SUBJECT: Addendum #1 Clarification and Questions and Answers  
IFB752-17-192757-BS – Mobile Solar Collection Trailer

Clarifications:

1. Addendum to 1.1.5 Trailer Platform  
The trailer should be enclosed to hold the batteries and components inside and also allow for storage of other items.

There have been questions asked in regards to the above mentioned IFB -see below for question with answer:

Q. Trailer size- 5x9 is a small trailer it will not weigh 3,100 lbs even with all the batteries

A. The trailer needs to be 5x9. Weight is not important, as long as it has the desired functionality.

Q. Do you have a design in mind?

A. Desired trailer should be enclosed. Batteries and components inside. Panels on top. Storage space left for items inside.

Q. Would you like a Hybrid system?

A. No. 100% solar power.
