT&E will also continue in FY 2010.

LACIS Project – Develops a networkable handheld detector for responders, which will detect up to 17 TICs and CWAs in a single sensor package. The S&T Directorate is targeting LACIS to detect TICs and CWAs below the Immediately Dangerous to Life and Health (IDLH) level, emphasizing a very low false-negative response. This system will allow for detection that is

more reliable across a broader range of chemical agents for improved protection of responders to a chemical incident. Additionally, it will enable enhanced detection capabilities at borders, portals and other nodes of people and cargo flow. In FY 2008, the project refined the LACIS prototype detectors (software and hardware) using results from independent testing and evaluation (IT&E). Also in FY 2008, the project initiated additional IT&E of prototype detectors. In FY 2009, the project initiated and will complete test bed trials and expand and continue the IT&E of prototype detectors. In FY 2010, the project plans to conduct a critical design review to down-select successful prototype detectors for developmental field-testing in FY 2011. The IT&E will continue in FY 2010.

Advanced Chemical Vapor Detection System (formerly Next-Gen ARFCAM & LACIS) – Targets the development of a single concept system that can be used to support the need for both an autonomous, networked continuously running facility monitor and a hand-portable, networked chemical detection system with the capability to quickly (<1 min) “detect-to-warn” the presence of up to 40 high-priority TICs and CWAs. Starting in FY 2010, this project plans to explore concepts that enable such broad range detection.

Integrated CBRNe Detection System Project – Develops an architecture that integrates reporting from disparate chemical, biological, radiological, and potentially nuclear and explosive (CBRNe) detection/collection systems. This system will provide timely CBRNe detection, identification, and assessment of the threat and enables appropriate response by local, State and Federal officials. It will greatly improve the integration of alarm and response assets across multiple potential attack modes, resulting in more rapid and informed decisions at the appropriate response level. In FY 2008, the project completed a survey of five potential pilot cities, detailing current detection information-sharing architectures, identified gaps in the current capabilities, and initiated a two-city pilot of the chem/rad portions of the integrated CBRNE detection. In FY 2009, the project will expand Integrated CBRNe pilot testing to include biological and explosive detection integration. Upon successful pilot testing of all portions of the Integrated CBRNe Detection System, the project will perform a full-scale demonstration. In FY 2010, the project plans to complete a lessons learned package and a technical template/guidance document to support implementation by other federal, state, and local agencies.

Low-Vapor Pressure Chemicals Detection Systems (LVPCDS) Project – Investigates man portable technology to detect and identify persistent low vapor pressure chemical threats on surfaces. This system will enable a rapid, standoff survey of areas potentially contaminated with persistent chemical agents, thus accelerating facility restoration. In FY 2008, the project conducted independent test and evaluation on laboratory prototypes. In FY 2009, the project will conduct test and evaluation of an engineering development model in a simulated operational environment. In FY 2010, the project plans to build, test, and evaluate a field prototype system and deliver the final Project Report.

Non-Intrusive Container Monitor – Investigates technology to rapidly and efficiently determine the contents of suspicious containers in cargo or passing through security portals. Starting in FY 2009, work will focus on enhancing security at portals within and at the perimeter of key elements of our national infrastructure. This technology will promote the interception and confiscation of illicit materials by a variety of customs, law enforcement, and responder

personnel. In FY 2009, the project will conduct research to characterize the range of hazards that can be interrogated effectively through common packaging materials. In FY 2010, the project plans to explore new technology concepts.

Response and Recovery Program – FY 2009: \$19.698 million; FY 2010 estimate: \$18.695 million. Provides technologies for restoring a chemically contaminated area to a normal condition. This work primarily supports the development of technologies and guidelines for decontamination and the analysis of contaminated areas both before and after restoration processes. These efforts will decrease the the time it takes to cleanup after an attack with a chemical agent on key infrastructure and include supporting capabilities such as the development and demonstration of facility restoration and decontamination technologies and guidelines; development of a mobile chemical analysis laboratory; and the development of fixed-site chemical analysis laboratories for CWAs.

Facility Restoration Demonstration Project – Develops a systems approach to response and restoration (R&R) of critical transportation facilities following a chemical agent release. This project develops efficient planning tools, identifies decontamination methods, identifies sampling methods, and develops decision analysis tools. Facility Restoration Demonstration will enable rapid recovery from a chemical agent release in a major transportation facility, minimize the economic impact of a chemical agent release, and provide defensible public health decisions concerning the re-opening of major transportation facilities following a chemical agent release. In 2008, the project completed a draft, site-specific, final restoration plan for a major U.S. airport and a general restoration guidance document. In FY 2009, the project completed a tabletop exercise to demonstrate restoration guidance. The project will also complete an operational demonstration and final restoration guidance document. Final demonstration will occur in early FY 2010. There is no funding requested for FY 2010.

Fixed Laboratory Response Capability Project – Develops prototype environmental laboratories and protocols to assist with the assessment and remediation of CWA contamination. These laboratories will have full EPA quality certification, standard methods for analysis of CWAs in environmental matrices, and standard reporting protocols. The laboratories will be located in high-threat areas and be available to assist law enforcement with rapid identification of unknown chemical hazards. The optimization of laboratory protocols will maximize overall throughput and the capability will be appropriately sized to assist in remediation of incidents involving CWA or non-traditional agent (NTA) releases. This project will greatly reduce the time needed to restore contaminated facilities and inform public health decisions regarding re-use. In FY 2008, the project selected four additional laboratories for prototyping in the West and Southeast regions. In FY 2009, the project will complete optimization of the high-throughput analytical methods, jointly with EPA, establish a proficiency testing process that will be demonstrated by the original three prototype laboratories, and quantitatively determine via round-robin tests the improved analytical capacity for environmental samples containing CWAs. In FY 2010, the four additional prototype laboratories plan to complete proficiency and high-throughput tests. In addition, the project will transition the network of seven CWA Fixed Laboratories to EPA.

NTA Laboratory Capability Project – Develops a high-throughput chemical laboratory system for analysis and identification of NTAs. The project will enable high-throughput analysis for

rapidly mapping contamination and supporting the recovery of contaminated areas. This product will help government officials make rapid determinations and expedite the return of areas contaminated with classified chemical threats to normal use. In FY 2009, the project will complete initial conceptual designs following selection of the appropriate laboratory platform (fixed site, mobile or transportable). In FY 2010, the project plans to validate analytical assay performance across multiple matrices, optimize sample preparation methods to maximize agent recovery/detection, and complete a system design. The project also plans to initiate lab construction in FY 2010.

Integrated Detection/Decontamination Demonstration Project – Demonstrates newly evolving tools for detecting the release of classified chemical threats, mapping chemical contamination, and monitoring the decontamination process through facility clearance. This project plans to reduce the overall time for recovery of critical infrastructure by focusing response on affected areas. Starting in FY 2009, this project will define and identify operational test environments and perform a market survey of existing and evolving detection/decontamination technologies. In FY 2010, this project plans to demonstrate and evaluate performance of surveyed technologies.

Chemical Decontamination R&D Project – Develops and tests technologies that decontaminate NTAs, CWAs, and persistent TICs. The project will assess the validity of current techniques for decontamination of NTAs, describe performance gaps, and begin to fill performance gaps through a measured R&D program. In FY 2008, the project continued fundamental studies of stability and transport properties of NTAs on common indoor surfaces (e.g., transportation facilities such as airports) and approaches to decontamination. In FY 2009, the project will complete the initial study and describe key performance gaps. In FY 2010, the project plans to select the most promising new approaches for use in proof-of-concept demonstrations against NTAs and traditional persistent chemical threat agents.

Integrated Consortium of Laboratory Networks (ICLN) Project – Consists of a national homeland security infrastructure with a coordinated and operational system of laboratory networks that provide timely, high-quality, interpretable results for early detection and effective consequence management of acts of terrorism and other events requiring an integrated laboratory response. This project will provide optimized national laboratory preparedness by improving 1) coordination of laboratory response to incidents and 2) common standards of performance across laboratory response assets. In FY 2009, the project will develop an integrated laboratory response architecture and assess through table-top exercises. In FY 2010, the project plans to transition the operational aspects of the ICLN to OHA and continue to support specific laboratory response technological assessments and improvements in the S&T program.

PPA: COMMAND, CONTROL, AND INTEROPERABILITY

	Perm Pos	FTE	Amount
2008 Actual			\$66,171
2009 Enacted			\$74,890
2010 Adjustments-to-Base			\$0
2010 Current Services			\$74,890
2010 Program Change			\$5,374
2010 Request			\$80,264
Total Change 2009-2010			\$5,374

The Science and Technology (S&T) Directorate requests \$80.264 million for Command, Control, and Interoperability in FY 2010, of this amount \$2.007 million supports the SBIR Program.

CURRENT SERVICES PROGRAM DESCRIPTION

The Command, Control and Interoperability Division (CCI) creates and deploys technologies and information resources to enable seamless and secure interactions among Federal, State, local, and tribal stakeholders ensuring that they have comprehensive, real-time, and relevant information to create and maintain a secure and safe Nation. CCI's science and technology efforts work toward providing operational capabilities that ensure:

- Operability and interoperability of communication systems for emergency responders;
- Protection and integrity of cyber systems that are critical to homeland security; and
- Knowledge management tools and capabilities that can detect potential threats.

CCI thrust areas include: Cyber Security; Communication, Interoperability, and Compatibility; Knowledge Management Tools; Basic/Futures Research; Surveillance, Reconnaissance and Investigative Technologies; and Emergent Threat Assessment.

Cyber Security Thrust Area – Leads cyber security research, development, testing, and evaluation to secure the Nation's current and future critical cyber infrastructure. Cyber attacks are increasing in frequency and impact. As outlined in the President's *National Strategy to Secure Cyberspace* (NSSC), our Nation's economy and national security depend on information technology and the information infrastructure. Information networks directly support the operation of all sectors of our economy – energy (electric power, oil and gas), transportation (rail, air, merchant marine), finance and banking, information and telecommunications, public health, emergency services, water, chemical, defense industrial base, food, agriculture, and postal and shipping. Computer networks also control electrical transformers, trains, pipeline pumps, chemical vats, radars, etc. Cyber attacks can have serious consequences including the disruption of critical operations, loss of revenue and intellectual property, and loss of life.

This thrust area consists of three programs: Information Infrastructure Security, Research Tools and Techniques, and Next Generation Technologies.

Information Infrastructure Security (IIS) Program – FY 2009: \$16.889 million; FY 2010 estimate: \$10.726 million. Facilitates the implementation of the President’s NSSC. This program leverages the collective resources of private companies and technology vendors to identify and demonstrate new technologies to help protect the Nation’s infrastructure. Through the IIS program, the S&T Directorate engages with industry, government, and academia to ensure that the core functions of the Internet develop securely and benefit all owners, operators, and users, including Internet Operations Organizations. In addition, the IIS program addresses economic assessment, risk analysis, and modeling requirements to implement and deploy cyber security technologies that support internal Department of Homeland Security (DHS) customers and external partners.

Secure Protocols Project – Develops secure protocols for the cyber-components that make up the Internet, specifically the Internet’s Domain Name System (DNS) and routing infrastructure. This project combines Domain Name Security System Security (DNSSEC) and Secure Protocol for the Routing Infrastructure. In the area of DNS security, activities focus on enabling all DNS-related traffic on the Internet to be compliant with the DNSSEC standard protocol that secures DNS communications. The DNS translates alphabetic domain names (such as website addresses) into their corresponding numeric Internet Protocol (IP) addresses, which is what computers, networks, and Internet sites actually use to ‘call’ one another. The entire Internet relies on DNS to function, so its security is paramount.

In FY 2008, within DNSSEC, the project completed the modification of end-user applications such as web browsers and e-mail clients to provide end-to-end security to assure authenticity and integrity of information; provide step-by-step operator guidance documentation for various operating environments, along with training, procedural, and development documentation, as well as executable software, patches, commented source code files, and packaging requirements; and developed and deployed a Public Key Infrastructure (PKI) with the American Registry for Internet Numbers (ARIN), which controls and allocates IP addresses for North America. In FY 2009, the project will deploy additional DNSSEC protocol and gather operational DNSSEC query data in an effort further analyzing DNS security, and initialize deployment within government networks

In FY 2010, the project plans to conclude PKI deployment activities with global registries to enable effective and efficient connections between URLs; develop and deploy standards for secure routing; and gather operational DNSSEC query data to further analyze DNS security, and accelerate deployment of DNSSEC policies and technology.

Process Control Systems (PCS) Security Project – Improves security for PCS, a statistics and engineering discipline that deals with architectures, mechanisms, and algorithms for controlling the output of a specific process. PCSs control water supply, electrical power, gas and oil pipelines, and other distributed processes. Project deliverables will include advances in interoperability with existing PCS systems. This interoperability will allow PCS systems to easily integrate new products into existing systems and enhance information sharing within the critical infrastructure sectors using PCS. In FY 2009, the project will initiate activities in the area of PCS Security to support improved security for process control systems used across multiple critical infrastructure sectors and developed PCS model applications to Oil and Gas

Sector(s) to ultimately better secure those infrastructures. In FY 2010, the project plans to deliver Secure Wireless end devices that will assist in securing wireless transmission for process control systems.

Insider Threats Project – Addresses advanced methods of document control and management in order to provide an unalterable accounting of document access and dissemination. Ultimately, this project will ensure that appropriate control requirements are translated into a security policy that can be applied to documents and preserved from cradle to grave. No single description of an insider is applicable in all cases, and trusted insiders have “inside knowledge” of these countermeasures and controls. In FY 2009, the project will develop and evaluate graph-based approach for insider threat; design, prototype and analyze Document-based Management, Access Control, and Security (DocuMACS). In FY 2010, the project plans to develop and implement graph-based approach performance enhancements; pilot DocuMACS Version 1.0; and deliver a Source Code/Executables and DocuMACS Computer Based Training (CBT) Guide.

Cyber Infrastructure and Emerging Threats Project – The Distributed Environment for Critical Infrastructure Decision-Making Exercises (DECIDE) effort is a distributed scenario-based exercise (war-gaming) environment designed to enable large businesses in critical infrastructures to develop coordinated responses to a variety of disruptions based on their individual and collective business models. In FY 2009, the project will provide a dedicated exercise capability for several critical infrastructures in the U.S. In FY 2010, the Web*DECIDE will facilitate distributed infrastructure protection exercises by providing a multi-user simulation framework aimed at business continuity managers. Also in FY 2010, Web*DECIDE will demonstrate more complex user interfaces and decision trees, and scenarios involving equities and options trading, clearing and settlement, and investment banking.

Cyber Security Research Tools and Techniques (RTT) Program – FY 2009: \$8.911 million; FY 2010 estimate: \$7.000 million. Provides secure facilities and methods for testing cyber security technologies under real-life conditions. Neither existing research network infrastructures nor the operational Internet provides adequate means for testing defense technologies. Over the last decade, the network-security research community could not test their research prototypes and prove the utility of their research in large-scale network environments. To accelerate research, development, and deployment of effective defenses for U.S.-based computer networks, CCI is developing a cyber security-testing infrastructure that allows researchers, developers, and operators from government, industry, and academia to experiment with potential cyber security technologies. CCI will produce scientifically rigorous testing frameworks and methodologies to support national-scale experimentation. The end-users for these research tools and techniques include cyber security researchers, developers, and operators.

Experimental Research Testbed Project – Provides a cyber security testbed to evaluate defense mechanisms against attacks on the infrastructure and support mitigation of attacks. The project supports the S&T Directorate by working with the National Science Foundation (NSF) to create the Defense Technology Experimental Research (DETER) cyber security testbed. Existing testing facilities cannot handle experiments on a large enough scale to represent today’s operational networks or the portion of the Internet that might be involved in a security attack. Industry has only been able to test and validate new security technologies in small- to medium-

scale private research laboratories that do not adequately simulate a real networking environment. The DETER cyber security testbed addresses these gaps. In FY 2008, the project increased the test bed's capacity to allow large-scale malicious-code experiments and increased the number of testbed users and large-scale data sets applications. In FY 2009, the project will test five new technologies. In FY 2010, the project plans to test additional technologies that may include: worm defense, routing security, distributed denial of service defense, malware detection, and domain name system security.

Research Data Repository Project – Creates and maintains a large-scale data set repository of real network and system traffic for use by the cyber-security research community to accelerate design, production, and evaluation of next-generation cyber-security solutions, including commercial products. In FY 2008, the project built Protected Repository for the Defense of Infrastructure against Cyber Threats (PREDICT) datasets. In FY 2009, the project will increase the large-scale data sets applications to 200. In FY 2010, the project plans to add 50 cyber-security data sets to the Research Data Repository each year to allow users to more effectively test technologies using a wider sample of data.

Experiments and Exercises Project – Addresses cyber security requirements from internal Department customers in support of DHS's operational missions in critical infrastructure protection. Through this project, DHS participates in experiments and exercises that facilitate the development and deployment of technologies to significantly improve security of key infrastructure sectors. In FY 2009, technology that defends against malware and botnet attacks will be deployed on the recently deployed S&T LABNET, which includes a connection to the Defense Research and Engineering Network (DREN). This will provide an environment for thorough testing and evaluation of the technology so the S&T Directorate can consider a pilot deployment of the technology, possibly extending the deployment across all of DHS. In FY 2010, S&T will work with the oil and gas sector as part of the Linking Oil & Gas Industry to Improve Cyber security (LOGIIC) consortium. LOGIIC is a public/private partnership that allows industry to perform pre-competitive collaborative research and development. During FY 2010, the LOGIIC consortium will complete the Safety Instrumented Systems (SIS) Project which will result in security improvements to individual systems, architectural recommendations to greatly increase the security of SIS/PCS integration, and confidence on the part of the sector that safety systems are verifiably secure. The LOGIIC effort will facilitate a robust and coordinated process involving vendors, end users, and experts in security and SIS applications, enabling improved architectures and future standards while decreasing duplication.

Next Generation Technology (NGT) Program – FY 2009: \$4.852 million; FY 2010 estimate: \$19.498 million. Addresses next-generation cyber security R&D needs in support of DHS components' mission requirements. It will define technical areas of interest, based on customer requirements, and allow university and private sector researchers to submit their best and most innovative ideas to the S&T Directorate. This program will accelerate transition of new cyber security technologies into commercial products and services. End-users for these technologies include: first responders, critical infrastructure providers, the banking and finance sector, private industry, and government.

Internet Route Monitoring Project – Identifies critical internet infrastructure, incorporating an understanding of geographic and topological mapping of internet hosts and routers. These maps will enhance internet monitoring and modeling capabilities to identify threats and predict the cascading impacts of various damage scenarios. In FY 2009, the project will release open source software Prefix Hijack Alert System (PHAS). In FY 2010, the project plans to complete Geographic router-level maps.

Modeling of Internet Attacks – Develops modeling and analysis capabilities that predict the effects of cyber attacks on Federal Government infrastructures. This project will improve public Border Gateway Protocol (BGP) route monitoring capabilities, extract peering relationships from Internet topology and telco hotel datasets, and produce more reliable geo-location tools for visualizing and navigating geographic as well as topological connectivity and increase accuracy of currently available tools for matching Internet Protocol (IP) addresses to router interfaces. In FY 2010, the project plans to collect network traffic data revealing Internet attacks from widely distributed Internet locations that will help to create technologies to combat internet attacks.

Software Quality Assurance- Develops tools and techniques for analyzing software to detect security vulnerabilities associated with our Nation’s critical infrastructure (energy, transportation, telecommunications, banking and finance, and others) and networks. Specifically, this project addresses the presence of internal flaws and vulnerabilities in software threatening its correct or predictable operation and use. Software quality assurance deals with the root of the problem by improving software security. In FY 2010, the project will publish a Broad Agency Announcement (BAA) and award contracts to provide tools and techniques to analyzing software to detect security vulnerabilities.

Enterprise Level Security Metrics Program – Develops a science of security measurement and the supporting tools and techniques to make the measurements practical and useful as decision aids. Specifically this project addresses evaluating security at the system level, providing tools that facilitate decision-making and accountability through collection, analysis, and reporting of relevant performance data. In FY 2010, the project will publish a BAA and award contracts to develop security measurements and the supporting tools and techniques.

Communications, Interoperability and Compatibility Thrust Area – Strengthens interoperable communications to improve effective information sharing at all levels of government. The thrust area coordinates interoperable emergency communications requirements for all voice and data communications systems and equipment purchased with DHS funding and develops and evaluates cross-jurisdictional information-sharing technologies, policies, and processes. CCI initiatives impact end users that include more than 60,000 emergency response agencies nationwide, state homeland security officials, and policy makers at the local, tribal, State, and Federal levels.

Office for Interoperability and Compatibility (OIC) Program – FY 2009: \$11.084 million; FY 2010 estimate: \$9.885 million. Strengthens and integrates interoperability and compatibility activities to improve preparedness and response among Federal, State, local, and tribal governments. OIC addresses the myriad complexities of improving interoperable communications, including:

- Spectrum allocation;

- Incompatible proprietary systems and infrastructure;
- Inadequate standard operating procedures (SOPs); and
- Multi-jurisdictional, multi-disciplinary governance structures.

Emergency responders – police officers, fire personnel, emergency medical services – need to share vital voice and data information across disciplines and jurisdictions to successfully respond to day-to-day incidents and large-scale emergencies. Unfortunately, responders often cannot talk to some parts of their own agencies – let alone across cities, counties, and states. Ineffective communications risk the lives of responders in the field, and can mean the difference between life and death for those awaiting help. OIC relies heavily on input from State and local emergency responders and works cooperatively with the Nation’s 60,000 emergency response agencies, State homeland security officials, associations, and policy makers throughout all levels of government. OIC also conducts the RDT&E and standards aspects of the SAFECOM program.

P25 Interfaces Project – Accelerates emergency response interoperable communications through the development of national voluntary consensus standards. The S&T Directorate partners with National Institute of Standards and Technology (NIST) to execute these standards efforts. Through this project, OIC participates on the Telecommunications Industry Association’s P25 Interfaces standards committee. P25 is a suite of manufacturing standards for interoperable, digital, two-way wireless communications products. The project will ultimately enable connections between multi-vendor and multi-jurisdiction communications infrastructure components and allow for greater interoperability and flexibility. In FY 2009, the project will initiate test, model and evaluate broadband standards. The project will also launch a demonstration between Voice over Internet Protocol (VoIP) and P25 gateways. In FY 2010, the P25 Interfaces project plans to complete the development of network-management interface standards for P25 to improve management of communications systems.

Emergency Data Exchange Language (EDXL) Project – Facilitates the RDT&E of practitioner-driven information-sharing standards and encourages their implementation into software, systems, and devices. In FY 2009, the project will initiate development and piloting data messaging standards for the emergency response community; develop a compliance certification process to ensure industry implements the standards as intended—to encourage interoperability; and conduct a gap analysis to identify the list of gaps between the information sharing requirements of the broad emergency response community (health care, transportation, law enforcement, fire, EMS, etc.) and existing data messaging standards. In FY 2010, the project plans to expand its standards development work to address the list of gaps identified through the gap analysis effort, as well as develop and pilot additional data messaging standards for the emergency response community.

IP Backbone Test and Evaluation Project – Researches IP-enabled communication backbones and evaluates promising technologies. Backbones are the core “back office” components of communications systems. Standards-based, IP-enabled backbones will provide greater flexibility and increasingly scalable architectures. This project will enable the emergency response community to confidently deploy and use IP backbones and integrate cell phone and satellite communications into interoperable communications networks. In FY 2009, the project will

initiate testing and evaluation of IP solutions; prepare a report that analyzes multiple VoIP Briding solutions, which were piloted in FY 2008; and complete Public Safety prioritized VoIP Release Standards profile(s). In FY 2010, the project plans to transition a set of standards for an operational environment that will be prioritized by public safety and confirmed by industry.

Wireless Broadband Productization Project – Tests and evaluates commercially available and emergent wireless broadband products to reveal any existing capability gaps. The overall goal of the project is to ensure that technologies developed in the laboratory work in a real-world environment to support the emergency response community. Ultimately, emergency response agencies will be able to purchase solutions that meet their needs and remain interoperable as future networks are deployed. In FY 2009, the project will develop a strategy for effective emergency response use of and migration to the 700 MHz band. In FY 2010, the project plans to pilot cutting-edge emergency response communications technologies (e.g., wireless broadband prototypes).

Technology Demonstration Pilots Project – Conducts command, control and interoperability pilot projects and technology demonstrations across the country that will test and evaluate voice, data, imagery, and video communications technologies within real world environments. The Technology Pilot Demonstration Project works across all Division Thrust Areas using integrated pilot teams that include scientists/engineers, analysts, and practitioner first responders. Pilot Demonstration Projects will involve a range of technologies including: Thales Communication Multi-band Radio (MBR) with testing and evaluation sites in New York, Colorado, Idaho, New Jersey and Michigan; Fusion Analytics Desktop Environment (FADE) a data analysis tool within California and Washington; Law Enforcement Information Framework (LEIF) a tactical information retrieval and analytics tool for street-level deployment in California, Washington and New Jersey; and, Real Eyes video streaming and data transfer technology at various sites across the country with TSA Federal Air Marshalls. Critical Incident Inspection Management System (CIIMS), an aerial technology that enables flight crews in fixed wing and helicopters to efficiently manage inspections of critical infrastructures such as dams, bridges, and large industrial complexes, will have pilot demonstration sites in Maryland, California and additional sites to be determined. In FY 2008, the project launched the Radio-Over Wireless Broadband project to research how to connect existing Land Mobile Radio (LMR) systems with advanced broadband technologies, such as Push-To-Talk over Cellular and the Geographic Information System. In FY 2009, the project received the initial delivery of prototype MBR for lab testing and short- and long-term demonstrations. When fully implemented in 2010 the project will facilitate more rapid deployment of technologies from labs to emergency management preparedness; promote information sharing and state-to-state communications; and, accelerate transition of new technologies to first responders within all-hazard response disciplines.

Compliance Assessment Project - Evaluates existing and emerging technologies to ensure operational effectiveness and conformance to standards. Current work focuses on validating that P25 standardized systems are indeed P25-compliant and that equipment from different manufacturers can interoperate, thereby ensuring that Federal grant dollars are being used appropriately. OIC works with NIST to execute this project. This project develops open and rigorous processes to ensure equipment from different manufacturers can interoperate. In FY 2009, the project will recognize laboratories qualified to test for compliance for the P25

Common Air Interface and require its testing through grant guidance. In FY 2010, the project plans to extend the program to the P25 Inter-RF Sub-System Interface, which will require the evaluation of laboratories and assisting in the completion of the relevant testing standards.

Knowledge Management Tools Thrust Area – Provides knowledge management capabilities to reduce the risk of terrorist attacks and to prepare for and respond to natural and man-made disasters. The thrust area is developing new capabilities for the DHS Office of Intelligence and Analysis (I&A), National Protection & Programs Directorate (NPPD), U.S. Immigration & Customs Enforcement (ICE), U.S. Coast Guard (USCG), Federal Emergency Management Agency (FEMA), State/local/tribal DHS partners and the DHS information sharing enterprise, which is a gateway for users to retrieve information, services or resources from the Department. This includes tools and methods to handle massive amounts of information that are widely dispersed in a great variety of forms. Work in this thrust area is collaborative and complements efforts in the intelligence, law enforcement, and homeland security communities. In addition, the thrust area focuses on applied R&D in visualization and information analytics because they are critical to the usability and effectiveness of converting raw data into useful information. This thrust area conducts its work through the Knowledge Frameworks and Collaborative Information Sharing programs.

Knowledge Frameworks Program – FY 2009: \$13.425 million; FY 2010 estimate: \$12.550 million. Reduces the risk of terrorist attacks and enhances preparations for and responses to natural and man-made disasters. Efforts include developing tools and methods to handle massive amounts of information that are widely dispersed in a great variety of forms. The best way to save lives is to identify pertinent information, understand its meaning, and then use it to assess an actual threat and determine the level of risk before an attack or incident occurs.

Collective Situational Awareness Project – Researches and develops technologies for accessing and exchanging situational awareness information among the USCG and its maritime, law enforcement, and intelligence partners. The project establishes information sharing protocols to enable the exchange of information across disparate National System security networks. In FY 2009, CCI plans to provide a basic demonstration of the Global Command and Control System-Joint (GCCS-J) Track Management System (TMS) as a web service. In FY 2010, the project will build on the FY 2009 demonstration using accepted Service Oriented Architecture (SOA) standards. In FY 2010, the project plans to continue to provide technical services to the DHS Office of Applied Technology to collect test and validate requirements across the DHS Enterprise.

Common Operating Picture (COP) Data Fusion Technologies Project – Develops sensor integration technologies to fuse massive volumes of surveillance information from government agency and private sector sensor systems. Rapidly analyzes the nature, composition, and pattern of the threat in support of a common operating/intelligence picture. In FY 2009, the project will initiate development of the Automated Continuing Evaluation System (ACES) for the DHS Office of Security and deploy the Fused Analytic Desktop Environment (FADE) for USCG Maritime Intelligence Fusion Center, Pacific (MIFCPAC). In FY 2010, the project plans to automate the verification and validation process for FADE, along with producing emerging requirement analysis papers. The project plans to develop a mission blueprint that delineates

core systems requirements, futuristic technical requirements, and recommendations to address revolutionary technical needs specific to the National Response Coordination Center and other Regional Response Coordination Centers.

Integrated Data Processing and Analysis Project – Develops scalable technologies for the integrated analysis of free text, database records, audio, video, imagery, transactional data, geographical data, and sensor information. Establishes and validates reliable performance metrics for integrated data processing and analysis. This project provides technological tools for intelligence analysts to “connect the dots” of information that has been legally collected to protect the homeland. In FY 2009, the project plans to launch Integrated Text Analytics for the ICE Office of Intelligence. In FY 2010, the project plans to transition text analysis/geospatial capability to the production environment and demonstrate a proof-of-concept prototype to ICE and State and local partners.

Law Enforcement and Intelligence Sensor Fusion Project – Develops comprehensive sensor fusion standards and protocols for sharing sensor information between traditional law enforcement organizations and intelligence partners. It also accelerates integration of sensor fusion standards and protocols into the Department’s cross-domain threat assessment and mitigation systems to support common operating picture. In FY 2009, the project will initiate development of a prototype of multiple visualization environments and demonstrate the exchange of Geospatial Information System (GIS) Data between NPPD and the State of Alabama. In FY 2010, this project plans to pilot the integration of multiple technologies such as Smart Closed Circuit TV, Automatic License Plate Recognition (ALPR), a digital dashboard for incident management and coordination, an infrastructure inspection management capability, Automatic Vehicle Locator (AVL), and Link analysis software into GIS Software.

Real-Time Data Processing and Visualization Project – Develops technologies for dynamic, real-time processing and visualization of information in multiple forms and from diverse, distributed sources. The project automates the selection, ranking, and correlation of relevant information for purpose-driven, decision making. In FY 2009, the project will initiate development the Generalized Data Driven Analysis and Integration (GDDAI) system for the ICE Office of Investigations, the Scalable Exploration of Network Flows for the U.S. Computer Emergency Readiness Team (US-CERT) and the Sea, Lake, Overland Surge for Hurricanes (SLOSH) system for FEMA. In FY 2010, this project plans to develop an ICE Office of Investigations’ infrastructure capable of supporting enterprise-wide data fusion and web-based visualization of queries across data cubes and GIS systems. The project plans to roll out handheld access to the field as well as anomaly detection, and offer cube-to-link analysis integration to ICE. CCI will evaluate these handhelds and wireless federated query applications in integrated Federal/State/Local law enforcement information sharing environments in FY 2010. In addition, the project plans to interconnect fragmented regional systems using existing public safety network infrastructure and non-proprietary software components.

Network Identity Management – Develops a highly scalable architecture for managing user identities, rights, and authorities used within and external to an organization’s networks. The project will enable timely, complete evaluation of an individual’s status and eligibility for access – enhancing the security of DHS information sharing environments by improving authentication

for persons, hardware devices, and software applications. In FY 2009, this project will evaluate the Homeland Security Presidential Directive (HSPD)-12 Backend Attribute Exchange (BAE) Architecture, the proposed government-wide standard for exchanging user attributes, developed by the HSPD-12 Architecture Working Group. Currently, the BAE concept is a paper document, but DHS S&T is working with DOD to test this concept in a lab environment. In FY 2010, this project plans to conduct an operational test of the BAE to share information between FEMA state and local first responders and the United States Northern Command (NORTHCOM) in a secure and timely manner. S&T is working in partnership with the National Security Agency (NSA) to provide the research and development for their relevant missions and information sharing capability gaps. S&T is also working in conjunction with the DHS Office of the Chief Information Officer (OCIO) to collaborate on the enterprise roadmap on Identity and Access Management for the department.

Collaborative Information Sharing Program – FY 2009: \$9.133 million; FY 2010 estimate: \$7.854 million. The purpose of this program is to focus on the development and deployment of advanced technologies to support inter-organizational and multi-level dissemination of information and intelligence products. This includes:

- Pattern recognition and correlation technologies for creating broad threat awareness;
- Operational support capabilities for protecting infrastructure, guarding against threats, and providing relevant, actionable intelligence to operators;
- Strategic analysis capabilities to recognize, track, and accurately assess the significance of patterns and trends in suspicious activity reports; and
- Advanced encryption and redaction tools, digital rights management technologies, and automated destruction capabilities to increase the multi-level security of distributed products.

Threat Dissemination Standards Project – Disseminates intelligence products to State, local, and private sector security partners. In FY 2009, the project will conduct a pilot test to deploy the Critical Infrastructure Inspection Management System (CIIMS) to the Los Angeles Police Department (LAPD) ARCHANGEL program to be integrated into the patrol, assessment, prevention, response, and after action process of critical infrastructure protection. In FY 2010, the project plans to design specifications for sensor fusion standards, exchange protocols and conduct a pilot test to deploy CIIMS to the LAPD ARCHANGEL program for integration into the patrol, assessment, prevention, response, and after action process of critical infrastructure protection. The project will also design technology specifications for threat assessment and mitigation exchange standards. Starting in FY 2010, CIIMS plans to evolve to include capabilities that would enhance the prototype for a broader law enforcement community and on various platforms (e.g., cars, boats, locomotives, and on foot).

Multi-Level Information Dissemination Project – Provides secure inter-organizational and multi-level dissemination capabilities for its information and intelligence products to State, local, and private sector(s). In FY 2008, the project performed comparative scenario-based exercises to evaluate implementation of the Controlled Unclassified Information (CUI) framework. Beginning in FY 2009 and continuing into FY 2010, the project plans to assess and document requirements for external intelligence product dissemination and evaluate relevant multi-level security technologies. Also in FY 2010, the project plans to support CUI implementation and

rollout pilots for additional multi-level security technologies.

Suspicious Activity Reporting (SAR) Project – Assists with the technical development of a cross agency suspicious activity reporting tool/system to track, in real-time, all encounters with individuals on government watch lists, while protecting privacy. It will build and sustain a strategic analysis capability to recognize, track, and accurately assess the significance of patterns/trends in suspicious activity reports. In FY 2009, the project plans to initiate development of mission-based reports and requirements for improving each DHS component's SAR capabilities, including an integrated approach to SAR analytics based on best practices and knowledge of common analytic tools and techniques. In addition, it will demonstrate how to ingest, track, and analyze SAR. Also in FY 2009, the project will deliver a Capability Migration Roadmap that will outline how DHS components could deploy the SAR tool. In FY 2010, the project plans to perform technology assessments, system interface specifications, and software development for SAR. This work is fully coordinated with related efforts within the Department of Justice (DOJ).

Basic/Futures Research (BFR) Thrust/Program Area – FY 2009: \$4.536 million; FY 2010 estimate: \$4.744 million. Addresses the increasing difficulties associated with discovering, processing, analyzing and synthesizing, understanding, securing, and communicating information. Customers and partners include the various first responder, law enforcement, public safety, and public health officials and organizations throughout the Federal, State, local, and tribal homeland security community. For this diverse group, receiving real-time, accurate information is critical to effectively anticipate threats; prepare for, prevent, and respond to natural disasters and terrorist incidents or threats; quickly and efficiently recover from such incidents; and restore our nation's critical infrastructures. The BFR thrust promotes an effective homeland security risk management process based on comprehensive, real-time situational awareness and informed decision-making. The programs will accelerate the development of automated knowledge management capabilities to help identify and analyze potential national threats, strengthen communications interoperability, improve the security and integrity of our nation's cyber infrastructure and the internet, and apply integrated, network- and database-aware sensors and investigative tools.

Visual Analytics, Precision Information Environments (VAPIE – formerly, Visual Analytics and Physics-based Simulation Research) Project - Visual analytics refers to techniques and technologies that enable the broad spectrum of homeland security stakeholders to access, organize, analyze and synthesize, communicate, and disseminate the massive, diverse, distributed, and diffuse information required. Starting in FY 2009 and proceeding into the future, this project will shift focus from analytical reasoning and information synthesis to the creation of environments, all based on a common hardware and software architecture, that can be specifically tailored for the precise needs of the diverse CCI user set. This project works to create Precision Information Environments (PIEs) that are tailored for diverse users in a broad range of situations. Such environments, when available to the myriad local, tribal, state, and Federal organizations or individuals engaged in homeland security, are critical to accurately understanding threats, quickly assessing consequences, proactively determining responses, and then establishing effective remediation activities.

In FY 2008, the program delivered algorithms and capabilities for research evaluation; designed and installed a simple, first-level data analysis and visualization capability at the Port Authority of New York and New Jersey (PANYNJ); developed enhancements for a common knowledge management architecture, which included interactive full-text analytical visualization capabilities for large document sets; and established a joint 5-year DHS-NSF Visualization Research Program. In FY 2009, the project plans to develop a multi-modal common visual analytics framework; demonstrate a lightweight Scalable Reasoning System (SRS) for Visual Analysis at the San Diego Automated Regional Justice Information System (ARJIS); and pilot a full visual analytics suite tailored for its CompStat (Computer Statistics) system at the PANYNJ. In addition, the program plans to integrate into the new CCI Center of Excellence (COE) with the National Visualization and Analytics Center (NVAC) and expand the NVAC Industry Consortium to 35 members.

In FY 2010, the program plans to design and demonstrate a combined PANYNJ CompStat and ARJIS SRS capability in both locations; complete integration of the CCI CoE with the DHS-NSF Foundations of Data and Visual Analytics (FODAVA) research activity; and demonstrate a limited, metropolitan-scale precision information environment for San Diego and Seattle. In addition, program efforts plans to support the 2010 Olympics by implementing a Common Operation Picture and a Visual Analytics Center and will establish a basic Science-Industry-Funding Transfer framework (SIFT) for moving research products to Federal, State, and local applications.

Discrete-Element Computing, Privacy and Forensics (formerly data-Intensive Computing, Privacy, and Forensics) Project - As a complement to visually based techniques for interacting with large, diffuse data sets or information sources, CCI is developing specialized technologies and techniques for accessing, managing, and processing multiple data types, modes, and structures. These include structured information in databases as well as unstructured text in documents and messages, images, video, audio, sensor data, and instrumentation, among other information sources. To be most effective and useful, these techniques must operate in real-time on dynamic, streaming data and include networked sensor or surveillance data. In addition, they allow privacy, computer and network security, and forensics attributes to be directly incorporated into the software algorithms being implemented for accessing, managing, and disseminating or sharing information, rather than being added as special privacy or security layers operating on top of the processing algorithms.

In FY 2009, the project will test mathematical parameters for discrete-element computing, creating the discrete computing software architecture, and demonstrating a discrete computing/visual analytics integration system based on hypothesis-driven analysis. In FY 2010, the project plans to design and create the discrete-element computing hardware architecture, demonstrate a discrete element framework for synthetic simulation environments, and pilot discrete-based techniques for incorporating information privacy and security.

Collaboration Project (formerly included within above efforts) –In FY 2008, the S&T Directorate and CCI created formal links, through a Memorandum of Understanding (MOU) and a CCI-specific Cooperative Activity Agreement, respectively, with the National Science Foundation and the Canadian Government (Defence Research and Development Canada).

Further collaborations with Germany, of the European Union (EU), and the CIA and Department of Defense (DOD) within the United States are beginning in FY 2009. Plans for FY 2010 involve expansion of those joint programs, to include machine learning (NSF FODAVA); visual analytics based cyber security techniques (EU), cognitive science for visual analytics (Canadian VAC), and large-scale database visualization (Germany).

Reconnaissance, Surveillance, & Investigative Technologies (RSIT) Thrust Area –

The RSIT thrust area develops advanced integrated tools for law enforcement agencies within the DHS and other Federal, state, and local agencies. The programs focus on reducing the time required for forensic analysis; creating new capabilities for examiners to evaluate evidence; strengthening national security by deterring terrorist and criminal activity; and effectively prosecuting criminals and terrorists. CCI will develop pilots with State/Local Law Enforcement to provide technology-based solutions to challenges faced by State and local Law Enforcement agencies. The thrust area will address the full spectrum of crimes investigated by Law Enforcement organizations with a focus on the following program areas:

Law Enforcement Support Systems (LESS) Program - FY 2009: \$0.000 million; FY 2010 estimate: \$0.500 million. Develops advanced integrated tools to enable the collection and display of information to support the requirements of the law enforcement community. Projects developed through this program will provide standards and advanced analytical tools for the analysis of audio and video evidence. In addition, this program develops integrated sensor support, collection, display, and transmission of information for situational awareness by officers in the field or at a command center.

RealEyes Project – Tests the operational effectiveness and efficiency of streaming video for first-responder and law enforcement applications. RealEyes is a prototype software system that enables first responders and law enforcement officials equipped with Personal Digital Assistants (PDAs) to send and receive live video and geospatial coordinates; view video from fixed or mobile cameras; and receive data (video, photos and text) from a field command post using basic cellular technology. In FY 2010, the project plans to focus on testing the system’s applicability for state and local law enforcement applications.

Sensor Web Project – The project develops intelligent sensor webs for law enforcement applications and emergency response. In FY 2010, the project plans to focus on the development of robust, low cost, easily deployed sensor platforms that may be deployed to detect and track intruders; identify threats (such as carrying weapon, crawling, or loading/unloading trucks); provide information on emergency situations (such as the location of fire, smoke and occupants in a building); and increase situational awareness

Forensic Analysis Tools Program- FY 2009: \$0.000 million; FY 2010 estimate: \$0.600 million. Develops and demonstrates advanced investigative and crime-scene forensic technologies to analyze evidence. Efforts in this area will introduce new capabilities in the examination and characterization of forensic evidence, which will reduce analysis time from days to hours. This program will develop advanced forensic document, fingerprint, simulation, and situational awareness technologies. The program will also develop Personal Electronic Device (PED)

analysis; global positioning system (GPS) device analysis; first responder field kit development; and information sharing clearinghouse.

Searchable Toners and Printing Inks Library (STPIL) Project – STPIL will create a searchable library for toners, inkjet ink, and printing ink (impact and non-impact). STPIL will fully characterize print media (i.e., toners and printing inks) from both fraudulent documents and corresponding genuine exemplars and create a searchable library of printing media to compare questioned documents with genuine specimens based on their respective analytical chemical and morphological profiles. In FY 2010, the project plans to determine the most appropriate equipment for characterization of ink categories and document current best-practices in print media recognition.

GPS Forensics Project – Develops a universal tool for forensic analysis of GPS devices seized during criminal and terrorist investigations. In FY 2010, the project plans to build upon research completed in the previous first year of development and continue to make progress toward the development of a universal GPS device analysis tool.

First Responder Field Kit Project – Develops an easy-to-use tool for non-technical law enforcement officers investigating cyber forensic crimes in the field. In FY 2010, project plans to research and develop a universal device to aid law enforcement officers in the quick investigation and extraction of evidence from computers and other devices captured or involved in an active criminal or terrorist investigation.

Tagging, Tracking, and Locating Technologies Program- FY 2009: \$0.000 million; FY 2010 estimate: \$0.400 million. Develops tagging, tracking, and locating devices for the law enforcement community. The program focuses on cell phone and portable device tracking, beacons, illuminators, marking material, and electronic devices. Technologies developed in this area will expand the ability of federal, state, and local law enforcement components to efficiently monitor and capture criminal and terrorist suspects.

Wireless Tracker Project – Provides advanced tools to four Federal and more than sixty State and local law enforcement agencies. Technology developed earlier in this program enabled numerous arrests in high profile cases. In FY 2010, the project plans to expand the capabilities of current direction-finding equipment adapted to the changing cellular landscape.

Emergent Threat Assessment Thrust Area – Provides components of DHS, the Intelligence Community and other government agencies programmatic and technical expertise in emerging threats, risk sciences, intelligence, surveillance, and reconnaissance (ISR) and other areas applicable to homeland security that may be especially sensitive, classified or requiring of extraordinary security protection.

Emerging Threats Program – FY 2009: \$3.900 million; FY 2010 estimate: \$1.836 million. Determines potential emerging threats through commissioned and interagency threat assessments; through the expertise brought by the customers in the Integrated Product Team (IPT) process; and through an assessment of existing counter-measure availability and

capabilities. Individual activities under the project areas including deliverables, technology capabilities, customer, performer, and/or overall program focus may be classified.

Identification and Assessment Project – Anticipates and defines potential threats emerging from new scientific and technological advances, and evaluating terrorists' innovative or novel use of existing technologies. In FY 2008, the project initiated research and documentation of international communities' thoughts and response procedures in dealing with emerging and persistent infectious diseases. In FY 2009, the project will support a Center for Strategic and International Studies (CSIS) which will examine the affects of Israel's use of journalists in simulations and training exercises to mitigate society-wide, psycho-social affects of terrorist attacks; and to assess India's emergency response plan for nuclear and radiation effects following a nuclear detonation. The Intelligence Based Threat Assessment project scheduled for FY 2009 plans to examine the innovative use of technology from the terrorists' perspective. Also in FY 2009, the project will initiate a study to examine the potential homeland threats and vulnerabilities associated with the emerging U.S. hydrogen fuel cell infrastructure in support of the nation's energy requirements. The study will include counter-measure recommendations to discover the problem areas and policy implementation recommendations to support the findings. In FY 2010, the project plans to complete the threat assessment of hydrogen fuel cells; provide up to two threat assessments on over-the-horizon technologies and harmful innovative uses of that technology; and provide science and technology intelligence based threat assessments to the 12 functional area DHS S&T IPTs.

Countermeasures Development Project – Addresses the dynamic nature of emerging threats previously identified through threat assessments of new technology. The project focuses on identifying capabilities to counter emergent threats for which countermeasures capabilities do not yet exist. In FY 2009, Countermeasures Development will complete project SWITCHBLADE to include an operational prototype and design package. The SWITCHBLADE system will provide the capability to identify/detect a wide range of undeclared electronics, both on and off. In FY 2010, the project plans to identify and continue countermeasure development needs based on FY 2009 and other pertinent science and technology threat assessments.

Future Capabilities Research and Development – Supports activities that include research collaboration with external agencies and international partners. In FY 2008, the project transitioned a holographic imaging device that will enable key stakeholders to identify hidden threats within concrete surfaces. In FY 2009, the future capabilities research and development project transitioned a detection device to key stakeholders to enable detection of electronics in the power on and/or power off mode. In FY 2010, the project plans to complete the development of a nanosensor detector in collaboration with outside agencies. The outcome will result in a library of nanosensors tuned to compounds of human odors with technology that uses Deoxyribonucleic acid (DNA)-coated carbon nanotube field-effect transistors as sensing elements. Also, in FY 2010, the project plans to continue working on the Detect and Identify Threatening Plant Pathogens activity that focuses on investigating the ability to detect and identify the presence of foreign plant pathogens that are potential threats to U.S. agriculture sector using high resolution satellite imagery to differentiate the presence of threatening plant pathogens from endemic pathogens that are present within crops. In addition, the project plans

to continue developing an UltraFast Sequencing Model that involves the development of a rapid, tagging-free, DNA sequencing technique using solid-state nanopores to analyze single DNA and Ribonucleic acid (RNA) molecules.

Intelligence, Surveillance, and Reconnaissance (ISR) Program/Project – FY 2009: \$0.000 million; FY 2010 estimate: \$1.377 million. Supports research activities to improve the collection and dissemination of intelligence information using satellites, radars, sensors, and unmanned platforms in support of DHS components and Northern Command. In FY 2009, the project will continue with an airspace modeling effort, which identified the multi-function possibilities of the surveillance system; to determine if the analysis to date is accurate and comprehensive; to ensure that the planning process to date has been appropriate; and to conduct a surveillance systems analysis. In addition, the project plans to perform systems analysis of DOD surveillance, information gathering, and decision-support technology investments to benefit the complex DHS needs in CBP Air and Marine and Coast Guard operations, protecting critical infrastructure, and integrating operations with other government agencies.

In FY 2010, the project plans to continue the GAP Filler effort, which the S&T Directorate initiated in FY 2009. The GAP Filler program is a collaborative effort with NORTHCOM. The project will leverage technological advances in sharing data across enterprises, bi-national and interagency, for shared situational awareness, to correlate and fuse data to enhance current architecture, and transition an improved capability as proven through a test-bed.

Risk Sciences Program – FY 2009: \$0.000 million; FY 2010 estimate: \$1.377 million. Fosters systematic, transparent, and goal-focused application of risk concepts and tools to better support strategic, operational, and tactical decision-makers across the national homeland security enterprise. In addition, this program enables for informed decision-making across government, and particularly in DHS.

Risk and Decision Support Project – Conducts R&D aimed at advancing the state of the art in the risk and decision support sciences (risk analysis, risk communications, performance metrics, etc.) helping those who hold primary responsibility for risk assessments and other risk-related functions (e.g., risk communications, evaluation of alternative courses of action, etc.) to conduct their work in a conceptually sound and analytically rigorous manner.

In FY 2009, the project will support the development of a risk-assessment methodology model using actual information from a transit security project. In FY 2009, the project will also produce a Risk and Intelligence Communities Integration Study and provide support to National Protection Programs Directorate (NPPD). In FY 2010, the project plans to continue improving risk practices in DHS with particular emphasis on improving both internal and external DHS risk communications practices.

Comparative Studies Project – Conducts research and analytic studies (e.g., historical, competitive strategies, net assessment, etc.) to examine the past and future evolution of the terrorist vs. security force competition over time. The objective is to generate information and insights useful to decision-makers in developing future strategies that will help avoid repetition of past mistakes and future “failures of imagination. In FY 2009, the project will deliver a report

on “Consequences of Worldwide Immigration.” In follow-on to another study “Reasons for Success and Failure of Terrorist Attacks,” the project will conduct a comparative study looking at the success and failure of on-the-ground security forces in U.S. and foreign settings. The project will also conduct a series of workshops and other activities examining the use of emerging consumer-oriented communications technologies in domestic emergency response scenarios. Additionally, the project will prepare a number of focused issue papers to support the Quadrennial Homeland Security Review and released the Proceedings of an earlier Homeland Security 2015 workshop, held jointly with Georgetown University and the Canadian R&D counterpart to DHS S&T. In FY 2010, the project plans to conduct at least one comparative study and/or net assessments as directed in support of the Office of Policy DHS.

PPA: EXPLOSIVES

	Perm Pos	FTE	Amount
2008 Actual			\$ 116,883
2009 Enacted			96,149
2010 Adjustments-to-Base			0
2010 Current Services			96,149
2010 Program Change			24,660
2010 Request			120,809
Total Change 2009-2010			24,660

The Science and Technology (S&T) Directorate requests \$120.809 million for Explosives, of this amount \$3.020 million supports the SBIR Program. The increase in FY 2010 includes \$10.000 million to support the High Throughput Air Cargo Program and \$5.000 million to address the high-priority mass-transit counter improvised explosive device (C-IED) gaps identified in the Transportation Security Integrated Product Team (IPT). These efforts support the President’s homeland security initiatives of safeguarding mass public transportation and improving airline security.

CURRENT SERVICES PROGRAM DESCRIPTION

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impact of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure. This includes passenger-, baggage-, and cargo-screening technologies; blast-resistant aircraft construction; and integrated protective systems for high-value facilities.

The Division’s primary Federal customers include the Transportation Security Administration (TSA), the U.S. Secret Service (USSS), the U.S. Coast Guard (USCG), and the Office of Bombing Prevention (OBP). Other end-users include federal, state, and local first responders and the aviation industry.

The Explosives Division carries out its activities through four thrust areas: Explosives Detection; Mitigation; Explosives Research; and C-IED.

Explosives Detection Thrust Area: Develops advanced technologies to detect explosive threats to the Nation’s aviation, rail, and ship transportation systems. Activities in this thrust area include: improving existing explosive detection methods; developing new detection methods for screening people, baggage, and cargo; and ensuring freedom-of-movement for people and commerce. The Explosives Detection Thrust Area includes the following programs: Cargo, Checked Baggage, Check Point, Homemade Explosives, and Manhattan II.

Cargo Program - FY 2009: \$3.450 million; FY 2010 estimate: \$13.450 million Develops the next generation of air cargo screening systems to mitigate the threat of explosives placed in air cargo containers based on Department of Homeland Security (DHS) customer identified capability gaps developed during S&T’s Capstone Integrated Product Team (IPT) process. The program will continue research, development, testing, and evaluation of the next generation of

air cargo screening systems that will enable the screening of 100 percent of air cargo, while reducing operating costs and achieving a low rate of false alarms. In addition, the program will work to optimize canine explosive detection performance to enable DHS canine user agencies such as TSA, Customs and Border Protection (CBP), USSS, and National Protection and Programs Directorate (NPPD) meet new threats and the increased demand for canine inspections. The program includes the following projects:

Air Cargo Project – Identifies and develops the next generation of air cargo screening systems to mitigate the threat of explosives placed in air cargo containers. Activities include developing technologies to enable 100 percent air cargo screening (including break-bulk screening) with reduced operational costs and a low false alarm rate. In FY 2008, the project continued research, development, test and evaluation (RDT&E) and developed technology to detect metallic IED components and disable intact IEDs in cargo. In FY 2009, the project delivered valid, reliable, and fair screener selection and qualification tests at technology readiness level (TRL) 6. In FY 2010, the project plans to deliver validated air cargo screener training based on procedures and equipment at TRL 6, as well as assess state-of-the-art commercial-off-the-shelf (COTS) and near COTS equipment to screen break-bulk, palletized, and containerized air cargo.

Additional requested funds support the High Throughput Air Cargo Screening Project, which will accelerate current efforts to develop effective and operationally acceptable technologies to detect explosive materials within a wide range of perishable and non-perishable commodities in break-bulk, palletized, and containerized configurations. This technology will protect commercial airliners, as well as the Nation's supply chain and economy. The technology will: reduce reliance on human screeners to detect artfully concealed threats; provide automated equipment to screen air cargo to increase throughput; reduce the government's oversight costs; reduce the costs of industry compliance to air-cargo screening regulations; and provide additional layers of security to enhance and verify air cargo supply-chain integrity. In FY 2010 with additional funding, the project plans to begin the development of human-operator inspection and resolution tools.

Canine Explosives Detection Project –Improves tools and techniques for and further understand canine explosives detection in the DHS operational mission space. The project has two main activities – (1) Canine Structure and Function and (2) Canine Training and Operational Enhancements.

Canine Structure and Function - Studies the canine olfactory system, genetic markers that can predict high-performance explosive-detection canines, and canine physiological limitations and strengths. In early FY 2009 the project completed a canine gait analysis mat and written protocols, which can be used to model canines with existing knee and hip problems. Also in FY 2009, researchers will complete computer and physical models of the canine nose that will measure airflow within the canine nasal cavity in order to better understand odorant deposition within a canine nose. At the end of FY 2009, the activity will determine the potential to develop a genetic test that can predict good olfaction ability in canines. Additionally the project will determine the feasibility of enhancing canine olfaction using zinc nano-particles to improve canine trace explosives detection. In FY 2010, the project plans to initiate a multi-year program to observe Department of Homeland Security (DHS) breeding programs to determine

Deoxyribonucleic acid (DNA) markers associated with desirable behavioral, physiological, and genetic traits of a successful explosives detection dog. Results will lead to the use of DNA markers for selection of breeding pairs and for selection of procured working dogs.

Canine Training and Operational Enhancements – Enhances canine training tools and implementation. In FY 2009, researchers will complete an analysis of high-priority homemade explosives (HME) formulations that lack canine training aids to identify unique chemical signatures that can be used as markers to develop low-cost, non-hazardous HME canine training aids. In late FY 2009, this activity will assess and field-test currently available HME canine training aids to determine the effectiveness of these aids against the actual explosive type in a TSA operational environment. Additionally in FY 2009, the activity will complete a systematic analysis of Remote Air Sampling for Canine Olfaction (RASCO) as deployed in the United Kingdom (UK) to determine the potential application of RASCO for screening U.S. air cargo. In late FY 2009, researchers will also complete a ruggedized canine vest with a suite of sensors to command and communicate with the canine remotely. In FY 2010, the activity plans to develop and transition low-cost, non-hazardous canine training aids for the highest priority HME threats identified by TSA.

Check Point Program - FY 2009: \$11.653 million; FY 2010 estimate: \$8.150 million. Develops advanced capabilities to detect explosives and concealed weapons (including homemade explosives) that could be detonated in passenger cabins or used in the hostile takeover of mass transit systems. The program is designing a next-generation checkpoint that will enable passengers to travel seamlessly from public areas to secure areas via a high-tech corridor that will automatically identify threats. The check point corridor will contain an integrated system of detectors (sensors, biometrics, radio frequency identification technologies) networked with command control operations to effectively meet TSA's requirements for automation, efficiency, and cost reduction. This program includes the following projects:

Automated Carry-On Detection Project – Develops advanced capabilities to detect explosives and concealed weapons, such as IEDs. This project also will introduce new standalone technologies or adjunct technologies, such as computed tomography (CT), to continue the improvement of detection performance and the detection of novel explosives. In FY 2009, the project will award a development contract for the detection of novel explosives in the next-generation checkpoint detection system. It completed certification for the detection of novel explosives in the new generation checkpoint system. In FY 2010, the project plans to develop visual search performance aids that reduce bag-search rates for faster checkpoint throughput.

Explosives Trace Detection Project – Develops advanced capabilities to detect explosives (including homemade explosives) through non-contact trace residue technologies. This project is developing the capability to perform trace detection without the use of swabs and is working to deliver a fully functional laboratory breadboard Portal for aerodynamic wake sampling to improve throughput by real-time sampling of a passenger's wake while he or she is walking through the portal. In FY 2009, the project completed a fully functional laboratory breadboard portal for aerodynamic wake sampling. In FY 2010, the project plans to conduct a demonstration of a bench-top non-contact trace detection system.

Next Generation Passenger Check Point Project – Develops the next-generation detection system to screen passengers for explosives at mass transit portals. This project investigates new emerging liquid- and gel-based explosive threats and includes them in a comprehensive detection system. In FY 2009, the project transitioned a dual-energy checkpoint detection system to identify potential threats based on atomic number, mass, and other physical characteristics to TSA. In FY 2009, the project will also collaborate with the Explosives Trace Detection Project to deliver a fully functional laboratory breadboard portal to improve passenger checkpoint throughput using real-time sampling of a passenger's wake while he or she walks through the portal (no stopping required). In FY 2010, the project plans to deliver a Whole Body Imager at technology readiness level (TRL) 7.

Homemade Explosives (HME) Program - FY 2009: \$7.000 million; FY 2010 estimate: \$5.300 million. Numerous attempted and executed terrorist attacks involving Homemade Explosives (HME) have led to an urgent operational need to detect HME. As a result, in 2004 DHS S&T stood up a rapid response team to address the HME Threat and established a program responsible for the identifying and detecting HME in the U.S. transportation infrastructure. The program consists of three main activities.

Homemade Explosives (HME) Project – Evaluates all potential technologies capable of detecting and distinguishing explosives and flammable liquids from benign liquids. The project includes: improving products and systems capable of detecting HME; supporting the research and development of next-generation, novel technologies, algorithms, or prototypes for the detection of HME; and addressing potential operational venues, including airport and mass-transit checkpoints for passengers and carry-on baggage (not including cargo or checked baggage). In FY 2008, the project completed COTS technology demonstrations and in FY 2009 is producing a final report for TSA. In FY 2009, the project will complete new technology test and evaluation and provide a report to TSA. Funding for this program will end in FY 2009.

Homemade Explosives Characterization Project – Determines the impact, friction, and electrostatic discharge sensitivities of HME threats. The project provides a better understanding of the potential damage of HME and their impact on aircraft. Further, this work assists the division in determining the necessary technologies to counter this threat. This data also facilitates the safe handling and storage of volatile materials that S&T Directorate researchers and their customers routinely use to develop explosive detection systems. In FY 2009, the project will conduct detonation assessment tests and publish the results. The project plans to continue to conduct these in assessments in FY 2010, as well as continue to conduct phenomenological testing of HME threats and address the prioritized list of HME formulas.

Homemade Explosives Stand Alone Detection Project - Identifies, evaluates and improves HME detection technologies and screening methods through the collection of raw data and images from explosives detection equipment from a wide variety of COTS Explosive Detection Systems (EDS), CT and x-ray diffraction equipment. This work helps TSA to determine how best to improve EDS performance through hardware and software (image processing) upgrades. In addition, the project evaluates COTS equipment in laboratories to determine detection limits, false-alarms rates, and documents unique HME properties for detection exploitation. The

characterization activity also provides raw and analyzed data from COTS tests in near real-time peer reviewed reports to TSA.

In FY 2009 the detection activity will achieve the following:

- Support the Broad Agency Announcement (BAA) for the test and evaluation of HME detection technology that meets TSA technical requirements for screening bottles and medical essential liquids
- Complete test and evaluation of COTS devices and deliver reports to TSA
- Examine HME material selection and its impact on HME safety testing processes at several laboratory locations to generate best practice approaches and determine the error associated with equipment and test method selection for different safety data tests
- Collect raw data and images from COTS EDS, CT and x-ray diffraction equipment and develop a draft data compendium to be shared with TSA and the explosives community

In FY 2010 the detection activity plans to:

- Continue to evaluate emerging COTS equipment and HME detection techniques in laboratories to determine detection limits, false alarms rates and document unique HME properties for detection exploitation
- Examine HME synthesis methods for HME safety testing processes at several laboratory locations to generate best practice approaches and determine the error associated with equipment and test method selection for different safety data tests
- Collect raw data and images from COTS EDS, CT and x-ray diffraction equipment and develop a definitive compendium for TSA and the explosives community
- Withstand damage from novel explosives of various weights placed at various locations in the passenger cabin and cargo hold through the use of modeling and simulation and through empirical field testing
- Determine technical data/information to serve as the scientific basis for detection technology certification standards

In FY 2010 the damage assessment activity plans to:

- Deliver a validated model for Boeing 737-800 that will be eventually used to model other aircraft in the current fleet
- Develop solid geometry models of the Airbus A-320 and validate models on numerous aircraft
- Continue to characterize aircraft ability to withstand damage from novel explosives of various weights placed at various locations in the passenger cabin and cargo hold.
- Conduct testing of flat and curved panels that are representative of an actual aircraft's structure (e.g. skin, frames, stringers, doors, etc.) against HME threats

In summary, the HME program helps TSA determine threat amounts that must be detected for various HME explosives threats. In turn, these threat amounts drive the detection performance, which must be the requirements for future EDS, CT and x-ray diffraction equipment acquisitions by TSA. Data from the HME program help vendors improve the performance of equipments and help the government determine "the best of the best" technologies to meet detection requirements for an ever expanding list of potential HME threats. The HME program must understand the threat, develop technology and screening methods, and evaluate COTS detection

technology that can minimize false alarms and improve HME detection probability with the end goal of distinguishing true HME threats from the many innocent gels and liquids.

Manhattan II Program - FY 2009: \$12.641 million; FY 2010 estimate: \$12.630 million
Drives commercial development of next-generation systems that will substantially improve performance and affordability for screening checked baggage. Test and evaluation of these systems will focus on probability of detection, number of false alarms, and throughput. The project also measures affordability of these systems by evaluating initial purchasing cost, operating costs, maintainability, and other elements of the full life-cycle costs. In FY 2009, the project will complete detection technology demonstrations and produce a final report for TSA. In FY 2010, the project plans to complete system performance analysis and metrics in coordination with TSA to develop a performance standard for future acquisition programs. The standard will link hardware and software development for future EDS.

Mitigation Thrust Area – Reduces the impact of undetected bombs that cannot be rendered safe through available means. This thrust area hardens conveyance against threats (e.g., blast-resistant cargo containers) to enhance the protection of high-value transportation targets.

Conveyance Protection Program - FY 2009: \$1.500 million; FY 2010 estimate: \$2.200 million
Assesses risks and mitigates the consequences of an intentional assault on air, surface, and maritime conveyances. The overall objectives of this program are to:

- Assess the vulnerability and survivability of commercial vehicles to high-energy explosives;
- Develop materials, technologies, and techniques to decrease vulnerability or improve survivability of commercial vehicles;
- Develop domain awareness systems and other information technology that help security organizations thwart intentional assault; and
- Develop information systems that allow first responders to react in the most effective way to terrorist attack, other intentional assault, natural disaster, or other catastrophes.

TSA, the aviation industry, and the traveling public are the primary customers for this program. Current program activities focus on aircraft hardening and preventing the catastrophic loss of passenger aircraft from explosives devices detonated in passenger cabins or cargo holds. Specific projects include:

Aircraft Vulnerability Tests Project – Assesses the vulnerability of narrow- and wide-body aircraft passenger cabins and cargo holds to explosives. These vulnerability assessments will analyze blast and damage effects of explosives and determine the minimum quantities of HME required to cause catastrophic damage to various aircraft types. The assessments will also identify the limits necessary for detection systems. In FY 2009, the project will deliver computational models to predict aircraft vulnerability to HME threats at various locations within the passenger cabins and cargo holds. In FY 2010, the project plans to test the full-scale effects of aircraft vulnerability on narrow-body overhead bins, wide-body and narrow-body window-belts, and wide-body and narrow-body lavatories.

Conveyance Protection Project – Enhances and broadens the investment in the Conveyance Protection Program, which focuses on aircraft hardening and the risk of catastrophic loss of passenger aircraft, resulting from various sizes of IEDs detonated in the passenger cabins or cargo holds. In FY 2008, the project continued assessments of aircraft vulnerability, focusing on narrow-body aircraft, and blast testing of fuselage liners. In FY 2009, the project will deliver computational models to predict aircraft vulnerability to HME threats at various locations within the passenger cabins and cargo holds. In FY 2010, the project plans to evaluate state-of-the-art mitigating technologies.

Explosives Research Thrust Area – Conducts basic research to support an integrated execution of the division’s responsibilities for explosive detection and mitigation to support future customer needs in the area of explosive detection with customer capability gaps identified by the Capstone IPT.

Explosives Research Program - FY 2009: \$8.423 million; FY 2010 estimate: \$8.717 million. Improves explosive-detection capabilities by performing multi-disciplinary research and development in imaging, particle physics, chemistry, and algorithms. Through this work, the program will develop enhanced detection capabilities and next-generation detection systems.

Algorithm and Analysis of Raw Images Project – Develops a non-proprietary database of explosive detection images provided to all detection program participants. Collects and consolidates images from commercial vendors and coordinates the purchase of additional images and data from CT, EDS, Trace, and new emerging devices to include novel explosives and other technologies. The evaluation of these images will help determine the causes of false alarms over many types of fielded and new scanning systems. In FY 2009, the project will complete preliminary research and data analysis to identify the potential application to customer capability gaps and detection programs. In FY 2010, the project plans to continue its research and image data analysis to produce a report that will help guide future development work.

Detection Technology and Material Science Project – Employs the latest advances in high-performance materials to enhance aircraft survivability in the event of an on-board blast. The project will study blast-resistant materials, develop, and implement advanced materials within aircraft to reduce the effects of an explosive detonation, including the attenuation of the explosive shock wave and containment of blast fragmentation (shrapnel). In FY 2009, the project will integrate promising materials technologies into products to improve protection of people, conveyances, and infrastructures. In FY 2010, the project plans to conduct assessments and complete testing to identify new materials that may have crossover potential for other transportation applications.

Fundamental Particle Physics Project – Researches phenomenology to improve technology to best exploit particle behavior and properties. This fundamental research can lead to the development of new sampling technologies and the enhancement of current technology. Advances in understanding particle behavior can potentially lead to the next generation of sampling technologies. In FY 2009, the project conducted preliminary data analysis in advanced signature and detection concepts. In FY 2010, the project plans to complete research and data analysis and produce a report to help identify technologies for potential customer transition.

Liquid and Homemade Explosives Chemical Characterization Project – Identifies and quantifies the physical and chemical properties of HME as part of an ongoing effort to counter this increased threat. This project will identify explosive properties including density, dielectric constant, chemical composition, molecular structure, and thermal decomposition rates of products. In FY 2009, the project will continue work based on prior-year analysis. In FY 2010, the project plans to complete data collection and analysis for a specific group of HME physical and chemical properties and provide the test results to the user community.

Counter IED Thrust Area – Develops technologies that will counter the threat of explosive attacks in our homeland in support of Homeland Security Presidential Directive (HSPD)-19 and its resulting National Strategy for Improvised Explosive Devices, which calls for “the detection of, protection against, and response to terrorist use of explosives in the United States.” The S&T Directorate has a balanced long-term basic research and technology development program to deliver critical Counter-IED technologies and products to address three major domestic threats: person-borne IEDs, vehicle-borne IEDs, and devices targeting valuable infrastructure. In addition to leveraging existing multi-agency Counter-IED investments from DOD, NPPD’s Office for Bombing Prevention, USSS, TSA, and CBP, C-IED has incorporated related projects from the Explosives, Human Factors, Infrastructure and Geophysical Divisions to advance efforts in this area.

Additional requested funds will enable the thrust area to support additional high-priority projects identified by DHS customers to address high-priority mass-transit C-IED gaps identified in the Transportation Security IPT.

The C-IED Thrust Area carries out its activities through five programs: Prevent/Deter; Predict; Detect; Respond/Defeat; and Mitigate Thrust areas and includes some crosscutting activities.

Prevent/Deter Program – FY 2009: \$3.310 million; FY 2010 estimate: \$2.800 million
Conducts social and behavioral science research to help the homeland security community identify groups and individuals who are moving towards conducting IED attacks and analyzes the efficacy of intent-focused prevention efforts. This program has one project, Actionable Indicators and Countermeasures, which addresses multiple aspects of IED prevention/deterrence.

Actionable Indicators and Countermeasures – Uncovers actionable indicators to aid the intelligence and law enforcement communities in identifying actors that pose significant IED threats and provides policymakers with scientifically tested strategies to prevent radicalization and IED attacks before they occur. This project will develop practical tools through the synthesis of state-of-the-art social and behavioral science databases, case studies, surveys, and fieldwork. It will also examine how social and behavioral science principles can support the development of counter-radicalization efforts and use advanced computational modeling, simulation, and visualization technologies to test scenarios and present findings of relevance to end-users. In FY 2009 the project will analyze trends and provide reports on support for Jihadi terrorism in the U.S., and characteristics of groups that use IEDs. In FY 2010, the project plans to identify characteristics that distinguish the rhetoric of violent and non-violent Jihadi groups.

Predict Program – FY 2009: \$4.608 million; FY 2010 estimate: \$6.250 million

Develops technologies to secure U.S. borders that will automatically identify, alert on, and track suspicious behaviors that precede a suicide bombing attack, as well as automatically identify and prioritize the risk of potential targets of attack. The program also develops technologies to rapidly and automatically identify potential IED targets and staging areas within the U.S. These capabilities will enhance the people-screening capability of DHS customers by reducing their reliance on subjective processes.

Predictive Screening Project – Develops technologies to automatically identify, alert authorities to, and track suspicious behaviors that precede suicide-bombing attacks. The S&T Directorate will test technologies at ports-of-entry, transit portals and special events. Operational benefits derived from predictive screening include increased probability of identifying suicide bombing behaviors before an attack occurs; significant expansion of active surveillance within a target environment; and increased deterrence of travelers carrying illegal weapons and false documents. In FY 2009, the project will use knowledge elicitation, an interviewing technique, with eyewitnesses and operation experts and begin operational experiments. In FY 2010, the project plans to conduct operational testing of semi-automated tracking of designated suspicious behavior.

Risk Prediction Project – Develops technology to rapidly and automatically identify potential IED targets and staging areas within the U.S. This project will leverage existing geo-behavioral pattern discovery algorithms from overseas attacks and the understanding of domestic infrastructure, terrorist tactics, and demographic data to identify U.S. vulnerabilities. In FY 2009, the project will develop multi-cultural data sets related to IED use and begin operational tests at customer sites. In FY 2010, the project plans to deliver a final test and evaluation report benchmarking the performance characteristics of existing technologies and deliver an interim architecture for integrated geospatial, social, and anomaly detection technologies.

Detect Program – FY 2009: \$28.891 million; FY 2010 estimate: \$45.912 million
Conducts research on underlying science for advanced approaches to IED and explosive detection and develops advanced technologies to detect explosive threats to the Nation's aviation, rail, and ship transportation systems. Activities in this program will:

- Improve existing explosive detection methods;
- Develop new detection methods for screening people, baggage and cargo; and
- Ensure freedom of movement for people and commerce.

This program includes funding for both basic research and transition. It supports projects that address four specific aspects of IED detection: Person-Borne Improvised Explosive Device Detection (PBIED), Technology Demo/System Integration, Vehicle-Borne Improvised Explosive Device Detection (VBIED), and Standards.

Person-Borne Improvised Explosive Devices (PBIED) Detection Project (formerly Suicide Bomber Improvised Explosive Device Detection) – Investigates technologies capable of detecting all types of explosive threats such as homemade, commercial and military explosives. In FY 2008, the project tested a prototype, backscatter x-ray portal at TRL 7. In FY 2009, the project will continue basic research efforts, including advancement of scientific understanding behind deposition, sampling, removal and trace detection of explosive particles on people and

packages; and the fundamental science behind explosive particle behavior for insight into sampling technology. The project will also expand contamination studies for non-intrusive sampling and detection of explosive residues, algorithm development for fusing multiple detection technologies, and investigate increased automation for PBIED detection. In FY 2010, the project plans to develop prototypes of standalone detection technologies using spectroscopic technologies and demonstrate a laser system as part of a project for broad bandwidth dynamic control.

Additional funding requested in FY 2010 under PBIED will enable the project to support additional high-priority projects identified by DHS customers to address high-priority mass-transit C-IED gaps identified in the Transportation Security IPT.

Technology Demo/System Integration Project – Consolidates work with first responders, State and local public safety officials, and Federal DHS officials to develop a comprehensive plan and venue for technology demonstrations. The project also leverages its partnerships to determine and validate system-integrated technologies to detect IEDs to improve system performance definition and integration. In FY 2009, the project will conduct a larger-scale technology field demonstration. In FY 2010, the project plans to conduct an annual technology field demonstration to detect explosives and explosive devices.

Vehicle-Borne Improvised Explosive Devices (VBIED) Detection Project – Develops technologies to detect or image the physical Improvised Explosives Device (IED) within a vehicle. The project also develops technologies to sample and detect explosive residues and components non-intrusively, and fuse multiple technologies to provide a level of automation for VBIED detection. This has the potential to speed screening and enable security screeners to concentrate on high-risk vehicles. In FY 2008, the project completed the assessment and demonstration of vibrometric- and neutron-based technologies to screen VBIEDs. In FY 2009, the project will conduct expanded basic contamination studies for sampling and trace detection of explosives residues from vehicles and develop methods to detect threat explosives for which no acceptable detection method currently exists. In FY 2010, the project plans to develop a prototype for screening moving vehicles remotely, as well as a prototype of standalone spectroscopic technologies to detect both explosives and explosive device components for the standoff detection of VBIEDs.

Respond/Defeat Program – FY 2009: \$3.217 million; FY 2010 estimate: \$4.077 million
Develops technologies and associated tactics and procedures for bomb squads and other first responders to improve their effectiveness and increase safety in dealing with Improvised Explosive Devices (IEDs). Beginning in FY 2010, the program plans to conduct research and systems development of products to increase the operational capabilities of the State and local bomb squads to defeat and mitigate IEDs. The research will focus on basic understanding of IEDs to guide development of technologies that would deliver advanced tools and technologies to access, diagnose, and render safe IEDs.

In collaboration with Federal, state, and local agencies, the S&T Directorate identifies, validates, and prioritizes requirements through an on-going generation and prioritization process. The program consists of the following projects:

Defeat Project- Conducts R&D to better respond to and defeat explosive threats. The non-explosive defeat tools develop technology to non-explosively defeat IEDs without activating them, causing detonation and collateral damage. In FY 2009, the project will begin characterization of the response of VBIEDs to various disruption techniques to quantify the requirements for disruption tool effectiveness. In FY 2010, the project plans to continue disruption tool characterization using overpressure techniques and to develop a system capable of penetrating a simulated vehicle wall without initiating reactive material. Also in FY 2010, this project plans to develop standoff technologies that place the bomb technician outside the blast zone of an explosive device. This system will provide remote access to VBIEDs with minimal disturbance or impact. Additionally, in FY 2010, this project plans to develop technologies to enable public-safety bomb-squad technicians and divers to disrupt and defeat waterborne IEDs including devices attached to port infrastructure and small craft used as explosive devices.

Electronic Countermeasures (ECM) Project – Improves the technology used to counter Radio-Controlled Improvised Explosive Devices (RCIED), by providing a secure and safe radius of operations. In FY 2010, the project plans to improve and enhance current State and local capability by developing enhanced waveforms and jamming algorithms (load sets) that can effectively address the challenges defined by the Domestic RCIED Threat List; Optimizing the selected wave form; and Testing and validating operational load sets for use in current ECM systems; examining the potential improvements based on antenna, amplifier, receiver and signal processing technologies. In addition, the project plans to provide an evaluation of COTS ECM systems to identify potential systems that may support future U.S. domestic ECM requirements.

Render Safe /Diagnostics Project – Increases standoff capabilities, reduces collateral damage, and provides precision disruption and disablement capabilities and techniques. In FY 2008, the project transitioned a proof-of-concept study for a non-explosive IED defeat tool. In FY 2009, the project will deliver a complete IED tool characterization guide to aid bomb technicians in the tactical decision making process for disabling the threat device. Also in FY 2009, the project will develop technologies for precision disruption, aiming and ranging systems to disable and render safe IEDs and to assist bomb squads in accessing and analyzing improvised terrorist devices. In FY 2010, the project plans to transition a decision support tool, for tactical decision making in disabling the threat.

Outreach Project – Coordinates requirements from user communities, first responders, public safety officials, and various Federal organizations. The project includes requirements development, vetting and coordination, as well as coordinating Test and Evaluation Master Plans. In FY 2008, FY 2009, and FY 2010, the S&T Directorate plans to conduct an annual outreach meeting with first responders and other customers to further develop requirements for technology advancements.

Mitigate Program – FY 2009: \$7.491 million; FY 2010 estimate: \$7.491 million
Reduces the effects of undetected bombs that cannot be rendered safe through practical and available means. This program includes the protection of high-value or prominent buildings and infrastructure, as well as addressing methods to help communities prepare for and recover from IED

attacks. The program area contains the following projects: Blast-resistant Materials, Bridge Vulnerability, Enhanced Blast in Urban Canyons, Blast Analysis of Complex Structures, Stabilization of Damaged Structures, Active Blast Protection and Community Resilience.

Blast-resistant materials - Develops proof-of-concept material technologies to mitigate the explosive and damaging force from an IED. This project includes basic research studies on advanced blast-resistant materials with properties that provide added protection to high-value structures that are likely targets of IED attacks, including new materials and deflecting structures that reduce damage to critical infrastructure and/or personnel. In FY 2008, the project identified potential mitigation opportunities and formulated a technology development plan. In FY 2009, the project will initiate material properties studies to understand blast resistance. Also in FY 2009, the project will perform experiments on materials to protect against high-velocity, kinetic energy, penetrator-type weapons. In FY 2010, the project plans to characterize new materials to define their critical blast-resistance properties.

Bridge Vulnerability – Develops an understanding of the vulnerabilities of different types of bridges. Provides more accurate vulnerability information for aging bridges and improves existing numerical models for failure of bridge components. The project is using the Waldo Hancock Bridge, a suspension bridge, completed in 1931 and now scheduled for demolition, for Homeland Security research on potential effects of an IED attack against a bridge. This effort is a partnership with Maine Department of Transportation (DOT) and the Federal Highway Administration. In FY 2008, the project conducted a series of nondestructive onsite experiments to measure simulated blast loading effects on the Waldo Hancock Bridge main cable. In FY 2009, the project will implement strategies for recovery of key components (sections of the bridge towers, cables, and suspenders) during the bridge demolition. In FY 2010, the project plans to complete recovery of bridge components and develop a plan for explosive testing with recovered components at an offsite location.

Enhanced Blast in Urban Canyons – Characterizes the effect of IED events in urban canyons, (i.e., city landscapes populated with tall buildings) and develops a high-quality database of blast overpressure measurements that can ultimately be used to refine numerical models to accurately predict the complicated reflection, diffraction, and diffusion of blast waves in these scenarios. Accurately characterizing the explosive air blast in an urban environment is critical for predicting casualties and building damage, developing structural retrofits and blast mitigation methods, and planning response operations. The S&T is collaborating with the Technology Support Working Group on this project. In FY 2009, the project will investigate instrumentation for large-scale blast testing with enhanced novel explosives, such as those containing aluminum particles, and develop a test plan. In FY 2010, the project plans to conduct a series of half- to full-scale explosive tests in a wide range of simulated urban environments.

Blast Analysis of Complex Structures - Develops computational tools to quickly calculate structural responses to a range of explosives. Provides methods for blast engineers to calculate blast loads in dense urban environments and perform calculations to estimate the relationship between an overcast sky and blast. In FY 2009, the project will perform nonlinear explicit dynamic finite element analyses on a variety of structural systems to determine response to blast loading in dense urban environments and potential for developing a progressive collapse. In

FY 2010, the project plans to conduct a detailed investigation of airblast interaction with novel curtain walls such as blast resistant glass and laminated glass in urban environments.

Stabilization of Damaged Structures – Develops a research agenda that will identify research priorities and gaps on building stabilization and investigates materials that might stabilize buildings after an IED attack. In FY 2009, the project will create a Technical Committee for the Stabilization of Buildings. In FY 2010, the project plans to create a research clearinghouse of available technologies to help stabilize buildings. Also in FY 2010, the project plans to conduct up to three product test simulations based on preliminary computer and small-scale lab evaluations of repaired structure elements.

Active Blast Protection –Researches materials that can be used in the protection of infrastructure and buildings in case of an IED attack. The project will develop new materials that enhance the performance of existing structures and buildings, making them increasingly more energy-efficient, environmentally friendly, and multi-hazard resistant, with self-healing and self-monitoring capabilities. In FY 2009, the project will issue a report on Advanced Materials and Counter-IEDs Effects. In FY 2010, the project plans to report on ultra-high-performance concrete (UHPC) materials.

Community Resilience Project – Conducts research into methodologies for effective hazard and risk communications to enhance the ability of local officials to convey understandable and credible warnings of IED activity to the public. This project will help local government and civic officials understand how to properly frame risk warnings and post-event instructions to the public in a manner that maximizes the public's understanding of the instructions and maintains public trust and confidence. In FY 2009, the project will issue a preliminary report detailing state of knowledge and recommended guidelines for government and civic officials for effective IED communications strategies. In FY 2010, the project plans to validate preliminary guidelines against historical events, experiential reasoning, and expert knowledge among authorities in terrorism, risk perception and communication, media communications, and public administration.

Crosscutting Program – FY 2009: \$1.561 million; FY 2010 estimate: \$1.187 million
Develops science and technologies that cross over more than one of the programs within the Counter-IED Thrust Area. The program currently addresses Community Perceptions of Counter-IED Technology.

Community Perceptions of Counter-IED Technology – Provides an improved understanding (through group and survey analysis) of public perception regarding IED countermeasures to design more acceptable and effective Counter IED methods. Focused panel workshops will help analyze community perceptions of C-IED strategies and technologies. Researchers will use qualitative workshop results to develop a broad-based, quantitative survey to capture community implications from a larger, more diverse population. The results will inform program managers and technology developers, resulting in more acceptable and effective Counter-IED methods. In FY 2010, the project plans to conduct and report on two Community Perceptions of Technology (CPT) panels.

PPA: HUMAN FACTORS

	Perm Pos	FTE	Amount
2008 Actual			\$13,889
2009 Enacted			12,460
2010 Adjustments-to-Base			0
2010 Current Services			12,460
2010 Program Change			2,627
2010 Request			15,087
Total Change 2009-2010			2,627

The Science and Technology (S&T) Directorate requests \$15.087 million for Human Factors, of this amount \$0.377 million supports the SBIR Program. The increase of \$2.627 million is to support increased research and development (R&D) efforts in Biometrics, Suspicious Behavior Detection and Human Systems Research and Engineering.

CURRENT SERVICES PROGRAM DESCRIPTION

The Human Factors/Behavioral Sciences Division applies social, behavioral and physical sciences to improve the detection, deterrence, analysis, and understanding of threats posed by individuals, groups, and radical movements. This division supports the preparedness, response, and recovery of communities impacted by catastrophic events and advances homeland security capabilities by integrating human factors into the development and deployment of homeland security technologies. The division also develops and tests biometrics-based technologies to identify known terrorists and criminals and prevent their movement into, out of, or within the United States while reducing delays of legitimate travelers.

The primary Federal customers include Customs and Border Protection (CBP), Federal Emergency Management Agency (FEMA), Immigration Customs Enforcement (ICE), Transportation Security Administration (TSA), U.S. Coast Guard (USCG), U.S. Citizenship and Immigration Services (USCIS), Office of Intelligence and Analysis (OIA) and U.S. Secret Service (USSS). End users include Federal, State, and local emergency management officials, first responders, and private sector infrastructure owners and operators.

Social Behavioral Threat Analysis Thrust Area – Improves the detection, analysis, and understanding of threats posed by individuals, groups, and radical movements using theory and data from the social and behavioral sciences. It also draws on and conducts research addressing the psychological, social, and economic impacts of catastrophic events to inform risk analyses, risk communications, community and individual preparedness, response, resiliency, and recovery efforts. Programs within this thrust area include Community Preparedness and Resilience; Motivation and Intent; and Suspicious Behavior Detection.

Community Preparedness and Resilience Program (formerly the Community Preparedness, Response, and Recovery Program) – FY 2009: \$0.725 million; FY 2010 estimate: \$1.200 million. Conducts analytical research to support the preparedness, response, and recovery of

communities impacted by catastrophic events. The program enhances the ability of the public and government to prepare for, respond to and recover from catastrophic events. The program includes the following projects: Enhancing Public Response and Community Resilience; Resilient Social Networks; Quantitative Psychosocial Impacts Index; and Muslim Community Integration.

Enhancing Public Response and Community Resilience Project – Identifies and measures public needs that were generated during hurricanes Katrina and Rita and makes empirically based recommendations about prioritizing and addressing such needs. The goal is to capture and communicate lessons learned to enhance Federal, State, local responses to future catastrophic events. In FY 2008, the project developed a unique database of more than 900,000 hurricane-related calls to the Texas 2-1-1 emergency response number. These will be coded and integrated with geospatial information systems (GIS) mapping to track needs of a population during a disaster. In FY 2009, the project will provide a report detailing temporal analysis of needs for shelter, food, and disaster relief as identified by callers into the Texas 2-1-1 System. In FY 2010, the project plans to provide a report detailing the geospatial analysis of needs for shelter, food, disaster relief, and other services. This will enable first responders/response planners to more accurately plan for resource requirements, evacuation strategies, and to anticipate needs for assistance during hurricanes and other catastrophic events.

Risk Perception, Public Trust and Communication Project – Identifies effective messaging strategies for public officials in order to provide more effective hazard and risk warnings and public service announcements during a catastrophic event. In FY 2008, the project analyzed exercise data from TOPOFF 4 to establish baselines to improve communications with the public during catastrophic events. In FY 2009, the project delivered a report summarizing conclusions from the exercise and providing recommendations for effective messaging strategies for public officials.

Resilient Social Networks – Examines the application of social network analysis to the identification and strengthening of social networks across public and private sector entities in local communities to improve collaboration, planning, response, and recovery. Starting in FY 2009, the National Research Council (NRC) will deliver a report on the state-of-the-art in social network analysis and its applicability to community resilience. In 2010, the NRC plans to complete a report highlighting research opportunities and methodologies to enhance public and private sector collaboration to strengthen community resilience against natural and man-made disasters.

Quantitative Psychosocial Impacts Index Project – Produces a quantitative index of the direct and indirect psychological, social and economic impacts of catastrophic events. A valid quantitative index will improve Department of Homeland Security (DHS) risk and cost assessments and will help DHS prioritize its preparedness, response and recovery activities. Drawing on social and behavioral science theory and data, starting in FY 2010 this project plans to begin construction of a sophisticated multivariate model to produce and validate the index.

Muslim Community Integration Project – Supports ethnographic research to examine the experiences of Muslims and non-Muslims in communities throughout the U.S. The project will

provide insights into the current state of Muslim communities, focusing on their role and status in America and on Muslim perceptions of American society. In FY 2009, the project will conduct a seminar on research findings to an audience that includes homeland security policymakers from inside and outside of DHS. In FY 2010, the project plans to deliver a book-length manuscript reporting on the integration of Muslim Americans into communities in the U.S. for policymakers, operational components, and academia.

Motivation and Intent (M&I) Program – FY 2009: \$3.028 million; FY 2010 estimate: \$2.015 million. Leverages social and behavioral science research, data and theory to understand the determinants and timing of terrorist conversions and terrorist intentions to engage in violence. Knowledge from this program informs analytical, operational, and policy concerns related to the terrorists and terrorist activities. The program plans to model likely scenarios for the rise, fall and activities of groups engaged in violence.

Violent Intent Modeling and Simulation (VIMS) (formerly known as Group Violent Intent Modeling) Project – Develops tools to assist analysts in determining whether radical groups are likely to engage in political violence. This project draws on social science theories and methods to build models and data retrieval systems that will allow analysts to better understand how behavioral, social, and organizational factors may contribute to and predict the emergence of violence. In FY 2008, the project completed VMIS 1.0, an integrated group-level analytical framework for the Office of Intelligence and Analysis. In FY 2009, researchers will meet with TSA representatives. Additionally in FY 2009, the project will carry out and report on work to further verify modeling capabilities, identify reliable data sources for the various VIMS components, and evaluate information extraction and content analysis tools for integration into VIMS. In FY 2010, the project plans to update VIMS 2.0, to increase user friendliness and better integrate social science theory and data into the analysis.

Suspicious Behavior Detection Program – FY 2009: \$4.417 million; FY 2010 estimate: \$6.365 million. Builds the capability to non-invasively detect suspicious behavior that indicates the intent to cause harm. This program's activities support DHS's operational screening and interviewing missions.

Hostile Intent Detection-Automated Prototype Project – Develops a real-time, non-invasive, multi-modal, and culturally independent, hostile-intent detection prototype to identify unknown or potential terrorists through an interactive process with 75 percent accuracy. In FY 2008, the project demonstrated near real-time intent detection. In FY 2009, the S&T Directorate will demonstrate real-time automated detection of hostile intent and transition expanded multi-cultural behavioral indicators of hostile intent. In FY 2010, the project plans to demonstrate multi-cultural, real-time intent detection.

Cross-Cultural Validation of SPOT Project (formerly Hostile Intent Detection—SPOT) – Provides cross-cultural validation of behavioral indicators employed by DHS's operational components to screen passengers at air, land, and maritime ports, including those contained within TSA's Screening Passenger by Observation Techniques (SPOT). This effort complements the automated prototype work and will support development of an enhanced capability to detect behavioral indicators of hostile intent at a distance. The project will integrate

these validated behavioral indicators into the screening concept of operations through each component's existing training program. In FY 2009, this project will establish protocols for collecting cross-cultural research data and will transition validated multi-cultural indicators of hostile intent. In FY 2010, the project plans to insert multi-cultural indicators into the Intent Training and Simulation project and demonstrate a mobile, collaborative collection and reporting tool.

Intent Training and Simulation Project (formerly Hostile and Intent Detection – Training and Simulation) – Develops a computer-based simulation to train behavior-based, standoff detection of hostile intent in support of screening and interviewing interactions at air, land, and maritime portals. It will leverage the interactive and observational behavioral indicators, as analyzed in the Hostile Intent Detection – Automated Prototype and Cross-Cultural Validation of SPOT projects, respectively. In FY 2009, the project will demonstrate and test a courseware prototype and transition a validated simulation product. In FY 2010, the project plans to transition validated cross-cultural upgrades to the classroom and simulation-based training.

Insider Threat Detection Project – Delivers improved tools to identify behavior patterns and characteristics before, during, and after employment that are associated with insider threats. Starting in FY 2009, this project will collaborate with other U.S. agencies and international partners to leverage their work and develop a greater capacity to deter and detect insider threats before substantial harm has been done. In FY 2009, the project will launch a market survey of existing insider countermeasure technologies and related behavior research, and develop a program plan to include addressing privacy and legal issues. In FY 2010, the project plans to assemble enabling data including research, training and testing sets; develop metrics to measure tools and provide linkages to standard threat measurements; and identify behavioral indicators. Ultimately, this project will pilot and transition the insider-threat detection tools to critical industrial bases and to Government agencies.

Personal Identification Systems Thrust Area (formerly part of the Human Systems Research and Engineering Thrust Area) – Develops an accurate, contactless, near real-time capability to identify known terrorists and criminals at U.S. checkpoints while speeding the unconstrained movement of legitimate travelers. In FY 2010, the S&T Directorate is separating the biometrics and credentialing programs from the Human Technology Integration Thrust Area to create this new thrust area.

Biometrics Program – FY 2009: \$2.600 million; FY 2010 estimate: \$2.800 million. Develops biometrics-based technologies to identify known terrorists and criminals and prevent their movement into and out of the U.S. through effective, interoperable multi-biometrics capabilities in diverse areas, such as border crossings, ports-of-entry, and visa application sites. Projects in this program are Multi-modal Biometrics and Mobile Biometrics System.

Multi-modal Biometrics Project (formerly Biometrics Project) – Delivers a department-wide capability to non-intrusively collect two or more biometrics (e.g., fingerprint, face image, and iris recognition) in less than 10 seconds at a 95% acquisition rate without impeding the movement of individuals. This project provides robust, standards-based, interoperable multi-modal biometric technologies to identify threat individuals accurately and rapidly. Technology developed under

this project will support entrance and exit solutions that US-VISIT will need to provide to the Office of Field Operations (OFO) within CBP. In FY 2008, the project initiated development of a multimodal biometrics test and evaluation (T&E) framework. In FY 2009, the project will award Phase II Small Business Innovation Research (SBIR) to develop a contactless multi-modal biometrics identification prototype and create a corresponding reference dataset. In FY 2010, in conjunction with the National Institute of Standards and Technology (NIST) and other Federal partners, the project plans to demonstrate and test biometric prototypes. The project will also analyze the performance of biometrics vendors against the T&E framework to ensure they meet design criteria important for the Department's screening of travel documents and the traveling public.

Mobile Biometrics System – Develops prototype component technologies that provide mobile biometrics screening capabilities for use at remote sites along U.S. borders, during disasters and terrorist incidents, at sea, and in other places where communication access is limited. The project will demonstrate mobile biometrics screening capabilities and technologies that meet the needs of DHS Operational users, but currently elude conventional or interim biometrics systems. To accomplish this, the S&T Directorate has partnered with US-VISIT and the USCG to identify and capture DHS user needs for Mobile Biometrics. In FY 2009, the project will continue its work developing Mobile Biometrics System functional requirements. In FY 2010, the project plans to begin to integrate the components into a Mobile Biometrics System prototype.

Credentialing Program (formerly part of the Biometrics Program) – FY 2009: \$0.800 million; FY 2010 estimate: \$0.400 million. Develops and demonstrates tamper-proof credentialing systems incorporating multi-modal biometric information that can be used across the entire DHS customer base. It will also develop and test an accurate, near real-time, contactless, biometrics-based card-and-reader system. Projects in this program are Credentialing and Commercial Data Sources.

Credentialing Project – Develops tamper-proof credentialing systems that incorporate biometric information; such as a biometrics-based card-and-reader system. Homeland Security Presidential Directive 12 (HSPD-12), *Policy for a Common Identification Standard for Federal Employees and Contractors* directed the use of this technology for DHS personnel. In FY 2008, the project developed a laboratory test and evaluation protocol for the Transportation Worker Identification Credential (TWIC) reader. In FY 2009, the project is funding the National Institute of Standards and Technology (NIST) to develop DHS-specific accreditation protocols, advocate for DHS positions on national and international standards groups, and analyze gaps and needs for development and revision of biometrics and credentialing standards. Funding for this project ends in FY 2009.

Commercial Data Sources Project – Assesses quantitatively the utility of commercial data sources to augment governmentally available information about people, foreign and domestic, being screened, investigated, or vetted by DHS. Commercial data sources may provide valuable corroborating information to ensure that an individual's identity and eligibility for a particular license, privilege, or status is correctly evaluated during screening conducted by USCIS, CBP, and TSA. Starting in FY 2009 the project will develop a project demonstration design. In FY 2010, the project plans to deliver a final report on the feasibility of Commercial Data Sources for

identity verification to the DHS Office of Screening Coordination and Operations, TSA, USCIS, and CBP.

Human Technology Integration Thrust Area (formerly the Human Systems Research and Engineering Thrust Area) – Improves the effectiveness of technologies by working independently and with the S&T Directorate divisions to incorporate the needs of all technology users, including the public, operators, and maintainers, into the research, design and development of technology from its inception. By promoting research, development, and deployment processes that incorporate the knowledge of human capabilities and limitations, one can increase levels of satisfaction and overall acceptance, mitigate program risks, reduce costs, and enhance system safety, efficiency and effectiveness. Sponsored projects aim not only to enhance the capacities of technology users but also to ensure public trust in technologies with due regard for civil rights and civil liberties.

Human Systems Research and Engineering Program (formerly Human Systems Optimization Program) – FY 2009: \$0.228 million; FY 2010 estimate: \$1.567 million. Incorporates human systems integration activities into the contracts, planning and execution of DHS research and technology development to ensure that human systems integration analysis, design and test activities are conducted throughout the system life cycle. This program also conducts research in Human Systems Integration to better understand the underlying cognitive, behavioral, and physiological processes that affect human performance. Projects supporting this program are Human Systems Engineering and Human Systems Research.

Human Systems Engineering Project (formerly Human Performance project) – Develops and defines requirements for systems and technologies, and methods and measures that can be used to evaluate the degree to which new and existing technologies addresses human performance needs. This project develops a human systems integration roadmap that will aid the S&T Directorate’s divisions and DHS’s constituent agencies to identify, develop, and apply technologies to enhance system design, system safety, operational efficiency, and total performance to best recruit, train, and retain DHS operational staff. Starting in FY 2009, the project will establish a DHS wide Human Systems Integration Community of Practice/ Working Group. In FY 2010, the project plans to validate and demonstrate the evaluation process.

Human Systems Research Project (formerly Human Performance Project) – Develops ways to use advanced technologies to maximize human performance in screening-related tasks and activities. This project explores brain-based sensor technology and how it can provide real-time cognitive state and operational performance feedback for customized training and personnel selection. Starting in FY 2009, the project will review existing brain-based sensor technologies to determine applicability and identify three candidate systems for further evaluation and development. In FY 2010, the project plans to deliver an initial system evaluation in a simulated training situation.

Technology Acceptance and Integration Program – FY 2009: \$0.350 million; FY 2010 estimate: \$0.350 million. Researches public perceptions of new technologies and processes to identify factors that have the potential to advance or impede technology deployment and to identify adjustments to technologies and processes that make them more effective in achieving

their intended purposes. This research generates knowledge that can drive process improvement and guide the development and deployment of technologies along paths most likely to meet with public use and acceptance.

Community Perceptions of Technology (CPT) Panel (formerly known as Community Acceptance of Technology (CAT) Panel) – Brings together representatives of industry, public interest, and community-oriented organizations to better understand and integrate community perspectives and concerns in the development, deployment, and public acceptance of technology. In FY 2008, the S&T Directorate participated in three panel meetings that focused on vehicle/vessel pursuit termination, standoff detection of explosives, and mobile biometrics. These meetings lead to a better understanding of the limitations, correct perceptions, and misperceptions of emerging homeland security technologies. In FY 2009 and FY 2010, the project plans to coordinate four meetings per year. In FY 2009, panels will focus on Acoustic Non-Linear Standoff Threat Detection and Radio frequency identification (RFID) vehicle registration and Low Resolution Imaging for improved Northern Border Security. These meetings continue to yield feedback to aid ongoing technology and process developments as well as strategies to accurately inform the public of new approaches to securing the homeland to better ensure acceptance of the technology within the affected communities.

Transportation Technology-Human Integration Program – FY 2009: \$0.000 million; FY 2010 estimate: \$0.000 million. Addresses integration of human-in-the-loop technology systems as used by transportation screeners.

Enhanced Screener-Technology Interface – Characterizes screener-performance issues, proposes new screener technologies and procedures, and develops training curricula to optimize security effectiveness and to reduce human fatigue and injury, while reducing training requirements and overall cost. Starting in FY 2008, this project built on existing data on screeners' perceptual and cognitive processes to develop a more helpful display for baggage screening sensors used at transportation checkpoints and to increase the acuity of screeners in evaluating the pictures they see. The project completed a pilot study of new training techniques for the X-ray visual search task. TSA will integrate the results into system upgrade designs. In FY 2008, funds will support work on this project continuing through early FY 2010. In FY 2009, a pilot test will be conducted on an attention focusing technique for increasing TSA screener hit rate. The project will also conduct Phase II of the "threat-discrimination" screener-training pilot for TSA and a field-test of new fatigue detection technology for X-ray screeners. In FY 2010, the project will create a motion x-ray prototype. Research indicates that these approaches could yield an increased detection rate of up to 30% with a reduction of false alarm rates of up to 15%.

Institute for Homeland Security Solutions – FY 2009: \$0.000 million; FY 2010 estimate: \$0.000 million. As directed by Congress, in FY 2008, the Human Factors Division funded the Institute for Homeland Security Solutions to conduct applied technological and social science research with universities, other Federal agencies, State and local security agencies and the private sector. The project is focusing on developing near-term technological solutions to practical, real world problems that have broad applications. In addition, this project addresses critical policy and operational implications of new technologies and will narrowly focus on

information analysis tools and policies, including anomaly detection. Funding was not requested in FY 2009 or FY 2010.

PPA: INFRASTRUCTURE AND GEOPHYSICAL DIVISION

	Perm Pos	FTE	Amount
2008 Actual			\$52,424
2009 Enacted			75,816
2010 Adjustments-to-Base			(38,000)
2010 Current Services			37,816
2010 Program Change			6,926
2010 Request			44,742
Total Change 2009-2010			(31,074)

The Science and Technology (S&T) Directorate requests \$44.742 million for the Infrastructure and Geophysical Division, of this amount \$1.119 million supports the SBIR Program. The \$6.926 million increase to current services supports planned intensification of development of 3D locators and physiological monitors for first responders. It also supports acceleration of research and development (R&D) on extremely strong, lightweight, resilient materials. Incorporation of these materials may lead to stronger panels and windows for buildings, liners to protect transportation tunnels, materials to protect bridge cables and towers, and unobtrusive strengthening measures for monuments.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Infrastructure and Geophysical Division’s mission is to improve the Nation’s preparedness for and response to natural and man-made threats through superior situational awareness, enhanced emergency response capabilities, and critical infrastructure protection. The Division develops technical solutions and reach-back capabilities to improve Federal, State, local, tribal, territorial, and private sector preparedness for and response to all-hazards events impacting the U.S. population and critical infrastructure. The Division also develops modeling, simulation, and analysis (MSA) capabilities for critical infrastructure and key resources (CIKR) applicable to communities, regions, and the Nation. These MSA capabilities examine interdependencies between sectors; determine how various scenarios will affect each sector; provide decision support tools to guide decision makers in identifying gaps and vulnerabilities; and develop predictive tools and methods to aid in preparing for and responding to various catastrophes. The primary Federal customers for the Infrastructure and Geophysical Division are the Department’s Office of Infrastructure Protection (IP), National Protection and Programs Directorate (NPPD), and the Federal Emergency Management Agency (FEMA), which represent end-users including first responders; Federal, State, and local emergency managers; and critical infrastructure owners and operators.

Successful transition of the technologies managed by this Division will improve Department of Homeland Security (DHS) components’ performance and support the Secretary’s goals of:

- Protecting the Nation from dangerous people;
- Protecting the Nation from dangerous goods;
- Protecting Critical Infrastructure;

- Building a nimble and responsive emergency response system; and
- Strengthening and unifying DHS operations and management.

The Infrastructure and Geophysical Division carries out its activities through three thrust areas: Critical Infrastructure Protection, Preparedness and Response, and Geophysical.

Critical Infrastructure Protection (CIP) Thrust Area – Conducts research and development (R&D) activities on the 18 Critical Infrastructure/Key Resource (CIKR) Sectors identified in the *National Infrastructure Protection Plan* (NIPP). This meets the requirements of IP in the NPPD, and requirements that the President set forth in Homeland Security Presidential Directive 7 (HSPD-7), *Critical Infrastructure Identification, Prioritization, and Protection*. The NIPP provides the overarching approach for integrating the nation’s many CIKR protection initiatives into a single national effort. The CIKR sectors identified by HSPD-7 and the NIPP are: Agriculture and Food; the Defense Industrial Base; Energy; Public Health and Healthcare; National Monuments and Icons; Banking and Finance; Drinking Water and Water Treatment Systems; Chemical; Commercial Facilities; Dams; Emergency Services; Commercial Nuclear Reactors, Materials, and Waste; Information Technology; Telecommunications; Postal and Shipping; Transportation Systems; Government Facilities; and Critical Manufacturing.

Protective Technologies (formerly Risk Reduction Technologies) Program – FY 2009: \$8.368 million; FY 2010 estimate: \$11.665 million. Conducts research on sector-specific and region-specific needs as identified by IP or as requested from CIKR Sectors and Sector Specific Agencies (SSAs), as designated by HSPD-7 and the NIPP. The primary customer for these technologies is IP, although end-users may include the SSAs, State and local governments, and in some cases the private sector. The program is developing revolutionary capabilities to protect the nation’s most vital critical infrastructure targets primarily against blast loads and blast effects such as shrapnel, flying debris fragments, and fire. The goal is to enable infrastructure owners and operators to implement effective, affordable, and reliable materials, design procedures, and innovative construction methods to reduce the risk to critical infrastructure assets. The following projects support this program.

Blast/Projectile - Advanced Materials Design Project – Conducts basic research in conjunction with existing Federal investments in nanotechnology and other material-science efforts to develop extremely strong, lightweight, resilient materials. These advanced materials, design procedures for their use, and innovative construction methods will enable more effective and affordable hardening and increase the resiliency of assets deemed most vital to the safety, economy, and security of the Nation, for both existing infrastructure and new construction. In FY 2009, this project will identify/survey existing materials to consider: the appropriate scale of materials; and the appropriate types of numerical analysis codes needed to model these materials at the molecular level. The S&T Directorate will assemble a team of experts from universities, private industry, national and government laboratories, and international experts, to formulate the project plan; and begin first-year modeling and testing efforts for the new materials. In FY 2010, the project plans to report on the advanced materials in critical infrastructure protection. Additionally, the project plans to accelerate efforts to identify novel materials for a wide variety of blast protection applications in FY 2010. The project will also continue numerical modeling

of material properties and begin development of materials to meet requirements for blast resistance.

Blast/Projectile - Protective Measures and Design Tools Project – Builds upon the basic research conducted through FY 2008. The program will provide enhanced and additional protective measures along with design guidance for protecting the Nation’s most critical infrastructure assets. Protective measures could include mechanisms to reduce blast effects, rapid mitigation and restoration technologies, and other defensive measures. In addition, the project plans to numerically analyze designs against blast and projectile threats and to conduct physical demonstrations to assess their effectiveness. This work will seek to mature and expand existing protective measures by making them less expensive, easier to apply, and more effective, and will develop entirely new materials and design concepts for additional classes of infrastructure. In FY 2009, the project will (1) evaluate and mature protective measures for tunnels, including those initiated in the basic research project; (2) begin development of protective measures for additional classes of vital critical infrastructure such as bridges, dams, and other classes of CIKR identified by IP. Additionally in FY 2009, the project will demonstrate and conduct field experiments of the existing and new prototype protection measures for tunnels and bridges. In FY 2010, the project plans to continue to develop and conduct demonstrations of protective measures and create design guidance for blast protection of high-value assets.

Blast/Projectile - Unified Blast Analysis Tool Project – Develops computational models to assess vulnerability to blast and projectiles and evaluate design of protective measures for key infrastructure assets. The project will establish a suite of tools that provides accurate, efficient analysis and models of diverse classes of infrastructure to include tunnels, bridges, dams, and complex urban environments. These tools will enable infrastructure owners and operators to efficiently analyze vulnerabilities and inform implementation of affordable, reliable protective measures against blast and projectile threats. In FY 2009, the project will begin development of computational models for blast effects on tunnels, bridges, dams, and urban environments, and to conduct experiments to validate the numerical predictions. In FY 2010, the project plans to continue developing the computational models initiated in FY 2009 and demonstrate a first-generation, fast-running blast analysis tool.

Modeling, Simulation, and Analysis Program – FY 2009: \$2.731 million; FY 2010 estimate: \$3.260 million. Develops modeling, simulation, and analysis (MSA) capabilities that can improve the ability of decision makers to evaluate threats to CIKR and changes to risks including interdependencies. This capability will help public service and private industry policy and decision makers, owners/operators, planners and responders to understand the consequences of policy and investment options before enacting solutions, and to provide support during crises. The program will enable:

- Rapid examination of interdependencies;
- Trade-offs between risk reduction benefits and protective action costs;
- Incorporation of threat information;
- Vulnerability assessments; and
- Understandings of disruption consequences (including cascading effects).

Complex Event Modeling, Simulation, and Analysis (formerly the Real-time Decision Support Tool) Project – Activities will focus on interdependencies, cascading effects, and the dynamics of multi-event and multi-vector attacks. This effort will provide significant improvements in timelines, quality, and usability of information to provide decision makers up-to-date information to make informed decisions during an event. The program will leverage the capabilities developed for Critical Infrastructure Protection Decision Support System (CIPDSS) and sector-specific MSA. In FY 2009, the program will continue the development of CEMSA, based on the architecture design started in FY 2008, and include updated databases, as well as focus on the systems-level design and interfaces of the technology. In FY 2010, the project plans to conduct proof of concept and feasibility of the critical infrastructure protection analytical capability.

The National Critical Infrastructure Protection R&D Plan Program – FY 2009: \$11.359 million; FY 2010 estimate: \$0.640 million. The S&T Directorate prepares an annual update to the *National Critical Infrastructure Protection Research and Development Plan* (NCIP R&D Plan), as required by HSPD-7. This plan supports the implementation of the *National Infrastructure Protection Plan* (NIPP), and by corollary, the supporting Sector Specific Plans (SSPs), the Sector Annual Reports and the National Annual Report (NAR) in collaboration with IP. The NIPP, the SSPs, the NAR, and the NCIP R&D Plan integrate near-term (i.e. NIPP), mid-term (i.e., SSPs), and long-term (i.e. NCIP R&D) research objectives to form a coordinated approach to technology development to meet sector infrastructure protection goals and work toward a national vision of a secure homeland. In FY 2008, the program updated the plan to reflect improvements on baseline information established in previous years. In FY 2009 and FY 2010, the program plans to update the plan based on advances in technology. All these activities will be closely coordinated with the NPPD, the SSAs (as designated by HSPD-7), private industry through the NIPP Coordinating Council System, and all other agencies involved in funding R&D relevant to CIP, including international technical collaboration through the agreements established by the S&T Directorate.

Advanced Surveillance and Detection Systems Program – FY 2009: \$3.986 million; FY 2010 estimate: \$5.484 million. Conducts R&D on the surveillance of the 18 CIKR sectors identified in the NIPP and HSPD-7. The program will address IP requirements by automating and increasing the fidelity of tasks currently performed by operators, allowing for detection of subtle changes against a background environment, and incorporating advanced sensors, such as optical, infrared, ultraviolet, and acoustic. The program provides advanced, automated, affordable technologies for monitoring, surveillance, and detection that improve the ability of infrastructure owners and operators to monitor their infrastructure assets efficiently and effectively. The project may also integrate affordable, effective chemical and biological detection equipment into critical infrastructure as appropriate.

Advanced Surveillance Systems Project – Develops advanced surveillance technologies for critical infrastructure to detect intrusion, casing, and other physical disruption. The project will focus on reducing manpower requirements by replacement of operator-dependent monitoring of large numbers of cameras with systems that incorporate advanced algorithms to provide high-fidelity anomaly and change detection. The project will design systems to interpret information from multiple surveillance modes (such as closed-circuit television cameras, infrared cameras, intrusion detection alarms, acoustic sensors) and provide actionable information to infrastructure

operators. In FY 2009, the project will conduct an analysis of existing surveillance technologies and select sets of sensor systems appropriate for monitoring selected infrastructure types. In FY 2010, the project plans to further develop system components for practical use at a chosen infrastructure site and conduct a technology demonstration of surveillance technologies that would effectively monitor critical infrastructure.

Underwater Surveillance-Dams and Tunnels Project – Provides advanced, automated, affordable underwater monitoring and surveillance technologies to detect underwater threats against dams and tunnels. Since these structures are particularly vulnerable to a water-borne attack, detection of suspicious activity is critical to asset protection. These technologies must be capable of operating in harsh environments for extended periods, and should seamlessly and transparently integrate into existing infrastructure security operations. In FY 2009, the project will identify, prioritize, and select potential solutions for underwater surveillance based on cost, performance, and integration. In FY 2010, the project plans to adapt identified technologies to specific requirements for underwater infrastructure.

Underwater Surveillance Project (Basic Research) – Conducts basic research to support the Underwater Surveillance-Dams and Tunnels project. It will study bubble jetting resulting from underwater explosions and its impact on vertical structures (such as dam spillway gates and navigation locks), and then determine appropriate standoff distances for submerged targets, thus defining which areas will require surveillance. The lack of fundamental knowledge of underwater blast effects currently limits researchers' ability to define parameters for effective underwater surveillance. This research will have the added benefit of informing effective design of blast mitigation measures for underwater targets. In FY 2009, the project will evaluate numerical codes that simulate underwater blasts and conduct scaled testing of underwater blasts. In FY 2010, the project plans to conduct large-scale physical testing to describe bubble jetting and inform numerical codes.

CIP Advanced Requirements Development and Studies – Engages critical infrastructure SSA in IP, regional consortiums and owner/operators to assess the current state-of-the-art and establish requirements for the development of advanced technologies within the Infrastructure Protection Advanced Surveillance and Detection Systems Program. This project teams customers with experts to develop those requirements. In addition, experts work with customers to identify any existing innovative capabilities that will meet the customers' needs. These investments, at the early stages of technology acquisition, improve chances of project success and increase project efficiency. In 2010, this project plans to initiate the application of surveillance data-aggregation tools and other leading-edge technologies as a way to quickly integrate surveillance systems with change and anomaly detection information management systems to greatly improve multi-jurisdictional coordination.

Community Based Critical Infrastructure Protection Institute Program - FY 2009: \$10.725 million; FY 2010: \$0. Supports university and private industry partnerships to develop community-based homeland security technologies and mature them so that they can become commercially viable. Projects of this program are diverse and include capabilities for continuous monitoring of beef cattle; monitoring and securing milk from farm to processor; advances in less

expensive biometrics for iris and handprint imaging; and development of affordable nano-materials for blast mitigation.

Response and Recovery Technologies Program – FY 2009: \$4.520 million; FY 2010 estimate: \$5.790 million. Provides automated response and rapid recovery technologies for the nation's most vital infrastructure assets and their long-lead time components. Activities will focus on those infrastructure types where effective, affordable protective measures have not been previously identified. The technologies developed in this program will provide all-hazards infrastructure resilience against multiple natural and man-made threats. Many infrastructure assets need these capabilities to prevent or limit structural failure, and maximize life safety; these measures also add to a layered defense system, thus further buying down risk. The following projects support this program.

Recovery Transformer (previously the New Electrical Grid Transformer) Project – Partners with IP and DOE to specify, design, build, and demonstrate a new type of electrical power transformer for use during recovery from emergency grid blackouts. The recovery transformer will be easy to transport and install, have low maintenance and long service life. This capability will eliminate the two-year lag in transformer replacement and will increase the resiliency of the power grid. In FY 2010, the project plans to design and demonstrate a recovery transformer in a laboratory environment.

Rapid Mitigation and Recovery Project – Basic Research (formerly Rapid Response and Recovery) – Develops rapid mitigation and recovery technologies for CIKR assets to limit damage and consequences and to resume normal operations more quickly. This project includes basic research and transition activities. The basic research portion will focus on longer-term needs and investigate failure mechanisms, damage limitations, and solutions for rapid restoration of service for critical infrastructure such as bridges, tunnels, and dams. The project initially plans to investigate dams that contain both concrete and embankment sections. Better definition of interactions at soil/water/concrete junctions is critical for understanding potential failure modes and determining whether current embankment construction methods provide inherent resiliency for high consequence dams. In FY 2009, the project will conduct numerical modeling to explore whether the current zoned regions of certain embankments are capable of preventing catastrophic internal erosion through cracks potentially induced by an improvised explosive device (IED) attack or natural hazards. In FY 2010, the project plans to conduct additional numerical modeling and scaled physical experiments.

Rapid Mitigation and Recovery Project – Transition (formerly Rapid Response and Recovery) – Develops rapid mitigation and recovery technologies for CIKR assets to limit damage and consequences and to more quickly resume normal operations. This project includes basic research and transition activities. This transition portion focuses on IP's high-priority technological need for technologies to quickly reduce the effect of natural and manmade disruptions and cascading effects specifically related to the release of Toxic Inhalation Hazard (TIH) materials from rail tank cars and stationary storage tanks. Specifically, the project will identify, develop, and assess threat mitigation technologies and/or procedures that will reduce or eliminate the release of TIH products from rail tank cars and stationary storage tanks that have been intentionally assaulted. The threat scenarios of interest will include .50 caliber armor-piercing rounds and small IED. In FY 2009, the project will focus on rail tank cars carrying

chlorine. In FY 2010, the project plans to address stationary storage tanks, additional TIH chemicals, and additional threat scenarios.

Preparedness and Response (P&R) Thrust Area – Develops and deploys capabilities that improve the Nation’s ability to prepare for, respond to, and recover from all-hazards emergencies. P&R applies the best available science and technology to the safety and security of our emergency responders and homeland security professionals so they can effectively and efficiently perform their jobs – saving lives, minimizing damage, and restoring critical services. All programs will comply with the National Incident Management System (NIMS), the National Response Framework (NRF) – previously known as the National Response Plan, and all HSPDs that enable government, private sector, and nongovernmental organizations to work together during domestic incidents of all sizes.

Incident Management Enterprise Program – FY 2009: \$10.292 million; FY 2010 estimate: \$8.761 million. Develops advanced, scalable, interoperable, and non-proprietary incident information-management, decision-making, and training tools for emergency responders and incident commanders to use during everyday episodes to events of national significance that increasingly demand more highly coordinated responses. The need to manage incidents in a comprehensive and transparent way across the government and with various agencies is paramount to the first responder’s ability to prepare, protect, and respond to all-hazard incidents. The program includes the development of logistics and resource tracking systems that are critical in restoring services, replenishing critical infrastructure, and helping disaster victims in a timely fashion. The logistics systems will provide total asset visibility to incident responders and commanders and will help to manage the entire logistics supply chain – from inventory management to distribution and verification of supply disbursements.

Interagency Modeling and Atmospheric Assessment Center (IMAAC) – Coordinates national capabilities in atmospheric modeling and provides the single Federal prediction of atmospheric hazards and their consequences. Incident commands across Federal, State and local jurisdictions use IMAAC model predictions for improved situational awareness. In FY 2008, the program delivered an accredited event reconstruction and building infiltration models. In FY 2009, the S&T Directorate plans to prepare for transition of the operational aspects of IMAAC to another DHS component. In FY 2010, the S&T Directorate plans to transition the operational aspects of IMAAC to DHS OPS.

Unified Incident Command and Decision Support (UICDS) Project – Develops the UICDS framework based on the NIMS/Incident Command System (ICS) and NRF. It also develops compliant tools to manage and share information that will enhance incident command systems and multi-agency coordination with common situational awareness and decision support during all types of incidents. Based on an open-architecture, the UICDS framework will allow multiple responding organizations (using their own equipment) to jointly manage personnel, direct equipment, and seamlessly communicate, gather, store, redistribute, and secure any mission-critical information needed by incident commanders and emergency responders during an emergency situation. In FY 2008, the project initiated development of draft information-management architecture and piloted it in an urban environment to demonstrate multi-jurisdiction incident response. The project will initiate transition into the Advanced Incident

Management Enterprise System (AIMES) project. In FY 2009, the project will complete an advanced concept technology demonstration of the UICDS architecture, publish the UICDS standards-based architecture, and integrate this into the DHS Grant Guidance process through the Department's Office of Grants and Training. Using this standards-based architecture will enable incident decision-makers to better manage a unified response and share a common situational awareness with organizations providing support and coordination. In FY 2010, the project plans to merge into the Advanced Incident Management Enterprise System.

Training, Exercise & Lessons Learned (TELL) Project – Develops a federated simulation-based training and exercise capability that uses advanced computer models and will allow responders at all levels to affordably train and exercise for large and complex events in a virtual/constructive/live environment. TELL will link multiple agencies, functions, and jurisdictions to improve preparedness and decision-making for emergency responders and managers. TELL incorporates training objectives, scenarios, and metrics defined by other programs, and the capability to capture lessons learned to improve future emergency response capabilities. TELL addresses the overarching need of successful implementation of the NIMS and the ability to conduct quick, repeatable, economical, and effective means of training incident commanders so they can better prepare to handle complex incidents. In FY 2008, the project developed a system prototype concept and demonstrated it in Anaheim and Cincinnati. In FY 2009, the project will conduct several joint training exercises, using the TELL prototype, across the United States with various first responder communities. The prototype will incorporate lessons learned to enhance the functionality of the system prior to deployment of the pilot program. In FY 2009, the project will deploy the TELL architecture at the Seattle and Anaheim regional technology integration (RTI) cities. The project also plans to identify sub-components to migrate to the Simulations Based Incident Planning and Response project. In FY 2010, the project plans to transition a federated simulation-based training and exercise capability to FEMA and integrate technology concepts into IMMS/SUMMIT.

Advanced Incident Management Enterprise System (AIMES) Project – Develops the next-generation incident-management enterprise system. It builds upon the UICDS architecture and TELL framework by providing an integrated, interoperable, and unified common operating picture with total visibility into: incident information, resources, environment, logistics supply chain, response and recovery plans, methods, tactics, and policies. AIMES will integrate all elements of the incident management enterprise in order to provide a secure, scalable, interoperable, and unified situational awareness to the responder community. In FY 2009, the project will establish overall system requirements for AIMES through a series of workshops with customers such as FEMA and end-users in the emergency response communities. In FY 2009, the project will complete an execution plan and develop a system concept prototype to establish a high-level architecture for AIMES based on the UICDS effort, demonstrate its functionality, as well as validate and prioritize its requirements. In FY 2010, the project plans to design, develop, and test an AIMES prototype enterprise framework.

Incident Logistics and Resource Tracking System Project – Provides a comprehensive and transparent disaster logistics enterprise across the entire area of responsibility of all disaster response, public and private, partners. Lessons learned from past incidents, such as Hurricane Katrina, identified the need for an integrated logistics capability to provide relief supplies to victims in a timely manner—a capability that does not exist today. This capability will provide

decision makers overall situational awareness relative to availability for timely procurement and disbursement of public and private material inventories, locations of resources, and supplies to respond to an emergency. The tracking system will allow FEMA to manage critical resources more effectively and will enhance real-time coordination and situational awareness, setting the standard for all disaster response partners. This capability will be scalable and interoperable with Federal, State and local systems (legacy and future) to enable efficient use of the supply chain. In FY 2009, the project will develop a prioritized list of FEMA logistics system requirements, establish a program execution plan, and develop a functional logistics system prototype. In FY 2010, the project plans to develop the logistics system and begin integration into FEMA's Total Asset Visibility (TAV) capability.

P&R Advanced Requirements Development and Studies – Engages emergency response communities at the Federal, State, and local levels to assess the state-of-the-art and establish requirements for the development of advanced technologies within the Incident Management Enterprise Program. This project teams customers with experts to develop those requirements. In addition, experts work with customers to identify any existing innovative capabilities that will meet the customers' needs. These investments at the early stages of technology acquisition improve chances of project success and increase project efficiency. In 2009, this project will pioneer the application of "virtual world" and other leading-edge technologies as a way to quickly integrate disaster information management systems that currently do not easily exchange data and information to greatly improve multi-jurisdictional coordination. In 2010, the project plans to pilot the use of very high-resolution geospatial data in conjunction with a number of physics-based hazards models to provide emergency managers and incident commanders with realistic 3-D virtual environments that support consequence assessments, training, planning and after action reviews.

First Responder Technologies Program – FY 2009: \$3.901 million; FY 2010 estimate: \$5.979 million. Develops advanced life-saving technologies to track, locate, monitor, and protect first responders, emergency managers, and incident commanders as they respond to all-hazard incidents. The mission-critical technologies developed by this program will go through test and evaluation (T&E) before they become part of any acquisition programs. The following projects support this program.

Geospatial Location Accountability and Navigation System for Emergency Responders (GLANSER) [formerly Advanced First Responder Locator Project] – Develops an advanced first responder locating system. It builds off prior year efforts by including integrated sensor components and software for visualizing locations and tracks for incident commanders. The technology uses building diagrams, floor maps, and office/apartment location and it securely connects to emergency operations centers (EOCs). This system will enable incident commanders and decisions makers to visually track responders to enhance overall situational awareness. In FY 2009, the project will release a Broad Agency Announcement (BAA) in order to develop the GLANSER system as a product for the first responder community. The basis of the BAA was a prioritized list of requirements developed by a working group of first responders, industry experts, and government stakeholders. The BAA seeks to develop a system that will improve accuracy and signal penetration through difficult structures (i.e., underground, over ground) and conduct testing in major urban areas and demonstrate key 3D-locator prototype sub-

components to track first responders within an accuracy of less than three meters. In FY 2010, the project plans to develop the system prototype and deliver an initial set of locators for field-testing at several locations across the nation.

Physiological Health Assessment Sensor for Emergency responders (PHASER) [formerly First Responder Physiological Monitoring Project] – Develops an integrated sensor package that will monitor a responder’s vital signs such as cardiac rhythm, heart rate, blood pressure, body temperature, and oxygen saturation, which could indicate Pre-Ventricular Contractions (PVCs) or cardiac arrhythmias. First responders need a highly reliable metric and notification system for on-scene identification of firefighters who are about to experience an immediate heart attack or other life-threatening condition. This project plans to fuse these measurements to establish the physical health of the responder based on a set of metrics, and warn both the wearer and command staff to potential life threatening physiological conditions. In FY 2009, the project will establish system requirements through interaction with FEMA’s U.S. Fire Administration (USFA) and other end-users across the Nation. The program plans to issue a Broad Agency Announcement to solicit proposals for the development of a PHASER system to become a product for the first responder communities. The project will also demonstrate a concept prototype to validate system requirements, architecture, and concept of operations. In FY 2010, the project plans to develop an engineering model and a brassboard model and conduct system tests at several test facilities to verify design and performance.

Integrated Modeling, Mapping and Simulation Program – FY 2009: \$2.438 million; FY 2010 estimate: \$2.044 million. Develops and integrates advanced modeling and simulation technologies to support the incident management teams of first responders, commanders, and decision makers to better understand, prepare, and plan for emergency operations to enhance the quality of response and recovery operations. Specifically, this program plans to conduct R&D in the following three technology areas: advanced models of critical infrastructure; standard integration process and methodology to enable plug and play of legacy and new models; and support for a real-time modeling framework. This program will integrate these technologies in an advanced simulation infrastructure so that the first responders can conduct simulation-based planning exercises to economically verify and validate their response plans.

Standard Unified Modeling Mapping Integrated Toolkit (SUMMIT) [formerly Simulation Based Incident Planning and Response Project] – Provides FEMA analysts, decision makers, policy makers, emergency managers, and infrastructure operators an integrated modeling and simulation capability to effectively, economically, and rapidly verify and validate response tactics, plans and procedures and to conduct “what-if” type analyses prior to an incident (preparedness, analysis, training) and during/after an incident (operational, lessons learned). The project will develop accurate and reliable estimates of possible hazards from a wide range of natural and terrorist events; analyze and use route mapping to effectively manage transportation assets during mass evacuations or the post-event flow of emergency supplies; and conduct impact analysis to provide better understanding of possible impacts from natural disasters and terrorist events. This capability will leverage the results of the TELL project and will follow three tracks: model development, integration framework, and support for conducting planning exercises. The project will use a spiral-development process to insert technology as it matures and to refine requirements and concepts before committing to significant development efforts. In

FY 2009 and beyond, the program will conduct workshops with stakeholders from FEMA and the modeling and simulation communities across DHS and other government agencies, universities and the private sector to identify, capture, and prioritize the simulation model requirements and capabilities. In FY 2009, the program will also conduct disaster planning training scenarios to prepare FEMA decision and policy makers to validate their plans, procedures, tactics, and doctrine when responding to major events. In FY 2010, the project plans to develop framework specifications for new models.

Geophysical Thrust Area - FY 2009: \$10.725 million; FY 2010: \$0. Develops technologies and systems to address the geophysical concerns of the Nation, i.e., hurricanes, flooding, earthquakes. The thrust area has previously included the Southeast Regional Research Initiative (SERRI) program. There is no funding requested in this thrust area for FY 2010.

PPA: INNOVATION

	Perm Pos	FTE	Amount
2008 Actual			\$46,515
2009 Enacted			33,000
2010 Adjustments-to-Base			0
2010 Current Services			\$33,000
2010 Program Change			11,000
2010 Request			44,000
Total Change 2009-2010			11,000

The Science and Technology (S&T) Directorate requests \$44.000 million for Innovation activities. The increase will fund existing programs whose scopes increase as they mature and allows for two additional projects that would address gaps identified by the S&T Capstone Integrated Product Team (IPT) process. The increase allows existing projects to conduct major demonstrations and the start of two new projects in multi-modal tunnel detection and low cost biological detection. Unlike transition program products, Innovation projects are high-risk in nature but if successful, dramatically increase capabilities in responding to threats posed by terrorism and natural disasters.

CURRENT SERVICES PROGRAM DESCRIPTION

The Office of the Director of Innovation oversees the S&T Directorate’s Homeland Security Advanced Research Projects Agency (HSARPA). Established by the *Homeland Security Act of 2002*, HSARPA funds research and development (R&D) of homeland security technologies to

“...support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities.”

The Director of Innovation/HSARPA works closely with the Under Secretary for Science and Technology, the S&T Directorate’s divisions, Department of Homeland Security (DHS) Components, industry, academia, and government to determine topic areas for projects. The Director’s many sources of guidance and recommendations include:

- Congressional direction;
- DHS Goals and Priorities as described by the Secretary of Homeland Security;
- Office of Management and Budget (OMB) and Office of Science and Technology Policy (OSTP) Research and Development Budget Priority Guidance;
- Goals set by the Under Secretary for Science and Technology;
- DHS Components’ input regarding their operational capability gaps; and
- The S&T Directorate’s Integrated Product Team (IPT) process.

Innovation focuses on high-risk/high-reward, homeland security R&D that could lead to technology breakthroughs and products that significantly enhance DHS operations. Its efforts are complementary to the S&T Directorate's other programs and projects, pushing scientific limits to address gaps in areas where current technologies and R&D are inadequate or non-existent.

Given the nature of this work, Innovation must be flexible to quickly adapt projects to maximize their high-payoff potential. As part of this process, Innovation will constantly assess its activities to determine whether they should continue, end, be adopted by a division, or be transitioned to a customer – taking into consideration the impact of emerging technologies and new opportunities leveraging other Federal programs and activities for homeland security. This process may cause Innovation's projects to deviate from the normal life cycle expected of transition programs. As projects fail or stop at critical decision points, Innovation will initiate new high potential projects so it can quickly adapt to such changes. Innovation always has a number of potential projects in reserve, and new high potential projects may begin during the course of the year.

Innovation carries out its activities through two thrust areas: Homeland Innovative Prototypical Solutions (HIPS) and High Impact Technology Solutions (HITS), as described in further detail below.

Homeland Innovative Prototypical Solutions (HIPS) Thrust Area – FY 2009: \$21.930 million; FY 2010 estimate: \$35.500 million. Deliver prototype-level demonstrations of game changing technologies in two to five years. These projects are moderate-to-high-risk with high-payoff if successful.

Project Chloe – FY 2010 estimate: \$0.000 million. Investigates innovative solutions for defense against man-portable air-defense systems (MANPADS), focusing on technology that can protect airports over a wide area instead of relying on technologies installed on individual aircraft. Project Chloe uses a single, high-altitude platform, such as an Unmanned Aerial Vehicle (UAV), to protect aircraft at an airport, or at a cluster of airports, rather than installing full detect-to-engage systems on every commercial aircraft. This approach would reduce the number of systems required; eliminate the need to add weight to aircraft; and lower operations and maintenance costs for end-users. Other DHS mission areas, including border and maritime surveillance, critical infrastructure protection, and disaster relief support, can leverage many of the technologies developed under Project Chloe.

In FY 2008, Project Chloe successfully demonstrated the detection of the launch of MANPADS from a height of 65,000 feet and tested both detection and disabling technologies that would effectively work with a high-altitude platform for comprehensive detect and defeat. Project Chloe demonstrated that it could detect, track, and engage from high altitude. In FY 2009, the project's final deliverables include performance specifications, laser power requirements, integration design, and requirements for placing the missile warning and laser systems into a high altitude unmanned aircraft. Depending on available funds, Innovation will also deliver the design of a laser system, "Responsive Flyaway Package," to quickly mount on a larger manned aircraft and flown at the lower attitudes of national airspace in the event of an emergency.

Scalable Common Operational Picture Experiment (SCOPE) Project – FY 2010 estimate: \$0.000 million. Leverages an existing effort by the Department of Defense (DOD). The DOD effort, called the Joint Concept Technology Demonstration for Global Observer (GO), is developing a high-altitude, long-endurance unmanned aircraft system (GO UAS). This aircraft-mounted system will enable homeland security personnel at the Federal, State, and local levels to collectively see what is happening during an event and potentially provide a communication platform for regions where infrastructure has been destroyed. This will allow responders to quickly understand the extent of a natural disaster or terrorist attack, enable communications, and provide sufficient time to make critical decisions to mount a coordinated response. Today, no such capability exists.

In FY 2008, the project developed and integrated modular sensor and communication payloads and began the formal GO Critical Design Review (CDR). In early FY 2009, the project will complete a CDR and conduct a series of operational utility assessments that will serve as a proof-of-concept for DHS operational security needs.

Rapid Liquid Component Detector (MagViz) Project – FY 2010 estimate: \$3.000 million. Uses ultra-low-field Magnetic Resonance Imaging (MRI) technology to screen baggage for liquid explosives. To mitigate the liquid explosives threat, airline passengers currently must pack liquids or gels (such as certain toiletries and medicines) in containers that are 3 ounces or smaller. Air passengers must place those containers in a 1-quart-sized, clear plastic, zip-top bag; and are only allowed one bag per traveler. These are known as “3-1-1 bags”, which undergo an X-ray inspection and possibly secondary screening using multiple methods, such as visual inspection. The goal of MagViz is to eliminate the 3-1-1 rule and allow passengers to place liquids in their carry-on baggage. MagViz will scan and identify individual materials that may be packaged together or separately as they go through the scanning process and evaluate them against a database that will differentiate between those items considered safe for carrying onto an aircraft (e.g., benign liquids and gels like mouthwash, toothpaste, etc.) and harmful ones. The intent is to detect liquids in baggage without contact at the same rate as current X-ray machines, thus not hindering passenger throughput.

In FY 2008, the project built and demonstrated a 3-1-1 bag-screening prototype in a lab. The August 2008 laboratory demonstration of this system showed that it can discriminate between harmful and benign liquids and gels with greater sensitivity and discrimination capability than previous demonstrations and overcome operational challenges such as the orientation of containers and containers within containers. Also in FY 2008, the project designed and built a second, research prototype for a 20 cm standoff system.

In December 2008, the project conducted a full demonstration of the 3-1-1 bag-screening prototype in an airport to assess its ability to detect liquid explosives within baggage in an operational setting. This public demonstration successfully showed that the prototype could distinguish between liquids in an operational environment, overcoming challenges that could affect its sensitivity. Also in FY 2009, the project will build an exhaustive database of liquids through magnetic characterization and further address clutter in the operational environment; evaluate the capability of MagViz to detect dangerous solids; and demonstrate the capability of its research prototype to inspect to a depth of 20 cm. In FY 2010, the project plans to continue

building the magnetic characterization database of liquids and demonstrate the capability of MagViz to seamlessly screen segregated liquids (without the 3-1-1 bag constraint) in an operational environment and subsequently evaluate termination or transition options.

Safe Container (SAFECON)/Time Recorded Ubiquitous Sensor Technology (TRUST) Project – FY 2010 estimate: \$5.000 million. Investigates various technologies, including probe systems that detect and identify dangerous cargo and could be mounted on cranes used for on- and off-loading ship-carried containers. SAFECON also looks for sensors and specialized container materials designed to make screening more effective. The project aims to provide the capability to scan containers entering the country while minimizing the impacts on commerce; high reliability, high-throughput detection of weapons of mass destruction (WMD), explosives, contraband, and human cargo; and immediate detection and isolation of suspected threat containers.

In FY 2008, the project completed threat characterization and container characterization studies at the ports of Charleston, South Carolina and Boston, Massachusetts to inform decisions on sensor and prototype development. SAFECON also began the development of a remote vapor inspection system using advanced laser techniques to detect and identify threat chemicals and explosives. In FY 2009, the project will demonstrate integrated chemical and explosives sensor performance in a laboratory. The project will also identify additional container-screening technologies from industry that justify further development. In FY 2010, the project plans to develop and test technologies at ports or in a test bed that can provide a relevant environment.

In addition to a crane-mounted detection system, the S&T Directorate is also pursuing an alternative approach to container screening that takes advantage of the long transit time most shipping containers undergo from their port of origin to the United States. This part of the SAFECON program is called **Time Recorded Ubiquitous Sensor Technology (TRUST)**. TRUST would allow detect Chemical, Biological, Radiological, Nuclear, Explosive, and personnel (CBRNE/P) threats within any container while in its port of embarkation or in transit, thus enabling authorities to route suspect containers to a safe location for special handling and an entry determination prior to entering a U.S. port.

Future Attribute Screening Technologies Mobile Module (FASTM2) Project – FY 2010 estimate: \$10.000 million. Develops a prototype screening facility and a suite of real-time, non-invasive sensor technologies to rapidly, reliably, and remotely detect behavior indicative of malintent (the intent or desire to cause harm). The system will measure both physiological and behavioral signals to automatically make a probabilistic assessment of malintent based on sensor outputs and advanced fusion algorithms. Federal, State, and local authorities may use the fully developed FAST system in primary and secondary screening environments to increase the accuracy and validity of people screening at special events, airports, and other secure areas. FAST will measure indicators using culturally independent and non-invasive sensors.

In FY 2008, the project identified specific behavioral, physiological, and paralinguistic cues that likely indicate malintent (FAST: Survey of Sensing Abilities – Martin, Martin, & Coskren, 2007) and identified remote sensors capable of detecting the associated physiological signals. FAST researchers presented their theory for initial peer review to independent, nationally recognized

subject matter experts and received positive feedback and guidance. The FY 2008 demonstration of the sensor suite laboratory and the command and control framework documented the project progress with new advances in human-centered screening theory while validating technical requirements and establishing performance metrics for the FY 2009 work.

In FY 2009, the project will continue validation and updates to the malintent theory, update sensors, update the module environment, and incorporate the initial elements of data fusion and machine learning to improve screening accuracy through multi-modal sensor architectures (e.g., heart beat, respiration, pore count, etc.). FAST will use independent peer review will be an ongoing element of the project to promote objectivity and ensure all aspects of the project are addressed. Additionally, the project will investigate automatic adjustments to the screening processes to meet changing operational threats; and detect and adapt to additional physiological and behavioral cues. The project will conduct a demonstration in FY 2009 based on an operational scenario of a real-time intent detection capability. In FY 2010, the project plans to identify, integrate, and demonstrate continued advances in physiological and behavioral screening as well as new sensor technology derived from previous research efforts. The project plans to demonstrate the effectiveness of the mobile module in the laboratory and operational environments, such as a special security event or transportation portal.

Resilient Electric Grid (REG) Project – FY 2010 estimate: \$8.000 million. Demonstrates High-Temperature Superconducting (HTS) technologies for reliable distribution and protection of electrical power. REG will protect critical, electric-power dependent infrastructure (like the Manhattan Financial District) from the cascading effects of a power surge on electrical grids. Much of the existing electric grid is highly susceptible to brown outs and black outs, and current methods for preventing power outages and restoring power are often costly, slow and require extraordinary efforts. Existing technologies and planned mitigations also require a lot of space, which is problematic in dense urban areas. This project will demonstrate key components of a future “micro grid” that will instantaneously reduce power surges and allow for multiple alternative pathways of power delivery, providing resilience against natural disasters and deliberate attacks. Across the country, a resilient electric grid will produce savings of billions of dollars each year in the course of normal operations through gains in efficiencies. After a successful laboratory demonstration, the S&T Directorate will implement a REG prototype in Consolidated Edison’s electric grid in the Borough of Manhattan. Following a successful in-grid prototype, Consolidated Edison will incorporate REG in other parts of the New York City electric grid, including the financial district, in order to protect the economic infrastructure of American business. REG will simultaneously transition to other regions and power companies to protect critical infrastructure.

In FY 2008, the project conducted proof-of-concept demonstrations of a three-meter, fault-current-limiting (FCL) HTS cable. The first demonstration in December 2007 showed that an HTS cable could transmit power with no electrical losses and simultaneously prevent cascading failures under normal conditions (by preventing fault currents from being transmitted). The February 2008 demonstration was an important Go/No Go decision point because it confirmed that the HTS cable provides significant fault current limiting. The demonstration also identified potential challenges due to higher-than-expected alternating current (AC) losses in the HTS cable. The project team conducted additional experiments and demonstrations in May 2008 to

isolate the causes of the higher-than-expected AC losses, and performed a third 3-meter cable demonstration focusing on decreasing the AC losses. The demonstration results of the 3-meter cable justified going forward with a 25-meter demonstration in January 2009.

In October 2008, the program completed construction of the testing facility at Oak Ridge National Laboratory (ORNL), which will be the only location in the country with this test capability. In FY 2009, the project will conduct the 25-meter cable demonstration at ORNL. In FY 2010, the project plans to manufacture the cable to be inserted into the Manhattan electric grid and conduct testing to address AC losses. The project will also demonstrate a stand-alone FCL, which is a significant technological advancement and could be installed in the grid as an alternative to the relatively high-risk FCL cable.

If REG is successful, Consolidated Edison will deploy the cable developed by REG in New York City. The technology will also transition to other utility providers and benefits critical infrastructure protection in dense, urban populations.

Hurricane & Storm Surge Mitigation Project – FY 2010 estimate: \$1.500 million. Develops methods to better understand and accurately predict the behavior of a hurricane to reduce the intensity and/or duration of a hurricane or storm. The focus will be on understanding the dynamics of storms as they grow from depressions to full hurricanes, and to try to determine if any of the dynamic variables can be used or manipulated against the storm itself in order to prevent further growth in strength. State and local officials will be able to determine more accurately and quickly which areas to evacuate. This project will determine which variables could reduce the intensity and/or duration of a hurricane or storm before it reaches a point of runaway growth in strength. This project, in partnership with the National Oceanic and Atmospheric Administration (NOAA), will apply knowledge gained in the last 25 years to understand and model the life cycle of hurricanes and identify/evaluate the effects of salt seeding, carbon black aerosol, upper ocean cooling, ion generators, and monolayer films.

In FY 2009, the project will fund equipment for NOAA aircraft to collect data in parts of the hurricane that are not yet well understood, such as the eye wall and the transitional layer (400-500 feet above the surface of the water), and that have previously presented challenges in data collection. In FY 2010, the project plans to analyze the measurements; model and simulate the lifecycle of hurricanes; and model and simulate the effects of different modification strategies. The goal is not to stop hurricanes, which are an important part of nature's cycle, but to mitigate damage to life and property.

Levee Strengthening & Damage Mitigation Project – FY 2010 estimate: \$4.000 million. Develops techniques to (1) strengthen levees through natural covers or engineered armoring in order to prevent levee failure by soil erosion or breaching; (2) rapidly and remotely detect the condition of a levee; and (3) rapidly repair failure locations. Innovation provided funds for this project in FY 2007. With limited funding since 2007, Innovation has been able to demonstrate one technology by working with the Infrastructure/Geophysical division. Adjustments to the FY 2008 and 2009 budgets delayed many activities, particularly efforts in levee breach remote detection and strengthening.

In September of FY 2008, the project conducted a successful demonstration at a United States Department of Agriculture (USDA) facility in Stillwater, Oklahoma. The Portable Lightweight Universal Gasket (PLUG) greatly impeded the flow of water, and its success at quarter scale will lead to the development of a full-scale version and associated concept of operations (CONOPS) in FY 2009. In FY 2010, the project plans to demonstrate the full-scale version of the PLUG and begin developing solutions for remote detection of a levee's condition and strengthening. The Innovation PPA plans to eventually transition the PLUG to the S&T Directorate's Infrastructure and Geophysical Division, once a thorough evaluation determines that the technology is ready for transition.

New HITS and HIPS - The projects in this section are new HITS or HIPS starting in FY 2010. Because the very concept of innovation is to address known problems with emerging solutions that have not yet been fully defined, details on exact solutions are not definitive until solutions are proposed by private entities, universities, laboratories, and others in response to Broad Agency Announcements. For this reason, only high-level details of these new projects are included.

Multi-modal Tunnel Detect Project – FY 2010 estimate: \$2.000 million. Builds on the existing HITS tunnel detection project to develop an integrated, orthogonal approach to detect and characterize cross border tunnels. The United States Geological Survey (USGS) has actively participated in the development of all tunnel detection technologies, and the S&T Directorate will continue relying on the geological expertise of the U.S. Army Corp of Engineers – Engineering Research and Development Center (USCE – ERDC), USGS, National Geospatial Agency (NGA), Defense Threat Reduction Agency (DTRA), Defense Advanced Research Projects Agency (DARPA), Defense Intelligence Agency – Underground Facilities Analysis Center (DIA-UFAC), Sandia National Laboratory, and Los Alamos National Laboratory.

No single technology can detect tunnels in all environments. Multi-modal Tunnel Detect will combine magnetic, seismic, acoustic, resistive, radio frequency and other complementary sensor modalities to detect tunnels in differing and complex geophysical conditions. This project will develop revolutionary prototypes that 1) improve the identification and characterization of geophysical conditions found in areas of greatest interest along the border; 2) uncover technological dependencies with respect to location; and 3) detect clandestine tunnels. The goal is to develop new border security system technologies for reliable detection of clandestine tunnels for a variety of geophysical environments. If successful, this program will deliver new border security options to DHS while providing improved problem characterizations for long-term research efforts in S&T's basic research portfolio.

Very Low Cost Bio Agent Detect – FY 2010 estimate: \$2.000 million. Decreases cost and improves efficiency of high-specificity real-time pathogen detection and characterization; conduct comparative experiments between competing approaches; and conduct field pilots within the homeland security community to validate cost and efficiency models. In FY 2010, the project plans to analyze emerging pathogen detection/characterization capabilities and develop low cost models. The project plans to build laboratory prototypes for low cost sensing packages.

High Impact Technology Solutions (HITS) Thrust Area – FY 2009: \$11.070 million; FY 2010 estimate: \$8.500 million. Tests high-payoff, proof-of-concepts which are instrumental in identifying viable technologies to pursue further.

Tunnel Detect Project – FY 2010 estimate: \$0.000 million. Develops detection technologies to locate clandestine underground tunnels used for cross-border illegal activities such as smuggling. Current tunnel detection technologies are almost non-existent, and the few available require experts to operate, significant time to process data, and do not work in all geographical environments. The S&T Directorate's approach to tunnel detection is multi-modal, relying on several indicators to detect tunnels.

In FY 2008, the project conducted a series of demonstrations of an electromagnetic gradiometer (radio frequency) mounted on an unmanned aircraft system, which Customs and Border Protection (CBP) and Immigration and Customs Enforcement (ICE) plan to further evaluate in early FY 2009. The project also initiated a parallel effort to prototype and test advanced ground-penetrating radar for tunnel detection. In FY 2009, S&T will demonstrate the ground-penetrating radar and leverage DOD tunnel-detection efforts for border protection applications. The project plans to evaluate transition options in FY 2009 and FY 2010.

Biometric Detector Project – FY 2010 estimate: \$2.000 million. Develops rapid, non-contact, three-dimensional fingerprint scanner technologies that will allow DHS to collect high-quality fingerprints at screening checkpoints with minimum impact on throughput. Currently the fingerprinting process is slow, and converting contact fingerprints into digitally stored records is time consuming and can require several attempts. Biometric Detector will develop less intrusive technology that produces much higher success rates at capturing fingerprints the first time, with far greater detail, consequently allowing for increased speed and accuracy in records matching and identification. In FY 2008, the project began prototype development of three different, but complementary contactless single-finger scanning technologies whose demonstrations will occur in FY 2009. Based on the demonstration results, the project plans to down-select among the technologies to develop a multi-finger contactless device and conduct a proof-of-concept demonstration. Should these demonstrations prove successful, the project plans to continue to develop a non-contact scanner for the entire hand and demonstrate the biometric detector prototypes in the field in FY 2010.

Wide Area Surveillance – FY 2010 estimate: \$2.000 million. Investigates novel sensors and systems for use in densely populated infrastructure settings and urban landscapes (e.g., airports, train stations, city streets and squares) to provide continuous surveillance of the nation's highest priority infrastructure. The effort will adapt and further develop military-grade optical sensors with far greater image resolution than currently available commercially. This project will integrate sensors into a system that must accommodate large data quantities, camera-to-camera handoff, and advanced image recognition. It will provide high-resolution real-time and forensic surveillance of threats posed by individuals, objects, or vehicles.

In FY 2008, the project constructed an array of multiple high-resolution cameras that were digitally integrated into a single view with an overall resolution of 100 mega pixels. The system provided high-resolution imagery and allowed multiple operators to simultaneously view and

manipulate (e.g., zoom, scan) regions of the scene in high-resolution detail while maintaining a full 360-degree field of view. The system included automated change detection capabilities, and users rapidly scanned video images for forensic analysis. In FY 2009, the project will significantly advance the system hardware by developing a novel optical imager based on military aerial surveillance technology. The new imager will more than double the current resolution and may ultimately improve system cost effectiveness due to its use of a large number of inexpensive imagers. In FY 2010, the project plans to improve tracking of people and vehicles throughout a complex scene by integrating advances in both system hardware and algorithms and plans to conduct a demonstration of a second-generation system.

Cell-All Ubiquitous Chem/Bio Detect Project – FY 2010 estimate: \$2.500 million. Examines proof-of-concept technologies for integrating miniaturized chemical and biological agent detectors into personal devices, such as cellular telephones, in order to create a widely distributed network for detection, classification, and notification in the event of a chemical release, potentially detecting chemical components of some biological agents. Individual device owners on the network would control the detection and transmission of the data, sensor timing, and global positioning system (GPS) location information. The goals of this project include significant improvement to chemical and biological detectors' integration, size, costs, power, maintenance, durability, and response characteristics.

In FY 2008, the project conducted research for concept development. In FY 2009, the project will develop laboratory prototypes. One technology will leverage the National Aeronautics and Space Administration's (NASA) expertise with novel-gas-sensor architectures for manned space missions. The second involves the use of porous silicon based detection devices integrated into a common phone component. A third effort examines device interfacing, emerging commercial sensor designs, and explores the development of an overall concept of operations for successful sensor applications developed under this program and lays the groundwork for this technology to be more widely available to future sensor designs. In FY 2010, the project will demonstrate a concept of operations and several technologies in a multi-phone environment.

Resilient Tunnel Project – FY 2010 estimate: \$2.000 million. Develops technologies to address critical vulnerabilities in U.S. transportation tunnels. Prior assessments have revealed that terrorists using improvised explosive devices (IEDs) could exploit certain weaknesses to cause catastrophic failure of a tunnel. The project will expand upon the analyses performed to date and identify alternative technical solutions to mitigate the vulnerabilities. The project is designing an inflatable tunnel plug to protect mass transit tunnels from fires, smoke, and flooding. In FY 2008, the project initiated a partnership with the Washington Metropolitan Area Transit Authority (WMATA); completed a technical and operational requirements document for an inflatable tunnel plug; and completed specific vulnerability assessment to inform requirements. The project tested a number of inflatable plug prototypes with different geometries in the laboratory and deployed a full-scale plug in a WMATA subway tunnel in August 2008. The demonstration illustrated that a full-scale plug can be inflated quickly and efficiently in a real-world transit environment and that the plug effectively seals against the tunnel walls.

In FY 2009, the project will conduct numerical modeling to optimize plug structure and performance; construct new small-scale plugs with stronger materials; and subject these plugs to

pressurized testing in the laboratory to simulate tunnel flooding. Also in FY 2009, the project will begin design and testing of component subsystems (e.g., inflation, packaging, control, and sensing) for a complete Resilient Tunnel system. WMATA, the Port Authority of New York, and New Jersey's (PANYNJ) operating requirements will drive updated technical and operational requirements for the plug and subsystem designs. In FY 2010, the project plans to conduct a full-scale demonstration of a second-generation tunnel plug. Also in FY 2010, the project plans to optimize the geometry of the plug, generate the final design for the plug, and continue development of an optimized full-scale inflatable tunnel plug with its supporting subsystems.

PPA: LABORATORY FACILITIES

	Perm Pos	FTE	Amount
2008 Actual	0	0	\$109,358
2009 Enacted	124	124	161,940
2010 Adjustments-to-Base	6	6	(33,243)
2010 Current Services	130	130	128,697
2010 Program Change	0	0	25,803
2010 Request	130	130	154,500
Total Change 2009-2010	6	6	(7,440)

The Science and Technology (S&T) Directorate requests \$154.500 million for this activity, a decrease of \$7.440 million from FY 2009. The FY 2010 program request supports National Bio and Agro-Defense Facility (NBAF) site preparation, including central utility plan (CUP) construction; Pacific Northwest National Laboratory (PNNL) construction; operations and maintenance (O&M) and salaries and benefits (\$16.501 million) of non-Headquarters employees at the Department of Homeland Security (DHS) S&T laboratories; and infrastructure upgrades to S&T facilities beginning with the Transportation Security Laboratory (TSL).

CURRENT SERVICES PROGRAM DESCRIPTION

The Office of National Laboratories (ONL) manages the Laboratory Facilities programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

The *Homeland Security Act of 2002* assigns ONL the responsibility for “the coordination and utilization of the Department of Energy national laboratories and other sites under Section 309 in a manner to create a networked laboratory system for the purpose of supporting the missions of the Homeland Security Department.” In addition to oversight of laboratory operations in direct support of the Department and its missions, ONL is also responsible for coordinating homeland security related activities and laboratory directed research conducted within the Department of Energy (DOE) national laboratories.

ONL’s internal customers are the S&T Directorate’s executing divisions, including test and evaluation. The primary external Federal customers are the United States Department of Agriculture (USDA), Transportation Security Administration (TSA), and the Federal Bureau of Investigation (FBI). ONL activities lie in two thrust areas: Laboratory Operations and Facilities Construction.

Laboratory Operations Thrust Area – Manages the operations and maintenance of the DHS laboratories and infrastructure. ONL provides the planning, budgeting and coordination needed to ensure that these laboratories effectively support the S&T Directorate programs. The DHS laboratories include Plum Island Animal Disease Center (PIADC), National Biodefense Analysis

and Countermeasures Center (NBACC), TSL, Chemical Security Analysis Center (CSAC) and Environmental Measurements Laboratory (EML).

Plum Island Animal Disease Center (PIADC) – 2009: \$30.700 million; FY 2010 estimate: \$36.686 million. Researches contagious animal diseases (e.g., foot-and-mouth) identified in other countries. The mission of the facility is to develop strategies and vaccines for protecting the Nation's animal industries and exports from foreign animal diseases accidentally or deliberately introduced into the United States. The R&D work at PIADC is a joint mission between DHS and USDA. Both organizations have a research presence at the laboratory including employees, but DHS is responsible for the operations and maintenance of the facility. The combined work of both agencies at PIADC directly supports the S&T Directorate's agro-terrorism countermeasures programs. Research at the facility occurs in laboratory spaces rated biosecurity level (BSL)-2, BSL-3, and BSL-3Ag.

PIADC is located on Plum Island, off the eastern end of Long Island, New York; it is a self-sustaining operation, with its own power plant, fuel storage, fire protection, waste disposal, and security systems. The S&T Directorate provides the day-to-day operational support and work force at the facility. Other major operations investments include security, utilities, fuel costs, and personnel. The S&T Directorate also provides the only ferry transport to and from the island and is responsible for operating and maintaining ferries, docks and the harbor. These activities represent the largest portion of operations investments for PIADC in FY 2008, FY 2009, and FY 2010. In FY 2010, there are one-time costs for PIADC including roof replacement and ferry engine overhaul.

National Biodefense Analysis and Countermeasures Center (NBACC) Operations – FY 2009: \$32.940 million; FY 2010 estimate: \$30.002 million. Directly supports the S&T Directorate's biological countermeasures programs. ONL oversees two additional centers within the NBACC complex: the Biological Threat Characterization Center (BTCC) and the National Bioforensics Analysis Center (NBFAC). The unique missions of threat characterization and bioforensics analysis complement the mission responsibilities of the Department of Defense (DOD), the Department of Health and Human Services (DHHS), and USDA. Both centers currently conduct research in interim space with limited capabilities.

- BTCC conducts studies and laboratory experiments to fill information gaps in the understanding of current and future biological threats, assess vulnerabilities, conduct risk assessments, and determine potential impacts in order to guide the development of countermeasures such as detectors, drugs, vaccines, and decontamination technologies.
- NBFAC conducts forensic analysis of evidence from biocrimes and terrorism, to assist in identifying perpetrators and determining the origin and method of attack.

Construction on the new NBACC facility began in FY 2006. The construction should be substantially completed and ready for occupancy in FY 2009 (i.e., offices and administrative space, with a fully operational NBACC in FY 2010). The S&T Directorate began operation of the NBACC as a Federally Funded Research and Development Center (FFRDC) in the first

quarter of FY 2007. The FFRDC is responsible for planning, managing and executing the NBACC research programs and operating the facility.

In FY 2008, FY 2009, and FY 2010, operations investments are primarily for NBACC management, security, equipment/furnishings, utilities, and site services, fees, and insurance.

Chemical Security Analysis Center (CSAC) – 2009: \$0.500 million; FY 2010 estimate: \$0.510 million. Develops and informs risk assessments related to national chemical defense. CSAC is located at the Department of Defense (DOD) Edgewood Chemical Biological Center (ECBC) in Aberdeen, MD. CSAC directly supports the S&T Directorate's chemical countermeasures activities in the Chemical and Biological Division and operates in cooperation with the FBI and DOD. The S&T Directorate established the interim CSAC at ECBC in FY 2006 to leverage DOD infrastructure and legacy investments. The operations investments for this facility include rent, security, and utilities for office space and information technology infrastructure and storage.

In FY 2007, DOD commenced construction of a Sample Receipt Facility (SRF) at ECBC. This state-of-the-art facility will house the permanent CSAC, making it the premier facility with the capability to integrate knowledge across the full chemical threat spectrum. The SRF and CSAC commenced operations at the end of FY 2008. In FY 2009, CSAC will commence full operations. In FY 2009 and FY 2010, planned operations investments for this facility include rent, security, and utilities.

Transportation Security Laboratory (TSL) – 2009: \$15.500 million; FY 2010 estimate: \$16.250 million. Develops civil transportation security technologies, such as explosives and weapons detection systems. TSL is a science and engineering laboratory that enhances and accelerates development of promising technologies to the point of operational test and evaluation. TSL supports the S&T Directorate's explosives countermeasures programs and TSA.

TSL is located at the Federal Aviation Agency (FAA) William J. Hughes Technical Center in Atlantic City, N.J. The real property belongs to FAA. The FY 2008, FY 2009, and FY 2010 operations include rent, buildings maintenance, utilities, security, environment, and safety. The other significant portion of operations investment provides infrastructure and personnel to conduct internal TSL research; engineering; and test and evaluation facilities.

Environmental Measurements Laboratory (EML) – 2009: \$7.700 million; FY 2010 estimate: \$1.250 million. Provides testing and evaluation expertise to the S&T Directorate and the Domestic Nuclear Detection Office (DNDO) and acts as the DHS liaison for the deployment of experimental technologies in the New York City metropolitan area. EML is a government-owned, government-operated laboratory located in the Borough of Manhattan in New York City. Prior to its transfer from the Department of Energy (DOE) to DHS, EML's activities focused on the measurement of low-level radiation.

In FY 2006, ONL disposed of surplus materials and radioactive sources and began the decontamination/decommissioning of unused areas in the current EML space. In FY 2009, ONL will conduct the remaining cleanup activities, and the space will be returned to the General Services Administration (GSA). The current office space is larger than necessary and the S&T

Directorate has determined that EML will occupy a smaller set of offices. The move will result in a reduction in rent and lower operational costs. GSA requirements drive one-time EML costs for final cleanup in FY 2009; these will include, at a minimum, the final disposal of contaminated materials and removal of fume hoods, large exhaust ducting, furnaces, and other equipment remaining from DOE program activities. The FY 2008, FY 2009, and FY 2010 operations include rent, security, utilities, and personnel.

Facilities Construction Thrust Area – Oversees the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects are required to maintain and provide R&D capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions such as USDA, DHHS, and DOD. The ONL construction investments include the construction of future assets, where a current capability does not exist, and upgrades to extend the life and capabilities of present facilities.

Plum Island Animal Disease Center (PIADC) Upgrades – 2009: \$0.000 million; FY 2010 estimate: \$0.000 million. Provides research capabilities necessary to protect the Nation's agriculture infrastructure. PIADC is the Nation's first line of defense against foreign animal diseases and will need to remain a viable research facility until the National Bio and Agro-Defense Facility (NBAF) is ready to provide this capability. These facility upgrades support ongoing and expanded research activities of USDA and DHS and ensure that this research can be performed in a safe and secure manner. In FY 2006, a detailed study identified essential and optional improvements to maintain and upgrade PIADC operations. In FY 2007, S&T began designs for the upgraded infrastructure. In FY 2008, construction began. Implementation of the upgrades will continue through FY 2010 when they are expected to be completed. The upgrades will enable the PIADC facility to remain operational through 2014.

In FY 2009, ONL plans to continue funding projects identified in the multi-year Corrective Action Plan in a FY 2005 Report to Congress. These projects are in addition to the mission-related upgrades, and occur in five general areas: (1) security programs and systems; (2) information technology and communication systems; (3) environmental, health, and safety systems; (4) buildings, grounds, and infrastructure systems; and (5) administrative and management programs. In FY 2010, the project plans to complete upgrade construction and overall corrective actions.

National Bio and Agro-Defense Facility (NBAF) Construction – 2009: \$35.600 million; FY 2010 estimate: \$36.312 million. Provides an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility that will support the complementary missions of DHS and USDA. NBAF will replace PIADC and provide additional capabilities in state-of-the-art research, development, testing, and evaluation infrastructure that enables research to enhance agriculture and public health. It will house numerous laboratory spaces including BSL facilities to conduct research on high-consequence biological threats involving foreign animal and zoonotic (transmitted from animals to humans) diseases. NBAF will also provide enhanced capabilities to address a broader and more complete spectrum of threats posed by emerging bio- and agro-terrorism agents. In FY 2007, ONL conducted the conceptual design of the facility and down-selected potential sites for NBAF. In early FY 2009, the project completed the

Environmental Impact Statements (EIS) that evaluated the six remaining selected sites to comply with the National Environmental Policy Act. S&T issued a Record of Decision (ROD) identifying Manhattan, Kansas as the chosen site for NBAF. In FY 2009, ONL will begin a detailed design of the facility and, in FY 2010, the requested funds, along with funds provided by the State of Kansas, will fund construction of the central utility plant (CUP) and site preparation, which includes earthwork, roadways and parking, fencing and utility distribution (on-site and off-site). The S&T Directorate plans to start NBAF building construction in FY 2011.

NBAF Facility Space Justification – NBAF will satisfy the requirements identified in Homeland Security Presidential Directives (HSPD) 9 and 10 by providing an integrated facility for studying diseases categorized as foreign animal diseases and zoonotic diseases. The existing animal holding, laboratory, training, and support spaces at PIADC are severely limited in size and present challenges for scientists and building operators. Major limitations exist in the ability to conduct large animal research trials necessary for assessing and countering emerging threats and developing necessary vaccines. The primary limitations at PIADC are an inability to conduct certain research activities because the facility does not meet current standards and there is insufficient space.

NBAF will have approximately 504,000 gross square feet. The overall space is broken out as follows:

Space	GSF
Office/Admin.	35,000
BSL-2*	30,000
BSL-3**	372,000
BSL-4	55,000
Vaccine Prod.	12,000
NBAF	504,000

*BSL-2 includes laboratory and support areas.

**BSL-3 includes laboratory, agriculture threat containment, and training and support areas.

The BSL-3 laboratory space is required for research studies on Foot and Mouth Disease (FMD) and developing countermeasures, while the BSL-4 laboratory space is required for research studies on zoonotic diseases. Upon completion, the facility will include: (1) BSL-4 space, large animal and laboratory space that is not currently available to DHS and USDA programs at PIADC; (2) facility space for a vaccine and reagent production module that will aid in providing biological product candidates for rapid licensure to meet the needs of the National Veterinary Stockpile; and (3) multi-purpose, state-of-the-art, distance-learning equipped, conference/training space, research and collaborative offices, and auxiliary spaces, that will make NBAF the world-class biocontainment research facility identified in HSPDs 9 and 10.

NBAF Construction Offset – The Homeland Security Act of 2002 [Section 310, Public Law 107-296] transferred all assets and liabilities of PIADC, including Plum Island, to DHS. After the planned renovations and upgrades to Plum Island, the fifty-year-old facility will maintain current research capabilities through 2014, until activities can begin transfer to NBAF. Because DHS

did not select Plum Island as the site for the replacement facility, the S&T Directorate, using the authorization given by Congress, has begun actions to sell the island so that it can offset NBAF construction costs as well as clean up and remediation expenses for the island. DHS intends to sell Plum Island, NY following the model used by GSA during the sale and continued use of the Middle River Depot in Baltimore County, MD as follows:

Congress granted GSA the authority to dispose of the Middle River Depot and permitted GSA to deposit the proceeds of the sale into the Federal Building Fund. This authority for a one-time retention of proceeds allowed GSA to use those funds its real property capital needs. The sale involved a former B26 bomber plant that GSA had been using as a warehouse and as office space for DHS and Army tenants. GSA put up the facility and land for auction in mid FY 2005. GSA accepted the final offer in October 2006 selling the assets to a private entity who, by terms of the sale, allowed the existing tenants to remain until September 2008. During this time, the tenants paid the new landlord rent while the new owner finalized plans and financing for the future use and renovation of the facility. GSA closed with the buyer in January of 2007 and deposited the funds into the Federal Building Fund. The auction and final terms of the sale also laid out the environmental liabilities and hazards associated with the facility and the responsibilities of both the government and the buyer in their remediation.

Congress directed the Secretary of DHS to liquidate Plum Island and associated assets, remediate the environmental liabilities on the island, and transfer all operations currently housed at the Plum Island Animal Disease Center (PIADC) to NBAF, if Plum Island was not chosen as the future site for NBAF. Congress also directed that the gross proceeds of such sale shall be deposited as offsetting collections into the Department of Homeland Security Science and Technology Research, Development, Acquisition, and Operations (RDA&O) account for site acquisition, construction, and costs related to the construction of the NBAF, including the costs associated with the sale, due diligence requirements, necessary environmental remediation at Plum Island, and reimbursement of expenses incurred by GSA. GSA will conduct an auction to sell Plum Island and associated assets during FY 2010. DHS intends to sell and close on the property in FY 2011 at which point S&T will deposit the proceeds into its RDA&O account for use in the construction of NBAF and other associate costs. S&T will continue to occupy PIADC and pay the new owner rent until NBAF is ready for full operations in 2017. This will allow the new owner to finalize their plans for the island's use and to begin the early design and preparatory activities for occupation including remediation of environmental liabilities. The S&T Directorate will determine the extent of the environmental liabilities through an environmental impact statement and will negotiate the implementation of the remediation plan as a term of the sale.

The sale of Plum Island purchase agreement would allow current operations to continue during NBAF construction and eventual transfer of functions upon completion of the new NBAF facility. The S&T Directorate is working with GSA to put the island on the market in late FY 2009 or early FY 2010.

Research and development at NBAF will address multiple vulnerabilities related to an agro-attack on the animal agriculture including foreign animal disease and zoonotic disease pathogens. NBAF will directly support the DHS mission by providing the necessary infrastructure to improve our understanding of potential agro-terrorism such as employing FAD and zoonotic disease pathogens that may be transported and disseminated against U.S. targets; and the work at NBAF will be developing the Nation's abilities to improve protection against such threats.

Consequences of such an attack range from regional to national to international damage, economically and socially. NBAF will greatly reduce the adverse consequences of a bio-terrorist attack against the U.S. animal industries or an unintentional spread of disease by providing the foundational research and development of biological countermeasures and new, more sensitive and accurate methods of disease agent detection and identification, strategies to control disease outbreaks, including vaccines, antiviral drugs, and disease-resistant animals.

Pacific Northwest National Laboratory (PNNL), Area 300 – 2009: \$25.000 million; FY 2010 estimate: \$12.000 million. Funds construction of a Capability Replacement Laboratory at the DOE's PNNL in Richland, WA. The DOE Office of Science manages this project. ONL represents DHS to provide project management oversight and coordination for the construction of this DOE-led project, scheduled to be operational in FY 2011. PNNL currently provides DHS with research and development capabilities in several areas, such as radiological detection and analysis, dosimetry for standards, and information analytics, in support of the S&T Directorate, National Protection and Programs Directorate, DNDO and CBP. In FY 2007, ONL supported the joint program's facility design activities. ONL completed the design in FY 2007, and began construction in FY 2008; ONL expects completion of PNNL 300 construction in FY 2011 and no future funds will be required for this activity.

Infrastructure Upgrades – 2009: \$0.000 million; FY 2010 estimate: \$5.000 million. Ensures that DHS S&T laboratories do not reach a point where dilapidated infrastructure or the lack of sufficient infrastructure prohibits conducting needed research and development. These capital upgrades ensure that DHS S&T laboratories meet modern laboratory standards and avoid an unmanageable and unaffordable situation in which numerous key facilities require upgrades at once.

The first project under Infrastructure Upgrades will add storage space, including explosive storage bunkers, at TSL so that the laboratory can continue to support increasing system development testing requirements. TSL currently rents space off-site to store explosives, which it cannot continue to do with the anticipated growth in the need to validate the performance of explosives detection systems. In FY 2010, this project will begin the construction of needed storage space, which will eliminate the need to rent space off-site.

Adequate storage space at TSL is an immediate need, but it is also the first step in developing needed additional capabilities at the laboratory in the future. Currently, the laboratory operates second and third shifts and must rotate equipment amongst various laboratory cells to conduct testing. Any disruptions in these activities impact testing schedules and result in delays in delivering technology solutions to DHS customers.

PPA: TEST & EVALUATION AND STANDARDS DIVISION

	Perm Pos	FTE	Amount
2008 Actual			\$29,704
2009 Enacted			28,674
2010 Adjustments-to-Base			(574)
2010 Current Services			28,100
2010 Program Change			574
2010 Request			28,674
Total Change 2009-2010			0

The Science and Technology (S&T) Directorate requests \$28.674 million for Test and Evaluations (T&E) and Standards development, of this amount \$0.717 million supports the SBIR Program. This request will fund T&E and Standards current programs, including the System Assessment and Validation for Emergency Responders (SAVER) program that started in FY09.

CURRENT SERVICES PROGRAM DESCRIPTION

The Test and Evaluation (T&E) and Standards program provides technical support and coordination to assist the Nation’s emergency responders in the acquisition of equipment, procedures and mitigation processes that are safe, reliable and effective. The program carries out its activities through two thrust areas: T&E and Standards. The T&E thrust area works across the Department of Homeland Security (DHS) to measure whether technologies and tools perform well and are applicable to homeland security operations. DHS uses T&E results to make informed acquisition and deployment decisions. The Standards thrust area supports the development of consensus-based measures from basic specifications to performance criteria. When products meet standards, they give DHS and its customers confidence that technology and systems will perform as required. The S&T Directorate works across DHS and numerous external partners to build consensus on, and encourage the adoption of, voluntary standards.

Standards Thrust Area – Standards are the basic measures of effectiveness that provide specifications throughout the entire development cycle of a technology or system. The Standards thrust area coordinates the adoption of national standards and appropriate conformity assessment methods to ensure that our Nation's emergency responders can rely on the equipment to do their jobs. In addition, Standards ensures that personnel from different jurisdictions can easily communicate with one another; that detection and testing for threat agents produces consistent, accurate results; and that training exercises provide the instruction and practice that will best prepare homeland security personnel for responding to certain events. The lack of effective standards to measure product performance can lead to inconsistent grant guidance and the purchase of inferior or inappropriate products.

DHS does not have authority to impose regulatory standards and must therefore promote the development of voluntary consensus standards. Voluntary consensus standards rely on coordination and consensus between large numbers of entities. The Standards thrust area gathers requirements and facilitates the adoption of standards through formal standards working groups,

interagency task forces, conferences, and workshops with private-sector standards organizations, such as the National Fire Protection Association (NFPA) and ASTM International. The Standards thrust area does not seek to generate new standards, but solicits and endorses existing national-level standards.

Explosives Standards Program – FY 2009: \$3.170 million; FY 2010 estimate: \$3.300 million. Develops standards related to explosives detection, including standards for detectors and protective equipment, body-scanning systems, and cargo. In FY 2008, the program released standards for explosives detection, including draft standards of checkpoint/body scanning. In FY 2009, the program will draft standards for trace explosives detection; develop draft standards for high-energy computed tomography systems; and develop a methodology and test kit for quality control and assurance of field-deployed equipment to determine their effectiveness in detecting explosives. The program will also initiate standards development for standoff explosives detectors, improvised explosive device (IED) countermeasures technology (including radio frequency countermeasures used in jamming technologies), and terahertz technologies that can penetrate a wide variety of materials for body scanning. In FY 2010, the program plans to complete the development of trace explosives standard test materials for RDX and C4 explosives; develop a test kit for evaluation and quality control of walk-through portals; and finalize and adopt standard test methods for X-ray inspection systems and body scanners.

Chemical/Biological Standards Program – FY 2009: \$3.423 million; FY 2010 estimate: \$3.372. Develops standards related to chemical and biological threat detection. This includes development of a comprehensive suite of performance standards for detection equipment, guidance on how to respond to chemical/biological incidents, and the development of simulants (e.g., anthrax bacteria (*Bacillus anthracis*) and ricin) for testing. The program, working through two stakeholder groups, provides State and local authorities with guidance on chemical/biological detectors purchases.

In March 2008, the program conducted an initial decontamination guidance workshop. In FY 2009, the program will work to finalize standard test materials for anthrax and ricin, release interim guidance for chemical and biological decontamination, and develop guidance for first-responders to assess whether chemical and biological detection technologies meet manufacturer claims. In FY 2010, the program plans to develop draft training protocols to support decontamination guidelines. In addition, the program also plans to initiate the chemical warfare agents/toxic industrial chemicals detection standards program, including standoff (optical) detection systems.

Command, Control, and Interoperability Standards Program – FY 2009: \$0.951 million; FY 2010 estimate: \$1.000 million. Develops standards related to interoperable communication and incident management. Specific projects within this area address gaps not covered in the larger, overarching SAFECOM and National Institute of Justice interoperable communications projects, but address issues related to interfaces with protective equipment.

In FY 2008, the program presented these standards to U.S. manufacturers in workshops and test exercises. In 2008, the program initiated work with the National Incident Management System (NIMS) Integration Center to collect, assess, and evaluate FY 2007 compliance data to support

revisions of NIMS-related standards. In FY 2009, the program will adopt and updated existing incident-management standards and complete a gap analysis for new requirements. The program will also establish communication and coordination with the FEMA's newly formed Incident Management System Integration Directorate.

In FY 2009, the program will initiate work on Knowledge Management Standards, which address the need to organize, manage, and protect information databases used during incident management. This work will coordinate DHS standards adoption with national programs like the National Information Exchange Model (NIEM) and the Federal Geographic Data Committee, which is working with the DHS Office of the Chief Information Officer (OCIO) Data Management Working Group and the U.S. Coast Guard Position, Navigation and Timing Working Group. In FY 2010, the program plans to investigate the feasibility of using multiple-input, multiple-output (MIMO) communication concepts to improve ad hoc system performance for Incident Management. In addition, the program plans to incorporate performance requirements into the NFPA standard on radio communication equipment and to develop standards for indoor localization based on NFPA requirements.

Borders/Maritime Standards Program – FY 2009: \$1.321 million; FY 2010 estimate: \$1.000 million. Develops standards for cargo security and Radio Frequency Identification Device (RFID) technologies that are used to tag and track containers. Standards for border security technologies and systems are critical to ensure their effectiveness in protecting the Nation's ports and borders. Program activities focus on: (1) standards to enhance the security of shipping containers and cargo handling processes; and (2) standards to facilitate the reliable use of RFID systems for homeland security and first-responder applications.

In FY 2008, the program worked with Customs and Border Protection (CBP) and other organizations to review existing standards, conduct gap analyses, and gather user requirements to develop cargo security standards. In FY 2009, the program will continue the gap analysis and initiate work with the American National Standards Institute (ANSI) and other organizations to examine the current suite of applicable global trade and supply chain standards. In FY 2010, the program plans to analyze emerging cargo screening and sensor technologies for standards and to deploy a pilot RFID counterfeit detection system. The program also plans to develop consensus standards to comply with upcoming regulations, particularly the Federal Information Processing Standards (FIPS)-140).

Also in FY 2008, the program initiated development of performance requirements for RFID technologies. In FY 2009, the program will support development of additional RFID-based sensor network standards and performance metrics for cargo and border security. The program will also evaluate the feasibility of RFID counterfeit detection by electromagnetic signatures or other means and demonstrate technology required for FIPS 140 Level IV compliant RFID. In FY 2010, the program plans to analyze emerging cargo screening and sensor technologies for standards needs and to deploy a pilot RFID counterfeit detection system. The program also plans to develop consensus standards for reaching FIPS-140 Level IV compliant RFID systems.

Human Factors Standards Program – FY 2009: \$2.285 million; FY 2010 estimate: \$2.200 million. Develops standards for biometrics technologies and government personnel credentials.

A primary focus is on developing biometric standards and tests to ensure that a nationwide biometrics system can accurately identify individuals. To facilitate the identification of individuals, biometric information must be housed in searchable databases that are accessible to many government entities. The overall success of such a database requires standards for acquiring biometric information.

In FY 2008, the program identified and integrated emerging biometric technologies into its efforts, ensuring through performance testing and analysis, that they meet the developing suite of biometrics standards. In FY 2009, the program will provide draft standards for image quality for face, fingerprint, and iris biometrics, specifically to enhance interoperability of U.S. Visitor and Immigrant Status Indicator Technology (US VISIT) and FBI's Integrated Automated Fingerprint Identification System (IAFIS) fingerprint databases. In addition, the program will begin to provide on-line test data sets that manufacturers can use to test and develop next-generation software. In FY 2010, the program plans to implement an accreditation program for biometrics test and evaluation and develop training materials for assessors to use in performing audits under the accredited test lab program.

In FY 2008, the program began developing consensus standards for credentials of officials and responders at various levels in the government. These standards will integrate information stored in various databases to enable the rapid identification of personnel as well as verify their certifications, capabilities, and duties. Also in FY 2008, the program initiated standards development for version two of the Transportation Working Identification Credential (TWIC) and developed a suite of standards based on the universal access control mechanism through ANSI's International Committee on Information Technology Standards Cyber Security 1 (INCITS/CS1). In FY 2009, the program will complete initial standardization of the data model/architecture for first responder credentials. While the TWIC program addresses specific mandates for the transportation sector, the credentialing standards address the needs of all responder and emergency personnel and ensure that their credentials mesh neatly into emerging data and incident command systems. In FY 2010, the program plans to finalize and publish universal access control standards and to develop a reference implementation and conformance-testing tool for responder credentials.

Infrastructure and Geophysical Standards Program – FY 2009: \$4.463 million; FY 2010 estimate: \$4.800 million. Develops standards to enable emergency responders to purchase the appropriate equipment to protect them and the best operational equipment to use in protecting the public. The program focuses on protective clothing and gear, (e.g., breathing apparatus) used by emergency responders. In FY 2008, the program initiated activities that focus on further developing standards for chemical, biological, radiological and nuclear (CBRN) respiratory protection equipment, establishing certification programs, and updating, as necessary, previously developed standards. This included revising the NFPA personal protective equipment (PPE) standards previously adopted by DHS. In FY 2009, the program will support development of draft all-hazards protective clothing standards with attention to dermal hazards posed by toxic industrial chemicals and toxic industrial materials. The program will also continue facilitation of the development of standards for law enforcement officer PPE. In addition, the program will implement standards development for hybrid CBRN respiratory protection equipment, such as combined self-contained breathing apparatus and air purifying respirator systems. In FY 2010,

the program plans to review existing respiratory protection guidelines, and in collaboration with other Federal partners, propose modifications to existing standards.

Current activities also focus on standards for Geographical Information Systems (GIS). In FY 2008, the program coordinated with DHS users of GIS information to ensure that emerging information systems at DHS use the same relevant data standards as other Federal entities. In FY 2009, the program will finalize input to NFPA standards for indoor localization technologies. This supports NFPA development of a next generation Personal Alerting Safety System standard and test method. Funding for this activity ends in FY 2009.

Platforms Program – FY 2009: \$2.113 million; FY 2010 estimate: \$2.000 million. Organizes standards development for Urban Search and Rescue (USAR) robots, sensor networks and alert systems, and HAZMAT equipment. Consolidating customers' requirements for common detection technologies will prevent duplicative development efforts and reflects the move of DHS towards integrated technologies that will respond to a range of scenarios, while lowering operational costs. The program will have two emphasis areas: (1) mobile platforms, which includes robots and Unmanned Aerial Vehicles (UAVs) and other mobile detection applications; and (2) sensors and alert networks, which will include stationary sensor systems and the networks to support them.

In FY 2008 and FY 2009, the program supported the development of standard test methods for advanced sensors and mobility used in USAR robots. In FY 2010, the program plans to calibrate and characterize a test facility that can conduct standard test methods for USAR robots as well as produce user guides that assist in decision-making about appropriate robots for given situations. The program also plans to draft standards, organize review of best practices by responders, and develop data sets for verification of conformance and commercial products to sensor standards.

Also in FY 2008, in the area of sensors and alert networks, the program began to identify standards development efforts needed to ensure packages of sensors work together and provide data to users in a standardized, secure format. In FY 2009, the program will begin technology maturity assessments to identify new candidate sensor technologies for standardization, including sensor interfaces, data transmission/exchange, and security. In FY 2010, the program plans to develop data sets for verification of conformance of commercial products to sensor standards.

Standards Development Program – FY 2009: \$1.110 million; FY 2010 estimate: \$1.700 million. Standards development requires consensus and significant resources across and outside DHS. A unique commitment to partnerships and ongoing infrastructure is needed to support both general activities (databases, working groups) and specific projects (biothreat identification protocols). For some private-sector standards development organizations, the S&T Directorate must pay to maintain its membership and ensure voting rights in decision-making processes. The S&T Directorate maintains important relationships with standards development organizations such as ANSI, ASTM International, Institute of Electrical and Electronics Engineers (IEEE), NFPA, National Institute of Occupational Safety and Health, additional program partners and include FEMA's Incident Management System Integration Division, Transportation Security Laboratory (TSL), Association of Analytical Communities (AOAC) International, Homeland Security

Institute (HSI), and the Interagency Board for Equipment Standardization and Interoperability (IAB).

Voluntary Private Sector Accreditation and Certification Preparedness Program (PS-Prep) - Congress identified four DHS components in Section 524 of Title IX of Public Law 110-53, “Implementing the Recommendations of the 9/11 Commission Act of 2007,” and directed the Secretary to establish a program for accreditation and certification of private sector preparedness. The Division is leading the team on identification of standards to adopt for use in this program.

In FY 2008, the program selected the ANSI-ASQ National Accreditation Board (ANAB) to develop and oversee the certification process, manage the accreditation, and accredit qualified third parties to carry out the certification in accordance with the accepted procedures of the program. The Division established a contract with ANAB and regularly monitors and inspects their operations to ensure that the third party conformity assessment bodies are complying with the accreditation procedures and requirements as well as all other applicable requirements. In FY 2009, the program will develop and refine criteria and processes to continuously evaluate and maintain preparedness standards for use in the program.

Test and Evaluation Thrust Area – Establishes and issues policies and procedures and coordinates T&E resources to verify attainment of technical performance specifications and operational effectiveness/suitability. The goal is to integrate a uniform and centrally managed Departmental T&E process into the entire development and acquisition lifecycle early and through continuous oversight and evaluation of system test requirements, planning, and execution, providing for an independent T&E assessment. The infrastructure area will assess, integrate, and coordinate DHS and non-DHS test assets to ensure adequate test capabilities are available to support acquisition programs. The objective of this thrust area is an integrated T&E process that provides vital information to decision makers and first responders on the capabilities and limitations of proposed systems.

T&E Plans and Policy Program – FY 2009: \$0.317 million; FY 2010 estimate: \$0.500 million. Develops and disseminates T&E policies and procedures that define T&E activities required of all DHS components throughout the system acquisition process. In FY 2008, the program established a T&E Council with representatives from DHS components. This council meets quarterly and addresses T&E policy, processes and infrastructure issues. Also in FY 2008, the T&E policy program worked closely with DHS Undersecretary for Management to ensure the updated Acquisition Directive addressed T&E. The program also initiated development of a robust department-wide T&E policy that is fully integrated into the Department’s Acquisition framework. In FY 2009, the program will finalize the T&E Directive that supplements the Department’s recently adopted Acquisition policy. Additionally, the program will initiate the development of a T&E Instruction that provides guidance to the DHS Components on how to implement the T&E activities addressed in the T&E Directive. The program will also begin development of a T&E Training course and continue to support the DHS T&E employee certification program. In FY 2010, the program plans to implement T&E training courses and will initiate work on a T&E Guidebook for Program Managers across DHS.

Infrastructure Program – FY 2009: \$0.317 million; FY 2010 estimate: \$0.477 million.

Assesses, integrates, and coordinates the physical Federal test assets and non-Federal assets at colleges, universities, local governments, private research institutes, and companies. This program will review the DHS acquisition programs' T&E infrastructure capabilities needed to perform the required T&E program and conduct gap analysis of existing DHS and non-DHS infrastructure to determine required investments or upgrades.

In FY 2008, the program initiated a review of DHS T&E infrastructure capabilities and developed a detailed matrix of DHS T&E infrastructure capabilities. In FY 2009, the program will complete the infrastructure review and provide a T&E capability matrix to the components that will allow DHS acquisition programs to choose existing capabilities that meet their testing requirements rather than build duplicative infrastructure. Additionally, the T&E infrastructure review will be expanded to begin collecting non-DHS T&E capabilities. The program will begin to assess the T&E infrastructure needed by participating in test planning meetings with acquisition programs across DHS. In FY 2010, the program plans to identify DHS T&E Infrastructure needs and work with the DHS components to develop the appropriate funding model. The program will refine the test-capability accreditation process and work with test facilities and laboratories to encourage voluntary laboratory accreditation.

Test Area/Capabilities Program – FY 2009: \$2.623 million; FY 2010 estimate: \$2.500 million.

Works directly with DHS acquisition programs to assist in the development and execution of a robust T&E program that will lead to the evaluation of the program's operational effectiveness and suitability. In FY 2008, the Test Area/Capabilities program worked closely with several acquisition programs over \$1 billion in life cycle costs (Level 1 programs) to mature and implement the department-wide T&E process by: participating in T&E working groups; approving Test and Evaluation Master Plans; approving Operational Test Plans; participating in Operational Test Readiness Reviews; observing testing; and providing Operational T&E support to the Acquisition Review Board (ARB). In FY 2009, the program will expand its oversight function to all DHS Level 1 and non-delegated programs and will begin writing an independent assessment report of the program's Operational Test and Evaluation. In FY 2010, the program plans to continue its oversight function as well as expand to include new Level 1 and non-delegated programs.

In FY 2008, the Modeling and Simulation (M&S) program initiated an assessment of the current modeling, simulation and analysis (MS&A) focus areas for homeland security applications, which evaluated MS&A shortfalls and opportunities and reviewed the M&S policies in federal organizations and agencies. This effort included discussions with M&S/computational science subject matter experts from academia and industry. In FY 2009, the program will develop a DHS M&S T&E policy and establish an M&S working group under the T&E Council with participation by all DHS components. The M&S working group will address issues regarding the evaluation and use of M&S and computational science. In FY 2010, the program plans to implement the M&S T&E policy and work to establish a DHS model verification, validation, and accreditation process.

First Responder Technologies Program – FY 2009: \$5.000 million; FY 2010 estimate: \$4.674 million. Develops an operational T&E program for First Responder Technologies. The

operational test program will conduct operational tests and assessments on commercial equipment and systems. In FY 2009, the Division will collaborate with FEMA to assume management and funding responsibility for the System Assessment and Validation for Emergency Responders (SAVER) program, previously managed by FEMA. The SAVER program tests and assesses commercially available equipment that falls within the categories listed on the DHS Authorized Equipment List and provides the results along with other relevant equipment information to the First Responder community. In FY 2010, the Division will continue to collaborate with FEMA to identify and prioritize specific product categories for assessment through the SAVER program. The SAVER program will continue to produce Assessment Reports that focus on answering responders' questions on how specific products perform. In addition, in FY 2010 the SAVER Program will continue to produce Market Survey reports. These reports identify for the responder community what equipment is available in a specific product category and details the technical characteristics of that equipment.

PPA: TRANSITION

	Perm Pos	FTE	Amount
2008 Actual			\$46,330
2009 Enacted			28,830
2010 Adjustments-to-Base			2,304
2010 Current Services			31,134
2010 Program Change			14,000
2010 Request			45,134
Total Change 2009-2010			16,304

The Science and Technology (S&T) Directorate requests \$45.134 million for Transition, of this amount \$1.128 million supports the SBIR Program. The increase of \$16.304 million supports continued efforts in Program Transition and the First Responder Technologies program.

CURRENT SERVICES PROGRAM DESCRIPTION

The Transition Office delivers near-term products and technology enhancements by working with the Department’s components to expedite the technology transition process. The office provides personnel, processes, and resources to support the transition and transfer of S&T Directorate technologies to customers. Activities involve integrating technology development efforts across the S&T Directorate to develop the most cost effective and timely solutions and processes to meet customer requirements. The Transition Office carries out these core responsibilities through the following two thrust areas: SAFETY Act and Transition.

SAFETY Act Thrust Area – FY 2009: \$8.500 million; FY 2010 estimate: \$8.680 million. The Office of SAFETY Act Implementation (OSAI) evaluates and qualifies technologies for liability protection in accordance with the *Support Anti-Terrorism by Fostering Effective Technologies (SAFETY) Act of 2002* and the supporting regulations of the Final Rule (6 CFR Part 25) implemented on July 10, 2006. As part of the *Homeland Security Act of 2002* (Public Law 107-296), the SAFETY Act provides risk management and liability protections for sellers of Qualified Anti-Terrorism Technologies. The purpose of the SAFETY Act is to ensure that the threat of liability does not deter potential manufacturers or sellers of effective anti-terrorism technologies from developing, deploying and commercializing these technologies. There are three key areas of focus for OSAI: operations, outreach, and coordination.

Operations – OSAI processes applications under the criteria stipulated by the provisions of the SAFETY Act in an expeditious manner. As part of this process, OSAI evaluates the efficacy of candidate technologies based on a set of criteria set forth in the Final Rule, considers the applicant’s current insurance situation, and advises the Department of Homeland Security (DHS) whether to issue SAFETY Act protections to the company.

In FY 2008, OSAI reduced the number of Requests for Information (RFIs) sent to applicants requesting clarification of information, which resulted in a significant decrease in the evaluation process timeline. Also in FY 2008, OSAI conducted an independent assessment of its business

process performance to identify further efficiencies. To improve service to the applicants and keep up with increasing volume, in FY 2009, OSAI will work to modernize SAFETY Act IT system; enabling the Office to handle an increased process flow as the program continues to mature. In FY 2009 and FY 2010, OSAI will continue evaluating and streamlining business processes to ensure that at least 85 percent of applications are processed within the congressionally mandated timeline of 120 days and continue to grow the program by 10 percent a year.

Outreach – OSAI promotes homeland security technologies by raising public awareness of the benefits of liability protections available under the SAFETY Act and thereby expand the creation, proliferation, and use of anti-terrorism technologies.

In FY 2008, OSAI continued expanding its outreach into untapped homeland-security technology markets to encourage full industry participation. To this end, OSAI attended approximately 42 conferences and stakeholder meetings as well as continued its aggressive communication strategy with previously unreached industry groups, trade associations and others involved in strategic areas of homeland security. In FY 2009 and FY 2010, the program plans to continue its outreach efforts into priority homeland-security technologies and under-represented technology areas to further industry participation. Due to the previous successes, OSAI will continue to hold periodic SAFETY Act workshops. OSAI also plans to hold these workshops outside of the Washington, DC Metropolitan Area to reach more potential stakeholders.

Coordination – OSAI coordinates the SAFETY Act application review process across DHS and with other Federal agencies to support these partners in their missions and to minimize the burden on applicants for SAFETY Act protection. This crucial advance coordination regularly occurs wherever the SAFETY Act can play an important role in pending Federal procurements.

In 2008, OSAI continued to align the SAFETY Act process to the Federal procurement process to (1) reduce submission of contingent contracts by offerors; (2) streamline the application process for similar or identical technologies containing the same basic scientific principles (such as different types of X-ray systems); and (3) identify, in advance of Requests for Proposals, appropriate anti-terrorism technologies that will be considered for, or entitled to, SAFETY Act protections. The program also identified, in advance of Requests for Proposals (RFPs), appropriate Qualified Anti-Terrorism Technologies that were to be considered for, or entitled to, SAFETY Act protections. In FY 2009, the SAFETY Act program will expand coordination with other Federal agencies to assist in the creation of Federal best practices, standards and guidelines and work with public and private consortiums/associations to identify promising technologies for prompt consideration under the SAFETY Act as well as sector-specific areas identified by the *National Infrastructure Protection Plan* (NIPP). In FY 2010, OSAI also plans to work with universities and national laboratories that research develop, and pilot new innovative homeland security technologies to educate and inform them about the SAFETY Act.

Transition Thrust Area – Provides personnel, processes, and resources to support the transition and transfer of S&T Directorate technologies to customers. Integrates technology development efforts across the S&T Directorate to develop the most cost-effective and timely solutions to meet customer requirements. This work includes coordinating technology efforts with

international agencies and other government agencies and providing an appropriate venue for first-responder input to the S&T Directorate's transition process.

International and Interagency Programs – FY 2009: \$3.571 million; FY 2010 estimate: \$3.642 million. Leverages the capabilities of external organizations, within the U.S. and abroad, to address high-priority homeland security needs. The International and Interagency Programs facilitate the S&T Directorate's cooperative RDT&E activities across Federal, State, local, territorial and tribal governments, the international community, and the private sector. These activities include:

- Guiding the S&T Directorate's coordination of Federal government and private-sector efforts to identify and develop countermeasures against current and emerging threats;
- Leading a world-wide staff of science and technology liaison officers who help execute S&T Directorate programs of national and international scope and impact; and
- Facilitating both national and international technology awareness to avoid technological surprise and ensure the Department's technological superiority.

In FY 2008, these programs continued to leverage external organizations in three venues: interagency agreements; international agreements; and national and international collaborations, which include visiting scientist collaborations, conference/workshop collaborations, and science and technology collaborations.

The Interagency program sponsored the first in a series of Regional Homeland Security Summits. The Pacific Northwest Regional Summit brought together the Adjutant Generals, State Emergency Management Directors, the State Directors of Public Health, the State Patrol Chiefs, and the FEMA Directors from Regions 8 and 10 with the objective of strengthening DHS collaborative efforts, enhancing identification and prioritization of regional technology needs, and information sharing. The Interagency program recruited a seasoned first responder to help address specific technology needs from that community and to help bring the first responder needs into the S&T Directorate's program development efforts. The Interagency program continued S&T Directorate cooperation, coordination, leverage, and liaison with the Joint Staff and appropriate Combatant Commanders, including U.S. Northern Command, U.S. Joint Forces Command, U.S. Transportation Command, and U.S. Strategic Command. In addition, Interagency programs engaged with State Homeland Security Advisors and Emergency Management leadership and their staffs to address their needs with the S&T Directorate and sought potential linkages between local needs and S&T Directorate initiatives.

The International program funded five international research projects through grant solicitation program to expand DHS's access to worldwide, cutting-edge S&T Directorate research in support of homeland security. The grant program allowed the International program to address significant challenges, including the ability to assess methods to protect the cross-border produce supply chain, to assess the effectiveness of international policies on terrorist activity and to develop an entirely new glass material to protect against blast and projectiles. Other International activities included a bilateral S&T Directorate exercise with the Government of Sweden on maritime domain awareness (MDA) to identify joint strengths and gaps for port and maritime security and development of a coordinated binational MDA S&T Directorate program. The International program initiated a scientist and engineer exchange program with key nations

to facilitate international technology awareness and prevent technology surprise. The program also implemented two more bilateral agreements with the United Mexican States and the State of Israel.

In FY 2009 and FY 2010, the International and Interagency programs plan to continue to leverage external organizations. The Interagency program plans to expand S&T Directorate outreach to State/ Local/ Territorial/Tribal, homeland security, emergency management, and related agencies. It plans to expand collaborative relationships and outreach with other entities, such as the Department of Defense, Department of Energy, the National Guard, the Joint Staff, and appropriate Combatant Commanders to leverage RDT&E efforts and capabilities. The Interagency program plans to conduct additional Regional Homeland Security Interagency Symposia to strengthen DHS regional collaborative efforts and to collect State/Local/Territorial/Tribal input on technology gaps and to communicate achievements. In addition, the Interagency program plans to establish the S&T Directorate First Responder Integrated Product Team (IPT).

The International program plans to expand the grant solicitation program to include funding of six international research projects per year. Other planned International activities in FY 2009 and FY 2010 include numerous international workshops, conferences, and activities that will build capacity for international cooperation in the technical areas of S&T Directorate Divisions. International programs plans to facilitate international participation in an International Conference on Science and Technology in Sweden in FY 2009. The program plans to establish S&T Directorate agreements with at least two new international partners.

Program Transition – FY 2009: \$4.463 million; FY 2010 estimate: \$5.684 million. Aligns and coordinates the S&T Directorate's transition effort with the Departmental component's requirements using Capstone Integrated Product Teams (IPT). This product transition program focuses on delivering near-term technology to meet customer-identified science and technology requirements as well as informing the Basic Research and Innovation Offices of priority customer technology needs. The Capstone IPTs consist of thirteen functional homeland security areas: Border Security; Cargo Security; Chemical/Biological Defense; Cyber Security; Counter-Improvised Explosive Devices (IED); Transportation Security; Incident Management; Infrastructure Protection; Information Sharing/Management; Interoperability; Maritime Security; People Screening, and the newest Capstone IPT, the First Responder IPT.

In FY 2008, the Transition Office continued to mature the IPT process and conduct further analysis to appropriately align the S&T Directorate's advanced technology efforts to the Department's highest priority mission capability gaps. It also conducted quarterly status updates and semi-annual program reviews. In FY 2009, the Office plans to identify appropriate support and analysis of customer gaps through the IPT process. In FY 2010, it plans to refine support and analysis of customer gaps through the IPT process and monitor efforts for cost, schedule, and capability to ensure the technology effectively transitions into acquisition.

In addition to the Capstone IPTs, the Transition Office, through the efforts of the Chief Commercialization Officer (CCO), manages the development and execution of programs and processes that identify, evaluate, and commercialize technologies that meet the operational requirements of DHS operating components, first responder community, and end-users. The

CCO also develops and manages the S&T Directorate's outreach effort with the private sector to establish and foster mutually beneficial working relationships that lead to fielding technologies to secure the Nation. In FY 2008, the Office established the SECURE Program, an innovative business initiative that enables collaboration of public and private entities to develop products and services rapidly for DHS and first responders. It also developed and started implementing a comprehensive commercialization process for all of DHS. In FY 2008, the program developed a detailed database of firms in the private sector with technologies, capabilities and products aligned with the identified capability gaps. In addition the program expects a minimum of five new SECURE Operational Requirements Documents (ORDs) generated by DHS/First Responders in FY 2009 and 15 ORDs in FY 2010.

Within the Transition Office, the Technology Transfer Program manages the Office of Research and Technology Application (ORTA), to conduct technology transfer in accordance with 15 USC 3710. The Technology Transfer Program also represents DHS in the Department of Defense's 1401 Technology Transfer Working Group, used to identify and transfer DOD technology, items, and equipment that can be used by the Federal, State, and tribal first responders. In FY 2009, the Technology Transfer Program plans to commence with its annual Technology Transfer and Intellectual Property Training for all engineers and scientists. The program also plans to implement a knowledge management system to capture and track the use of all technology transfer mechanisms and intellectual property developed within S&T Directorate. In FY 2009, the ORTA will establish an Invention Evaluation Board (IEB) to assess the patentability of DHS' inventions. In FY 2010, the Technology Transfer Program plans to establish a partnership intermediary network to assist with creating partnerships for Cooperative Research and Development Agreements (CRADAs) and licenses, continue training engineers and scientists, and have all DHS laboratories fully participating in the Federal Laboratory Consortium (FLC).

Transition Pilot Program – FY 2009: \$2.000 million; FY 2010: \$0.000. Identifies, researches, develops, and transitions advanced technologies and manufacturing processes in the homeland security industrial base. The Homeland Security Research, Development, & Manufacturing Pilot (HomeTech) will significantly improve the affordability and mission capability of DHS products and systems by engaging in manufacturing initiatives that address the entire system life-cycle and will enable the timely transition of laboratory technology to industry and the marketplace.

HomeTech will aid in the economical and timely acquisition and sustainment of DHS S&T technologies, systems, and components that are developed for the nation's first responders. HomeTech will also ensure that advanced manufacturing processes, techniques, and equipment are available for reducing materiel acquisition, maintenance, and repair costs as well as to bridge the gap from research and development to full-scale production. HomeTech will promote capital investment and industrial innovation in new plants and equipment by reducing the cost and risk of advancing and applying new and improved manufacturing technology. This will also ensure that manufacturing technologies used to produce materiel are consistent with safety and environmental considerations and energy conservation objectives. In addition, HomeTech will sustain and enhance the skills and capabilities of the manufacturing work force, and promote high levels of worker education and training. The S&T Directorate will disseminate the pilot program results throughout the industrial base.

HomeTech's first three projects will look at reducing the cost of a portable chemical detection system developed for first responders, ocular systems that detect chemical exposure to toxic chemicals, and the Safe Against Fire and Embers (S.A.F.E.) quick-cover project which provides protect for homes against wildland fires.

First Responder Technologies – FY 2009: \$0.000 million; FY 2010 estimate: \$12.000 million. Develop and design technologies to address capability gaps identified by Federal, State, local and tribal first responders in the First Responder Capstone Integrated Product Team (IPT). Using the prioritized capability gaps from the IPT, the S&T Directorate's six divisions will propose technology solutions. The First Responder IPT will then prioritize these technology solutions to determine which to fund. This program will also test technologies, assess them for usability, and commercialize them so the technologies are available across all First Responder communities. In FY 2009, the S&T Directorate will stand up the first responder IPT and integrate it into the current product transition program. In FY 2009 and FY 2010, Federal, State, local and Tribal First Responders will identify science and technology requirements and prioritize technology solutions proposed by the S&T Directorate's divisions. In FY 2010, the divisions plan to start these new first responder initiatives. Additionally in FY 2010, the S&T Directorate, in continued partnership with the Naval Post Graduate School, will field test first responder prototype technologies.

Homeland Security Institute (HSI) – FY 2009: \$0.000 million (PPA: HSI in FY09); FY 2010 estimate: \$0.000 million. HSI is a specialized studies and analysis Federally Funded Research and Development Center (FFRDC) established by the Homeland Security Act of 2002. The Institute provides a unique source of in-depth knowledge of homeland security mission objectives, operational concepts and requirements, strategies, resources, systems and technologies. The Institute's mission is to assist DHS and its operating elements in addressing important homeland security issues, particularly those requiring scientific, technical and analytical expertise. The research agenda covers the spectrum of homeland security issues and activities, including threat trends and adversarial perspectives, information sharing and communications interoperability, border and transportation security, law enforcement, infrastructure protection, preparedness, emergency response, and training.

As the primary sponsor, the S&T Directorate provides core funding for HSI. Prior to FY 2008, the S&T Directorate funded HSI's core activities through its division budgets. In FY 2008, the S&T Directorate created a new program within the Transition PPA to fund HSI. HSI customers include all operational components of the Department—Federal Emergency Management Agency (FEMA), Customs and Border Protection (CBP), Transportation Security Administration (TSA), United States Coast Guard (USCG), National Operations Center, United States Secret Service (USSS), Immigration and Customs Enforcement (ICE), United States Citizenship and Immigration Services (USCIS), Office of Health Affairs (OHA), Domestic Nuclear Detection Office (DNDO), DHS Chief of Staff, Policy Directorate, National Preparedness and Protection Directorate (NPPD), Management Directorate, Intelligence and Analysis Directorate, and the Office of Counter-Narcotics.

In FY 2008, HSI conducted studies and analyses for the Department and its components in support of their mission needs. Recent studies conducted by HSI include, but are not limited to:

- Risk Assessment Process for Informed Decision Making (RAPID)
- National Counter-IED Research & Development Strategy for DHS S&T Directorate
- Management Directive (MD) 102-01 Acquisition Management, November 2008
- Biodefense Net Assessment: Countering a Bioterrorism Campaign in the New Century, August 2008
- National Response Framework and the National Incident Management System
- TSA Airport Employee Screening Assessment
- Nuclear Event Public Communications Strategy
- CIS Immigration Reform
- Small Vessel Security Implementation Plan
- Voluntary Private Sector Preparedness
- Independent Program Analyses and Evaluations
- The Institute is finalizing the first three studies: Air Cargo Security; National Bio-surveillance Integration Center (NBIC); National Command Coordination Capability. Bound White Paper by HSI titled: Utility and Integration of Cargo Advanced Automated Radiography systems (CAARS) in the Global Nuclear Detection Architecture (GNDA)
- Advanced Spectroscopic Portal (ASP) Independent Review
- Acquisition Program Baseline (APB) Review Teams
- In order to facilitate successful Acquisition Review Board (ARB) decisions for DHS Level I and II Programs, the Institute provides two teams of Subject Matter Experts to assist the OCPO/APMD in reviewing APB specific documentation.

The authorization for HSI expires April 25, 2009. The S&T Directorate re-competed a studies and analysis FFRDC under the authority of Section 305 of the Homeland Security Act of 2002.

Homeland Security Studies and Analysis Institute (HSSAI) – FY 2009: \$0.000 million; FY 2010 estimate: \$5.000 million. The S&T Directorate awarded a Homeland Security Studies and Analysis Institute (HSSAI) FFRDC contract in March 2009. The purpose of HSSAI is to provide special technical expertise to Department mission owners to analyze and conduct trade-off studies of mission-level goals and strategies, analyze operations and operational requirements, and evaluate performance metrics constrained by cost and schedule. The HSSAI will generally consider all missions within the context of threat, consequence, and vulnerability risk reduction under the constraints of cost and schedule. The research agenda covers the spectrum of homeland security issues and activities, including threat trends and adversarial perspectives, information sharing and communications interoperability, border and transportation security, law enforcement, infrastructure protection, preparedness, emergency response, and training. In FY 2009 and FY 2010, the HSSAI plans to provide recommendations for policy and operational changes as well as technology insertion concepts throughout the Federal, State, local, tribal, public and private sector organizations that make up the homeland security enterprise.

The studies and analyses include, but are not limited to:

- Develop top-level mission risk and risk reduction (threat, vulnerability, consequence) resource allocation models, component tradeoff simulations, and tools and metrics to evaluate mission tradeoffs and mission integration strategies;
- Develop system and system-of-system concepts through analysis of alternatives to address the most strategic and critical needs of the homeland security enterprise;
- Develop top-level program requirements and system performance and effectiveness metrics based on mission goals;
- Develop and promote standardization of effective and efficient operational modeling, simulation, test and evaluation best practices for homeland security programs to provide independent and objective assessments based on mission and program goals;
- Design and provide support for the conduct of homeland security-related exercises, games, and simulations, including the examination of past incidents, tabletop and operational exercises, and nominal operations to determine lessons learned and the implications for homeland security planning;
- Conduct operational analysis, particularly at field activities for extended (months to 1-2 years) periods, to provide objective assessments, systems evaluations, and other technical and analytic support; and
- Use economic (lifecycle) and policy analyses to assess the distributed costs and benefits of alternative approaches to enhancing security including leveraging of homeland security, particularly R&D, assets across the Nation and with international partners.

Technologies to Secure the Homeland and Advance Responder Effectiveness (Tech SHARE) Program – FY 2009: \$9.500 million; FY 2010 estimate: \$9.000 million. Consists of two projects: Tech Clearinghouse and Tech Solutions.

Tech Clearinghouse Project – At the end of calendar year 2008, the project established a certified and accredited web-based central resource system of technical information to serve as a one-stop-shop for the dissemination of homeland security science and technology information to Federal, State, local and tribal agencies. The system and associated efforts will encourage and support innovative solutions to enhance homeland security. Along with other outreach efforts (i.e., publication of a monthly newsletter, participation at key First Responder conferences and events), the website will also fulfill Section 313 of the *Homeland Security Act of 2002*. The Tech Clearinghouse will provide: (1) government organizations with information to support procurement and grant guidance decisions; and (2) technology developers with requirements and operational information that can help them develop tools that are more useful. Tech Clearinghouse continually identifies and integrates new sources of relevant information for first responders into its website development.

In FY 2008, Tech Clearinghouse developed a one-stop-shop portal (www.FirstResponder.gov) to showcase other DHS programs that provide services to First Responders, such as the Responder Knowledge Base and Tech Solutions. The program also developed a tool, within this portal, that enables the dissemination of technology information to Federal, State, local and tribal agencies. In FY 2009, the project will incorporate new functions and capabilities into the portal to meet users' requirements and make periodic system upgrades to keep information relevant. In FY 2009, the project plans to establish testing and evaluation standards for technologies developed

by TechSHARE. In FY 2010, the project plans to integrate content from other existing government agency databases such as the Centers for Disease Control (CDC) and FEMA.

TechSolutions Project – Rapidly addresses the technology gaps identified by Federal, State, local, and tribal first responders. Program fields prototypical solutions within 12 months; establish a cost that is commensurate with the proposal but costs less than one million or less per project; and develops a solution that meets 80 percent or more of the identified requirement. First responders are able to submit gaps to the program through the web site, www.TechSolutions.dhs.gov.

In FY 2008, the project, in conjunction with the Infrastructure and Geophysical Division, demonstrated an enhanced 3D-locator prototype capable of locating first responders within three feet of their exact proximity; it initiated prototype development activities for a stand-off patient triage device capable of acquiring vital sign readings from individuals injured at a mass casualty scene; and evaluated a next-generation Self Contained Breathing Apparatus (SCBA) that is lighter and smaller than current systems to increase first responder effectiveness. After the outbreak of wildfires in southern California during the fall of 2007, the program investigated technologies that mitigate risks posed by wildfire-prone regions under an initiative called the Secure Against Fires and Embers (SAFE). The program also investigated technologies that can mitigate the risks associated with the after-effects of wildfires such as soil erosion and mudslides.

In FY 2009, the program will develop a multimodal assessment system capable of collecting sensor data and analyzing it against carefully tested medical algorithms and initiate prototype development for a vehicle-mounted chemical sensor capable of identifying 13 toxic industrial chemicals and reporting the results to a command post via a wireless network. TechSolutions will validate capability gaps and first responder priorities by working with the Inter-Agency Board (which comprises over 1,000 leaders from fire, police, EMS throughout the United States). In FY 2010, the program plans to continue to collect capability gaps received through the TechSolutions website and determine which prototypes to develop and demonstrate. Tech Solutions plans to demonstrate up to 12 prototypes per year, which potentially include: ocular scanning; extremity protection; location orientation using a fire-ground compass; physiological monitoring; brain music therapy; chem/bio exposure detection; and miniaturized chem/bio detectors.

PPA: UNIVERSITY PROGRAMS

	Perm Pos	FTE	Amount
2008 Actual			\$63,715
2009 Enacted			\$50,270
2010 Adjustments-to-Base			(2,000)
2010 Current Services			48,270
2010 Program Change			(2,270)
2010 Request			46,000
Total Change 2009-2010			(4,270)

The Science and Technology (S&T) Directorate requests \$46.000 million for this activity, of this amount \$1.150 million supports the SBIR Program. The decrease of \$4.270 million below the FY 2009 enacted amount represents the cost for the Naval Postgraduate School and no additional funding to support the Centers of Excellence (COEs).

CURRENT SERVICES PROGRAM DESCRIPTION

The University Programs Division engages the academic community to conduct research and analyses to address high-priority homeland security issues and to provide education and training programs to enhance homeland security capabilities. The program brings together the best scientific talent and resources from diverse academic institutions to help solve complex and technologically challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new scientific workforce of homeland security experts. The primary customers for University Programs are the Department of Homeland Security (DHS) S&T divisions, the DHS components, and state and local government agencies.

Increased investments in the Program’s basic research and increased support for students in relevant fields are critical to preserving the U.S.’s strategic and economic security as well as supporting the Secretary’s goals of:

- Protecting the Nation from dangerous people;
- Protecting the Nation from dangerous goods;
- Protecting Critical Infrastructure; and
- Building a nimble and responsive emergency response system and a culture of preparedness.

The University Programs Division carries out its activities through three thrust areas: 1) a coordinated university-based system of DHS Centers of Excellence (COEs), 2) the DHS S&T Educational Programs, and 3) the Minority Serving Institutions programs.

Centers of Excellence Thrust Area – FY 2009: \$36.720 million; FY 2010 estimate: \$34.980 million. Conducts multidisciplinary research in priority DHS mission areas and is aligned to the S&T Directorate’s divisions and their customers. COEs improve understanding of the causes, elements, and consequences of a range of threats from terrorists and natural disasters. The COEs

also support countermeasure, mitigation, and prevention approaches based on both technologies and on human behavior.

The COEs work with and through the S&T divisions and complement other DHS research and development programs including those of Federal laboratories' and federally funded research and development centers (FFRDCs). The COEs take advantage of other relevant Federal agency-sponsored research and provide outcomes useful to Federal, state and local government, private sector, and international partners. The selection process for designating the COEs is highly competitive, peer-reviewed, and merit-based.

Primarily funded through research grants and cooperative agreements, the COEs are building expertise and reach-back capabilities in multi-disciplinary topical areas important to homeland security. Presently, these areas are:

- Risk and economic analysis of terrorism;
- Food system protection and defense;
- Foreign animal and zoonotic disease defense;
- Social origins of and behavioral responses to terrorism;
- Preparedness and response to catastrophic events;
- Advanced microbial risk assessment;
- Advanced mathematical, data and visual analysis;
- Natural disasters, infrastructure protection and emergency management;
- Explosives detection, mitigation and response;
- Maritime, island, remote environment and port security;
- Border security and immigration, and
- Transportation security.

In FY 2008, the program established new five new COEs, whose terms will extend from 2012 to 2014. The five new COEs address:

- Maritime Island and Extreme/Remote Environmental Security
- Explosives Detection, Mitigation, and Response
- Border Security and Immigration
- Natural Disasters, Coastal Infrastructure and Emergency Management, and
- Transportation Security

Additionally, the S&T Directorate extended the Center for the Study of Terrorism and Responses to Terrorism (START), led by the University of Maryland, through FY 2011, based on the results of a comprehensive review of START in FY 2007.

In FY 2009, the program will establish a new Center of Excellence for Command, Control, and Interoperability to run through FY 2015. This COE will address the research and education areas formerly the focus of the Regional Visualization and Analytics Centers and the Discrete Science Centers. Additionally, based on a thorough and objective evaluation in 2008, DHS is extending the Center for Preparedness and Critical Event Response (PACER), at John Hopkins University, through FY 2012.

The current centers include:

1. Center of Excellence for Risk and Economic Analysis of Terrorism Events (CREATE), based at the University of Southern California (www.usc.edu/create)
2. Center of Excellence for Food Protection and Defense (NCFPD), based at the University of Minnesota (www.ncfpd.umn.edu)
3. Center of Excellence for National Center for Foreign Animal and Zoonotic Disease Defense (FAZD), based at Texas A&M University (www.fazd.tamu.edu)
4. Center of Excellence for National Consortium for the Study of Terrorism and Responses to Terrorism (START), based at the University of Maryland (www.start.umd.edu)
5. Center of Excellence for the Study of Preparedness and Catastrophic Event Response (PACER), based at Johns Hopkins University (www.pacercenter.org)
6. Center for Advancing Microbial Risk Assessment (CAMRA), based at Michigan State University, established jointly with the U.S. Environmental Protection Agency (www.camra.msu.edu)
7. Discrete Science Centers (DSCs) led by Rutgers University, with the University of Pittsburg, University of Southern California and the University of Illinois, (www.dydan.rutgers.edu)
8. Regional Visualization and Analytics Centers (RVACs), which partner with the National Visualization and Analytics Center at the Pacific Northwest National Laboratory. The RVACS are located at Pennsylvania State University/Georgia Institute of Technology, University of North Carolina-Charlotte, Purdue University, the University of Washington, and Stanford University.
9. Center of Excellence for Maritime Island and Extreme/Remote Environmental Security collocated at the University of Hawaii and Stevens Institute of Technology
10. Center of Excellence for Explosives Detection, Mitigation, and Response collocated at Northeastern University and the University of Rhode Island; and
11. Center of Excellence for Border Security and Immigration collocated at the University of Arizona at Tucson and the University of Texas at El Paso
12. Center of Excellence for Natural Disasters, Coastal Infrastructure and Emergency Management collocated at the University of North Carolina at Chapel Hill and Jackson State University
13. National Transportation Security Center of Excellence co-located at the University of Connecticut, Texas Southern University, Tougaloo College, Long Island University, University of Arkansas, Rutgers University, and San Jose State University.

Activities conducted through each of these centers are outlined in the following section:

CREATE – Cuts across all six S&T Directorate divisions’ missions, and coordinates activities with the S&T Directorate’s Operations Analysis Office, the Risk Sciences Branch, and the Homeland Security Institute (HSI). CREATE evaluates the risks, costs and consequences of terrorism, and identifies economically efficient investments in countermeasures to improve security and resilience. Research in these areas can contribute significantly to the Department’s ability to identify and select cost-effective options for enhancing national security and minimizing human and economic casualties in the face of a range of hazards, as well as improve DHS’ ability to predict terrorist threats. In FY 2008, CREATE started developing advanced

economic models, with special emphasis on the effects of household, business, and market resilience to terrorism events, and is developing risk assessment models of terrorist threats.

In FY 2009, CREATE will integrate risk and economic models into an overall risk management model that provides support for decisions to invest in countermeasures and allocate homeland security resources. Also in FY 2009, CREATE will extend the terrorism risk assessment framework to incorporate novel experimental approaches and new sources of data. In FY 2010, the Center plans to extend decision analysis methodologies to include dynamic interactions between attackers and defenders; develop specific projects in collaboration with each of the S&T Divisions and the corresponding DHS operational units; develop capabilities for including intelligence data and analysis into decision support tools; extend applications of game theory to homeland security to include dynamic, multi-stage and stochastic games; and develop experimental games as a method for testing alternative theories and models of defender-attacker interactions. Also in FY 2010, CREATE plans to add partners with extensive capabilities in financial risk and economics as well as counter terrorism operators. The synergies with CREATE's existing capabilities as well as those of the START center will create a powerful alliance to predict and counter terrorist attacks.

NCFPD – Aligns with the Chemical and Biological Division. Its mission is to defend the safety of the post-harvest food system by establishing best practices, developing new tools, and attracting new researchers to manage and respond to food contamination events. NCFPD works in system-wide food security, including:

- Supply chain management;
- Food processing protection;
- Detection and diagnostics;
- Public health;
- Disposal and decontamination; and
- Economic impact assessment and risk communication.

This work helps the Department mitigate and counter threats to U.S. agriculture and food. In FY 2008, NCFPD developed prototype food event modeling system now in use by NBACC; developed a prototype of an outline neuro-toxin (BoNT) detection system for low cost/real time detection of BoNT in complex food matrices; and characterized risk of imported foods (China). In FY 2009, NCFPD will extend their analysis of imported food vulnerabilities to global food risk assessment and potential solutions with DHS/FDA/USDA; extended a food transportation model; and further improve the model of food events and multi-state event communication systems. In FY 2010, NCFPD plans to develop a comprehensive information system for biological threats and countermeasures; extend the food event-modeling framework; work on detection in various food matrices; and broaden research on import vulnerabilities.

FAZD – Aligns with the S&T Directorate's Chemical and Biological Division. FAZD's mission is to protect against the introduction of high-consequence foreign animal and zoonotic diseases in the United States, with an emphasis on prevention, surveillance, intervention, and recovery. These diseases could have staggering economic impacts and threaten human health. FAZD is developing a scientific basis for detecting and preventing exotic and zoonotic diseases, which is informing the Department's development of countermeasures and effective control strategies. In FY 2008, the Center developed rapid and accurate methods for detecting and diagnosing

biological agents that could threaten U.S. livestock and poultry, such as Rift Valley Fever (RVF), Avian Influenza (AI), and Foot and Mouth Disease. In FY 2009, FAZD will work on the development of vaccines, antiviral agents, and means to increase resistance against threat diseases: FMD, RVF, Brucellosis, and AI. In FY 2010, the center plans to 1) complete testing and deliver rapid multi-agent field tests for exotic animal diseases; 2) develop prototype host pathogen genetic markers for field use; create the ability to enhance genetic resistance to classes of exotic disease host-pathogen environmental relationships and molecular genetics; and 3) develop second generation scenario and consequence models and use these to provide analyses for third-generation bio-threat risk assessment.

START – Aligns with the S&T Directorate’s Human Factors Division. START provides strategies for intervention against terrorists and terrorist groups, while strengthening the resilience of U.S. citizens to terrorist attacks. The START consortium uses advanced behavioral and social science theories, methods, and data to better understand the origins, dynamics, and impacts of terrorism. Applying this knowledge will provide guidance on how to disrupt terrorist networks, reduce the incidence of terrorism, and enhance the resilience of American society in the face of terrorist threats and natural disasters. Program activities include providing the world’s largest open-source database of terrorist incidents, a Global Terrorism Database (GTD), which enhances our understanding about the occurrences and impacts of terrorism. START will link the GTD to a number of databases that will include data on terrorism using weapons of mass destruction, volatility around the world, and illegal acts committed by extremists in the United States. In FY 2008, the center provided guidance on enhancing societal resilience to terrorist events at the individual, community, and national levels. In FY 2009, START will pilot, revise, and refine a Community Assessment of Resilience Tool, conducting focus groups and interviews among diverse audiences regarding the impact of public communications about terrorist threats. In FY 2010, START plans to continue its work on: 1) Radicalization and Terrorist Group Formation, extending its research to more countries and groups; 2) Terrorist Group Persistence and Dynamics, focusing on improving understanding of how terrorist groups operate, the effectiveness of counterterrorism strategies, and conducting an empirical analysis of IED attacks; 3) Societal Responses to Terrorist Threats and Attacks; 4) Muslim Community Integration: Journey into America; 5) The Role for State Governments in Community Resilience; 6) Potential Populations at Risk from U.S. Chemical Facilities Releases; and 7) Cross-cutting Data Collection and Analysis, including expansion of the Global Terrorism Database (GTD), development of a Quantitative Index of the Public Health Impacts of Terrorism, building Community Resilience through Public Involvement, analysis of Organizational Factors in the Successful Application of ‘Community Engagement’, and identification of Principles for Bioterrorism Preparedness.

PACER – Aligns with the S&T Directorate’s Infrastructure and Geophysical Division. PACER focuses on optimizing our Nation’s preparedness in the event of a high-consequence natural or man-made disaster and develops guidelines to best alleviate the effects of such an event. In the wake of the devastation inflicted by Hurricane Katrina, this center assumes even greater relevance and immediacy. PACER is investigating issues relevant to the theory and practice of emergency preparedness and response to terrorism incidents and natural disasters, including critical decision-making, regional integration of communication and response capabilities, surge capacity, informal and formal response networks, health systems integration, deterrence and prevention, infrastructure integrity, and sensor networks. DHS customers and end-users include

Office of Health Affairs (OHA), the Federal Emergency Management Agency (FEMA), the Office of Infrastructure Protection (OIP) and the hospitals, health departments, and emergency responders. In addition, PACER will engage in joint projects with other DHS University Centers. In FY 2008, PACER developed Electronic Mass Casualty Assessment and Planning Scenarios (EMCAPS), a web-based shareware applet designed around a subset of the Department of Homeland Security planning scenarios to calculate and predict a surge in casualties at the local level. In FY 2009, PACER will identify decision-making approaches and decision support technologies that would improve catastrophic event response. In FY 2010, PACER plans to develop model Memoranda of Understanding (MOUs) for shared resources and services between health care facilities applicable to all acute care hospitals in the United States.

CAMRA – Aligns with the S&T Directorate’s Chemical and Biological Division. The S&T Directorate established CAMRA jointly with the U.S. Environmental Protection Agency to fill critical gaps in the area of microbial risk assessments – answering the question, “How clean is safe?” Following the experience of the anthrax contamination events, the Federal government recognized the need to develop safe standards for cleanup of biological agents of concern (BACs). The CAMRA researchers are developing a scientific basis for standards for BACs in different media – air, water, and on surfaces. In FY 2008, CAMRA completed a single object infectious disease model to redesign an intervention study with the following parameters: advice on sampling strategies; single venue intervention scenario using a single venue model; multiple venue intervention scenarios using the multiple-venue models; and complete the influenza model at the college campus level. In FY 2009 through FY 2010, CAMRA plans to conduct infectious disease models for various agents to assess microbial risks and develop control strategies, assessment-analysis interface, and fate/transport.

Discrete Sciences Centers (DSCs) – Aligns with the S&T Directorate’s Command, Control, and Interoperability (CCI) Division. DSCs represent a collaborative effort with Rutgers University, the University of Southern California, the University of Illinois at Urbana-Champaign, and the University of Pittsburg and the national laboratories, including Lawrence Livermore National Laboratory. In FY 2008, DSCs conducted coordinated research on advanced methods for information analysis and the development of computational technologies to protect the Nation. In FY 2009, the S&T Directorate will transition the activities of the DSCs to a new Command, Control, and Interoperability COE.

Regional Visualization and Analytics Centers (RVACs) – Aligns with the CCI Division and works closely with the National Visualization and Analytics Center (NVAC) at the Pacific Northwest National Laboratory (PNNL). They address issues of synthesizing information and deriving insight from massive, dynamic, ambiguous, and possibly conflicting data sets. The goal of examining data is not merely to acquire information, but rather to be able to understand and inform decision-making. The RVACs research visually based mathematical methods and computational algorithms for handling diverse data and apply the resulting knowledge to anticipate terrorist incidents or catastrophic events. The five current RVACs include Stanford University, the University of Washington, Purdue University, Pennsylvania State University, the University of North Carolina at Charlotte, and the Georgia Institute of Technology. The RVACs are currently coordinating a number of projects with other COEs. In FY 2008, the COE worked with the Port Authority of New York and New Jersey to improve analysis of its data on crimes

and search for evidence of terrorist activity at the ports. In FY 2009, the S&T Directorate will merge RVACs' mission areas into a new Command, Control, and Interoperability COE.

Center of Excellence for Command, Control, and Interoperability – S&T launched this COE in March 2009, following an open competition and selection process in FY 2008. This COE merges activities of the Discrete Sciences Centers and the DHS RVACs and supports the Command, Control and Interoperability division's core activities in the knowledge of management, threat assessment, surveillance and reconnaissance, cyber security, and communications interoperability and compatibility. In FY 2009, the center will provide a set of advanced analytical capabilities for use with the Global Terrorism Database produced and hosted by the START center. In FY 2010, the center plans to develop extensive HS-STEM curricula and research programs to train students in advanced command, control and interoperability related research and analytical methods; and also develop strategy for integration of command, control and interoperability research and analysis with empirical data from other COEs and DHS Components.

Center of Excellence for Explosives Detection, Mitigation, and Response – This COE will conduct research to enhance the Nation's capabilities to prepare for, prevent, mitigate, respond to, and recover from terrorist attacks involving explosives. The COE also develops relevant educational curricula for undergraduates, graduate students and career professionals as well as programs to enlighten secondary school teachers about the scientific foundations and emphasis for homeland security. It also brings teachers and students of all ages into laboratories to participate in actual research and enhance their interest and commitment in homeland security-related professions.

In collaboration with the S&T Directorate's Explosives Division, this COE will provide basic research to advance the technical tools and information that S&T Directorate's customers will need in the future. DHS customers and end-users will include the Chief Medical Officer (CMO), Office of Infrastructure Protection (OIP), Policy Directorate, Transportation and Security Administration (TSA), Immigration and Customs Enforcement (ICE), and State Homeland Security Agencies.

This COE will conduct basic and transformation research in explosive-related areas such as:

- The properties (e.g., chemical, physical, and material) and formulation of explosive materials (including precursors and homemade compounds), as well as materials and/or technologies to mitigate explosives effects (e.g., blast-resistant materials);
- Detection of explosives and explosive devices, including methods to screen people, containers, and other potential conveyances of explosive materials;
- Unconventional approaches (e.g., alternative signatures) to identify indications of threats from explosives or bombers, to include algorithm development for improved detection and/or imaging capabilities and relevant human factors issues; and
- Other effective and efficient countermeasures, particularly ones for use in densely populated urban settings and transportation venues.

In FY 2008, the center developed the infrastructure, operational support, platform, characterization plan, and method for assessing scientific properties of a variety of homemade

explosives and precursor compounds. In FY 2009, the center will conduct workshops to help guide future research directions on novel countermeasure concepts, human factors issues, and improved imaging algorithms. In FY 2010, the center plans to develop a multi-factor approach to detection that will improve technology and the ability to prevent casualties and damage to property. Also in FY 2010, the center plans to obtain first-generation, scientific properties from available technical tools to characterize and test homemade explosives (HME) and precursor compounds.

Center of Excellence for Border Security and Immigration – This center aligns with the S&T Directorate’s Borders and Maritime Security Division. The center provides fundamental research in support of DHS’s goals of strengthening border security, immigration enforcement, and immigration services. DHS customers and end-users include Customs and Border protection (CBP), Immigration and Customs Enforcement (ICE), U.S. Citizenship and Immigration Services (CIS), U.S. Coast Guard (USCG), and State and local agencies. The center will conduct scientific and engineering investigations in basic research that offer the prospect of high-payoff breakthroughs in detecting people and goods, be it legally or illegally, moving across our borders as part of a fully integrated, system-of-systems approach. The S&T Directorate expects this center to provide insight and facilitate breakthroughs in the fundamental science that could improve areas including screening and situational awareness along U.S. northern and southern borders. In FY 2009, the center will conduct research in detection (human, vehicles, and decision support), networks (interoperability, reliability, and C2), fusion (tools and approaches), risk assessment (mitigation and alignment), immigrant populations (methods, metrics and estimates), immigration economics and policies, and governance (law enforcement and international cooperation). In FY 2010, the center plans to, based on insights from research successes, develop corresponding educational curriculum materials in topical areas of greatest promise for long-term research and enduring need.

Center of Excellence for Maritime, Island & Extreme/Remote Environmental Security – Aligns with the Borders and Maritime Security Division. This COE provides fundamental research to support DHS’ and other agencies’ maritime security goals, including improved interdiction capabilities, enhanced capacity to respond to catastrophic events, particularly for U.S. islands and extreme environments, and a more secure and efficient marine transportation system. DHS customers and end-users include the NPP, CMO, DHS OIP, FEMA, USCG, and State Homeland Security Agencies. The center conducts integrated policy, legal, scientific, and engineering studies in detection and monitoring of people and goods moving through the U.S. maritime domain. It also conducts research to improve our ability to plan for and respond to natural and terrorist threats in the maritime realm. Finally, it supports long-term mitigation and recovery strategies for catastrophic events, particularly those that impact U.S. islands, territories, and remote areas, as part of an integrated systems approach. DHS also expects this COE to develop meaningful courses of study for students, both at the graduate and undergraduate levels, and for career professionals involved with these issues. In FY 2008, the center established a network of premier academic research university partners in order to develop the platform and methods for technical assessments of maritime island and extreme/remote environment security issues. In FY 2009, the COE will establish mature taskings that will address diverse areas including: wide-area surveillance techniques and harbor security. In FY 2010, the COE plans to

continue to assess the impacts of global policies and procedures, such as vulnerabilities within the global supply chain.

Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management

– This center conducts research leading to profound and far-reaching improvements in the Nation’s preparedness and ability to respond to, mitigate against, and recover from catastrophic natural events in coastal areas. DHS anticipates that this COE’s discoveries will ultimately save American lives, property and economic activities, both regionally and nationally. In addition, the Center will develop educational curricula focused on natural disasters that will serve as a firm and enduring foundation for producing the next generation of highly educated, creative, and innovative researchers to help solve existing and future DHS challenges relating to natural disasters in coastal areas. This center conducts basic and transformational research in areas related to coastal region issues, including:

- Natural hazards of the coastal region (e.g., flooding from hurricanes or storm surges);
- Innovative, comprehensive, regional flood-water management, to include technical approaches/options for preventing, mitigating, or recovering from flooding incidents, and better understanding of land-water interactions;
- Approaches to securing public-sector coastal infrastructure and meeting other public-sector needs in crisis incidents; and
- Improved emergency management and response processes in the areas of supply chain networks, evacuation modeling and organizational collaboration during catastrophic events.
- Coastal region planning, governance, resilience, and unified comprehensive risk-based decision support tools, particularly for natural disasters warranting emergency measures.

In FY 2008, the center established a network of premier academic research universities as partners and identified niche roles for each area. In FY 2009, the center will develop and test improved computer models of atmosphere-water-land interactions during hurricanes that generate predictions of storm surge size and location more accurately. In FY 2010, the center plans to launch new graduate and undergraduate natural disasters curricula in multiple programs including Engineering, Public Safety Management, Applied Science, and Environmental Health.

The National Transportation Security Center of Excellence – Cuts across all six S&T Divisions and DHS component organizations, but is particularly responsive to the needs of TSA, the Office of Infrastructure Protection, the U.S. Coast Guard activities at ports, and these agencies’ partners. This COE is initiating collaboration with the Transportation Security Laboratory and the Maritime COE. It addresses the technology and research needs associated with securing the Nation’s infrastructure and protecting the people who use it. In FY 2008, the COE worked with a number of DHS partners to develop a detailed, thoroughly reviewed, work plan and initiated research, education and training projects in accordance with the completed work plans for each university. NTSCOE research projects address 4 major challenges: Identification of most likely targets through threat analysis and other assessments, Development of technology and implementation strategies aimed at enhancing the security and monitoring of the most likely targets, Development of advanced multi-functional material technologies that will be ductile, blast resistant, self-healing and self-energetic and Development of coordination and effective communications networks for Emergency Response and Crisis Management. In FY 2009, the

center will develop extensive homeland security science, technology, engineering and mathematics (HS-STEM) curricula and research programs to train students in advanced science and technology related to transportation security. In FY 2010, the center plans to extend and further implement the results of the research projects to support the evolving needs of DHS and its partners in the areas of transportation security.

Multi-Center Priority Project – Because the COEs span a wide range of DHS-related areas of scientific research and engineering, University Programs serves a critical role in assuring that cross-cutting, overlapping and novel research areas are coordinated across researchers, research sponsors, and federal, state and local end users. This program is a strategic effort to link COEs that have common research interests to national laboratories and DHS programs with related R&D interests. The intent of this workshop-based program is to avoid unnecessary and unintentional duplication of effort while addressing complex research issues that otherwise might “fall between the cracks.” This program conducts several types of workshops. The first type focuses on crosscutting topics suggested by S&T Directorate divisions and DHS components, connects researchers with Federal, State and local end users, and identifies gaps that the research community has not addressed. The second type of workshop focuses on strengthening communication and coordination of research among the DHS COEs, to avoid duplication. The third type of workshop brings together COEs to share information and address common issues such as education, transition, and management issues. In FY 2008, the program sponsored workshops on First Responder Communication, Community Resilience, Consequence Modeling, and COE Education programs. In FY 2009, this program will sponsor workshops on technology transition for COEs, Anomaly Detection, COE Education, and Risk Assessment Modeling with Adversarial Behavior.

Education Programs (formerly Scholars and Fellows Program) Thrust Area – FY 2009: \$8.131 million; FY 2010 estimate: \$6.000 million. This program invests in high-performing science and engineering students or professionals in the United States to develop the next generation of homeland security science and technology leaders. This thrust funds students, scholars, and faculty drawn from postsecondary, graduate, and professional levels of science and engineering disciplines that directly support the S&T Directorate’s divisions and the Department’s mission. Activities in this thrust area include DHS Scholarships and Fellowships, HS-STEM Career Development Grants, American Association for the Advancement of Science (AAAS) Fellowships, and partnerships with the Naval Postgraduate School, the National Defense University and the U.S. Coast Guard Academy, which provide advanced science and technology education to DHS and other career federal employees.

Scholarships and Fellowships Programs – This program provides scholarships for undergraduates and fellowships for graduate students pursuing homeland security-related science, technology, engineering, or mathematics (HS-STEM) degrees. The program competitively selects science, mathematics, and engineering undergraduate and graduate students. DHS has identified sixteen topical areas in which it will support graduate and undergraduate education to include: Explosives Detection, Mitigation and Response, Social, Behavioral, and Economic Sciences, Risk and Decision Sciences, Human Factors Aspects of Technology, Chemical Threats and Countermeasures, Biological Threats and Countermeasures, Food and Agriculture Security, Transportation Security, Border Security, Immigration Studies, Maritime and Port Security,

Infrastructure Protection, Natural Disasters and Related Geophysical Studies, Emergency Preparedness and Response, Communications and Interoperability, and Advanced Data Analysis and Visualization. The purpose of the program is to provide educational support and relevant internship and employment opportunities to diverse and highly talented individuals in order to enhance the scientific leadership in areas important to DHS. The program focuses on building a high quality and diverse talent pool of public-service-oriented scientists and engineers who will be committed to the Department's mission and working on homeland security problems and challenges at all levels. DHS requires supported students to serve one 10-week summer internship and one year in an approved HS-STEM venue. Student and scholar researchers perform work at more than 28 DHS-affiliated venues including DHS and the national laboratories and DHS components such as the U.S. Coast Guard and the Office of Intelligence and Analysis (I&A).

The program includes the DHS S&T Career Development grants program, which provides funding to support scholarships and fellowships at institutions, including the COEs that have made a commitment to develop HS-STEM curricula and fields of study. It also includes the awarding of two Ph.D. fellowships, starting with the Class of 2009, to qualified graduating U.S. Coast Guard Academy (USCGA) cadets to attend any of the COEs in HS-STEM areas relevant to the U.S. Coast Guard's mission.

The program also includes agreements with the Naval Postgraduate School (NPS), the National Defense University (NDU), and the USCGA to provide high-priority S&T education to DHS employees. NPS is initiating a PhD program in homeland security science and technology disciplines. This program will build on the existing research strengths of NPS and its existing partnerships, as well as newly developed collaboration with the DHS COEs. The new program will provide opportunities for DHS and other Federal employees to pursue doctoral studies with a commitment to return to their sponsoring Federal agency and work in their chosen HS-STEM areas, and to take advantage of courses, certificates, and research projects developed at the DHS COEs. In FY 2008, the project initiated programs in one or two science and engineering disciplines and established partnerships with several of the most mature COEs.

The agreement with NDU will establish a master's program in Science and Technology Leadership that will give rising stars in DHS components the training needed to fully exploit scientific research and technology for the benefit of their agencies. This program will be initiated in the Fall 2009 semester and piloted with the Federal Emergency Management Agency (FEMA). In FY 2010, NDU plans to expand this program to other DHS components.

The agreement with the USCGA, DHS' only institution of higher education, will establish a Center for Scholarship and Innovation, which will enable USCGA faculty and students to engage with a range of scientists on mission-critical R&D projects. The program plans to initiate the center in spring of 2010.

Minority Serving Institutions (MSIs) Thrust Area – FY 2009: \$4.163 million; FY 2010 estimate: \$3.870 million. Improves the capabilities of MSIs to conduct research, education, and training in areas critical to homeland security and to develop a new generation of scientists capable of advancing homeland security goals. In FY 2008, University Programs extended its

MSI programs to provide Scientific Leadership Awards to MSI institutions to engage and develop early-career faculty and provide student support as well as research, education, training, and curriculum development. In addition, it continued the Summer Research Team Program, which provides opportunities for MSIs to conduct research at COEs and form partnerships. In FY 2009, the program will expand its focus to HS-STEM workforce development at DHS, State and local agencies, national laboratories and COEs. In FY 2010, the program plans to further refine successful programs, develop more internships, and identify more career opportunities in areas of importance to DHS.

IV. Program Justification of Changes

**Department of Homeland Security
Science and Technology Directorate
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Border and Maritime

Strategic Goal(s) & Objective(s):
 Goal 1: Protect Our Nation from Dangerous People
 1.1. Control Our Borders and Protect Our Interior

PPA: Border and Maritime

Program Increase: Positions _____ FTE _____ Dollars \$7,131

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$33,050
Program Increase									7,131
Total Request			\$28,664			\$33,050			\$40,181

Description of Item

The FY 2010 program increase will allow the Borders and Maritime Security Division to fund the Maritime Security program and the Urban Tunnel Detection project within the BorderTech project. The Borders and Maritime Security Division will develop and transition tools and technologies that improve the security of our Nation’s borders and waterways without impeding the flow of commerce and travelers. Working closely with its operational customers to identify and generate the best technologies for securing U.S. borders, including ports-of-entry and vast stretches of remote terrain and waterways – with the ultimate goal of stopping threats before they enter the United States. The primary Federal customers and end-users for the Borders and Maritime Security Division are the Department’s Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE), U.S. Coast Guard (USCG), and Transportation Security Administration (TSA).

Justification

The threat of terrorist entry into the United States – along with illegal immigration, organized crime, and illegal activity – puts the security and integrity of the Nation’s borders at extreme risk. Vast financial resources and sophisticated criminal networks provide smugglers with access to highly lethal weapons, explosives, state-of-the-art communication, and night vision

equipment. This puts law enforcement officers on both sides of the border at high risk. Additionally, the relentless and successful smuggling of aliens and contraband leaves the borders vulnerable to both criminal activity and potential terrorist entry. The reduction and elimination of these vulnerabilities will further increase the security of the border and lower the risk of a successful terrorist attack.

The technologies and systems developed by the Maritime Technologies program will help to ensure that border security assets are used efficiently and effectively and will enable law enforcement to access to robust and reliable information when they need it.

These programs support research and development that will provide advanced detection, identification, apprehension, and enforcement capabilities along the maritime borders. The additional funding will allow the S&T Directorate to fund the Maritime Technologies program, which will support a wide range of capability gaps generated through the DHS S&T Capstone IPT process. United States Coast Guard (USCG) provided the majority of the requirement gaps, along with Customs and Border Protection (CBP), Transportation Security Administration (TSA) and Immigration and Customs Enforcement (ICE). Major project areas include the following:

Sensors and Surveillance Project – This project addresses, documents, and demonstrates visual and non-visual technologies for monitoring the maritime border. Visual technologies provide an eyes-on capability that enables agents to verify visually if an activity is illegal. Non-visual technologies provide low-cost, long-endurance monitoring to detect and track objects that are not captured by cameras. The project includes the following visual and non-visual technologies:

- Self-Propelled Semi-Submersible (SPSS) Threat Project - SPSSs are low profile vessels with most of its hull situated beneath the waterline to avoid detection. Data indicates this is becoming a rapidly growing threat to transport illegal contraband (i.e. drugs, humans, terrorists, WMD) into the USA. This threat is difficult to counter due to the vessels unique low profile design and large remote operating area. A specialized sensor is needed with a wide area detection capability to counter this growing maritime threat.
- Affordable Wide-Area Surveillance (WAS) Capability - demonstrates persistent and WAS commercial off the shelf/government of the shelf (COTS/GOTS) capability to explore Concept of Operations (CONOPS) and data integration issues associated with the detection, tracking and classification of vessel traffic 12-60+ miles offshore;
- Advanced Geospatial Intelligence (AGI) Technical Exploitation - demonstrates a processing and exploitation capability that provides wide-area surveillance of the offshore maritime environment;
- Port and Coastal RADAR Improvement - documents RADAR performance, maintainer/operator proficiency, and recommended improvements, and implements a prototype RADAR system enhanced for harbor and 0-20nm offshore to detect, track, and identify vessels in the port and coastal region;
- Port/Harbor Underwater Change Detection and Hull Inspection - assesses technologies for surveying the ambient underwater seascape and to address the pros/cons of a drive-over hull detection capability to detect anomalies;

- Offshore Deepwater Buoy and Vessel Tracking Program Pilot (VTP) - conducts a pilot program which uses buoys for detection and classification of vessels and relays that data to the VTP program for cueing and correlation with other sensors; and
- Small Boat Harbor Surveillance Study/Pilot - assesses near term technologies for tracking small boats in a port environment then demonstrates the improved situational awareness through an operational test/pilot program.

Situational Awareness and Information Management Project – This project plans to provide law enforcement agents the ability to know instantaneously when a threat presents itself at the maritime border and to provide required information quickly to decision makers and security forces. These functions are performed through an arrangement of personnel, equipment, communications, and facilities as well as the procedures agents employ in operations. The project will include:

- Covert Illegal Contraband Tracker - provides the ability to track illegal contraband to its final location after being detected by law enforcement linking illegal shipments to the organizations that are smuggling them;
- Boarding Team Communication - enhances the USCG's ability to more quickly, safely, and effectively board and inspect vessels by providing boarding teams continuous, reliable, inter-deck, team-to-ship, and team-to-command center communications platform for voice & data;
- Automated Scene Understanding and Automated Target Recognition - improves efficiency and effectiveness of the watchstanders/agents by autonomously detecting prohibited, suspicious, and anomalous behaviors based on self learning of normal behaviors or operator generated rules; and
- Advanced Situational Awareness and Collaboration Tools – assesses and develops improvements to current situational awareness (SA) and collaboration tools to improve ability of command and control and SA centers across USCG and Port Partners to share information and collaborate when not collocated.

BorderTech Project– This project was initiated in FY09 for the development, integration and testing of sensor technologies in an operational environment to provide in-the-field capabilities, improving mission effectiveness and agent safety. This project will develop, demonstrate, and test unproven technologies as a risk reduction activity for the SBI Network (SBI*net*). It will include:

- Urban Tunnel Detection Basic Research –investigates the geophysical characteristics of urban border regions including the uniqueness of all types of tunnels and underground voids as well as the overall detection effectiveness of each. The threat posed by tunneling is a serious and growing concern for United States' national security. Detection of tunnels requires a combination of both direct and indirect methods to determine the shape, size, and position of the tunnel. Many of the current detection capabilities have been developed and employed over the years with limited success. Most were not developed based on first principles but are modifications of existing equipment to detect land mines and identify oil deposits. This basic research will identify the best methods for tunnel detection success. In FY 2010, the project plans to research and distinguish the

geology of the different key urban border regions, and will identify technologies and methods with the greatest potential for detecting tunnels.

Impact on Performance (Relationship of Increase to Strategic Goals)

These programs align to the following DHS Strategic Goals and Objectives:

Goal 1.1: Control our borders and protect our interior

1.1.1 Deploy a mix of infrastructure, technology, and personnel on the Southwest border to ensure all illegal activity along the border is detected and result in interdictions and apprehensions. Support a comprehensive plan and deployment strategy to address security along the Northern Border and Great Lakes.

1.1.2 Deploy maritime and air awareness capabilities and regulatory programs to identify, track, and intercept, if necessary, vessels and airplanes capable of bringing a catastrophic threat device across US borders.

1.1.3 Build the capability to integrate surveillance assets of DHS components as well as the Department of Defense, Interior, US Geological Survey and other related Federal agencies to unify operational awareness with near real-time information sharing.

1.1.4 Ensure interoperability and information/data sharing between DHS and other federal law enforcement components and screening and credentialing programs.

Goal 3.2: Improve maritime safety and stewardship

3.2.1 Continue to protect our ports and waterways and the marine environment against threats from pollution, environmental degradation, the spread of invasive species, and the illegal harvesting of marine resources.

3.2.2 Advance the safety of commercial and recreational activities in the maritime domain using focused prevention and response programs and activities.

Program Increase 2: Chemical and Biological

Strategic Goal(s) & Objective(s):

- Goal 2: Protect Our Nation from Dangerous Goods
- 2.2 Prevent, detect, and respond to biological attacks

PPA: Chemical and Biological

Program Increase: Positions FTE Dollars \$5,000

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$201,800
Program Increase									5,000
Total Request			\$260,273			\$200,408			\$206,800

Description of Item

The increase in FY 2010 supports the Rapid Test Methods for High Volume Analysis project. This project will identify key areas for improvement in laboratory analytical methods for high-throughput and on site analysis of suspect food products. The overall project will target contamination concerns, including chemical, biological, and radiological contaminants, which pose high risk to the American public or economy by undermining the safety of the agriculture/food infrastructure and supply. Investment in this improved technology area will enable more rapid detection of food contamination; provide prompt assessment of the scope of risk presented during a food contamination incident; support enhanced ability for epidemiological trace back investigations, and will ultimately minimize the impact of food contamination events to both public safety and the economy.

The funds requested will address two objectives. The first is the conduct of a systems study to outline priority chemical, biological, and radiological agents for food contamination, assess key points in infrastructure where testing would make a difference in preventing widespread disease, and estimate the cost of implementing, to include the price point at which industry can accept a device, its maintenance, and use in practice. The second objective is to augment funding to develop a high-throughput, multiplex analysis device for biological threats which enables the detection of a wider range of agents than possible today in formats that are representative of numerous types of samples, to include clinical, environmental, and other matrices. The funding increase will ensure solutions to detect agents in food are addressed.

Justification

Recent chemical, biological, and radiological terrorism risk assessments conducted by DHS with interagency participation have highlighted significant risks to the US population through consumable vectors such as food and water. The level of risk posed through these means is not effectively mitigated by current investments across the government. This effort seeks to contribute substantially to the mitigation of risks through the food domain by developing high-throughput testing techniques that are directed to agents of potential terrorist interest as well as agents that are occasionally found and monitored in food products. The target of a dual-use capability will foster the adoption of these tools within the food industry.

Schedule / Implementation plan / Capability increases / Timeline of deliverables:

- Systems study report identifying highest leverage investments – FY10
- Develop high throughput lab methods for top five targets – FY11
- Quantitative demo of lab-based methods – FY12
- Independent lab test real-time diagnostic methods – FY13
- Operational test/evaluation real-time diagnostics – FY15

Impact on Performance (Relationship of Increase to Strategic Goals)

These programs align to the following DHS Strategic Goals and Objectives:

Goal 2: Protect Our Nation from Dangerous Goods

2.2 Prevent, detect, and respond to biological attacks

Program Change 3: Command, Control, and Interoperability

Strategic Goal(s) & Objective(s):

- Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
- 4.1. Strengthen Response and Recovery

PPA: Command, Control and Interoperability (CCI)

Program Change: Positions ____ FTE ____ Dollars \$5,374

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$74,890
Program Change									5,374
Total Request			\$66,171			\$74,890			\$80,264

Description of Item

The FY 2010 program increase will enable CCI to fund Cyber Security research and development that will be applied towards cyber security priorities identified in the Comprehensive National Cybersecurity Initiative (CNCI). Specifically, this effort will develop enduring leap-ahead technologies to secure the Nation’s critical information infrastructure (energy, transportation, telecommunications, banking and finance, and others) and networks.

Justification

The \$5.374 million increase will enable the S&T Directorate to fund Cyber Security R&D initiatives to secure the Nation's critical cyber infrastructure. As outlined in the President’s *National Strategy to Secure Cyberspace* (NSSC), our Nation’s economy and security depend on information technology and the information infrastructure. The increase will encourage research, development, and application of tools and techniques for analyzing software to detect security vulnerabilities associated with our Nation’s critical infrastructure.

Impact on Performance (Relationship of Decrease to Strategic Goals)

The program aligns to the following DHS Strategic Goals and Objectives:

- Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
- 4.2. Strengthen Response and Recovery

Program Increase 4: Explosives

Strategic Goal(s) & Objective(s):

Goal 3: Protect Critical Infrastructure

3.1. Protect and Strengthen the Resilience of the Nation's Critical Infrastructure and Key Resources

PPA: Explosives

Program Increase: Positions _____ FTE _____ Dollars \$24,660

Funding Profile

	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$96,149
Program Increase									24,660
Total Request			\$116,883			\$96,149			\$120,809

Description of Item

The increase in FY 2010 includes \$10,000,000 to support the High Throughput Air Cargo Screening project. The High Throughput Air Cargo Screening project is developing technologies for TSA. The requested funding will support the objective to screen 100% of air cargo by developing high throughput screening technology suitable for cargo screening applications and filling the current technology capability gap. The funding supports the development and integration of multiple cargo screening technologies to reduce personnel costs and impact on the aviation industry by using automated, effective, and efficient equipment.

The increase in FY 2010 also includes \$14,660,000 to support Counter-IED Research, of which \$5,000,000 will specifically address Transportation Security Integrated Product Team identified gaps in mass transit. This funding will enable the Directorate to build upon existing research programs and improve large threat mass detection for large areas, such as mass transit and special events.

Justification

These efforts support the President's homeland security initiatives of safeguarding mass public transportation and improving airline security.

The High Throughput Air Cargo Screening project is critical to maintaining the safety of air travel against explosive threats concealed inside of air cargo. Further, the project will help to ensure that air cargo has a level of security comparable to that of checked baggage. Many of the core technologies that have been proposed for screening air cargo were developed for checked baggage screening but have not been implemented with the level of integration and performance characteristics required for high throughput cargo screening. As a result, each technology and

approach has significant limitations in terms of detection, throughput, sensitivity, reliance on a human operator, and operational costs. This funding will enable TSA to screen 100% of air cargo by supporting the development of effective and operationally acceptable technologies to detect explosive materials within a wide range of perishable and non-perishable commodities in break bulk, palletized, and containerized configurations. If not identified, the explosive threat could cause catastrophic damage to commercial airliners and disrupt the nation's supply chain and economy.

The High Throughput Air Cargo Screening Program is expected to begin deployment in FY 2012 with continued developments thereafter.

The developed technology will:

- Reduce reliance on human screeners to detect artfully concealed threats;
- Provide automated equipment to screen air cargo to increase throughput;
- Reduce the government's oversight costs;
- Reduce the costs of industry compliance to air cargo screening regulations; and
- Provide additional layers of security to enhance and verify air cargo supply-chain integrity.

The Person-Borne Improvised Explosive Devices (PBIED) Detection Project (formerly Suicide Bomber Improvised Explosive Device Detection) includes research on underlying science for advanced approaches to IED and explosive detection and develops advanced technologies to detect explosive threats to the Nation's aviation, rail, and ship transportation systems. Activities in this program will:

- Improve existing explosive detection methods;
- Develop new detection methods for screening people, baggage and cargo; and
- Ensure freedom of movement for people and commerce.

PBIED investigates technologies capable of detecting all types of explosive threats such as homemade, commercial, and military explosives. The FY 2010 increase will enable the project to support additional high-priority projects identified by DHS customers to address high-priority mass-transit C-IED gaps identified in the Transportation Security IPT.

Increased funding for this existing project will expand and strengthen the C-IED portfolio. This will enable the Division to execute strategic plans to deliver effective technology-based solutions that reach across both the explosives delivery kill chain and technology generations. Increased funding will:

- Accelerate technology development and hasten the deployment of counter-IED capabilities in the Trace detection.
- Focus support on the R&D of technologies for detection and reduced risk of the increasing threats from person-borne IEDs.

Impact on Performance (Relationship of Increase to Strategic Goals)

This program aligns to the following DHS Strategic Goal:

Goal 3: Protect Critical Infrastructure

3.1. Protect and Strengthen the Resilience of the Nation's Critical Infrastructure and Key Resources

This program supports research and development that will expand and strengthen the portfolio and enable S&T to develop technology capabilities that customers have identified as critical.

Program Change 5:

Human Factors/Behavioral Sciences

Strategic Goal(s) & Objective(s):

- Goal 1: Protect Our Nation from Dangerous People
- 1.3. Strengthen Screening of Travelers and Workers

PPA:

Human Factors

Program Change: Positions ____ FTE ____ Dollars \$2,627

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$12,460
Program Change									2,627
Total Request			\$13,889			\$12,460			\$15,087

Description of Item

The increase in FY 2010 reflects additional support for Human Factors’ efforts in the Suspicious Behavior Detection and Human Systems Research and Engineering Programs. This will allow Human Factors to continue and expand activities that will strengthen screening of travelers.

Justification

To support efforts that address high-priority capability gaps identified by customers through the Capstone Integrated Product Team (IPT) for People Screening and the Technology Oversight Group (TOG), chaired by the Deputy Secretary, the Human Factors/Behavioral Sciences Division plans to increase efforts in the Suspicious Behavior Detection program.

Human Factors is developing a simulation to train behavior-based, standoff detection of hostile intent in support of screening and interviewing interactions at air, land, and maritime portals. This project will leverage the interactive and observational behavioral indicators, as analyzed in the Hostile Intent Detection – Automated Prototype and Cross-Cultural Validation of SPOT projects, respectively. Requested funds will allow Human Factors to transition validated cross-cultural upgrades to the classroom and simulation-based training.

The Human Factors/Behavioral Sciences Division is also increasing efforts in Human Systems Research and Engineering which incorporates human systems integration activities into the contracts, planning and execution of DHS research and technology development to ensure that human systems integration analysis, design and test activities are conducted throughout the system life-cycle. This program also conducts research in the area of Human Systems Integration to better understand the underlying cognitive, behavioral, and physiological processes that affect human performance. Requested funds will help Human Factors evaluate existing brain-based sensor technologies in a simulated training situation.

Impact on Performance (Relationship of Decrease to Strategic Goals)

This program aligns to the following DHS Strategic Goal:

Goal 1: Protect Our Nation from Dangerous People

1.3. Strengthen Screening of Travelers and Workers

Program Increase 6: Infrastructure and Geophysical

Strategic Goal(s) & Objective(s):

Goal 3: Protect Critical Infrastructure

3.1. Protect and Strengthen the Resilience of the Nation’s Critical Infrastructure and Key Resources

PPA: Infrastructure and Geophysical

Program Increase: Positions FTE Dollars \$6,926

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$37,816
Program Increase									\$6,926
Total Request			\$52,424			\$75,816			\$44,742

Description of Item

The overall increase in the FY 2010 request will support sustaining current R&D efforts through the Infrastructure and Geophysical Division.

Justification

A continuation of current services in FY 2010 supports Infrastructure and Geophysical research and development (R&D) on the 17 Critical Infrastructure/Key Resource (CIKR) sectors identified in the *National Infrastructure Protection Plan (NIPP)*. This meets the requirements set forth in the Homeland Security Presidential Directive (HSPD) 7, *Critical Infrastructure Identification, Prioritization, and Protection*. In the area of preparedness and response, all programs will be compliant with the National Incident Management System (NIMS) and the National Response Plan (NRP), and in accordance with all HSPDs that enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents of all sizes.

This specifically funds Infrastructure and Geophysical programs that address the following high priority capability gaps identified in the customer-led Infrastructure Protection and Incident Management Capstone IPTs.

Infrastructure Protection IPT Gaps

- Analytical tools to quantify interdependencies and cascading consequences as disruptions occur across critical infrastructure sectors

- Effective and affordable blast analysis and protection for critical infrastructure; improved understanding of blast failure mechanisms and protection measures for the most vital CIKR
- Advanced, automated, affordable monitoring and surveillance and interdiction technologies
- Effective rapid response and recovery for most vital CIKR
- Development and testing in an operational environment of a prototype of a temporary recovery transformer that is easily transported, and easily installed

Incident Management IPT Gaps

- Simulation training and planning tools for Emergency Managers
- First responder tracking and locating during an incident
- First responder tracking and physiological status during an incident
- Total Situational Awareness and Unified Common Operating Picture during an incident

Funded efforts, specifically in Response and Recovery Technologies, Modeling Simulation and Analysis, and First Responder Technologies will improve the protection of our critical infrastructure by providing technologies for hardening these vital critical infrastructure assets and for rapid response and recovery for critical infrastructure assets to limit damage and consequences and allow for normal operations to be resumed more quickly than would otherwise be possible.

Impact on Performance (Relationship of Increase to Strategic Goals)

This program aligns to the following DHS Strategic Goal:

Goal 3: Protect Critical Infrastructure

3.1. Protect and Strengthen the Resilience of the Nation's Critical Infrastructure and Key Resources

The Infrastructure and Geophysical Division will improve our critical infrastructure by providing technologies for hardening and rapid response and recovery for critical infrastructure assets. The increases to Preparedness and Response and Infrastructure Protection will allow the Division to meet the Secretary's goal to protect critical infrastructure.

Program Change 7:

Innovation

Strategic Goal(s) & Objective(s):

Goal 1: Protect Our Nation from Dangerous People

- 1.1. Control Our Borders and Protect Our Interior
- 1.2. Enforce and Reform Immigration Laws
- 1.3. Strengthen Screening of Travelers and Workers

Goal 2: Protect Our Nation from Dangerous Goods

- 2.1. Prevent, Detect, and Respond to Biological Attacks
- 2.2. Prevent, Detect, and Respond to Chemical and Explosives Attacks
- 2.3. Prohibit the Introduction of Illicit Contraband

Goal 3: Protect Critical Infrastructure

- 3.1. Protect and Strengthen the Resilience of the Nation’s Critical Infrastructure and Key Resources

Goal 4: Build a Nimble, Effective Emergency Response System and Culture of Preparedness

- 4.1 Ensure Preparedness
- 4.2 Strengthen Response and Recovery Capability

PPA:

Innovation

Program Change: Positions ____ FTE ____ Dollars \$11,000

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$33,000
Program Change									11,000
Total Request			\$46,515			\$33,000			\$44,000

Description of Item

The increase in FY 2010 reflects support for two new starts and existing projects as they mature. Existing project efforts include demonstrating technologies for protecting levees, mass transit tunnels, the electric grid in Manhattan, NY; and detecting and distinguishing between harmful and benign liquids at airport checkpoints, and detecting a person’s intent to cause harm based on physiological and behavioral cues. The FY 2010 request allows the S&T Directorate to start two new projects in the area of multi-modal tunnel detect, where capabilities are currently non-existent to inadequate; and low cost biological detection, which could result in huge gains in capability for DHS.

Justification

Innovation focuses on homeland security R&D that could lead to significant technology breakthroughs that would greatly enhance DHS operations. Innovation and the S&T Divisions

jointly execute these projects that take a different approach to technology development, seeking high rewards by taking more risks relative to the rest of the S&T Directorate. The major thrust areas of this PPA are:

Homeland Innovative Prototypical Solutions (HIPS) Projects

In FY 2010, the increase in Innovation will support operational demonstrations, particularly in the following HIPS projects:

Future Attribute Screening Technologies Mobile Module (FASTM2) Project – Develops a prototype screening facility and a suite of real-time, non-invasive sensor technologies to rapidly, reliably, and remotely detect behavior indicative of malintent (the intent or desire to cause harm). The system will be capable of measuring both physiological and behavioral signals to automatically make a probabilistic assessment of malintent based on sensor outputs and advanced fusion algorithms. Federal, State, and local authorities to increase the accuracy and validity of people screening at special events, airports, and other secure areas may use the fully developed FAST system in primary and secondary screening environments. Indicators will be measured using culturally independent and non-invasive sensors.

In FY 2010, the project plans to identify, integrate, and demonstrate continued advances in physiological and behavioral screening as well as new sensor technology derived from previous research efforts. The project plans to demonstrate the effectiveness of the mobile module in the laboratory and operational environments, such as a special security event or transportation portal.

Resilient Electric Grid (REG) Project – Demonstrates High-Temperature Superconducting (HTS) technologies for reliable distribution and protection of electrical power. REG will protect critical, electric-power dependent infrastructure (like the Manhattan Financial District) from the cascading effects of a power surge on electrical grids. Much of the existing electric grid is highly susceptible to brown outs and black outs, and current methods for preventing power outages and restoring power are often costly, slow and require extraordinary efforts. Existing technologies and planned mitigations also require a lot of space, which is problematic in dense urban areas. This project will demonstrate key components of a future “micro grid” that will instantaneously reduce power surges and allow for multiple alternative pathways of power delivery, providing resilience against natural disasters and deliberate attacks. Across the country, a resilient electric grid will produce savings of billions of dollars each year in the course of normal operations through gains in efficiencies, and these benefits would multiply in the case of deliberate attacks and as power grids continue to grow. After a successful laboratory demonstration, the S&T Directorate will implement a REG prototype in Consolidated Edison’s electric grid in the Borough of Manhattan. Following a successful in-grid prototype, Consolidated Edison will incorporate REG in other parts of the New York City electric grid, including the financial district, in order to protect the economic infrastructure of American business. REG will simultaneously transition to other regions and power companies to protect critical infrastructure.

In FY 2009, the project will conduct the 25-meter cable demonstration at ORNL. In FY 2010, the project plans to manufacture the cable to be inserted into the Manhattan electric grid and

conduct testing to address AC losses. The project will also demonstrate a stand-alone FCL, which is a significant technological advancement and could be installed in the grid as an alternative to the relatively high-risk FCL cable.

If REG is successful, Consolidated Edison will deploy the cable developed by REG in New York City. The technology will also transition to other utility providers and benefits critical infrastructure protection in dense, urban populations.

Rapid Liquid Component Detector (MagViz) Project – Uses ultra-low-field Magnetic Resonance Imaging (MRI) technology to screen baggage for liquid explosives. To mitigate the liquid explosives threat, airline passengers currently must pack liquids or gels (such as certain toiletries and medicines) in containers that are 3 ounces or smaller. Those containers must be placed in a 1-quart-sized, clear plastic, zip-top bag; and only 1-bag-per-traveller is allowed. These are known as “3-1-1 bags,” which undergo an X-ray inspection and possibly secondary screening using multiple methods, such as visual inspection. The goal of MagViz is to eliminate the 3-1-1 rule and allow passengers to place liquids in their carry-on baggage. MagViz will scan and identify individual materials that may be packaged together or separately as they go through the scanning process and evaluate them against a database that will differentiate between those items considered safe for carrying onto an aircraft (e.g., benign liquids and gels like mouthwash, toothpaste, etc.) and harmful ones. The intent is for the detection of liquids in baggage to be non-contact and to occur at the same rate as current X-ray machines, thus not hindering passenger throughput.

In FY 2010, the project plans to continue building the magnetic characterization database of liquids and demonstrate the capability of MagViz to seamlessly screen segregated liquids (without the 3-1-1 bag constraint) in an operational environment and subsequently evaluate termination or transition options.

Levee Strengthening & Damage Mitigation Project – Develops techniques to (1) strengthen levees through natural covers or engineered armoring in order to prevent levee failure by soil erosion or breaching; (2) rapidly and remotely detect the condition of a levee; and (3) rapidly repair failure locations.

The FY 2010 plan would support testing of the Portable Lightweight Universal Gasket (PLUG).

High Impact Technology Solutions (HITS) Projects

In FY 2010, the increase in Innovation will support demonstrations, particularly in the following HITS projects:

Resilient Tunnel Project – Seeks approaches to address critical vulnerabilities in U.S. transportation tunnels. Prior assessments have revealed that terrorists using improvised explosive devices (IEDs) could exploit certain weaknesses to cause catastrophic failure of a tunnel. The project will expand upon the analyses performed to date and identify alternative technical solutions that could be applied to mitigate the vulnerabilities. The project focuses on designing an inflatable tunnel plug to protect mass transit tunnels from fires, smoke, and

flooding. In FY 2008, the project initiated a partnership with the Washington Metropolitan Area Transit Authority (WMATA) and completed a technical and operational requirements document for an inflatable tunnel plug; a specific vulnerability assessment was also completed to inform requirements. Small-scale and full-scale laboratory test tunnels were constructed to facilitate testing of inflatable plug prototypes. Several scale model plugs were designed to test different plug geometries, and the project selected the most promising design for construction of a full-scale tunnel plug. The full-scale tunnel plug was subjected to laboratory testing and then demonstrated in an operational WMATA subway tunnel in August 2008. The demonstration illustrated that a full-scale plug can be inflated quickly and efficiently in a real-world transit environment and that the plug effectively seals against the tunnel walls.

In FY 2010, the project plans to conduct a full-scale demonstration of a second-generation tunnel plug based on the WMATA and the Port Authority of New York and New Jersey's (PANYNJ) requirements.

Cell-All Ubiquitous Chem/Bio Detect Project – Examines proofs-of-concept for integrating miniaturized chemical and biological agent detectors into personal devices, such as cellular telephones, in order to create a widely distributed network for detection, classification, and notification in the event of a chemical release, and with possible extensions to detect chemical components of some biological agents. Individual device owners on the network would control the detection and transmission of the data, sensor timing, and global positioning satellite (GPS) location information. The goals of this project include significant improvement to chemical and biological detectors' integration, size, costs, power, maintenance, durability, and response characteristics.

In FY 2008, the project conducted research for concept development. In FY 2009, the project will develop laboratory prototypes. One will leverage the National Aeronautics and Space Administration's (NASA) expertise with novel gas sensor architectures for manned space missions. The second involves the use of porous silicon based detection devices integrated into a common phone component. A third effort examines device interfacing, emerging commercial sensor designs, and explores the development of an overall concept of operations for successful sensor applications developed under this program and lays the groundwork for this technology to be more widely available to future sensor designs developed under other Government or commercial programs. In FY 2010, the project will demonstrate a concept of operations and several technologies in a multi-phone environment.

Biometric Detector Project – Develops rapid, non-contact, three-dimensional fingerprint scanner technologies that will allow DHS to collect high-quality fingerprints at screening checkpoints with minimum impact on throughput. Currently the fingerprinting process is slow, and converting contact fingerprints to a digitally stored record is time consuming and can require several attempts. Biometric Detector's goal is to have a less intrusive technology that produces a much higher success rate at capturing fingerprints the first time and with far greater detail, which will allow for increased speed and accuracy in records matching and identification. In FY 2008, the project began prototype development of three different, but complementary contactless single-finger scanning technologies whose demonstrations will occur in FY 2009. Based on the demonstration results, the project plans to down select among the technologies to develop a

multi-finger contactless device and conduct a proof-of-concept demonstration. Should these demonstrations prove successful, the project plans to continue to develop a non-contact scanner for the entire hand and demonstrate the biometric detector prototypes in the field in FY 2010.

New Innovation Projects:

The FY 2010 request allows Innovation to start two new projects in areas that have the potential for huge gains in capabilities:

Multi-modal Tunnel Detect Project – No single technology can detect tunnels in all environments. This project will combine magnetic, seismic, acoustic, radio frequency, and other complementary sensor modalities to detect tunnels in differing and complex geophysical conditions. Multi-modal Tunnel Detect will develop prototypes to 1) improve the identification and characterization of geophysical conditions found in areas of greatest interest along the border; 2) uncover technological dependencies with respect to location; and 3) detect clandestine tunnels. The goal is to develop new border security system technologies for reliable detection of clandestine tunnels for a variety of geophysical environments. If successful, this program will deliver new border security options to DHS.

Very Low Cost Bio Agent Detect Project – Decreases cost and improves efficiency of high-specificity real-time pathogen detection and characterization; conducts comparative experiments between competing approaches; and conducts field pilots within the homeland security community to validate cost and efficiency models. In FY 2010, the project plans to analyze emerging pathogen detection/characterization capabilities and develop low cost models. The project plans to build laboratory prototypes for low cost sensing packages.

Impact on Performance (Relationship of Decrease to Strategic Goals)

This program aligns to the following DHS Strategic Goal:

Goal 1: Protect Our Nation from Dangerous People

- 1.1 Control Our Borders and Protect Our Interior
- 1.2 Enforce and Reform Immigration Laws
- 1.3 Strengthen Screening of Travelers and Workers

Goal 2: Protect Our Nation from Dangerous Goods

- 2.2 Prevent, Detect, and Respond to Biological Attacks
- 2.3 Prevent, Detect, and Respond to Chemical and Explosives Attacks
- 2.4 Prohibit the Introduction of Illicit Contraband

Goal 3: Protect Critical Infrastructure

- 3.1 Protect and Strengthen the Resilience of the Nation's Critical Infrastructure and Key Resources

Goal 4: Build a Nimble, Effective Emergency Response System and Culture of Preparedness

- 4.1 Ensure Preparedness
- 4.2 Strengthen Response and Recovery Capability

This program supports research and development designed to achieve technology breakthroughs in DHS capabilities – programs range from detecting tunnels (Borders/Maritime), strengthening and protecting mass transit tunnels and levees (Infrastructure/Geophysical), biological and chemical detection (Chem/Bio) to detecting a person’s intent to cause harm before he/she acts (Human Factors).

Program Change 8: Laboratory Facilities

Strategic Goal(s) & Objective(s):

- Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
- 4.1. Ensure Preparedness

PPA: Laboratory Facilities

Program Change									25,803
Total Request			\$109,358	124	124	\$161,940	130	130	\$154,500

Description of Item

The FY 2010 program change reflects an increase of \$25.803 million to support additional storage space at the Transportation Security Laboratory, Pacific Northwest National Laboratory (PNNL) construction, and operations and maintenance (O&M) at DHS S&T laboratories.

Justification

In FY 2009, Congress gave DHS S&T \$25.000 million for the PNNL Capability Replacement Laboratory (CRL). In FY 2010, S&T plans to meet its commitment according to the terms of the Memorandum of Understanding (MOU) with the Department of Energy (DOE). This project is a multi-year construction effort to build a research laboratory campus used by several DHS elements (e.g., S&T, DNDO, CBP and the USCG) relying on the PNNL 300 Area for mission-critical technical work. The national laboratory infrastructure to be built provides upgrades for one aging facility in the PNNL “300 Area,” and replacements for others that will be razed and/or decommissioned in regulatory-driven site cleanup actions circa 2012. The CRL project will preserve these at-risk laboratories. DHS agreed to contribute 25% of the \$224.000 million construction cost. DHS’s portion is \$56.000 million. As of FY 2009, DHS has received \$44.000 million to fund this effort.

Prior to FY 2007: \$2.000 million

FY 2007: \$2.000 million

FY 2008: \$15.000 million

FY 2009: \$25.000 million

Total: \$44.000 million

The FY 2010 program increase also supports Infrastructure Upgrades at DHS S&T laboratories to ensure that they do not reach a point where dilapidated infrastructure or the lack of sufficient infrastructure prohibits conducting needed research and development. These capital upgrades ensure that DHS S&T laboratories meet modern laboratory standards and avoid an unmanageable and unaffordable situation in which numerous key facilities require upgrades at once.

The first project under Infrastructure Upgrades will add storage space, including explosive storage bunkers, at TSL so that the laboratory can continue to support increasing system development testing requirements. TSL currently rents space off-site to store explosives, which it cannot continue to do with the anticipated growth in the need to validate the performance of explosives detection systems. In FY 2010, this project will begin the construction of needed storage space which will eliminate the need to rent space off-site.

Adequate storage space at TSL is an immediate need, but it is also the first step in developing needed additional capabilities at the laboratory in the future. Currently, the laboratory operates second and third shifts and must rotate equipment amongst various laboratory cells to conduct testing. Any disruptions in these activities impact testing schedules and result in delays in delivering technology solutions to DHS customers.

The FY 2010 program also allows the laboratories to address increases in operational expenses due to several factors including: anticipated higher O&M costs related to the aging facilities at both Plum Island Animal Disease Center (PIADC) and Transportation Security Laboratory (TSL); new O&M and Security contracts that are being re-competed; increased operational costs for NBACC as it becomes operational; and anticipated increases in security, rent, electricity, contractor labor rates (particularly in the New York, Connecticut, and New Jersey areas), and other O&M at the laboratories.

Impact on Performance (Relationship of Decrease to Strategic Goals)

This program aligns to the following DHS Strategic Goal:

Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
4.1. Ensure Preparedness

The requested FY 2010 funding will enable the Division to continue to support its DHS customers, both by providing FTE support and by facilitating several construction projects. Once complete, these laboratories will enable cutting edge research that will ensure the preparedness of the Nation against a variety of chemical, biological, agricultural, and other attacks.

Program Change 9: Transition

Strategic Goal(s) & Objective(s): Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness

4.1. Ensure Preparedness

PPA: Transition

Program Change: Positions ____ FTE ____ Dollars \$14,000

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$31,134
Program Change									14,000
Total Request			\$46,330			\$28,830			\$45,134

Description of Item

The increase in FY 2010 reflects support for Transition’s efforts in First Responder Technologies.

Justification

The Transition Office supports the transition and transfer of S&T Directorate technologies to customers. Departmental components’ science and technology requirements are coordinated through the Capstone Integrated Product Teams (IPT). To directly focus on the needs of First Responders, the Transition Office is adding a functional homeland security area to the product transition program. To support additional efforts that address high-priority capability gaps identified by First Responders, Transition plans to increase its activities to stand up a First Responder Technologies program and IPT.

Requested funds will help the First Responder Technologies IPT address capability gaps identified by Federal, State, local and Tribal First Responders. Requested funds will also allow S&T to design, develop, and test technologies for First Responders. The program will assess technologies for usability and commercialize them to make the technology solutions available across all First Responder communities.

Impact on Performance (Relationship of Increase to Strategic Goals)

This program aligns to the following DHS Strategic Goal:

Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
4.1. Ensure Preparedness

Program Change 10: University Programs

Strategic Goal(s) & Objective(s):

- Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
- 4.1. Ensure Preparedness

PPA: University Programs

Program Change: Positions FTE Dollars (\$2,270)

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$48,270
Program Change									(2,270)
Total Request			\$63,715			\$50,270			\$46,000

Description of Item

The FY 2010 decrease represents no additional funding to support the Centers of Excellence (COEs) in particular, the expansion of the Transportation Security (TS) COE.

The Transportation Security COE cuts across all six S&T Divisions, but is particularly responsive to the needs of TSA, the Office of Infrastructure Protection, the US Coast Guard activities at ports, and these agencies’ partners. This COE is initiating a significant collaboration with the Transportation Security Laboratory, as well as the Maritime COE. It addresses the technology and research needs associated with securing the Nation’s infrastructure and protecting the people who use it.

Justification

The Implementing Recommendations of the 9/11 Commission Act of 2007 (H.R. 1, Sec. 1205) mandated the creation of the Transportation Security COE. The FY 2008 Appropriations bill provided additional funding for the center and funds were realigned in FY 2009. However, this is no longer a viable option FY 2010 through FY 2014. S&T reallocated funding from the Divisions to support this COE, effectively preventing S&T from delivering prototypes and solutions to its customers as quickly as it might have otherwise. University Programs has internally realigned and strived to build an appropriate portfolio of COEs aligned to S&T Divisions and offices; in order to retain the balance it has established, the program is unable to accommodate the Transportation COE in FY 2010 through FY 2014. University Programs is also opposed to using money from Educational Programs to support the COE; supporting education is a vital part of University Programs’ mission, as well as the Under Secretary’s vision for the future of S&T. The funding requested for the center would enable it to continue the work it started in FY 2008 and FY 2009.

This work has the potential to lead to developments in explosives detection, cargo security, port security, and infrastructure protection that will make the current system safer, while reducing the impact on private citizens and industry. Without funding, University Programs will be unable to support the mandated center.

Impact on Performance (Relationship of Increase to Strategic Goals)

Without funding, University Programs will be unable to support the mandated center and allow the Division to meet the Department's goal to build a nimble, effective emergency response systems and a culture of preparedness.

Program Change 11: Homeland Security Institute

Strategic Goal(s) & Objective(s):

- Goal 4: Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
- 4.1. Ensure Preparedness

PPA: Homeland Security Institute

Program Change: Positions _____ FTE _____ Dollars (\$5,000)

Funding Profile

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$5,000
Program Change									(5,000)
Total Request			\$0			\$5,000			\$0

Description of Item

The Homeland Security Institute is a specialized studies and analysis Federally Funding Research and Development Center (FFRDC) established by the Homeland Security Act of 2002. The Institute provides a unique source of in-depth knowledge of homeland security mission objectives, operational concepts and requirements, strategies, resources, systems and technologies. The Institute’s mission is to assist DHS and its operating elements in addressing important homeland security issues, particularly those requiring scientific, technical and analytical expertise. The research agenda covers the spectrum of homeland security issues and activities, including threat trends and adversarial perspectives, information sharing and communications interoperability, border and transportation security, law enforcement, infrastructure protection, preparedness, emergency response, and training.

Justification

The S&T Directorate will continue to fund this FFRDC out of the Transition PPA.

Impact on Performance (Relationship of Increase to Strategic Goals)

This program aligns to the following strategic goal:

- Goal 4 Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
- 4.1. Ensure Preparedness

NATIONAL BIO AND AGRO DEFENSE FACILITY

1. Project Description, Justification, and Scope

The proposed National Bio and Agro Defense Facility (NBAF) is an integrated foreign animal and zoonotic disease research, development and testing facility that will support the complementary missions of DHS and the United States Department of Agriculture (USDA). Currently, this research occurs at Plum Island Animal Disease Center (PIADC), where researchers have contributed significantly to protecting against Foreign Animal Diseases (FAD) for the past 50 years. The Homeland Security Act of 2002 (Public Law 107-296) transferred the operation of the Plum Island Animal Disease Center (PIADC) from the United States Department of Agriculture (USDA) to DHS. Discussions between DHS and USDA on a coordinated agricultural research strategy, as called for in the Homeland Security Act of 2002 and Homeland Security Presidential Directive 9 (HSPD-9), "Defense of United States Agriculture and Food (January 30, 2004)", revealed a capability gap that must be filled by an integrated research, development, test, and evaluation infrastructure for combating agricultural and public health threats posed by Foreign Animal Diseases, emerging, and zoonotic diseases in livestock. The DHS Science and Technology (S&T) Directorate is responsible for addressing this gap.

Accordingly, DHS proposed to build NBAF to bridge the capability gap and to comply with HSPD- 9. Co-locating DHS with USDA's Animal and Plant Health Inspection Service - Veterinary Services (APHIS-VS) and Agricultural Research Service (ARS) at NBAF would increase capabilities in research, diagnostics, and responses to outbreaks in agricultural animals (i.e., cattle, swine, and sheep) and meet the requirements of HSPD-9 by providing a domestic, modern, integrated high-containment facility that includes Biosafety Level (BSL) - 2, BSL-3E, BSL-3Ag, and BSL-4 laboratories for an estimated 350 scientists and support staff to safely and effectively prevent the accidental or intentional introduction of animal diseases of high consequence into the United States.

PIADC, the current facility built in the 1950s, is nearing the end of its lifecycle, and does not contain the necessary BSL facilities to meet the NBAF research requirements. NBAF would fulfill the need for a secure U.S. facility that could support collaborative efforts among researchers from Federal and state agencies, academia, and international partners to perform necessary research at the required BSLs 3 and 4. Additionally, as discussed in the recent Report of the Commission on the Prevention of Weapons of Mass Destruction (WMD) Proliferation and Terrorism (December 2008), the United States should continue to undertake a series of mutually reinforcing domestic measures to prevent agro and bioterrorism.

DHS began the site selection process in January 2006. In July 2007, DHS identified five site alternatives that surpassed others in meeting the DHS evaluation criteria: and determined that they, along with Plum Island, would be evaluated in the Environmental Impact Statement (EIS) as reasonable alternatives for the proposed NBAF. The Record of Decision (ROD) issued in January 2009 identified Manhattan, Kansas as the location to build NBAF, a decision based on the numerous strengths that were evident when evaluating the Manhattan, Kansas site against various evaluation criteria. The EIS also included a comprehensive risk assessment of FMD.

The proposed NBAF consists of two laboratory facilities and four outbuildings. One of the two laboratories would be the primary research building with BSL-2, BSL-3E, BSL-3Ag, and BSL-4 capabilities and support space. The other laboratory, to be located adjacent to the primary laboratory, would be for small-scale vaccine and reagent production. The outbuildings include a central utility plant, an entry guardhouse, a central receiving facility, and parking. The area needed for the NBAF is approximately 500,000 square feet.

DHS plans to complete detailed design of the facility and begin site preparation including central utility plant construction in FY 2010. NBAF building construction is planned to begin in FY 2011 with completion scheduled for 2015.

2. Significant Changes

Since the submission of the FY 2009 budget, DHS has completed an EIS and issued a ROD identifying Manhattan, Kansas as the site for NBAF construction. The total cost has been updated to account for site-specific costs at the Kansas University campus. The total NBAF project cost is \$725.000 million, including prior year funds. In addition, DHS will decontaminate and decommission (D&D) PIADC and transfer assets to NBAF which requires an additional \$190.000 million. To offset these costs, Congress authorized DHS to sell Plum Island and use the proceeds for NBAF construction and remediation of the island. With congressional approval, DHS plans to accept in-kind contributions from the State of Kansas, which has proposed to provide land (at no cost) and \$110.000 million of in-kind contributions. DHS S&T

plans to request funding for NBAF building construction and Plum Island remediation in FY 2011. Construction is expected to be completed in FY 2015.

The sale of Plum Island will likely take place in FY 2011, and the purchase agreement should allow current operations to continue until eventual transfer of functions upon completion of the new NBAF facility.

3. Project Schedule

NBAF Project Milestones	Fiscal Quarter and Year				Total Estimated Completion Cost (\$000)	Total Project Cost (\$000)
	Work Initiated	Work Completed	Physical Construction Start	Physical Construction Complete		
Management, Planning, Pre-Site Conceptual Design (CD), & Technical Support	1Q FY 2005	2Q FY 2015			25,000	25,000
Feasibility Study/Pre-Conceptual Design	2Q FY 2006	3Q FY 2006			3,000	3,000
Site Characterization & Cost Analysis	1Q FY 2008	4Q FY 2008			2,000	2,000
EIS/Record of Decision	1Q FY 2008	2Q FY 2009			5,000	5,000
Facility Detailed Design	3Q FY 2009	4Q FY 2010			53,000	53,000
CMc Involvement in Design	4Q FY 2009	4Q FY 2010			5,000	5,000
Site Preparation and Central Utility Plant (CUP) (GMP #1)			4Q FY 2010	2Q FY 2011	110,000	110,000
Physical Construction (GMP #2)			3Q FY 2011	4Q FY 2014	510,000	510,000
Facility Commissioning	4Q FY 2009	1Q FY 2015			12,000	12,000
Begin Occupancy	2Q FY 2015					
Total					\$725,000	\$725,000
PIADC D&D Project Durations	Work Initiated	Work Completed	Physical Construction Start	Physical Construction Complete	Total Estimated Completion Cost (\$000)	Total Project Cost (\$000)
Preliminary Planning & Development	2Q FY2009	4Q FY2012			4,000	4,000
Management	1Q FY2012	3Q FY2017			25,000	25,000
Transition	2Q FY2014	4Q FY2017			90,000	90,000
Closure Activities	3Q FY2014	4QFY2017			71,000	71,000
Total					190,000	190,000
Grand Total NBAF Construction + PIADC Transition/D&D					\$915,000	\$915,000

**4. Schedule of Project Funding
(Dollars in Thousands)**

	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011 - 2014	Total
Appropriation	12,000	23,000	11,000	35,600	36,312	687,088	805,000
Kansas In-Kind Contribution ⁽¹⁾					60,000	50,000	110,000
Obligation (planned)	12,000	23,000	11,000	35,600	36,312	687,088	805,000
Expenditure (planned)	1,100	7,000	6,900	59,000	33,500	507,500	615,000
Obligation (projected for In-Kind)					60,000	50,000	110,000
Expenditure (projected for In-Kind)					33,500	76,500	110,000
PIADC Transition/D&D						190,000	190,000
NBAF Project Expenditures⁽²⁾							
Planning & Administration Phase	1,100	7,000	6,900	3,000	4,000	13,000	35,000
Design Phase (Detailed Design)				53,000			53,000
CMc Involvement in Design					5,000		5,000
Site Preparation and CUP (GMP#1)					57,000	53,000	110,000
Physical Construction (GMP #2)						510,000	510,000
Commissioning Phase				3,000	1,000	8,000	12,000
Total NBAF Project Expenditures	1,100	7,000	6,900	59,000	67,000	584,000	725,000
PIADC Transition/D&D						190,000	190,000
Grand Total							\$915,000

(1) The Kansas in-kind contribution proposal offers up to \$110.000 million for site infrastructure and utility improvements for the Manhattan Campus site. Of this amount, Kansas State University will execute \$5.000 million (per the proposal) on activities to upgrade existing utility infrastructure outside of the proposed NBAF site. The S&T Directorate plans to execute \$105.000 million and is in the process of examining the terms of the agreement.

(2) Expenditures include Kansas in-kind contributions of \$110.000 million.

5. Cost Estimate Detail and Changes
(Dollars in Thousands)

Cost Estimate Detail and Changes	Current	Previous
	Estimate	Estimate
Detailed Breakdown of Project phases: (same major categories as above with additional detail)		
Construction:		
Management, Pre-site CD, Planning & Technical support	\$35,000	\$12,000
Construction – General and CMc Involvement in Design	\$515,000	\$390,000
Construction (Site-Specific) - Site Preparation and CUP	\$110,000	N/A
Commissioning	\$12,000	\$4,000
Contingencies: (Built into Cost Estimates)		
Other Costs:		
Design Costs	\$53,000	\$45,000
NBAF Project Total	\$725,000	\$451,000
PIACD Transition/D&D	\$190,000	\$0
Grand Total	\$915,000	\$451,000

In addition to accounting for PIADC Transition and D&D, the S&T Directorate has updated the cost estimate for NBAF to include site-specific cost at the Kansas University campus. As stated in the DHS *Report to Congress in Response to Senate Appropriations Report, 109-273 (December 2006)*, “the preliminary budget of \$451,000,000 is based on estimated facility size of 500,000 square feet and does not include the cost of infrastructure or site specific characteristics or any decommissioning of PIADC.” The original estimate also does not include the cost of security (which varied depending on the site selected) and information technology (IT) to meet maturing DHS requirements.

6. Method of Performance

The NBAF project consists of three phases: design; site preparation and central utility plant (CUP) construction; and NBAF building construction. For accountability and in accordance with sound project management principles, the program management team will track all of the project’s activities in an organizational work breakdown structure (WBS) to manage cost, scope, and schedule. The DHS S&T Directorate’s Office of National Laboratories (ONL), DHS Federal Law Enforcement Training Center (FLETC) Biocontainment Branch, the Construction Contractor (known as the Construction Manager as Contractor (CMc)), and the Architecture and Engineering (A/E) team will form the integrated project team and will coordinate inputs into the WBS. The project execution plan includes the following components:

- Program Organizational Structure;
- Contraction Administration Oversight;

- Quality Assurance;
- Status and Cost Reporting;
- Communications with Stakeholders;
- Cross-Task Linkages;
- Risk Management; and
- Cost Controls.

A robust, well-integrated plan that includes a WBS is an essential ingredient in effective project management and will provide the source data for internal and external reporting requirements. Such a plan provides a detailed blueprint for project execution and facilitates project coordination, control, reporting, and communications between team components, and all stakeholders.

The FLETC Biocontainment Procurement Branch (FLETC-BPB) will provide day-to-day management and execution of the NBAF design and construction activities and will lead an experienced team of contracting officers, technical managers, and procurement specialists. The NBAF Project Management Office (PMO) will maintain an integrated project will maintain constant communication and coordination among the integrated project team members, cooperating agencies, stakeholders, regulatory agencies, senior leaders, and other local and regional interests. Project communication will occur both internally and externally. Additionally, the ONL Director and NBAF Project Director, may establish other critical interfaces throughout the development process.

The NBAF Project Director and the PMO will implement project controls, address reporting requirements, and produce documents to support this project. Project controls include an integrated project schedule, earned value management (EVM) system, and project communication portal. The EVM will effectively integrate the project's scope, schedule, and cost elements to assess and optimize project planning and performance. The NBAF project will meet all reporting requirements. Reports include the following:

- Monthly Project Report to Project Director;
- Monthly Periodic Report to DHS Headquarters (HQ) Acquisition Program Management Division (APMD);
- Quarterly Construction Update to Management Directorate;
- Quarterly Probability of Program Success (PoPS) Report to DHS HQ APMD;
- Quarterly Risk Report;
- Yearly Office of Management and Budget (OMB) Exhibit 300;
- Cost Accounting and Status Reports;
- Hill Briefings; and
- On-going availability of the integrated project schedule (IPS).

The NBAF Steering Committee, consisting of individuals from the integrated project team, will execute the NBAF Risk Management Plan. The Committee will identify, manage, track, and control risks in order to minimize adverse impacts that would jeopardize mission success.

The Acquisition Strategy for NBAF includes the involvement of a CMc early in the process, prior to actual construction. This approach improves the project decision-making framework, resulting in a blended perspective on the design and associated construction cost estimates. At pre-determined stages of the project, the CMc and A/E will participate in cost reconciliation exercises that will result in the CMc submitting a Guaranteed Maximum Price (GMP) for a firm fixed price agreement for the work.

7. Related Annual Funding Requirements (Dollars in Thousands)

The estimated annual operating and support cost for NBAF is \$44.500 million and is based on analysis presented in the NBAF Site Cost Analysis (July 2008) document, which used actual cost data from an existing facility comparable to the size of the proposed NBAF. The A/E and CMc will further refine this estimate upon completion detailed design.

8. Budget Allocation to Programs

Complete the table below with the total project budget allocation to programs.

Program	Allocated Budget (\$000)	
	FY 2009	FY 2010
Laboratory Facilities	\$35,600	\$36,312
Total	\$35,600	\$36,312

9. Compliance with applicable Public Laws, Regulations, Standards and Executive Orders

Identify and certify compliance with all applicable laws, regulations, standards, and executive orders to this project.

- DHS, in coordination with the U.S. Department of Agriculture (USDA), is fulfilling requirements from HSPD-9: *Defense of the United States Agriculture and Food* (January 2004) by constructing the National Bio and Agro-defense Facility (NBAF) to replace the Plum Island Animal Disease Center (PIADC).
- The FY 2006 Appropriations House Report directed S&T to pursue NBAF:
 - The Committee recognizes that the Department of Homeland Security’s Plum Island facility will need to be replaced in the near future and that other potential locations need to be explored.
 - NBAF will provide safe, secure, and state-of-the-art agriculture biocontainment laboratories that research and develop diagnostic capabilities for foreign animal and zoonotic diseases. It will house biosecurity level (BSL) 3 and 4 laboratories. There is currently no BSL 4 lab for livestock in the United States.

- DHS completed a 3-year, multi-agency competitive site selection process including an Environmental Impact Statement (EIS) assessing the impacts of accidental release of Foot and Mouth Disease (FMD) on the mainland.
- DHS and USDA will evaluate the existing Biosecurity Research Institute (BRI) at Kansas State University during the design phase which may affect the final project cost. Final security requirements and design criteria may also affect design and construction costs.
- In the FY 2009 Appropriations Act, Section 540, Congress directed the Secretary of DHS to liquidate Plum Island and use the proceeds of the sale to fund construction and other costs associated with establishing NBAF (P.L. 110-329) including:
 - Site acquisition;
 - Construction of the facility;
 - The sale of the island including expenses incurred by GSA;
 - Environmental remediation of Plum Island; and
 - Other related costs related to the construction of NBAF and the sale of the island.
- Prior to passage of the Food, Conservation, and Energy Act of 2008 (H.R. 6124 [2008 Farm Bill]) which became law on May 22, 2008, the United States Code (21 U.S.C. Section 113a) stipulated that live Food and Mouth Disease Virus (FMDV) could not be studied on the U.S. mainland unless the Secretary of Agriculture made a determination that such study was necessary and in the public interest and issued a permit for such research to be conducted on the mainland. Section 7524 of the 2008 Farm Bill directs the Secretary of Agriculture to issue a permit to the Secretary of Homeland Security for work on the live FMDV at any facility that is a successor to the Plum Island Animal Disease Center and charged with researching high-consequence biological threats involving zoonotic and foreign animal diseases. The permit is limited to a single successor facility. On December 18, 2008, the Secretary of Homeland Security, Michael Chertoff sent a letter to the Secretary of Agriculture, Ed Schafer requesting that a permit be issued if a mainland site is selected. On January 9, 2009, DHS received a letter from Secretary Schafer that affirmed USDA's intention of complying with Congressional direction to issue a permit for the movement and use of live FMDV at the NBAF.

H. PPA Budget Justification

PPA Mission Statement

The Borders and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers. The division works closely with its operational customers to identify and generate the best technologies for securing U.S. borders including ports-of-entry as well as vast stretches of remote terrain and waterways – with the ultimate goal of stopping threats before they enter the United States.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$132	\$240	\$300	\$60

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. A travel increase of \$60,000 is included.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$2,570	\$2,415	\$2,500	\$85

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. A program increase of \$85,000 is included.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$1,051	\$12	\$15	\$3

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. A program increase of \$3,000 is included.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$1,955	\$230	\$250	\$20

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The request includes a program increase of \$20,000.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & maintenance of facilities	\$50	\$0	\$0	\$0

Operation and maintenance of facilities includes obligations for operation, maintenance, repair, and storage of equipment, when done by contract.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$22,906	\$30,153	\$37,116	\$6,963

Research and Development includes costs for contracts for the conduct of basic and applied research and development. A program increase of \$6,963,000 is included in the FY 2010 request.

PPA Mission Statement

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures. The division carries out its activities through three thrust areas: Agriculture, Biological, and Chemical.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Benefits	\$22	\$0	\$0	\$0

Temporary Subsistence Allowances includes payments for actual subsistence expenses incurred by the employee and/or members of his or her immediate family while occupying temporary quarters upon the employee's permanent transfer.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$672	\$917	\$917	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request is the same as that for FY 2009.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Transportation of Things	\$10	\$0	\$0	\$0

Transportation of Things includes contractual obligations for the transportation of things (including animals), for the care of such things while in process of being transported, and for other services incident to the transportation of things.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$10,047	\$8,358	\$8,158	(\$200)

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. A program decrease of \$200,000 is included. This decrease is a result of a decrease in Systems Engineering and Technical Assistance (SETA) support.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$9,519	\$189	\$1,289	\$1,100

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. A program increase of \$1,100,000 is included to support training and development for FY 2010.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchases of Goods and Services from Government Accounts	\$13,192	\$1,982	\$982	(\$1,000)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. This decrease is the result of decreased administrative fees for contracts processed outside of the Office of Procurement Operations (OPO).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research & Development	\$224,673	\$188,962	\$194,954	\$5,992

Research and Development includes costs for contracts for the conduct of basic and applied research and development. A program increase of \$5,992,000 is included to support current program activities.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies and Materials	\$648	\$0	\$500	\$500

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. A program increase of \$500,000 is included.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$206	\$0	\$0	\$0

Obligations for the purchase of personal property of a durable nature—that is, property that nominally may be expected to have a period of service of a year or more after being put into use without material impairment of its physical condition. Includes obligations for service in connection with the initial installation of equipment when performed under contract.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$1,285	\$0	\$0	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Interest and Dividends	\$1	\$0	\$0	\$0

Payment to creditors for the use of moneys loaned, deposited, overpaid, or otherwise made available and the distribution of earnings to owners of trust or other funds.

Total Command, Control & Interoperability		\$66,171	\$74,890	\$80,264	\$5,374

PPA Mission Statement

The Command, Control, and Interoperability (C2I) Division focuses on significantly improving operable and interoperable communications for emergency responders, the security and integrity of the Internet, and the development of automated capabilities that “connect the dots” to recognize potential threats. The division’s mission is to transform new and promising concepts into real operational capability through the judicious blending of new technologies and current capabilities. C2I receives its requirements from the following: partners in Federal, State, local, tribal emergency response; DHS operational components in planning for, detecting, and responding to all hazards; and private sector partners who own, operate, maintain, and use much of the Nation’s cyber infrastructure.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$414	\$375	\$400	\$25

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The \$25,000 increase will support newly hired Federal employees.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$5,180	\$3,055	\$4,500	\$1,445

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. A program increase of \$1,445,000 is included to support existing R&D activities.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Other Services	\$474	\$0	\$0	\$0

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Purchase from Government Accounts	\$1,941	\$256	\$0	(\$256)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The reduction to the Purchase from Government Accounts object class is a result of the reclassification of expenses, the program decrease of \$256,000 is included to reflect reduced costs of executing programs that are ending and the shift of R&D funding to higher priority projects in the Directorate as a result of the Capstone IPT process.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Research and Development	\$57,789	\$71,204	\$75,364	\$4,160

Research and Development includes costs for contracts for the conduct of basic and applied research and development. Research and Development includes an increase of \$4,160,000 for Cyber Security.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Supplies & materials	\$5	\$0	\$0	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Grants/Subsidies/Contributions	\$368	\$0	\$0	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

Total Explosives		\$116,883	\$96,149	\$120,809	\$24,660

PPA Mission Statement

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure. This includes passenger-, baggage-, and cargo-screening technologies; blast-resistant aircraft construction; integrated protective systems for high-value facilities; and the detection and defeat of Improvised Explosive Devices. The requested amount will help address Explosives' strategic challenges of detecting non-nuclear explosives and disrupting terrorist attacks.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2008 to 2009 Change
Benefits	\$52	\$0	\$0	\$0

Temporary Subsistence Allowances includes payments for actual subsistence expenses incurred by the employee and/or members of his or her immediate family while occupying temporary quarters upon the employee's permanent transfer.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$563	\$601	\$800	\$199

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request includes an increase of \$199,000 for Explosives. The increase supports efforts in the Air Cargo and Person-Borne Improvised Explosive Device (PBIED) Programs.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Transportation of Things	\$15	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

Total, Infrastructure/Geophysical		\$52,424	\$75,816	\$44,742	(\$31,074)

PPA Mission Statement

The Infrastructure and Geophysical Division's mission is to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection. The division develops technical solutions and reach-back capabilities to improve State, local, tribal, and private sector preparedness for and response to all-hazards events impacting the U.S. population and critical infrastructure. The Division also models and simulates the Nation's critical infrastructures to determine how various scenarios will affect each sector, provide decision support tools to guide decision makers in identifying gaps and vulnerabilities, and develop predictive tools and methods to aid in preparing for and responding to various catastrophes.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$187	\$299	\$325	\$26

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The increase of \$26,000 will accommodate R&D efforts.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$2,397	\$1,886	\$2,060	\$174

Advisory and assistance services include services acquired by contract from non-Federal sources (such as the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request includes an increase of \$174,000. The increase over FY 2009 is for IPA and SETA to support R&D activities.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$0	\$27	\$10	(\$17)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Includes a decrease of \$17,000 in Other Services.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$17	\$0	\$0	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$49,822	\$73,604	\$42,347	(\$31,257)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2010 request includes a program decrease of \$31,257,000. This decrease is due to two non-recurring Congressional earmarks in FY 2009 appropriations, the Southeast Regional Research Initiative (SERRI) and the National Institute for Hometown Security.

26.0	Supplies & materials	16	---	---	---
Total, Innovation		\$46,515	\$33,000	\$44,000	\$11,000

PPA Mission Statement

Established in FY 2007, the mission of the Innovation Office is to direct the design and delivery of prototype-level demonstrations of game-changing technologies in two to five years and provide proof-of-concept answers that could result in high-payoff technology breakthroughs. The nature of the research is high risk with the potential for significant gains in capabilities

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$148	\$150	\$200	\$50

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. The increase of \$50,000 from FY 2009 to FY 2010 reflects an increase in travel required as Innovation's projects are ready to perform operational demonstrations.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$2,753	\$1,830	\$2,822	\$992

Advisory and Assistance Services provide funds for consultants in management and professional support services as well as engineering and technical services. The FY 2010 request reflects an increase of \$992,000 due to increased costs in program support service contracts and subject matter experts, to support existing programs and two new starts in multi-modal tunnel detection and low cost bio detection technologies.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$5	\$0	\$0	\$0

Other Services includes all costs relating to S&T personnel training, conference registration, and attendance fees.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$2,362	\$0	\$0	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$41,231	\$31,020	\$40,978	\$9,958

Research & Development includes costs for contracts for the conduct of basic and applied research and development. The increase in the Research and Development object classification is a result of \$9,958,000 in program increases as projects mature and perform operational demonstrations. The increase allows Innovation to continue to support demonstrations of its most promising projects - Resilient Electric Grid, Future Attribute Screening Technology Mobile Module, Levee Strengthening and Damage Mitigation, and Resilient Tunnel. The increase also allows Innovation to fund other existing projects that have not yet reached critical decision points and two new starts in multi-modal tunnel detection and low cost bio detection technologies.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$16	\$0	\$0	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

42.0	Indemnity	1	---	---	---
Total, Laboratory Facilities		\$109,358	\$161,940	\$154,500	(\$7,440)

PPA Mission Statement

The mission of the Laboratory Facilities is to ensure that required infrastructure laboratory facilities support ongoing Science and Technology mission research and development activities. There are two primary thrust areas: construction of laboratory facilities and DHS-laboratory operations.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Salaries and Benefits	\$52	\$14,000	\$16,501	\$2,501

Salaries and Benefits includes costs for FTEs located at DHS S&T-operated laboratories. The FY 2010 request includes an increase of \$2,501,000 reflecting increases in salaries and benefits and an increase in the number of FTEs as S&T attempts to fill vacant technical and program support positions at the laboratories.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$564	\$665	\$665	\$0

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. There is no change in projected costs for FY 2010 over FY 2009.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Transportation of Things	\$6	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. There is no change in projected costs for FY 2010 over FY 2009.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
GSA rent	\$1,990	\$2,277	\$1,000	(\$1,277)

GSA Rent provides funding for rental space provided by General Services Administration (GSA). Spaces currently funded through GSA are the Environmental Measurements Laboratory (EML) facilities. The FY 2010 request reflects a decrease from FY 2009 of \$1,277,000 as a result of less space rented from GSA after environmental cleanup of Environmental Measurements Laboratory (EML).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Rent	\$16	\$0	\$0	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Communication, Utilities, and miscellaneous char	\$2,177	\$11,946	\$12,544	\$598

Communications, Utilities, and Misc Charges provides funds for communications, utilities, and related charges at laboratories managed by ONL. The FY 2010 request reflects an increase over FY 2009 of \$598,000 to cover increases in the utilities at Plum Island Animal Disease Center (PIADC), Transportation Security Laboratories (TSL), and National Biodefense Analysis and Countermeasures Center (NBACC).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$10,283	\$45,700	\$17,008	(\$28,692)

Advisory and assistance provides funds for Intergovernmental Personnel Act and consultants in management and professional support services as well as engineering and technical services. The FY 2010 request reflects a decrease from FY 2009 of \$28,692,000 due to the decrease in architectural and engineering services as National Bio and Agro Defense Facility (NBAF) transitions from design to, site preparation activities for construction.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$8,669	\$155	\$490	\$335

Other Services provide funds for mission essential training and tuition. The increase of \$335,000 from FY 2009 to FY 2010 reflects training needed for personnel as the laboratories reach their planned staffing levels in FY 2010.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$33,855	\$32,690	\$17,447	(\$15,243)

Purchase from Government Accounts provides costs for administrative support, contracting administration support, and rent for interim facilities that do not belong to GSA. The FY 2010 request reflects a decrease from FY 2009 of \$15,243,000, reflecting a decrease in funds to the Department of Energy for construction at Pacific Northwest National Laboratory (PNNL) - Area 300 and a decrease in payment to another government agency for conducting EML clean-up.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & maintenance of facilities	\$16,603	\$38,681	\$40,615	\$1,934

Operation and maintenance of facilities provides normal daily operations of PIADC, EML, TSL, and NBACC. The costs include maintenance and repair of building and land. The FY 2010 request reflects an increase over FY 2009 of \$1,934,000 as a result of increases in private sector and government facility support contracts.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$478	\$1,350	\$2,000	\$650

Operation and maintenance of equipment provides normal daily operations and maintenance of PIADC, EML, TSL, and NBACC equipment. The FY 2010 request reflects an increase over FY 2009 of \$650,000 as a result of increases in operation and maintenance of information technology equipment contracts.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$4,015	\$7,225	\$7,803	\$578

Supplies and materials provides daily office supplies and fuel costs associated with the facilities. The FY 2010 request reflects an increase from FY 2009 of \$578,000 due to additional supplies for NBACC operations.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$2,361	\$7,250	\$2,000	(\$5,250)

Equipment provides costs for personal property, information technology hardware/software, includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request reflects a decrease from FY 2009 of \$5,250,000 reflecting NBACC becoming operational in the third quarter of FY 2009, when most of the equipment will be in place.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Land & Structures	\$0	\$0	\$36,427	\$36,427

Land and Structures provides costs for construction and capital improvement activities. The FY 2010 request reflects an increase of \$36,427,000 over FY 2009 due to the start of site preparation for NBAF construction. Also included is an increase for infrastructure upgrades, in FY 2010 the infrastructure upgrades will include storage space, including explosives bunkers at TSL.

Total, Test & Evaluation and Standards		\$29,704	\$28,674	\$28,674	\$0

PPA Mission Statement

The Testing & Evaluation and Standards program provides technical support and coordination to assist the Nation's emergency responders in the acquisition of equipment, procedures and mitigation processes that are safe, reliable and effective. The program carries out its activities through two thrust areas: Test & Evaluation (T&E) and Standards.

Summary Justification and Explanation of Changes

	2007	2008	2009	2008 to 2009
	Actual	Enacted	Request	Change
Salaries and Benefits	\$68	\$0	\$0	\$0

Salaries and Benefits include costs for FTEs.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$115	\$300	\$300	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Transportation of Things	\$33	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Advisory and Assistance Services	\$1,031	\$1,100	\$1,100	\$0

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$856	\$0	\$0	\$0

Other Services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 request includes a program decrease of \$1,350,000.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$1,920	\$0	\$0	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$25,681	\$27,274	\$27,274	\$0

Research & Development includes costs for contracts for the conduct of basic and applied research and development.

Total, Transition		\$46,330	\$28,830	\$45,134	\$16,304

PPA Mission Statement

The Transition Office focuses on delivering near-term products and technology enhancements by working with the Department's components to expedite the technology transition process. The Transition Office carries out related activities that complement the transition efforts through the Office of the SAFETY Act Implementation, management of S&T Directorate's international and interagency programs, and operation of the Technology Clearinghouse and Technology Solutions.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$739	\$585	\$750	\$165

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2010 request increases by \$165,000 due to increased R&D efforts requiring travel.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$8,087	\$7,382	\$6,958	(\$424)

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. The FY 2010 request includes a decrease of \$424,000.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$738	\$571	\$0	(\$571)

Other Services provide funds for contractual services that are not covered under R&D or Purchase from Government Accounts. The decrease of \$571,000 includes no funding in FY 2010 for other services.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$1,039	\$130	\$130	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & maintenance of facilities	\$0	\$80	\$80	\$0

Operation and maintenance of facilities includes all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$33,783	\$18,832	\$35,766	\$16,934

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2010 request includes an increase of \$16,934,000 to support increased R&D efforts within the Division in the area of First Responder Technologies.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & maintenance of equipment	\$1	\$50	\$50	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & Materials	\$1	\$0	\$0	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$85	\$0	\$0	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$1,858	\$1,200	\$1,400	\$200

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 Request includes an increase of \$200,000 to support increased grants within the division.

Total, University Programs		\$63,715	\$50,270	\$46,000	(\$4,270)

PPA Mission Statement

University Programs cultivates a homeland security culture within the academic community through research and educational programs that address current and future homeland security challenges. The program engages the academic community to develop scientific leadership, creates strategic partnerships, and fosters the next generation of homeland security experts.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$195	\$250	\$270	\$20

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. The Travel object class includes costs for travel to funded Centers; potential Centers for management, review, and determination of suitability to become new Centers; to attend workshops and conferences; and potential invitational travel for COE personnel.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$2,109	\$1,700	\$2,000	\$300

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. A program increase of \$300,000 is included to support increased work the Division plans to execute in FY 2010.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Other Services	\$1,884	\$0	\$0	\$0

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$1,693	\$0	\$0	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The decrease of \$736,000 in FY 2010 reflects a reclassification of funds to the object class code for Advisory and Assistance Services (25.1).

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$5,573	\$736	\$730	(\$6)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. A program decrease of \$6,000 is included.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of Equipment	\$0	\$0	\$0	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & Materials	\$2	\$0	\$0	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$52,261	\$47,584	\$43,000	(\$4,584)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. This includes all funding provided to COEs. A program decrease of \$4,584,000 is included due to a decrease in funding for the Centers of Excellence.

I. STRATEGIC CONTEXT FOR THE FY 2010 BUDGET

A. Mission and Description of the Science & Technology Directorate

The Science and Technology (S&T) Directorate advises the Secretary on research and development efforts to support the Department's mission, and conducting basic and applied research, development, testing and evaluation (RDT&E) activities relevant to the Department through both intramural and extramural programs.

In fulfillment of the enabling and follow-on legislation, Secretary Napolitano stated that the urgent and overriding mission of the Department of Homeland Security (DHS) is to secure the homeland means to protect our Nation's borders by finding and killing the roots of terrorism and to stop those who intend to hurt us; to wisely enforce the rule of law at our borders; to protect our national cyber infrastructure; and to prepare for and respond to natural and man-caused disasters with speed, skill, compassion, and effectiveness. She stated that DHS should build on its science and technology portfolio for the following reasons:

- Better science helps us understand emerging threats and how to identify, counter and mitigate them.
- Better technology can expand our capabilities and free our agents to spend their time where it is most valuable, while at the same time protecting the interests of private citizens by minimizing law enforcement's impact on lawful activities.
- Technology can also aid us in consequence management, so that we are better prepared to respond to any type of disaster.

This budget requests the resources needed to provide the technologies to fulfill this mission and address Secretary Napolitano's priorities.

Mission Statement

The S&T Directorate will improve homeland security by providing our customers, the operating components of DHS and State, local, tribal, and territorial emergency responders and officials, with state-of-the-art technology that helps them to accomplish their missions.

The S&T Directorate provides leadership for directing, funding, and conducting RDT&E, and procurement of technology and systems to prevent, protect against, and respond to terrorist threats and natural disasters. The S&T Directorate collaborates and coordinates with Federal, State, and local government and private sector entities to conduct its activities. It establishes an efficient system to transfer homeland security developments and technologies to the operational elements of the Department to enhance their ability to execute all missions, now and in the future, and to meet the high priority homeland security RDT&E needs of the Nation.

In leading the homeland security research enterprise outside of the S&T Directorate, we are proactively engaged with universities, research institutions, government laboratories, and private industry that conduct research and development in areas important to addressing our customers' homeland security requirements.

Description of Directorate

The S&T Directorate accomplishes its mission through customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to deliver. These RDT&E programs support the needs of the operational components of the Department and address crosscutting areas such as standards and interoperability.

About 50 percent of the S&T Directorate's investment is in transition technologies – lower-risk projects dedicated to addressing a customer-defined capability need – within three years. Six percent of the S&T Directorate's investment is in higher risk innovative prototypical demonstrations, which, if successful, will place leap-ahead technology in the operating components' hands much more quickly than the incremental improvements typical of most acquisition programs. About 20 percent of the S&T Directorate's investment portfolio is in long-term, basic research conducted primarily in universities and laboratories in areas of enduring homeland security relevance that could lead to revolutionary changes in the way we approach homeland security challenges. This balanced portfolio ensures that the Directorate maintains a self-replenishing pipeline of future capabilities and products to transition to customers.

Other components often leverage the S&T Directorate's expertise in program management, technical oversight, testing and evaluation, and systems engineering. These developmental activities are more technologically mature than the typical science and technology program such as testing new border security technologies for Customs and Border Protection (CBP) or leveraging existing advanced research and development (R&D) to make spiral improvements to off-the-shelf infrastructure protection technologies.

The S&T Directorate's R&D functions consist of six technical divisions along enduring functional disciplines. This, along with additional offices, allows us to better meet the Department's strategic goals.

Six Divisions

Borders and Maritime Security

The Borders and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers.

Chemical and Biological

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

Command, Control, and Interoperability

The Command, Control, and Interoperability Division develops interoperable communication standards and protocols for emergency responders; cyber security tools for protecting the integrity of the Internet; and automated capabilities to recognize and analyze potential threats.

Explosives

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure.

Human Factors/Behavioral Sciences

The Human Factors/Behavioral Sciences Division applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements; it supports the preparedness, response, and recovery of communities impacted by catastrophic events; and it advances homeland security by integrating human factors into homeland security technologies.

Infrastructure and Geophysical

The Infrastructure and Geophysical Division develops capabilities to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

Additional Offices

Innovation

The Innovation Office focuses on high-risk/high-reward, homeland security R&D that could lead to technology breakthroughs that significantly enhance DHS operations. The Director of Innovation oversees the Homeland Security Advanced Research Project Agency (HSARPA). The *Homeland Security Act of 2002* directs HSARPA to "support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities." Its efforts are complementary to the S&T Directorate's other programs and projects, pushing scientific limits to address gaps in areas where current technologies and R&D are inadequate or non-existent.

Test & Evaluation and Standards

The Test & Evaluation (T&E) and Standards Office provides technical support and coordination to assist DHS components and the Nation's emergency responders in the acquisition of equipment, procedures, and mitigation processes that are safe, reliable, and effective. The T&E and Standards Office works across DHS to measure whether technologies and tools perform well and are applicable to homeland security operations; the results of which enable informed acquisition and deployment decisions.

Transition

The Transition Office focuses on delivering near-term products and technology enhancements by working with the Department's components to expedite the technology transition process. The Transition Office implements the SAFETY Act to ensure that the threat of liability does not deter potential manufacturers or sellers of effective anti-terrorism technologies from developing, deploying and commercializing these technologies. The Chief Commercialization Officer (CCO) in the Transition Office manages the development and execution of programs and processes that identify, evaluate, and commercialize technologies that meet the operational requirements of DHS operating components, first responder community, and end-users.

Research - Laboratory Facilities

The Office of National Laboratories (ONL) executes the Laboratory Facilities programs, which includes construction of new laboratories as well as operations and maintenance of existing DHS laboratories. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Research - University Programs

University Programs engages the academic community to conduct research and analyses and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

A “matrix management” structure links the six technical Divisions and additional offices to three R&D investment portfolio directors. These three portfolio directors – Director of Research, Director of Transition, and Director of Innovation/HSARPA – provide crosscutting coordination of their respective elements of the investment strategy within the technical Divisions. The matrix structure allows the S&T Directorate to provide more comprehensive and integrated technology solutions to its customers by appropriately bringing all of the disciplines together in developing solutions.

B. Major Activities and Key Strategic Goals

In FY 2007, the S&T Directorate shifted its focus to a new strategic approach. This resulted in a realigned organization and research portfolio management strategy, both of which allow the S&T Directorate to better identify, enable, and transition new capabilities to our customers to better protect the Nation. To that end, the S&T Directorate develops and manages an integrated program of science and technology, from basic research through technology product transition.

The S&T Directorate is customer-focused and delivers capabilities that DHS components can rely on to meet their operational needs. To accomplish this, we facilitated customer-led Capstone Integrated Product Teams (IPTs) in 12 functional areas and charged each one with identifying functional capability requirements across the Department. The S&T Directorate uses the products of these IPTs to identify the highest priority needs and allocate resources to those programs that support the priorities established by the DHS customers. The S&T Directorate’s business model of structured Capstone IPTs ensures that product transition investments align to customer mission requirements.

Each Capstone IPT works to identify, validate, and prioritize capability requirements across the Department (within a functional area) that the S&T Directorate can address. The interaction of technologists and operators has improved the prioritization of efforts and the focus on relevant, cost-effective solutions that make a significant difference. The S&T Directorate’s product transition process ensures that appropriate technologies are harvested and integrated into the DHS acquisition system for our customers. Outputs from the IPTs drove considerable changes to programs in the FY 2009 budget request, which continue into FY 2010.

In executing its portfolio of investments, the S&T Directorate will draw upon the R&D capability across the public enterprise, private sector, and academia to locate and promote the best R&D possible. This consortium of capability is referred to as the Homeland Security Research Enterprise. With the authorities provided in the *Homeland Security Act of 2002*, the S&T Directorate has the organic ability to leverage not only DHS laboratories, the Homeland Security Institute, and the DHS Centers of Excellence, but also the Department of Energy (DOE) National Laboratories to meet homeland security research requirements.

The Nation’s technical superiority in science and technology is a key factor in the effort to ensure a secure homeland. The fulfillment of the Department’s mission requires a concerted effort to access, leverage, and enhance the vast resources and expertise of the Nation’s public and private sectors, academic community, non-governmental organizations, and other scientific bodies. This effort is primarily the responsibility of the S&T Directorate. That responsibility requires that the Nation’s

homeland security R&D efforts focus on meeting mission requirements, are adequately funded, and meet long-term, as well as near-term objectives. A significant portion of the S&T Directorate's programs directly support federally mandated homeland security priorities.

To perform its varied missions, the S&T Directorate received \$830.3 million in FY 2008 (Enacted) and \$932.6 million in FY 2009 (Enacted). The S&T Directorate is requesting \$968.4 million in FY 2010. The following are a few examples of how the S&T Directorate has used its funds in FY 2008 and plans to use FY 2009 and FY 2010 funds to further enhance and enable homeland security capabilities:

Management and Administration –

With the FY 2008 appropriation of \$138.6 million, the S&T Directorate continued to implement several efficiency initiatives to make better use of its resources. In FY 2009, \$14 million and 124 FTE non-headquarters S&T Directorate federal employees will be realigned to support DHS organic laboratories including Plum Island Animal Disease Center, the Environmental Measurements Laboratory, and the Transportation Security Laboratory, which better accounts for program activity costs at the laboratories. This action brought the 2009 M&A budget request to \$132.1 million. The S&T Directorate plans to continue to implement several efficiency initiatives with FY 2010 funds of \$142.2 million.

Overall, the S&T Directorate has:

- Continued to reduce business operation expenses by centralizing supply purchases;
- Organized central career developmental training within the S&T Directorate;
- Consolidated National Capital Region floor space to one location;
- Consolidated floor space at the Environmental Measurements Laboratory to decrease the rent and operations and maintenance costs;
- Implemented a telework program;
- Developed an S&T Directorate carpooling program;
- Continued to reduced the number of Intergovernmental Personnel Act employees; and
- Reduced reliance on contractor staff.

Borders and Maritime –

FY 2008 appropriation of \$25.5 million:

- Piloted a fiber optic tripwire that can locate activity anywhere along miles of fiber optic cable, enabling a single officer to monitor the border effectively. The Border Detection Grid provides a network of advanced sensors and detection, classification, and localization technologies to detect and classify cross-border movement (e.g., friendly forces, animals, weather, or illegal activity).
- Developed second small, low-cost Container Security Devices (CSDs). These devices detect and warn of opening or removal of container doors and provide a major increase in shipping container security.
- Supported a Northern Border testbed demonstration in a northeast Border Patrol sector that will provide technology insertion and lessons learned to the Secure Border Initiative Network (SBInet). As part of BorderNet, the testbed is part of a wireless data network that will connect law enforcement officers in the field to real-time tactical scene awareness information using multi-sensor fusion and law-enforcement database query.

FY 2009 appropriation of \$33.0 million:

- Complete field-testing of the Advanced Container Security Device (ACSD) prototypes and conduct a large-scale operational test. The ACSD is a small unit that attaches to the inside of a

container to monitor all six sides of the container, reporting any intrusion, door opening or presence of human cargo.

- Initiate capability enhancements to existing secondary non-intrusive inspection systems to detect or identify terrorist contraband items (e.g., drugs, money, illegal firearms) or humans. This project addresses an important capability gap to enhance cargo screening and examination systems through advanced non-intrusive inspection.
- Initiate a program to develop technologies for advanced detection identification, apprehension, and enforcement capabilities along the maritime borders for rapid coordinated responses to anomalies and threats. Major investment areas include persistent wide-area surveillance in the maritime environment, port and coastal sensor surveillance, and enhanced sensor/data fusion technologies for command center situational awareness.

FY 2010 request of \$40.2 million:

- Deliver improved prototypes for future field-testing and transition the Container Security Device specifications to Customs and Borders Protection and DHS Policy.
- Build, demonstrate, and transition the first phase of improved capabilities for detecting Semi-Submersible Self-Propelled Vessels (SPSS) to customers.
- Transition Light-Emitting Diode Incapacitator (LEDI) and Safe Quick Undercarriage Immobilization Device (SQUID) efforts to first responder communities via the commercialization process. The execution of these products began as Small Business Innovation Research efforts.

Chemical and Biological –

FY 2008 appropriation of \$208.0 million:

- Transitioned BioWatch system to the Office of Health Affairs. Completed development of the BioWatch Biological Autonomous Network Detector (BAND) system, which increases the number of agents detected, and reduce the maximum time between an event and warning to six hours and significantly reduces operating costs.
- Validated forensic analytical methodologies for H-series blister agents, which are acid-forming compounds that damage skin and respiratory system, resulting burns and respiratory problems. These analytical methodologies will provide enhanced capability for the Federal Bureau of Investigation (FBI) to identify attack sources.

FY 2009 appropriation of \$200.4 million:

- Initiate a second round of Biodefense Net Assessments with a focus on developing a longer term strategic view of our and our adversaries' competitive strengths and tipping points. In response to HSPD-10, Biodefense Net Assessments (BNAs) provide "recommendations for re-balancing and refining investments among the pillars of our overall biodefense policy."
- Develop evaluated bioassays (fingerprint signatures of biological agents) that detectors and monitors use to recognize biological agents and trigger an alarm, which help to improve the ability to identify and characterize human or agriculture bioterrorism incidents. Complete development of and transition 10 bio threat assays to OHA for use in the Gen 2 BioWatch system and to establish the initial operational capability for the Public Health Actionable Assay process.
- Conduct bioforensics research in support of criminal investigative cases, with the ultimate goal of attribution, apprehension, and prosecution of the perpetrator, in fulfillment of the President's Biodefense for the 21st Century (HSPD-10). Complete validation at the National BioForensics and Analysis Center of forensic assays for the top thirty biological threat agents.
- Conduct biennial, end-to-end risk assessments on biological agents and conducts laboratory studies to close major scientific gaps that could significantly impact how the Nation structures its defenses. The Biological Threat Characterization Center should close the remaining gaps on

most of the classical, known agents by FY 2009, at which time the center will focus on addressing future threats.

- Develop, exercise, and demonstrate decontamination methods and restoration system tools that include a coordinated systems approach to the restoration of wide urban areas, to include high traffic areas (transit/transportation facilities) and Department of Defense (DOD) infrastructures following the aerosol release of a biological agent.

FY 2010 request of \$206.8 million:

- Complete the demonstration of wide area biological restoration guidelines and methods. Complete development of restoration plans and frameworks for a partner urban area with co-located military installations for validation of the overall concepts, protocols, and tools for recovering from an outdoor biological attack. When completed, the Interagency Biological Demonstration (IBRD) will provide a set of concepts, protocols and tools that can then be adopted and modified by other communities in developing their restoration plans.
- Complete the demonstration of integrated concepts of operation for chemical, biological, and radiological detection systems for urban areas by developing an architecture that integrates reporting from disparate chemical, biological, radiological, and potentially nuclear and explosive (CBRNe) detection/collection systems. It will greatly improve the integration of alarm and response assets across multiple potential attack modes, resulting in more rapid and informed decisions at the appropriate response level.
- Transition operations of the Integrated Consortium of Laboratory Networks (ICLN) to Office of Health Affairs (OHA). This laboratory network system strengthens early detection and consequence management and is consistent with Homeland Security Presidential Directives 9, 10, 21, and 22.
- Demonstrate a prototype high-throughput multiplex biological identification platform to enhance laboratory capabilities across multiple application areas. This instrument will be capable of analyzing for biological threats in environmental, food, water, animal, plant, and human clinical samples for multiple purposes and by multiple agencies.
- Complete validation of environmental anthrax sampling and analysis methods. The demonstration that environmental sampling methods are quantitatively characterized and consistent is critical to ensuring confidence in decisions regarding public health in biological contamination scenarios, delineating contaminated spaces, and establishing when contamination is removed.

Command, Control and Interoperability –

FY 2008 appropriation of \$57.0 million:

- Developed new capabilities to allow a mobile law enforcement official in a remote location to issue a single query that simultaneously accesses multiple databases across jurisdictions.
- Extended and applied pattern recognition tool to alert analysts to events that could be part of a developing, coordinated terrorist attack based on data from all-source intelligence leads and incident reports.

FY 2009 appropriation of \$74.9 million:

- Initiate development of architecture for accessing and exchanging situational awareness information between the U.S. Coast Guard and its maritime, law enforcement, and intelligence partners.
- Launch a demonstration between Voice over Internet Protocol (VoIP) and Project 25 gateways. The project will also accelerate the development and testing of Project 25 IP-based interfaces for

infrastructure inter-radio-frequency subsystems, console subsystems, and fixed base station subsystems.

- Initiate activities in the area of Process Control Systems (PCS) Security to support improved security for process control systems used across multiple critical infrastructure sectors and developed PCS model applications to Oil and Gas Sector(s) to ultimately secure those infrastructures better.

FY 2010 request of \$80.3 million:

- Improve the United States Secret Service (USSS) encryption breaking architecture in warranted criminal and terrorist cases by creating a scalable, distributed network that will allow USSS investigators to harness the computing power of tens of thousands of computers to break through challenging encrypted files.
- Integrate several existing statewide information and visualization platforms in the Southern U.S. into a regional information-sharing framework and provide advanced tools that support the gathering, managing, analyzing, sharing, and securing of relevant information.
- Continue working with emergency responders to perform an in-depth evaluation of the Multi-Band Radio (MBR). The MBR provides them with the unprecedented capability of communicating on all public safety radio bands.
- Create a global research and development enterprise for visualization and data sciences. The collaborative activity will enable CCI and the S&T Directorate to take advantage of worldwide expertise in these critical areas of science, to use the multiple resources being applied to their study efficiently and effectively, and quickly translate research to real tools and capabilities.

Explosives –

FY 2008 appropriation of \$77.7 million:

- Conducted demonstrations of promising new technologies to support their rapid prototyping and improve systems capable of detecting homemade explosives.
- Transitioned to Federal, State, and local responders a database of the mechanisms for defeating improvised explosive devices by means other than the current practice of detonating or manually disarming them.
- Initiated pilot testing the most promising advanced air cargo screening systems for deployment in FY 2011.
- Transitioned advanced technologies that improve the effectiveness of existing checked baggage technologies to TSA.

FY 2009 appropriation of \$96.1 million:

- Conduct detonation assessment tests to determine the impact, friction, and electrostatic discharge sensitivities of homemade explosives (HME) threats.
- Report on spectroscopic and trace technology research and development (R&D) for remote or standoff detection of Vehicle Borne Improvised Explosive Devices (VB-IED). These reports will establish the baseline and feasibility for employing explosives detection techniques as a means of VBIED detection.
- Develop advanced capabilities to detect explosives and concealed weapons, including IEDs or HMEs that could be detonated in passenger cabins and weapons that could be used in the hostile takeover of mass transit. Introduce new standalone technologies or adjunct technologies, such as Computed Tomography (CT), to continue improving detection performance and the detection of novel explosives. Award a development contract for the detection of novel explosives in the next-generation checkpoint detection system.

FY 2010 request of \$120.8 million:

- Develop a prototype for screening moving vehicles remotely, as well as a prototype of standalone spectroscopic technologies to detect both explosives and explosive device components for the standoff detection of VB-IEDs.
- Test and validate Electronic Countermeasures (ECM) operational load sets for use in current ECM systems and examine the potential for improvements based on antenna, amplifier, receiver and signal processing technologies.
- Investigate air blast interaction with blast resistant glass and laminated glass to quickly calculate structural responses to a range of explosives in urban environments.

Human Factors –

FY 2008 appropriation of \$14.2 million:

- Refined an existing multi-modal (finger, face, and iris) biometrics framework for test and evaluation activities. This leads to an identification tool that can accurately identify, without physical contact, known terrorists or criminals.
- Characterized screener-performance issues, propose new screener technologies and procedures, and develop training curricula to optimize security effectiveness and reduce human fatigue and injury, while reducing training requirements and overall cost.
- Improved the accuracy of risk assessments by incorporating a more comprehensive range of psychological, social, and indirect and long-term economic impacts of catastrophic events into the consequences aspect of DHS's risk assessments. Transition to TSA advanced technologies that improve the effectiveness of existing checked baggage technologies.

FY 2009 appropriation of \$12.5 million:

- Initiate development of a contactless multi-modal biometrics identification prototype and create corresponding reference datasets. The datasets are key to system design and prototype delivery.
- Deliver modeling capabilities, content analysis for the computerized analytical framework focused on determining whether radical groups are likely to engage in violence and what ideological, organizational, and contextual factors may influence this decision or spark action.

FY 2010 request of \$15.1 million:

- Initiate development of a Mobile Biometrics System prototype to provide screening capabilities for use at remote sites where communication access is limited including along U.S. borders, during disasters and terrorist incidents, and at sea.
- Demonstrate multi-cultural, real-time intent detection. This will lead to a hostile-intent detection prototype to identify unknown or potential terrorists through an interactive process with 75 percent accuracy.

Infrastructure and Geophysical –

FY 2008 appropriation of \$64.5 million:

- Evaluated blast effects and mitigation measures for dams, tunnels and bridges, which feeds into the development of suites of advanced materials, advanced materials, design procedures, and innovative construction methods that enable hardening of assets deemed most vital to the Nation.
- Conducted government testing of the 3D location system and conduct a functional test of the real-time, distributable standoff structure integrity monitoring system.
- Continued development of an automated training and exercise capability using advanced computer simulations and models, that will allow responders at all levels to affordably train and exercise for large and complex events in a virtual/constructive/live environment.

FY 2009 request of \$75.8 million:

- Start a project to provide a comprehensive and transparent disaster logistics tracking system across the entire area of responsibility of all disaster response partners, public and private. This system will allow the Federal Emergency Management Agency (FEMA) to more effectively manage critical resources and will enhance real-time coordination and situational awareness, setting the standard for all disaster response partners.
- Develop protective measures for tunnel protection by analyzing current measures; develop a design tool prototype for demonstration based on the new measures and conduct a field test.
- Develop advanced, automated, affordable underwater monitoring and surveillance technologies to detect underwater threats in harsh environments for extended periods that will be capable of being seamlessly and transparently integrated into infrastructure operations and operate in tandem and in support of law enforcement and other protective services/agencies.

FY 2010 request of \$44.7 million:

- Develop system components for practical use at a chosen infrastructure site and conduct a technology demonstration of surveillance technologies that would effectively monitor critical infrastructure.
- Design and demonstrate a recovery transformer in a laboratory environment. The recovery transformer will be easy to transport and install, have low maintenance and long service life, which will improve the resiliency of the electric grid.
- Develop a 3D-locator system prototype for first responders that will improve accuracy to within three feet and improve signal penetration through difficult structures (i.e., underground, over ground). The project plans to conduct testing in major urban areas and deliver an initial set of locators for field-testing at several locations across the Nation.
- Develop an engineering model and a brass board model and conduct system tests at several test facilities to verify design and performance of an integrated sensor package that will monitor a first responder's vital signs such as cardiac rhythm, heart rate, blood pressure, body temperature, and oxygen saturation, which could indicate Pre-Ventricular Contractions (PVCs) or cardiac arrhythmias.

Innovation –

FY 2008 appropriation of \$33.0 million:

- Developed and conducted initial validation of the Future Attribute Screening Technology (FAST) Theory of Malintent (the intent to cause harm) for a primary screening environment. Demonstrated FAST initial sensor integration and command and control framework.
- Conducted a demonstration of an early prototype of an inflatable tunnel plug to protect tunnels from fire, flooding, and potentially other hazards working with the Washington, DC Metro.

FY 2009 appropriation of \$33.0 million:

- Conduct early demonstrations of rapid, non-contact, three-dimensional fingerprint scanner that will have much higher success rates at capturing fingerprints the first time, with far greater detail, allowing for increased speed and accuracy in records matching
- Develop early prototypes of technology that will leverage National Aeronautics and Space Administration's (NASA) expertise with novel gas sensor architectures for manned space missions or use porous silicon based detection to be incorporated into everyday devices such as cell phones for ubiquitous chemical/biological agent detection.
- Conduct a demonstration of a 3-1-1 bag-screening prototype in an airport to test the system's ability to distinguish between liquids in an operational environment, where environmental factors can affect the technology's sensitivity.

FY 2010 request of \$44.0 million:

- Develop database of liquids and demonstrate the capability to seamlessly screen segregated liquids (without the 3-1-1 bag constraint) in an operational airport environment.
- Conduct demonstration of a stand-alone fault current limiter (FCL) technology, which is a significant technological advancement and could be installed in the grid as an alternative to the relatively high-risk FCL cable.
- Analyze the measurements taken from hurricanes and model and simulate the effects of different modification strategies. The goal is not to stop hurricanes, which are an important part of the natural cycle, but to mitigate damage to life and property with the goal of minimizing loss of life and property.

Laboratory Facilities –

FY 2008 appropriation of \$103.8 million:

- Continued construction of the National Biodefense Analysis and Countermeasures Center (NBACC) facility.
- Completed construction of the Chemical Security Analysis Center (CSAC) as part of the Department of Defense's Sample Receipt Facility at the Edgewood Chemical Biological Center.
- Conducted an environmental impact statement (EIS) of the National Bio and Agro-defense Facility (NBAF) sites as part of the National Environmental Policy Act. The Department used the EIS to determine site suitability leading to final site selection.

FY 2009 request of \$161.9 million:

- Complete construction of NBACC.
- Issue Record of Decision (ROD) on NBAF site selection.
- Conduct remaining cleanup activities at the Environmental Measurements Laboratory (EML) to return space to commercial use specifications.
- Initiate full CSAC operations in the state-of-the-art facility, which will be the premier facility with the capability to integrate knowledge across the full chemical threat spectrum.
- Begin a detailed design of the NBAF facility.
- Realign \$14 million and 124 FTE non-headquarters S&T federal employees to support DHS organic laboratories including Plum Island Animal Disease Center, the Environmental Measurements Laboratory, and the Transportation Security Laboratory.

FY 2010 request of \$154.5 million:

- Complete NBAF detailed design, and begin preparing the selected site for construction. Plan for the eventual transfer of activities from Plum Island Animal Disease Center (PIADC) to NBAF.
- Achieve full operations at NBACC, which will conduct forensic analyses and interpretation of material recovered following a bioterrorist attack; and conduct laboratory experiments and studies to fill important gaps in our knowledge of current and future threats.

Test & Evaluation (T&E) and Standards –

FY 2008 appropriation of \$28.5 million:

- Developed cargo security standards, working with CBP and other organizations, to include a review of existing standards, gap analysis, and requirements gathering from users.
- Identified needed T&E infrastructure, involving participation in requirements development and test planning activities across DHS as well as evaluation of potential partner activities across the Federal government.

- Conducted performance testing and analysis to ensure new technologies and equipment meet the developing suite of biometric standards.
- Conducted an independent peer review of projects across DHS beginning with an evaluation of TSA's air cargo certified shipper program.

FY 2009 appropriation of \$28.7 million:

- Finalize standard test materials for Anthrax bacteria (*Bacillus anthracis*) and Ricin, release interim guidance for chemical and biological decontamination, and develop guidance for first-responder assessment of detection technology claims.
- Provide standards for image quality for biometric images of face, fingerprint, and iris to enhance interoperability of US-VISIT and FBI Integrated Automated Fingerprint Identification System (IAFIS) fingerprint databases.
- Establish and issue policy and procedures as well as coordinate T&E resources to verify technical performance and operational effectiveness/suitability. Complete the Integrated DHS T&E Infrastructure Plan that will matrix the available domain of T&E capabilities to the DHS acquisition programs and the S&T Directorate's Capstone IPT projects.

FY 2010 request of \$28.7 million:

- Complete the development of trace explosives standard test materials for RDX and C4 explosives. Develop a test kit for evaluation and quality control of walk-through portals. Finalize and adopt standard test methods for X-ray inspection systems and body scanners.
- Initiate the chemical warfare agents/toxic industrial chemicals detection standards program, including standoff (optical) detection systems.
- Collaborate with FEMA to identify and prioritize specific product categories for assessment through the System Assessment and Validation for Emergency Responders (SAVER) program. SAVER tests and assesses commercially available products that fall within the product categories listed on the DHS Authorized Equipment List and provides the results along with other relevant equipment information to the First Responder community.

Transition –

FY 2008 appropriation of \$30.3 million:

- Developed and implemented an Office of Research and Technology Applications (ORTA) that will serve as the one-stop shop for managing patents and intellectual property identified during research efforts and promote partnerships to facilitate commercialization of the most promising technologies with industry to provide valuable homeland security technology applications to emergency responders and DHS component agencies.
- Developed a one-stop shop portal to disseminate technology information to Federal, State, local and tribal agencies.

FY 2009 appropriation of \$33.8 million:

- Initiate prototype development for a vehicle-mounted chemical and biological wireless sensor capable of identifying and reporting to a command post 13 toxic industrial chemicals.
- Expand coordination with other Federal agencies to assist in the creation of Federal best practices, standards and guidelines and work with public and private consortiums/associations to identify promising technologies for prompt consideration under the SAFETY Act
- *HSI – FY 2009 appropriation of \$5.0 million (in FY 2008 and FY 2010 HSI is a program in the Transition PPA):*
 - Conducted studies and analyses for the Department and its components in support of their mission.

- The authorization for HSI expires April 25, 2009. The S&T Directorate re-competed a studies and analysis FFRDC under the authority of Section 305 of the Homeland Security Act of 2002.

FY 2010 request of \$45.1 million:

- Educate and inform universities and national laboratories that research, develop and pilot new innovative homeland security technologies about the SAFETY Act.
- Refine support and analysis of customer gaps through the Capstone IPT process and monitor efforts for cost, schedule, and capability to ensure technologies effectively transition into acquisition.
- Develop and design technologies to address capability gaps identified by Federal, State, local and Tribal First Responders in the First Responder Capstone Integrated Product Team (IPT). This program will test technologies, assess them for usability, and commercialize them to make the technology solutions available across all First Responder communities.

University Programs –

FY 2008 appropriation of \$49.3 million:

- Developed a far-reaching and multi-faceted MSI program that will incorporate MSIs into the Centers of Excellence and develop homeland security research and training capabilities at the MSIs.
- Performed innovative research such as developing adaptive risk assessment tools and rapid, accurate methods for detecting and diagnosing biological agents that could threaten U.S. livestock.

FY 2009 appropriation of \$50.3 million:

- Establish a new DHS COE, the Center of Excellence for Command, Control and Interoperability, merging activities, of the Institute of Discrete Sciences University Affiliate Centers and the DHS Regional Visualization and Analytics Centers.

FY 2010 appropriation of \$46.0 million:

- CREATE will extend decision analysis methodologies to include dynamic interactions between attackers and defenders and develop capabilities for including intelligence data and analysis into decision support tools.
- NDU will expand its master's program in Science and Technology Leadership to other DHS components.

A more robust description of FY 2008 accomplishments, plans, and projects for FY 2009 and 2010 respectively are discussed within the Budget request section of the FY 2010 Congressional Justification.

C. Resources Requested and Performance Impact

Current Services

The proposed FY 2010 budget request of \$968,391,000 will maintain ongoing activities in science and technology research to detect and counter threats and attacks; to protect the Nation's critical infrastructure, both physical and cyber; to analyze and assess threats and vulnerabilities; and to provide cutting edge technologies to operational end-users.

The S&T Directorate has planned and budgeted for its activities in FY 2010 by focusing and incorporating our DHS customers' priorities to conduct the urgent and overriding mission of DHS to secure the homeland means to protect our Nation's borders by finding and killing the roots of terrorism and to stop those who intend to hurt us; to wisely enforce the rule of law at our borders; to protect our national cyber infrastructure; and to prepare for and respond to natural and man-caused disasters with speed, skill, compassion, and effectiveness.

As noted earlier, the S&T Directorate made its decisions on FY 2010 funding based on the priorities and the requirements of the Department.

Program Increases

The following projects represent increments over current service level by PPA:

- **Borders and Maritime Security:** The FY 2010 increase of \$7.131 million funds maritime security requirements identified by the Maritime Security IPT and Urban Tunnel Detection basic research.
- **Chemical and Biological:** The FY 2010 \$5.000 million increase supports the initiation of the Multiplex Detection Technology project. This project will develop a technology to address food borne pathogens in food and clinical sample matrices, detect biothreat agents in food, clinical, water and environmental sample matrices, detect foreign animal disease from animal samples, and cover a wide variety of other pathogens of interest in a variety of sample matrices. This will provide multiple Federal partners with a tool to meet their ever-demanding needs for preparedness and support of the National Bio Defense Strategy through rapid detection for rapid mitigation.
- **Command, Control and Interoperability:** The FY 2010 of \$5.374 million will enable CCI to fund Cyber Security research and development applied towards cyber security priorities identified in the Comprehensive National Cybersecurity Initiative (CNCI). Specifically, this effort will develop enduring leap-ahead technologies to secure the Nation's critical information infrastructure (energy, transportation, telecommunications, banking and finance, and others) and networks.
- **Explosives:** The FY 2010 increase of \$24.600 million supports the High Throughput Air Cargo Screening projects. The High Throughput Air Cargo Screening project is developing technologies for TSA. The requested funding will support the objective to screen 100% of air cargo by developing high throughput screening technology suitable for cargo screening applications and filling the current technology capability gap. The increase in FY 2010 also supports Counter-IED Research in the Transportation Security IPT, specifically the Person-Borne Improvised Explosive Devices project. This funding will enable the Directorate to build upon existing research programs and improve large threat mass detection for large areas, such as mass transit and special events.
- **Human Factors:** The increase of \$2.627 million in FY 2010 reflects additional support for Human Factors' efforts in the Biometrics, Suspicious Behavior Detection, and Human Systems Research, and Engineering Programs.
- **Infrastructure and Geophysical:** The \$6.926 million increase to current services supports planned intensification of development of 3D locators and physiological monitors for first responders. It also supports acceleration of R&D on extremely strong, lightweight, resilient materials.
- **Innovation:** The FY 2010 increase of \$11.000 million will fund existing programs whose scopes increase as they mature and might allow for additional projects that would address

gaps identified by the S&T Capstone IPT process. Two new starts include projects in the area of multi-modal tunnel detect, where capabilities are currently non-existent to inadequate; and low cost biological detection, which could result in huge gains in capability for DHS.

- **Laboratory Facilities:** The FY 2010 increase of \$25.803 million will fund infrastructure upgrades, starting with adding storage space at the Transportation Security Laboratory, Pacific Northwest National Laboratory (PNNL) construction, and operations and maintenance cost increases at the laboratories.
- **Transition:** The FY 2010 increase of \$14.000 million provides funding for the First Responder Capstone Integrated Product Team (IPT). This increase will allow DHS to test technologies, assess them for usability, and commercialize them to make the technology solutions available across Federal, State, local and Tribal First Responders.
- **University Programs:** The FY 2010 decrease of \$2.270 million is a result of no additional funding to support the Center of Excellence for the Transportation Security Agency and the Navy's Post Graduate School.

D. How Science and Technology Main Programs and Their Performance Goals Align to and Support the Secretary's Goals and Objectives.

The following list of programs with their performance goals and the DHS goals and objectives they support.

Borders and Maritime Security program performance goal – Improve the capability of homeland security personnel to secure the Nation's land, maritime, and air borders.

Goal 1 – Continue to protect our Nation from dangerous people

Objective 1.1 – Achieve Effective Control of Our Borders

Chemical and Biological program performance goal – Improve the understanding, technologies, and systems necessary to protect against possible biological and chemical attacks on the Nation's population, agriculture, or infrastructure.

Goal 2 – Continue to protect our Nation from dangerous goods

Objective 2.2 – Biological

Explosives program performance goal – Improve explosives countermeasures technologies and procedures to prevent attacks on critical infrastructure, key assets, and the public.

Goal 3 – Protect critical infrastructure

Objective 3.1 – Fixed Critical Infrastructure and Key Assets

Human Factors program performance goal – Improve detection, analysis, and the understanding of threats posed by individuals, groups, and radical movements through the application of the social and behavioral sciences.

Goal 1 – Continue to protect our Nation from dangerous people

Objective 1.3 – Strengthen Screening of Travelers and Workers

Infrastructure and Geophysical program performance goal – Improve the capability for State, local, tribal, and private sector preparedness for and response to all hazardous events impacting the population and critical infrastructure.

Goal 3 – Protect critical infrastructure

Objective 3.1 – Fixed Critical Infrastructure and Key Assets

Command, Control and Interoperability program performance goal – Improve and develop operable and interoperable communications for emergency responders, develop tools to improve the security and integrity of the internet, and improve and develop automated capabilities to recognize potential threats.

Goal 4 – Build a nimble, effective emergency response system and a culture of preparedness

Objective 4.1 – Response and Recovery

Test & Evaluation and Standards program performance goal – Improve and develop standards and test and evaluation protocols for products, services, and systems used by the Department of Homeland Security and its partners to ensure consistent and verifiable effectiveness of equipment and tools.

Goal 4 – Build a nimble, effective emergency response system and a culture of preparedness

Objective 4.2 – Preparedness

Innovation program performance goal – Support significant technology breakthroughs that have the potential to greatly enhance DHS operations.

Goal 4 – Build a nimble, effective emergency response system and a culture of preparedness

Objective 4.2 – Preparedness

Transition program performance goal – Deliver near-term products and technology enhancements.

Goal 4 – Build a nimble, effective emergency response system and a culture of preparedness

Objective 4.2 – Preparedness

University Programs program performance goal – Improve university-based research, development and education systems to enhance the Nation's homeland security.

Goal 4 – Build a nimble, effective emergency response system and a culture of preparedness

Objective 4.2 – Preparedness

Laboratory Facilities program performance goal – Improve the Nation's core of productive science, technology, and engineering laboratories, organizations, and institutions, which can develop the knowledge and technology required to secure our homeland.

Goal 4 – Build a nimble, effective emergency response system and a culture of preparedness

Objective 4.2 – Preparedness

E. Performance-Based Budget Highlights by Program

For each major program, the performance goal, alignment to DHS goals and objectives, total dollars and FTE, and main performance measure/s are shown below.

Program: Border and Maritime Security						
Performance Goal: Improve the capability of homeland security personnel to secure the Nation's land, maritime, and air borders through science and technology.						
DHS strategic objectives supported and % allocation of activities: 1.1 - 100%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$55,148	\$78,475	\$41,207	\$33,413	\$40,733	\$48,665
FTE	46	16	12	17	19	23

Measure: Percent of borders and maritime security program milestones that are met, as established in the fiscal years budget execution plan						
Description of Measure: This measure reflects the percent of borders and maritime security program milestones that meet their fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Borders and Maritime Security program works closely with its DHS customers (e.g. Customs and Border Patrol, Immigration and Customs Enforcement, and U.S. Coast Guard), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	N/A	100%	90%	90%	90%
Actual:	None	None	80%	91%	N/A	N/A

Measure: Percent of transition program funding dedicated to developing technologies in direct response to Department of Homeland Security components' requirements						
Description of Measure: The percent of science and technology transition funding that directly supports the development of technologies requested by the Department components such as Customs and Border Protection, to ensure that operational end users are provided with the technology and capabilities they need to detect and prevent terrorist attacks, means of terrorism and other illegal activities.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	80%	94%	95%	96%	97%
Actual:	None	94%	98%	99%	N/A	N/A

Program: Chemical and Biological						
Performance Goal: Improve the understanding, technologies, and systems necessary to protect against possible biological and chemical attacks on the Nation's population, agriculture, or infrastructure through science and technology.						
DHS strategic objectives supported and % allocation of activities: 2.2 - 76%, 2.3 - 24%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	\$478,886	\$529,944	\$343,511	\$239,483	\$231,192	\$238,203
FTE	100	106	23	49	54	59

Performance Plan Measures

Measure: Percent completion of an effective restoration capability to restore key infrastructure to normal operation after a chemical or biological attack						
Description of Measure: This measure reflects program activities to develop the required components of a capability to restore critical infrastructure from an attack with persistent chemical agents, including TICs, CWAs, and NTAs, as well as to restore areas contaminated with biological agents, such as anthrax. Progress in the comprehensive chemical and biological restoration effort is measured as the percentage of key products and deliverables that comprise together the full required capability. Such deliverables and products include the required technologies and guidance documents along with key reports developed to enable critical decisions along the development pathway. Through the broad proliferation of the guidance documents, restoration templates, and technology surveys that are products of this effort, the preparedness of local, regional, and national response entities for response to and recovery from a chemical or biological attack will be greatly enhanced.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	None	74%	91%
Actual:	None	None	None	N/A	N/A	N/A

Measure: Percent of chemical and biological program milestones that are met, as established in the fiscal years budget execution plan						
Description of Measure: This measure reflects the percent of chemical and biological program milestones that meet their established fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Chemical and Biological program works closely with its DHS customers (e.g., the Office of Infrastructure Protection, and the Chief Medical Office), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to invest in this technology once it is ready.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	N/A	88%	90%	93%	95%
Actual:	None	None	89%	93%	N/A	N/A

Measure: Percent of high - priority chemical and biological agents detectable in target operational scenarios						
Description of Measure: This measure reflects progress across the entire chemical and biological detection program toward developing technologies for transition to appropriate customers for deployment and use. Targeted agents for these detection systems are prioritized through biological and chemical terrorism risk assessments, which are updated by the program on a biennial basis and reviewed by other agencies with a stake in the outcome. The set of agents chosen comprise some 90 - 95% of total risk presented by chemical and biological agents.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	None	17%	39%
Actual:	None	None	None	N/A	N/A	N/A

Program: Command, Control and Interoperability						
Performance Goal: Improve and develop operable and interoperable communications for emergency responders; develop tools to improve the security and integrity of the internet; and improve and develop automated capabilities to recognize potential threats through science and technology.						
DHS strategic objectives supported and % allocation of activities: 3.3 - 36%, 4.1 - 41%, 4.2 - 23%

Performance Plan Measures

Measure: Number of cyber security data sets collected and approved						
Description of Measure: This measure tracks the cumulative number of data sets available in the protected repository, a secure library that is made available to specified researchers. Each data set contains information about real network and system traffic that researchers can use to design, produce, and evaluate new cyber security solutions. In FY 2006 the Science and Technology (ST) Directorate continued the ongoing collection, refreshing, and sharing of data sets, and addition of new partners as applicable for the Protected Repository for the Defense of Infrastructure against Cyber Threats (PREDICT) repository. This is important because the repository needs to continually add new and pertinent data so that the cyber security research community can have the most recent information to respond to new attacks.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	85	350	450	550
Actual:	None	None	263	281	N/A	N/A

Measure: Number of proof - of - concept reconnaissance, surveillance and investigative technologies demonstrated						
Description of Measure: This measure reflects the number of proof - of - concept (feasibility) of technologies demonstrated that aid in the discovery, investigation, and prosecution of terrorists and criminals. A proof of concept is a feasibility assessment that is considered a milestone in the development of a fully functioning prototype. These assessments are most meaningful and used by the program manager for the Reconnaissance, Surveillance, and Investigative Technologies subprogram or Division executives to determine the necessity of a continued investment.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	N/A	5	8	9
Actual:	None	None	None	7	N/A	N/A

Measure: Percent of command, control and interoperability program milestones that are met, as established in the fiscal years budget execution plan						
Description of Measure: This measure includes the percent of command, control, and interoperability program milestones that meet their fiscal year budget execution and five - year plan goals. These milestones are derived from the Directorate's Integrated Product Teams in which the Command, Control and Interoperability program works closely with its DHS customers (e.g., the Office of Intelligence and Analysis, the Federal Emergency Management Agency, and the Office of Emergency Communications), to identify customer requirements, set goals for milestones and deliverables, plan for the allocation of resources, discuss the status of projects, etc. ST develops Technology Transition Agreements with its customers to identify what ST will do to meet customer requirements in the development of a technology, and how a customer expects to						

invest in this technology once it is ready.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010

Performance Plan Measures

Measure: Number of applications for SAFETY Act coverage submitted.						
Description of Measure: The Office of SAFETY (Support Anti - Terrorism by Fostering Effective Technologies) Act Implementation (OSAI) is responsible for review and approval of applications for Designation and Certification of Qualified Anti - Terrorism Technologies under the SAFETY Act program. This measure reflects the cumulative number of applications received regarding anti - terrorism technologies through the SAFETY Act program. The number of applications received is an indicator of long - term success because it is a reflection of the homeland security market's desire to develop and deploy anti - terrorism technologies and the necessity of a program that will enable this process. By continuing to increase the number of applications the SAFETY Act program will continue to be effective in enabling the widespread commercial availability of effective anti - terrorism technologies.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	None	138	152

Measure: Number of SAFETY Act "transition" (new, highly innovative) technologies awarded						
Description of Measure: In order to stay up to date with the continually changing nature of terrorism, the Office of SAFETY (Support Anti - Terrorism by Fostering Effective Technologies) Act Implementation (OSAI) will seek out those evolving technologies that can serve a homeland security mission and provide coverage to enable their transition into the commercial market, at a rate of 20% a year. A "transition" technology is defined as any technology that is awarded Developmental Testing and Evaluation (DTE) Designation, and those that can be considered new and innovative (i.e. a new technological application in the homeland security arena). OSAI is actively seeking out these technologies in an effort to address the ever - changing nature of terrorism. The SAFETY Act program is the only Federal program that attempts to help industry transition these developmental technologies into the commercial marketplace.

iii. Status of Congressionally Requested Studies, Reports, and Evaluation

**Department of Homeland Security
Domestic Nuclear Detection Office**

Fiscal Year	Due Date	Reference/Citation	Requirement	Status
2008	26-Apr-08	House Report 110-181, Title IV, p. 126	The Committee directs DNDO to provide quarterly briefings, beginning in January 2008, on its assessments of these new technologies and its progress in deploying technologies to other vulnerable sites. These briefings should include information about the architecture necessary to deploy detection equipment at nontraditional ports of entry or seaports; the types of technologies being assessed; the strengths and weaknesses of these technologies; and the development timetable.	First Briefing complete (22 May 2008) Next Briefing: to be scheduled in September
2008	26-Apr-08	House Report 110-181, Title IV, p. 126	DNDO is working with CBP to find ways to screen shipments and vessels coming to the United States for radiation at the foreign ports from which they depart. The Committee directs DNDO to report on the results of these efforts in conjunction with the quarterly threat assessment briefings, beginning with the next scheduled briefing.	First Briefing complete (12 May 2008)
2008	26-Apr-08	House Report 110-181, Title IV, p. 127	The Committee directs DNDO to report quarterly on red team exercises it has conducted, any vulnerabilities identified, and any changes that are being made to the system to address these vulnerabilities. The first report shall be submitted on January 1, 2008.	First Briefing complete (22 April 2008) Next Briefing: to be scheduled in September
2008	26-May-08	House Report 110-181, Title IV, p. 129	GAO recommends that DNDO (1) collect and maintain reports concerning all of the testing performed by the U.S. national laboratories; and (2) review the test reports in order to develop an information database on how PVTs perform in both laboratory and field tests on a variety of indicators, such as their ability to detect specific radiological and nuclear materials or how they are affected by different levels of background environmental radiation. The Committee concurs with GAO's recommendations and directs DNDO to report on its plan to collect and maintain an information database in a timely fashion.	Target Delivery Date to Congress is October 2008
2008	26-May-08	Senate Report 110-84, Title IV, p. 119	The Committee directs DNDO to submit a strategic plan for its phased deployment that: (1) prioritizes the cities to be covered by the program; (2) lays out a decision matrix on which routes will be covered into the city whether by land, sea or air; (3) addresses whether decoy detection systems would benefit the public good; (4) indicates what level of detection infrastructure makes sense for each city; (5) addresses whether any given deployment has a reasonable chance of success against an adversary with at least a moderate level of technological know-how; and (6) establishes a 5-year projected cost of the program.	Target Delivery Date to Congress is October 2008
2008	26-Apr-08	Senate Report 110-84, Title IV, p. 119	The Committee directs DNDO to provide a classified briefing to the Committee on ways it plans to incorporate current intelligence into the structure and implementation of the Architecture by October 1, 2007.	Submitted to Congress: 1 May 2008
2008	1-Sep-08	FY 2008 Omnibus PL 110-161, Title IV, p. 230	None of the funds appropriated under this heading shall be obligated for full-scale procurement of Advanced Spectroscopic Portal Monitors until the Secretary of Homeland Security submits to the Committees on Appropriations of the Senate and the House of Representatives a report certifying that a significant increase in operational effectiveness will be achieved.	Target Delivery Date to Congress is Fall 2008

BUDGET REQUEST AND SUPPORTING INFORMATION

DOMESTIC NUCLEAR DETECTION OFFICE MANAGEMENT AND ADMINISTRATION

I. Appropriation Overview

A. Mission Statement for Management and Administration:

The Domestic Nuclear Detection Office (DNDO) is the lead agency within the Department of Homeland Security to integrate efforts across the Department in combating the threat of nuclear attack, and the lead departmental representative for all interagency activities to coordinate the U.S. Government's (USG) nuclear defense posture. Key to the success of the Department of Homeland Security (DHS) is improving the ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, the Department has integrated all nuclear detection research, development, test, evaluation, and operational support into a single office. DNDO is dedicated to both the development and enhancement of the global nuclear detection architecture; acquisition and deployment support for the domestic detection system; coordination of effective sharing of nuclear detection-related information; the coordination of nuclear detection research and development; the establishment of procedures and training for end users of nuclear detection equipment; and national-level integration, development, and advancement of an enduring national nuclear forensics capability.

The Management and Administration (M&A) appropriation provides for the management and administrative support to accomplish that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. In addition, M&A provides the material support for DNDO personnel, such as facilities, supplies and materials, and administrative needs such as information technology (IT) equipment and support. Finally, most of the Working Capital Fund (WCF) is included within the M&A request.

B. Budget Activities:

As a jointly-staffed office, the DNDO staff presently consists of 130 DNDO Federal staff positions, which consist of approximately 28 detailees. Beginning in FY 2007, DNDO agreed to reimburse parent organizations for detailed staff. Additionally, the M&A request includes all DNDO rent payments and contributions to the DHS Working Capital Fund (WCF). Beginning in FY 2009 the DNDO planned staffing level 130, of which 130 will be full-time equivalent (FTE) staff. FY 2010 staffing reflects the fully annualized level of staffing at 130 FTEs.

An additional adjustment to M&A will be to assign procurement operations costs directly to the contracting activity and collected under all three DNDO apportionments (M&A, RD&O and Acquisition) to effectively capture the full costs of each contracting activity and vendor activity. Assignment of the procurement costs directly to the contracting funds allocations provides an enhanced efficiency in planning and capturing lifecycle costs by program activity. The present process is to fund the cost of procurement operations from M&A for expediency

purposes. Nevertheless, the need to move the costs of procurement operations will provide accurate understanding of the contracting costs of the program and will increase the efficiency of the financial execution.

Even though the costs of procurement operations are being moved to the programs, the M&A budget requirements increase with the costs associated with the WCF, annualized personnel payroll and benefits and GSA rental costs. In fact, the funding requirements equate to an 8% increase. Additionally, with the growth of personnel and program support there are additional space requirements that will be incurred in, or before, FY 2010.

C. Budget Request Summary:

The Domestic Nuclear Detection Office requests 130 FTE, 130 full-time positions and \$39,599,000 for FY 2010 Management and Administration. The total adjustments-to-base is 0 FTE and an increase of \$2,099,000. There are no program increases requested.

II. Summary of FY 2010 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security
Domestic Nuclear Detection Office
Management and Administration**

Summary of FY 2010 Budget Estimates by Program/Project Activity
(Dollars in Thousands)

Program/Project Activity	FY 2008 Actual		FY 2009 Enacted		FY 2010 Request		Increase (+) or Decrease (-) For FY 2010					
							Total Changes		Program Changes		Adjustments-to-Base	
	FTE	AMOUNT	FTE	AMOUNT	FTE	AMOUNT	FTE	AMOUNT	FTE	AMOUNT	FTE	AMOUNT
Management	121	31,305	130	37,500	130	39,599	---	2,099	(130)		130	2,099
Subtotal, Enacted Appropriations and Budget Estimates	121	\$31,305	130	\$37,500	130	\$39,599	---	\$2,099	(130)		130	\$2,099

III. Current Services Program Description by PPA

Department of Homeland Security
Domestic Nuclear Detection Office
Management and Administration
Program Performance Justification

(Dollars in thousands)

PPA: Management and Administration

	Perm Pos	FTE	Amount
2008 Actual	130	121	\$31,305
2009 Enacted	144	130	37,500
2010 Adjustments-to-Base	---	0	2,099
2010 Current Services	144	130	39,599
2010 Program Change	---	---	---
2010 Request	144	130	39,599
Total Change 2009-2010	---	0	2,099

DNDO requests 130 positions, 130 full time equivalents (FTE), and \$39.599 million for FY 2010. This is an increase of \$2.099 million over FY 2009 for annualization of FY 2009 part year funding, annualization of FY 2008 increases, GSA rent, and Working Capital Fund adjustments.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Management and Administration (M&A) funds the administration of the Domestic Nuclear Detection Office. The M&A request provides for the execution of salaries, benefits, and expenses related to 130 positions and 130 FTE, an increase of 0 positions and 0 FTE over FY 2009 request levels.

Beginning in late FY 2007, DNDO initiated an internal review resulting in a realignment of activities and personnel to better reflect its full range of missions and customers. The M&A request provides the material support for DNDO personnel, such as facilities, supplies and materials, and administrative needs like information technology (IT) equipment and support. With the exception of the Office of Procurement Operations costs for managing the DNDO procurements, DNDO contributions to the DHS Working Capital Fund (WCF) are included within the M&A request.

IV. Program Justification of Changes

Not applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Domestic Nuclear Detection Office
Justification of Proposed Changes in Management and Administration
Appropriation Language**

For salaries and expenses of the Domestic Nuclear Detection Office and for management and administration of programs and activities, [37,500,000] **\$39,599,000**; Provided, that not to exceed \$3,000 shall be for official reception and representation expenses. (Department of Homeland Security Appropriations Act, 20[09]**10**).

PPA Mission Statement

Under the direction of NSPD-43/HSPD-14, the mission of Domestic Nuclear Detection Office (DNDO) is to address the broad spectrum of radiological and nuclear protective measures through the development of the global nuclear detection architecture; the deployment of the domestic detection system to detect and to report attempts to import or to transport a nuclear device or fissile or radiological material intended for illicit use; the coordination of nuclear detection research and development on a government-wide scope; and the establishment of procedures and training for the end users of the deployed equipment.

The Management and Administration (M&A) appropriation provides for the management and administrative support of that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. The M&A appropriation accounts for the funding that assists in the achievement of DNDO's mission through the maintenance of an operations level that provides facilities, supplies and materials, IT equipment and administrative support. DNDO's contributions to the DHS Working Capital Fund (WCF) are included within the M&A request.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Salaries and Benefits	\$10,011	\$17,875	\$20,922	\$3,047

Salaries and Benefits includes costs for 130 FTEs. The FY 2010 request includes an increase of \$3,047,000 for the personnel compensation and benefits.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$149	\$331	\$400	\$69

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2009 request includes increases of \$1,829,000 in non-pay inflation increases.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Transportation of Things	\$334	\$37	\$37	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2010 request of 37,000 is the same as FY 2009. The funding will be used to finance the transportation of furniture and other household goods associated with the rotation of overseas employees and the permanent change of station or relocation of domestically based DHS federal employees.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
GSA rent	\$334	\$4,082	\$4,823	\$741

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2010 request includes increases of \$741,000 in non-pay inflation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Communication, Utilities, and miscellaneous char	\$0	\$28	\$28	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2010 request of 28,000 is the same as the FY 2009 request.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Printing	\$0	\$15	\$15	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2010 request includes an increase of \$15,000 in non-pay inflation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Other Services	\$1,063	\$8,072	\$6,175	(\$1,897)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2010 request includes a decrease of \$1,897,000 in non-pay program decreases.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Purchase from Government Accounts	\$18,786	\$4,768	\$4,877	\$109

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. In FY 2008 this account also included rent. The FY 2010 request includes an increase of \$2,088,000 in non-pay inflation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Operation & maintenance of facilities	\$275	\$1,082	\$1,093	\$11

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2010 request includes an increase of \$11,000 in non-pay inflation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Operation & Maintenance of equipment	\$185	\$61	\$62	\$1

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 request includes an increase of \$1,000 in non-pay inflation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Supplies & materials	\$246	\$317	\$327	\$10

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2010 request includes a \$3,000 in non-pay inflation program increase.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$256	\$832	\$840	\$8

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request includes increases of \$8,000 in non-pay inflation.

BUDGET REQUEST AND SUPPORTING INFORMATION

DOMESTIC NUCLEAR DETECTION OFFICE RESEARCH, DEVELOPMENT, AND OPERATIONS

I. Appropriation Overview

A. Mission Statement for Research, Development, and Operations:

The mission of the Department of Homeland Security's (DHS) Domestic Nuclear Detection Office (DNDO) is to improve the Nation's capability to deter, detect and report attempts to import, possess, store, develop, or transport nuclear or radiological material for use against the Nation, and to further enhance this capability over time. DNDO was established by National Security Presidential Directive (NSPD)-43 and Homeland Security Presidential Directive (HSPD)-14 to provide a focal point addressing the broad spectrum of radiological and nuclear (rad/nuc) protective measures. Title V of the SAFE Port Act of 2006 (P.L. 109-347) directs DNDO to "serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time." DNDO is responsible for the engineering development of all the current and next generation of nuclear detection systems (and associated materials development and facilitation). DNDO is also responsible for integrating, advancing, and stewarding national nuclear forensics capabilities amongst the Departments of Defense, Energy, and Justice.

To more effectively carry out its goals and objectives, in late fiscal year (FY) 2007 DNDO initiated an internal review and realignment of activities and personnel to better reflect its full range of missions and customers, and to ensure an optimum merger of user requirements with capability development. At the foundation of this mission space construct is the global nuclear detection architecture (GNDA) delineation of geographic layers (exterior, border, interior, and crosscutting) and threat pathways (air, land, and sea). DNDO formed the Mission Management Directorate (MMD) to ensure an increased understanding of the Federal, state, and local entities with the primary operational responsibility for each pathway forge a more effective linkage between their user requirements and DNDO's technology and operational capability development efforts.

The four mission areas to which DNDO has aligned activities, and the scope of activity addressed by each mission area, are described below:

The *land borders mission area* encompasses all official road and rail ports of entry (POEs), as well as land border checkpoints and illicit traffic between the official POEs. Road POE rad/nuc scanning focuses on cargo, pedestrians, and privately-operated vehicles (POVs). Current rail POE efforts will address the scanning of cargo.

The *aviation mission area* addresses all threat pathways involving civil air transport – both commercial operations and general aviation. Rad/nuc threats may be transported via air as a prelude to an attack elsewhere, or the actual attack involving a rad/nuc threat device may be

executed and delivered directly by air. Rad/nuc detection capabilities must address the scanning of air cargo, aviation passengers and their baggage, as well as the aircraft and crew.

The *maritime mission area* addresses the scanning of people, cargo, vessels, and other conveyances at seaports of entry and on seas, oceans, or other navigable waterways within U.S. Federal, State, local and tribal law enforcement jurisdiction. All vessels, including container ships, commercial fishing boats, tug boats, barges, commercial tour boats, cruise ships, tankers, bulk cargo ships, and privately owned/operated pleasure craft and sailboats, within the defined maritime domain may be exploited by terrorists to transport illicit rad/nuc material.

The *interior mission area* comprises all detection opportunities within U.S. border.

The *Mission Management Directorate* (MMD) is responsible for coordinating the development of mission area plans addressing the pathways outlined above. The *mission support* role is to interface directly with Federal, State, and local stakeholders to gather rad/nuc technology and operational capability requirements and provide these requirements to the transformational research, systems development, and operations support activities within DNDO.

DNDO is committed to ongoing interaction with Federal, state, and local groups throughout the full range of systems development efforts, which include all necessary systems engineering and test and evaluation needs. In addition, DNDO will develop training and exercises specific to user groups and technologies. As a complement to the activities of these mission areas, DNDO will continue transformational research and development programs, the enhancement of a technical nuclear forensics capability, and a full range of mission support efforts such as systems engineering, test and evaluation infrastructure, red teaming and net assessments, architecture studies, and operations support activities, including technical reachback.

The Research, Development, and Operations (RD&O) request identifies resources required for research, systems development, and all required mission and operations support activities.

B. Budget Activities:

Systems Engineering and Architecture:

All programs and mission areas require the implementation of a strong and disciplined systems engineering approach. Systems engineering is integral to program support, and includes areas such as risk management, configuration control, requirements development, and technical evaluation and analysis. Systems engineering is also a key component of test and evaluation efforts, providing the basis for the development of test strategies and plans, definition of test schedules, generation of test requirements, selection of appropriate test venues and equipment, support of test implementation, and reporting of test results. In addition, DNDO has established the Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER), a program to ensure independent and consistent testing of radiation detectors for the private sector.

At the core of all DNDO activities is the systems architecture function: determining gaps and vulnerabilities and then formulating recommendations and plans to develop an enhanced architecture.

By intensively studying the multi-layered structure of the rad/nuc detection architecture, a well-defined and carefully coordinated network of interrelationships is understood and developed.

The Joint Annual Interagency Review of the GNDA gives rise to critical projects across all DNDO mission areas and the U.S. Government. DNDO Systems Architecture efforts are focused on developing an enhanced GNDA, including both domestic and international components. The global architecture comprises several key elements: a multi-layered structure of rad/nuc detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time.

Near-term (FY 2008-FY 2010) RD&O priorities for systems engineering and architecture are:

- Develop Technical Capability Standards for handheld, transportable, and mobile rad/nuc detection equipment, non-intrusive inspection systems, and for radiation portal monitors.
- Participate in the development of national and international standards for rad/nuc detection equipment.
- Complete an overarching strategic plan for the GNDA and continually update the architecture gap and risk analyses.
- Conduct international country and regional studies that outline the characteristics and potential vulnerabilities of a country or region's rad/nuc capabilities.
- Conduct maritime architecture studies to characterize PRND opportunities both domestically and overseas.
- Conduct domestic interior PRND studies for the "Green Border" States along the Mexican and Canadian borders, identify gaps and develop mitigation strategies.
- Continue to develop a cooperative and integrated effort with DOD to assure an interagency program to advance the strategic vision for a GNDA by leveraging the DNDO GNDA.
- Continue to refine the GNDA to effectively address the risk from the commercial and general aviation pathways by gathering relevant data and conducting analyses in a coordinated manner which supports the efforts of other stake holders. Efforts will include focus on continuing development of overseas scanning options as well as addressing the domestic aviation pathway.

Systems Development:

DNDO Systems Development programs serve as the rad/nuc detection product improvement component within DNDO, taking concepts for new detection systems from exploratory research into a level of maturity sufficient for later production and deployment. Systems Development activities include engineering development and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography (which includes non-intrusive inspection, or NII), human-portable systems.

Near-term (FY 2008-FY 2010) RD&O priorities for systems development are:

- Develop a rad/nuc scanning capability to address cargo entering the country from Canada and Mexico via rail.
- Develop next-generation radiography systems that can automatically detect materials that could be used to shield special nuclear materials.
- Develop next-generation human-portable and mobile rad/nuc detection systems to improve presently-deployed capabilities at our Nation's borders and airports.
- Continue the field evaluation of Commercial-Off-The-Shelf (COTS) detectors and Concept of Operations (CONOPS) validation for non-POE land borders.
- Continue the support of crosscutting and enabling functions such as algorithm improvements, and quality control, management, and communication of data.
- Develop solutions for scanning international general aviation aircraft, passengers, and their baggage at "gateway" airports to protect against the aforementioned "direct-to-target" scenario.
- Develop and evaluate rad/nuc detection technologies (human-portable, boat-mounted, and airborne detectors) to address the "detection at sea" mission.
- Develop and implement, at seaport terminals that have on-dock rail transfer capabilities, technologies to scan cargo that is transferred directly from ship to rail and exits the terminal by train.

Assessments:

The DNDO research and development process is anchored by a critical assessment of technologies as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Mission-specific research, development, and acquisition programs are supported by test and evaluation (T&E) campaigns to characterize technologies and systems, red teaming assessments to deepen the understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

In addition to the above activities, DNDO has established a Pilots Execution Division to oversee the execution of all pilots – activities planned as operational tests or trials to inform that serve as a tentative model for future development or deployment decisions. While DNDO's other test campaigns (mentioned above) are intended to evaluate the technical performance of detection technologies in controlled environments, pilot programs allow DNDO to conduct limited deployments of new CONOPS or emerging rad/nuc detection technologies in existing operational environments, or alternately, existing CONOPS or technologies in new operational environments. These pilots provide an assessment of the process, equipment, and/or system to support PRND mission objectives and customer/stakeholder requirements. Pilots are a tool for DNDO to identify and leverage lessons learned that will reduce the risk of full scale deployments, enhance the impact of limited and competing resources, and expedite the deployment of the GNDA, increasing the Nation's ability to respond to the rad/nuc threat.

Near-term (FY 2008-FY 2010) RD&O priorities for assessments are:

- Conduct Net Assessments and Red Teaming evaluations that enable DNDO programs to enhance the integration of international, Federal, State, tribal, local, first responders, and other mission partners with DNDO PRND efforts.
- Complete the Rad/Nuc Countermeasures Test and Evaluation Complex (RNCTEC) facility in FY 2009. This facility that will be the premier national test facility for DNDO and other agencies to conduct passive and active radiation detection, and radiography testing.
- Conduct RNCTEC Operational and management activities following startup completion.
- Retain radiation experts to assist in test planning and analysis and to ensure independent and technically defensible T&E campaigns.
- Produce rad/nuc sources for all DNDO testing programs.
- Conduct T&E activities each year to support each DNDO mission area, and enhance testing infrastructure at the testing sites as required.

National Technical Nuclear Forensics:

Nuclear forensics is one of the three pillars along with intelligence and law enforcement investigations that are critical to the ability to attribute the source of nuclear material. In the event of a rad/nuc incident or interdiction in the United States, the technical questions raised during an investigation are partially answered through nuclear forensics.

Current nuclear forensics capabilities are built upon a foundation from the Cold War, which addressed nuclear weapons development and testing, arms control monitoring, and intelligence activities. The imperative to modernize and advance these capabilities came into sharp focus after the 9/11 attacks. Nuclear forensics, in response to a disrupted or actual attack, will be called upon to help answer the questions about the identification of the source of materials, reducing uncertainties, and reducing the time required to reach technical conclusions. In order to address this threat, the Presidential Directive, “National Technical Nuclear Forensics,” was issued and established roles and responsibilities of six federal organizations. The Secretary of Homeland Security was directed to establish within DNDO the National Technical Nuclear Forensics Center (NTNFC). Nuclear forensics priorities are focused squarely on technological advances, international cooperation, interagency integration, and exercising to assure readiness.

At the same time, the strategic landscape is in a state of flux, directly impacting the nuclear forensics community. The nuclear weapons complex, which provides most of the facilities and expertise that is leveraged for NTNFC, is being reduced, and many of the senior experts are either retiring or moving on to more promising career paths. Furthermore, the academic pipeline that would provide the next generation of nuclear experts has withered and is currently in a state of extremis. Hence, DNDO is aggressively pursuing improvements to the academic pipeline with synchronized programs encompassing the DNDO mission space for nuclear detection and forensics.

Within the forensics landscape, DNDO is striving to advance the technical capabilities, integrate the partner agencies, and restore the academic pipeline to ensure an enduring national capability. In order to accelerate accomplishment of these goals, DNDO is planning to continue increasing its focus and resources in the nuclear forensics program in FY 2010. This will serve to not only more rapidly address the scientific challenges to improve pre-detonation materials forensics technology capabilities,

but at the same time to continue expanding our efforts to restore the nuclear forensics expertise pipeline, across the spectrum from the most junior (e.g., student internships fellowships, and retaining/recruiting new faculty) to the most senior (e.g., engaging and retaining the expert laboratory forensic scientists through a stable and sufficient R&D program). The expertise pipeline program relies on a measured approach, building on the initial efforts launched in FY 2008 and FY 2009 and gauging performance in step with the expansion.

Near term (FY 2008-FY 2010) RD&O priorities for National Technical Nuclear Forensics are:

- Accelerate the development and advancement of technological capabilities to perform nuclear forensics on pre-detonation rad/nuc materials with a focus on discovery of new material signatures and new tools, models and methods to evaluate forensic data.
- Foster and advance a fully integrated interagency NTNF enterprise by leading joint planning activities to include a senior level Steering Committee, Executive Council, Joint Program Review teams, and leading interagency exercises and corrective actions follow-up activities.
- Expand and direct essential activities to reinvigorate university programs, faculty and students in nuclear forensics-related specialties, while restoring the national laboratory expertise pipeline and workforce to include summer internships, undergraduate opportunities, Ph.D. student fellowships, post-doctoral fellowships, and university research programs and faculty awards.
- Advance established international partnerships in nuclear forensics and develop new cooperative relationships working closely with the State Department, the Department of Energy and NTNF partner agencies through initiatives such as the Global Initiative to Combat Nuclear Terrorism, the International Technical Working Group on Nuclear Smuggling, and the international nuclear forensics Model Action Plan.

Transformational Research and Development:

DNDO has established a transformational research and development (TR&D) program to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of rad/nuc detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. TR&D is carried out within three major programs: Exploratory Research, the Academic Research Initiative, and Advanced Technology Demonstrations.

Toward the goals of improving nuclear detection capabilities, addressing enduring vulnerabilities, or reducing the operational burden of rad/nuc detection, exploratory efforts in radiation detection materials research and development over the last several years have yielded several very promising materials. These new materials have shown significant improvement over the current materials with respect to the key metrics: sensitivity, energy resolution, manufacturability, and cost. The increase in

FY 2010 will further these efforts to accelerate the material optimization, production techniques, and establish a low rate production capability for this material. The definitive outcome of this initiative would be that much higher performing detection devices would become commercially affordable. This could have a tremendous impact on the ability to detect radiation threat sources.

TR&D is engaged in long-term R&D with projects that span several years. The TR&D activity is robust, long-term, stable, and annually refreshed. Therefore, continuation of programs is a necessary and positive indication of progress.

Near term (FY 2008-FY 2010) RD&O priorities for TR&D are:

- Create new advanced technology demonstration (ATD) programs every year as programs build on past success. Continue to initiate 1 ATD per year with a performance period of 2 to 3 years per ATD with transitions throughout FY 2009 and FY 2010.
- Refresh the exploratory research (ER) projects each year including elimination of less promising concepts for new ones at a reasonable rate is vital for a robust program. Continue a strong ER program, exploring innovative, high-risk, early-stage, new ideas that can make a transformational contribution to DNDO mission of reducing the risk of nuclear terrorism.
- The Academic Research Initiative (ARI) is meant to be stable over many years so continuation and constant funding is desirable. Continue the ARI to engage the academic community in DNDO research goals, building a community dedicated to solving long-term, high-risk research issues and to develop the next generation of researchers in nuclear detection technology.

Operations Support:

DNDO operations support efforts enhance DNDO's situational awareness of the rad/nuc landscape and the GNDA, while directly facilitating the technical adjudication of rad/nuc incidents. Through these activities, DNDO provides actionable analytical and intelligence assessment products for operational decision makers. DNDO also works directly with law enforcement and other Federal partners to determine indicators of nuclear terrorism and recommend response or interdiction. Additionally, DNDO develops and maintains information sharing capabilities and analytical tools necessary to create an integrated operating system to be used by Federal, State, local, and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. A central operations support capability is the Joint Analysis Center (JAC), a 24/7 DNDO information and analysis hub that provides for situational awareness of the deployed nuclear detection architecture, rapid information reporting, and facilitation of technical support for alarm adjudication and resolution. The JAC relies on the Technical Reachback Program (TRB) to provide expert advice and analysis in support of detection operations and the Nuclear Assessment Program (NAP) to maintain awareness of the nuclear threat and illicit trafficking, and to support the Federal government with rapid analysis of communicated threats. While these operations support activities require DNDO to closely interact with the Intelligence Community, DNDO does not act as an intelligence collection agency. In addition, DNDO does not provide command or control functions over detection and response assets, but provides critical support to entities which have these responsibilities and authorities.

Near term (FY 2008-FY 2010) RD&O priorities for Operations Support are:

- Maintain situational awareness of the Global Nuclear Detection Architecture (GNDA).
- Analyze information from the GNDA and share data with the Community (ies) of Interest to make the GNDA more effective.
- Ensure that detection leads to an appropriate response by local or Federal hazmat and law enforcement.
- Conduct engagements with State and local communities to increase awareness, partnerships, and capabilities.
- Build the appropriate support assets for State, local, and other Federal partners. Existing foundational programs, such as training, exercises, and facilitated on-site program assistance will be expanded to include a broader range of customers, evolving risks and vulnerabilities, technologies, and proven operational concepts.
- Complete the initial operating capability of the JAC Collaborative Information System (JACCIS).

C. Budget Request Summary:

The Domestic Nuclear Detection Office requests \$326.537 million for FY 2010 Research, Development, and Operations, an increase of \$3.337 million over the FY 2009 Enacted level.

An internal review of the DNDO financial, mission and program management was conducted in 2007 per the “Implementing Recommendations of the 9/11 Commission Act of 2007” (P. L. 110-53, Section 1103), calling for the preparation of a Joint Annual Review of the Global Nuclear Detection Architecture (GNDA). Consequently, DNDO initiated an internal adjustment of the management of projects and activities to better reflect the missions and customers of DNDO in the context of the GNDA.

Prior to this managerial adjustment, DNDO focused on the research, development and eventual deployment of specific products and technologies, such as the Advanced Spectroscopic Portal (ASP) as the focus of addressing the nuclear threat. The nuclear threat, however, is multifaceted and requires DNDO to be more flexible and comprehensive as it addresses rad/nuc detection in various pathways as outlined in the GNDA. As a result, the solution sets have evolved to more effectively support the detection and prevention efforts in the threat layers as described in the GNDA. DNDO is effectively executing the cross-agency coordination by integrating the mission area end-user requirements into DNDO planning and activities. In accordance with the expression of Congress, this budget for DNDO is submitted in the same account structure as previously appropriated. The previous structure had been designated as DNDO was created as an organizational element within DHS. The evolution of its budget and program management from technological and product focus to a mission area orientation is a practical evolution demonstrative of its responsiveness to the Nation’s needs.

To better align the financial and program management, DNDO requests a new budget structure be considered and adopted so that DNDO management can:

- increase the transparency of DNDO’s financial planning and program management as it crosswalks its planned programs and activities to the requirements of mission area customers;

- better facilitate the reporting of financial and program performance along both the mission and program and product areas; and
- improve DNDO's efforts to be results-oriented as it correlates DNDO budgets with its goals and refines its performance-based budgeting.

Program Performance Justification
(Dollars in thousands)**

PPA: SYSTEMS ENGINEERING AND ARCHITECTURE

	Perm Pos	FTE	Amount (\$k)
2008 Actual	---	---	21,918
2009 Enacted	---	---	25,147
2010 Adjustments-to-Base	---	---	301
2010 Current Services	---	---	25,448
2010 Program Change	---	---	0
2010 Request	---	---	25,448
Total Change 2009-2010	---	---	0

DNDO requests \$25.448 million for this activity. There is an increased adjustment to base of \$.301 million over the FY 2009 enacted level.

CURRENT SERVICES PROGRAM DESCRIPTION:

The DNDO systems engineering and architecture programs are (1) developing, implementing, and supporting a disciplined systems engineering approach throughout DNDO, and (2) enhancing the GNDA, including both domestic and international components.

Systems Engineering Program: DNDO is committed to the successful implementation of its founding principal of establishing and putting into practice a strong and disciplined systems engineering approach in achieving an integrated and balanced global nuclear detection solution. DNDO's systems engineering program provides integral support to program areas and establishes and documents clear and measurable rad/nuc detection and identification requirements. This program also leads the establishment of rad/nuc detection standards.

Pursuant to the SAFE Port Act of 2006, DNDO is responsible for developing Technical Capability Standards for non-intrusive imaging and radiation detection systems. The objective of the DNDO Standards Program is to ensure all radiation detection standards are based on the actual threat. By ensuring a threat basis for standards, the Standards Program directly or indirectly supports all DNDO programs for acquisition, research and development.

Initial standards will be government-unique standards that will use classified information on rad/nuc threats as a basis. The approach is to develop a technical capability standard for each category of detection systems. As appropriate, the program will then support the modification of existing consensus standards to include the government-unique standard information. The Technical Capability Standard will also provide a basis for DNDO to work with DOE's National Nuclear Security Administration (NNSA) to develop unclassified test objects that are consistent with the threat-based

requirements. In collaboration with the National Institute of Standards and Technology (NIST), DNDO has formed an interagency working group and commenced work on developing the Technical Capability Standards, with a goal of publishing the first standard in 2009.

In addition to having responsibility for the Technical Capability Standards, DNDO is responsible for supporting the development of national and international rad/nuc detection consensus standards. The DNDO consensus standards program will:

- Review present standards for currency and revision as needed; identify those areas requiring development of new standards.
- Provide the support needed to maintain the current Internet access to rad/nuc ANSI standards under DNDO responsibility.
- Provide modeling development and analysis necessary for definition and establishment of criteria, parameters, and specifications for existing and proposed standards.
- Support U.S. participation at related international standards development meetings to ensure U.S. concerns are represented in the international community, and that U.S. standards reflect existing international efforts.

DNDO also provides systems engineering and evaluation support to specific DNDO programs in areas such as standard systems engineering documentation, adaptation of CONOPS, systems capabilities matrices, and test campaigns. These systems engineering activities are included in the Systems Development PPA as a part of the programs that receive this support.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- Developed a draft, threat-based Technical Capability Standard for handheld rad/nuc detectors.
- Provided 2,381 rad/nuc consensus standards to vendors requested through the Institute of Electrical and Electronics Engineers, Inc.(IEEE) website on standards.

FY 2009 planned accomplishments include:

- Achieve interagency concurrence on a Technical Capability Standard for handheld rad/nuc detectors.
- Created a working group to update the ANSO N42 rad/nuc data format standard..

FY 2010 planned accomplishments:

- Achieve interagency concurrence on Technical Capability Standards for transportable and mobile radiation detection systems and for radiation detection portal monitors.
- Work with CBP and other key stakeholders to begin development of a Technical Capability Standard for rad/nuc detection by non-intrusive imaging systems.

Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) Program: The rad/nuc detector industry continues to develop new technologies and enhancements to existing technology. Federal, State, and local technology users need accurate, objective, and unbiased performance testing

of this equipment to inform the development of their requirements. The pace of innovation and new products in the marketplace makes it prohibitive for the Federal government to continually conduct testing to ensure that rad/nuc detectors meet necessary performance standards. DNDO is mandated by Congress (SAFE Port Act of 2006) to implement a test and evaluation program to provide effectiveness information and metrics for evaluating preventive rad/nuc detection technology. The GRaDER program was established to provide vendor-funded performance testing against established standards. As such, partnership and collaboration with the Standards Program (discussed above) is a key element of the GRaDER framework. This testing framework can be accessed any time a vendor has a new technology, rather than waiting for a government-sponsored test.

In the first phase, the GRaDER Program established independent testing against ANSI N42 consensus standards established by industry and the government. The law also requires DHS to publish technical capability standards and standard operating procedures for the use of non-intrusive imaging and radiation detection equipment. The GRaDER program will integrate these technical capability standards into the next phase of the program as the Federal government's unique technical capability standards are developed. The GRaDER program, working with the NIST, uses the National Voluntary Laboratory Accreditation Program (NVLAP) to designate competent laboratories and assure independent and consistent testing of Commercial-Off-The-Shelf (COTS) radiation detection devices. Results of the GRaDER program will be made available to DHS components, other Federal agencies, and State, local and tribal law enforcement and first responder agencies. The ultimate objective is to enable informed procurement decisions, particularly in the use of grant funding.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- Initiated the GRaDER program in collaboration with NIST, the Federal Emergency Management Agency (FEMA), and the DHS Science and Technology (S&T) Directorate.
- Collaborated with NIST to begin NVLAP accreditation of labs.
- Published guidance on the DHS website to explain the program to laboratories, vendors and users and to provide information regarding participation in the program.
- Reviewed and accepted request from first accredited laboratory.

FY 2009 planned accomplishments:

- Initiate vendor-financed testing of COTS rad/nuc detection systems by NVLAP-accredited laboratory.
- Report results of testing against selected ANSI N42 standards to support the Authorized Equipment List from the FEMA Grant Program Office.
- Integrate at least two additional NVLAP-accredited or DNDO-accepted laboratories.
- Increase scope of laboratory testing of additional ANSI N42 standards in support of the GRaDER program.
- Execute outreach strategy to the vendor community to inform them of the availability, benefits, and protocols of the program.

FY 2010 planned accomplishments:

- Initiate testing against Technical Capability Standards.
- Integrate additional NVLAP-accredited or DNDO-accepted laboratories.
- Increase scope of laboratory testing in terms of additional ANSI N42 standards.
- Support NIST to conduct a GRaDER post-market surveillance program to ensure continued vendor compliance.
- Update information on previously tested instruments based on the NIST post-market surveillance program.
- Continue outreach to the vendor community.

Systems Architecture: DNDO develops time-phased strategies and plans for improving the probability of detecting and interdicting rad/nuc attacks. Plans are developed jointly with DNDO's intra- and interagency partners and in close coordination with relevant DNDO offices. These plans are focused on addressing the most important gaps in the existing GNDA. Studies and analyses are performed to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans for reducing risk. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase and that may not be available for implementation for several years.

The global architecture comprises several key elements: a multi-layered structure of rad/nuc detection systems (deployed both domestically and overseas), a well-defined and carefully coordinated network of interrelationships among them, and a set of systems engineering based principles and guidelines governing the architecture's design and evolution over time. The architecture will continue to assess threats by mission areas.

The principal focus of DNDO's systems architecture efforts since FY 2006, when the initial baseline architecture analysis was completed, has been to identify ways to address the largest gaps in the border layer—namely, air, maritime, and land pathways between designated POEs—and gaps in the interior layer. These efforts are summarized in the accomplishments by fiscal year. Going forward in FY 2009 and FY 2010, an additional focus will be to complete an overarching strategic plan for addressing gaps and monitoring progress across the entire GNDA. Architecture work will continue in four areas: International Architecture; Border Layer; Interior; and Modeling, Crosscutting Studies and Analyses. The International Architecture area will support international programs such as the Global Initiative to Combat Nuclear Terrorism (GI) and the Security and Prosperity Partnership (SPP) to identify and encourage best practices for rad/nuc detection architectures. In addition, the GI work will encourage regional architectures and conduct analyses of appropriate CONOPS or particular regions. The Border Layer will continue to support analyses of detection strategies between the POEs and remaining vulnerabilities at POEs, as well as modeling and risk assessments focused on characterizing the threat and identifying opportunities for detection and interdiction at the border. Emphasis will be placed on the land border (to include rail pathways), aviation pathways, and the maritime border. The Interior area will continue to develop approaches to detection and interdiction appropriate for metropolitan areas, special events, and domestic pathways. In addition, DNDO is leading an interagency effort to increase the public's awareness of the risks, consequences, and appropriate responses related to an attack using an RDD. The Modeling, Crosscutting Studies, and Analyses area will be responsible for the Annual Report to Congress as well as overarching risk analyses and detection modeling such as the bi-annual risk analysis to support medical countermeasure planning and the detection architecture risk

assessments. This area will support architecture documentation development and will provide systems architecture support (for items such as the standardization of data exchange and functional requirements) as necessary. The GNDA strategic plan will continue to be updated and enhanced.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- Prepared the first Joint Annual Review of the GNDA, as required by Sec. 1103 of the “Implementing Recommendations of the 9/11 Commission Act of 2007 (P.L. 110-53).”
- Drafted the global nuclear detection guidelines document in support of the GI.
- Facilitated recommendations for hardening blood and research irradiators containing cesium chloride sources.
- Developed of the interagency action plan for “Public Education” on RDDs, as called for by the Radiation Source Protection and Security Task Force established by the Energy Policy Act of 2005.
- Expanded the maritime dimension of DNDO Mission Support to provide additional support to States with major ports and navigable waterways (Florida and California (Los Angeles/Long Beach)).
- Completed a maritime background radiation study on small vessels to measure normal background and hull impact to onboard sources with various types of small vessels (less than 300 gross tons).

FY 2009 planned accomplishments include:

Systems Architecture will continue to enhance individual components (i.e. individual detection “layers” or threat pathways) of the initial baseline architecture. However, the principal focus of system architecture work in FY 2009 will shift. The emphasis will be to strengthen the architecture by addressing remaining challenges, beyond those addressed in FY 2007-2008.

Specific efforts will include:

International Architecture:

- Complete and publish GNDA model guidelines document (and associated maritime guidelines “annex”) supporting the GI.
- Initiate planning and implementation of an engagement strategy for regional rad/nuc architectures for key international regions.
- Conduct international country and regional studies that outline the characteristics and potential vulnerabilities of a country or region’s rad/nuc capabilities. Increased emphasis will be placed on bilateral and multilateral technical workshops and exchanges to help countries and regions develop and implement effective rad/nuc architectures tailored to address existing vulnerabilities.
- Strengthen neighboring countries’ maritime borders by supporting a bilateral rad/nuc detection capability-building program with Mexican Customs and other Mexican organizations, to include equipment, training, protocols, technical reachback, exercises, etc.

- Formalize relationship with United States Northern Command (NORTHCOM) to enhance both the domestic architecture as well as leverage NORTHCOM's relationships with Canada and Mexico.
- Initiate a systematic framework for engagement planning and execution with foreign (e.g., North American, European, Central and South Asian, North Pacific Rim, Wider Caribbean Region, and Southeast Asian) partners on establishing regional rad/nuc detection architectures. Develop international engagement "annexes" for both the maritime and aviation pathways.

Modeling, Crosscutting Studies and Analysis:

- Complete the 2009 Joint Annual Interagency Review of the GNDA, including GNDA Program/Budget Crosscut.
- Develop a framework for overarching strategic plan for the GNDA.
- Begin the second edition of risk assessment of architectures based on risk results from FY 2007 and FY 2008.
- Continue detection modeling research and analysis.
- Continue work on data fusion and analysis in support of various operational programs.
- Develop a rad/nuc Detection Operational Concept and a rad/nuc Detection Capability Document that will be prepared in accordance with the general format specified by DoD's Joint Capabilities Integration Development System (JCIDS).

FY 2010 planned accomplishments:

International Architecture:

- Continue to strengthen United States maritime borders in partnership with Canada and Mexico including joint work on training and exercise plans, reachback, and information sharing agreements.
- Continue to support the bilateral rad/nuc detection capability-building program with Mexican Customs and other Mexican organizations.
- Continue engagement with foreign (e.g., European, Central and South Asian, North Pacific Rim, Wider Caribbean Region, and Southeast Asian) partners on establishing regional rad/nuc detection architectures.
- Expand relationship with NORTHCOM to enhance both the domestic architecture as well as leverage NORTHCOM's relationships with Canada and Mexico.

Modeling, Crosscutting Studies and Analysis:

- Complete the 2010 Joint Annual interagency review on the GNDA including the Program/Budget Crosscut.
- Work with DHS S&T Directorate to complete the second edition of the HSPD-18 risk analysis for medical countermeasures.
- Complete the GNDA Strategic Plan and supporting analysis.
- Complete the second edition of the risk assessment of the architecture building on risk results from FY 2007 through FY 2009.

- Continue detector fusion and algorithm development for a range of fixed and mobile detectors.

Guided by the GNDA, DNDO provides support relative to the assessment and mitigation of threats in the land border, aviation, maritime and interior mission areas, such as the development of specific architecture studies, CONOPS analyses, detector modeling studies, and enterprise architecture support that are specific to each mission area. These studies will typically be focused on specific programs and will directly support DNDO pilot and R&D initiatives. In general, mission areas will commission architecture studies to identify and characterize trade-offs, risks and costs before deciding on a specific implementation. These preliminary studies are intended to reduce the technical and programmatic risk of new efforts and enhance their integration and interoperability with the overall GNDA.

For each mission area, DNDO approaches and mitigates threats by working with our front-line end-user components to assess and implement solutions to mitigate the threat. This allows DNDO to delineate accomplishments by mission area. During FY 2008 DNDO began the evolution from a product-centric focus to a mission area focus and anticipates achieving the following in support of these efforts:

Accomplishments in the Land Borders Mission Area:

FY 2009 planned accomplishments include:

- Initiate a study of the feasibility of using unattended ground sensors for PRND along the U.S. – Mexico border between POE's..

FY 2010 Planned Accomplishments:

- Investigate other types of radiation detectors that might be suitable for use at CBP Office of Border Patrol (OBP) checkpoints.

Accomplishments in the Aviation Mission Area:

FY 2009 planned accomplishments include:

- Perform systems architecture analyses to enable CBP to more effectively perform the rad/nuc screening mission in the international general aviation environment.
- In close coordination with CBP, TSA, and other operating agencies and stakeholders, perform systems architecture analysis studies of various rad/nuc screening equipment suites and CONOPS variants to introduce rad/nuc screening into the international commercial aviation environment.
- Develop a guidelines document for rad/nuc screening for the general aviation environment for use in international engagements.

FY 2010 Planned Accomplishments:

- Conduct an updated analysis of pre-clearance scanning of general aviation at overseas points of departure and domestic aviation architectures.

- Conduct a study of the gaps related to detection capabilities for international aviation traffic transiting into the United States from outside the continental United States private or non-commercial airports.

Accomplishments in the Maritime Mission Area:

FY 2009 planned accomplishments include:

- Partner with the USCG to fully develop rad/nuc scenarios into the USCG Maritime Security Risk Analysis Model (MSRAM).
- Analyze and develop PRND architecture options for various vectors, which may include: tug and barge, inland waterways, off-shore secondary screening, passenger/vehicle vessels, and cruise ships.
- Develop an International maritime pathways execution plan.
- Complete a maritime architecture study to analyze and develop options for non-container vectors (bulk, break bulk, roll-on/roll-off, tanker).
- Complete an architectural study of the maritime domain in the Great Lakes region to lay the ground work for enhancing the layered detection capability along this significant maritime border.
- Initiate an architectural study that analyzes solutions for underwater detection against smuggling illicit materials via unconventional submersible, semi-submersible, towed, and parasitic devices.

FY 2010 planned accomplishments:

- Carry out the International maritime pathways execution plan developed in 2009 focusing on implementation of PRND concepts.
- Complete an architectural study that analyzes solutions for underwater detection against smuggling illicit materials via unconventional submersible, semi-submersible, towed, and parasitic devices.

Accomplishments in the Interior Mission Area:

FY 2009 planned accomplishments include:

- Execute DNDO's component of the multi-agency Radiological Dispersal Device (RDD) Public Education program under the Radiation Source Protection and Security Task Force.

Training, Education, and Outreach on Nuclear Threat Policy: The Training, Education, and Outreach on Nuclear Threat Policy program seeks to stimulate and encourage a sustainable knowledge base on nuclear policy issues with a new generation of nuclear policy experts drawn from among social scientists, policy analysts, physical scientists, and engineers that ensures continuity of these critical skill sets, and to support the development of a “pipeline” of a new generation of nuclear professionals.

The effort will leverage the knowledge, resources, and experience of nuclear and policy experts to cultivate future generations of nuclear policy experts, scientists, and engineers, across a broad

spectrum of academia, government, and industry. This knowledge base will include renowned personnel with broad nuclear policy expertise including political policy advisors, U.S. diplomats, and specialists from the national laboratories, government agencies (DOE, DoD, DOS, DHS, etc), the private sector, and academia. A key outcome of these activities is the interaction of the counterproliferation and counterterrorism communities in fusing their ideas into coordinated policies for the future. Program-sponsored networking will allow participants to gain additional information in specific areas of interest and/or expertise.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- There was no activity in the Training, Education, and Outreach on Nuclear Threat Policy in FY 2008.

FY 2009 planned accomplishments include:

- There was no activity in Training, Education, and Outreach on Nuclear Threat Policy in FY 2009.

FY 2010 planned accomplishments:

- Commence the Training, Education, and Outreach on Nuclear Threat Policy program.

SUMMARY: The table below assists in illustrating the crosswalk between specific projects and activities and the DNDO mission areas. It is clear that programs and activities have applicability to more than one mission area are represented in a cross-cutting manner.

PPA: SYSTEMS DEVELOPMENT

	Perm Pos	FTE	Amount (\$k)
2008 Actual	---	---	100,087
2009 Enacted	---	---	108,100
2010 Adjustments-to-Base	---	---	(8,100)
2010 Current Services	---	---	100,000
2010 Program Change	---	---	0
2010 Request	---	---	\$100,00
Total Change 2009-2010	---	---	(8,100)

DNDO requests \$100.000 million for this activity. This includes a decrease of \$8.100 million from the FY 2009 Enacted level because of management and technology efficiencies and the conclusion of the Securing the Cities initiative in the New York City region.

CURRENT SERVICES PROGRAM DESCRIPTION:

DNDO is responsible for ensuring that the Nation maintains a preeminent research and development program to address user requirements in radiation detection science and technology. Consequently, DNDO has implemented a consistent development methodology to address technical requirements arising from gaps in operational capabilities and to meet user requirements.

International Rail Program: International rail traffic represents one of the most difficult challenges for radiation detection systems. Over 120 trains with 4,800 loaded rail cars enter the United States from Canada and Mexico each day through 31 CBP rail POEs. Over 2,500 million rail cars pass every year with goods destined for every state in the country. Approximately three times the number of trains cross from Canada compared to Mexico. Additionally, three of the top five northern gateways and four of the top five southern gateways are situated in major urban population centers.

Currently, radiographic imaging systems are installed at the major CBP rail POEs to enable non-intrusive inspections (NII) of rail cargo. Generally, false alarms due to large amounts of naturally occurring radioactive material (NORM) make first-generation RPMs (which are not able to discriminate between radiation alarms) unacceptable for rail. Next-generation passive detection systems which have identification capabilities are also challenged in this environment due to the increased offset distances for rail portals, and due to the heavy steel construction of the rail cars. Furthermore, there are unique operational challenges in this environment due to the length of the trains (up to 2 miles), the distance required to stop moving trains, and the difficulties in separating alarming cars for further examination.

DNDO has worked with CBP to capture the end-user needs, characterize the rail operational environment, and develop operational requirements and is presently developing feasible system concepts. In the fall of 2008, DNDO initiated system concept development and preparation of technical requirements to support a joint DNDO/CBP program to develop a rad/nuc detection system to meet the unique requirements of the international rail environment.

Accomplishments in the Land Borders Mission Area:

Significant accomplishments in FY 2008 include:

- Completed development of CBP operational and threat-based requirements for scanning all international rail traffic entering the United States from Mexico and Canada.

FY 2009 planned accomplishments include:

- Complete development of technical requirements and transition to a technology development program.
- Participate in a Rail Cargo Scanning Project with Canada to develop a strategy to explore the technical and operational options available to mitigate the risks posed by the rail pathway between the U.S. and Canada, especially including options that would involve U.S.-Canada cooperation.
- Initiate a Rail Cargo Scanning Project with Mexico.
- Conduct Analysis of Alternatives (AOA) for the Rail Cargo Scanning Project.
- Develop systems architecture for the selected alternative.

FY 2010 planned accomplishments:

- Engage in detailed engineering development of the selected approach to address the international rail environment including:
 - Develop base system user interface software.
 - Extend prototype of selected alternative to Engineering Design Model (EDM) including all subsystems.

Joint Integrated Non-Intrusive Inspection Program: Currently-deployed Non-Intrusive Inspection (NII) radiography systems are primarily designed to provide the capability to address detection of “traditional” contraband such as drugs, currency, guns, and explosives that may be illicitly smuggled in cargo containers. These types of contraband have a relatively low atomic number (low Z), and are generally detectable with standard radiography systems and the use of image analysts for the two-dimensional radiograph. Conversely, nuclear material or shielding material, which has a high atomic number (high Z), will show up in the radiograph as an opaque or dark object (because the high Z material will attenuate the x-rays more effectively than low Z material) that might be noticed by an image analyst. Current systems are used in this way and provide some degree of rad/nuc detection capability. In FY 2006, DNDO began the development of the Cargo Advanced Automated Radiography System (CAARS), which will provide the capability to automatically detect high Z materials with high confidence and a low false alarm rate. These CAARS systems will be able to automatically distinguish between low density materials such as aluminum and steel, and higher density materials such as lead, uranium, or plutonium. CAARS systems will also provide CBP

operators with the capability to continue to detect traditional contraband, although this function will not be automated and will continue to require manual image analysis.

In FY 2008, two important conclusions were reached and programmatic changes were made in response. First, it was concluded that the technology needed to achieve the goals of the CAARS program was less mature than originally estimated (but still feasible) and therefore it would take longer to develop and test the systems than planned. Second, privately funded development had advanced in the intervening two years since CAARS was initiated and some capability to perform automated high Z detection would be forthcoming in future commercial product releases. It is worth pointing out that although these commercial products do not deliver the full capability that CAARS will offer (e.g., they are not as sensitive), they should be available sooner than CAARS systems.

Therefore, DNDO has initiated the Joint Integrated Non Intrusive Inspection (JINII) program with the primary purpose of combining CAARS development with a new development and testing program. Systems to be tested will include the CAARS units as they become available in addition to the nearer-term commercial systems that have been developed by industry and possess some capability to manually or automatically detect high-Z materials. Development of the advanced capability (CAARS) will continue. Systems previously deployed will be capable of creating images that will allow CBP image analysts to continue to inspect for low Z contraband at least as effectively as they can with current systems. System development and testing will be consistent with CBP operational needs.

JINII will also include a research campaign to determine if simple methods are available to upgrade the currently deployed NII radiographic systems to incrementally improve shielded nuclear material detection performance. If methods are found, these methods will be further developed and tested by DNDO.

With regard to the CAARS development, the CAARS prototype systems will be delivered in FY 2009. FY 2009 activities will focus on subjecting systems to a test and evaluation (T&E) program necessary to evaluate the technology. The same methods used to characterize existing NII systems will be used to characterize the CAARS prototypes. Prior to conducting the formal test, each of the CAARS vendors will conduct a rigorous readiness test at their facilities.

The results of the CAARS T&E will be compared to the results of the existing NII system T&E. The result of this study will be a cost-benefit analysis (CBA) to include recommendations with regard to future development and testing options. Depending on the results of the CBA, DNDO may release a solicitation for a rapid development prototype followed by a pilot deployment at a POE yet to be determined.

Accomplishments in the Land Borders Mission Area:

Significant accomplishments in FY 2008 include:

- Planned a test campaign to characterize the ability of near-term commercial NII systems to manually detect shielded nuclear material.
- Initiated a study to determine if methods are available to upgrade existing NII systems to incrementally improve shielded nuclear material detection performance.
- Continued development of three prototype CAARS systems that are designed to automatically detect shielded nuclear material at high throughput rates.
- Updated the JINII health physics impact study.

FY 2009 planned accomplishments include:

- Validate radiographic test objects.
- Complete development of CAARS prototypes.
- Begin T&E campaign of the CAARS prototypes.
- Complete test campaign to characterize the ability of near-term commercial NII systems to detect shielded nuclear material through either automated image analysis or manual image interpretation.
- Complete assessment of available methods to upgrade existing NII systems to incrementally improve shielded nuclear material performance.

FY 2010 planned accomplishments:

- Complete T&E campaign of the CAARS prototypes.
- Perform cost benefit analysis (CBA) to include recommendations with regard to future development and testing options.
- Depending on the CBA recommendation, solicit and award contracts for a rapid development prototype and pilot project to get a realistic measure of the false alarm rate in real stream of commerce and test the overall robustness of the system.

Human-Portable Systems: DNDO has multiple Programs that will provide a wide variety of law enforcement and first responders with effective human portable systems for rad/nuc detection: the Handheld program, the Human-Portable Wide Area Search (HPWAS) program, and the Human-Portable Tripwire (HPT) program. Each of these programs will result in the delivery of human-portable systems that will be used in all DNDO mission areas. For example, human-portable systems will be targeted for use by CBP Office of Field Operations and Office of Border Patrol in the land borders mission area. In the aviation mission area, systems will aid CBP Officers in scanning aircraft and their contents (passengers and baggage) in the international general aviation environment, as well as passengers and baggage in the international commercial aviation environment. For the maritime mission area, future generations of human-portable systems will augment the capabilities of the U.S. Coast Guard. Interior customers will also benefit from DNDO's development of human-portable systems. Through the State & Local Stakeholder Working Group, South East Transportation Corridor Pilot (SETCP) Regional Task Team users working group, and other State and local engagements, DNDO has gathered user requirements for handheld systems. New and enhanced equipment that results from the handheld program will be available to State and local agencies through grants and other funding.

Overall, each of the three human-portable system programs seeks to expand the spectrum of detectors available to end users by 1) investigating existing commercially available systems and tailoring them to better meet the needs of operators; 2) developing cutting-edge technology when current systems are inadequate to meet customer requirements; and 3) conducting systems development efforts for maturing technologies that transition from Advanced Technology Demonstrations (ATDs). Next-generation systems will provide enhanced radiation detection, threat source identification, and notification capabilities to aid end-users in mitigating nuclear threats.

The first human-portable detection technology expected to transition from an ATD to a systems development phase is the Intelligent Personal Radiation Locator (IPRL), a pocket-sized spectroscopic radiation locator that detects radiation, delineates source type, and locates the source. The IPRL technology is discussed in more detail in the Transformational Research and Development (R&D) PPA. In FY 2010 the IPRL program will transition to a systems development phase. DNDO plans to engage in an iterative development process to bring IPRL capability to end-users in a timely manner.

Accomplishments in multiple mission areas:

Significant accomplishments in FY 2008 include:

Handheld Program

- Tested and evaluated sodium iodide (NaI)-based handheld systems. Continued system refinement for Lanthanum Bromide (LaBr₃) handheld systems to support a production decision in FY 2009.
- Conducted data analysis and requirements verification to allow DNDO to deliver the next generation high purity germanium (HPGe)-based handhelds.
- Conducted spectral data collection campaigns to support algorithm and detection system improvements.
- Evaluated handheld EDMs in operationally-relevant environments to assess and incorporate end-user feedback.

Human-Portable Wide Area Search (HPWAS) Program

- The HPWAS program was not formally initiated until FY 2009.

Human-Portable Tripwire (HPT) Program

- Developed prototype systems, including improved algorithms, optimized for non-POE operating environments.

FY 2009 planned accomplishments include:

Handheld Program

- Complete the development of base technologies that will be adapted to support mission-specific environments.
- Finalize, with the users, the operational requirements for handheld systems that will be used for small area searches and secondary screenings.
- Continue to improve the associated software utilized within the detectors. Based on additional data collection campaigns in FY 2008 and FY 2009, improvements will be made to the isotope libraries upon which these algorithms are built.

Human-Portable Wide Area Search (HPWAS) Program

- Complete the updated mission analysis that identifies the needs for human-portable systems.
- Begin the development of operational requirements through user engagement and operational analysis.

Human-Portable Tripwire (HPT) Program

- Begin the development of operational requirements through user engagement and operational analysis.
- Conduct a capability transition assessment for the transformational R&D IPRL program, including specific assessments of the unique capabilities that IPRLs are designed to provide.

FY 2010 Planned Accomplishments:

Handheld Program

- Initiate LRIP for handheld systems that will be used for small area searches and secondary screenings
- Conduct Operational Testing for handheld systems that will be used for small area searches and secondary screenings.
- Enter full rate production for Germanium based handheld detectors that will be used for advanced operations.

Human-Portable Wide Area Search (HPWAS) Program

- Complete the development of operational requirements for an HPWAS system through user engagement and operational analysis.
- Conduct AOA for HPWAS potential materiel and non-materiel solutions.

Human-Portable Tripwire (HPT) Program

- Complete the development of operational and functional requirements for an HPT system through user engagement and operational analysis.
- Conduct AOA for HPT potential materiel and non-materiel solutions.
- Initiate the development of a HPT system designed to meet user requirements.

Vehicle/Mobile Program: Federal, State, and local end-users in the security and law enforcement communities have stated requirements for a vehicle-based rad/nuc detection capability. A vehicle-mounted, mobile detection system may be utilized for PRND across the land borders, maritime, aviation, and interior mission areas.

In the land borders and maritime mission areas, CBP has stated a need for a next generation mobile detection capability for operations on both the northern and southern land border POEs and sea POEs.

In the aviation mission area, vehicle/mobile detection may prove useful for targeted inspections of cargo, baggage or aircraft, in both commercial and general aviation environments. Further, the vehicle/mobile systems may augment some of the tasks currently performed by handheld devices. As such, an AoA will be conducted to determine the technical and operational feasibility of utilizing vehicle-mounted, mobile detection in the aviation environment. Pending the results of the analysis, requirements will be defined to drive appropriate R&D efforts within the Vehicle/Mobile program to address aviation-specific needs.

In the interior mission area, the primary missions anticipated for a vehicle-mounted radiation detection system are:

- Planned Operations - screen for radiological sources of interest during planned operations such as checkpoints, commercial vehicle inspection, Special Events, etc; and
- Routine Operations - screen for radiological sources of interest while performing routine operations such as highway patrols, vehicle detection, and emergency response or during emergent operational situations such as detection and examination of a “suspicious package” by police, fire, or bomb squad.

In order to address these needs, DNDO used the non-recurring engineering and the production experience gained with ASP cargo scanning systems to develop customized designs for new mobile systems. The resultant mobile detection system will be refined based on proof of technology

demonstrations with State and local end-users in the Securing the Cities (STC) initiative and SETCP. In addition, commercially-available, vehicle-mounted rad/nuc detection technologies will be evaluated in order to provide users in all mission areas the ability to acquire the vehicle-based technology that best fits their operational needs.

The ASP-based mobile detection system utilizes spectroscopic radiation detection equipment mounted inside a sport utility vehicle (SUV) to provide multidirectional detection, identification, and classification of radiation sources (both gamma-ray and neutron). This system incorporates capabilities similar to the core technology developed for the fixed advanced spectroscopic cargo portal, and provides mobile scanning capabilities that the fixed nuclear detection systems cannot perform. Currently, DNDO is in the final stages of developing the ASP-based mobile detection system.

DNDO intends to conduct a test in 2009 to compare the capability of the ASP-based mobile system against commercially available and Government-off-the-Shelf (GOTS) mobile detection systems to assess the overall effectiveness of the various systems. The test will be designed to allow DNDO to determine which mobile detection system(s) best satisfies(y) customer requirements and is (are) most suitable within the various layers of the GNDA. Additionally, during FY 2010, DNDO will continue to collect reliability data to develop a logistics cost model for maintaining these systems. The results of the report will drive selection of the mobile systems to be acquired by customers to best fit their operational needs.

Accomplishments in multiple mission areas:

Significant accomplishments in FY 2008 include:

- Completed prototype ASP-based mobile detection systems.
- Performed assessment of ASP-based mobile detection systems in typical operational scenarios.
- Deployed four limited production ASP-based mobile detection systems for use within SETCP.
- Deployed three limited production ASP-based mobile detection systems for use within the STC initiative.
- Analyzed data from fielded units to improve system capability.

FY 2009 planned accomplishments include:

- Incorporate additional user interface features realized during early deployments and assessments.
- Test and compare the capabilities of the ASP-based mobile system against commercially available and GOTS mobile detection systems to assess effectiveness of systems in different operational environments.
- Identify mobile units that demonstrated superior performance in operational settings relevant to end users.

FY 2010 planned accomplishments:

- Complete collection of reliability data to develop a logistics model for maintaining systems.

Aviation Program: In the aviation domain, DNDO supported CBP to achieve scanning of all international general aviation aircraft arriving in the United States by December 30, 2007. Shortly following CBP's International General Aviation (IGA) scanning implementation, in FY2008, DNDO and CBP began rigorously testing Commercial Off-the-Shelf (COTS) equipment for effectiveness in the general aviation environment in conjunction with controlled laboratory tests to evaluate the performance of next generation human portable detection devices. The former evaluation was conducted at Andrews AFB, and the latter was conducted at the Nevada Test Site (NTS). For FY 2009, based on the results of these tests, DNDO will continue working with its federal partners to analyze alternatives for potential system enhancements within the IGA environment for scanning aircraft for rad/nuc materials at APOEs and airports of departure (APODs). This includes implementing immediate improvements to non-materiel elements of the process (such as introducing modifications to the current Standard Operating Procedure based on feedback from CBP officers and equipment experts) as well as further examining materiel alternatives for scanning at APOEs. DNDO is also working with TSA and CBP to characterize the APOD environment to inform the implementation of the scanning procedures at commercial and general aviation pre-clearance sites, and will use available test data as well as test data from the planned (FY 2009) International Commercial Aviation Passenger and Baggage Program equipment evaluation to inform future strategies.

DNDO and CBP have initiated a pilot program for screening international commercial passengers and their baggage at APOEs. The pilot program is in response to congressional direction in the Consolidated Appropriations Act of 2008 (P.L. 110-161), which states, "DNDO shall work with U.S. Customs and Border Protection (CBP) to initiate two pilots of radiation portal monitors within the air port of entry environment for screening individuals and their baggage for radioactive materials. The pilots should include a detailed concept of operations." In FY 2008, DNDO and CBP completed five airport facility site surveys to understand the operating environment, generate user needs, and develop requirements for a test campaign and two pilot demonstrations that DNDO will conduct in FY 2009/2010 to evaluate applicable COTS rad/nuc detection equipment. The Passenger and Baggage (Pax/Bag) Pilot Program will evaluate the technical and operational integration of rad/nuc detection capabilities in this environment. Systems that are selected as a result of the FY 2009 test campaign will be evaluated in a limited pilot deployment at Seattle-Tacoma International Airport in FY 2009, to be followed later by a limited deployment at Charlotte International Airport. Each pilot will run for approximately two months at each airport.

The results of the Pax/Bag Pilot Program will inform future strategies for APOEs and overseas pre-clearance efforts managed by CBP and will provide input for R&D efforts to optimize rad/nuc scanning of passengers and their baggage in the airport environment.

Accomplishments in Aviation Pathways Mission Area:

Significant accomplishments in FY 2008 include:

International General Aviation

- In partnership with CBP, DNDO conducted five test sessions at Andrews Air Force Base to baseline the performance of currently-deployed systems for scanning IGA aircraft, to assess whether CBP operational procedure changes could enhance performance, and to evaluate performance of other human-portable detection systems to support CBP operations.
- The Joint CBP/DNDO IGA Working Group evaluated test results from the Andrews AFB test and the HPRDS test campaign at the NTS in order to assess the current capability and

determine opportunities for capability development. The data from both tests will feed subsequent material research and development efforts, as appropriate.

- After analyzing results from the IGA Test Campaign and the IGA analysis portion of the HPRDS Test Campaign, DNDO and CBP concluded that the currently deployed IGA materiel capability is sufficient until a replacement device with demonstrated improvements is available.
- A set of program objectives derived from testing and CBP-DNDO discussions on expanding future operational capabilities defined the following priorities:
 - Provide a set of operational requirements that leads to improved technical identification capability in human portable systems.
 - Implement IGA SOP recommendations to enhance the operational performance of the currently deployed capability to better achieve the IGA mission. These enhancements clarify and improve SOP guidance.

International Commercial Aviation Passengers and Baggage

- Conducted site visits to Charlotte International Airport in North Carolina, BWI International Airport in Maryland, JFK International Airport in New York, Seattle-Tacoma International Airport in Washington, and Vancouver International Airport in Canada. Gathered data required to plan pilots of rad/nuc scanning of personnel (passengers and crew), carry-on bags, checked baggage, and the aircraft itself in the international commercial scheduled passenger environment.
- Completed Analysis of Alternatives to identify potential scanning and detection technologies for evaluation in a controlled test campaign.

FY 2009 planned accomplishments include:

International General Aviation

- Evaluate impact of the IGA SOP recommendations made in FY 2008 and determine need for additional adjustments.
- Evaluate rad/nuc detection capability in the general and commercial Pre-Clearance Airport environment. Review and modify as appropriate the operational environment requirements; analyze potential international alarm resolution solutions.
- Analyze CBP Air & Marine's operational environment and requirements to determine potential future enhancements of their rad/nuc detection capability.

Note: FY 2008 and FY 2009 activities were funded from the FY 2007 Supplemental appropriation.

International Commercial Aviation Passengers and Baggage

- Conduct a test campaign to establish performance of systems to be carried forward in two pilots scheduled to take place in Seattle-Tacoma International Airport in Washington and Charlotte International Airport in North Carolina.
- In close coordination with CBP and other operating agencies and stakeholders, conduct and conclude pilot at Seattle-Tacoma International Airport to study the effectiveness and suitability of various rad/nuc scanning equipment suites and CONOPS for scanning international air passengers and their baggage.

FY 2010 planned accomplishments:

International General Aviation

- Based on the results from FY08-09 activities, the path forward for International general Aviation will be re-evaluated.

Based on the results from FY08-09 activities, the path forward for International General Aviation will be re-evaluated.

International Commercial Aviation Passengers and Baggage

- In close coordination with CBP and other operating agencies and stakeholders, conclude pilot at Charlotte International Airport to study the effectiveness and suitability of various rad/nuc scanning equipment suites and CONOPS for scanning international air passengers and their baggage.
- Provide limited operational capability to Charlotte International Airport to assess the holistic impact to an airport location where CBP also conducts cargo scanning operations in addition to passengers and baggage scanning.
- With CBP, TSA and other federal and international partners, conduct at least one pilot in the commercial pre-clearance environment, if the pre-clearance location is available, to evaluate scanning alternatives according to specific pre-clearance requirements.
- Conduct an equipment test campaign based on the Pax/Bag Pilot Program results to inform acquisition decisions for the commercial aviation pathway.

On-Dock Rail Program: On-dock rail accounts for the transfer of approximately 2% of all imported cargo containers to the U.S. This program addresses the challenge of scanning cargo at seaport terminals where containers are transferred from ships to a rail facility that is within the terminal. These shipments therefore leave on rail cars that bypass the detectors at the terminal exit gate which scan trucks departing with the other 98% of the containers. Pursuant to the requirements of the SAFE Port Act of 2006, DNDO established a Rail Test Center (RTC) at the Port of Tacoma, WA. The on-dock rail terminals at the Port of Tacoma, WA, account for half of the aforementioned 2% of import containers.

Operational testing conducted at the RTC at the Port of Tacoma has demonstrated that either mobile or fixed radiation portal monitors are adequate to scan containers where chassis are used to move containers to the rail facility. However, when straddle carriers are used in this role, no technology currently available is effective at scanning containers. Efforts are underway to develop the use of a large radiation detector portal to scan the container at primary as a straddle carrier moves it from dockside to a lay-down area prior to being loaded onto a rail. Should a secondary scan be required, a mobile detection system may be developed to scan containers referred by the primary system. Also, CBP investigated a radiation detector mounted to the crane-mounted spreader bar that moves the container from ship to shore. Tests were conducted at the RTC and at Los Alamos National Laboratory.

FY 2009 funds were provided to the On Dock Rail to support the design a prototype straddle carrier portal. In FY 2009, a straddle carrier portal test article will be constructed and subsequently tested at the RTC.

Accomplishments in Maritime Mission Area:

Significant FY 2008 accomplishments include:

- Performed a requirements analysis of rad/nuc scanning solutions for the on-dock rail environment.
- Conducted operational impact analysis for the straddle carrier portal detection system.
- Modeled the straddle carrier portal radiation detection systems using both polyvinyl toluene (PVT) and ASP systems.
- Produced preliminary design of a prototype radiation detection portal to scan a container as it is carried by a straddle carrier.

FY 2009 planned accomplishments include:

- DOE, DNDO, and CBP will conduct additional tests of two crane-mounted detection systems to evaluate the capability of systems to detect special nuclear material sources
- Based on modeling results, complete design of a straddle carrier portal test prototype for installation at RTC
- Develop straddle carrier portal prototype design and initiate test efforts at RTC

FY 2010 planned accomplishments:

- Based on modeling and simulation, as well as test results, DNDO, in coordination with CBP, will develop a specification for procurement of technologies to address the stated mission need of the On-Dock Rail program
- Construct a prototype straddle carrier portal at RTC and evaluate its performance

Boat-Mounted Sensor Program: Results of the FY 2008 Maritime test campaign (Crawdad) and early deployments of selected systems in the West Coast Maritime Pilot in Puget Sound will lead to the definition of a boat-mounted radiation detection system (for further information, please see the Maritime Test Campaign and West Coast Maritime Pilot program descriptions in the Assessments PPA). If it is demonstrated that operational and technical requirements of the maritime mission area can be met by commercially available boat-mounted systems, systems may be incorporated into DHS operational component acquisition programs. DNDO will develop and test a prototype system if commercially available systems cannot meet operational requirements.

Accomplishments in Maritime Mission Area:

Significant accomplishments in FY 2008 include:

- Conducted the Crawdad maritime test campaign on currently available boat-mounted equipment to baseline performance characteristics in a controlled maritime environment. Test results are being used to inform boat-mounted system development efforts and requirements generation, to identify equipment for follow-on testing in an operationally relevant environment, and to support the West Coast Maritime PRND pilot program. The Crawdad program is discussed further in the Assessments PPA.

FY 2009 planned accomplishments include:

- Conduct the Dolphin maritime test campaign to test boat-mounted detection systems in an operationally relevant environment that could be further developed to meet DHS operational component requirements for boat-mounted systems.

- Collect and compile the mission needs of DHS operational components in regards to maritime standoff detection to include boat-mounted, aircraft-mounted, fixed, and mobile. Develop operational requirements specific to boat-mounted detection systems from USCG, CBP-AMO, and CBP-OBP.
- Complete an analysis of alternatives to compare cost effectiveness and probability of detection of boat and aircraft-mounted standoff detection systems with currently fielded detection equipment carried by law-enforcement boarding teams.

FY 2010 planned accomplishments:

- Produce EDM unit(s) for selected alternative.
- Develop boat-mounted systems to support evaluation and deployment on selected DHS small boats.
- Develop Life Cycle Cost Estimates (LCCE) to support larger-scale deployments.

Securing the Cities Initiative: The Securing the Cities (STC) Initiative was an effort to plan and implement the coordinated and integrated detection and interdiction of illicit rad/nuc materials that may be used as a weapon within a major metropolitan area. The initial three-year STC pilot, concluding in FY 2009, was conducted within the New York City (NYC) region, which for the purposes of the STC initiative is defined as within 45 miles of the NYC border. State and local participation is incorporated into all aspects of the STC initiative through multi-jurisdictional working groups.

Particular emphasis of the STC initiative is placed on roadway and maritime (small vessels) pathways because they allow for a wide-spectrum, in both size and weight, of rad/nuc threat devices to be transported under the direct physical control of adversaries. An additional area of emphasis is detection screening of industrial, warehouse, and storage areas which may be utilized by terrorists for weapon construction, assembly, and/or storage areas. Mass transportation and railways are also addressed. All operational capabilities incorporate the means to characterize the nature of detection alarms, including mechanisms and procedures for referring alarm information to technical experts for adjudication.

No STC funding is requested in FY 2010.

Accomplishments in Interior Mission Area:

Significant accomplishments in FY 2008 include:

- Completed a strategic plan for STC in NYC.
- Completed supportability concept analysis; selected a concept, and began the implementation plan.
- Developed and refined CONOPS.
- Conducted 18 tailored workshops assisting State and local personnel in evaluating how to best deploy their equipment in their specific operational environment.
- NYPD completed Memoranda of Understanding with all relevant regional partners to implement the STC initiative.

FY 2009 planned accomplishments include:

- Develop and document deployment positions in the NYC region.
- Complete 13 tailored workshops.
- Complete concept refinement studies for a multilane roadway detection system, and begin RDT&E.
- Develop a Personal Radiation Detector and Radioisotope Identification Detector training refresher course to enable operator proficiency to be maintained after initial training.
- Implement a capability for detection system supportability.
- Initiate planning for a regional full scale exercise.
- Pilot an automated information system for reporting sensor information to the Lower Manhattan Security Initiative.

FY 2010 planned accomplishments:

- Prior-year funding will provide for the continued assessment of the effectiveness of the STC engagement model at the first site, New York City area.

National Technical Nuclear Forensics: DNDO's National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of "nuclear accountability" for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

The NTNF PPA describes the core activities and pertinent accomplishments of this mission area. Additionally, beginning in FY 2010, the Systems Development PPA provides for nuclear forensic systems technology advancements in order to meet the stringent requirements and expectations of the primary stakeholders in the Executive Branch and in the Congress. By prudently leveraging Systems Development resources, DNDO will initiate and expand forensics systems development projects which will allow us to develop advance techniques to more rapidly and accurately characterize materials and link them to nuclear processes/facilities/locations to support attribution. This effort is focused on developing the Knowledge Management and Assessment System (KMAS), a system of evaluation tools to 1) canvas and link large amounts of disparate data and information, 2) recognize latent patterns and trends in multi-dimensional data, and 3) discover potentially new discriminating nuclear forensics signatures. The KMAS will play a key role in formulating technical nuclear forensics conclusions in a credible and defensible manner.

Accomplishments in National Technical Nuclear Forensics:

Significant accomplishments in FY 2008 include:

- In FY 2008 all activities were accomplished within the NTNF PPA.

FY 2009 planned accomplishments include:

- In FY 2009 all activities were accomplished within the NTNF PPA.

FY 2010 planned accomplishments:

- Expand the application of KMAS evaluation tools to initial use in the forensics exercise program and operational case studies.
- Conduct the first demonstration of KMAS tools for pattern recognition and trend analyses when sifting through substantial banks of nuclear materials data.
- Demonstrate the next generation of tools for pattern analysis and methods to articulate whether or not nuclear material signatures can be included or excluded from specific families of signatures.
- Develop and validate predictive models and techniques to improve understanding of how technical processes within the nuclear fuel cycle (from mining raw material to processing, enrichment, burn-up and disposal) can affect the resultant nuclear materials' forensic signatures (which are created, erased and persist throughout the fuel cycle).

Nuclear Assessment Program: The Nuclear Assessment Program (NAP) is responsible for assessing nuclear threat communications and monitoring worldwide illicit trafficking in rad/nuc materials, and assessing illicit nuclear trafficking incidents and trends. A comprehensive description of NAP, including pertinent accomplishments, is contained within the Operations Support PPA. As DNDO increases engagements with mission area customers to provide additional PRND capability through systems development efforts and other support programs, it is imperative that DNDO concurrently enhance NAP to appropriately support new customer groups. Beginning in FY 2010, the DNDO Systems Development PPA will provide for necessary NAP enhancements, but will continue to leverage funds within the Operations Support PPA to maintain the current NAP capability.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- In FY 2008 all activities were accomplished within the Operations Support PPA.

FY 2009 planned accomplishments include:

- In FY 2009 all activities were accomplished within the Operations Support PPA.

FY 2010 planned accomplishments:

- Upgrade and transform the historical NAP database into a community-accessible tool.
- Collaborate with the Defense Intelligence Agency (DIA) and DOE to produce a database for the communities of interest.
- Complete a repository for smuggling data and continue data management for increased GNDA situational awareness.

Technical Reachback Program: The Technical Reachback (TRB) Program provides 24/7 regionally and nationally-based expertise to resolve alarms promptly and accurately. A detailed description of TRB, including pertinent accomplishments, can be found in the Operations Support PPA. As DNDO increases engagements with mission area customers to provide additional PRND capability through systems development efforts and other support programs, it is imperative that DNDO concurrently enhance TRB to appropriately support new customer groups, including the projected increase in reachback requests. Beginning in FY 2010, the DNDO Systems Development PPA will provide for necessary TRB expansion, but will continue to leverage funds within the Operations Support PPA to maintain the current TRB capability.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- In FY 2008 all activities were accomplished within the Operations Support PPA.

FY 2009 planned accomplishments include:

- In FY 2009 all activities were accomplished within the Operations Support PPA.

FY2010 planned accomplishments:

- Train an additional six national-level spectroscopists to account for attrition and the increasing demand for technical support as the GNDA develops.
- Provide additional trend analyses of State and local data that will be collected and archived from the domestic layer via the DNDO Joint Analysis Center Collaborative Information System (JACCIS) S&L portals.

Training and Exercises Program: The Training and Exercises program develops and executes rad/nuc training and exercises for Federal, State and local law enforcement and emergency responders. A thorough description of the Training and Exercises program, including pertinent accomplishments, is included in the Operations Support PPA. As DNDO increases engagements with mission area customers to provide additional PRND capability through systems development efforts and other support programs, it is imperative that DNDO concurrently develop training curricula and additional training delivery modalities, and provide appropriate support for exercises. Beginning in FY 2010, the DNDO Systems Development PPA will provide for additional training and exercises support, but will continue to leverage funds within the Operations Support PPA to maintain the baseline Training and Exercises capability.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- In FY 2008 all activities were accomplished within the Operations Support PPA.

FY 2009 planned accomplishments include:

- In FY 2009 all activities were accomplished within the Operations Support PPA.

FY 2010 planned accomplishments:

- Provide strategic planning and Subject Matter Expertise for training and exercise activities across DNDO mission areas, including scanning cargo, passengers and aircraft/freight left on board; maritime operations support; and interior pilots.

Systems Architecture: At the core of all DNDO activities is the systems architecture function, which determines gaps and vulnerabilities and then formulates recommendations and plans to develop an enhanced architecture. By intensively studying the multi-layered structure of the rad/nuc detection architecture, a well-defined and carefully coordinated network of interrelationships is understood and developed.

With DNDO's increased emphasis on mission area needs and customer requirements, DNDO requires additional systems architecture activity in order to support and inform near and long term systems development programs. While the Systems Engineering and Architecture PPA addresses the core systems architecture functions and certain mission area analysis tasks, the Systems Development PPA addresses systems architecture studies and analyses to support new technologies and capabilities.

Accomplishments in Land Borders Mission Area:

Significant accomplishments in FY 2008 include:

- No land borders mission area accomplishments are delineated for Systems Architecture in the Systems Development PPA in FY 2008 because they were consolidated with the Systems Engineering and Architecture PPA during that fiscal year.

FY 2009 planned accomplishments include:

- Develop long-term and transformational architecture options for land borders between POEs.
- Continue field evaluation of COTS detectors and CONOPs validation for non-POE land borders.
- Complete a follow-on study to determine the feasibility of using unattended radiation sensors in the areas between checkpoints.
- Develop detailed requirements for future agent-based detector additional requirements which will be determined through the past year's evaluation and analysis efforts, as well as analyses conducted throughout this fiscal year.
- A study of the feasibility of using unattended ground sensors will be initiated.
- Completion of a threat and gap analysis of rail pathways into the United States for smuggling rad/nuc material.
- Completion of a study that examines the potential architectures and CONOPS that take into consideration a collaborative effort between the CBP, State, and local entities, including State-State interactions, for protecting the domestic interior of the United States from rad/nuc material smuggled in between the non-POE border areas.

FY 2010 planned accomplishments:

- Complete field evaluations of advanced rad/nuc detection technologies and CONOPs to support the Border Patrol.
- Complete initial detector deployment of selected COTS detectors to the Border Patrol in accordance with the Phased Deployment Implementation Plan (PDIP).

Accomplishments in Aviation Mission Area:

Significant accomplishments in FY 2008 include:

- No aviation mission area accomplishments are delineated for Systems Architecture in the Systems Development PPA in FY 2008 because they were consolidated with the Systems Engineering and Architecture PPA during that fiscal year.

FY 2009 planned accomplishments include:

- Conduct a study on air domain situational awareness for general aviation flights entering the United States.
- Conduct a targeted architecture study of helicopter traffic transiting the Gulf of Mexico and crossing the United States coast or border.
- Conduct a study on near term options for gateway pre-clearance screening of international general aviation.
- Complete the Megaports for Air study, an integrated North American aviation architecture study, and complete detection and interdiction studies for fixed wing aircraft making illegal cross-border trips.

FY 2010 planned accomplishments:

- Conduct a study of pre-clearance scanning of general aviation at overseas points of departure and domestic aviation architectures.
- Conduct a targeted architecture study of regional cross-border aviation traffic along the U.S.-Canadian border.
- Conduct a study of the gaps related to detection capabilities for international aviation traffic transiting into the U.S from private or non-commercial airports.

Accomplishments in Maritime Mission Area:

Significant accomplishments in FY 2008 include:

- No maritime mission area accomplishments are delineated for Systems Architecture in the Systems Development PPA in FY 2008 because they were consolidated with the Systems Engineering and Architecture PPA during that fiscal year.

FY 2009 planned accomplishments include:

- Complete an architectural study to enhance the Coast Guard Maritime Risk Assessment Model (MSRAM).

- Complete a geographic architecture study of the Inland Waterway environment within the Continental United States, to include the Central and Western River Systems and the Intracoastal Waterway to include evaluating PRND strategies for locks and bridges prominent in the inland waterways.
- Complete an Offshore Secondary Inspection Study to examine current and appropriate Inter-agency Conops and alternative capabilities for inspecting cargo onboard large vessels (particularly containerized cargo) as well as smaller vessels prior to entering port. This study will also assess alternative protocols for at-sea safe-distance divert and hold locations.
- Complete a review of all maritime reports, studies, and strategic plans associated with DNDO maritime elements of the GNDA and synthesize these documents into a summary and develop a maritime document repository for DNDO to perpetually retain this knowledge.
- Complete an architectural study of the maritime domain in the Great Lakes region that builds on previous architecture studies of the maritime pathway and lays the ground work for enhancing the layered detection capability along this significant maritime border.
- Complete a maritime architecture study to analyze and develop options for non-container vectors (bulk, break bulk, roll-on/roll-off, tanker).

FY 2010 planned accomplishments:

- Incorporate previous studies results and analysis into the USCG MSRAM model, and conduct risk modeling for several Tier I ports.
- Complete an architecture study to understand the requirements and existing PRND capabilities for Customs and Border Protection Air and Marine Office. Translate gaps into a multi-year joint acquisition strategy.
- Complete an architecture study to evaluate PRND options, existing programs, capabilities/curriculums for maritime state/local/international public safety and law enforcement boarding teams.
- Initiate architecture study to understand USG plans to expand maritime domain awareness (MDA) and propose options to better incorporate PRND requirements, including remote detection, reachback communications, and situational awareness among federal, state, local, and tribal public safety forces and community decision makers.
- Complete architecture study to assess screening/scanning capabilities and conops for cruise ship passengers/cargo/stores and ferry services (passengers and vehicles).

Accomplishments in Interior Mission Area:

Significant accomplishments in FY 2008 include:

- No interior mission area accomplishments are delineated for Systems Architecture in the Systems Development PPA in FY 2008 because they were consolidated with the Systems Engineering and Architecture PPA during that fiscal year.

FY 2009 planned accomplishments include:

- Examine the existing PRND Architecture for the “Green Border” States along the Mexican and Canadian borders, identify gaps and develop mitigation strategies.

- Examine the risk reduction attained when PRND architectures are applied to urban areas in the United States.
- Produce a comprehensive guide to existing RDD public education resources. This effort is the baseline for the other six projects in the Public Education Action Plan and will feed into the projects as they are initiated.

FY 2010 planned accomplishments:

- Architecture will advise the PRND strategy for future engagements in urban areas.
- Completed the public education program baseline curriculum development
- Investigate PRND capabilities in the non-border (interior) States to maximize the effect of PRND at pathway intersections.

State and Local Capability Development: Central to the success of an integrated effort to defend our Nation from the rad/nuc threat is a strong partnership with State and local entities responsible for the PRND mission within their own communities.

To facilitate this partnership, DNDO is pursuing targeted engagements with State and local communities to educate and inform them on rad/nuc threats, available support from DNDO and partner agencies and activities they can undertake to reduce risks. Prioritization of the Interior architecture is as follows: regions in and around major urban areas; border States; and finally, non-border States without major urban areas. Additional efforts to promote the PRND mission include: providing reports to State Fusion Centers and Emergency Operations Centers; maintaining a secure web portal; including a dedicated appendix on PRND in the DHS Homeland Security Grant Program Guidance; and outreach to national associations and State and local stakeholders through conferences and meetings. DNDO is also coordinating with Federal partners (including but not limited to: FBI, DOE, DoD, CBP, TSA, DHS Office of State & Local Government Coordination, and FEMA) to identify potential stakeholders interested in PRND.

Beyond increasing awareness and promoting the PRND mission, DNDO is addressing the needs of State and local partners that are dedicating resources toward the PRND mission by establishing support systems that will grow over time to meet increasing demands. Seeking long-term partners to assist in our evolving support network, DNDO has identified key members of the State and local PRND community from over 25 States who have been engaged in PRND planning and operations. Since 2005, the DNDO State & Local Stakeholder Working Group has met eight times and has collaborated in developing the entire range of support resources offered by DNDO, such as training curriculum, exercise designs, and equipment test designs. Another series of capstone products that DNDO is developing with the stakeholder group is the PRND Program Management Handbook and accompanying modules. The Handbook provides comprehensive guidance to State and local agencies in developing, enhancing, and maintaining PRND programs around the framework of planning, organization, equipment, training, and exercises. For the Handbook and other program development, DNDO also relies on the subject matter expertise of other State and local public safety agencies on specialized operations such as maritime, special events, and CVI.

As national awareness increases and more resources are dedicated by Federal, State, and local governments to the PRND mission, operational programs will grow in size and create further demand for support services. To meet these needs, DNDO will develop new training, exercise, and other support resources that remain relevant to the full range of operations, technologies, and threats.

Specialized capabilities at the State and local levels, as well as Federal capabilities such as the TSA's Visible Intermodal Prevention and Response (VIPR) program and DNDO's Mobile Detection Deployment Program (see the Systems Acquisition appropriation, FY 2008 and FY 2009 for a description of these initiatives), will require much greater hands-on assistance to foster and develop comprehensive, integrated, and regional approaches to PRND programs.

Accomplishments in Interior Mission Area:

Significant accomplishments in FY 2008 include:

- Conducted four situational awareness outreach meetings with Urban Area Working Groups and Joint Terrorism Task Forces
- Conducted two State and Local Stakeholder Working Group Meetings, including one dedicated to the development of user requirements for the next-generation, human-portable, rad/nuc detection systems program.
- Developed an additional module for the PRND Program Management Handbook, focusing on Small Maritime Craft
- Completed the delivery of a Statewide PRND Facilitated Handbook Program Assistance package in Florida, and initiated delivery in California

FY 2009 planned accomplishments include:

- Conduct six situational awareness outreach meetings with Urban Area Working Groups and Joint Terrorism Task Forces
- Conduct two State and Local Stakeholder Working Group Meetings, focusing on development of special event and source security modules for the PRND Program Management Handbook
- Complete development of one additional module for the PRND Program Management Handbook
- Complete delivery of Statewide PRND Facilitated Handbook Program Assistance package to California, and conduct at least one additional State delivery

Note: In FY 2008 and FY 2009, activities aligned with State and local capability development were funded in a decentralized manner, with funds provided from all DNDO mission and functional areas to support this range of activities. FY 2010 is the first year in which DNDO has centralized all State and local capability development activities under one program with a unique line item in support of the interior mission area.

FY 2010 planned accomplishments:

- Conduct at least eight situational awareness outreach meetings with Urban Area Working Groups and Joint Terrorism Task Forces.
- Conduct at least two State and Local Stakeholder Working Group Meetings, leading to development of new, specialized operational support modules for the PRND Program Management Handbook.
- Deliver Statewide PRND Facilitated Handbook Program Assistance package to at least three additional States.

- Deliver PRND Facilitated Handbook Program Assistance package to at least three Urban Areas.
- Develop technical assistance support programs for specific operational capabilities
- Deliver specialized technical assistance support to at least five States or Urban Areas in developing specific operational capabilities.

Algorithm Development: DNDO is responsible for the current and next generation of nuclear detection and identification systems. The identification will occur both at the detector level, such as a handheld device, or at the reach-back level when assistance from a nuclear specialist is required.

A critical component of the DNDO nuclear detection architecture is the software that correctly identifies the radioisotope. The algorithm program will review different mathematical approaches to radioisotope identification by studying the gamma spectroscopic signatures of threat isotopes, response functions of detector crystals, signal to noise ratios of the electronic filters, resulting in a high performance algorithm for deployment into the field and for technical reachback. The high performance algorithm (DHSIsotopeID) will provide the reachback analyst with an automated tool validated to provide fast and accurate evaluation that can accept data files from rad/nuc detection systems.

Accomplishments in Mission Support:

Significant FY 2008 accomplishments include:

- Completed the delivery of the first version of DHSIsotopeID, including documentation.
- Began the validation of DHSIsotopeID using data collected from the ASP cargo portal.

FY 2009 planned accomplishments include:

- Complete the validation testing of DHSIsotopeID using the algorithm testbed.
- Investigate other Isotope Identification algorithm techniques.
- Add additional isotopes to the identification library.
- Add additional shielding templates to the identification library.
- Add masking material templates to the identification library.

FY 2010 planned accomplishments:

- Conduct testing of DHSIsotopeID for all new radioactive isotopes and templates added to the identification library, supported by the algorithm testbed.
- Regression test new isotopes to ensure those added to the library do not alter the performance characteristics of other isotopes.
- Investigate other isotope identification algorithm techniques, and add additional isotopes, shielding templates, and material templates to the identification library as needed to support analysis of spectra from fielded systems.

Standard Information Exchanges (Data Interfaces) and Communications: The development and deployment of rad/nuc detection devices for operational monitoring and detection is one part of preventing a catastrophic rad/nuc event. In order to be successful, data must be exchanged efficiently and quickly among many nodes to support rapid decision-making and to initiate effective response once detection has occurred. Standardization of information exchanges is essential to achieving this capability and the standard Information Exchanges and Communications program tackles these challenges in a common manner providing economies of scale and removing duplication of effort. This program leverages earlier efforts to standardize radiation sensor system communications data as well as other government agency approaches to setting up communications links and distributing data automatically and securely to the right recipients.

The initial efforts in FY 2009 and FY 2010 will design and implement (as part of an existing pilot program) an interoperable approach to data communications while enhancing USG-wide standards. In FY 2010, specialized measures to accommodate low bandwidth scenarios will be tested and in the out-years DNDO will continually update the communications approaches to take advantage of emerging technology. Existing standards will be maintained and evolved while methods for validating new capabilities against these standards will be developed and provided to appropriate DHS or USG standards testing organizations.

Accomplishments in Mission Support:

Significant FY 2008 accomplishments include:

- There was no activity in the Standard Information Exchanges and Communications program in FY 2008.

FY 2009 planned accomplishments include:

- Complete documentation of the rad/nuc domain data exchange standard for inclusion in the National Information Exchange Model (NIEM), and support adoption of these standards by the broader Chemical, Biological, Radiological, and Nuclear (CBRN) community.
- Develop an approach to low bandwidth communications interoperable with the rad/nuc domain.
- Identify potential solutions for a communications capability for mobile systems and select one to test as part of an existing pilot program.

FY 2010 planned accomplishments:

- Implement approach to low bandwidth communications as part of an existing pilot program
- Complete testing of a mobile systems communication.

Data Validation & Quality: Radiation sensors provide significant quantities of complex data that must be used effectively to identify and interdict threats. This complexity manifests itself both in the data structures of the sensor system, as well as in the assessment of performance of the sensor systems themselves. To achieve interdiction of rad/nuc threats, data must be well-defined and accurately collected to be used effectively. This effort is closely integrated with the Sensor Data Management activities referenced in the Assessments PPA.

Accomplishments in Mission Support:

Significant FY 2008 accomplishments include:

- Completed ASP data interface validation software and supported ASP testing and evaluation.
- Completed initial Handheld program data interface validation software.

FY 2009 planned accomplishments include:

- Continue to support major DNDO test campaigns with data quality collection checks.
- Design, as part of a joint DNDO-CBP joint effort, N.25 (rad/nuc Domain) data standard validation capability with broad applicability to several pilot programs such as Handheld program LRIP units.

FY 2010 planned accomplishments:

- Support the Handheld program next-generation Operational Test and Evaluation (OT&E) activity.
- Integrate validation capabilities with Archive and Retrieval Management System (ARMS).

SUMMARY: System Development projects and activities maintain the Nation’s preeminent research and development program. The table below illustrates the crosswalk between specific and the DNDO mission areas. It is clear that programs and activities have applicability to more than one mission area and are represented in a cross-cutting manner.

2010 Adjustments-to-Base	---	---	416
2010 Current Services	---	---	32,416
2010 Program Change	---	---	0
2010 Request	---	---	32,416
Total Change 2009-2010	---	---	416

DNDO requests \$32.416 million for this activity. This includes an increase to the adjustment to base of \$.416 million over the FY 2009 enacted level.

CURRENT SERVICES PROGRAM DESCRIPTION:

The DNDO research, development, and acquisition process is anchored by the assessment of DNDO-mission related programs as they are developed, deployed, and implemented. DNDO continually assesses the global nuclear detection and reporting architecture through a variety of means, including test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation (CONOPS), red teaming assessments to deepen the understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

Test and Evaluation (T&E) Infrastructure and Operations: The DNDO research, development, and acquisition process is anchored by a rigorous assessment of DNDO-mission related technologies as they are developed, deployed, and implemented. The testing of detection systems against special nuclear materials (SNM) in significant quantities and in realistic configurations is a key to assessment of rad/nuc systems.

The SNM test capability will be improved by the completion of the Rad/Nuc Countermeasures Test and Evaluation Complex (RNCTEC) located at the Nevada Test Site (NTS). This facility is unique in the U.S. Government, enabling the technical community to bridge the gap between “bench-top testing” performed by developers and operational field-testing, including pilot deployments.

Scanning containers at intermodal seaports presents unique challenges, including marine and surface cargo carriers. The Port of Tacoma was designated as host for the Rail Test Center (RTC) for DNDO to evaluate operational protocols and various instrument technologies for radiation scanning without adversely impacting commerce. The standup of the RTC was required by the SAFE Port Act of 2006.

RTC began operational data collection in the early spring of 2008, and conducted the first system testing beginning in July 2008.

DNDO must also continue to develop and maintain supporting infrastructure and materials needed for test campaigns at other test facilities such as the maritime test facility at L-Lake in the DOE Savannah River Site (SRS). The Crawdad test campaign assessed eleven marine-specific detection systems during the summer of 2008.

Core testing capabilities have expanded to include mobile data collection systems which are flexible to support multiple test campaigns, expanded GPS and wireless communication systems, an expanded data archival/retrieval data collection system to maintain all DNDO test data, and video tracking systems. To ensure comprehensive, technically defensible test campaigns, radiation and nuclear experts are included in all test planning activities from organizations such as NIST, DOE national laboratories, and Defense Threat Reduction Agency (DTRA).

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- Conducted twelve distinct test campaigns at NTS, PNNL, SRS, RTC, and Kirkland and Andrews Air Force Bases (AFBs).
- Re-initiated construction of the RNC TEC.
- Established the RTC at the Port of Tacoma.
- Established a maritime test bed at the DOE SRS.
- Procured, developed, and maintained a supply of test articles, including threat-representative sources, challenging Naturally Occurring Radiation Material (NORM), and masking materials.
- Developed plans and procedures to conduct limited scope rapid response testing (R2T) at NTS to shorten planning process in times of urgent need. Conducted field exercise to validate plans and procedures
- Delivered one weapons-grade plutonium (Pu) sealed source to NTS for detector testing and potential algorithm development for future generation systems.
- Integrated expertise from a variety of partner agencies for threat test scenario planning, analytic design, and technical data analyses and modeling.

FY 2009 planned accomplishments include:

- Complete construction of RNC TEC, start nuclear operations, and initiate test campaigns at this facility.
- Increase testing infrastructure at the SRS, particularly at the Calibration Laboratory.
- Expand testing capabilities at RTC to include straddle carrier testing.
- Develop and assemble test objects for active interrogation and advanced radiography testing.
- Procure and develop relevant sources and stream-of-commerce NORM (such as “abandoned” or “seized” rad/nuc material at POEs) to support testing. This includes sources needed for Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) testing against government-unique Technical Capability Standards.

- Conduct R2T scenario to validate process and maintain readiness and proficiency.
- Perform twelve distinct test campaigns at RNC TEC/NTS and RTC.
- Integrate expertise from partner agencies in integrated test campaigns for threat test scenario planning, analytic design, and technical data analyses and modeling.
- Enhance data acquisition systems to include integrated video tracking, secure wireless data transmission and storage, and enhanced data archival/retrieval systems.

FY 2010 planned accomplishments:

- Conduct at least eight test campaigns.
- Increase testing infrastructure at RNC TEC to support advanced radiography and active interrogation.
- Expand testing capabilities to support aerial rad/nuc detection.
- Maintain schedule of radiation detector test operations and pilots at RNC TEC (T&E) and RTC and San Diego Port and Seattle airport (pilots).
- Integrate expertise from partner agencies in integrated test campaigns for threat test scenario planning, analytic design, and technical data analyses and modeling.

Directed Test Campaign: Routinely, DNDO conducts test campaigns to characterize currently-available equipment in operationally relevant environments. Such tests provide for the independent assessment of equipment outside of the Developmental Test and Evaluation (DT&E) and Operational Test and Evaluation (OT&E) conducted by the developers of this equipment. State and local entities have repeatedly stated their requirements for these test data to inform their grant requests, to ensure that they develop grant applications that include rad/nuc equipment that is proven to be effective for their unique operational environments.

Advanced Aerial Mounted Detector Campaign. Federal, State, and Local partners are currently purchasing and deploying COTs and GOTs detector systems for use with fixed and rotary wing aerial platforms. This test campaign will focus on determining technical performance of currently available COTs and GOTs systems in operationally relevant land-based and maritime-based scenarios. The results will support State and locals in the interior mission area, between ports of entry in the Land Border mission area, and large area screening by State and Coast Guard in the Maritime mission area.

Maritime Test Campaigns. In support of the Boat-Mounted Sensor Program (in Systems Development PPA in prior years) and the West Coast Maritime Pilot Program, DNDO conducted the Crawdad test campaign in FY 2008 to characterize the performance of mobile standoff (boat-mounted) detection systems in the marine environment. In FY 2009 DNDO will conduct additional testing of boat-mounted detection equipment as part of the West Coast Maritime Pilot program.

Accomplishments in the Maritime Mission Area:

Significant accomplishments in FY 2008 include:

- Conducted a maritime test campaign (Crawdad) on currently available boat-mounted detectors to baseline their performance in a controlled maritime environment (L-Lake, SRS). Test results will inform the decision-making process in the selection of equipment for the

West Coast Maritime Pilot Program as well as technical requirements for future development efforts.

FY 2009 planned accomplishments include:

- Evaluation of COTS/GOTS boat-mounted radiation detection systems in the West Coast Maritime Pilot program in Puget Sound.
- Conducted boat-mounted maritime radiation detector test (Dolphin) in San Diego to support West Coast Pilot in Sand Diego.

FY 2010 planned accomplishments:

- There is no planned maritime test campaign activity in FY 2010.

Red Teaming and Net Assessments (RTNA): RTNA evaluates the overall effectiveness of implemented PRND capabilities using adversary emulation, workshops, expert elicitation, modeling, cooperative assessments, covert testing, open source studies and adversarial red teaming. Over time, these tools can improve the effectiveness of the Nation's capabilities relative to a determined adversary, and they are used as part of a coordinated assessments cycle, using cooperative and adversarial approaches in assessing the effectiveness of implemented programs. Assessments are tailored to meet the customers' objectives and capability maturity levels and to provide an actionable set of recommendations for improvement.

The red teaming process tests the GNDA using information available to a variety of potential adversaries. This emulation of the threat increases the probability that DNDO identifies and addresses weaknesses in the Nation's PRND defenses, and more importantly, focuses on the effectiveness of these defenses against a resourceful and adaptive adversary. Open source studies use publicly available information to develop realistic courses of action. Adversarial red teaming acts on these courses of action. Red teaming will contest technologies, concepts, and approaches and provide insights for achieving a more robust PRND capability. Covert testing, on the other hand, focuses on the performance of implemented capabilities by attempting to penetrate known defenses with materials of interest.

The net assessments process examines the overall effectiveness of implemented and planned PRND capabilities and perceived adversary capabilities through cooperative means. It enables the United States to evaluate its effectiveness against the adversary. This process incorporates findings and recommendations from a variety of assessment methods, including cooperative assessment methods, surveys, probabilistic modeling, and expert elicitation.

When these various assessment tools are used in coordination, DNDO benefits by understanding how defensive systems perform against an emerging, adaptive adversary. This continuous process will significantly improve global nuclear detection capabilities.

Accomplishments in Mission Support:

Significant accomplishments in FY 2008 include:

- Conducted open source studies, covert testing, and adversarial red teaming of PRND capabilities and exercises. Assessments focused on seaports (in support of CBP's Top 22

Seaport testing to comply with the SAFE Port Act of 2006) and initial engagement with State and local detection capabilities.

- Conducted training assessments with Federal, State, and local agencies and developed a strategy for follow-on testing and assessment, including first responder and law enforcement personnel and spectroscopists involved in technical reachback and alarm adjudication.
- Assessed DNDO detection equipment surge capability, initiated assessment of embedding detection capability with TSA VIPR teams, and assessed the STC business model.
- Continued with development validation of a probabilistic model that incorporates an adversary's aspirations coupled with a comprehensive transportation network.

FY 2009 planned accomplishments include:

- Conduct open source, covert testing, and adversarial red teaming activities, including use of SNM surrogates. Continue assessments of Federal detection capabilities beyond seaports (e.g. land border POEs and aviation). Continue to assess domestic capabilities, aligning support with DNDO outreach programs (e.g. WCMP and State engagements).
- Continue assessing the effectiveness of international, Federal, State, territorial, tribal, local agency, and first responder PRND training.
- Conduct assessments of PRND programs internal to DNDO and programs involving other agencies to determine program effectiveness. Continue assessment of the effectiveness of the STC engagement model, complete assessment of embedding detection capability with TSA VIPR teams, and initiate the PRND data collection effort to base-line State and local detection capabilities.
- Conduct workshops on nuclear terrorism to enhance adversary portrayal in the probabilistic model under development.
- Complete the first phase of development of a probabilistic model that incorporates an adversary's aspirations coupled with a comprehensive transportation network.

FY 2010 planned accomplishments:

- Conduct open source, covert testing, and adversarial red teaming activities to include using SNM surrogates and possible involvement in the West Coast Maritime Pilot and expanded assessments of land border and aviation pathways.
- Assess the effectiveness of international, Federal, State, territorial, tribal, local agency, and first responder PRND training.
- Conduct assessments of PRND programs internal to DNDO and programs involving other agencies to determine program effectiveness including continuation of the PRND Data Collection Effort.
- Refine the probabilistic model by fully incorporating red teaming and net assessment findings and recommendations and conducting analysis that enhances the nation's PRND defenses, and conduct model verification, validation, and accreditation.

Southeast Transportation Corridor Pilot: In 2006, DNDO began a pilot program to test certain elements of the interior layer of the GNDA. The Southeast Transportation Corridor Pilot (SETCP) involved Federal, State, and local participants in the Southeast Region of the United States, and dealt

with the detection and interdiction of illicit rad/nuc materials on the Nation's interstate highways. SETCP is scheduled to end on or around July 31, 2009 .

SETCP focused on the following objectives:

- Develop a regional threat detection and interdiction architecture.
- Implement a limited operational detection and reporting capability.
- Develop and demonstrate a regional CONOPS, including alarm resolution protocols.
- Enhance regional communication infrastructure and collaboration for information exchange.
- Implement technical reachback to support detector deployments.
- Evaluate detection, data sharing, training, and connectivity components, individually and as part of an integrated system.

Accomplishments in the Interior Mission Area:

Significant accomplishments in FY 2008 include:

- Completed the design, installation, and training for radiation portal monitors (RPMs) in five States (SC, GA, VA, MS, and NC). These deployments provide a detection capability at weigh stations and have supported the identification of basic capability requirements and determination of the feasibility of the expanded use of radiation detection monitors at weigh stations throughout the country.
- Deployed six mobile detection systems (TN, KY, FL, AL, VA, DC), four of which were the mobile version of the Advanced Spectroscopic Portal (ASP). These systems allow for a re-locatable detection capability which can be used to monitor by-pass routes, road-side inspection activities, and targeted detection activities within commercial vehicle inspection (CVI) operations.

FY 2009 planned accomplishments include:

SETCP initiatives concluded with a full scale exercise (FSE) in CY 2008. Final SETCP documentation will be finalized in FY 2009.

- The pilot culminated in a FSE, *Southern Exposure*, which took place in October and November 2008. *Southern Exposure* included an evaluation of source detection within all SETCP-Member States, the District of Columbia, and the Port of Charleston, SC (*Project SeaHawk*); communication of spectral data to State command centers, the Joint Analysis Center (JAC), and Regional Reachback centers; and resolution of alarms. The results of the *Southern Exposure* FSE will be captured in an After Action Report (AAR) released in the Spring 2009.
- As a pilot, SETCP has an exit strategy that includes a finalized Best-of-Breed design package for weigh station portal monitor installations. The design package will provide a turn-key approach to planning, designing, installing and operating detection equipment at weigh stations. It will provide States the necessary means to conduct PRND operations in a CVI environment to include coordinating resolution of alarms with the Federal Government.
- At the end of the pilot DNDO will publish a Final Report to include pilot lessons learned, an operational utility assessment (OUA), and a business case analysis (BCA) that will inform future decisions regarding expanding PRND capabilities within State and local CVI operations and support further enhancements to the interior layer of the GNDA.

West Coast Maritime Pilot Program: This pilot program supports the DHS Small Vessel Security Strategy objective to develop a robust layered defense by expanding and enhancing maritime rad/nuc detection capabilities for international, Federal, State, local, tribal and private stakeholders. Consequently, the focus of this effort is to evaluate the effectiveness of a limited, phased deployment of commercially available and Government-Off-the-Shelf (GOTS) rad/nuc detection capabilities against the small vessel threat in the Puget Sound and San Diego regions and gather lessons learned to improve effectiveness of a wider deployment of maritime capabilities to other priority US ports. The pilot will conclude in September 2010 with final report expected by December 2010.

Accomplishments in the Maritime Mission Area:

FY 2008 accomplishments include:

- Baselined the existing PRND architectures for both Puget Sound and San Diego regions.
- Identified 15 State and local participants for the West Coast Maritime Pilot in the Puget Sound region, and identified available assets from the USCG and CBP (Offices of Field Operations and Air & Marine).
- Performed initial design activities in Puget Sound to include 1) assessing geographic choke points and buffer zones in order to maximize opportunities to encounter, detect, and interdict rad/nuc threats, 2) developing initial deployment strategies and CONOPS, and 3) identifying detector technology/equipment requirements.
- Developed and implemented regional concepts of operation and the alarm adjudication process for the Puget Sound Region.
- Developed a deployment plan supported by CONOPS for commercially available human portable rad/nuc detectors suitable for the maritime environment for the Puget Sound Region.
- Began initial training for human portable rad/nuc detection equipment in Puget Sound.
- Initiated development of long-term regional supportability plan.
- Assisted DOE in conducting a feasibility study of rad/nuc detection in the maritime environment using airborne detection systems.

FY 2009 planned accomplishments include:

- Build on the work completed in Puget Sound to develop and implement regional CONOPS and an alarm adjudication process for San Diego.
- Complete a background radiation report for Puget Sound and San Diego.
- Complete the initial design and begin limited employment of boat-mounted rad/nuc detection equipment in Puget Sound and San Diego.
- Initiate training in San Diego and continue training in the Puget Sound Region to support the deployment of rad/nuc detection equipment.
- Conduct drills and exercises with human portable equipment. These exercises will test the validity of the CONOPS, procedures and protocols that have been developed for each region.
- Build on initial design efforts by conducting feasibility study and analysis of alternatives for possible locations for fixed radiation detection equipment.

- Validate the effectiveness and usability of the Maritime Module for the PRND Program Management Handbook.
- Develop and implement maritime-specific training.

FY 2010 planned accomplishments:

- If determined feasible, deploy, integrate and assess fixed detectors and associated CONOPS and SOPs.
- Conduct FSEs in Puget Sound and San Diego in order to validate training, equipment, CONOPS, procedures and protocols. The exercises will be designed to involve all participants in the West Coast Maritime Pilot, and evaluate the effectiveness of human portable, boat-mounted, and fixed rad/nuc detection equipment in the maritime environment.
- Document lessons learned and identify gaps from the pilot to improve future development and deployment of maritime PRND capabilities.
- Develop and document a maritime PRND process that will provide a framework for other Area Maritime Security Committees (AMSC)/ports considering the establishment of a maritime PRND program.
- Complete an integrated logistics study to identify life-cycle costs associated with maintaining a maritime PRND capability.
- Identify requirements to support a full-scale maritime PRND capability.
- Identify Maritime Domain Awareness (MDA) and Command, Control and Communications requirements to integrate maritime PRND with intelligence, targeting, reachback and response for a full scale deployment.

Sensor Data Management. The activities within this section pertain to the collection, standardization, utilization and archiving of data throughout the DNDO programs. This includes Data Architecture, Standard Information Exchanges (Data Interfaces) and Communications, and Data Validation and Quality.

Data Architecture: Virtually every DNDO program collects and stores data of some kind. Many programs collect large amounts of complex data from radiation or radiography sensors as well as supporting sensors such as cameras. This data must be collected, stored, archived and analyzed to support both operational and test missions of DNDO. The Data Architecture program seeks to standardize these data management functions across DNDO in order to facilitate analysis of data trends, information sharing and advanced algorithm development obviating the need for additional and costly testing.

Support for Test and Evaluation Data: As part of the Data Architecture program DNDO is developing an important capability aimed at archiving and using technical performance data associated with the types of instruments DNDO develops and/or procures. This archived data, called the algorithm development test bed, is a powerful tool capable of improving algorithm and detector performance by using previously collected test data thereby providing substantial cost savings to the government. The algorithm development test bed is a nationwide asset being used by DNDO, DOE, and many national laboratories to perform injection studies, make trade-off decisions, and verify software updates.

All activities that comprise the Data Architecture effort will work together to make all data collections interoperable, comparable, and re-useable for different purposes. In FY 2008 and FY 2009, initial systems are being developed to archive, manage and utilize data from DNDO test programs. This effort is closely integrated with the Data Validation & Quality activities referenced in the Systems Development PPA.

Accomplishments in Mission Support:

Significant FY 2008 accomplishments include:

- Designed and began implementation of the Archive and Retrieval Management System (ARMS) for DNDO test campaign data.
- Designed and deployed core functionality for the Data Collection System (DCS) against major test campaigns.
- Began implementation of the Report Analysis and Archive System (RAAS) and collected input documents on RPMs.
- Generated certified data sets from data collection efforts for threat identification algorithm development and to perform regression analysis during the ASP system qualification testing.
- Developed tools to support algorithm analysis and injection studies

FY 2009 planned accomplishments include:

- Create long-term storage design implementation for ARMS. Complete conversion of high value data from past tests into the ARMS standardized format.
- Add functionality to DCS and use for an increased number of test campaigns.
- Complete the RAAS implementation at the Defense Threat Reduction Information Analysis Center
- Migrate open and closed data sets generated for ASP algorithm development and Human Portable Radiation Detection Systems into ARMS
- Maintain Algorithm test bed, continue injection studies and support algorithm development and new technology trade studies
- Perform regression testing of software updates as needed and support DHSIsotopeID testing and development

FY 2010 planned accomplishments include:

- Complete implementation of ARMS long-term data storage design.
- Support algorithm development and new technology trade studies and injection studies.
- Perform regression testing of software updates as needed, and maintain support for DHSIsotopeID testing and development.
- Enhance data acquisition systems to include integrated video tracking, secure wireless data transmission and storage, and enhanced data archival/retrieval systems.

SUMMARY: The table below illustrates the crosswalk between specific projects and activities and the DNDO mission areas. Programs and activities have applicability to more than one mission area and are represented in a cross-cutting manner.

PPA: NATIONAL TECHNICAL NUCLEAR FORENSICS

	Perm Pos	FTE	Amount (\$k)
2008 Actual	---	---	14,122
2009 Enacted	---	---	16,900
2010 Adjustments-to-Base	---	---	0
2010 Current Services	---	---	16,900
2010 Program Change	---	---	2,800
2010 Request	---	---	19,700
Total Change 2009-2010	---	---	2,800

DNDO requests \$19.700 million for this activity. This includes a program change increase of \$2.800 million over FY 2009 enacted levels.

CURRENT SERVICES PROGRAM DESCRIPTION:

In the aftermath of a nuclear detonation in the United States, the interdiction of a nuclear device, or the seizure of nuclear materials, there will be extreme pressure to attribute the source, establish responsibility, and to ensure that it does not happen again. Nuclear forensics, as one of the three pillars supporting attribution, along with intelligence and law enforcement investigations, provides essential support to the global nuclear detection architecture through deterrence, and should a device or materials be intercepted, support for attribution of the materials and subsequent US Government (USG) actions.

DNDO’s National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the USG effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can also help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of “nuclear accountability” for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

DNDO’s NTNF mission is twofold: 1) to serve as national “systems integrator” providing centralized planning, integration, assessment, exercising, and stewardship of USG nuclear forensics capabilities, and 2) to conduct nuclear materials R&D enabling an enduring capability to rapidly, accurately, and credibly identify the origins and history of nuclear and radiological materials.

A strong, consistent effort to coordinate TNF activities across the USG is critical to the success of the mission – ad hoc cooperation in the aftermath of an event will fail to meet intense demands for rapid

and effective processes. DNDO's NTNF Center (NTNFC) has the leading role to ensure this coordinated success as national systems integrator for USG nuclear forensics. NTNFC is fulfilling its mandate to steward the national-level planning, integration, advancement, and readiness of an enduring national nuclear forensics capability. This includes continuous review, exercising, and assessment of NTNF activities, in order to maximize readiness and advance capabilities. It also includes leading and stewarding USG initiatives to restore and sustain an enduring nuclear forensics expertise pipeline, which is one of the most important challenges facing the nation's TNF capability. DNDO has begun planning and leading efforts to address pipeline deficiencies on multiple fronts, including fellowships, internships, outreach, university awards, and enhanced multi-year R&D funding. DNDO's joint forensics and transformational research academic expertise initiatives have generated enormous enthusiasm among non-governmental organizations, universities, and national labs. These new initiatives are providing a significant adrenaline boost to the nuclear pipeline.

DNDO's pre-detonation nuclear materials R&D program supports its essential mission to serve as the national capability provider for technical nuclear forensics of rad/nuc materials interdicted before a detonation. The success of the pre-detonation materials program is crucial in responding to the growing threat of nuclear terrorism, which is evidenced by increased global nuclear smuggling, proliferation, and accessibility to nuclear knowledge since the early 1990s. The program is focused on ensuring and advancing the capability to perform rad/nuc materials analysis, evaluation, and interpretation of all sources of technical information, including isotopic and chemical composition, physical structure, manufacturing processes, and material pathways; developing and sustaining a pre-detonation concept of operations and technical capabilities to handle and analyze rad/nuc materials; and performing research and development to address gaps and shortfalls in the capabilities. This includes the development of Material Reference Standards & Measurements. DNDO is working with the DOE National Laboratories, in addition to international partners, to further progress in this mission area.

Within this context, DNDO is striving to advance the technical capabilities, integrate the partner agencies, and restore the academic pipeline to ensure an enduring national capability. In order to more effectively accomplish these goals, DNDO is focusing its efforts in both the Systems Development PPA and NTNF PPA and will serve to not only more rapidly address the technical challenges to improve pre-detonation forensics technological capabilities, but at the same time to focus attention on the nuclear forensics expertise pipeline, which requires continuing measured and enhanced funding across its spectrum from the most junior (e.g., student internships and fellowships, and retaining/recruiting new faculty) to the most senior (e.g., engaging and retaining the laboratory forensic scientists through a stable and sufficient R&D program).

Operational Readiness Support -- Integration, Stewardship, and Evaluation: DNDO's overarching nuclear forensics mission to serve as national "systems integrator" to ensure readiness involves providing centralized planning, integration, assessment, exercising, and stewardship of USG nuclear forensics capabilities. DNDO leads the coordination of a comprehensive global TNF capability that weaves together and leverages the six departments and agencies with roles and responsibilities across the TNF mission spectrum, including DHS, DOE, DoD, FBI, DOS, and the Office of the Director of National Intelligence (ODNI).

Accomplishments in National Technical Nuclear Forensics:

Significant accomplishments in FY 2008 include:

- Completed development of the USG interagency NTNF Playbook that describes the coordination and operations across the entire mission space from pre-detonation materials, to interdicted devices, to post-detonation debris in both domestic and foreign scenarios.
- Initiated development of an interagency NTNF Strategic Plan, Baseline Capabilities Framework and CONOPS. The Strategic Plan describes the overarching goals and objectives for FY 2009 – FY 2014 to further develop and sustain an enduring USG technical nuclear forensics capability. The NTNF Baseline Capabilities Framework delineates expected near-term (FY2009-FY2012) threshold NTNF capabilities across the pre-det materials, pre-det device, and post-det mission areas. The NTNF CONOPS is a strategic version of the Playbook, outlining at a higher level NTNF interagency coordination and operations across the mission spectrum.
- Initiated a National Academy of Sciences (NAS) assessment on nuclear forensics capabilities, infrastructure, and workforce, which is jointly sponsored by DNDO, DOE, DoD, and the FBI.
- Led the centralized interagency planning effort to coordinate TNF activities, address programmatic issues, and align and leverage resources. Accomplished this by leading the interagency NTNF Steering Committee, Executive Council, and numerous program planning and alignment meetings to coordinate activities and refine the NTNF interagency Budget Crosscut.
- Chaired the interagency Attribution Working Group of the Office of Science and Technology Policy Nuclear Defense R&D Roadmap and completed the forensics and attribution chapter of this document prioritizing USG R&D needs for FY 2010-2014.

FY 2009 planned accomplishments include:

- Complete the interagency NTNF Strategic Plan and the Baseline Capabilities Framework and the CONOPS.
- Complete a “Path Forward Plan” for interagency work toward the development of NTNF requirements. This plan will include options for incrementally tiered capability improvements across the NTNF mission space, tied to resource implications. Once the Path Forward Plan is complete or well under way, work will commence on Capability Area Technical Annexes, to include Pre-Det Materials Requirements.
- Update the NTNF Playbook.
- Complete the development of an NTNF interagency Strategic Communications Plan, which will inform stakeholders, the media, the public, and adversaries. This plan was delayed in order to coincide with emerging U.S. declaratory policy and Weapons of Mass Destruction (WMD) attribution policy.
- Conduct two interagency program planning and alignment sessions to coordinate activities and refine the NTNF interagency budget crosscut.
- Lead interagency Steering Committee meetings at least once every two months and an annual Executive Council meeting to facilitate issue resolution and document development, coordination, and review.
- Participate in developing and coordinating interagency NTNF International Engagement Strategy.
- Initiate the first overarching NTNF Annual Capability Assessment to evaluate how well the NTNF community can accomplish the mission in each phase of the process. Partner with the

FBI and ODNI to plan and lead a major assessment and exercise in the Summer Hard Problem Program (SHARP) entitled “Interdisciplinary Communication of Nuclear Event Attribution: How and Why?” The assessment will examine issues and processes related to time-sensitive decision making and effective formulation and communication of technical conclusions (which may be based on incomplete information) with their associated confidence levels to senior officials

- Complete the National Academies Study, which will provide findings and recommendations to sustain and improve the Nation's nuclear forensics capabilities. Continue to chair Attribution Working Group to coordinate interagency long-term R&D priorities.

FY 2010 planned accomplishments:

- Complete first NTNF Annual Capability Assessment.
- Complete the CONOPS based on results from two end-to-end interagency exercises in FY09, Oak Phoenix (post-det IND) and Marble Challenge (pre-det IND).
- Continue to lead the centralized interagency effort to coordinate TNF activities and ensure continued interagency program and resource alignment, including annual refining of the Budget Crosscut.
- Continue to lead joint planning through the interagency Steering Committee and Executive Council.
- Update the Playbook and CONOPS as necessary to reflect maturing TNF operational processes.
- Update the NTNF Strategic Plan.
- Conduct first annual assessment to ensure alignment of interagency budgets with OSTP Roadmap.
- Continue to chair Attribution Working Group to coordinate interagency long-term R&D priorities.

Technology Advancement -- Pre-Detonation Materials Research & Development (Collections, Analysis, Evaluations, and International Collaborations): The pre-detonation rad/nuc materials forensics mission is the NTNFC’s primary R&D concentration. This mission is focused on ensuring and advancing the capability to perform rad/nuc materials analysis and evaluation of all sources of technical information, including isotopic and chemical composition, physical structure, and material pathways; developing technical capabilities to handle and analyze rad/nuc materials; and performing R&D to address gaps and shortfalls in the capabilities. The pre-detonation material capability also engages in a disciplined approach to developing scientifically sound validated methodologies that will provide a known level of confidence to analytical results. The development and implementation of validated methodologies in technical nuclear forensics analyses ensures the use of standard methods for signature analyses, articulation of confidence in results, and practice of demonstrated competencies in measurements and evaluations.

There are many nuclear and radiological threat materials that require the same level of rigor in laboratory analysis. At the current level of funding, DNDO validated one signature every two years. At this rate, it will take more than 15 years of effort on the high priority threat items alone. This could dramatically affect our ability to respond adequately to a nuclear forensics requirement resulting from a terrorist event.

While the NTNF PPA describes the core activities in this mission area, beginning in FY 2010 the Systems Development PPA provides for additional NTNF capability advancements in order to meet the stringent requirements and expectations of the primary stakeholders in the Executive Branch and in the Congress. By prudently leveraging Systems Development resources, DNDO will initiate and expand forensics systems development projects (described in the Systems Development PPA for the Knowledge Management and Assessment System (KMAS)) which will allow us to more quickly analyze and catalogue U.S. and foreign nuclear materials, develop techniques to more rapidly and accurately characterize materials and link them to nuclear processes/facilities/locations to support attribution. Note to clarify the forensics PPA alignment: in order to remain consistent with the previous direction of Congress, funding for KMAS system developmental work resides in the Systems Development PPA.

Accomplishments in National Technical Nuclear Forensics:

Significant accomplishments in FY 2008 include:

- Developed a more balanced technology portfolio for R&D incorporating Collection, Analysis, and Evaluation projects. For FY 2008 proposals, conducted the first merit review process using federal representatives from stakeholder agencies such as the FBI, DOE, and DoD. Initiated a structured approach to managing projects through their entire lifecycles, beginning with a call for proposals, merit reviews, selection, development of Statements of Work and funding processes, project oversight, and concluding with project closeout. Further efforts to refine this process will continue in FY 2009.
- Initiated development of a phased approach for validating methodologies for laboratory analysis, beginning with ¹³⁷Cesium age dating, which will improve the understanding of confidence levels as well as enhance accuracy.
- Conducted high resolution gamma-ray measurement screening on U.S.-produced highly enriched uranium (HEU) for follow-on forensics analyses and material characterization.
- Completed study for controlled uranium production capability to enable development of process-based predictive signatures for HEU.
- Demonstrated group exclusion algorithms, using the open-source SFCOMPO (spent reactor fuel) database, to mathematically exclude hypothetical questioned samples from potential signature families.
- Enhanced NTNF collaborations with the State Department in support of cooperative international nuclear forensics activities, including the Global Initiative to Combat Nuclear Terrorism (GI), the International Technical Working Group on Nuclear Smuggling & Forensics (ITWG), and a series of three meetings with Canadian counterparts through the North American Security and Prosperity Partnership (SPP).

FY 2009 planned accomplishments include:

- Examine foreign source materials for radiological dispersal device (RDD) signatures, specifically Am and AmBe sources, to populate a database for comparative signatures as well as have material samples for future methodology development.
- Perform comprehensive forensics material characterization on selected U.S. HEU samples, based on the high resolution gamma-ray screening results from 2008, to identify potential discriminating signatures in U.S. HEU.

- Initiate plans for controlled uranium production capability to enable development of process-based predictive signatures for HEU.
- Conduct forensic analyses of foreign research reactor spent fuel assemblies from Savannah River Site to improve modeling in research reactors which will support both special nuclear materials (SNM) and RDD attribution.
- Based on the successful demonstration of group exclusion algorithms, initial feasibility of group inclusion (which is more challenging) will be demonstrated, using the open-source SFCOMPO (spent fuel) database, to mathematically include hypothetical questioned samples with potential signature families.
- Facilitate the advancement of international nuclear forensic capabilities -- partner with the Atomic Weapons Establishment (AWE) in the United Kingdom, through the existing DOE/JOWOG collaboration, to identify and determine diagnostic signatures in Pu material.
- Collaborate with international partners through the 14th International Technical Working Group on Nuclear Smuggling and Forensics.
- Collaborate with the Canadian government on RDD material signatures and associated databases.
- Partner with State to support international workshops and related activities under the Preventing Nuclear Smuggling Program (PNSP) and Global Initiative.

FY 2010 planned accomplishments:

- Demonstrate the first production batch of uranium material from controlled bench-scale production capability to enable development of process-based predictive signatures.
- For RDD threat material, complete validated methodology for ¹³⁷Cs age dating in a CsCl matrix (the first validated methodology for the TNF program) and include the development of a supporting barium reference material.
- Support efforts to better link TNF research to the law enforcement needs of the FBI by employing a “mock trial” to demonstrate how TNF evidence and conclusions would be used in a court of law.
- Using the “mock trial,” conduct the first demonstration of the robust criteria for standard forensics data requirements for nuclear materials (information from illicit nuclear material trafficking events to be used in the prosecution of responsible individuals), which will define an initial framework of how existing nuclear information may be used in TNF cases.
- Continue international collaborations on TNF materials signatures analyses and comparative process knowledge with the UK and Canadian governments.
- Continue broader international cooperation under the GI and ITWG constructs.

Material Reference Standards & Measurements: The use of standard reference materials is crucial to ensuring the accuracy of laboratory analyses/measurements both in operational casework as well as in research. They allow for the understanding of how well an analytical method works, how errors propagate through the process, and the level of confidence that can be placed in the results. The ability to validate a methodology is often dependent upon reference materials, which in many cases do not exist and must be developed for this particular purpose. The development of reference standards is time consuming and is often the longest lead item in achieving a validated methodology that can support casework.

DNDO will continue to support the development of quality assurance (QA) standards for nuclear forensics purposes, and per agreement with the FBI the responsibility for the maintenance of an operational QA capability will rest with the FBI. In turn, NTNFC is responsible for the development of standard reference materials. QA and reference standards are intricately tied together and DNDO has been partnering with the FBI on this endeavor.

Accomplishments in National Technical Nuclear Forensics:

Significant accomplishments in FY 2008 include:

- Developed a plan of action to prioritize reference standards development for rad/nuc materials and continued capability development.
- Completed formal QA certification and annual QA re-certification at partner laboratories.
- Developed experimental design and certification strategy for production of ^{229}Th Isotope Dilution reference material.
- Completed calibration, characterization, dilution, verification, and certification of RDD material identification solutions (^{60}Co , ^{90}Sr , ^{137}Cs , ^{210}Po , ^{226}Ra , ^{238}Pu , ^{239}Pu , and ^{241}Am), which was co-sponsored with the Environmental Protection Agency, the Food and Drug Administration, and the Centers for Disease Control and Prevention.

FY 2009 planned accomplishments include:

- Restart mass separator at Idaho National Laboratory, which will be the only operating mass separator in the U.S. for the production of enriched isotopes for standard reference material. Barium is the first material needed for production to support the ^{137}Cs age dating methodology.
- Transition QA oversight and ISO-17025 (certification) maintenance to the FBI. Develop overall policy for QA needs for the NTNFC program.

FY 2010 planned accomplishments:

- Complete standard reference material development to support ^{137}Cs age dating method validation, which will be the first DNDO-sponsored validated methodology for an RDD threat material signature.
- Produce priority standard reference materials with the mass separator.
- Continue to engage international partners in sharing standard reference materials, best practices and protocols, and participate in an international materials forensics exercise.

Exercises: DNDO reviews and assesses NTNFC capabilities by conducting exercises and evaluating proficiencies, processes, and protocols. Once an exercise has been conducted, the documented results are appraised and thoroughly examined for improvement areas. Finally, recommended enhancements are proposed to the interagency NTNFC Exercise Working Group. All relevant interagency partners participate in the exercise planning and schedule coordination process, including DOJ, DOS, DoD, DHS, ODNI, DOE, and the national laboratories. Exercises assess field sampling techniques, laboratory analysis and coordination, data evaluation and reporting, and strategic communication flow

and media output. They alternate between pre-detonation and post-detonation scenarios involving Improvised Nuclear Devices (INDs) and RDDs as well as interdicted materials.

DNDO will support and/or conduct at least one large scale end-to-end exercise annually. These exercises and associated training events will focus on the refinement of interactions between nuclear forensics stakeholders. The primary objectives will explore technical and operational shortcomings and interagency gaps, and DNDO and its partners will pursue corrective actions based on After Action Reports and Lessons Learned.

Accomplishments in National Technical Nuclear Forensics:

Significant accomplishments in FY 2008 include:

- Led an interagency effort to develop an integrated TNF Exercise Plan that leverages cross-cutting expertise and resources. This interagency, integrated document is continuously updated and refined to efficiently plan and execute TNF exercises.
- Used ¹³⁷Cs RDD Materials Exercise (2007) After Action Review to specify near-term materials R&D activities to address gaps in the development of validated methodologies and protocols for RDD materials signature analyses.
- Co-sponsored an in-depth analysis of post-detonation exercises to-date with DoD/Defense Threat Reduction Agency (DTRA). This analysis produced one consolidated set of findings that is now being used to develop a system for tracking progress and implementation of lessons learned in the maturing interagency exercise program.
- Jointly planned and provided exercise support to NCTC and FBI. This was the first table-top exercise of the newly formed Attribution Assessment Group.

FY 2009 planned accomplishments include:

- Provide planning support and participate in the first large-scale NTNF end-to-end exercise. This DOE-sponsored event, named Oak Phoenix, includes players from the DOE, FBI, DHS, and DoD. The exercise objectives encompass post-detonation sample collection, lab analysis, and data evaluation.
- Conduct Proficiency Tests in order to validate competencies in TNF materials analyses and evaluations. These Proficiency Tests are designed to exercise and validate a particular TNF analytical capability. End-to-end exercises are designed to demonstrate proficiencies and interfaces for a specific set of TNF analytical capabilities along with data evaluation procedures and information flow.
- Conduct exercise planning and participate in the DOE and FBI exercise (Marble Challenge) to assess the flow of information from this scenario into the attribution process and the transfer of materials into the pre-detonation analysis process. This involves an interdicted pre-detonation device which is recovered by the FBI, rendered-safe by DOE, and analyzed and evaluated by the national laboratories.

FY 2010 planned accomplishments:

- Lead the NTNF Community through the planning, execution, after action evaluation, and corrective action plan development of NTNF operations as part of National Level Exercise 2010 addressing National Planning Scenario 1, for an Improvised Nuclear Device.

- Review and assess NTNF capabilities by training and exercising all of the processes, targeting the overarching goals of process improvement and technical enhancement.
- Integrate and synchronize exercise events across the TNF community for maximum leverage and benefit to all departments and agencies.

National Nuclear Forensics Expertise Development Program (“Academic Pipeline”): An enduring nuclear forensics scientific workforce and academic pipeline is critical to ensuring a national capability to provide rapid and accurate technical nuclear forensics analyses and interpretations in support of deterrence and attribution. The nuclear forensics interagency community, academicians, and non-governmental organizations have determined that the Nation’s academic nuclear pipeline capacity has withered and will not meet the near and long-term needs for qualified nuclear scientists, engineers, and associated faculty for a credible and enduring capability. In its role as steward for the national nuclear forensics capability, DNDO developed plans and in FY 2008 launched the first steps to begin immediately restoring the pipeline and to prepare for the FY 2009 academic year. Based on the successful inaugural FY 2008 activities, the FY 2009 and FY 2010 academic pipeline activities will be expanded and enhanced to include summer internships, Ph.D. student fellowships, post-doctoral fellowships, and faculty awards. This forensics focused academic strategy is closely integrated with the academic initiatives in DNDO’s transformational R&D mission area. These activities are intended to expand at a prudent pace annually, so that results can be measured and evaluated in step with expansion.

Accomplishments in National Technical Nuclear Forensics:

Significant accomplishments in FY 2008 include:

- Supported the Glenn T. Seaborg Institute Nuclear Science Summer Internship Programs.
- Initiated the Nuclear Forensics Graduate Fellowships for the 2008 – 2009 academic year which funded the award of four students and arranged a partnership with DoD/DTRA.
- Initiated a partnership with the American Physical Society (APS) Education Office for nuclear forensics outreach programs at undergraduate and top high schools.
- Sponsored university outreach, e.g., Project on Nuclear Issues (“PONI – Young Nukes”), and the Air Force Institute of Technology (AFIT).

FY 2009 planned accomplishments include:

- Continue support to a new cadre of interns at the Seaborg Institute Nuclear Science Summer Internship Programs.
- Continue and expand the Nuclear Forensics Graduate Fellowships for the 2009 – 2010 academic year, funding the initial four students for an additional year and awarding fellowships to four new students.
- Continue a partnership with the APS for nuclear forensics outreach programs at undergraduate and top high schools.
- Continue sponsorship of outreach to universities, war colleges, and other institutions.
- Initiate a Nuclear Forensics Education Awards Program (NFEAP) to foster nuclear forensics-related education and research at universities (initially two awards in FY 2009).

- Initiate an undergraduate internship program that would fund undergraduate research projects and students.
- Initiate two Post-doctoral Fellowships at the national laboratories in order to bring the best and brightest into the nuclear forensics core team's pipeline.

FY 2010 planned accomplishments:

- Build upon the success of programs initiated in FY 2008-2009, and expand them in a controlled and measured fashion to achieve a steady-state goal in FY 2012.
- Expand the nuclear forensics outreach program.
- Continue support for undergraduate internship programs.
- Increase graduate fellowships to 12 in FY 2010 (from eight in FY 2009).
- Expand NFEAP to include five awards in FY 2010 (from two in FY 2009).
- Expand Post-doctoral Fellowships to five in FY 2010 (from two in FY 2009) at the national labs in order to bring the best and brightest into the nuclear forensics core team's pipeline.
- Initiate Junior Faculty Award Program to address the academic faculty deficiencies in the pipeline (initially two awards).

PPA: TRANSFORMATIONAL RESEARCH AND DEVELOPMENT

	Perm Pos	FTE	Amount (\$k)
2008 Actual	---	---	86,942
2009 Enacted	---	---	103,300
2010 Adjustments-to-Base	---	---	\$0
2010 Current Services	---	---	103,300
2010 Program Change	---	---	7,237
2010 Request	---	---	110,537
Total Change 2009-2010	---	---	\$7,237

DNDO requests \$110.537 million for this activity. This includes a program change increase of \$7.237 million over the FY 2009 enacted level.

CURRENT SERVICES PROGRAM DESCRIPTION:

DNDO's transformational research and development (R&D) program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of radiological/nuclear detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. Transformational R&D is carried out within three major programs: Advanced Technology Demonstrations (ATD), Exploratory Research (ER) and Academic Research Initiative (ARI).

Advanced Technology Demonstration: The ATD program addresses leading edge technology with high potential to address the strategic criteria listed above – in many cases with technology demonstrated conceptually under Exploratory Research – to develop a working prototype that is used to characterize performance capabilities. The results of the characterization form the basis for a subsequent cost benefit analysis (CBA) that is used to objectively determine whether the technology should transition to system development and eventual production and deployment. Each ATD effort is expected to last for two to five years, depending on the maturity and complexity of the technology. Funding constraints dictate that two to three ATD's can be operating at the same time and only one new ATD can be launched per year.

DNDO initiated the Intelligent Personal Radiation Locator (IPRL) ATD in FY 2006, the Standoff Radiation Detection System (SORDS) ATD in FY 2007 and the Shielded Nuclear Alarm Resolution

(SNAR) ATD in FY 2008. The following list includes topics and completion dates for ATD's that have been started, are about to start, or are planned in the near future:

- IPRL (FY 2009 projected completion).
- SORDS (FY 2010 projected completion).
- SNAR (FY 2011 projected completion).
- Intelligent Radiation Sensing System (IRSS) (FY 2012 projected completion).
- Advanced Radiation Module for Detection (ARMD) (FY 2013 projected completion).

Each of these ATD's will be described followed by a list of accomplishments by fiscal year for all ATDs.

IPRL ATD: The purpose of the IPRL ATD is to develop and characterize an affordable, pocket-sized spectroscopic radiation locator that detects radiological/nuclear emissions, delineates source type, and locates the source. The IPRL will be able to discriminate threat sources and special nuclear material (SNM) from non-threat sources, such as naturally occurring radioactive materials (NORM) and medical isotopes by using spectroscopic identification. It will have localization and directionality capabilities derived from GPS and inertial reference systems. It will also have wireless connectivity. IPRL will improve capability for law enforcement, first responder, and counterterrorism officials, the IC, and others in routine activities and surveillance, maintaining constant vigilance at all defensive layers. There are two vendor teams under contract for IPRL.

SORDS ATD: The purpose of the SORDS ATD is to develop and characterize passive stand off detection technologies that are capable of detecting small sources at extended distances. These systems will be integrated and demonstrated on mobile platforms such as a truck or trailer. The SORDS ATD will allow DNDO to develop and evaluate the key technology of gamma-ray imaging for sources detection and localization; as well as, advanced alarming algorithms, and sensor and data fusion techniques that may dramatically improve sensitivity and directional accuracy. These systems will show the operator visual overlays indicating the location and identification of radiation sources. The SORDS technology is directly applicable to standoff detection requirements for maritime, air and land venues. There are four vendor teams under contract for SORDS.

SNAR ATD: The purpose of the SNAR ATD is to develop and characterize advanced technologies to resolve alarms and definitively verify the presence of special nuclear material (SNM) in shielded and/or cluttered environments. The program has two principal applications: (1) Dramatic performance enhancement to commercially or near commercially available x-ray non-intrusive inspection (NII) screening systems, e.g., radiographic, by integrating solutions directly into hardware and software, substantially reducing the number of manual inspections while increasing probability of SNM detection; and (2) Targeted and choke point screening in multiple venues including vehicle crossing borders, checkpoints, rail, air cargo, and general aviation with rapidly re-locatable inspection systems. The cost benefit analysis and transition to system development is planned for FY 2011. There are four vendor teams under contract for SNAR.

IRSS ATD: This ATD will leverage advances in small, efficient directional detectors (such as IPRL) and advanced distributed detection algorithms developed under various Exploratory Research programs and phenomenology studies characterizing the requirements for in-transit detection. IRSS will create data fusion software to maximize performance of co-deployed hardware that is connected by a wireless network. Applications include Coast Guard boarding parties and security teams at special events. A network of systems, which could include many disparate types of detectors, offers

the opportunity for improved sensitivity, wider surveillance area, faster location of threats, and better detection and identification of radiation sources compared to single detectors or multiple autonomous (non-networked) detectors. There is also the possibility of using people or vehicles that are performing other functions to serve as platforms for positioning small mobile sensors and producing valuable detection data without interfering with normal operations. This approach would be directly applicable to commercial and general aviation. Preliminary design reviews are projected to be held in mid-FY 2010, with a final transition decision intended in mid-FY 2012.

ARMED ATD: This ATD is currently being planning with two options, either or both of which may be exercised. Both options will build upon advances in new detection materials under the Exploratory Research and Advanced Technology Demonstration programs. The first option will leverage the hardware developments of both the IPRL ATD and the innovative semiconductor research thrust in the Exploratory Research program to produce the next generation pocket-sized detector. Promising new semiconductor materials such as thallium bromide (TlBr) have already been discovered that could provide significant improvement in detection capability and cost over currently available semiconductor materials, such as the cadmium zinc telluride (CZT), employed in IPRL. The second option will leverage break-through scintillator material development advances as well as solid state replacements for photomultiplier tubes (PMT), which are also being developed under Exploratory Research. The ARMED unit under this option could employ DNDO's new scintillator materials, such as strontium iodide (SrI), for excellent energy resolution and low cost. The PMT replacements would be much more compact and lower power, enabling high performance devices in a compact form factor. ARMED will focus on development of small modular sensors based on innovative, highly sensitive materials that are designed to best exploit the networked systems deployment while maintaining high stand-alone performance. The newly developed detector materials allow for better detection sensitivity and capability in a much more compact form and at significantly lower cost for production than existing detector materials.

Accomplishments for all these ATD's are combined below.

Accomplishments in Transformational Research and Development:

Significant accomplishments in FY 2008 include:

IPRL:

- All vendors completed Preliminary Design Review (PDR), Critical Design Review (CDR), Characterization Readiness Review (CRR) and initial fabrication of key system components.

SORDS:

- All vendors completed Preliminary Design Review (PDR) which entailed the initial modeling and trades studies to optimize and validate the proposed device design. Initial long lead components were also ordered, such as crystals and supporting electronics.

SNAR:

- Initiated SNAR ATD and defined system approach.

FY 2009 planned accomplishments include:

IPRL:

- Complete fabrication of prototype units.

- Complete the demonstration and characterization phase. This entails successful detailed device characterization at the component and subcomponent level of the IPRL systems.
- Perform CBA for IPRL based on performance and cost data.
- Transition the technology to a systems development phase.

SORDS:

- All vendors will complete CDR and CRR. This includes the detailed modeling and/or measurements to validate the final device design prior to fabrication.
- Complete fabrication of detection systems, software integration and mounting on the mobile platform for the SORDS units.

SNAR

- Complete the Preliminary Design Reviews for all vendors which entail the initial modeling and trade studies to optimize and validate the system designs.

IRSS

- Define selected system approach; prepare solicitation based on that approach, review technical proposals received and award contracts.

FY 2010 planned accomplishments:

IPRL:

- Transition IPRL technology to a systems development phase as part of the HPRDS program. The Transformational R&D PPA will no longer provide funds for IPRL.

SORDS

- Complete the demonstration and characterization phase. This entails successful detailed device characterization at the component and subcomponent level of the SORDS systems.
- Perform CBA for SORDS based on performance and cost data.
- Transition the technology to a systems development phase (this may occur in late FY 2010 or early FY 2011).

SNAR

- Complete the Critical Design Review for all of the vendors. This includes the detailed modeling and/or measurements to validate the final device designs prior to fabrication.

IRSS

- Complete PDR's comprising system modeling and trade studies to validate proposed design(s).

ARMD

- Define selected system approach; prepare solicitation based on that approach, review technical proposals received and award contracts.

New ATD programs will be initiated based on successes in ongoing or future exploratory research, changes in the design threats, and changes in the architecture or advances made elsewhere in the

community. Additional concepts are under consideration for future ATD's, especially those that are applicable to detection challenges such as those associated with small commercial maritime vessels, private maritime vessels, small commercial aircraft, private aircraft, non-port of entry (POE) land crossings, and State and local operations, as well as land, maritime, and aviation POEs.

Exploratory Research: The Exploratory Research (ER) program is the vehicle for exploring innovative, high-risk, early-stage, new ideas that can make a transformational contribution to DNDO mission of reducing the risk of nuclear terrorism. Specifically, ER focuses on potential techniques for closing gaps in the GNDA; substantially improving the performance or reducing the cost of radiological/nuclear detection capabilities; and, techniques to improve nuclear forensics. The first step in an ER project is to perform a feasibility study. Innovative concepts that successfully complete this initial feasibility evaluation are typically extended through to a proof-of-concept (PoC) demonstration. Ideas that fail to demonstrate feasibility are dropped. A PoC demonstration is a laboratory test of a technological concept to demonstrate its potential and search for possible major technical barriers. This stage includes laboratory studies to experimentally validate analytical predictions from the feasibility study. If the concept is proven to be successful, it is likely to be incorporated into a subsequent ATD. Exploratory Research also provides capabilities that apply across the DNDO mission, particularly in the areas of performance modeling and improved algorithm development.

Most ER projects are multi-year so funding has to be planned to allow for continuation of successful projects, termination of those that are less promising, and for starting new projects. Proposals are solicited annually through a Broad Agency Announcement (BAA) (for industry and academia) and a Call for Proposals (CFP) (for the national laboratories).

Broad topic areas for ER include:

- Materials
- Passive systems
- Active systems
- Integrated systems
- Algorithms, modeling, and software
- Forensics

Accomplishments in Transformational Research and Development:

Significant accomplishments in FY 2008 include:

- Three concepts transitioned from feasibility to PoC
- New, higher energy resolution, low cost, easily manufacturable, scintillators (e.g., SrI₂) were well characterized. High energy resolution is important to allow high resolution energy spectra of incoming gammas and neutrons in order to allow definitive identification of isotopes, and to distinguish threat material from non-threat material
- New, higher energy resolution, low cost, easily manufacturable, semiconductors (e.g., TlBr) were well characterized.
- Nano-particle composite scintillator, with potentially large area and volume applications, offering high energy resolution, was well characterized.

- Readout technologies for large array semiconductors, based on recent advances in Application Specific Integrated Circuits (ASICs), are available for use in semiconductor devices and 3-D imagers.
- Completed long dwell study, which concluded that in-transit detector systems for cargo containers are not likely to be a cost effective approach to detection and are likely to need to be supplemented with other detection methods or conops.
- Demonstrated (limited) automated detection of high-Z material using drive-through x-ray system.
- Completed PoC of x-ray backscatter to identify high-Z material in simulated cargo container environment.
- Completed successfully a PoC demonstration of fully-functional, sub-scale x-ray scanner that utilizes nuclear resonance fluorescence and high-Z backscatter to detect the elemental constituents of all materials inside cargo containers including SNM, high-Z shielding material and other contraband such as drugs, explosives, and money. This technology has been selected for the SNAR ATD.
- Demonstrated automatically linked gamma-ray and video imaging to track moving vehicles containing radiation sources.
- Screened hundreds of candidate materials for use in scintillator detectors, using a high-throughput facility for discovery and identification of new materials.

FY 2009 planned accomplishments include:

- Approximately 10 concepts will transition from feasibility to PoC.
- Complete development of new scintillator and semiconductor materials for the ARMD ATD.
- Continue characterization and fabrication efforts of several other promising radiation detection materials which have been discovered and developed over the last several years.
- PoC for fusion of video and directional gamma detector images to allow for screening of vehicles at speed across multiple lanes of traffic.
- Evaluate feasibility of actively detecting SNM at distances greater than 100 meters.
- Demonstrate feasibility for pathway-related and proximity induced technologies for nuclear forensics analysis.
- Evaluate feasibility of monochromatic x-ray spectrum and brightness from laser driven, wakefield accelerator. The goal is to reach 3 MeV photons with sufficient brightness and reproducibility.
- Complete PoC demonstration of Large Area X-ray Detector (LAXD) NII system that could potentially enable volumetric imaging (i.e., three dimensional) of air cargo containers, cargo containers, and trucks.
- Integration and PoC of an algorithmic expert system for feature extraction on various contextual info streams.
- Accelerate development of several promising new materials in the categories of both scintillators and semiconductors, addressing the remaining key risks, and starting development of low rate production efforts to help optimization of complete detector devices.
- Accelerate the development of a promising material that could help replace ³He detectors in many applications.

FY 2010 planned accomplishments:

- Approximately seven concepts will transition from feasibility to PoC.
- PoC for Compton Imaging device using room temperature semiconductor detector components with supporting reconstruction and ID algorithms which enable more effective source localization.
- PoC for compact accelerator design for portable active interrogation applications.
- PoC for high spatial resolution particle detectors for use with charged particle interrogation systems.
- PoC for high resolution scintillators integrated, high efficiency readout system which enable more compact, low power devices.
- Demonstration of a compact laser source for nearly monochromatic high energy x-rays for active systems which enable more effective, lower dose systems.
- Demonstration of high resolution semiconductor readouts for tracking electron clouds which enable more effective source localization.
- Accelerate several alternatives to neutron detectors which would not be based on ^3He .
- Complete development of several low rate production efforts for both scintillators and semiconductors.
- Transition several which provide alternatives to ^3He neutron detectors to testing and / or product acquisition.

Academic Research Initiative (ARI): The ARI has two goals. The first is to engage the academic community in DNDO research goals, building a community dedicated to solving long-term, high-risk research issues. The second is to develop the next generation of researchers in nuclear detection technology. DNDO has partnered with the National Science Foundation (NSF) for ARI. NSF administers the proposal solicitation, evaluation, and grant award process as well as the first year of the grant. Subsequent years are administered through the DHS Grants Office. Through the FY 2007 and FY 2008 NSF and DHS grant activity, 31 university teams were selected to begin research programs in areas such as next generation detection systems, nuclear forensics, detection material and detectors, and documenting key nuclear data. By virtue of supporting this research - which includes professors, undergraduates, and graduate students - future nuclear scientists and engineers are being enabled and supported throughout the educational portion of their careers. The ARI is expected to grow as the academic community continues to respond to this stable and relatively new investment in nuclear related R&D, attracting researchers from disciplines in nuclear, particle, solid state, materials, accelerators, chemistry, plasma, astrophysics, etc.. Academic areas not typically associated with nuclear terrorism and radiological/nuclear detection, such as the social sciences, are also being invited to submit ideas and proposals.

The awards made in FY 2007 were a mix of small, medium, and large grants with periods of performance of (generally) three, four, and five years, respectively. Selection of new grants in the future must reflect the time-phasing of the FY 2007 grants and available funding. For example, the FY 2008 grant awards were for medium size projects only. In FY 2009, the small grants from FY 2007 will reach the end of their period of performance and free up funding for more new awards. In this way, equilibrium will be reached in which new grants can be made each year to replace the ones that are nearing completion.

Accomplishments in Transformational Research and Development:

Significant accomplishments in FY 2008 include:

- Continuing and new grants to 25 different universities (36 grants total).
- Conducted the first annual academic conference on nuclear and radiological detection sciences to share ideas and promote collaboration across the community.
- Funding provided support to over 75 students.
- New detectors: performed experimental measurements with novel gas chamber neutron detector, performed optimization of novel photonics based detector, conducted feasibility design study of 3-D pixilated semiconductor scintillator, measurements from silicon drift devices for enhanced imaging of radioactive sources, performed measurements from tungsten coil spectrometer as a fast field diagnostic forensics tool, design study of self-powered neutron detector.
- New materials: explored techniques to fabricate radiation detectors utilizing quantum dots, initiated the first synthesis of boron arsenide powders as a neutron detector material, explored synthesis techniques for colloidal nanocrystals to enhance performance of scintillator materials, explored growth methods for CdMgTe as a solid state radiation detector
- Other: developed models of nuclear resonance fluoroscopy (NRF), software tools for dynamic programming of decision trees to optimize radiation detector deployment, modeled threat scenarios for interdicting smuggled nuclear material.

FY 2009 planned accomplishments include:

- Conduct annual grantees conference.
- Provide additional grant funding to support a total of approximately 110 undergraduate and graduate students.
- New detectors: complete fabrication of lightweight novel gas chamber neutron detector, complete fabrication of light-weight low-power neutron detector, first design photonics-based radiation sensor.
- New materials: first synthesis of enhanced nanophosphor materials, complete synthesis and characterization of high efficiency boron arsenide crystals for neutron detection.
- Other: software to fully simulate NRF, measure key NRF emission lines and (n f) cross sections, smuggling interdiction model with deterrence and strategic gaming, design of shielded HEU detection system, social models for decision support algorithms, software for sensor system management and simulation.

FY 2010 planned accomplishments:

- Conduct annual grantees conference.
- Approximately 140 students will be supported.
- Design and construction of a lightweight and portable neutron detector.
- Detailed examination of CdMgTe as a choice for room temperature gamma-ray detector with a focus on understanding the Te inclusions and mitigating their effects.
- Growth and structural characterization of the first boron phosphide crystals for high efficiency neutron detectors.

- Complete characterization and fabrication of a photonics-based nuclear radiation sensor.
- Complete characterization and testing of a novel solid-state self powered neutron detector.
- Development of a web application for studying optimum use of sensor resources by dynamic programming of decision trees.
- Development of an interdiction model for smuggled nuclear materials with deterrence methodologies and strategic gaming aspects incorporated.

DNDO requests \$38.436 million for this program. This is an adjustment to base of \$.683 million above the FY 2009 enacted level.

CURRENT SERVICES PROGRAM DESCRIPTION:

While technology is a critical tool in combating the nuclear threat, the threat cannot be effectively overcome by technology alone. All detection and interdiction efforts must be conducted in coordination with trained Federal, State, local and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. Accordingly, while DNDO has initiated technology research, development, and acquisition programs, it is also responsible for developing the information sharing and analytical tools necessary to create a fully integrated operating environment. Furthermore, DNDO establishes additional protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material or radiological material is promptly reported to the Secretaries of Defense, Homeland Security and Energy and the Attorney General and other appropriate officials for appropriate action by law enforcement, military, emergency response or other authorities. DNDO must have the ability to integrate detection data and intelligence assessments in a near real-time environment to develop information that, as actionable knowledge, maintains an overall system and situational awareness. This requires DNDO to closely interact with the Intelligence Community (IC) as a developer of intelligence requirements and consumer of intelligence products. Conversely, DNDO does not act as an intelligence collection agency. This integrated approach to detection and information analysis will ultimately provide a substantial improvement and efficiency in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of success.

Joint Analysis Center and Joint Analysis Center Collaborative Information System: The Joint Analysis Center (JAC) at DNDO provides 24/7 capabilities to meet the NSPD-43/HSPD-14 directed objectives to maintain situational awareness of the GNDA, analyze information from the GNDA and share data with the Community(ies) of Interest (COI) to make the GNDA more effective, and ensure that detection leads to an appropriate response.

To accomplish this mission the JAC maintains data on all deployed detectors to include their operational environment and detection histories; assists in establishing and understanding appropriate

Federal, State, local and international protocols to ensure detection events lead to an appropriate response; provides 24/7 technical support to PRND operations, including notification to appropriate interagency partners for appropriate response and deployable technical assets; and fuses intelligence, law enforcement and technical data into informational products to better the operators' chances of identifying the threat. In addition, DNDO does not provide command or control functions over detection and response assets, but provides critical support to those who are doing so.

The JAC program includes:

- Operation and maintenance of the JAC's 24/7 capabilities, including the analytical research and techniques and protocols required to maintain situational awareness and facilitate alarm adjudication.
- Nuclear Assessment Program (NAP).
- Technical Reachback (TRB) Program.
- The Joint Analysis Center Collaborative Information System (JACCIS).

Both NAP and TRB are key components of the Presidential Directives NSPD-43 and HSPD 14 (Domestic Nuclear Detection) Annex 1, "U.S. Government Nuclear and Radiological Alarm Technical Adjudication and Resolution Process," and Annex 1 to PDD-41 (U.S. Policy on Improving Nuclear Material Security in Russia and the Other Newly Independent States), 15 May 2007 (C). NAP and TRB also contribute to and utilize the information and communications infrastructure provided by the JAC, and provide the subject matter expertise in support of all the JAC's functions.

The JACCIS provides unique and centralized communication and information technology (IT) support to accomplish the mission of the JAC. Through an adaptive framework by integrating intelligent services and data provisioning capabilities in an open, scalable architecture, the JACCIS also provides the flexibility to adapt to the evolving GNDA, mission areas, business processes, and COI requirements. When fully developed, the JACCIS will fuse and store data obtained by the GNDA, as well as other pertinent data for use by the nuclear technical community, the nuclear policy community, and other members of the nuclear COI. The system will track detection events and provide alerts for events of interest, as well as the relevance to other known events through detailed trending and analysis. It will make available historical trends to refine protocols and search parameters and better inform the nuclear counterterrorism community. The JACCIS is being developed in stages through planned product improvements to provide for integration of future requirements, both technical and operational, as the GNDA continues to mature.

Accomplishments in Mission Support & Operations:

Significant accomplishments in FY 2008 include:

- Established a Beta test bed to validate functional requirements for the JACCIS.
- Began the final build out of the initial JACCIS operational system based on functional requirements and validated by the Beta test bed.
- Established information sharing processes with the State and local authorities. JAC provided weekly postings on the Homeland Security Information Network-Intelligence (HSIN-I) website and formalized the sharing of information with Federal analysts at State and local Fusion Centers.

- Produced and distributed over 35 State Retrospective reports, each providing State and local law enforcement officials with a snapshot of nuclear and radiological information in their state, along with possible threat considerations. Each written, report is an actionable analytical product that describes sensitive facilities, possible transportation vulnerabilities, alleged or actual smuggling or loss of control events, and a listing of nuclear detection and responder resources.
- Established a dedicated notification and conferencing communications system to decrease the response time and increase the ability to collaborate across Federal, State, local and tribal agencies and departments.
- The JAC has seen an increase for technical adjudication support from State and Local entities from three requests in 2007 to 26 in 2008. Of these adjudication requests, six were elevated to National Reachback, and three required coordination for the deployment of Federal assets to assist in the adjudication process to verify there was no threat.
- Conducted a total of 120 drills in 2008 with 58% (69 of 120) of these drills being conducted with State and local entities. The JAC has also conducted an additional 44 connectivity checks with various State and local entities. This is done to ensure that protocols are effective and technical reachback is ready.
- Coordinated with 11 State and Local Governments for detailed alarm adjudication protocols.
- In coordination with NRC, developed a searchable NRC Database for Category 1 and Category 2 nuclear materials and began a pilot to consolidate and automate Agreement State License information.

FY 2009 planned accomplishments include:

- Development, security certification and operational deployment and of the initial JACCIS. Continuing the effort started in FY 2008, the JACCIS will reach Initial Operational Capability (IOC) in April of 2009 providing interoperability with Federal, State and local authorities conducting PRND missions, detection event tracking and logging, real-time data links to the NRC for radiation source license checks, and connectivity to intelligence, law enforcement, and detection event information in an integrated and collaborative environment and automated processing of JAC mission functions, primarily the adjudication of alarms requiring Federal involvement.
- Maintain the 24/7 capability of the JAC for support to the deployed GNDA.
- Provide automated business practices and analytical tools to fuse and analyze all source information and alert operators of items of interest.
- As State and local authorities become more involved in PRND activities, the JAC will coordinate with State and local agencies on specific protocols and SOPs for alarm adjudication/resolution and develop the complementary Federal procedures in support thereof.
- Complete the initial retrospectives on all States and major urban areas.
- Conduct weekly drills of the alarm adjudication, resolution and notification protocols integrating Federal, State and Local agencies into these drills.

FY 2010 planned accomplishments:

The JAC will continue to maintain situational awareness of the GNDA by updating and consolidating data required to facilitate appropriate architecture development, alarm adjudication and resolution,

including detector deployment information and historical data on detection events. The growing GNDA will create and require expanded situational awareness and wider distribution of information products. As rad/nuc detection technology is further deployed, concurrent development of operational support capabilities will be required. GNDA will create and require expanded situational awareness. As rad/nuc detection technology is deployed across the Nation and in strategic areas around the world, operational support will need to adapt and expand by adding increased analysis and presence to ensure 24/7 connectivity and capacity to track and handle multiple simultaneous events, and manage and update the unique protocols and interactions with the GNDA stakeholders. It is anticipated that more domestic partners will develop PRND capabilities due to DNDO engagements and outreach initiatives. It is also anticipated that international partners and their detection systems will become more integrated into a cohesive information sharing architecture due to USG initiatives such as the Global Initiative for Combating Nuclear Terrorism. This will require the JAC to expand and adapt to ensure continued mission accomplishment.

The JAC will continue to operate and maintain the JACCIS, for the effective sharing and use of rad/nuc detection information and intelligence from most, if not all, detection systems operated by DHS and Federal, State, and local partners. The JACCIS baseline capabilities that will be maintained are:

- Comprehensive, accessible asset database on all deployed GNDA systems;
- Real-time data links to existing networked detection systems communications and situational awareness links to Federal operations and intelligence centers (a total of 48 data systems and 15 communications links),
- Rapid and interactive links to technical reachback via an automated communication and data sharing system, linking first responders to regional and national level technical experts,
- Real-time automated radiation source license data verification and source tracking information to include automating and networking four agreement State license information under a pilot program with NRC and the Organization of Agreement States (OAS), and
- Real-time access to intelligence, law enforcement, and detection event information in an integrated and collaborative environment.
- Information/data adaptation and transformation services, interoperability services and integration services,
- Customer Relation Management application(s) to support Reachback Event Management providing: event ticketing and logging, task tracking, complete event and task history accounting, workflow management and collaboration, notification and alerting, technical support knowledgebase and reference material resources.

The maintenance of the JACCIS will include hardware and software status monitoring, a 24/7 “help line” to ensure full-time functionality and correction of problems, and the robust information security and access control procedures required to ensure protection of the system while facilitating access by the GNDA COI.

To maintain the viability and capability of the JACCIS, planned product improvements will begin in FY 2010. This includes defining and validating the updated functional requirements to support the evolving evolution of the JAC concepts of operations and the expanding GNDA and development of the upgrades for the JACCIS. Key FY 2010 JAC proposed accomplishments driving the planned improvements are described below:

- Increase the number of technical support requests that can be processed from 12 per day to 20 per day with improved corporate knowledge.
- Increase the number of agencies and/or requests for simultaneous support from six to 12.
- Reduce the number of man-hours per alarm adjudication from four to three.
- Increase the number of JAC MOUs with State Fusion Centers by 20% and develop the automated links from these nodes in the COI to JACCIS.
- Complete a review and update of all previous situational reports for the interior layer of the architecture. A planned review cycle of all situational awareness and information documents is required to ensure currency.
- Increase the number of JAC Technical Report disseminations will increase by 20%.

Nuclear Assessment Program: The Nuclear Assessment Program (NAP), a DOE weapons laboratory-based capability, was transferred from DOE to DHS per the Homeland Security Act of 2002. It is a unique national capability designed to provide rapid, accurate and actionable assessments of illicit nuclear trafficking events and trends, the credibility of nuclear threat communications, and other nuclear terrorism indicators in order to assist DNDO, DHS and other U.S. Government decision makers. NAP scientists provide technical, operational and behavioral assessments of communicated nuclear threats while giving support and guidance to the U.S. Government efforts to counter nuclear smuggling. Additionally, NAP not only supports the DNDO JAC and the broader nuclear community during threat and alarm incidents and resolution, but it is critical to providing the JAC with significant support of situational awareness products and threat understanding to the GNDA.

NAP provides rapid technical support of operational elements in the law enforcement, diplomatic and intelligence communities, as well as providing illicit nuclear trafficking trend reports. The NAP program ensures that a resource pool of subject matter experts is sustained in order to analyze the technical feasibility, operational practicality and behavioral resolve of communicated threats. The highly specialized skills required for this effort necessitate continued training of replacement personnel to address attrition due to retirement or other factors in the availability of personnel.

Accomplishments in Mission Support & Operations:

Significant accomplishments in FY 2008 include:

- Continued providing rapid technical support of operational elements in the law enforcement, diplomatic, and intelligence communities.
- Provided 125 NAP formal assessments/reports/products.
- Provided 37 technical reports, training, and briefings to national and international audiences.
- Co-sponsored the CIA University Nuclear Awareness Course and present the “Nuclear Crimes Overview” at 25 venues to over 600 participants from the International Law Enforcement Academy (ILEA) and CIA University.
- Conducted a review of the current nuclear and radiological threat assessment requirements of the federal departments and agencies involved in counter nuclear terrorism to ensure NAP products are based on customer needs. This included a closer look at NAP products, procedures, methodology of assessments and reconciled those needs and changes with other members of DHS, NRC, CIA, DIA, FBI, and DOS.

FY 2009 planned accomplishments include:

- Maintain the unique national capability designed to provide approximately 140 rapid assessments of nuclear threat communications, illicit nuclear trafficking events, and other nuclear terrorism indicators to operational elements in the law enforcement, diplomatic, and intelligence communities.
- Maintain subject matter experts to analyze the technical feasibility, operational practicality, and behavioral resolve of communicated nuclear threats.
- Expand the Scientific Assessor Pool to meet the anticipated growing needs of State and local agencies in rad/nuc alarm adjudication and resolution by more than three.
- Continue co-sponsoring the CIA University Nuclear Awareness Course and present the “Nuclear Crimes Overview” at 25 venues to over 600 participants from the ILEA and CIA University.
- Provide daily reports of all-source information to enhance the situational awareness of the JAC and USG, including ongoing technical, operational and behavioral analysis and evaluations of current cable and open source traffic.
- Explore and plan to enhance the archival and retrieval capability of the historical data maintained by the NAP, and in the multi-agency ‘SENTRY’ illicit nuclear trafficking database.

FY 2010 planned accomplishments:

- Maintain the unique national capability designed to provide approximately 150 rapid assessments of nuclear threat communications, illicit nuclear trafficking events, and other nuclear terrorism indicators to operational elements in the law enforcement, diplomatic, and intelligence communities.
- Maintain the Scientific Assessor Pool to meet the needs of State and local agencies in rad/nuc alarm adjudication and resolution.
- Continue co-sponsoring the CIA University Nuclear Awareness Course and present the “Nuclear Crimes Overview” at 25 venues to over 600 participants from the ILEA and CIA University.
- Provide daily reports of all-source information to enhance the situational awareness of the JAC and USG, including ongoing technical, operational, and behavioral analysis and evaluations of current cable and open source traffic.
- Transition the NAP restricted database and library and the SENTRY database into a single community-accessible tool, and collaborate with members of the IC in developing a single repository for all known data on nuclear smuggling.
- Assist DHS Office of Intelligence and Analysis (IA) in producing at least two comprehensive studies regarding illicit trafficking of nuclear material to be presented to the COI.

Technical Reachback Program: Technical Reachback (TRB) is an essential component of the “U.S. Government Nuclear and Radiological Alarm Technical Adjudication and Resolution Process,” Annex 1 to NSPD-43/HSPD-14 (Domestic Nuclear Detection) and Annex 1 to PDD-41 (U.S. Policy on Improving Nuclear Material Security in Russia and the Other Newly Independent States), 15 May 2007 (C). In coordination with DOE, TRB provides 24/7 technical capability to facilitate radiation detection alarm resolution and effectively transition to response operations. TRB is composed of two

elements: an initial reachback component and a national or secondary component and an initial reachback component. The TRB initial reachback component, which currently utilizes spectroscopy expertise at four national labs, supports primary alarm adjudications resulting from domestic detector deployments from State and local PRND programs. Currently, initial reachback for DHS Federal agencies is performed by CBP's Laboratories and Science Services (LSS). In addition to rapidly facilitating radiation detection alarm resolution by providing subject matter expertise to Federal, State, and local detection operators, the TRB national component, which is operated out of the DOE weapons laboratories, develops analytic tools and reports to assist, evaluate and enhance radiological and nuclear alarm adjudication.

TRB sustains these two reachback components, while enhancing the expertise of the technical personnel who support scalable capability through knowledge of equipment capabilities and limitations, intelligence situational awareness and specific knowledge of end-user CONOPS.

Accomplishments in Mission Support & Operations:

Significant accomplishments in FY 2008 included:

- Continued operation of the National Reachback (Secondary Reachback – SRB) capability, supporting the radiation detection community with immediate spectral data analysis and reports for 53 incidents. These alarms were elevated to reachback due to either complexity, meeting criteria for required analysis to ensure a threat does not go undiscovered, or simply, could not be resolved at the alarm site because of a lack of technical information or capability. Current demand at the national reachback level is handled by two on-call spectroscopists who are available 24/7.
- Analyzed data from deployed detectors and all source information and prepared 15 technical reports that inform the PRND community on detector performance, detection phenomena trends, triggers that may indicate threat material is present and operational aspects of detector performance to assist in adjudicating alarms and identifying threat material.
- Integrated the DHS and DOE alarm resolution processes.
- Sustained the Initial Reachback network, while enhancing the expertise of the technical personnel who support scalable capability through knowledge of equipment capabilities and limitations, intelligence situational awareness, and specific knowledge of end-user concepts of operations. The JAC's current 24/7 initial reachback capability is manned by 4 on-call spectroscopists at any given time.
- Conducted a spectroscopy and reachback seminar for spectroscopists from National and laboratories.

FY 2009 planned accomplishments include:

- Expand operations of the National Reachback capability, supporting the radiation detection community with immediate spectral data analysis and reports for national level reachback request from DHS and State and local entities.
- Sustain the existing Initial Reachback capability, while enhancing the expertise of the technical personnel who support scalable capability through knowledge of equipment capabilities and limitations, intelligence situational awareness, and specific knowledge of end-user CONOPS.

- Develop analytical tools and conduct analysis for spectral adjudication, detector performance evaluations, data mining activities, and operational reports.
- Conduct at least two reachback and spectral analysis courses at the National Laboratories, to provide reachback tools and training to State and local radiation health professionals
- Continue to provide spectral analysis courses to LSS spectroscopists when required.

FY 2010 planned accomplishments include:

The demands for 24/7 TRB assistance at the Federal, State, local, and international levels are projected to increase continually as more assets are deployed, protocols are established, and awareness of the capability increases. TRB will maintain the Initial Reachback capability and ensure the system and numbers of spectroscopists are appropriate to account for the anticipated increase in demands for Initial Reachback support. TRB will begin a robust selection and training program to ensure the pool of experts for National Reachback remains adequate due to attrition of existing experts or call volume increases

- TRB will continue to analyze technology roadmap studies to keep pace with emerging detection technologies and systems in order to maintain need knowledge of field deployed systems that result in alarm adjudication requests.
- Continue to design and enhance software and analytical tools to conduct analysis for spectral adjudication, detector performance evaluations, data mining activities, and operational reports. Keep current with existing and emerging data formats to ensure future operability of software and analytical tools.
- Continue to provide reachback tools and training to State and local radiation health professionals, assistance with State and local development of basic reachback capabilities, and help integrating State experts into the national alarm adjudication protocol.
- Complete trend reports for each Reachback Center, and operate and enhance DNDO's initial reachback capability through increasing alarm resolution and spectral analysis experience, greater rad/nuc detection situational awareness, improved CONOPS, and increased training and drills/exercises
- Coordinate with DOE to ensure the appropriate level of spectroscopists is available at the National Reachback level. Use the program's training efforts to replace spectroscopist attrition and to accommodate increased needs due to higher call volumes.

Training and Exercises Program: Operational training, drills, workshops and exercises accomplish the critical hand-off between the delivery of detection equipment and its effective, sustained use in the operators' environment. The DNDO Training and Exercises program develops and implements such rad/nuc training and exercises for Federal, State, and local law enforcement and public safety agencies. The main objective of the Training and Exercises program is to increase the chances of encountering and detecting a possible indicator of nuclear terrorism by promoting integrated and systematic training and exercise execution to operational users of rad/nuc detection systems. Where appropriate and requested, the Training and Exercise program elements interact with and benefit from the synergistic, DNDO-led matrixed approach to the development and delivery of PRND training and exercise support.

The Training and Exercises program offers courses on instrument operation and deployment, detection mission operations and activities, team organization, reporting/reachback protocols, and other Federal assets available for the integration of operations and assistance. Furthermore, the Training and Exercises program continues to develop, oversee and administer the design, delivery, evaluation, and continual improvement of the PRND training curriculum. This training curriculum is directed by DNDO personnel and provided by contracted instructors in the vicinity of the requesting State or local

agency and utilizes the participants' PRND equipment. Additionally, the Training and Exercises Program is developing a more expansive Train-the-Trainer curriculum, which will significantly increase the number, awareness and capabilities of PRND participants involved with the DNDO mission.

DNDO is also transitioning the Nation's PRND training curriculum from an equipment-based to a capabilities-based focus. The primary means of accomplishing this effort will be the Federal Emergency Management Agency/National Preparedness Directorate (FEMA/NPD) certification of the new Modular Screener Training (MST) curriculum. MST will allow participating agencies to adapt PRND instruction to their individual and collective needs, while minimizing the time officials must spend away from their regular duties to attend training.

DNDO exercises activities assist in evaluating new and existing capabilities. DNDO's Exercise program works closely with training delivery partners to ensure that PRND instruction leads to successful operational capabilities. In addition, the exercise program supports National Security Special Events (NSSE), DHS Special Events, and elevated threat conditions, as required, and the Department of State and other Federal agencies with exercises associated with the Global Initiative to Combat Nuclear Terrorism (GI) and other international activities.

Significant accomplishments in FY 2008 include:

- Developed a National PRND Training Strategy document.
- Directly trained 2,400 and indirectly, through Train-the-Trainer instruction, 2,600 additional Federal, State, and local participants in PRND capabilities.
- Conducted two reachback and spectral analysis courses at the National Laboratories for State and Local radiation health officials.
- Developed initial maritime small craft rad/nuc detection training curricula.
- Participated in Florida Fish and Wildlife Conservation (FWC) Commission's maritime rad/nuc detection operations demonstration, "Project Sturgeon".
- Coordinated with FEMA/NPD in development and delivery of PRND training for the West Coast Maritime Pilot (WCMP) project.
- Provided supplemental training for local officials to improve security at the Democratic and Republican National Conventions.

FY 2009 planned accomplishments include:

- Directly train 3,600 and indirectly through Train-the-Trainer instruction, 7,500 additional Federal, State, and local participants in PRND operations.
- Assist several States (e.g., FL, CA, TX, IL, and WA) to integrate comprehensive PRND capabilities-based training into their State homeland security training infrastructure and expand this effort to additional States.
- Provide subject matter expertise to FWC and other Southeast region mission partners in continued development of their maritime PRND training programs.
- Evaluate WCMP PRND training program and apply lessons learned to next generation maritime training materials.
- Provide training assistance to the Northern Border (Great Lakes) Security Initiative to Ohio in conjunction with the USCG.

- Participate in a National Level Exercise (TOPOFF 5) and two Principal Level Exercises (PLE).
- Provide guidance and oversight for the WCMP exercises.
- Support National Security Special Events (NSSE), DHS Special Events, and elevated threat conditions, as required.
- Represent DNDO with other USG agencies in designing and executing preventive rad/nuc exercises in conjunction with the U.S. Department of State-led GICNT.

FY 2010 planned accomplishments (Training):

- Directly trained 5,000 and indirectly, through Train-the-Trainer instruction, 10,000 additional Federal, State, and local participants in PRND capabilities.
- Develop DVD-ROM and web-based instructional tools for the Personal Radiation Detectors (PRDs) commonly used by law enforcement and first responder agencies.
- Continue to assist additional States (regionally representative) to integrate comprehensive PRND capabilities-based training into their State homeland security training infrastructure and expand this effort.
- Integrate and pilot PRND training curriculum into two to three Federal, State, and local law enforcement and/or fire training academies for current staff and new recruits.
- Provide maritime rad/nuc training detection assistance to additional Great Lakes States participating in the Northern Border Security Initiative.
- Deliver advanced small craft maritime rad/nuc training curriculum to FEMA/NPD.
- Deliver a maritime-specific training module suitable for an integrated port-centric rad/nuc detection plan.

FY 2010 planned accomplishments (Exercises):

- Conduct workshops, table top exercises, drills and FSEs in support of DNDO regional pilot projects and programs.
- Participate in National Level Exercises (NLE) and Principal Level Exercises (PLE), as scheduled.
- Develop and lead two additional regional FSEs with the Interior Mission area.
- Provide guidance and oversight for discussion-based exercise activities supporting the WCMP project.
- Support NSSEs, DHS Special Events, international rad/nuc detection exercises, e.g. GI and elevated threat conditions, as required.

IV. Program Justification of Changes

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development and Operations
Justification of Program Changes
(Dollars in Thousands)**

Program Increase: Exploratory Research

Strategic Goal(s) & Objective(s): DHS Strategic Objective: 2. Continue to Protect our Nation from Dangerous Goods. IPG Priority: 2.1 Prevent and detect radiological/nuclear attacks.

PPA: Research, Development and Operations / Transformational Research

Program Increase: Positions ____ FTE ____ Dollars _\$7,237__

Funding Profile:

	FY 2008. Actual			(ii) FY 2009 Enacted					
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	
Program Increase							0	0	7,237
Total Request	0	0		0	0		0	0	\$7,237

Description of Item:

Performance Metric 1: Crystal Optimization – objective characterization of key performance elements: energy resolution, efficiency, linearity, light production, uniformity to measure the current state of development the radiation detection materials.

Performance Metric 2: Production capability – characterization of the size and quantity of optimized crystals that can be produced monthly.

Directive / Mandate: In the National Security Presidential Directive (NSPD)-43/Homeland Security Presidential Directive (HSPD)-14, DNDO is mandated to “Serve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material, or radiological material in the United States.”

Justification: Transformational R&D focuses on dramatically improving nuclear detection capabilities, addressing enduring vulnerabilities, or reducing the operational burden of rad/nuc detection. The increase in FY10 will exploit the initial detection material break-throughs realized in

FY09. Two new revolutionary detection materials have been demonstrated, but need to move through several steps before production can start. The new materials would be state of the art for gamma and neutron detection (ideal for SNM detection) at a competitive cost. The neutron detection material is a potential replacement for He3 detectors, which is an emerging critical shortage for DHS and DOE applications. The increase in FY10 is to optimize production techniques and establish a low rate production facility for each material capable of producing 10 crystals per month. These crystals could then be integrated in to much higher performing devices and more widely distributed due to the lower material costs. This would have a tremendous impact on the ability to detect radiation threat sources.

Risk Reduction: The radiation materials are the building blocks for detection systems. Current portable systems are constrained by two main areas: operational performance and cost of deployment. The new crystals address both areas – higher performing crystals will have a much greater operational performance (the key metric is expected to be twice as good as current NaI systems). The costs are expected to lower than other alternatives, enabling deployment of more highly capable units. This would have a broad risk reduction in the area of nuclear terrorism.

Program Increase: National Technical Nuclear Forensics

Strategic Goal(s) & Objective(s): DHS Strategic Objective: 2. Continue to Protect our Nation from Dangerous Goods. IPG Priority: 2.1 Prevent and detect radiological/nuclear attacks.

PPA: Research, Development and Operations / National Technical Nuclear Forensics

Program Increase: Positions ____ FTE ____ Dollars _\$2,800__

Funding Profile:

	(v) FY 2008 Actual			(vi) FY 2009 Enacted					
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	
Program Increase							0	0	2,800
Total Request	0	0		0	0		0	0	\$2,800

Description of Item: The pre-detonation radiological/nuclear materials forensics mission is the primary R&D concentration of the National Technical Nuclear Forensics (NTNF). Building on the significant progress in prior years the increase in FY 2010 will expand efforts to identify and characterize the most discriminatory material signatures in US-made nuclear and radiological materials; and reduce timelines to develop validated protocols to ensure laboratory material analyses/measurements are performed in a credible and defensible manner. The increase will also expand our international collaborative efforts of collecting relevant nuclear forensics information and sharing appropriate information with our international partners and will also increase the amount of support provided to universities under the National Nuclear Forensics Expertise Development Program.

Performance Metric 1: Increase number of signature development projects

Performance Metric 2: Increase number of university awards, internships and fellowships.

Directive / Mandate: In the National Security Presidential Directive (NSPD)-43/Homeland Security Presidential Directive (HSPD)-14, DNDO is mandated to “Serve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material, or radiological material in the United States.”

Justification: The overall goal of the NTNFC is to develop an enduring TNF capability that provides rapid, accurate, credible conclusions; is well exercised, with maximum readiness; and attracts and retains critical expertise. At the current level of funding, NTNFC is managing to sustain, and able to

baseline but with marginal advancement. This funding will contribute to the acceleration, advancement and exploration of novel technological approaches; begin to close identified gaps; and attract and retain the forensics experts, providing them a viable career path by:

- Enabling more TNF scientists to devote more than their current average of 15% time on materials forensics-related R&D
- Expanding the internships, fellowships, university and faculty awards in the National Nuclear Forensics Expertise Development Program
- Moving beyond maintaining the current state of capability which primarily relies on Subject Matter Experts
- Beginning investments in novel R&D methods and tools at national laboratories and universities which could enable breakthroughs in TNF signatures discovery and analyses
- Advancing the pace of validating signature methodologies: Currently only one age-dating methodology is being developed and validated

Risk Reduction: It is widely recognized that global nuclear risks are accelerating with growing access to nuclear power, technology, expertise and materials. A credible nuclear forensics capability provides a significant measure of deterrence to both witting and unwitting transfers of materials to terrorists, if a nation realizes those materials have a “return address” – a powerful contributor to risk reduction. Additionally, a rapid and robust forensics capability can help to minimize the risk of a follow-on attack or smuggling of materials into the U.S. Within the U.S. the strategic landscape for nuclear defense measures is in a state of flux, directly impacting the nuclear forensics community. The nuclear weapons complex, which provides most of the facilities and expertise that is leveraged for NTNF, is being reduced, and many of the core senior experts are at risk of either retiring or moving on to more promising career paths at the same time we are trying to advance our capabilities. A stable and enhanced R&D program will reduce the risk of losing our core expertise while achieving advancements. Furthermore, the academic pipeline that would provide the next generation of nuclear experts has withered and is currently in a state of extremis. Hence, DNDO is aggressively pursuing improvements to the academic pipeline with synchronized programs encompassing the DNDO mission space for nuclear detection and forensics.

In summary, it is essential that we reduce the risk of a declining expertise pipeline; reduce the risk that forensics support to attribution will not meet the expectations of the President, the Congress and the public; reduce the risk of insufficient deterrence; and should deterrence fail, reduce the risk of a follow-on event.

V. Exhibits and Other Supporting Materials

		\$21,918	\$25,147	\$25,448	301

PPA Mission Statement

Systems Engineering and Architecture: DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) maintaining and supporting a disciplined systems engineering approach throughout DNDO. The global architecture comprises several key elements: a multi-layered structure of radiological/nuclear detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time. From its initial stand-up, DNDO recognized the importance and need for the application of a systems engineering approach in achieving an integrated and balanced global nuclear detection system solution. Effective implementation and operation of detection systems begins with the design and development of reliable and maintainable systems, built to rigorous, established performance standards and specifications, while assessing total system performance and total ownership costs within the family of radiological/nuclear detection systems.

2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
\$132	\$405	\$405	\$0

Travel

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request of \$405,000 which is not a change from the FY 2009 enacted appropriation.

2008	2009	2010	2009 to 2010
Actual	Enacted	Request	Change
2,122	\$3,311	\$3,311	\$0

Advisory and Assistance Services

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request is \$3,311,000 which is an increase of \$2,000 change from the FY 2009 enacted appropriation.

2008	2009	2010	2009 to 2010
Actual	Enacted	Request	Change
\$4,289	\$7,385	\$7,500	115

Purchase from Government Accounts

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 request of \$7,500,000 which is an increase of \$115,000 above the enacted FY 2009

2008	2009	2010	2009 to 2010
Actual	Enacted	Request	Change
\$15,375	\$14,046	\$14,232	186

Research and Development

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2010 request is \$14,232,000 which is an increase of \$186,000 from the enacted FY 2009 appropriation.

Full Time Equivalents		---	---	---	---

PPA Mission Statement

Systems Development: DNDO Systems Development and Acquisition (SDA) programs serve as the radiological/nuclear detection systems research, development and acquisition component within DNDO. SDA is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography (which includes non-intrusive inspection, or NII, systems such as the CAARS), human-portable systems, and integration programs to address the needs of our operational customers (Federal, State, local, and tribal authorities).

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$754	\$460	\$450	(\$10)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request of \$450,000 which is a decrease of \$10,000 from the FY 2009 enacted appropriation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$6,685	\$4,534	\$3,000	(\$1,534)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request is \$3,000,000 which is an decrease of \$1,534,000 change from the FY 2009 enacted appropriation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$11,021	\$7,296	\$5,150	(\$2,146)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 request of \$5,150,000 which is a decrease of \$2,146,000 from the enacted FY 2009

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$41,890	\$93,810	\$90,000	(\$3,810)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2010 request is \$90,000,000 which is a decrease of \$3,810,000 from the enacted FY 2009 appropriation.

	2008	2009	2010	2009 to 2010
	EOY Proj. Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$2,000	\$2,000	\$1,400	(\$600)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 request is \$1,400,000 which is a decrease of \$600,000 from the enacted FY 2009 appropriation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$39,737	\$0	\$0	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request is \$0 which is not a change from the FY 2009 level.

Full Time Equivalents		---	---	---	---

PPA Mission Statement

Assessments: The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen our understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$253	\$545	\$545	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request of \$545,000 which is not a change from the FY 2009 enacted appropriation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$4,361	\$5,570	\$5,670	\$100

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request is \$5,670,000 which is an increase of \$100,000 change from the FY 2009 enacted appropriation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$21,944	\$1,026	\$1,026	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 request of \$1,026,000 which is not a change from the enacted FY 2009 appropriation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & maintenance of facilities	\$0	\$8,466	\$8,682	\$216

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2010 request is \$8,682,000, which is an increase of \$216,000 above the FY 2009 request.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$5,888	\$10,761	\$10,861	\$100

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2010 request is \$10,861,000 which is an increase of \$100,000 from the enacted FY 2009 appropriation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Operation & Maintenance of equipment	\$0	\$390	\$390	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2010 request is \$390,000 which is not a change from the FY 2009 request.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Grants/Subsidies/Contributions	\$0	\$5,242	\$5,242	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 request is \$5,242,000 which is not a change from the enacted FY 2009 appropriation.

Total, Forensics		\$14,122	\$16,900	\$19,700	\$2,800
Full Time Equivalents		---	---	---	---

PPA Mission Statement

DNDO's National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can also help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of "nuclear accountability" for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

A strong, consistent effort to coordinate NTNF activities across the USG is critical to the success of the mission. DNDO's NTNF Center (NTNFC) has the leading role to ensure this coordinated success as national systems integrator for USG nuclear forensics. NTNFC is fulfilling its mandate to steward the national-level planning, integration, advancement, and readiness of an enduring national nuclear forensics capability. DNDO has begun planning and leading the interagency effort to address pipeline issues on multiple fronts, including fellowships, internships, scholarships, outreach, university awards, and enhanced multi-year R&D funding. DNDO's joint forensics and transformational research academic expertise initiatives have generated enormous enthusiasm among non-governmental organizations, universities, and national labs. These new initiatives are providing a significant adrenaline boost to the nuclear pipeline.

Summary Justification and Explanation of Changes

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Travel	\$59	\$205	\$205	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2010 request of \$205,000 which is not a change from the FY 2009 enacted appropriation.

Full Time Equivalents		---	---	---	---

PPA Mission Statement

DNDO's transformational and applied R&D program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of rad/nuc detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. Transformational and applied R&D is carried out within three major programs: Exploratory Research (ER), Academic Research Initiative (ARI), and Advanced Technology Demonstrations (ATD).

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Travel	\$132	\$355	\$355	\$0

PPA Mission Statement

DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change

	Actual	Enacted	Request	Change
Purchase from Government Accounts	\$22,359	\$26,001	\$26,684	\$683

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2010 request of \$26,684,000 which an increase of \$683,000 from the enacted FY 2009 appropriation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Research and Development	\$2,121	\$3,860	\$3,860	\$0

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2010 request is \$3,860,000 which is not a change from the enacted FY 2009 appropriation.

	2008	2009	2010	2009 to 2010
	Actual	Enacted	Request	Change
Equipment	\$593	\$0	\$0	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2010 request is \$0 which is not a change from the FY 2009 level.

BUDGET REQUEST AND SUPPORTING INFORMATION

DOMESTIC NUCLEAR DETECTION OFFICE SYSTEMS ACQUISITION

I. Appropriation Overview

A. Mission Statement for Systems Acquisition:

At inception, the Domestic Nuclear Detection Office (DNDO) was given responsibility for all Department of Homeland Security (DHS) system procurement, deployment, and installation of radiological/nuclear (rad/nuc) systems to land, air, and sea ports of entry. This responsibility expanded to include acquisition of rad/nuc detection equipment for other DHS components, including the United States Coast Guard (USCG), multiple offices within Customs and Border Protection (CBP), and the Transportation Security Administration (TSA). In addition, the DNDO acquisition program provided robust systems engineering and test and evaluation programs in support of fielded systems. DNDO ensured that all deployed systems were evaluated prior to any acquisition decisions, so that the performance capabilities of these systems are well understood. All deployed technologies were accompanied by the appropriate training, exercises, and alarm response protocols. This ensured that systems are operated properly, and alarms are adjudicated according to established protocols.

B. Budget Activities:

No funds are being requested for the Domestic Nuclear Detection Office Systems Acquisition reflecting unobligated carryover balances from prior appropriations and unanticipated delays in final Secretarial certification of Advanced Spectroscopic Portals. DNDO will continue to acquire radiological/nuclear detection equipment in FY 2010 as it draws down unobligated balances remaining for this activity. To date, DNDO's acquisition program has successfully enabled DHS components to dramatically increase scanning of cargo and persons at US points of entry.

C. Budget Request Summary:

The Domestic Nuclear Detection Office does not request any FY 2010 funding for the Systems Acquisition appropriation account. The total adjustments-to-base is a decrease of \$153,491,000 from the FY 2009 enacted level.

II. Summary of FY 2010 Budget Estimates by Program/Project Activity (PPA)

(Dollars in thousands)**

PPA: RADIATION PORTAL MONITORING PROGRAM

	Perm Pos	FTE	Amount
2008 Actual	---	---	\$56,429
2009 Enacted	---	---	\$120,491
2010 Adjustments-to-Base	---	---	\$(120,491)
2010 Current Services	---	---	\$0
2010 Program Change	---	---	\$0
2010 Request	---	---	\$0
Total Change 2009-2010	---	---	\$(120,491)

DNDO does not request any FY 2010 funding for this activity. This is a decrease of \$120.491 million from the FY 2009 enacted appropriation level.

CURRENT SERVICES PROGRAM DESCRIPTION:

Radiation Portal Monitoring Program: The Radiation Portal Monitor Program (RPMP) was established by DHS in January 2002 with the objectives of deploying RPMs at the United States POEs and providing the scientific and technical expertise to design, acquire, deploy, operate, and maintain these systems.

Since 2006, DNDO acquired and deployed Commercial-Off-The-Shelf (COTS) first-generation polyvinyl toluene (PVT) RPMs in accordance with the Global Nuclear Detection Architecture (GNDA) and Customs and Border Protection (CBP) priorities, as defined in the "Joint DNDO/CBP Deployment Strategy for Radiation Portal Monitors." DNDO initiated the Advanced Spectroscopic Portal (ASP) program in 2006 for development of a fixed cargo-scanning portal unit. The ASP program is designed to address necessary improvements in the land borders, aviation pathways, and maritime pathways mission areas to better accomplish radiation detection at U.S. land, air, and sea POEs. ASP machines are expected to be ready for Secretarial certification by September, 2009 and the first deployments will begin on October, 2009.

Accomplishments

Accomplishments in FY 2008 include:

- Procured 32 and deployed 22 ASP RPMs for test purposes.

- Procured and deployed approximately 80 PVT RPMs to achieve 98% scanning of containerized cargo and 93% of privately operated vehicles (POVs) entering U.S. land POEs. (Includes screening 96% of cargo and 87% POV along the Northern Border).
- Achieved 100% scanning of cargo containers and POVs at the Southern Border.
- Procured and deployed PVT RPMs to United States seaports.
- Achieved 98% screening of cargo at United States seaports in accordance with the “Joint DNDO/CBP Deployment Strategy for Radiation Portal Monitors.”

FY 2009 planned accomplishments include:

- Subsequent to Secretarial certification of the ASP system, DNDO will upgrade and deploy the 45 low rate initial production NaI ASP units procured in FY 2006.
- Initiate continuous improvement program for ASP RPMs to increase functionality, maintainability and reliability as mutually agreed by DNDO and CBP.
- Procure and deploy a mix of ASP and PVT RPMS to continue to progress towards the DHS goal of 100% screening of containerized cargo and POVs entering the U.S. at designated POEs in accordance with the “Joint DNDO/CBP Deployment Strategy for Radiation Portal Monitors.”
- Achieves the goal of screening 100% of cargo and 100% of POV along the Northern Border.
- Procure and deploy a mix of PVT and ASP RPMs to continue to work toward the goal of scanning 100% of cargo at United States seaports in accordance with the “Joint DNDO/CBP Deployment Strategy for Radiation Portal Monitors.”
- Continue the deployment of PVT RPMs to a large number of smaller capacity seaports that account for a smaller volume of cargo being screened. As such, DNDO expects the percent of cargo screened to remain at 98% at the end of FY 2009.

Customs and Border Protection Joint Acquisition Strategy: The CBP Joint Acquisition Strategy (JAS) is a joint DNDO/CBP-Office of Field Operations effort to procure human portable systems to equip CBP officers operating land, air, and sea POEs. The CBP JAS is closely coupled with the RPMP in that human portable units are included – in addition to RPMs - as part of land, air, and sea POE deployments.

Accomplishments

Significant accomplishments in FY 2008 include:

- Procured 164 NaI-based RIIDS for deployment to address the CBP’s expanding mission as well as to supply replacement units for damaged or worn out systems.
- Procured 50 LaBr₃-based RIIDS for deployment in two venues to evaluate the systems performance in an operational environment.

FY 2009 planned accomplishments include:

- Recapitalize equipment for Customs Officers at POEs (approximately 200 NaI, LaBr₃, and HPGe handheld units and 10 backpack units to CBP officers).

Visible Intermodal Prevention and Response Teams: An increased layer of preventive rad/nuc detection (PRND) capabilities poised at domestic transportation modes provides both a deterrent to terrorist activities and increases the odds of detecting rad/nuc material in transit to a target. The coupling of PRND capabilities with the Transportation Security Administration's (TSA's) Visible Intermodal Prevention and Response (VIPR) team operations provides greater detection capability, rapid response, and additional PRND trained and equipped law enforcement personnel in support of the global nuclear detection architecture (GNDA). Through the delivery of tailored training and suites of PRND equipment, TSA VIPR teams will become another Federal asset that may be called upon during times of heightened alert.

Accomplishments in FY 2008 include:

- Conducted two PRND team drills with TSA's Washington Field Office—variously with TSA's Philadelphia, New Jersey, and Delaware Field Offices, and state and local law enforcement officers—and established a concept of operations (CONOPS) and standard operating procedures (SOPs) for employing PRND equipment and integrating operations into VIPR activities.
- Procured and deployed rad/nuc detection equipment for two VIPR teams.

FY 2009 planned accomplishments include:

- Procure and deploy rad/nuc detection equipment and operational spares for eight national VIPR teams.
- Procure and deploy rad/nuc detection equipment and spares for the TSA training facility to allow TSA to develop and conduct its PRND “train the trainer” program.

Mobile Detection Deployment Program: In FY 2007, DNDO began the procurement of a national nuclear detection “surge” capability, a suite of mobile (man-portable) and re-locatable (vehicle-mounted) detection systems and accompanying communications and information infrastructure deployable to varying locations based upon heightened threat and security alert levels. This Federal asset will increase limited existing “surge” capacity of domestic deployments of radiation detection equipment to support special events, allow for wide-area detection in response to non-specific threats, and serve as a force multiplier for DOE Radiological Assistance Program (RAP) teams and Nuclear Incident Response Teams (NIRT). The 2007 Systems Acquisition appropriation provided funding for the procurement of a mobile detection unit to be deployed to provide increased security in specific areas in periods of heightened alert or if specific threats are identified. The system package will be Federally-owned and maintained, but operated in conjunction with State and local agencies.

The initial specialized MDDP asset (delivered and fielded in FY 2008) was modeled after a RAP response system; a vehicle (SUV/truck/van) towing a trailer loaded with enhanced radiation

detection instruments and command and control capabilities. DNDO is evaluating the recently deployed MDDP system and is utilizing lessons learned to develop an out-year strategy and plan for the MDDP system, and to propose an optimal number of equipment suites. MDDP activities in the out years will rely on the analysis provided through this evaluation activity.

Accomplishments in FY 2008 include:

- Completed the design and build-out of the initial MDDP unit. The unit was deployed at designated special events in FY 2008.

FY 2009 planned accomplishments include:

- Deploy existing MDDP unit and develop a strategy to expand the program to the necessary operational capability.
- Complete build-out of two additional MDDP units and initial deployment of at least one of the additional systems.

PPA: SECURING THE CITIES

	Perm Pos	FTE	Amount
2008 Actual	---	---	\$29,582
2009 Enacted	---	---	\$20,000
2010 Adjustments-to-Base	---	---	(\$20,000)
2010 Current Services	---	---	\$0
2010 Program Change	---	---	\$0
2010 Request	---	---	0
Total Change 2009-2010	---	---	(\$20,000)

DNDO does not request any funding for this activity. This is a decrease of \$20 million due to the completion of the initial three-year pilot project in New York City.

CURRENT SERVICES PROGRAM DESCRIPTION:

Securing the Cities Initiative: The objective of the Securing the Cities (STC) initiative is to prevent a rad/nuc attack on high-risk metropolitan areas by enhancing regional capabilities to detect and interdict radiological threats.

No STC funding is requested in FY10.

Significant accomplishments in FY 2008 include:

- Awarded a Cooperative Agreement to NYC to procure, integrate, deploy, and train a multi-layer, multi-pathway, multi-jurisdiction PRND and reporting architecture for the NYC region.

FY 2009 planned accomplishments include:

- Implement the means to calibrate and maintain equipment purchased through the STC initiative.
- Deploy over 4,000 Personal Radiation Detectors, 50 Radioisotope Identifiers (with communication equipment & computers), 100 backpack-based detectors, and 30 mobile detection systems. Deployment includes delivery of uniformly configured equipment and associated training on the use of the equipment.

PPA: HUMAN PORTABLE RADIATION DETECTION SYSTEMS

	Perm Pos	FTE	Amount
2008 Actual	---	---	\$8,490
2009 Enacted	---	---	\$13,000
2010 Adjustments-to-Base	---	---	(\$13,000)
2010 Current Services	---	---	\$0
2010 Program Change	---	---	\$0
2010 Request	---	---	\$0
Total Change 2009-2010	---	---	(\$13,000)

DNDO does not request any funding for this activity. This is a decrease of \$13 million from the FY 2009 appropriated level.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Human Portable Systems: DNDO has multiple Programs that provided a wide variety of law enforcement and first responders with effective human portable systems for rad/nuc detection: the Handheld program, the Human Portable Wide Area Search (HPWAS) program, and the Human Portable Tripwire (HPT) program.

Phased Deployment Implementation Plan: The Phased Deployment Implementation Plan (PDIP) is a joint effort between DNDO, the CBP Office of Intelligence and Operations Coordination (OIOC), the CBP Office of Border Patrol (OBP), and Laboratory and Scientific Services (LSS) to upgrade the effectiveness of detecting illicit radioactive material being smuggled into the United States across our borders with Canada and Mexico without passing through official POEs.

A PDIP Working Group has been formed with the user (CBP-OBP) that considered all Border Patrol sectors (including HQ in Washington, DC) and developed a prioritized system deployment schedule.

Accomplishments

Accomplishments in FY 2008 include:

- Procured initial installment of 64 handheld systems for Border Patrol agents.

FY 2009 planned accomplishments include:

- Procure and deploy approximately 169 handheld systems.

Civil Aviation Passengers, Baggage, and Aircraft Scanning: DNDO is currently developing programs that address scanning of passengers, baggage, and aircraft in International General Aviation (IGA) and international commercial aviation. Program efforts include assessing current detection capability, generating technical and operational requirements, and piloting systems and Concepts of Operations (CONOPs) to evaluate deployment concepts.

Accomplishments in the Aviation Pathways Mission Area:

Significant accomplishments in FY 2008 include:

- There was no acquisition activity in the Aviation Passengers, Baggage, and Aircraft Scanning Program in FY 2008.

FY 2009 planned accomplishments include:

- There is no planned acquisition activity in the Aviation Passengers, Baggage, and Aircraft Scanning program in FY 2009.

FY 2010 planned accomplishments:

- No further accomplishments in this area due to decreased funding.

United States Coast Guard Joint Acquisition Strategy: DNDO and the USCG have collaborated on a Joint Acquisition Strategy (JAS) to leverage resources to assist the USCG with achieving the DHS Secretary's goal that all USCG boarding/inspection teams have radiation detection equipment by the end of 2007. The JAS identifies the USCG radiation detection requirements and delineates responsibilities for developing and providing equipment to meet this requirement. In addition, the JAS provides for recapitalization of currently deployed systems, and for the acquisition of advanced detection systems. In FY 2008, DNDO supported: 1) the recapitalization of 10% of the USCG Personal Radiation Detectors (PRDs); 2) the acquisition of the additional HPRDS Communications Packages (HCPs) required to complete the USCG's requirement for wireless spectra transmission of gamma spectra for alarm adjudication; and 3) the provision of an advanced radiation detection capability for the deployable, specialized forces. Beginning in FY 2009, DNDO has budgeted funds for efforts to recapitalize existing USCG equipment at a rate of approximately 20% per year as well as to acquire, in low rates, newly developed rad/nuc detection systems. As newly developed equipment becomes available, cost benefit analyses will be conducted to determine if this next-generation radiation equipment should be used for recapitalizing instead of being replaced with older systems.

Acquisition of advanced rad/nuc detection systems (such as boat-mounted systems) will be required to enhance the radiation detection capability of the USCG, which is predominantly comprised of human portable systems. As currently envisioned, boat-mounted systems do not require the boarding of a vessel to screen it for rad/nuc devices. The Boat-Mounted Sensor

Program description in the Research, Development, and Operations (RD&O) appropriation provides further information about these advanced detection systems.

Accomplishments in the Maritime Pathways Mission Area:

Significant accomplishments in FY 2008 include:

- Procured rad/nuc detection and related equipment in accordance with the USCG JAS, to include: 360 PRDs, 134 HCPs, 6 linear radiation monitors, 18 handheld radiation monitors, and 4 high-purity germanium (HPGe) Radioisotope Identification Devices (RIIDs).

FY 2009 planned accomplishments include:

- Begin recapitalization of existing USCG equipment at an approximate rate of 20% per year
- Procure rad/nuc detection systems to satisfy USCG requirements. Current planning figures for the USCG JAS in FY 2009 includes approximately 788 PRDs, 118 RIIDs and 23 backpack systems

FY 2010 planned accomplishments:

- No further accomplishments in this area due to decreased funding.

West Coast Maritime Pilot Program: This pilot program supports the DHS Small Vessel Security Strategy specific objective to develop a robust layered defense by expanding and enhancing maritime radiological/nuclear detection capabilities for international, Federal, State, local, tribal, and private stakeholders. Consequently, the focus of this effort is to evaluate the effectiveness of a limited-phased deployment of commercially available and Government-Off-The-Shelf (GOTS) rad/nuc detection capabilities against the small vessel threat in the Puget Sound and San Diego regions and gather lessons learned to improve effectiveness of a wider deployment of maritime capabilities to other priority U.S. ports.

Accomplishments in the Maritime Pathways Mission Area:

Significant accomplishments in FY 2008 include:

- Procured PRDs, RIIDs, and backpacks for Federal, State, and local entities participating in the West Coast Maritime pilot, beginning with the Puget Sound region.

FY 2009 planned accomplishments include:

- Procure PRDs, RIIDs, and backpacks for Federal, State, and local entities participating in the West Coast Maritime pilot, in Puget Sound and San Diego.
- Acquire and deploy (on a limited basis) boat-mounted detectors for the Federal, state and local stakeholders that will develop and evaluate CONOPs, protocols and alarm adjudication.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	82	0	0	0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request is \$0 which is not a change from the FY 2009 enacted appropriation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Purchase from Govt. Accts.	\$0	\$8,000	\$0	(\$8,000)

Purchases from government accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. Funds will be used for installation, integration, and deployment activities at ports of entry and other domestic locations, as outlined in the current services section. The FY 2010 request is \$0 which is an \$8,000,000 decrease from the FY 2009 enacted appropriation.

2008	2009	2010	2009 to 2010
Actual	Enacted	Request	Change

Equipment \$0 \$12,000 \$0 (\$12,000)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. Equipment purchased will be deployed to ports of entry and other domestic locations, as outlined in the current services section. The FY 2010 request is \$0 which is a decrease of \$12,000,000.

2008	2009	2010	2009 to 2010
Actual	Enacted	Request	Change
\$29,500	\$0	\$0	\$0

Grants/Subsidies/Contributions

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2010 request is \$0 which is not a change from the enacted FY 2009 appropriation.

PPA Mission Statement

The HPRDS program is structured to provide a wide variety of law enforcement and first-responder services with the capability to detect and identify terrorist nuclear explosive devices or radiation dispersal devices (RDDs). HPRDS provides key radiation detection, threat source identification, and notification capabilities to aid law enforcement officers in mitigating terrorist nuclear threats in both POE and non-POE locations. HPRDS fills existing shortfalls through either commercial-off-the-shelf (COTS) solutions tailored to existing concepts of operations (CONOPs) and operating environments or, in instance where COTS systems are demonstrated to be inadequate, the development of cutting edge technology, which are used as primary detection tools by Customs officers, Border Patrol agents, and USCG personnel. State and local law enforcement agencies and first responders use this equipment for queued search and secondary identification operations.

Summary Justification and Explanation of Changes

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Advisory and Assistance Services	\$156		\$0	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request is \$0 which is not a change from the FY 2009 enacted appropriation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Research and Development	\$8,334		\$0	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2010 request is \$0 which is not a change from the FY 2009 enacted appropriation.

	2008 Actual	2009 Enacted	2010 Request	2009 to 2010 Change
Equipment	\$0	\$13,000	\$0	(\$13,000)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. Equipment purchased will be deployed to ports of entry and other domestic locations, as outlined in the current services section. The FY 2010 request is \$0 a decrease of \$13,000,000 from the FY 2009 enacted appropriation.

FY 2010 PRESIDENT’S BUDGET REQUEST STRATEGIC CONTEXT

Domestic Nuclear Detection Office (DNDO)

TABLE OF CONTENTS

I. STRATEGIC CONTEXT FOR FY 2010 BUDGET	
A. Mission and Description of Component.....	DNDO-1
B. Major Activities and Key Strategic Goals.....	DNDO-1
C. Resources Requested and Performance Impact.....	DNDO-2
D. Performance Highlights, Resources, and Alignment to Strategic Goals.....	DNDO-2
E. Digest Tables by FYHSP Programs	DNDO-4

A. Mission and Description of Component

The Domestic Nuclear Detection Office (DNDO) was chartered on April 15, 2005, through National Security Presidential Directive 43/Homeland Security Presidential Directive 14 (NSPD-43/HSPD-14). DNDO's primary focus is on the radiological/nuclear (rad/nuc) threat posed by non-state actors. DNDO is the lead Federal agency to develop a Global Nuclear Detection Architecture (GNDA) that will contribute to a robust, layered rad/nuc defense of the United States; enhance and coordinate rad/nuc detection efforts across Federal agencies, as well as state and local governments; coordinate and conduct rad/nuc detection technology research and development (R&D) programs; lead the effort to develop advanced nuclear forensics capabilities for pre-detonation materials and coordinating the USG National Technical Nuclear Forensics (NTNF) capability; and build the core technical expertise and conduct the R&D needed to support rad/nuc response and recovery efforts.

Key to the success of the Department of Homeland Security is improving the Department's ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, the Department has integrated all nuclear detection research, development, test, evaluation, acquisition, and operational support into a single office. To this end, the Domestic Nuclear Detection Office is developing the global nuclear detection architecture and supporting the deployment of the domestic detection system to detect and report attempts to import or transport a nuclear device, or fissile or radiological material intended for illicit use.

The DNDO has the primary responsibility within the Department of Homeland Security to integrate efforts across the Department in combating the threat of nuclear attack. The DNDO is the lead Departmental representative for all interagency activities to coordinate the U.S. Government (USG) nuclear defense posture. To meet this diverse mission, the DNDO is jointly-staffed with representatives from the Department of Defense, Department of Energy, Department of Justice's Federal Bureau of Investigation, the State Department, and the Nuclear Regulatory Commission, as well as DHS components, including the Science and Technology Directorate, U.S. Customs and Border Protection, the Transportation Security Administration, and the U.S. Coast Guard. DNDO utilizes the combined interagency resources to improve the nuclear detection capability across the mission as support in the GNDA.

DNDO's principle offices are in the Washington, D.C. area with program functions being performed around the Nation at National laboratories and other Federal facilities.

B. Major Activities and Key Strategic Goals

DNDO's primary focus is on activities such as developing the GNDA, enhancing deterrence, supporting source security efforts, enabling detection of rad/nuc material, testing and evaluating rad/nuc detection systems, conducting R&D to improve detection capabilities, and determining the source of nuclear material through nuclear forensics. Specifically, DNDO funds, conducts, supports, assists, and encourages R&D that has a nexus to rad/nuc detection. DNDO supports applied research and focuses on cutting-edge, next generation technology that is not currently attracting commercial investment. Further, DNDO tests and evaluates these new technologies as well as commercial-off-the-shelf detection systems. DNDO also provides training, exercises, situational awareness, and other operational support activities to the user communities.

The goals of DNDO are:

- Goal 1: Lead USG efforts to further develop an enhanced GNDA through a layered defense-in-depth approach to the detection and interdiction of illicit rad/nuc materials.

- Goal 2: Strengthen the GNDA beyond U.S. borders through strategic collaboration with international partners.
- Goal 3: Strengthen the Nation's ability to detect and report rad/nuc threats at the border in conjunction with Federal, state, and local partners.
- Goal 4: Strengthen interior preventive detection and reporting capabilities to reduce the risk to large cities and critical infrastructure in coordination with state and local partners.
- Goal 5: Strengthen NTNF capabilities to enable deterrence and attribution of rad/nuc threats and attacks.
- Goal 6: Conduct and support a robust R&D program to develop solutions for the GNDA.
- Goal 7: Strengthen the foundation and infrastructure of the GNDA through continuously improving operational support and situational awareness.
- Goal 8: Continuously improve DNDO personnel, processes, and Enterprise Architecture, while optimizing the organizational structure.

In FY 2010, the President's Budget Request includes \$366 million for the activities of DNDO. The request provides for \$100 million and \$110.537 million for Systems Development and Transformational Research and Development, respectively. These two programs conduct all short- and long-term radiation detection R&D within the Department, including the Advanced Spectroscopic Portal program, the Cargo Advanced Automated Radiography Program, and Advanced Technology Demonstrations in Intelligent Personal Radiation Locators. These activities address the problems of detecting shielded and low emissions rad/nuc materials. To ensure that all technologies developed through these activities are fully characterized prior to deployment, the President's Budget Request includes \$32.4 million to develop and maintain a robust assessment capability, including developmental and operational test and evaluation, pilots, red teaming, and net assessments. As part of this effort, DNDO will conduct high-fidelity test campaigns in FY 2010 to assess the effectiveness of currently available handheld, mobile, and vehicle-based detection systems.

C. Resources Requested and Performance Impact

Major Changes within the Base level: The President's Budget Request of \$366 million is a decrease of \$148 million from FY 2009 enacted base level.

The Budget Request contains an increase over the FY 2009 enacted budget of \$7.2 million for Transformational Research and Development and \$2.8 million for NTNF for a total of \$10 million to base level. The Budget does not request additional funding for acquisition of equipment for FY 2010 that reflects a decrease of \$148 million to the base level. Additionally no funding is being requested for the Securing the Cities Initiative, having concluded the three year pilot in the New York City region.

Remaining budget will maintain the GNDA and provide for the continuation of DNDO's support of the Department's strategic mission and goals by serving as the primary organization within the Department to integrate efforts across DHS in combating the threat of nuclear attack, including all research, development, test, and evaluation of nuclear detection systems.

D. Performance Highlights, Resources, and Alignment to Strategic Goals

For each major program, the performance goal, alignment to DHS goals and objectives, total dollars and FTE, and main performance measure/s are shown below.

Performance Budget Highlights by Program

DNDO
2010 Congressional

Program: Domestic Nuclear Detection						
Performance Goal: Improve the Nations capability to detect and report unauthorized attempts to import, possess, store, develop, or transport radiological or nuclear material for use against the Nation.						
DHS strategic objectives supported and % allocation of activities: 2.1 - 100%						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
\$ Thousands	None	\$317,392	\$615,968	\$484,750	\$514,191	\$366,136
FTE	None	14	112	121	130	130

Performance Report Measures

Measure: Number of Advanced Technology Demonstrations transitioned to development or deployment in a fiscal year						
Description of Measure: As innovative new concepts for Domestic Nuclear Detection are identified and developed, a key step in the process is to test the new concept, device, or system in a field environment even if performance shortfalls are identified. The culmination of such developmental testing is the Advanced Technology Demonstration (ATD). This measure gauges the number of ATDs that result in a transition of radiation detection technology to full scale engineering development or deployment. The fact that the technology has matured to a point where a device/system can be evaluated in an ATD environment is a strong indicator of progress toward the long - term goal of providing enhanced radiation detection capabilities.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	0	1	1
Actual:	None	None	None	0	N/A	N/A

Measure: Number of Graduate Fellowship and academic research awards in nuclear forensics - related specialties.						
Description of Measure: This measure gauges the number of awards made under the Domestic Nuclear Detection program for Graduate Fellowship awards in nuclear forensics - related specialties, and academic research awards in nuclear detection and forensics. These awards ensure that appropriately trained technical personnel will continue to be available, maintaining and enhancing the Nation's "nuclear expertise pipeline" and increasing the deterrent effect of a robust nuclear defense capability.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	4	15	17
Actual:	None	None	None	13	N/A	N/A

Measure: Number of States and Urban Areas with an effective Preventive Radiological/Nuclear Detection program.						
Description of Measure: This measure identifies the number of States and Urban Area Security Initiative (UASI) Urban Areas having an effective Preventive Radiological/Nuclear Detection (PRND) program. An effective PRND program is considered in place if the State or the UASI Urban Area has included current contact information within the jurisdiction, that its radiological/nuclear detection protocols are in accordance with national guidance and are tied into the States Radiation Control Program notification protocols, and the State or UASI Urban Area has provided the locations of their existing radiation detection systems/hardware.						

Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	8	10	16
Actual:	None	None	None	8	N/A	N/A

Measure: Percent of cargo, by volume, that passes through fixed radiation portal monitors at land and sea ports of entry

Description of Measure: The Domestic Nuclear Detection Office (DNDO) is responsible for acquiring all radiation detection equipment to be deployed to the Nation's ports of entry. Radiation portal monitors are one of the principle pieces of equipment used to meet this requirement. While Customs and Border Patrol (CBP) maintains the responsibility for operating the systems, this measure reflects the capability that DNDO provides to CBP in support of this mission.

Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	90%	95%	98%	98%
Actual:	None	85%	94%	97%	N/A	N/A

Measure: Percent of cargo, by weight, that passes through radiation detection systems upon entering the Nation.

Description of Measure: This measure gauges the capacity of the radiation detection equipment deployed to the Nation's sea ports of entry, land border crossing ports of entry, international rail ports of entry, and international cargo aviation airports within the United States. It is expressed in terms of the percent (by weight) of the total cargo entering the Nation through all of these pathways that is scanned by radiation detection systems.

Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	None	89.4%	91.4%	91.4%
Actual:	None	None	None	90.3%	N/A	N/A

Additional Measures

Measure: DNDO cost per person trained in radiological and nuclear preventive detection skills.

Description of Measure: Domestic Nuclear Detection Office (DNDO) is responsible for providing radiological and nuclear detection training to state and local law enforcement personnel along with first responders. This measure is intended to track the DNDO cost for training development and delivery per person trained in a given fiscal year.

Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	\$7,500	\$2,500	\$1,800	\$1,700	\$1,600
Actual:	None	None	\$1,260	\$1,130	N/A	N/A

Measure: Number of individual Urban Area Security Designs completed for the Securing the Cities Program.

Description of Measure: This measure is one of several for informing the DNDO leadership of the reduction in risk to the interior layer of the global nuclear detection architecture. An Urban Area Security Design will consist of a strategy for encountering and identifying illicit radioactive or nuclear materials in or near high - risk urban areas or regions. The design will provide an acquisition plan with types, quantities, and placements of radiation/nuclear materials detectors, and describe interfaces to other Federal systems that collectively will enhance the security of the interior layer against a terrorist attack.

Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	None	0	0	1	0
Actual:	None	None	0	0	N/A	N/A

Measure: Number of personnel trained in radiological and nuclear preventive detection skills.						
Description of Measure: Domestic Nuclear Detection Office (DNDO) is responsible for providing radiological and nuclear detection training to state and local law enforcement personnel along with first responders. This measure is intended to specify the number of people who were trained in the DNDO sponsored preventive radiological and nuclear detection training program in a given fiscal year.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	300	1,200	1,700	3,000	3,500
Actual:	None	None	2041	5148	N/A	N/A

Measure: Number of tests conducted annually to assess system capability.						
Description of Measure: Each year the Test and Evaluation provides the infrastructure and institutional experience necessary to conduct independent evaluations of developed technologies. The evaluations serve to provide program managers with the information to evaluate prototype systems prior to technology transitions or acquisition/deployment decisions.						
Fiscal Year:	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010
Target:	None	2	2	2	2	2
Actual:	None	None	3	4	N/A	N/A

BUDGET REQUEST AND SUPPORTING INFORMATION

Working Capital Fund

I. Working Capital Fund Overview

A. Mission Statement for the Working Capital Fund (WCF):

To provide cost-effective support services throughout DHS, the WCF provides a mechanism for shared service costs to be distributed and recouped, and facilitates the delivery and oversight of shared services.

The WCF supports selected services, activities, and programs that benefit more than one DHS organizational component. Furthermore, the WCF supports the funding for government-wide initiatives as well as DHS crosscutting initiatives approved by OMB and Congress. The goal of the Under Secretary for Management is to maintain and operate a fund that promotes economy, efficiency, and accountability and to apply best practices from the public and private sectors for improving organizational performance, operational efficiencies, and ensure full cost recovery of goods and services for selected DHS agency-wide programs, activities, and services.

B. Budget Activities:

The key WCF activities are organized under the five activity categories listed below:

Fee for Service Activity

DHS WCF activity managers provide or coordinate delivery of a specific service or benefit to DHS components. The benefit/cost for providing the WCF activity is tangible and is directly linked to a component's use of services or products. These activities may include subscription-type services such as providing access to electronic services, for example the Library of Congress' FEDLINK. WCF activities earn revenue from the provision of services, and have characteristics typical of a business enterprise. The costs for operating the "business" are reimbursed by billing customers for the provision of goods and services, through rates that are pre-approved by the CFO and reviewed by component customers. Each fee for service activity is expected to recover its operational costs, usually at a much lower cost as the components benefit from economies of scale. Examples include: IT services, human resource services, procurement operations, and financial management services.

Tri-Bureau Service Activity

The WCF Tri-Bureau Service activity provides IT support such as data center services provided by the Department of Justice (DOJ) to WCF customers.

Government-wide Service Activity

Government-wide activities are Administration sponsored initiatives that are managed by a designated Federal department, to improve overall government performance. Other departments are assessed for the cost of supporting the activity. The activities should also provide a direct benefit to participating components.

DHS Crosscutting Activity

The DHS crosscutting activities are department-wide programs managed by a single office that yield some benefit, such as Strategic Sourcing, to all DHS components. The actual costs of the programs are recouped by redistributing the costs to the components based on their share of the discretionary budget, staffing or some other fair and equitable pro-rata basis.

WCF Management Activity

The WCF Management Activity includes funding for the staff that develops WCF policy and procedures, formulates and executes the WCF budget and negotiates issues between activity managers and customers.

C. Budget Request Summary:

The DHS WCF operating requirements for FY 2010 are estimated to be \$766,936,000 in reimbursable authority and 344 FTE. This is an increase of \$243,564,000 and 2 FTE over FY 2009 Enacted.

In FY 2010, the WCF will continue all services and activities from FY 2009, with the exception of the Tri-Bureau Human Resources (HR) activity. The FY 2010 increase is attributable to several program changes, including:

- an increase of \$253,294,000 for approved Fee for Services Activities,
- an increase of \$200,000,000 for the new Data Center Consolidation activity;
- an increase of \$2,709,000 million for DHS Cross-Cutting Activities; and
- an offset of \$23,287,000 from the Tri-Bureau Service Activities.

- **Fee for Service Activity; Program Changes: \$253.3 million over FY 2009 Enacted**
 - GSA Rent; \$8.3 million – The FY 2010 budget increase includes GSA occupancy agreement updates, Federal Protective Service (FPS) rate increases, and rent for additional space that will be required in FY 2010.
 - Financial Statement Audit; \$669,000 – The FY 2010 amount includes an increase in contract costs and OIG travel oversight cost for audit services.
 - Finance and Accounting Shared Services; \$3.1 million – The additional resources requested in FY 2010 reflect higher than anticipated costs being incurred by the service provider.
 - National Finance Center (NFC) Payroll and Reporting; \$3.5 million - The FY 2010 request includes O&M costs for NFC payroll and EmpowHR personnel systems. The funding increase will support deployment of EmpowHR to additional DHS components such as the Federal Emergency Management Agency (FEMA), Immigration and Customs Enforcement (ICE), and Citizenship and Immigration Services (CIS) in FY 2010.
 - Headquarters (HQ) Human Capital Services; \$5.3 million - The HQ Service center will continue to provide the full range of personnel operational support to DHS HQ components (excluding the Office of the Inspector General) and eventually expand that service through functional integration to other DHS components. The increase of \$5.3 million is in line with the reprogramming increase that occurred in FY 2008.
 - Internal Control Audit; \$2.7 million – The additional funding for FY 2010 reflects additional audit procedures anticipated due to implementation of DHS corrective actions.
 - Flexible Spending Plan; \$0.5 million - The FY 2010 request reflects the funding required to support the proportional increase in administrative fees associated with increased employee participation in flexible spending account programs.
 - National Capital Region (NCR) IT Services; \$5.2 million - The increase in funding will cover the purchase and installation of additional network hardware and software to augment network capabilities and increase network utility for users.
 - Microsoft Enterprise Software Licenses; \$24.4 million - The FY 2010 increase for this activity is significantly higher than previous years due to the expiration of the current Microsoft contract that uses 2003 prices. The increase to many components' assessments are offset by the fact that they are currently paying for these services outside of the WCF, and for FY 2010 these charges are being brought into the fund.
 - Data Center Consolidation; \$200.0 million - The DHS Office of the Chief Information Officer (OCIO) has established two enterprise DHS data centers to provide large-scale, physically secure, scalable, mission critical data center computing facilities and services for DHS. Operation as a WCF activity will allow a dramatic reduction in the overhead required to manage data center consolidation, and will enable greater transparency and more effective management of department-wide data center migration and consolidation efforts.

- Program Offsets, reduction of \$325,000 in Fee for Service Activities.
 - Reduction of \$11,000 for the Bankcard Program
 - Reduction of \$107,000 for Fedlink (Consolidated Subscription)
 - Reduction of \$166,000 for Procurement Operations
 - Reduction of \$41,000 for the DHS Executive Leadership Development)

- **Tri-Bureau Service Activity; Program Changes: \$(23.3) million from FY 2009 Enacted**
 - Tri-Bureau HR Services; \$(23.3) million - In FY 2010, a program change is requested to remove the HR Services activity from the Working Capital Fund at the request of both the service provider and customers.

- **Government-wide Mandated Service Activity; Program Changes: (\$98,000) decrease and 2 additional FTE from FY 2009 Enacted**
 - USAJOBS (Recruitment One-Stop); \$67,000 – The increase includes increases for maintenance of USAJOBS, which is to operate on a fully reimbursable basis.
 - e-Training; \$127,000 – The increase in FY 2010 accounts for an expected stabilization of licensing support costs and an increase in dependency on centralized custom courseware development being managed by the ADL PMF. Two additional FTE are requested to support this effort in FY 2010.
 - IT Infrastructure Line of Business (IT LoB); \$157,000 - This funding will help define DHS Enterprise Architecture technical targets and continue network and data center consolidation.
 - IAE Loans and Grants; \$192,000 – The increase in funds will allow the activity to facilitate the tracking and management of loans and grants in the FFATA portal by assigning them a unique DUNS number.
 - Financial Management Line of Business; \$140,000 – The increase in funding is to support financial management system standardization and consolidation efforts.
 - Program Offsets; \$(781,000) in Government-wide Mandated Activities are due to reductions by OMB in the e-government amounts:
 - Decrease of \$145,000 to Interagency Council Funding
 - Decrease of \$636,000 to the E-Gov Integrated Acquisition Environment

- **DHS Crosscutting Activity; Program Changes: \$2.7 million over FY 2009 Enacted**
 - Chief Procurement Office Shared Reporting; \$442,000 – The increase in FY 2010 is required to support enterprise activities resulting from expanded workload and requirements of a growing acquisition workforce.
 - Capital Planning and Investment Control; \$2.3 million – The increase in FY 2010 is to fund

improvements to DHS's integrated program management and reporting capability, the System for Management Analysis and Resource Tracking (SMART).

- Program Offsets; \$(27,000) in DHS Crosscutting Activities:
 - Decrease of \$27,000 to Strategic Sourcing

- **WCF Management Activity; Program Changes: \$36,000 over FY 2009 Enacted**

The Working Capital Fund (WCF) Management Activity requests \$36,000 to cover pay and program base adjustment over FY 2009. This will enable the WCF to ensure compliance with Congressional guidance and provide oversight to the increased number of WCF activities. The WCF will continue to improve cost methodologies in determining customer assessments for products and services received.

Total Change 2009-2010	261,973

Working Capital Fund requests \$673.5 million for Fee for Service activities. This is an increase of \$262.0 million over FY 2009 Enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

Fee For Service Activity

GSA Rent – Fee for Service Activity

Description of Service: GSA charges rent to over 100 Federal agencies, which is deposited into the Federal Buildings Fund and used to operate the government's buildings and pay rent to private sector for lease space. GSA provides workspace and related services for over 100 Federal client agencies serving more than one million workers through the Public Buildings Service (PBS). Whenever possible, client agencies are located in existing Federal-owned space. If suitable space in the Federal inventory is not available, PBS acquires leased space in privately owned buildings.

GSA also provides related real estate services including the operation and maintenance of buildings and out-leasing programs. GSA's Computer Integrated Facility Management program uses cutting-edge technology to look at a building's life cycle. Real estate services provided to clients appear in Federal agencies' monthly electronic rent bills. GSA has simplified these bills so agencies have a clearer understanding of the costs they are charged for their workspace and services.

Cost Allocation Methodology: GSA rents costs are allocated based on the amount of actual occupied space for each organizational element which is divided by the total occupied in square footage in the WCF-managed portfolio. This percentage is then multiplied by the projected annual bill to determine the Component's annual rent assessment. Occupied square footage is measured using floor plate drawings in CAD.

Full Time Equivalent (FTE): This activity requires 5 FTEs.

FEDLINK (Library of Congress) – Fee for Service Activity

Description of Service: FEDLINK is an “Ask a Librarian” initiative which is a cooperative Federal library project implemented and funded by the DHS Management Directorate. The project expands library services to workforce desktops using interactive chat, email or phone. Librarians from 25 Federal agencies (including DHS staff librarians) answer questions, search databases and send materials directly to DHS staff, detailees, and contractors.

Cost Allocation Methodology: The cost allocation methodology is the unit contract costs multiplied by the number of users each component requested.

Full Time Equivalent (FTE): This activity requires 4 FTEs.

Financial Management (Finance & Accounting Shared Services) – Fee for Service Activity

Description of Service: The Office of the DHS Chief Financial Officer (OCFO) gives authorization for financial systems in the Department of Homeland Security and sponsors, sets policy, and manages the development, implementation, operation and maintenance of the departmental financial management systems and related business processes. The OCFO has determined that it is in the best interest of the Department to obtain selected financial management services from the Office of Financial Management, U.S. Immigration and Customs Enforcement (ICE OFM) and Federal Law Enforcement Training Center (FLETC), on a reimbursable basis. ICE OFM and FLETC provide financial management services in support of the following components:

- ICE OFM
 - Departmental Operations, including the immediate offices of the Secretary, the Directorate for Management, etc.
 - Office of Health Affairs
 - Directorate for Science and Technology
 - National Protection and Programs Directorate
 - U.S. Citizenship and Immigration Services
- FLETC OFM
 - Directorate for Operations Coordination and Intelligence and Analysis

ICE OFM formulates and disseminates financial management policies, procedures, standards and maintains overarching internal controls in conjunction with the DHS OCFO. The DHS OCFO and ICE OFM assist DHS HQ components in the implementation, if needed. The activities with respect to this function include:

- Oversee the development and maintenance of OFM policies, standards, and procedures for serviced groups to ensure compliance, uniformity, and consistency with Federal Financial and Accounting regulations, guidelines, rules, and standards.
- Create and submit updates to be posted on the OFM intranet website.
- Ensure necessary continuation of operations plans are prepared, viable, and in place in the event of required use.
- Monitor, adjust, and execute shared services agreements including the development/refinement of cost methodologies.

- Channel customer service requirements to service owners through formalized meetings, memorandums, issues papers, and other communication mechanisms.
- Establish points-of-contacts to support customer liaison and service requirements, and participate in customer meetings.
- Conduct periodic reviews of internal business practices to identify means in order to improve operations in terms of effectiveness and efficiency.
- Create new Federal Financial Management System transaction codes and process changes to the general ledger.
- Manage travel card services by processing new travel card applications; establishing hierarchies, maintaining user profiles, handling disputes, increasing limits, replacing cards, and contacting delinquent card holders.

Cost Allocation Methodology: The cost allocation methodology for this activity is based on the historical cost of providing seven categories of financial support to each participating component. The seven categories of financial support services include the following: (1) financial reports, (2) obligations and payment processing, (3) system usage, (4) receipts, (5) payroll, (6) overhead, and (7) travel and cash management services.

Full Time Equivalent (FTE): This activity requires no FTE.

Financial Statement Audit – Fee for Service Activity

Description of Service: The DHS Inspector General awards a contract to an independent Certified Public Accounting firm to perform a financial statement audit functions. The costs include travel and incidental costs associated with the performance of the audit as permitted by the contract maintained by the Office of the Inspector General (OIG) as the Contracting Officer's Technical Representative (COTR). Award will be made under a GSA schedule contract.

The Financial Statement Auditor is selected through contracting procedures by the OIG (with the Bureau of Public Debt (BPD) acting as the procurement office) and must stay independent from the DHS components that are being audited. The auditor selected commences work immediately and entrance conferences are held within a short time after award of the financial statement audit contract.

The Office of the Chief Financial Officer (OCFO) coordinates and prepares the DHS consolidated financial statements and in this role acts as primary liaison for the auditors. All DHS departmental CFOs coordinate with the Director of Financial Management in the preparation of financial statements and completion of the audit.

The Office of the Inspector General became the COTR for the Financial Statement Audit contract in FY 2005. The WCF funds will be used to support the departmental financial statement audits with the OIG having the following responsibilities:

- Contracting with an independent public accounting firm to perform the FY 2008 DHS financial statement audit.
- Providing oversight of the contract auditor

- Providing estimated cost information that allows the OCFO to properly budget for audit costs
- Notify the OCFO of any potential cost overruns and the related reasons
- Review and approve invoices for payment. The OIG charges no fee to the WCF for these services.

Cost Allocation Methodology: The cost allocation methodology is the sum of the estimated auditor's billable hours multiplied by the hourly rate plus travel and incidental costs.

Full Time Equivalent (FTE): This activity requires no FTE.

Internal Control Audit - Fee for Service Activity

Description of Service: The contract includes time and materials for internal control audit services with the auditor providing the services and billing for hours worked at billing rates commensurate with the audit position being billed. The costs include travel and incidental costs associated with the performance of the audit as permitted by the contract maintained by the OIG as the COTR. Award will be made under a GSA schedule contract.

The Internal Control Auditor is selected through contracting procedures by the OIG (with the Bureau of Public Debt (BPD) acting as the procurement office) and must stay independent from the DHS components that are being audited. The auditor selected commences work immediately and entrance conferences are held within a short time after award of the financial statement audit contract.

The Office of the Chief Financial Officer (OCFO) coordinates the assessment process to support management's assertion and in this role acts as primary liaison for the auditors. All DHS departmental CFOs coordinate with the Director of Financial Management in the preparation of and completion of the internal audit.

Cost Allocation Methodology: The cost allocation methodology is the estimated auditor's billable hours per component multiplied by the hourly rate plus travel and incidental costs.

Full Time Equivalent (FTE): This activity requires no FTE.

Financial Management – Fee for Service Activity

Description of Service: The Departmental Operations Branch (DOB) within the Budget Division is a line of business under WCF that provides financial management and budget support to the Office of the Secretary and Executive Management, Under Secretary for Management, Office of the Chief Financial Officer, Office of the Chief Information Officer, and the Office of Health Affairs. It is estimated that DOB processes approximately 100 to 150 procurement requests per month. Procurement requests may vary in complexity and dollar value, ranging from \$25 to over \$1 million for one request.

This funding provides the personnel and materials to perform the following budget execution activities:

- Processing of procurement requests
- Commitment and obligation of funds
- Processing of travel authorizations and vouchers
- Reconciling a centrally billed travel account
- Set up and coordination of purchase cards
- Periodic purchase card reporting and review
- Invoice processing and certification
- Reconciliation of accounting records and financial data in FFMS
- Development of status of funds reporting
- Financial reporting as required or needed for special requests
- Periodic review of payroll data to ensure accurate reporting

Cost Allocation Methodology: The cost allocation methodology is a pro-rata share based on the percent of each office within Departmental Operations' adjusted total budget divided by the total Departmental Operations' adjusted total budget multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires 13 FTE.

Bankcard Program - Fee for Service Activity

Description of Service: DHS has selected the U. S. Coast Guard (USCG) as the servicing agent to provide for a centralized invoicing and payment system for components within DHS. The Finance Center (FINCEN) has developed and implemented a system that supports the receipt of daily invoices for all of DHS from US Bank. This system assures payment of those invoices within one business day of receipt, and provides transmission of an electronic file containing transaction data to each component's accounting system.

Cost Allocation Methodology: The cost allocation methodology for this activity is based on the percent of each component's number of Bankcard transactions processed divided by the total number of Bankcard transactions processed for all participating components multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

Treasury Information Executive Repository (TIER) – Fee for Service Activity

Description of Service: The DHS OCFO is responsible for creating the Department-wide financial statements. As part of this process, two software packages are used to process the work. These two products are the Treasury Information Executive Repository (TIER) and CFO Vision Software. The DHS use of TIER and CFO Vision has benefited the entire Department by the cost and resource savings involved in being able to produce financial statements in a timely manner. This has been a benefit especially with the accelerated timeframes for producing the Annual Financial Report.

Cost Allocation Methodology: The cost allocation methodology for this activity is average cost equally distributed to the organization element.

Full Time Equivalent (FTE): This activity requires no FTE.

National Finance Center (NFC) Payroll/Services and Reporting – Fee for Service Activity

Description of Service: Department of Agriculture/National Finance Center (NFC) provides Payroll/Personnel services utilizing their legacy mainframe systems (payroll) and EmpowHR PeopleSoft application (personnel). In addition, NFC provides Payroll/Personnel policy support and benefits reconciliation, tax reporting, and payroll problem resolution. All DHS Components will migrate to the enterprise DHS personnel system, EmpowHR, by FY 2010.

Cost Allocation Methodology: Allocation methodology for the components assumes the total cost times the transaction % - which is the components' percentage of the population serviced.

Full Time Equivalent (FTE): This activity requires no FTE.

HQ Human Capital (HC) Services -Fee for Service Activity

Description of Service: The HC Services team provides coordination and oversight support for outsourced services supporting HQ Human Capital operational needs. The team ensures that the personnel processes for HQ's managers/employees and service providers (excluding the OIG), runs efficiently and effectively. Examples of services provided include: Staffing and Recruitment; Position Classification/Position Management; Performance Management; Payroll and Personnel Action Processing; Employee and Labor Relations Support; Retirements and Benefits Support; Time and Attendance Support.

The HC Services Team provides coordinated and prioritized services to all DHS customers; ensures timely and effective recruitment of staff; effectively manages the "on-board" staffing process (which includes security clearances and collaboration with the Personnel Security Office), quality personnel staffing services; and, efficient and effective facilitation of staff exiting out of DHS HQ.

Cost Allocation Methodology: The cost allocation methodology is a pro-rata share based on the percent of each component's number of FTE divided by the total number of participating component's FTE multiplied by total estimated cost of the activity.

Full Time Equivalent: This activity requires 4 FTEs.

Human Capital Business Systems (HCBS) – Fee for Service Activity

Description of Service: The mission of the HCBS is to design, develop, acquire, implement, maintain and support DHS enterprise-wide HC business systems. The system capabilities meet the requirements specified by the user-community and provide services in a timely, user-sensitive and cost-effective manner.

As an example of the HCBS enterprise approach, two enterprise systems have been acquired; a PeopleSoft HRMS and a web based Time and Attendance (T&A) system. Both systems are

hosted at the NFC which already supports the DHS payroll system.¹ This yields a DHS leveraged cost effective approach where three integrated systems are supported by one service provider. The HCBS unit managed the acquisition process utilizing component participation through requirements gathering and vendor negotiations. In the past, several individual government entities purchased these systems “on their own”, but none have been able to match the competitive pricing that DHS secured via the HCBS enterprise approach.

HCBS continues its enterprise acquisition strategies on behalf of all of DHS components, avoiding considerable duplicative costs if DHS components proceed independently. In addition to the T&A system mentioned above, this includes additional enterprise HR services and applications; web-based Performance Management (or “e-Performance”); Employee/Labor Relations Case tracking; the Reward system for market-based pay analysis; Pay Tools/Utilities to assist with new pay cluster and band determinations; and an e-Classification/e-Recruitment enterprise system. In each case the components are supported by the HCBS unit in a collaborative and leveraged approach.

Cost Allocation Methodology: DHS population serviced assumes billing based on the "average number of employees paid" - which is consistent with NFC billing. HCBS is only charging O&M costs to the WCF. Full IT costs, including design/implementation, software purchases, etc. are offset with appropriated HRIT funds.

It is important to note that for HRIT Systems; only those components that are benefiting from specific systems are being charged in the year that they benefit.

Full Time Equivalent: This activity requires 24 FTE.

Flexible Spending Accounts (FSA) Administrative Costs – Fee for Service Activity

Description of Service: FSAs are employee-funded accounts that used by the employee account holder to pay for medical expenses that are tax deductible, but not reimbursed by any other source, as well as eligible dependent care costs. Contributions to the accounts come from an employee's pre-taxed salary; the government does not make a contribution. There is a fee that is paid to the administrator of these accounts. The law now requires that agencies pay these fees on behalf of their employees.

The costs for this program are charged back based on actual invoices received in October and March of each calendar year. The March bill assesses a fee for employees of record as of January 1 of the calendar year. The October bill makes an adjustment for any new employees who have entered the program since January 1. The Human Capital Business Office will manage the invoicing process with the FSA provider and charge the direct cost of the fees to the component based upon actual invoices received from the vendor.

Generally, the Department saves enough money in reduced payroll tax to cover administrative fees. We believe administering the costs of these services through the WCF provides for greater

¹ O&M costs for the PeopleSoft HRMS were included in the NFC Payroll/Reporting section and are charged only to TSA, Coast Guard, HQ and FLETC in FY 2009. It has not yet been determined which additional Component's will participate in and fund this NFC modernized system.

efficiencies through centralized management.

Cost Allocation Methodology: The allocation methodology for the component assumes the total cost times the transaction percentage - which is the component's percentage of the population serviced (FTEs).

Full Time Equivalent (FTE): This activity requires no FTE.

DHS Executive Leadership Development – Fee for Service Activity

Description of Service: A well executed Executive Leadership Program is a key element in sustaining a “One DHS” culture. For FY 2010, at a minimum the Executive Leadership Curriculum will consist of two DHS-wide leadership development activities: the Secretary's Senior Leadership Conference and the Senior Executive Service Candidate Development Program (SES-CDP).

The Secretary's Senior Leadership Conference is important as change management starts with top leadership. The purpose of this conference is to:

- Provide an opportunity for the Secretary to meet with DHS executives and for those executives to interact with each other;
- Broaden the perspective of DHS leadership by actively creating a forum for in-depth dialogue and discussion for cross-cutting Departmental issues;
- Allow executives to learn about both key DHS-wide and component-specific strategic and tactical initiatives for the coming year, which is predicated on strategic linkage of resources, performance and results;
- Provide perspective from the White House, Congress, and others on issues important to DHS.

The DHS Senior Executive Service Candidate Development Program serves as a corner stone for sustaining a corporate leadership identity as directed in the DHS Strategic Plan; contributes to meeting our succession planning goals; and creates a high-quality, SES leadership cadre. Most cabinet level agencies have a corporate level succession planning program.

This centralized program complements and enhances the strengths of existing component Leadership development initiatives across the Department and further facilitates succession planning opportunities. It provides the opportunity for participants to take advantage of developmental/rotational opportunities in other DHS components, thereby increasing participant's “corporate” DHS knowledge and experience. In addition, components benefit from these rotational assignments by having a senior staff person working with them on real issues and offering different perspectives and/or business experiences.

Cost Allocation Methodology: The costs are allocated based on the percentage of SES slots a component has relative to the total DHS SES (or SES equivalent) population excluding military. The allocation methodology for the components is the total cost divided by the total SES/ES population serviced and then multiplied by the Component percentage of the SES/ES

population.

Full Time Equivalent: This activity requires 2 FTE.

HQ Executive Leadership Development/General Workforce Training – Fee for Service Activity

Description of Service: The HQ ELDP provides executive level training to close potential competency gaps in our DHS Headquarters leadership. Programs to support Executive Leadership are provided through the following programs: The Treasury Executive Institute (TEI); the SES Forum; and, the Individual Executive Development Training and General HQ Workforce training. In addition to TEI and the SES forum, training opportunities could include attending courses in the Management Development Center (Shepardstown, WVA) or the Federal Executive Institute.

Cost Allocation Methodology: This allocation excludes the OIG, per request. The allocation methodology for the components is the total cost divided by the total population serviced and then multiplied by the component's percentage of the population.

Full Time Equivalent (FTE): This activity requires no FTE.

HQ Employee Assistance Program (EAP) — Fee for Service Activity

Description of Service: The EAP program includes short term counseling for employees and family members, critical incident stress debriefing, peer support programs, short term counseling, management consultations, information and referral to community resources for mental health providers, mental health education training, and peer trauma team support. EAP assistance enables employees to achieve and maintain balance in their lives, increasing job performance, satisfaction, and morale. The development of a Peer Support Program will enhance management's ability to provide assistance in traumatic and critical incidents – both on the local and national level to our employees, and to the public.

The goal of the EAP program is in support of DHS ongoing commitment to ensure effective recruitment, development, compensation, succession management and leadership of a diverse workforce to provide optimal service at a reasonable cost. The EAP is mandated under 5 U.S.C. 7904, 42 U.S.C. 290dd-1(a), and 42 U.S.C. 290ee-1(a).

Cost Allocation Methodology: The cost allocation methodology for this activity is the total cost of the EAP program divided by the population serviced.

Full Time Equivalent (FTE): This activity requires no FTE.

CIO/DHS Infrastructure Transformation Program – Fee for Service Activity

Description of Service: The DHS Consolidated IT Infrastructure serves the majority of employees of the Department since its establishment on March 1, 2003. Since the IT infrastructure provides the foundation for effective operations of DHS systems and

applications, including information sharing across components, a reliable and robust infrastructure is critical to the success of the DHS mission. From a business perspective, the goal of the IT infrastructure transformation is for the Department to be able to share data from any point in DHS to any decision maker.

The program seeks to create a robust platform on which to quickly launch new capabilities. For example, when DHS was created the department supported numerous legacy IT programs such as 15 separate targeting systems, 14 alerts and warnings systems, and a handful of identification and credentialing systems across 32 DHS run data centers, seven wide area networks, and multiple local area networks with overlapping system circuitry. These data centers contained over 12,000 servers. Contrasting acquisition strategies and IT infrastructure policies among components further complicated the DHS environment and the ultimate goal of moving to one DHS-wide IT infrastructure in a consolidated IT data center operational environment.

The Infrastructure Transformation Program (ITP) has been chartered by the CIO Council as a DHS Level 1 investment with the following project domain initiatives included in the scope of the transformation effort to provide the following services: Network, Email, Helpdesk, Data Center, Desktop, Site, Voice, Video, and Wireless.

ITP resides within the IT Services Office (ITSO) of the DHS CIO. ITP is managed by the ITSO Enterprise Services Division (ESD) and is led by the Director of ESD and a CIO Council member executive sponsor. Furthermore, ITP is supported by a senior executive steering group of CIOs, which is staffed by a team of technical experts hired by the Department HQ from the components, several components' working group members, and contractor support.

Cost Allocation Methodology: The FY 2010 cost allocation is based on the components' contribution percentages to the Consolidated IT Infrastructure FY 2009 OMB Exhibit 300.

Full Time Equivalent (FTE): This activity requires 10 FTE.

National Capital Region Infrastructure Operations (NCRIO) – Fee for Service Activity

Description of Service: The NCRIO serves the DHS Headquarters, the Department's components, and select field offices of the department's major components for network and internet/intranet access; infrastructure transformation and support; management and delivery of desktop computing applications and equipment, email, wireless communications, video (VTC), voice (phone) and messaging; communications security; and IT operations disaster planning and mitigation to ensure continuous operations. The NCRIO manages and maintains all deployed applications for full functionality and continuous availability on all DHS systems, as well as full functionality of file and data storage and retrieval, printing, and remote access. The NCRIO coordinates management and delivery of these services with build-out of new facilities and provides customer service through a 24/7 help desk.

In providing these services, the NCRIO adheres to and follows all applicable executive orders, presidential directives, other Federal and DHS laws, Federal orders management policies, handbooks, guidelines, processes, and procedures. The NCRIO continually monitors vendors' performance and technology to ensure that DHS HQ IT infrastructure services conform to

specified standards for reliability, readiness, sustainability, supportability, availability, stability, security, flexibility, responsiveness and cost effectiveness. The NCRIO tracks workload data by functional service area to identify trends and statistical variations, and provide technical, logistical and financial forecasts for future years. The NCRIO conducts baseline assessments of its existing systems and infrastructure against industry standards for items such as configuration and performance metrics. Using the results of baseline evaluations, the NCRIO maintains a program for the improvement of information technology services.

The NCRIO resides within the IT Services Office (ITSO) of the DHS CIO. NCRIO is managed by the ITSO Headquarters Services Division (HSD). NCRIO is led by the Director of HSD. Cost and activity based analyses are conducted, and projections validated independent of NCRIO management by the ITSO Business Services Division (BSD). Senior executive management of the DHS HQ Directorate Components forms a review group to identify and resolve customer service issues in monthly meetings with the DHS CIO.

Cost Allocation Methodology: The FY 2010 WCF submission is allocated among the participating organizational components: Undersecretary for Management (USM), Offices of the Secretary and Executive Management (OSEM) Under Secretary for National Protection and Programs, Domestic Nuclear Detection Office (DNDO), Science and Technology (S&T), and Operations Coordination & Intelligence and Analysis.

Full Time Equivalent (FTE): This activity requires 9 FTE.

Software Enterprise Licenses – Fee for Service Activity

Description of Service: This program offers a centralized tool that facilitates the compliance and oversight responsibilities of the Chief Information Security Officer (CISO) and the Office of Inspector General. The Department continues to pursue opportunities to benefit from economies of scale, moving from component or office specific software licenses to larger enterprise licenses for common services.

Microsoft: In the spirit of the Federal Acquisition Streamlining Act (FASA), DHS and Dell Marketing, L.P. entered into a single blanket purchase agreement (BPA) to establish a DHS-wide Microsoft Enterprise Agreement to standardize office automation and communication applications across the component agencies' existing IT environments. The account provides for the funding and management of the Microsoft Enterprise Agreement awarded June 2003, which provides enterprise access to the Microsoft suite of products. The FY 2010 costs for this activity will be significantly higher than previous years due to the expiration of the current Microsoft contract that uses 2003 prices. This contract will be renegotiated in FY 2009, and the increase to many components' assessments will be offset by the fact that they are currently paying for these services outside of the WCF, and for FY 2010 these charges are being brought into the fund. Before FY 2010 the costs included in the WCF were only based on the 2003 base requirements and amortized over a period of five years; when the new contract is negotiated in FY 2009, a new base will be applied that will allow for the purchase of additional licenses. The products include the software needed for individual desktops, laptops, and server platforms, such as MS Office, MS Project, MS Visio, MS Advanced Server, etc. This agreement is utilized by all of DHS. The request reflects the contractual obligations of each of the components.

Cost Allocation Methodology: The cost allocation methodology is the unit contract costs multiplied by the number of sites or licenses requested by each component.

Full Time Equivalent (FTE): This activity requires 1 FTE.

Procurement Operations – Fee for Service Activity

Description of Service: The DHS Office of Procurement Operations (OPO) provides full service acquisition support to the Office of the Secretary and Executive Management, the Under Secretary for Management, Science and Technology, U.S. Citizenship and Immigration Services, and the US Visit Program Office. In addition, the OPO provides acquisition services for department-wide acquisition initiatives identified by both the Chief Information Officer and the various commodity councils within DHS. Services provided include acquisition planning, training, execution, and administrative services.

Cost Allocation Methodology: The cost allocation methodology for this WCF activity is based on 1.53 percent of the obligated dollars of contracts under \$50,000.

Full Time Equivalent (FTE): This activity requires 250 FTE.

PPA: Tri-Bureau Services Activities

	Perm Pos	FTE	Amount
2008 Actual	2	2	59,978
2009 Enacted	2	2	60,060
2010 Adjustments-to-Base	0	0	1,204
2010 Current Services	2	2	61,264
2010 Program Change	0	0	(23,287)
2010 Request	2	2	37,977
Total Change 2009-2010	0	0	(22,083)

Working Capital Fund requests \$38.0 million for Tri-Bureau Services, which is a decrease of \$22.1 million from FY 2009 Enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

Tri-Bureau Service Activity

IT Services from Department of Justice (DOJ) – Tri-Bureau Service Activity

Description of Service: The Department of Justice (DOJ) MOU Working Group performed an analysis that clarified IT services that DHS requires from DOJ and their associated costs. The working group defined the specific IT service requirements of each component currently using DOJ as the provider: ICE, HQ Office of Policy, USCIS, and US Visit. The working group is preparing migration plans to transfer services to the Enterprise Data Center.

DOJ provides the following data center services:

- Application hosting OS/390 platform for more than 40 applications
- Application hosting on AIX Unix platform for more than 25 applications
- Housing of DHS servers
- Separate raised-floor computer room space and utilities

Cost Allocation Methodology: The cost allocation methodology is based on the actual usage as determined by DOJ.

Full Time Equivalent (FTE): This activity requires two FTE.

PPA: Government-wide Mandated Services Activities

	Perm Pos	FTE	Amount
2008 Actual	3	3	26,578
2009 Enacted	6	6	37,093
2010 Adjustments-to-Base	752
2010 Current Services	6	6	37,845
2010 Program Change	2	2	(98)
2010 Request	8	8	37,747
Total Change 2009-2010	2	2	654

Working Capital Fund requests \$37.7 million for Government-wide Mandated Services. This is an increase of 2 FTE over FY 2009 Enacted, and an increase of \$654,000. FY 2010 contributions and FFS costs are identical to those of FY 2009, but are subject to change, as redistributions to meet changes in resource demands are assessed.

CURRENT SERVICES PROGRAM DESCRIPTION:

Government-wide Service Activity

Interagency Council Funding - Government-wide Service activity

Description of Service: GSA provides oversight and administers the Interagency Council funds in consultation with the Chief Financial Officers Council, the Chief Information Officers Council, the Federal Acquisition Council and the Chief Human Capital Officers Council.

- **Chief Financial Officers (CFO) Council Funding Supports the Following Activities:**
 - Federal Audit Clearing House (FAC)
 - Grants Streamlining
- **Chief Information Officers (CIO) Council Funding Supports the Following Activities:**
 - A \$2 million contract to support the Portfolio Management Office for the ongoing e-government initiatives efforts.
 - Federal Enterprise Architecture (FEA) — the FEA PMO will continue their efforts to identify and develop collaboration and consolidation opportunities across Federal agencies.

- **Federal Acquisition Council (FAC) Funding Request Supports the Following Activities:**

- The Federal Competitive Sourcing Database (FCSD) is intended to facilitate comprehensive, consistent, and timely reporting of government actions related to competitive sourcing.
- Acquisition Workforce Competency Development and Training - Agencies use the Acquisition Career Management Information System (ACMIS) database which provides workforce training data and OPM data to make strategic workforce decisions affect the agency training and certification requirements.
- Government-wide Performance Measures for Socio-Economic Goals - Small business success is currently measured by meeting established statutory goals.
- Procurement Center Representatives (PCRs) Online - In order to obtain the appropriate level of contributory review, and move the procurement along in a timely fashion, it would facilitate the requirement if the agencies and SBA used an online workload tool.
- The Service Acquisition Reform Act (SARA), Acquisition Advisory Panel and Report to Congress - Section 1423 of SARA requires the Administrator of OMB/Office of Federal Procurement Policy to establish an advisory panel of recognized experts in acquisition law and policy to review laws and regulations regarding the use of commercial practices, performance-based contracting, the performance of acquisition functions across agency lines of responsibility, and the use of government-wide contracts.
- Acquisition Center of Excellence - SARA mandates the development and maintenance of a Center of Excellence in Contracting for Services.

- **Chief Human Capital Officers Council (CHCO) Funding Request Supports the Following Activities:**

- CHCO Website - A critical component in advancing the government-wide goals of this management innovation has been the development and maintenance of a high-quality, component rich Web content delivery system. The creation of this site has provided a vehicle for sharing and exchanging information of interest to the Federal human resource management community. The system provides a forum for the exchange of information among members of the Council in both a public and private manner.

Cost Allocation Methodology: The cost allocation methodology for this activity is pro-rata share based on the percent of each participating component's adjusted total budget divided by DHS's total adjusted budget (excluding grant funding) multiplied by the total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

USAJOBS (formerly Recruitment One-Stop)-Government-wide Service activity

Description of Service: The USAJOBS initiative is a government-wide initiative led by the Office of Personnel Management (OPM). All agencies fund their portion of this program (based on employment levels). Regulations contained in 5 CFR Parts 330, 333, and 335 implement section 4 of Public Law 1054-52 and authorizes OPM to charge fees to agencies in order to pay the cost of providing Federal employment information and services.

USAJOBS Federal Employment Information System delivers state-of-the-art on-line recruitment services to job seekers, simplifying the process of locating and applying for Federal jobs. It delivers a number of job seeker focused features including intuitive job searching; clean, concise, understandable and attractive job announcements; on-line resume submission; applicant data-mining; and on-line feedback on status and eligibility.

Managing Partner: OPM

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component's Full Time Civilian Equivalent (FTE) divided by total DHS civilian FTE multiplied by the total estimated cost of the activity. This activity only benefits civilian personnel; therefore, military FTE is not included in the cost allocation methodology.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Training – Government-wide Service Activity

Description of Service: Provides enterprise approach to leveraging technology to support learning and development programs, initiatives, and capabilities. This includes an enterprise architecture approach to the modernization and reduction in complexity of DHS Learning Management Systems (LMS'), building enhanced capability through tools such as web conferencing, and closing existing and future gaps in structured learning opportunities by providing every DHS employee access to over 3,000 online courses and 12,000 online books. Government-wide accomplishments derived from this activity are:

- Centralized procurement of primary DHS LMS' in use, providing greater visibility to CFO's, CIO's, and all DHS management regarding costs.
- Consistent, standardized delivery of all legislatively mandated training to all DHS employees (and contractors where appropriate) Launched IT security courses mapped to The Government Information Security Reform Act (GISRA) and The National Institute of Standards and Technology requirements.
- Providing 21st Century approach to training in critical areas such as Emergency Medical Technician training by assisting in the coordination of DHS Modeling and Simulation activity in regards to training.
- Compliance with OPM and OMB requirements for reporting Enterprise Human Resources Integration (EHRI) training data for all DHS Federal civilian employees.

Managing Partner: OPM

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component's Full Time Equivalent (FTE) divided by DHS's total FTE (excluding military) multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires 8 FTEs.

Enterprise HR Integration (EHRI) – Government-wide Service Activity

Description of Service: EHRI is a collaborative e-Government initiative designed to transform the way Federal HR Specialists and Managers access human resource information and the way all Federal employees access their personnel file information. When fully implemented, EHRI will replace the current paper based Official Personnel Folder (OPF) with an electronic employee record for all Executive Branch employees, resulting in a comprehensive electronic personnel data repository covering the entire life cycle of Federal employment. In addition to streamlining personnel management actions, EHRI will provide HR managers and specialists with powerful workforce analytic and planning capabilities.

Managing Partner: OPM

Cost Allocation Methodology: Costs for EHRI's products and services will be recovered by EHRI from all agencies on an equitable basis related to the size and usage of each participating agency. Charges to each agency will be established by distributing total EHRI costs to all clients on the basis of the number of OPFs or on the basis of actual cost, depending on the service.

Full Time Equivalent (FTE): This activity requires no FTE.

Business Gateway - Government-wide Service Activity

Description of Service: Business Gateway reduces the burden on businesses by making it easy to find, understand, and comply with relevant laws and regulations at all levels of government. The Business Gateway will be the cross agency portal for businesses that integrates the content and functionality of number of Federal business web sites (e.g., Business.gov, Businesslaw.gov, SBA.gov). The goals of Business Gateway are as follows:

- Develop a catalog of Federal forms for Business.gov.
- Expand harmonized miner reporting (Mine.gov) to include additional Federal agencies and additional states.
- Develop the Business Gateway portal into the Federal cross-agency portal for businesses, integrating the content and functionality of SBA.gov, BusinessLaw.gov, Business.gov and related sites into one comprehensive site: Business.gov.

Managing Partner: Small Business Administration (SBA)

Cost Allocation Methodology: The cost allocation methodology for this activity is pro-rata share based on the percent of each participating component's adjusted total budget divided by DHS's total adjusted budget (excluding grant funding) multiplied by the total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Rulemaking – Government-wide Service Activity

Description of Service: e-Rulemaking is a collaborative, interagency activity designed to

establish a common, automated and integrated approach to managing the Federal government's rulemaking function. The activity consolidates rulemaking systems at the various departments and agencies and is centrally managed through a web-based environment offering such as one-stop access, search capabilities, and public commenting. e-Rulemaking activities include:

- Expanding public understanding of the rulemaking process
- Improving the quality of Federal rulemaking decisions
- Increasing the amount, breadth, and ease of citizen and intergovernmental participation in rulemaking
- Administering Regulations.gov, a cross-agency, front-end Web application that posts and allows comments on proposed Federal agency rules
- Writing memoranda to the President's Management Council (PMC), directing agencies to include a link to Regulations.gov on agency homepages and in the synopsis of the notice of any regulatory action requesting public comment
- Posting the dockets for the Department of Housing and Urban Development, USDA's Animal and Plant Health Inspection Service, a portion of DHS, and Office of Personnel Management rulemaking on EPA's on-line system as a proof-of-concept.

Managing Partner: Environmental Protection Agency

Cost Allocation Methodology: The cost allocation methodology for this activity is pro-rata share based on the percent of each participating Component's adjusted total budget divided by DHS's total adjusted budget (excluding grant funding) multiplied by the total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

Case Management Line of Business – Government-wide Service Activity

Description of Service: Case Management Line of Business is one of the lines of business with the goal of supporting the expansion of Electronic Government. The goal of the effort is to identify opportunities to reduce the cost of government and improve services to citizens through business performance improvements. The Case Management Line of Business activity will ensure that DHS is aligned to the e-Gov Case Management Line of Business, currently owned by the Department of Justice. This activity will align budget submissions, rationalize the DHS case management portfolio, and guide development of business process, technical requirements, data governance and interoperability and information sharing in close conjunction with the DHS OCIO and mission areas.

Managing Partner: Department of Justice

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component's Law Enforcement Full Time Equivalent (FTE) divided by DHS's total Law Enforcement FTE multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Grants – Government-wide Service Activity

Description of Service: e-Grants creates a single portal for all Federal grant customers to find, apply and manage grants on-line. The Grants.gov Storefront provides electronic functionality for applicant's grantees, and reduces the paper-based processes that currently challenge the Federal grants environment. The initiative is designed to reduce existing inefficiencies, meet e-Gov goals, and provide benefits to both citizens and the government. Specifically, the initiative enables the government to meet many of the streamlining activities required by Public Law (PL) 106-107, and called for in the Federal Financial Assistance Management Improvement Act, such as deploying a unified search/find capability for grant opportunities, standard data sets, and a common mechanism and processes for applying for Federal grants funds.

Managing Partner: Department of Health and Human Services

Cost Allocation Methodology: The cost allocation methodology is a pro-rata share based on the percent of each organization element's grant funding divided by DHS's total grant funding multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Authentication – Government-wide Service Activity

Description of Service: The e-Authentication activity was implemented to minimize the burden on obtaining services online for businesses, the public and government by providing a secure infrastructure for on-line transactions, eliminating the need for separate processes to verify identity and electronic signatures. The goal of the e-Authentication Initiative is to provide trusted and secure standards-based authentication architecture to support the 24 government-wide e-Gov initiatives. e-Authentication's distributed architecture will also allow citizens and businesses to use non-government issued credentials to conduct transactions with the government.

Managing Partner: General Services Administration

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component's Full Time Equivalent (FTE) divided by DHS's total FTE multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

Human Resources Line of Business (HRLoB) – Government-wide Service Activity

Description of Service: HRLoB has been launched to drive rapid and transformational improvements in the delivery of human resources services across government agencies. HRLoB has been tasked to consider business benefits and impacts and then propose a model that improves strategic management of human capital, is effective and efficient, and improves customer service.

Managing Partner: Office of Personnel Management

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component's Full Time Civilian Equivalent (FTE) divided by DHS's total Civilian FTE multiplied by the total estimated cost of the activity. This activity only benefits civilian personnel; therefore, military FTE is not included in the cost allocation methodology.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Gov Benefits – Government-wide Service Activity

Description of Service: The GovBenefits.gov website provides a single point of access for citizens to locate and determine eligibility for government benefits and services. The site now offers links to 1,000 benefit and assistance programs. These programs improve the ability of government agencies to access performance and pinpoint redundant services, which creates opportunities for more efficient resource allocation.

Managing Partner: Department of Labor

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component's Full Time Civilian Equivalent (FTE) divided by DHS's total Civilian FTE multiplied by total estimated cost of the activity. This activity only benefits civilian personnel; therefore, military FTE is not included in the cost allocation methodology.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Travel– Government-wide Service Activity

Description of Service: This activity provides a government-wide, web-based service that applies world-class travel management practices to consolidate Federal travel, minimize cost, and produce superior customer satisfaction. From travel planning and authorization to reimbursement, the e-Travel initiative will leverage administrative, financial, and information technology best practices to realize significant cost savings and improved employee productivity.

Managing Partner: General Services Administration

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each Component's Full Time Equivalent (FTE), divided by DHS's total FTE and multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE

Geospatial Line of Business– Government-wide Service Activity

Description of Service: The Geospatial LoB is designed to further refine the opportunities for optimizing and consolidating Federal geospatial-related investments to reduce the cost of government and, at the same time, improve services to citizens. Cross-agency coordination of geospatial activities can identify, consolidate, and reduce or eliminate redundant geospatial

investments. The Geospatial Line of Business (LoB) will result in a more coordinated approach to producing, maintaining, and using geospatial data, and will ensure sustainable participation from Federal partners to establish a collaborative model for geospatial-related activities and investments.

Managing Partner: Department of Interior

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each participating component's adjusted total budget divided by DHS's adjusted total budget (excluding grant funding) multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Gov Integrated Acquisition Environment Loans And Grants– Government-wide Service Activity

Description of Service: The Federal Funding Accountability and Transparency Act of 2006 (FFATA) requires OMB to “ensure the existence and operation of a single searchable website, accessible by the public at no cost to access” that includes information on each Federal award. The law specifically requires a unique identifier for the entity receiving the award and of the parent entity of the recipient, should the entity be owned by another entity. Since contracts (and some grants) already require Data Universal Numbering System (DUNS) numbers, a decision was made to leverage this to cover loans and the remainder of the grants. This will allow those areas to feed information into the FFATA portal.

Managing Partner: General Services Administration

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each Component's Full Time Equivalent (FTE), divided by DHS' total FTE and multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

IT Infrastructure Line of Business– Government-wide Service Activity

Description of Service: The IT Infrastructure LoB will identify the opportunities for IT infrastructure consolidation and optimization, and develop government-wide common solutions. This LoB will define specific common performance measures for service levels and costs, identify best practices, and develop guidance for transition plans within agencies and/or across agencies. Consolidation and optimization of IT infrastructure represents a significant opportunity to realize future cost savings by taking a more coordinated approach to spending on commodity IT infrastructure. IT infrastructure consolidation and optimization case studies also demonstrate agencies could improve IT service levels and, when relieved of the burden of managing these non-core functions, can concentrate more on mission priorities and results.

Managing Partner: Office of Management and Budget

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each participating Component's adjusted total budget divided by DHS' adjusted total budget (excluding grant funding) multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

Budget Formulation and Execution Line of Business– Government-wide Service Activity

Description of Service: The focus of the Budget Formulation and Execution Line of Business (BFE LoB) is to build a “budget of the future” by promoting information sharing across government agency budget offices and building a “community of practice.” With this collaboration, the budget community can start to identify best practices for all aspects of budget formulation and execution. The BFE LoB strives to find solutions that link budget formulation, execution, planning, performance, and financial information. Areas of particular interest include technology, budget performance integration, data collection and tracking, financial management integration, and human capital.

Managing Partner: Department of Education

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each participating Component's adjusted total budget divided by DHS' adjusted total budget (excluding grant funding) multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

Financial Management Line of Business– Government-wide Service Activity

Description of Service: The Financial Management Line of Business (FMLoB) goals are to define, analyze, and implement options that will enhance cost savings in the financial management systems, provide for standardization of business processes and data models, promote seamless data exchange between Federal agencies, and strengthen internal controls through integration of core financial and subsidiary systems. The FMLoB's current objective is to improve the cost, quality, and performance of financial management (FM) reducing the number of noncompliant systems by leveraging common standards, shared service solutions, and implementing other government-wide reforms that foster efficiencies in Federal financial operations.

Managing Partner: General Services Administration (GSA)

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each participating Component's adjusted total budget, divided by DHS' adjusted total budget (excluding grant funding) and multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Gov Integrated Acquisition Environment – Government-wide Service Activity

Description of Service: The Integrated Acquisition Environment activity is a secure business environment that facilitates and supports cost-effective acquisition of goods and services in support of mission performance. The goals for the Integrated Acquisition Environment activity are achieved thru four major business areas: Business partner Network (BPN), Acquisition Information Reporting (AIR), e-Marketplace, and Standard Transactions. IAE is achieving its goal of streamlining the intricate system of process threats that is needed to buy and track over \$400 billion in goods and services annually.

Managing Partner: General Service Administration

Cost Allocation Methodology: The cost allocation methodology is a pro-rata share based on the percent of each component's measurement of three contract acquisition variables divided by the total sum of all component measurements of the same three variables multiplied by total estimated cost of the activity. The three contract acquisition variables measured for each component's is as follows: (1) the number of personnel providing contractor support, (2) number of contracts processed and (3) the dollar volume of contracts processed.

Full Time Equivalent (FTE): This activity requires no FTE.

e-Gov Disaster Management – Government-wide Service Activity

Description of Service: Disaster Management is part of the e-Gov Act of 2002, Title II, and Section 214 "Enhancing Crisis Management Through Advanced Information Technology" and is described in OMB M-03-18, "Implementation Guidance for the e-Government Act of 2002." This initiative, which will support disaster assistance and "all hazards" response, is a joint effort involving 10 other Federal agencies that support disaster management. This initiative also supports many of the goals of the Initial National Response Plan dated October 2003.

The scope of the project covers all Federal agencies that are involved in disaster recovery, as well as state, local and tribal disaster recovery organizations and individuals. The value of this program is its contribution to improving disaster preparedness and its potential to reduce property damage and loss of life.

Managing Partners: FEMA and CIO

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component's level of participation in Disaster Management divided by the total sum of all component levels of participation in Disaster Management multiplied by total estimated cost of the activity. Levels of participation include measuring the active participation of sixteen elements of Disaster Management defined by Disaster Management e-Government Initiative Program Office, EP&R/FEMA. The sixteen elements of Disaster Management include the following: (1) transportation, (2) communications, (3) public works and engineering, (4) firefighting/incident command system, (5) information and planning, (6) mass care, (7) resource support, (8) health and medical services, (9) search and rescue, (10) hazardous materials, (11) food, (12) energy, (13) warnings and alerts, (14) research and development, (15) emergency/domestic preparedness, and (16) disaster relief. The sixteen elements are the cost drivers for each component's assessment and because many components

are involved in various activities at different levels of participation, the cost for this activity is fairly uniform across the components.

Full Time Equivalent (FTE): This activity requires no FTE.

PPA: DHS Cross-Cutting Activities

	Perm Pos	FTE	Amount
2008 Actual	1	1	12,778
2009 Enacted	4	4	13,380
2010 Adjustments-to-Base	0	0	274
2010 Current Services	4	4	13,654
2010 Program Change	0	0	2,709
2010 Request	4	4	16,363
Total Change 2009-2010	0	0	2,983

Working Capital Fund requests \$16.4 million for DHS Cross-Cutting activities. This is an increase of \$3.0 million over FY 2009 Enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

Department of Homeland Security Crosscutting Activity

Capital Planning & Investment Control (CPIC) – DHS Crosscutting Activity

Description of Service: Capital Planning and Investment Control (CPIC) is run jointly by the CFO (Program Analysis & Evaluation), CPO Acquisition Program Management Division (APMD) and the CIO (Portfolio Management) to carry out the Department’s responsibilities for the quality and performance of its investment projects. A CPIC process is required to comply with the budget preparation guidance provided by OMB Circular A-11, Preparing, Submitting and Executing the Budget, and the management guidance provided by OMB Circular A-130, Management of Federal Information Resources, under the legislative authorities and requirements in the Clinger-Cohen Act and the Homeland Security Act. Project management offices throughout the components prepare business cases to demonstrate to OMB that they are on-track and ready to effectively use the additional funding requested.

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each participating component’s Exhibits 300 total divided by the total DHS Exhibit 300’s multiplied by the total estimated cost of the activity. Consolidated 300’s will be distributed back to Components based on ½ point for managing partners and with remainder spread by contributing component in equal shares.

Full Time Equivalent (FTE): This activity requires no FTE.

Ready Campaign – DHS Crosscutting Activity

Description of Service: The DHS “Be Ready” campaign and Ready.gov web site helps citizens make a kit of emergency supplies; make a plan of what to do in an emergency, and be informed of biological, chemical, explosion, nuclear blast and radiation threats.

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each participating component’s adjusted total budget divided by DHS’s adjusted total budget (excluding grant funding) multiplied by the total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires no FTE

Strategic Sourcing – DHS Crosscutting Activity

Description of Service: DHS has established Strategic Sourcing Group (SSG) to implement a department-wide approach to acquiring goods and services. The SSG has established commodity councils that are working to identify the department’s needs for each commodity and developing more efficient purchasing mechanisms to address those needs. The total number of commodity councils established thus far is 16 covering such commodities as weapons and ammunition, uniforms, electricity, office supplies, airport services, and copiers.

Cost Allocation Methodology: The cost allocation methodology is a pro-rata share based on the percent of each component’s measurement of three contract acquisition variables divided by the total sum of all component measurements of the same three variables multiplied by total estimated cost of the activity. The three contract acquisition variables measured for each component is as follows: (1) the number of personnel providing contractor support, (2) number of contracts processed and (3) the dollar volume of contracts processed.

Full Time Equivalent (FTE): This activity requires no FTE.

Chief Procurement Office Shared Reporting – DHS Crosscutting Activity

Description of Services: The DHS Shared Reporting - CPO system, known otherwise as the Homeland Security Contract Information System (HSCIS), is the acquisition data feeder system to the Federal Procurement Data System - Next Generation (FPDS-NG) that is required by statute. This data source is the primary source of all acquisition data for the Federal government, used by U.S. agencies, governments around the world, the public, and the commercial world for planning marketing opportunities with the American government related to its \$3.1 trillion annual acquisition budget. DHS uses HSCIS to provide data to FPDS-NG and to monitor acquisition data.

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each participating component’s adjusted total budget by DHS’ adjusted total budget (excluding grant funding) multiplied by total estimated cost of activity.

Full Time Equivalent (FTE): This activity requires 4 FTE.

PPA: WCF Management Activity

	Perm Pos	FTE	Amount
2008 Actual	6	6	901
2009 Enacted	8	8	1,280
2010 Adjustments-to-Base	0	0	36
2010 Current Services	8	8	1,316
2010 Program Change	0	0	0
2010 Request	8	8	1,316
Total Change 2009-2010	0	0	36

Working Capital Fund requests \$1.3 million for this activity. This is an increase of \$36,000 over FY 2009 Enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

WCF Management Activity

Working Capital Fund Operations – WCF Management Activity

Description of Service: The Working Capital Fund Operations provides policy, procedures, budget formulation, execution and customer resolution services in managing the WCF. Services are provided to the activity managers as well as customer Components across DHS.

Budget Formulation Services:

- Oversee all budgets, make recommendations on all aspects of the WCF, and perform or direct all duties and responsibilities of financial management.
- Provide direction and assistance to program managers in the development of operating plans, budgets, and supporting documents relating to use of the WCF.
- In coordination with the Director, Budget Staff, make recommendations on operating plans, rate structures and activities to be supported by the fund.

Budget Execution Services:

- Review financial reports for conformance with program and financial plans, and inform senior management and program officials of trends and changes required in the financial plan.

Cost Allocation Methodology: The cost allocation methodology for this activity is a pro-rata share based on the percent of each component’s WCF assessment amount divided by the total WCF assessment multiplied by total estimated cost of the activity.

Full Time Equivalent (FTE): This activity requires 8 FTE to oversee all budgetary functions of the Working Capital Fund.

IV. Program Justification of Changes

**Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: DHS Rent Consolidation

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$8,324

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							5	5	\$67,282
Program Increase							0	0	\$8,324
Budget Request	5	5	\$40,299	5	5	\$65,957	5	5	\$75,606

Description of Item

The General Services Administration (GSA) provides workspace and related services for over 100 Federal client agencies serving more than one million workers through the Public Buildings Service (PBS). GSA also provides related real estate services including the operation and maintenance of buildings and out-leasing programs. GSA’s Computer Integrated Facility Management Program uses cutting edge technology to look at the buildings life cycle. Real estate services provided to clients appear in Federal agencies monthly electronic rent bills.

The Department has established a clearing account to expedite the payment of GSA rent billings for the Department of Homeland Security, excluding the major components. The monthly bills include all GSA-controlled space that the Department occupies throughout the United States, including parking spaces allotted to the Department.

Justification

The FY 2010 budget increase includes GSA occupancy agreement updates, Federal Protective Service (FPS) rate increases, and rent for additional space that will be required in FY 2010.

Impact on Performance (Relationship of Increase to Strategic Goals)

These facilities improve the delivery of support services to each DHS component while reducing the cost of operations. The centralization of GSA Rent services for the Departmental Management and Operations is critical to the mission of the Department.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 2: Financial Statement Audit

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$669

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$14,883
Program Increase							0	0	\$669
Budget Request	0	0	\$13,212	0	0	\$14,591	0	0	\$15,552

Description of Item

DHS awards a contract to an independent Certified Public Accounting (CPA) firm to perform financial statement audit functions. The contract includes time and material for audit services with the auditor providing the services and billing the hours worked at billing rates commensurate with the audit position being billed. The cost include travel and incidental costs associated with the performance of the audit as permitted by the contract maintained by the Office of the Inspector General (OIG) as the Contracting Officer Technical Representative (COTR).

Justification

In FY 2010, the Financial Statement Audit activity requests a funding increase of \$669,000 in contractor cost and for travel oversight costs for the OIG staff. The amount includes an increase for time and material costs for audit services. These services includes a Full Scope audit cost for Customs and Border Protection (CBP), Federal Law Enforcement Training Center (FLETC) Transportation Security Administration (TSA), Immigration and Customs Enforcement (ICE), and Citizenship and Immigration Services (CIS).

Impact on Performance (Relationship of Increase to Strategic Goals)

If this request is not approved, the enhancement of \$669,000 will impact DHS components requesting Stand-Alone Full Scope audits in FY 2010. The components include CBP, FLETC, TSA, ICE and CIS.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 3: Finance and Accounting Shared Services

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$3,144

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$26,941
Program Increase							0	0	\$3,144
Budget Request	0	0	\$29,176	0	0	\$26,413	0	0	\$30,085

Description of Item

ICE and FLETC’s Office of Financial Management provide a variety of financial shared services for various DHS components on a reimbursable basis. The types of financial services provided include financial reports, obligations and payment processing, system usage, receipts, payroll, overhead, and travel and cash management services.

Justification

The \$3.1 million increase reflects higher than anticipated costs being incurred by the service provider to support the DHS components. These higher costs are being distributed across DHS components based on Activity Based Costing results from previous years and additional services provided to support eTravel.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Department requested a total of \$29.2 million for this activity in FY 2008, as part of a reprogramming effort that reflected higher costs for this activity. The requested increase from FY 2009 will cover the increased support costs of this activity in FY 2010.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 4: Internal Control Audit

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$2,668

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$2,267
Program Increase							0	0	\$2,668
Budget Request	0	0	\$1,129	0	0	\$2,223	0	0	\$4,935

Description of Item

The DHS Financial Accountability Act requires an audit opinion on the Department’s Internal Controls over Financial Reporting. Due to the extent of material weaknesses, the Department’s Inspector General conducts performance audits to assess the effectiveness of DHS corrective actions in effort to comply with the Act. The Internal Control Auditor is selected through contracting procedures by the OIG and must stay independent from the DHS components that are being audited. The auditor selected commences work immediately and entrance conferences are held within a short time after award of the financial statement audit contract.

Justification

The increase from \$2.3 million to \$5.0 million reflects additional audit procedures anticipated due to implementation of DHS corrective actions. For example, as DHS executes corrective actions and continues to make progress on resolving material weakness conditions, the auditors are required to perform additional work to validate the effectiveness of internal controls over financial reporting to implement the internal control audit provision of the DHS Financial Accountability Act.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Office of the Chief Financial Officer coordinates the management’s assessment process to support management’s assertion and act as primary liaison for the auditors. This additional funding is required in order to enable the Department to coordinate the preparation of and completion of the internal audit.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 5: NFC Payroll Services & Reporting
PPA: Fee-for-Service Activity
Program Increase: Positions 0 FTE 0 Dollars \$3,470

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$32,991
Program Increase							0	0	\$3,470
Budget Request	0	0	\$30,710	0	0	\$32,344	0	0	\$36,461

Description of Item

Department of Agriculture/National Finance Center (NFC) provides Payroll/Personnel services utilizing their legacy mainframe systems (payroll) and EmpowHR PeopleSoft application (personnel). In addition, NFC provides Payroll/Personnel policy support and benefits reconciliation, tax reporting, and payroll problem resolution. All DHS Components will migrate to the enterprise DHS personnel system, EmpowHR, by FY 2010.

Justification

Fundamental to the HCBS mission is reducing costs by consolidating the number and variety of DHS Human Resource systems maintained. Specifically, costs are reduced by centralizing and simplifying training, licensing fees; reducing errors associated with complex interfaces due to redundant and disparate systems; and by retiring older less productive/efficient systems with modern and more flexible systems. This enterprise approach directly supports the DHS Secretary’s priority to strengthen DHS Core Management, Policy and Operational Agenda; and the Human Resources Line of Business (HRLoB) and other “good government” practices.

There are several authorities that support the HCBS mission such as: 1) The Homeland Security Act of 2002 calling for the establishment of a new HR system for DHS that is flexible and contemporary; and 2) The e-Government Act of 2003 calling for the use by the government of web-based Internet applications and other information technologies, combined with processes that implement these technologies, to bring about improvements in government operations that may include effectiveness, efficiency, service quality, or transformation. It also calls for the adoption of innovative information technology, including the appropriate use of commercial best practices, as well as the use of electronic signatures. In addition to the mandated Acts, the business case that resulted from the DHS HRIT Council research provides authority to Human Capital Business Systems to consolidate and modernize the 144+ disparate systems.

This request includes O&M costs for NFC payroll and EmpowHR personnel systems. As part of its mission to consolidate and modernize its numerous payroll/personnel systems, DHS chose EmpowHR

under the the Human Resources Line of Business (HRLoB) as an OMB approved personnel system. EmpowHR is run by the National Finance Center (NFC). After DHS completed its payroll system consolidation which consolidated eight payroll systems into one, DHS started consolidating its personnel systems. As the DHS enterprise standard, EmpowHR is currently in use by TSA, DHS HQ, USCG, and FLETC. The increase in FY 2010 supports the CIS, ICE, and FEMA.

Impact on Performance (Relationship of Increase to Strategic Goals)

The activity directly supports the Secretary's goal to Strengthen DHS Operations and Management, as well as, the Human Capital Operational Plan, specifically in the areas of Talent Management, Culture of Performance, Learning and Development and Service Excellence. The government is looking at increasing effectiveness from a business perspective and with an enterprise-wide view. Based on the ePayroll Business Case, the best decision for the government is to achieve savings and economies associated with rapid consolidation of Providers while leveraging key technology investment. The goal is to interface payroll systems with customer administrative systems, while increasing interoperability and reducing overall cost. This decision, made from a government-wide rather than agency perspective, will move us toward the objective of a standard architecture and final Shared Service Provider solution.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 6: HQ Human Capital Service Center

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$5,314

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							4	4	\$9,009
Program Increase							0	0	\$5,314
Budget Request	4	4	\$13,915	4	4	\$8,825	4	4	\$14,324

Description of Item

The HQ Service Center provides coordination and oversight support for outsourced services supporting HQ Human Capital operational needs. The team ensures that the personnel processes for HQ’s managers/employees and service providers runs efficiently and effectively. Examples of services: Staffing and Recruitment; Position Classification/Position Management; Performance Management; Payroll and Personnel Action Processing; Employee and Labor Relations Support; Retirements and Benefits Support; Time and Attendance Support. It is imperative that we continue providing full-time, Federal employee oversight of these services.

Justification

In FY 2010, the estimated HQ population is almost 4,200 and assumes “full-service” capacity and the increased funding request will provide continued operational oversight of all contracted services as well as provide more effective focus on customer support. The increase of \$5.314 million over FY2009 is in line with the reprogramming increase that was approved for FY 2008.

The HQ Service center will continue to provide the full range of personnel operational support to DHS HQ components (excluding the OIG) and eventually expand that service through functional integration to other DHS components.

Impact on Performance (Relationship of Increase to Strategic Goals)

The funding is necessary for the HC Service Center will to provide coordinated and prioritized personal staffing services; ensure timely and effective recruitment of staff; effectively manage the “on-board” staffing process (which includes security clearances and collaboration with the Personnel Security Office).

Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 7: Flexible Spending Account Plan Fees (FSA FEDS)

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$496

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$1,632
Program Increase							0	0	\$496
Budget Request	0	0	\$1,362	0	0	\$1,600	0	0	\$2,128

Description of Item

The purpose of this WCF activity is to pay fees associated with the administration of FSAFEDS. FSAFEDS is the Federal government’s Flexible Spending Account (FSA) Program designed to allow Federal employees to set aside pre-tax funds from their pay to cover health and dependent care costs not covered by any other source. Employees elect to participate in the program within 60 days of entry on duty or each year during the Federal Benefits Open Season. Once a DHS employee elects to participate in the Program, FSAFEDS receive allotments from the employee’s pay and places those allotments into an account where the funds are held. The employee then files a claim against those funds for reimbursement of incurred costs associated with health and/or dependent care.

FSAFEDS is managed by The Office of Personnel Management, with additional support of a contractor (SHPS, Inc.). This activity reimburses OPM and the vendor for administrative fees as mandated by The National Defense Authorization Act of 2004 (P.L. 108-136), which requires that agencies pay the administrative fees associated with employee participation in flexible spending account programs.

Justification

In recent years, employee participation in FSAFEDS has reflected a gradual and continual growth. In FY 2007, DHS participated at a 6 percent rate, and in FY 2008, DHS participated at a 9 percent rate. Based on this growth, the FY 2010 request shows a gradual increase in the DHS-wide participation rate. This increase is based on OPM data, which indicate that mature organizations participate at a minimum 20 percent rate across the board. For this submission, the projected rate of growth is predicated on reaching a 20 percent DHS-wide participation rate in FY 2014.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Flexible Spend Plan Account administrative fees are a mandatory payment. The payment program supports the Department’s goal to Strengthen and unify DHS operations and management.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 8: Microsoft Enterprise Software Licenses

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$24,381

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							1	1	\$22,093
Program Increase							0	0	\$24,381
Budget Request	1	1	\$21,129	1	1	\$21,658	1	1	\$46,474

Description of Item

This activity provides for the funding and management of the Microsoft Enterprise Software License Agreement which provides enterprise access to the Microsoft suite of products.

The licenses cover the software needed for the individual desktop, laptop, and server platforms, such MS Office, MS Project, MS Visio, MS Advanced Server, etc. The enterprise agreement is utilized by all of DHS.

Justification

The FY 2010 costs are significantly higher than previous years due to the expiration of the initial contract that was based on 2003 Microsoft prices. In addition, the FY 2010 license costs are higher because they are based on the base requirements applied at the beginning of the contract in 2003, plus all of the true-up requirements that have been made by components since that time. Before FY 2010 the costs included in the WCF were merely based on the 2003 base requirements and amortized over a period of five years. When the new contract is negotiated in 2009, a new base will be applied.

The base requirements referred to are those that were provided by DHS components to develop the minimum requirements used in negotiations with Microsoft to secure enterprise pricing discounts. These represent DHS's requirements at the time of contract award (June 2003). True-up requirements are any Microsoft requirements above and beyond the original base requirement. All current and future purchases under this vehicle will be facilitated via the true up mechanism, which allows for the purchase of additional licenses above the base requirement. True up costs (as indicated on the DHS Microsoft EA Product/Price List) are updated each year and include the costs for licenses and Software Assurance (maintenance) through the remaining term of the contract.

Impact on Performance (Relationship of Increase to Strategic Goals)

This activity helps the agency to fulfill Federal Acquisition Streamlining Act (FASA) requirements. It also helps to ensure legal licensing of all DHS Microsoft servers deployed throughout the enterprise. In addition, it implements governance over the contract vehicle through which Microsoft licenses are purchased by DHS component organizations.

Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 9: National Capital Region Infrastructure Operations

PPA: Fee-For-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$5,154

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							9	9	\$116,161
Program Increase							0	0	\$5,154
Budget Request	9	9	\$93,635	9	9	\$113,868	9	9	\$121,315

Description of Item

The NCRIO serves the majority of DHS Headquarters users for network, email, internet, intranet, and telecom infrastructure, as well as all end user desktop computing, telecom, and wireless services. NCRIO's Program Management Office (PMO) coordinates management and deployment of infrastructure resources along with build-out of new facilities and provides continuous operations, help desk, vendor management, financial management, and technology evaluation.

Justification

With the growth in user demand that has been experienced in FY 2008 and FY 2009, the DHS WCF continues to realize an increased need for network storage and connectivity. The increase in funding will cover the purchase and installation of additional network hardware and software to augment network capabilities and increase network utility for the users. Operational network features such as network storage capacity and connectivity will be enhanced. This initiative will result in strengthened operations and management of the DHS network

Impact on Performance (Relationship of Increase to Strategic Goals)

Network enhancements such as storage capacity and improved response time, will help in reaching the DHS object of improved IT performance for the system users. These enhancements for the betterment of the user experience are another example of how this item supports the DHS strategic goal to Strengthen and unify DHS Operations and Management.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 10: USAJOBS (formerly Recruitment One-Stop)

PPA: Government-wide Mandated Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$67

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FT E	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$1,124
Program Increase							0	0	\$67
Budget Request	0	0	\$1,101	0	0	\$1,102	0	0	\$1,191

Description of Item

OPM’s USAJOBS Program Office has increased the content and navigation of Veterans-focused resources; incorporated a new one-stop information center; successfully implemented e-Authentication for Federal HR users; provided a more robust and meaningful online application status tracking mechanism for job seekers; added graphics to announcements and incorporated an applicant survey to provide feedback to agencies about the application process. This program operates on a fully reimbursable basis to pay the cost of providing Federal employment information and services.

In prior years, OPM’s fee assessment was based on the number of Competitive Service employees within a given agency. Effective October 1, 2007, in accordance with CFR Title 5, Volume 1, Part 317.501(b)(2), those organizations with Executive Resource Service/Senior Executive Service positions which are required to be posted on USAJOBS must now pay a USAJOBS fee. In addition, similar per-capita staff and SES fees will be charged to excepted-service agencies which voluntarily elect to use USAJOBS. The DHS fee was calculated based upon the Department’s total “on-board” employment levels for competitive, excepted service, and ERS positions.

Justification

USAJOBS Federal Employment Information System delivers state-of-the-art on-line recruitment services to job seekers including intuitive job searching, on-line resume submission, applicant data-mining, and on-line feedback on status and eligibility. The additional funds support the USAJOBS system to deliver state-of-the-art on-line recruitment services to job seekers. OPM plans for USAJOBS is to complete the migration of agency job search engines, enhance website tools, and expand agency implementation of integrated job application and status tracking. Since the majority of Federal government job announcements are posted via USAJOBS, and most job-seekers are aware of this tool, DHS will continue to be a user of this system.

Impact on Performance (Relationship of Increase to Strategic Goals)

Access to USAJOBS supports the DHS Strategic Goal to Strengthen and unify operations and management, as well as the DHS Human Capital Operations Plan goal to “Hire and Retain a Talented and Diverse Workforce.” USAJOB is a well-known tool for Federal job seekers, and continued use of this valuable system will support DHS’ efforts to promote DHS as the workplace of choice.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 11: e-Training

PPA: Government-wide Mandated Service Activity

Program Increase: Positions 2 FTE 2 Dollars \$127

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							6	6	\$13,594
Program Increase							2	2	\$127
Budget Request	3	3	\$5,701	6	6	\$13,318	8	8	\$13,721

Description of Item

e-Training is focused on strengthening and unifying DHS operations and management by taking an earned value approach to Information Technology Portfolio Management (IT PfM) in support of employee learning and development (L&D). Through consolidated systems and aligned business processes, the Advanced Distributed Learning Program Management Function (ADL PMF) within the Office of the Chief Human Capital Officer (OCHCO) serves to eliminate Department redundancies while increasing overall access to the highest quality ADL products and services. e-Training directly supports several government-wide initiatives as explained below. This activity benefits the Federal government, the Department, and the individual employee by:

- Reducing redundancies and achieving economies of scale in the purchase, deployment, and management of ADL technology infrastructure (e.g., Learning Management Systems (LMS), Learning Content Management Systems (LCMS) and/or other Information Technology (IT) hardware/software for Human Capital Performance Support (HCPS) tools), and the consolidation and/or sharing of hardware/software;
- Reducing redundancies and achieving economies of scale in the purchase and/or development of e-Learning courses and content (e.g., commercial-off-the-shelf (COTS) or custom-developed content to meet specific agency needs);
- Leveraging components of existing learning systems (e.g., LMS, LCMS, IT hardware, or HCPS tools) where clear value propositions exist;
- Offering user-friendly, one-stop access to a robust and high-quality learning environment;
- Encouraging ADL investments as part of a strategic, systematic, and continuous development of DHS human capital; and
- Fostering communication between Federal Human Resources Development (HRD) practitioners government-wide to identify, prioritize and develop solutions to issues of interest within the community, and to share best practices and resources where synergies are evident.

Justification

The increase in FY 2010 requests accounts for an expected stabilization of licensing support costs and an increase in dependency on centralized custom courseware development being managed by the ADL PMF. An additional two FTE are requested to manage this effort in FY 2010.

e-Training directly supports the Department's strategic human capital management activity as defined in the Homeland Security Act (HR 5005), Title XIII, Section 1304 and academic training as described in Section 1331; both the Office of Personnel Management's e-Training and Enterprise Human Resource Integration initiatives; and, specifically, Katrina Lessons Learned Recommendation 115.²

Impact on Performance (Relationship of Increase to Strategic Goals)

The implementation of e-Training fulfills the following critical goals:

- The DHS Human Capital Operations Plan (HCOP) and the DHS Learning and Development Strategic Plan for Fiscal Years 2006-2010 (specifically Goal 4, Strategy 2, Tactic 1 which is to implement the recommendations of the ADL Enterprise Architecture Study).
- Serving is a key enabling IT component to the DHS Chief Learning Officer's Strategy for establishing a Homeland Security University System.
- Further leveraging simplicity through reductions in Department-wide Information Technology (IT) infrastructure and redundancies in DHS-wide training needs.
- Direct support of Department Information Technology Portfolio Management goals

Benefits to be derived from e-Training include:

- Increased functionality through automation of the SF-182 process
- Automated Enterprise Human Resources Integration (EHRI) reporting of training to OPM
- Access to professional development, required training, and other enterprise content
- Anticipated integration of competency management capabilities
- Enterprise-leveraged course procurement (i.e., increased buying power)
- Enterprise-leveraged course management. Preliminary analysis showed approximately 75 percent in cost savings through enterprise licensing of commercial-off-the-shelf (COTS) courseware versus contracting by individual Components.

² Katrina Lessons Learned Recommendation 115: DHS should provide training, technical, and other assistance in support of other departments' and agencies' homeland security professional development programs. DHS should expand its use of innovative techniques and technologies to enhance the quality and dissemination of homeland security education and training. This may include the use of distance learning programs and interactive computer methodologies. DHS must expand its efforts to promote awareness and implementation of the NIMS and the NRP throughout Federal, State, and local governments, and private sector.

Program Increase 12: IT Infrastructure Line of Business

PPA: Government-wide Mandated Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$ 157

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$163
Program Increase							0	0	\$157
Budget Request		0	0	0	0	\$160	0	0	\$320

Description of Item

The IT Infrastructure Line of Business (ITI LoB) creates an effective and efficient IT infrastructure enabling government-wide customer-centric services. The first goal of the ITI LoB is to establish a contract for developing infrastructure best practices. DHS has an established enterprise program—the Infrastructure Transformation Program (ITP)—that manages the transformation, consolidation and optimization of infrastructure services across DHS.

Justification

The additional funds will define DHS Enterprise Architecture technical targets; continue network and data center consolidation; further implement DHS Management Directive MD 0007.1, Information Technology Integration and Management, and establish governance around enterprise configuration management.

Impact on Performance (Relationship of Increase to Strategic Goals)

This activity aims to achieve an Enterprise-wide IT infrastructure by leveraging existing capabilities within the components. Optimization of IT infrastructure represents a significant opportunity to realize future cost savings by taking a more coordinated approach to spending on commodity IT infrastructure. IT infrastructure optimization case studies also demonstrate agencies could improve IT service levels and, when relieved of the burden of managing these non-core functions, can concentrate more on mission priorities and results.

Department of Homeland Security
Working Capital Fund

(Dollars in Thousands)

Program Increase 13: Financial Management Line of Business

PPA: Government-wide Mandated Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$ 140

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level				0	0		0	0	\$146
Program Increase							0	0	\$140
Budget Request		0	\$143	0	0	\$143	0	0	\$286

Description of Item

The objective of the Financial Management LoB activity is to improve the cost, quality, and performance of financial management by implementing government-wide reforms that foster efficiencies in Federal financial operations.

Justification

The increase in funding is needed to support financial management system standardization efforts and to improve the implementation of FM consolidation.

Impact on Performance (Relationship of Increase to Strategic Goals)

An increase in funding will allow this activity to address transformation possibilities earlier thus gaining all of the benefits of standardization, consolidation and optimization sooner. This will ultimately lead to less costly implementation of systems and will ease the standardization and consolidation process.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 14: IAE Loans and Grants

PPA: Government-wide Mandated Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$ 192

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level				0	0		0	0	\$0
Program Increase							0	0	\$192
Budget Request		0	\$190	0	0	0	0	0	\$192

Description of Item

The Federal Funding Accountability and Transparency Act of 2006 (FFATA) requires OMB to “ensure the existence and operation of a single searchable website, accessible by the public at no cost to access” that includes information on each Federal award. The law specifically requires a unique identifier for the entity receiving the award and of the parent entity of the recipient, should the entity be owned by another entity. Since contracts (and some grants) already require Data Universal Numbering System (DUNS) numbers, a decision was made to leverage this to include loans and the remainder of the grants.

Justification

This activity allows loan and grant information to feed information into the FFATA portal, and the Integrated Acquisition Environment (IAE) activity has been expanded for this purpose. OMB initiated funding requests for each agency to reimburse IAE for this additional cost. This activity is a required agency activity mandated by the e-Government Act of 2002.

Impact on Performance (Relationship of Increase to Strategic Goals)

In addition to tracking loans and grants via DUNS numbers, this activity supports the grants management process by supporting the effort to provide business and linkage data seamlessly, resulting in higher quality data that are provided via real-time updates. This will result in a more integrated business process for buyers and sellers that will promote competition, transparency and integrity.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes

Program Increase							0	0	\$2,294
Budget Request	0	0	\$5,193	0	0	\$5,297	0	0	\$7,697

Description of Item

CPIC is run jointly by the OCFO, OCIO, and OCPO to assist the Department in carrying out its responsibilities for the quality and performance of its investment projects by providing support services and training for the Project Management Offices throughout the Department's components. The Project Management Offices are required to prepare business cases to demonstrate to OMB that they are on-track and ready to effectively use the additional funding that they are requesting in the DHS budget submission. This Activity provides services to support these efforts, including automated tools to assist with portfolio analyses, document preparation, document review and scoring, formal training, informational briefings, and remedial coaching to improve business case quality. It supports the Project Management Offices in preparing decision packages for DHS investment review boards at key decision points in their projects' life cycle.

Justification

The CIO is leading an effort to improve DHS's integrated program management and reporting capability, the System for Management Analysis and Resource Tracking (SMART). SMART will realize incremental improvements to the existing DHS CPIC architecture; establish interfaces to target DHS financial, acquisition, asset management, enterprise architecture, and human resources systems, and deploy an enterprise wide Business Intelligence solution to provide comprehensive program management analysis and forecasting capability for decision support services across the Department.

The budget increase of \$2.3 million in FY 2010 will enhance the CPIC periodic reporting function by integrating planning, budgeting and performance reporting at the project level on a monthly basis with corresponding financial, acquisition, asset management, DHS Enterprise Architecture (EA), and human resources information. SMART will provide centralized management information services for components to manage programs and investments down to the project level and for DHS to track corresponding performance metrics at monthly intervals for tracking performance trends such as Earned Value Management (EVM) and identifying risks for early mitigation and resolution. Consolidation within SMART will save time for users by streamlining the DHS status reporting and review processes. It will improve the quality, standardization, and consistency of program performance data across the entire department as the program managers entering corresponding

performance data will have a personal stake in the quality of the data. SMART will provide integration of DHS business information and provide implementation of analytic tools that support better tracking of program performance and better decision making by senior leadership in line with the EA. The budget increase will fund:

- Component Level Reporting roll out;
- Rollout of a workflow and Project Asset Library to store and route all required documentation for review and approval;
- Integration of project performance data with target financial, acquisition, asset management, and human resources systems of records; and
- Hardware software and support services to maintain the SMART architecture

Impact on Performance (Relationship of Increase to Strategic Goals)

The increase will progressively improve the number of DHS investments that perform within a 10 percent variance and reduce investment cost, schedule, and performance variances accordingly. It will also reduce overlap and duplication of investments; reduce reporting burdens on Components while improving data and information quality; increase alignment of DHS planning with program execution, and improve DHS Security Posture and information sharing capabilities.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 16: CPO Shared Reporting

PPA: DHS Crosscutting Services

Program Increase: Positions 0 FTE 0 Dollars \$442

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							4	4	\$4,825
Program Increase							0	0	\$442
Budget Request	1	1	\$4,400	4	4	\$4,724	4	4	\$5,267

Description of Item

The DHS Shared Reporting–CPO system is the acquisition data feeder system to the Federal Procurement Data System that is required by statute. This data source is the primary source of all acquisition data for the Federal government, used by U.S. agencies, governments around the world, the public, and the commercial world for planning marketing opportunities with the American government related to its annual acquisition budget. Without CPO Shared Reporting, DHS would not be postured to efficiently and effectively provide data, nor secure extensive reports from DHS acquisition data for Congress, the IG, GAO, and DHS management.

Justification

The increase in funding is required to support enterprise activities resulting from expanded workload and requirements of a growing acquisition workforce. A major tasking of the Acquisition Systems Branch (ASB) is to lead the long-term critical initiative to achieve comprehensive acquisition processes and data management through progressive consolidation and standardization. The Enterprise PRISM Instance is the cornerstone of this initiative and as the number of users increase, so do operations and maintenance costs. A related, but new project in FY 2010, involves establishing a contract management system for classified procurements. Due to the very nature of the project, costs are higher than those of a non-classified system. Another new project is Enterprise Reporting. Interest in DHS programs and the contracts that support them continues to grow. A system is required to provide enterprise data and metrics to quickly respond to inquiries and as a management tool to support information sharing to enable better business decisions.

Impact on Performance (Relationship of Increase to Strategic Goals)

The increase in funding will enable the ASB to continue to provide the wide-ranging acquisition systems and tools and personnel to support the contracting mission of the Department and to ultimately further the Department’s ability to more effectively support response and recovery activities.

The implementation of this WCF activity fulfills the following critical goals:

- Supports the Secretary’s goal to Strengthen and Unify DHS Operations and Management.

- Supports the Chief Procurement Officer's goals to make good business deals; perform effective contract administration; and to build and sustain the DHS acquisition workforce.
- Supports the ASB mission to provide the DHS acquisition workforce with e-Acquisition systems and tools which leverage investment costs and promote competition, transparency, integrity and standardization.

Benefits to be derived from CPO Shared Reporting WCF activity include:

- Cost avoidance and elimination and reduction in duplicative systems and tools across the Department.
- Provides the acquisition workforce with systems and tools to support and reinforce business processes and standards which facilitate efficient and effective acquisition of goods and services.

Department of Homeland Security
Working Capital Fund
Justification of Program Changes
(Dollars in Thousands)

Program Increase 17: Data Center Consolidation

PPA: Fee-for-Service Activity

Program Increase: Positions 0 FTE 0 Dollars \$ 200,000

	FY 2008 Actual			FY 2009 Enacted			FY 2010 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							0	0	\$0
Budget Request		0	0	0	0	0	0	0	\$200,000

Description of Item

The DHS Office of the Chief Information Officer (OCIO) has established two enterprise DHS data centers to provide large-scale, physically secure, scalable, mission critical data center computing facilities and services for DHS. Currently, DHS is undergoing efforts to migrate disparate component systems and applications from legacy data centers to the two enterprise DHS data centers. The two DHS centers address the need for greater efficiency, improved security posture and the rapid movement of information within the Department. With the two enterprise data centers, DHS has established the capabilities to integrate, consolidate, and transform the individual component Infrastructures into a single, world-class IT infrastructure capable of supporting the significant demands required of an organization of more than 200,000 employees along with the information sharing requirement of Federal, State, local and tribal business partners.

Justification

The Data Center Consolidation WCF activity will provide the vehicle by which to manage the funding for the migration efforts to the DHS enterprise facilities. Operation as a DHS WCF activity will allow dramatic reduction in overhead required to manage data center consolidation. The WCF will allow DHS to act as a single bill payer to the Data Center service providers, and will dramatically reduce necessary procurement activities. The consolidation into a WCF activity will also allow for greater transparency and more effective management of the goods and services being provided to the Department. By allowing for the central management of the contracts between Data Center providers, the Data Center Consolidation activity enables components to focus their resources on their missions, rather than contracting and administrative support for acquiring data center services.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Enterprise Data Centers WCF Supports the DHS goal of “One Infrastructure” and “One DHS.”. The proposed Enterprise Data Centers WCF activity aligns with Goal Five of the DHS Strategic Goals, “Strengthen and Unify DHS Operations and Management” and Goal One of the DHS IT Strategic Plan, “Optimizing IT Infrastructure.”

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Working Capital Fund
Justification of Proposed Changes in Department of Homeland Security
Appropriation Language**

SEC. 504. The Department of Homeland Security Working Capital Fund, established pursuant to section 403 of Public Law 103-356 (31 U.S.C. 501 note), shall continue operations as a permanent working capital fund for fiscal year [2009] **2010**. Provided, That none of the funds appropriated or otherwise made available to the Department of Homeland Security may be used to make payments to the Working Capital Fund, except for the activities and amounts allowed in the President's fiscal year [2009] **2010** budget: Provided further, That funds provided to the Working Capital Fund shall be available for obligation until expended to carry out the purposes of the Working Capital Fund: Provided further, That all departmental components shall be charged only for direct usage of each Working Capital Fund service: Provided further, That funds provided to the Working Capital Fund shall be used only for purposes consistent with the contributing component: Provided further, That such fund shall be paid in advance or reimbursed at rates which will return the full cost of each service: Provided further, That the Working Capital Fund shall be subject to the requirements of section 503 of this Act.

Explanation of Changes:

To extend the current language for the Working Capital Fund into FY 2010.
