**g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.**

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

NJIS is a cradle to grave case management system for the DON Legal communities. It will provide a web based system that will allow users from Law Enforcement, Judicial Actions, Corrections, Command Actions, and NCIS a tool to manage day to day case related activities. This system will satisfy DIBRS requirements for the Department of the Navy and also address data management for the Legal communities for both the Navy and the Marine Corps. NJIS collects, tracks and manages data on housing, custody, rehabilitation programs and education, public law mandated sex offender registration and victim and witness notification, Brady Bill reporting requirements, offenses, court actions, sentences, supervised release and clemency reviews, transfers, and releases. NJIS performs as the central repository for the Victim and Witness Assistance Program data. NJIS uses Business Objects (report tool) to identify data entry errors for brig staff correction purposes, create task lists, daily change sheets, brig logs, statistics, reports, and trend analysis used in manpower, program and budget planning.

Personal information collected includes: Name, other names used, SSN (full and truncated), driver's license, DoD ID number, citizenship, legal status, gender, race/ethnicity, birth date, place of birth, personal cell telephone number, home telephone number, personal email address, mailing/home address, security clearance, spouse information, marital status, child information, financial information, medical information: height, weight, eye and hair color, law enforcement information, employment information, military records, emergency contact information.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

The risk of data disclosure is very low. Potential threats/risks that may impact the integrity, availability, and

confidentially of the NJIS system includes individual users mishandling of data and firewall issues. Mitigations include: DoD PKI certificates are used for server and client authentication. Logins to the web page are controlled by the application. User authentication and role-based authorization are implemented to grant access to RIMS(FM). All external communications to the web server are protected by an external firewall, host address block / allow lists and HyperText Transfer Protocol (HTTP) of Secure Sockets Layer (SSL) encryption. An outer firewall interface will require HTTP of SSL opened inbound to the web servers. System logins are limited, in general, to administrators and developers. The NJIS production database server resides within the the Russell Knox Building (RKB) in Quantico Virginia Center's Production Private Access Zone of the EDMZ - providing another level of security.
