This P-1 line is for passenger-carrying vehicles consisting of buses, automobiles, ambulances, and various utility and carryall trucks up to 9200 lbs. Gross Vehicle Weight Rating (GVWR). T Naval operating forces and shore activities for essential transportation of personnel in the execution of official Navy business. Beginning in FY 2010 funding in this line supports the Joint PO Command (JPAC).

Buses procured are 20 to 60 passenger school buses, shuttle buses, intercity buses, and ambulance buses, which provide the most cost effective means to transport groups of people betwe are used to transport sailors/airmen and reserve personnel for flight/ship logistic related assignments, mandatory military training and exercises, and for transportation of personnel between a ships/airfields, and industrial areas on a daily basis (both scheduled and intermittent).

Automobiles are used to transport small groups of personnel, on and off base, for various work related activities. Law enforcement automobiles provide essential transportation services to ir responsiveness in support of DOD intelligence and base security missions. They are used in Naval intelligence, investigative and surveillance operations, security patrols, and other law enfo

Ambulances are used by the Medical Corps at Navy hospitals, clinics, and by Naval Expeditionary Medical Command Units. Modular ambulances are used for emergency transport of perso medical services are provided in route. Field ambulances provide the same emergency service, but are four-wheel drive to access remote sites in support of field units. Patient transport am transporting stabilized patients to specialized care/other medical facilities. Ambulance conversion buses are used to move mixed loads of ambulatory and/or stretcher-borne patients.

Maintenance/utility trucks are utilized to transport, tools, supplies, materials, and equipment necessary for maintenance personnel performing facility maintenance at shore facilities. Carryalls sailors, flight crews, maintenance, and civilian personnel to work sites or for other mission related activities.

Funding allocated for the procurement of reserve equipment is displayed on the P-5R. Delivery schedules displayed on the P-5A are representative of the delivery schedules for reserve proc

This request includes a budget base transfer of Civil Engineering Support Equipment (CESE) from SOCOM (MFP-11) to Navy (MFP-2).

Included in this request is FY 2012 Overseas Contingency Operations (OCO) funding for Operation Enduring Freedom - Horn of Africa (OEF-H) in the amount of \$2.628M for Camp Lemonie NSA Bahrain. These funds will provide for fully equipped and outfitted 4WD emergency medical ambulances as well as passenger carrying vehicles; buses, vans and 4x4 sport utility vehicle civilian personnel to work sites. Many of the roads in Djibouti are unimproved and the use of 4x4 SUVs is necessary to access work sites.

This P-1 line item is for various sizes of utility and cargo trucks of commercial design. Cargo pickup trucks are used to transport personnel and equipment in support of fleet operations where such mobility is necessary to support the mission. The maintenance/utility trucks are used to transport tools/materials necessary for maintenance personnel performing facility maintenance. Panel and multi-stop trucks are used primarily for the movement of material/equipment requiring protection in an enclosed van-type body and freight trucks are used to move palletized material from warehouses to users. Funding is also included in this line for specialized operations such as the Joint POW/MIA Accounting Command (JPAC), and other mission specific equipment.

This request includes a budget base transfer of Civil Engineering Support Equipment (CESE) from SOCOM (MFP-11) to Navy (MFP-2).

The funds requested in FY 2012 will provide for recapitalization requirements to support fielding a fleet of equipment within useful life expectancy.

QUANTITY												
COST (in millions)		12.936	12.853	14.315	3.672	17.987	14.533	14.748	14.941	1		

This P-1 line is for aircraft fire/rescue trucks and structural/brush fire trucks. The aircraft fire/rescue trucks are used at Naval Air Stations for combating aircraft fires and rescue of aircraft crew small 11,000 pound Gross Vehicle Weight Rating (GVWR) pickup with utility body and twin agentfire fighting unit to the 68,000 pound GVWR crash truck which carries 3,000 gallons of water structural/brush fire trucks are used at Naval activities in the same manner as municipal fire trucks in fighting structural and grass fires.

The Navy's investment in ships, aircraft, facilities, and equipment mandates having adequate fire protection. The requested funds are needed to comply with findings identified in the DoD IG Report: D-2003-121 DoD Fire and Emergency Services Program. Numerous structural pumpers do not meet current National Fire Protection Association (NFPA) standards for enclosed cab assemblies, crash response trucks do not meet roll safety criteria, and several ladder trucks are beyond safe working limits. A large number of crash response trucks are overage and no longer parts supportable and must be replaced. The ability to save lives and protect property is essential in supporting the Navy's mission. The role of these trucks is to provide fire supression, public safety, and force protection including first responder to terrorism incidents, and weapons of mass destruction.

The funds requested in FY 2012 will provide for recapitalization requirements to support fielding a fleet of equipment within useful life expectancy.

Included in this request is FY 2012 Overseas Contingency Operations (OCO) funding for Operation Enduring Freedom - Horn of Africa (OEF-H) in the amount of \$3.672M for Camp Lemonier, Djibouti (HOA). These funds will provide for 1) Weapons of Mass Destruction (WMD) /Chemical, Biological, Radiological, Nuclear, Environmental (CBRNE) / HazMat emergency vehicles capable of responding to all hazards incidents. Current vehicles are inadequate to move equipment and respond to emergencies, resulting in delayed response times, more equipment and manpower and inability to withdraw and relocate in a timely manner. The units will be fully equipped and operational to provide organic fire and emergency services response to these types of incidents; 2) Aircraft firefighting 3,000 gallon units are required to support new emerging aircraft operations and structural firefighting equipment are required to support new construction of installation facilities.

This P-1 line is for light and medium duty tactical equipment used primarily by the Naval Expeditionary Combat Command (NECC), Maritime Prepositioning Force (MPF), Naval Beach Group line also includes Force Protection requirements for Tactical Vehicles.

Light duty tactical vehicles (HMMWVs) are used by NECC, MPF, NBG, and special operating units for the movement of personnel and equipment. Medium tactical trucks are required for rap allowance material and have air transport, water fording, and enhanced combat mobility capability. Medium tactical cargo trucks are used for material/equipment movement and delivery. M combat construction of airfields, landing zones, road battle damage repair, and rapid runway repair.

Funds requested in Force Protection are for outfitting requirements for vehicle crew protection imposed by the use of IEDs. The crew protection requirements include vehicle armoring, Blue Measure (ECM) systems.

Program includes funds for the procurement of vehicles required for security of nuclear assets at the Naval Submarine Base, Kings Bay and the Naval Submarine Base, Bangor in accordance with DoD S5210.41M and SECNAVINST 8126. Both bases serve as homeport for TRIDENT submarines and provide for the production, assembly, and storage of TRIDENT II (D-5) missiles (including nuclear warheads). The vehicles are required for security in the Limited Area (LA) where missiles are assembled and stored, the Convoy Route (CR) used during transport of missiles between the LA and the waterfront, and for the Waterfront Restricted Area (WRA). The vehicles support the detection and assessment capabilities required by the Marine and Navy Response Team to ensure denial to unauthorized personnel, as well as, protection of the missiles during production, storage, and on/off-loads.

The funds requested in FY 2012 will provide for recapitalization requirements to support fielding a fleet of equipment within useful life expectancy. FY 2012 funds also provide for a DON Energy Initiative.

Funding allocated for the procurement of reserve equipment is displayed on the P-5R. Delivery schedules displayed on the P-5A are representative of the delivery schedules for reserve procurement.

This P-1 line provides equipment which significantly enhances the Navy's capability to support Marine Corps amphibious and Logistics Over the Shore (LOTS) operations through ship-to-sho This program is a key part of the Strategic Sealift Program. The equipment that is part of this program is designed to interface with Maritime Prepositioning (MPF) Ships, Roll-on/Roll-off (RO container ships (dry cargo) which enables the Navy to provide the required logistics support in advanced areas having little or no port capability. The equipment is used by the Amphibious Br Echelon (AFOE) and MPF operations.

The Improved Navy Lighterage System (INLS) replaced the Navy Lighterage (NL) which had reached the end of its' service life and which had a negative impact on crew safety and operation operations in higher sea states, has a greater service life, and has reduced maintenance costs. INLS is deployed during LOTS operations, AFOE operations, and MPF operations. INLS con Ferries, RO/RO Discharge Facilities, and Floating Causeways.

Other Amphibious Specialized Equipment consists of specialized equipment and crafts in support of Amphibious Sealift operations and exercises.

The FY 2012 funding request supports the Service Life Extension Program (SLEP) for the remaining Lighter Amphibious Resupply Cargo (LARC) crafts. In addition, the FY 2012 request sup module to interface with the Elevated Causeway System (ELCAS). ELCAS interface is required to ensure the disparate connector and mating systems of the INLS (8 ft. deep) and the ELCA safely engage in mission required seas. An INLS module rotational pool is required to provide the capability to maintain the inventory of INLS modules on board an MPF when the major mai is not completed prior to ship back load. The procurement of the INLS rotational pool is planned to begin in FY 2013 and be completed by FY2015.

This P-1 line supports the Navy Ashore Pollution Control Equipment program. Funding requirements for the Navy's oil spill program include procurements of oil spill containment boom and r Oil recovery systems such as oil skimmers enable shore activities to efficiently collect spilled oil after initial containment. This equipment will enable the Navy to meet the requirements estable National Contingency Plan which requires rapid and effective response to oil spills. The revised National Spill Contingency Plan mandates that the DOD and the Navy assume responsibility substance spills. These broad responsibilities require the Navy to maintain sufficient spill response equipment for the Navy activities worldwide, such as oil spill containment systems and rec spills in Alaska, California and the Gulf of Mexico have increased the public's sensitivity to releases of oil into the environment.

The change in funding levels beginning in FY 2012 is due to the requirement to replace equipment experiencing numerous and persistent mechanical problems at an increasing rate. This is response readiness which significantly increases the risk that Navy will not be able to respond to an oil spill in a timely manner.

SPECIAL PURPOSE VEHICLES/EQUIPMENT

This program includes special purpose vehicles and trailers of commercial design which support the Naval Expeditionary Combat Command (NECC), shore activities, and other special operating units. Include construction equipment at remote locations, waste disposal trucks used to transport waste oil/water, overhead maintenance trucks with insulated buckets and pole and line trucks used for repair/replacement or recovery/towing, field servicing vehicles used for on-site preventive maintenance of construction equipment in the field, and ammunition handling trucks used in loading/unloading and transporting munitions. T active operating forces in the logistics support of the fleet are also included in this program. Representative types and uses include van and stake bed semi-trailers to support loading/unloading of ships and ai equipment for fleet operations, lowbed semitrailers for transport of construction equipment, tank trailers for transport and dispensing of water, fuel, and hazardous liquids, and semi-trailers transport of materials procurement of vehicles required for security of nuclear assets at the Naval Submarine Base, Kings Bay and the Naval Submarine Base, Bangor in accordance with DoD S5210.41M and SECNAVINST 8126. submarines and provide for the production, assembly, and storage of TRIDENT II (D-5) missiles (including nuclear warheads). The vehicles are required for security in the Limited Area (LA) where missiles are (CR) used during transport of missiles between the LA and the waterfront, and for the Waterfront Restricted Area (WRA). The vehicles support the detection and assessment capabilities required by the Marine to unauthorized personnel, as well as, protection of the missiles during production, storage, and on/off-loads. The funds requested in FY 2012 will provide for recapitalization rquirements to support fielding a fl expectancy.

This request includes FY 2012 Overseas Contingency Operations (OCO) funding for Operation Enduring Freedom, Afghanistan (OEF-A) reset requirements in the amount of \$1.002M. The FY 2012 OCO funding for Operation Enduring Freedom, Afghanistan (OEF-A) reset requirements in the amount of \$1.002M. The FY 2012 OCO funding for Operation Enduring operating tempos in theater, these trailers are beyond economical repair. The trailers are requirement/materials.

COMBAT CONSTRUCTION SUPPORT EQUIPMENT

The equipment included in this program is used by the Naval Expeditionary Combat Command (NECC), Naval Beach Group (NBG), and special operating units to provide responsive military construction support forces during military operations, construction of base facilities, and in the conduct of limited defensive operations. These facilities and equipment are vital for maintaining the integrity and sustainability of these operations. Equipment items include containers, required for prepacking and securing on-site storage of expensive equipment to expedite mobilization, fuel storage tanks required for on-site storage of fuel, was treatment systems, water storage tanks (collapsible fabric) required for water treatment, storage and distribution systems, power distribution panelboards required for camp electrical distribution systems, and the equipment maintenance and company shops. The funds requested in FY 2012 will provide for recapitalization rquirements to support fielding a fleet of equipment within useful life expectancy.

OCEAN CONSTRUCTION EQUIPMENT

Ocean Construction Equipment are those specialized equipment and facilities components used primarily by the Naval Construction Force (NCF) to perform site selection, construction, inspection, maintenance, repair and removal of fleet and other Navy fixed underwater and ocean facilities, and in support of shore-based hyperbarics. Some equipment is centrally procured under this line as initial outfitting for the Underwater Construction Teams' (UCT) Tables of Allowance (TOA). Most of the equipment is for the Ocean Construction Equipment Inventory (OCEI). It is centrally procured and maintained by the Naval Facilities Engineering Command in a controlled inventory to ensure the NCF response to fleet needs is both timely and adequate. Utilization of funds from this program sustains the Naval Construction Force (NCF) capability to meet fleet requirements for ocean facility site survey, construction, inspection, repair, and removal, resulting in the ability of the fleet to retain its readiness through utilization of its underwater facilities. The funds requested in FY 2012 will be used to replace existing equipment kits and systems which are well beyond their useful and maintainable lives. In many instances, these replacements will result in slightly improved or modified capabilities.

MOBILE UTILITIES SUPPORT EQUIPMENT (MUSE)

Equipment in this program consists of electric power generation plants, electric substations, and steam boiler plants (including water treatment plants to meet ships' minimum clean steam requirements). MUSE provides short-term support for fleet and shore utility requirements resulting from equipment failures, changes in planning and programming, temporary replacement of utilities equipment which is out of service, ships' support and testing, expeditionary military operations, and utilities outages resulting from natural disaster. Operations supported are submarine testing, ships' repair, retrofit and nuclear refueling, cold iron applications, serious utility system deficiencies, MILCON delay, and advanced base requirements. The funds requested in FY 2012 will procure one 800kw power plant and one 1500kw power plant in each year.

LOCOMOTIVES

The \$3.6M in FY 2010 is Overseas Contingency Operations (OCO) funding. The funds are for the procurement of two (2) 120 ton locomotives for Naval Weapons Station Earle for Operation Enduring Freedom and Operation Iragi Freedom / Operation New Dawn requirements. The locomotives support major ship load-outs, transporting ordnance to and from the Mainside Area and Waterfront Area (a distance of 22 miles). These assets are critical, enabling the delivery of large quantities of ordnance in a safe and efficient manner in support of OCO requirements.

The Physical Security Vehicle line includes armored sedans and armored cargo/utility trucks assigned to Antiterrorism (AT), Counterintelligence (CI), and Counternarcotics (CN) missions in high threat OCONUS locations. Sedans and cargo/utility trucks are armored to various levels of protection and are on platforms of varying sizes and gross vehicle weights, dependent upon the level of threat and the operating environment. These vehicles are generically referred to as either Commercial Heavy Armored Vehicles (CHAVs) or Commercial Light Armored Vehicles (CLAVs).

NAVY CASH - This program funds the procurement of the Navy CashTM system. Navy CashTM is a teaming effort between the Naval Supply Systems Command (NAVSUP), U. S. Department of the Treasury (Treas,FMS), Industry, and the Fleet to replace the existing ATMs-at-Sea program. The program is essential to the Navy's Direct Deposit System. Navy Cash improves the Quality of Life for Sailors and Marines on board ship by providing improved access to their financial accounts ashore and better service shipboard. Navy Cash improves shipboard business practices by reducing the collecting, counting, recounting, sorting, moving, and monitoring of paper currency and coins for retail locations, disbursing office, and other functions that collect funds. By providing a form of electronic banking, Navy Cash provides fundamental support for other key initiatives in the Disbursing Office, Ship's Store, and Post Office and addresses optimal manning issues for retail and services operations on future ship classes. This program is a direct improvement of fleet support.

The program enhances morale and productivity aboard ships as well as cost savings to afloat disbursing operations by eliminating payroll and check preparation costs.

AUTOMATIC IDENTIFICATION TECHNOLOGY - The Department of Defense (DoD) promulgated Radio Frequency Identification (RFID) Policy on 30 July 2004. Current DoD RFID policy focuses on In-Transit Visibility (ITV) support of the Combatant Commanders (COCOMs) as the primary application of active RFID, and DoD supply management applications for passive RFID. This effort will ensure Fleet and component commands have deployable active RFID capability to support contingencies and DoD/Navy RFID policy. Navy has invested in and taken action to support initial CENTCOM active RFID requirements. These funds represent the Navy costs for the initial outfitting and life cycle costs to fully fund all currently identified COCOM ITV requirements.

<u>Description</u>: The OPN funding shown above will suppot the complex computing environment of the Joint Warfare Analysis Center (JWAC). This includes AIS hardware and major upgrades to support all analysis and administrative requirements for JWAC. The FY 2012-FY 2016 funding is necessary to maintain JWAC's computing environment. Contracts have been established that allow for Indefinite Deliveries Indefinite Quantities (IDIQ), multiple options and multiple delivery dates.

This funding also supports classified efforts. Additional information about these efforts are held at a higher classification.

This line item is reported in accordance with Title 10, United States Code, Section 119(a)(1) in the Special Access Program Annual Report to Congress.

<u>Justification</u>: In order to provide the complex computing environment necessary to meet the Joint Warfare Analysis Center's (JWAC's) mission, contracts have been established to allow for indefinite deliveries and indefinite quantities (IDIQ), multiple options and multiple delivery dates.

Mass Storage: The mass storage system is JWAC's key technical asset for storage of all data used by the analysts (lifecycle replacement of servers on the various networks.)

Miscellaneous Items: Cryptographic equipment and other centrally managed items to support and maintain JWAC.

Classified: Additional detatils are held at a higher classification.

This line item is reported in accordance with Title 10, United States Code, Section 119(a)(1) in the Special Access Program Annual Report to Congress.

(In Millions)														
BOATS: YP001 - Funds procurement of service craft and small boats through NAVSEA for training use.														
Fire Arms Training Simulator (FATS) equipment: YP300 /CO010- Funds technology upgrades for FATS weapons simulators used by CENSECFOR. Required upgrades include the "blue fire" un-tethered weapon systems. These un-tethered weapons systems and scenarios place the students into the action and afford them the ability to freely maneuver and handle the weapons. These simulators allow for repetitive training and learning of the movements without the cost of ammunition or the wear and tear on weapons and ranges.														
Force Protection Ship Simulator (FPSS) Netting: YP015 - Construction of a Force Protection Ship Simulator (FPSS) was completed in FY 2009 at the learning site in Mayport, FL. Subsequently, a safety inspection concluded that safety netting is necessary to contain the simulation for exterior training exercises. Without the required netting, simulated engagements on the outside of the FPSS cannot be conducted and simulation can only be used on the interior where it can be safely contained. This will fund procurement and installation of the required safety netting.														

BUDGET ITEM JUSTIFICATION SHEET	DATE:
P-40	January 2011
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE
OTHER PROCUREMENT, NAVY/BA-7	Training Support Equipment: 8081

Continuity of Operations (COOP) - YP010 - Existing IT infrastructure for training applications is insufficient to support the projected growth in content, users, and requirements for continuity of operations. Funds will be used to expand the capacity of servers, storage, and networks in addition to providing fail-over capability in the data center for storage of data and application code at an alternate site. These systems are vital to the operational readiness and effectiveness of education and training. Failure to make these investments could lead to immediate and sustained loss of mission effectiveness.

Fleet Synthetic Training (FST) Naval Continuous Training Environment (NCTE): AA800

Periodic upgrade of components within the NCTE architecture to keep system compliant with current technology and support both Joint interoperability and synthetic training. This architecture includes a distributed network which interconnects various Naval training sites, enabling Fleet Synthetic Training (FST) exercise operations. FST events are conducted using the NCTE to allow a seamless integration of geographically dispersed Navy, Joint, and Coalition forces, while optimizing the Fleet Response Training Plan (FRTP). Integrated in all phases of the FRTP, FST exercises provide Unit through Strike Force level warfare proficiency training, interoperability training, operational training, mission rehearsal training and joint interoperability training through a series of evaluated training events. The NCTE network was designed and built to be operated as a continuous, "always on" training environment, providing a superior, virtual constructive training capability that represents substantial cost savings to the Navy. It is imperative that periodic refresh of hardware and equipment encompassed within the NCTE architecture occurs, keeping the architecture current, operational and able to support Navy training requirements.

The upgrades/spare parts are vital to the NCTE training infrastructure within which the U.S. Navy and Joint Services train to ready forces for deployment.

Fleet Synthetic Training (FST) Joint Semi-Automated Forces (JSAF) - AA800 -This is a simulation system that generates entity-level simulations which interact individually in a synthetic environment. Individual entities include infantrymen, tanks, ships, airplanes, munitions, buildings, and sensors. They can be controlled separately or organized into appropriate units for a given mission. JSAF draws on a large-scale, worldwide terrain database to generate high-fidelity simulations of many environments, including the details of urban terrain. The system also simulates detailed civilian behavior - critical in representing urban environments. Simulation can be run locally or distributed on a wide-area network. JSAF supports multiple federations, or collections of simulation components that work together to represent the joint battle space. The equipment required to run JSAF software programs (servers/switches/workstations) is all Commercial Off The Shelf (COTS) procured.

BUDGET ITEM JUSTIFICATION SHEET	DATE:
P-40	January 2011
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE
OTHER PROCUREMENT, NAVY/BA-7	Training Support Equipment: 8081

GCCS-M: 68948 - GCCS-M GCCS-M is organized to support three different force environments: Afloat, Ashore and Tactical/Mobile. In order to allow for maximum interoperability among GCCS systems at all sites and activities (Afloat, Ashore and Tactical/Mobile), GCCS-M utilizes common communications media to the maximum extent possible. GCCS-M enhances situational awareness of the battle space and brings a Common Operational Picture (COP) to the fleet. In addition to enhanced/improved track management, improved web access, operator access to target intelligence from the theater JIOC, and hyperlinked COP capability, 4.x also provided the United States Navy (USN) closer coordination capability with the Joint community through additional joint interoperability tools. GCCS 4.x has also changed server hardware configurations and are more operator-friendly and easier to maintain.

Crane Simulator Trainers: M8010 - The development of basic crane operating skills through simulation. The student learns basic fundamentals in a potentially dangerous virtual environment while being in a safe real environment mitigating the risk of casualties to personnel and damage to the crane along with collateral damage to property and facilities. The instructor will be able to increase/decrease scenario fundamentals based on the students abilities which allow the student to grasp a fundamental concept prior to prematurely move to a more advanced scenario.

Life Cycle Maintenance: The Navy Continuous Training Environment (NCTE): AA800 - The Navy Continuous Training Environment (NCTE) is a distributed network that interconnects eighty-three plus (83+) Navy, Joint and Coalition training sites. The overall success of the NCTE and the positive impact on Navy Training has resulted in an unprogrammed expansion over the last three years. To maximize return on the training dollar, reduce overall operating expense, and support the global nature of the NCTE, the suite of equipment must be continuously maintained and upgraded. Planned periodic replacement of hardware within the NCTE architecture is essential to keep pace with technology upgrades and end of life issues associated with existing equipment within the architecture. The upgrades/spare parts are vital to the NCTE training infrastructure within which the U.S. Navy and Joint Services trains to ready its forces for deployment. Within the NCTE environment, we certify our forces as "ready" under the terminology of the Department of Defense requirements for training, equipping and manning the Navy and other Services.

Digital Radio Management System (DRMS): AA800 - The Navy Continuous Training Environment (NCTE) is the training infrastructure within which the U.S. Navy trains to ready its forces for deployment. The Digital Radio Management System (DRMS) enables communications within the NCTE Architecture enabling joint and service communications with USN ships during service and joint exercises. DRMS is currently installed throughout the East Coast of the United States and various locations on the West Coast. This funding will complete the installation of DRMS throughout Japan, at the Fleet Concentration Sites in Yokosuka and Sasebo Japan. This communications system provides the tactical communications, Link 11 and 16, and problem control circuits necessary to simulate/stimulate at sea training events while pier side. This communications system is essential to work up deploying Strike Groups headed for combat in theater.

Ballistic Missile Defense (BMD): AA800 - Missile Defense Synthetic Training is required for Navy's BMD synthetic training events (BMDEX and FST) and shipboard qualification / certification events. The Navy will have twenty-one (21) BMD-capable ships in FY-11, increasing to twenty-four (24) in FY-12, and continuing to climb to thirty-four (34) ships in FY-17. The Navy must be adequately trained to meet POTUS and CCDR BMD mission taskings, and to attain the BMD qualification required for MSO-R certification. TYCOMs, Numbered Fleet Commanders (C2F, C3F, C7F), and Afloat Training Groups (ATG)/Tactical Training Groups (TTG) are responsible for the training, qualification, and certification of BMD ships and units. The integrated/advanced phase training and BMD qualification is a quarterly unit training requirement. These training providers currently lack the tools and capability necessary to effectively execute this requirement.

BUDGET ITEM JUSTIFICATION SHEET	DATE:				
P-40	January 2011				
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE				
OTHER PROCUREMENT, NAVY/BA-7	Training Support Equipment: 8081				

Electronic Military Personnel Record System (EMPRS) - YP020 - is an electronic document/image based system that serves as the repository for all Department of Navy (DoN) official military personnel record images (over 150 million images). It supports retired, active, and reserve military personnel in the functional areas of selection board operations, casualty management, mobilization, veteran benefits (providing automated Sailor information to the Veterans Administration) and other military personnel management functions. EMPRS annually supports over 150 statutory and administrative selection boards, providing over 12 million service record images, covering promotions, assignments, and retention. References: Title 10 & 44, U. S. Code and Title 36, CFR (Record Management Requirements), DoD Directive 5015.2

Tactical Training Simulator (TTS): CO010 - The Tactical Training Simulator will support our MA (Master at Arms) "A" School (A-830-0011) course of instruction at our Learning Site, NTTC Lackland AFB. This procurement will help provide a more realistic training environment for students. The TTS will be used for teaching all MA "A" school students the proper tactics, techniques and procedures in support of the following course objectives: Anti-Terrorism / Force Protection procedures; Tactical Team Movement and communications; Pier Sentry procedures; Force Protection Conditions; Physical Security Safeguards; Apprehension; and Search and Seizure. The Guard Tower will serve three separate functions. It will be used as the primary safety observation point for the training; will serve as the primary focal point for the scenario driven training when using the Tactical Training Simulator and will reduce the required number of safety observers to deliver the training.

Guard Towers (Scenario Training Devices at both SERE East and SERE West locations) : YP300/CO010 - The Guard Towers used in support of delivering the resistance and escape phase of the training serves three separate functions. It is the command and control point for managing the training being conducted while the students are in the POW camp; it serves as the primary safety observation point for the training and is primary focal point for the POW camp scenario driven training. The tower is in poor condition and needs to be replaced.

Navigational/Communications Equipment: CO010 - Funds procurement of radios and navigational equipment to meet Command, Control, Communications, Computers, Intelligence (C4I) training requirements on four Riverine Patrol Boats and four Riverine Assault Boats.

Hostage Resistance Training Lab (HRTL): CO010 - In order to meet JPRA-mandated course content (Core Captivity Curriculum (CCC) a combination of Survival Evasion Resistance and Escape (SERE) and Peacetime Detention and Hostage Survival (PDAHS) Training) changes and additional throughput requirements, a third site or one large consolidated training site would be required. JPRA mandated that PDAHS training be conducted. PDAHS training incorporates a Hostage training scenario which requires an additional lab space configured to meet the training requirements. As such, funding is necessary to provide a Hostage Resistance Training Lab (HRTL) specifically for this training module.

Narrative Description/Justification:

JFCOM

1. Enterprise Networks

Command and Control, Communications, and Computer (C4) Systems Directorate (J6) implements and manages global communications and computer networks for USJFCOM and its components; ensures reliability of Command, and Control, Communications, Computer (C4) Systems and protects and defends these systems.

A. A broadband communication subsystem connected to and using operational networks globally is capable of carrying voice, video, imagery and data throughout the local area, DoD and the global-wide area. This subsystem provides multiple gateways for real-time access to world-wide networks such as: DREN, DISN, TMAN, NMCI, etc. The IT subsystem provides collaboration technologies, IT security protection and real-time detection, classified and unclassified network infrastructure, composed of client/server components, hardware, software and system services needed to execute planning. It includes both home station and deployable equipment with reach-back capability.

B. Capabilities that support the Enterprise include:

1. Command Email System

2. Command Portal - for sharing, collaboration, and workflow processing

3. Commander's Decision Tool

4. Video Teleconferencing for Headquarter's Staff

5. WEB Servers - Networked web services that provide web-based access to organizational information, including network-wide search capability.

6. Phone Expansion Port Node (EPN) - Phone system chassis to expand phone switch capacity for voice and data requirements, including higher capacity requirements using ISDN technology.

7. Enterprise Storage Area Network (SAN), CD Jukebox, and backup system - High capacity network storage for searchable networked-stored historical data with sufficient capacity for storing multiple years of organization data

8. Computer Network Defense - to protect and defend the network against a constant barrage of intrusion attempts, malicious code, phishing attempts, and network attacks.

9. Tier III Computer Network Defense Support Provider

10. Information Assurance - To provide analysis, recommendations, policy, and support ensuring availability, non-repudiation, confidentiality, and integrity of information contained on networked systems.

C. As an element of the transformation process, information technology services must be developed to keep pace with industry as well as operational readiness with a focus on leading edge technologies. The QDR also recognizes information operations as a core competency for DoD. Subsystems include:

1. Cable & Fiber Plant Maintenance Support - The base copper and fiber physical plant supporting the USJFCOM enterprise networks has reached its life expectancy and requires extensive repairs and maintenance. Currently no facilities exist for repair or life-cycle replacement of the cable infrastructure.

2. Networked Services Support and Maintenance - such as email, file storage, DNS, office automation, collaboration tools, project management tools, computer aided design, etc.

CLASSIFICATION: UNCLASSIFIED

OTHER PROCUREMENT NAVY/BA-7	BLI:	8106 Comman	d Support Equipment
Program Element for Code B Items:	Other Related Program Elemer	nts	

3. Enterprise Networks Life Cycle Replacement - Periodic replacement of the JFCOM Enterprise Networks equipment and software to include routers and switches in the LAN and WAN, along with their respective software packages (IOS) over a three -five-seven year period.

4. Network Tools Upgrade - to detect anomalies and to respond to critical issues within expected timeframes.

5. Network Management Upgrade - Periodic replacement of the JFCOM Enterprise Network Management equipment and software to include servers and associated software packages .

6. Information Assurance (IA)/Defense-in-Depth Architecture - Defense-in-Depth Information Assurance (IA) architecture monitors information systems and computer networks in order to detect, isolate, and react to intrusions, disruption of services, or other incidents that threaten the security or function of DoD operations, DoD information systems or computer networks. The hardware, software and additional resources needed for Phase 2 of the IA Architecture will provide multiple layers of defense mechanisms to protect USJFCOM infrastructures mandated by DoD policy. Periodic replacement of the JFCOM IA infrastructure equipment and software to include routers and switches in the LAN and WAN, along with their respective software packages (IOS).

2. JFCOM J7

Supports the CJCS exercise program providing training to RCCs, Battlestaffs and JTF Commanders and staffs worldwide in their preparation for joint and multinational operations. The JTEX is a combination of fixed, distributed and deployable subsystems. These subsystems are designed specifically to support this mission and, as such, their architecture is dictated by the training requirement. Due to the complex interactions which occur in these systems, the software and hardware configuration of the systems are rigidly controlled and not subject to modification based on resource consolidation or standards imposed on traditional administrative networks. All subsystems are required and so completely integrated that they cannot be addressed as separate or distinct systems. All systems are global and completely capable of being relocated with the operating location being determined solely by training event requirements. The JTEX system is composed of five (5) major subsystems: Information Transfer (IT) Subsystem, Information System (IS) Subsystem, Video System (VS) Subsystem, Modeling & Simulation (M&S) Subsystem, and the Command, Control, Communications and Computers (C4) Subsystem. A brief description of each subsystem follows:

A. Information Transfer (IT) Subsystem - A broadband communication subsystem connected to and using operational networks globally, is capable of carrying voice, video, imagery and data throughout the local area, DoD and the global-wide area. This subsystem provides multiple gateways for real-time access to world-wide networks such as: DREN, DISN, TMAN, NMCI, etc. The IT subsystem is sub-divided into the following major subsystems:

1. Exercise Communications Component – this component focuses on providing external communication connectivity to support the JFCOM/J7 training mission, independent of physical location of the training event.

2. Power Component – this component focuses on providing conditioned, redundant, continuous power to support the JFCOM/J7 training mission, independent of physical location of the training event.

3. Training & Exercise Network Distribution Component – this component focuses on providing intra-facility and transportable communications systems to support the USJFCOM/JWFC training mission.

B. Information Systems (IS) Subsystem - Client/server components designed to provide office automation, exercise planning, exercise execution, facility management, security management, process refinement and data management. The IS includes hardware technology and software technologies (COTS/GOTS) needed for the JFCOM/J7 to perform the exercise mission. The IS subsystem is sub-divided into the following major components:

CLASSIFICATION: UNCLASSIFIED		
BUDGET ITEM JUSTIFICATION SHEET	DATE	February 2011
P- 40		
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE	
OTHER PROCUREMENT NAVY/BA-7	BLI:	8106 Command Support Equipment
Program Element for Code B Items:	Other Related Program Elements	

1. Digital Library Component – includes hardware needed to provide a real-time data repository cable of using data mining, storage, retrieval techniques to support real-time data acquisition and processing in support of exercise post-action review and knowledge management.

2. Applications/Database Component – this component includes GOTS/COTS applications, databases, database models and structures, both home station and deployed, needed to plan, execute and review the exercise events in support of the JFCOM/J7 joint training mission.

3. Unclassified (JESNET-U) Component- the JESNET-U Component is composed of client/server components, hardware, software and system services needed to execute exercise planning, execution and after action review at the unclassified security level. It includes both home station and deployable equipment with reach-back capability.

4. Classified (JESNET-C) Component- the JESNET-C Component is composed of client/server components, hardware, software and system services needed to execute exercise planning, execution and after action review at the classified security level. It includes both home station and deployable equipment with reach-back capability.

C. Video System (VS) Subsystem - A digital and analog subsystem which supports local and remote distribution of video materials (VTC, TV production, etc.) in support of the JFCOM/J7 training mission. This subsystem is used to facilitate exercise planning, execution and after-action review of exercise events. The VS is sub-divided into the following major components:

Video Distribution Component – this component provides for secure and non-secure video transmission, distribution and replay in support of the entire event cycle (from planning through to post event review).
 Info OPS/Television Production Component – this component provides for simulated video injects which assist in the event scenario development. The component allows for customized broadcast quality media to be introduced to the training audience.

3. Distance Learning Component – provides for distribution, via digital or analog methods, of training content and material. This component is used to provide pre-event training to improve the quality of both ingarrison and distributed training.

D. Modeling and Simulation System (M&S) Subsystem - A subsystem which is integrated and capable of deployment to support the JFCOM/J7 training mission. This system provides complete local and distributed simulation event support for the exercises using all major simulation protocols (ALSP, HLA, DIS, etc.). The M&S subsystem is sub-divided into the following major components:

1. Simulation Component – provides the clients and servers necessary to host, distribute and execute the computer based simulation in support of the JFCOM/J7 training mission.

2. Model Workstation Component – provides the analytic stations needed to operate and interact with the simulation during the execution phase. This component is designed to relocate to the event execution location in support of the training audience.

E. Command, Control, Computers, and Communications (C4) Subsystem - Provides the interfaces for the M&S system to real-world Command and Control (C2) systems. These real-world systems were not originally designed to interoperate with the simulation subsystem, thus interfaces must be developed to provide data transfer from each simulation to stimulate each command/control system. The C4 subsystem is subdivided into the following major components:

1. Intel Component – the systems of record which support intelligence gathering, analysis and distribution such as: JDISS, GCCS-I3, ASAS and other various components to provide interoperability (OIW, C2Guard, Radiant Mercury, Tenix diode etc.) as required to support in-garrison and deployed exercise events.

2. C2 Component – the systems of record which allow the warfighter to manage the battlespace; these systems are real-world C2 systems, such as: GCCS-J, ADSI, C2PC, TBMCS, and other related C2 components as required to support in-garrison and deployed exercise events.

OTHER PROCUREMENT NAVY/BA-7		BLI: 8106 (Command Suppo	ort Equipment
Program Element for Code B Items:	Other Re	lated Program Elements		

2. JFCOM J7 Irregular Warfare Training Development (formerly NPSUE)

Irregular Warfare Training Development (IWTD) FY2011 procurement funds will provide the simulation, instrumentation, data collection and after action review hardware required to provide a representative environment and high quality feedback to the training audience. IW enhancements will be made to Service /COCOM and Joint training facilities that will allow units to utilize the full range of assets available to them in actual Irregular Warfare missions including their individual equipment, individual and crew-served weapons, command and control systems, navigation systems, and target location/designation systems. Simulation hardware will be procured to provide the synthetic environment representations and reactions across distributed locations that mimic those stressing conditions and situations across the Joint Force in the conduct of irregular warfare missions. Mobile instrumentation equipment will be procured to provide tracking/status of the training audience and their operational systems along with the live/simulated opposing forces within urban terrain environments. Data collection equipment will be procured to collect relevant information that will be utilized to accurately capture outcomes/effects of the training. After action review equipment will effectively provide timely high quality feedback and lessons learned to the training audience.

3. Joint Force Provider (J3/4)

Joint Force Provider mission assigned to USJFCOM by SECDEF and articulated in UCP08 requires USJFCOM to identify and recommend global and joint sourcing solutions to the Chairman, in coordination with the Services and other combatant commanders. To comport with this mission, the Joint Force Provider requires the full resourcing of the USJFCOM developed strategy which relies upon: Personnel augmentation; Information technology development (a global force sourcing capability); and Infrastructure improvements to the Joint Deployment Center.

The OPN funding outlined herein will support the procurement of Information Technology (Classified and Unclassified Computer systems, Communications systems and Briefing/Display System) to outfit net GFM capabilities within the facility and support the expanded staff in the execution of the assigned Joint Force provider mission. Procurement of these new systems are critical to ensure the operational effectiveness of the new facility and capitalize on the improved infrastructure.

4. Joint Enabling Capabilities Command (JECC)

A. Information Technology (IT) Subsystem - A broadband communication subsystem connected to and using operational networks globally, capable of carrying voice, video, imagery and data throughout the local area, DoD and the global-wide area. This subsystem provides multiple gateways for real-time access to world-wide networks. The ability to access six networks (SIPRNet, NIPRNet, CENTRIXS, Internet, JWICS, and ISAF) in-garrison and while deployed is supported in this section.

B. Information Systems (IS) Subsystem - Client/server components designed to provide office automation, operational and exercise planning/execution, facility management, security management, process refinement and data management. The IS includes hardware technology and software technologies (COTS/GOTS) needed for the JFCOM/JECC to perform the mission. The IS subsystem is sub-divided into the following major components:

1. JECC Operational in garrison - Includes hardware and software needed to provide a real-time data repository capable of providing data mining, storage, retrieval techniques to support real-time data acquisition and processing in support of plans, OPS, LOG, GST, DRT, and IS/knowledge management.

2. JECC Operational deployed to robust IT environment - This component includes GOTS/COTS applications in support of five networks (Internet, NIPRNet, SIPRNet, JWICS and CENTRIXS), databases, database models and structures, when deployed to an established IT environment, needed to plan, execute and review after action events in support of the JFCOM/JECC operational and exercise missions.

3. JECC Operational deployed to austere IT environment - Five networks (Internet, NIPRNet, SIPRNet, JWICS and CENTRIXS) with supporting client/server components, hardware, software and system services are needed to execute operational planning, execution and after action review at the five security levels. It includes deployable equipment with reach-back capability.

C. Video System (VS) Subsystem - A digital and analog subsystem which supports local and remote distribution of video materials (VTC, TV production, etc.) in support of the JFCOM/JECC missions whether in-garrison or deployed. This subsystem is used to facilitate operational/exercise planning, execution and after-action review of events. The VS is sub-divided into the following major components:

1. Video Distribution Component - This component provides for secure and non-secure video transmission, distribution and replay in support of operational missions (from planning through deployment and reconstitution).

CLASSIFICATION: UNCLASSIFIED				
	BUDGET ITEM JUSTIFICATION SHEET		DATE	February 2011
	P- 40	1		
APPROPRIATION/BUDGET ACTIVITY		P-1 ITEM NOMENCLATURE		
OTHER PROCUREMENT NAVY/BA-7		BLI: 8106 C	command Suppo	ort Equipment
Program Element for Code B Items:		Other Related Program Elements		
		-		

2. Info OPS Component - This component provides for video injects which assist in the Joint Intelligence Preparation of the Operational Environment (JIPOE) a holistic approach to joint operations, IS and Knowledge Management operational planning and development.

D. Command, Control, Computers and Communications (C4) Subsystem - Provides the interfaces for the JECC Operational systems to real-world Command and Control (C2) systems. These real-world systems were not originally designed to interoperate with the JECC components, thus interfaces must be developed to provide data transfer in support of JECC JEC command/control requirements. The C4 subsystem is sub-divided into the following major component:

1. C2 Component - The systems of record which allow the warfighter to manage the battlespace; these systems are real-world C2 systems as required to support in-garrison and deployed operational missions for the JECC.

5. Joint Capability Development (J8)

US Joint Forces Command has responsibility for Joint Command and Control (JC2) integrated architecture development as prescribed by DoDD 5100.30, dated Jan 2006. The Joint Command and Control (JC2) Architectures and Capability Assessment Enterprise (JACAE) is a tool suite developed by United States Joint Forces Command's (USJFCOM) Joint Capability Development Directorate (J8) under the Integrated Architectures and Systems Engineering Division (J89) to support architecture development, analyses, capability assessments, and capability portfolio management (CPM). Teamcenter System Engineering and SPARX Enterprise Architect are tools to achieve architectural integration and architectural support to the Combatant Commands (COCOMs). The data contained in the JACAE repositories can be used for: (1) more effective, efficient, and rapid organizing, equipping, training, and certifying of Joint Task Forces (JTFs), in order to achieve transition of JTFs from ad hockery to a Weapons System, and (2) objective, capabilities-based Doctrine, Organization, Training, Material, Leadership and Education, Personnel and Facilities (DOTMLPF) analysis for acquisition decisions, based on current and future Joint C2 capabilities' support of the joint warfighter environment.

6. Joint Center for Operational Analysis (JCOA)

As requested by SECDEF, CJCS, and Combatant Commanders, JCOA performs active collection, analysis, integration and dissemination of joint lessons learned. JCOA requires funding for Knowledge Management (KM)/Information Management (IM) equipment to provide support to Joint Lessons Learned for Irregular and Conventional Warfare.

JCOA must have access to and control of the collection, instantiation, retrieval, analysis, and collaboration on the design, development, and publication of the required products from diverse locations. This requires the development, maintenance and life-cycle replacement of JCOA Knowledge Management System (KMS). This provides JCOA the capability to collect and fully exploit the collected content through the thorough automated indexing of the content at the word, phrase, and context levels to automatically identify and alert the user of emerging associations and threads that might have application to JCOA's mission. Other Procurement, Navy (OPN) funding dollars listed above will be utilized for life -cycle replacement associated with JCOA SIPR, NIPR and Fail-Over KMS.

PACOM

1. Engineer/Design Support and Construction Oversight

Physical/Info Security – to include security systems required to create a "lock/leave" capability, with alarm connectivity to COMLOGPAC. It (systems/installs, secure VTC, STE/DRSN/PBXs, circuit transport, equipment, tech refresh Maritime Security Domain Awareness-permanent system installation maintenance.

2. Noncombatant Evacuation Operations Tracking System (NTS) (FY 2009 and FY 2010)

The Noncombatant Evacuation Operations Tracking System (NTS) is an automated data processing system that provides evacuee visibility to Warfighting Combatant Commanders and Joint Task Force Commanders during Noncombatant Evacuation Operations. The NTS consists of two main components; a registration station and a conveyance station which interfaces with the Defense Manpower Data

CLASSIFICATION: UNCLASSIFIED				
	BUDGET ITEM JUSTIFICATION SHEET		DATE	February 2011

Program Element for Code B Items:		Other Related Program Elements		

Center server. The use of NTS is directed by Joint Publication 3-68. The enhanced NEO tracking capability will strengthen its joint war fighting capability by allowing simultaneous, multi-phased evacuation operations as required. Further, interoperability would be achieved between USPACOM, its component command task forces, and the Defense Manpower Data Center during noncombatant evacuation operations.

AOR Tracking System equipment requirements through purchasing an additional 88 registration stations, 43 conveyance stations, 32 supply cases, 5 satellite phones, 4 pistol scanners, 28 passport readers and 50,020 bracelets.

3. PACOM Rotational SOF Support-Classified (FY 2010)

Provide the necessary C4 capability to effectively command and control personnel throughout the Pacific Theater. Improves defense capability since an effective C2 network will enable SOF to rapidly respond to contingencies throughout the theater.

The C4 architecture includes: NIPR, SIPR, Joint Warfare Intelligence Communication System (JWICS), MWR network and voice services, SC TACSAT, MBITR and HF tactical radio capabilities.

The Naval History and Heritage Command (NHHC)

1. Modular Contained Office System/HVAC Controlled with Sprinklers (Funding FY 2008 through FY 2011)

NHHC repository spaces in WNY Building 108 used for uniforms (dating from 1840 to the present) and rare books (dating from the mid 1600's) are in poor condition and have received no attention, despite repeated Naval audit findings and results of commissioned studies. MILCON projects and legacy proposals to fund the deficiencies have been rejected and the artwork, books, and textile artifacts deteriorate and risk permanent damage or at worst, suffer a total loss to the Navy and the nation. The NHHC has a critical need for a new humidity control system designed to ensure proper moisture levels for the maintenance of historic materials. This requirement is essential to NHHC's mission to preserve, collect, organize and provide access to materials related to the United States Navy. To achieve this task, renovations must be performed that achieve that maintain proper humidity for preservation. Improved humidity controls and upgraded electrical infrastructure are required. This system, operated in conjunction with the existing air conditioning system, will enable humidity levels to be maintained at acceptable levels for historic collections.

2. Compact Shelving (Funding FY 2009 through FY 2011)

Installation of Compact Shelving - FY 2009 through FY 2011 funding is in support of procurement and maintenance of library type shelving to preserve and archive wartime records.

Military Sealift Command (MSC) (Funding through FY 2016)

Funds required for the procurement of day boxes, high security locks and shrouded hasps, as well as miscellaneous hardware and repairs required to support the weapons and ammunition security and storage containers (magazines and armories) onboard MSC ships. Funds are also required to procure and install temperature monitoring devices for ammunition storage containers. Funding will also be used to maintain containers in compliance with NAVSEA OP4 (Ammunition and Explosive Safety Afloat) and OPNAV INST 5530.13C (Physical security of AA&E).

AAUSN

1. Office of Civilian Human Resources (OCHR): Human Resources IT Systems

OCHR Human Resources Systems provide information system support for the 180,000 Department of the Navy civilian workforce. Several systems require upgrades to become web based and NMCI compliant. These systems are the core of human resource support at OCHR and seven Human Resource Service Centers. Many systems have been migrated from individual servers to a complex superdome technology. This technology requires upgrades and/or additional capability to support and maintain the myriad of human resource applications.

2. Naval Criminal Investigative (NCIS): Data Modernization & Analytical Tools

NCIS data collection, filtering, and analysis infrastructure is unable to handle the increased flow of terrorism investigative and threat reporting of the Post 9/11-Global War on Terrorism era. NCIS must revitalize its infrastructure and its data and investigation management capabilities to effectively counter current terrorist threats. This program provides Modernization/funding for Enterprise Networks and Desktops/Laptops, data modernization and analytical tools, Local Area Network (LAN) specific connectivity and contract support on data collections and analytical integration. The three main components of this portfolio investment are data modernization, knowledge management, and investigation management.

3. Naval Criminal Investigative (NCIS): Department of The Navy Criminal Justice Information (DONCJIS)

The Naval Criminal Investigative Service (NCIS) is the Executive Agent (EA) for the Department of the Navy Criminal Justice Information System (DONCJIS). This system provides a cradle to grave criminal justice and law enforcement information system. The system enables multiple communities within the DON to share criminal justice and law enforcement information. Funding is required for contractor support to develop, test, train, deploy and implement this application.

4. Naval Criminal Investigative (NCIS): Law Enforcement Information Exchange (LINX)

LInX is a regional approach to the electronic sharing of law enforcement data among participating agencies to reduce crime, prevent terrorism, and protect DoD assets. LInX provides all agencies with secure access to cross-jurisdictional data with analytic capabilities which contributes to a force multiplier, investigative lead generator, agent/officer situational awareness and safety, identifying previously unknown relationships/associates, increasing efficiencies and cooperation between agencies. LInX is built to national information standards such as NIEM and NCIC and utilizes open source software best practices as mandated by DoD Directive 8320.02. LInX is the baseline platform being utilized to develop the DoD Law Enforcement Exchange (DDEX) which will allow USA, USMC, USN and AF components to share data in near real -time as mandated by the Fort Hood Working Group findings.

BUPERS

1. Electronic Military Personnel Record System (EMPRS)

The EMPRS is an electronic document/image based system that serves as the repository for all Department of Navy (DoN) official military personnel record images (over 150 million images). It supports retired, active, and reserve military personnel in the functional areas of selection board operations, casualty management, mobilization, veteran benefits (providing automated Sailor information to the Veterans Administration) and other military personnel management functions. EMPRS annually supports over 150 statutory and administrative selection boards, providing over 12 million service record images, covering promotions, assignments, and retention. References: Titles 10 and 44, U.S. Code and Title 36, CFR (Record Management Requirements), DoD Directive 5015.2.

OPN funding provided has allowed us to continue gradual Technical Refreshment (TR) of EMPRS. The initial technical refreshment project started in FY 2003 and completed in FY 2007. Current Acquisition Strategy is to sustain the EMPRS program through the FYDP, providing technology refreshment through the years (evolutionary) as opposed to a TR every four-eight years. This process began in FY 2009, approved by the MDA in FY 2004.

SPAWAR

1. Navy Standard Integrated Personnel System (NSIPS)

The (NSIPS) exchanges data with 12 corporate systems and provides a single, consolidated field-level system for creating and tracking pay and personnel transactions. NSIPS supports both active duty and reserve personnel, and is available to ashore and afloat users. Shore users are supported by a web site that utilizes server services from Navy Marine Corps Intranet (NMCI). Due to the limits of off-ship bandwidth, ships have a dedicated NSIPS server to provide web site and crew data to shipboard users. Only changes in data are transmitted to/from a ship. NSIPS relies on technical refresh (hardware replacement) to maintain the usability, functionality, and supportability of the systems on ships, and in addition, avoid technical obsolescence. Funds will be used to procure a server, monitor, and uninterruptible power supply for ships using NSIPS, installation planning, drawings, and supporting logistics documentation, and fund Alteration Installation Teams to install hardware. FY 2011 through FY 2015 funds are to install NSIPS onboard Naval ships to allow Navy personnel to maintain the same functionality as ashore activities.

2. Maritime Operations Centers (MOCs)

MOCs deliver Navy's Command and Control (C2) at the Operational Level Warfare (OLW) that guide execution of the six (6) Chief of Naval Operations (CNO) core global maritime capabilities (Forward Presence, Deterrence, Sea Control, Power Projection, Maritime Security, Humanitarian Assistance and Disaster Response) through the full range of military operations (ROMO). The MOC initiative focuses on improving the Navy's OLW C2 by establishing baseline capabilities in globally networked MOCs enabling the commanders of each numbered fleet and Naval Component Commander (NCC) to assume their role in OLW C2 while continuing to fulfill traditional Fleet management functions. The MOC construct enhances C2 of Navy's forces at the operational level through headquarters manned by individuals qualified in joint operational-level staff processes and enabled by globally interoperable Command, Control, Communications, Computers, and Intelligence (C4I) systems. MOCs provide organizational consistency, the scalability and flexibility to transition between various command roles, and enhanced global networking among Navy-maritime organizations. The desired end state/goal of the system of systems embodied in each of the ten (10) MOCs is to achieve globally-networked operational-level C2 decisions by NCC, Joint Force Maritime Component Commanders (JFMCC) and Commanders of Joint Task Forces (CJTF). Focused acquisition of standard and common suites of systems (from the existing base of Navy, Army, Air Force, joint Programs of Record (PORs) and non-PORs) facilitates successful accomplishment of designated Joint Mission-Essential Tasks (JMETS) aligned to Joint Capability Areas (JCAs) and in support of combatant commander theater objectives.

This system of systems aims to achieve effective, agile, networked and scalable MOCs, employing common doctrine, standardized processes and common C4I systems. Each MOC will be able to operate within a common organizational construct in various roles (joint, interagency and combined). The global network and commonality enable both reach-back and load-sharing across all MOCs within a Consolidated Afloat Networks and Enterprise Services (CANES)/Next Generational Enterprise Network (NGEN) and Ballistic Missile Defense (BMD) construct. The ten (10) MOCs (eight (8) ashore and two (2) afloat) include each of the numbered Fleets (Commander Second Fleet (C2F); Commander Third Fleet (C3F); Commander Fourth Fleet (C4F); Commander Fifth Fleet (C5F); Commander Sixth Fleet (C6F) afloat and ashore; and Commander Seventh Fleet (C7F); Commander, Pacific Fleet (COMPACFLT); U.S. Fleet Forces Command (COMUSFLTFORCOM) and Commander Tenth Fleet (C10F). The FY 2012 funding will provide for procurement of non-POR C4I ancillary equipment, and production engineering and integration of PORs and non-PORs to continue incremental improvements of the common capabilities of the MOCs leading to fully integrated, globally networked operational level commands with a CANES/NGEN and appropriate capabilities to exercise C2 over Navy BMD missions.

3. Converged Enterprise Resource Planning (ERP) Program:

The Navy Enterprise Resource Planning (ERP) Program solution is an integrated business management system that modernizes and standardizes Navy's business processes. Navy ERP utilizes best commercial practices to provide real-time information exchange, unprecedented financial and asset visibility, and improved reporting and decision-making capabilities across key acquisition, financial, and logistics operations.

Navy ERP is the tool chosen to meet Congressional mandates to establish and maintain federal financially compliant management systems, federal accounting standards, and US Government General Ledger procedures at the transaction level. The Navy ERP foundation to achieve enterprise-wide business transformation is accomplished through two releases; the Financial/Acquisition Solution and the Single Supply Solution. In October 2008, ASN FM&C designated Navy ERP the Navy's Financial System of Record. The Navy has already encountered and overcome a broad range of challenges to successfully deploy financial, acquisition, and workforce management capabilities to four System Commands. These Commands include over 40,000 users and cover about \$63B of the Navy's Total Obligation Authority (TOA). Navy ERP is currently in the process of deploying the Single Supply Solution, which will be completed in FY 2012, providing an integrated financial and supply functionality projected to resultin significant inventory savings. The Program of Record future deployment include the Fiancial/Acquisition Solution to Naval Sea Systems Command (NAVSEA) (Working Capital Fund) in October 2011, and the Office of Naval Research (ONR) and Strategic Systems Programs (SSP) in October 2012.

The Navy has committed to implementing the Navy ERP capabilities across the full Navy enterprise in order to tie Navy business processes together in a single system, provide unprecendented financial transparency, and increase asset visibility. this will ultimately increase the percentage of Navy TOA managed within the ERP system from 50% to approximately 100% and increase the number of users from approximately 66,000 to approximately 143,000.

APPROPRIATION/BUDGET ACTIVITY		P-1 ITEM NOMENCLATURE	0	
OTHER PROCUREMENT NAVY/BA-7 Program Element for Code B Items:		Other Related Program Elements	Command Supp	ort Equipment

The project acquires standard applications servers (ADP hardware) to support ERP software for the Navy Converged ERP Program. Funding reflects procurement of Government Furnished Equipment (GFE) hardware, software, and licenses in support of the SAP enterprise system environment for the Navy ERP Program.

4. Future Personnel and Pay Solutions

The John Warner National Defense Authorization Act for Fiscal Year 2007, Pub. I, No. 109-364, directed the Secretary of the Navy to prepare a report on the Marine Corp Total Force System (MCTFS), including an analysis of alternatives to MCTFS, which compared the costs of deploying the operating MCTFS within the Navy and the cost of including Navy in the Defense Integrated Military Human Resource System (DIMHRS) development. Based on the review, the Deputy Secretary of Defense (DEPSECDEF) concluded that it would be in the best interest of the Department of Defense (DOD) and the Department of the Navy (DON) to join the other services in migrating to DIMHRS. To support his findings he requested the DON to begin formulation of requirements and Program Office preparations for transition to an Integrated Personnel and Pay System. The Program Executive Office Enterprise Information Systems (PEO EIS) received funding to identify DON requirements, assess transition options, and establish a Navy program office to ensure appropriate interfaces are available to support the a Navy transition to a DIMHRS core product. Subsequent guidance from (DEPSECDEF) on 16 Jan 09 modified the guidance to the Services to confirm a DIMHRS core enterprise requirement and to integrate with the Business Transformation Activity (BTA) developed core product. On 08 Sept 2009, an Acquisition Decision Memorandum was issued by USDAT&L certifying the restructuring of DIMHRS program to provide a foundation upon which the Navy will build out and deploy the personnel and pay capabilities identified in the DIMHRS ORD. The Navy specific solution has been re-designated as the Future Personnel and Pay Solution (FPPS). FPPS will enable military human resources transformation by providing and bringing an enterprise-wide approach to the way records are created and maintained for service members. Funding will be utilized to support the installation of shipboard systems and spares; order the equipment and hardware to support completion of the installations of u

Commander, Navy Installations Command (CNIC)

1. Information Technology Services Connectivity Management

Funding supports the hardware/software (HW/SW), licenses and warranties required to establish and maintain Network connectivity services for applications hosted in the CNIC Service Delivery Points (SDP) - formerly called the Transitional Hosting Centers/THCs (Routers, Switches, Cabling, Patch Panels, Rack, Sniffers).

2. Navy & DoD IA Security HW/SW

Funding supports the HW/SW, licenses and warranties required to establish and maintain Navy and DoD IA security posture for the THCs and applications hosted in the CNIC SDP - formerly called the THCs (Intrusion Detection System (IDS), Intrusion Power Supply (IPS), Firewalls, Cryptos, Retina).

3. Hosting CNIC SDPs HW/SW

Funding supports HW/SW, licenses and warranties required to support hosting, monitoring, maintenance and support of applications hosted in the CNIC SD - formerly called the THCs (Racks, Servers, VMWare, Storage Area Network (SAN), Tape Back-up, Domain Controllers, Configuration Management).

4. Infrastructure & Environmental Systems HW/SW

Funding supports HW/SW, licenses and warranties required to provide infrastructure and environmental systems (Generators, Uninterrupted Power Source (UPS), Power Distribution Unit (PDU), Power Switches, Batteries, HVAC, Fire Suppression System/FM200, Very Early Smoke Detection Apparatus (VESDA), and Building Management System (BMS)).

UNITED STATES FLEET FORCES

A. BASE REQUEST:

The procurement of Command Support Equipment throughout the Navy Cyber Forces involves the purchase, replacement and upgrade of various pieces of equipment, such as Cable Replacement at Radio Barrigada and the purchase of Voice/Video/Data Infrastructure and security disintegrator/systems. This program provides the systematic replacement of investment items required in support of the operational mission of the claimancies.

1. NCTS Sicily Microwave: Design, procure, install and test electronic components necessary to interconnect the principle locations of NAS Sigonella so as to provide secure, reliable circuits to support VLF, HF, MUOS, pierside and other tactical and strategic missions operated by NCTS Sicily. Current interconnectivity systems are antiquated (at end of useful life), poorly integrated, and are expensive to operate and maintain.

2. Base Communications Office (BCO): Uninterruptible Power Supply (UPS): Design, procure, install and test telephone switch UPS and rectifier systems at CONUS/OCONUS locations needed to remedy safety concerns, hazardous situations and performance deficiencies.

3. Cable Infrastructure Repair: Required funding to relocate AT&T commercial demarcation cabling, equipment/circuits from current demarc point at NAVSTA Mayport. The Naval Computer and Telecommunications Station (NCTS) DETACHMENT (DET) Base Communications Office (BSO Jacksonville provides telecommunications services to include the transport of voice, video and data information to Navy and DOD activities at NS Mayport, FI. The BCO is responsible for the daily operations and maintenance of base telecommunications services, devices, and system.

4. Cable Upgrade/Naval Station Norfolk: Funding for the restoration and replacement of damaged copper cable systems at NAS Oceana. The OSP copper cables at NAS Oceana have deteriorated over the years allowing moisture to penetrate conductors. This funding is required to provide IT and network infrastructure support services in support of the listed U.S. Naval Stations. These tasks include, but are not limited to integration, operation, procurement, and overall support of computer systems, equipment and networks.

5. CONUS Cable Infrastructure: Design, procure, install and test Outside Plant (OSP) cabling at CONUS/OCONUS base/station/campus locations needed to avoid prolonged outages and unreliable performance of voice, video and data transport.

6. INFOCON 3: INFOCON 3 is a readiness strategy providing the ability to continuously maintain and sustain one's information systems for the Commander. Describes when a risk has been identified. Security review on important systems is a priority, and the Computer Network Defense system's alertness is increased. INFOCON 3 requires 100% of critical systems and 50% of non-critical systems to be validated every 60 days, versus INFOCON 5 which requires 100% critical systems and 10% of non-critical systems to be validated every 180 days. The support is required to monitor the INFOCON implementation and maintenance sustainment for Fleet Forces and Caimancy Command legacy excepted networks (136 at present). To increase the security readiness of Navy Networks, including Computer Network Defense, under the INFOCON3 readiness strategy. Required in order to meet the enhanced security posture established for DoD networks by STRATCOM.

7. DEFENSE RED SWITCH NETWORK (DRSN): Procure and install 5 new DSS-2A red switch systems. Must replace obsolete DRSN switches to maintain operation of Navy DRSN sites. DRSN is the only secure voice system that provides a single user desktop platform (Integrated Services Telephone, IST) that allows interface/access to multiple strategic and tactical secure voice systems.

8. Equipment Procurement for C10F MOC: Funding for equipment procurement and operation sustainment for Maritime Operations Center (MOC) architecture for the Enterprise. Funding provided to design, procure, and install Maritime Operations Center/Marine Headquarter (MOC/MHQ) visualization system to provide common operational picture. Audio visual systems will provide the command the ability to paint a global picture of network health and defense.

B. OCO REQUEST:

1. CJTFHOA-HSWAN EQUIPMENT (DKET 58B Upgrade) (CJTF-HOA): FY 2011 OCO - HSWANs provide critical transmission of OEF data and, due to greater than 5 years exposure in the harsh environment, operation is at risk if not replaced. X-Band Terminal Costs; Small Network Packages, and IP Modems for DKETs are required components to build an operational system. This procurement will replace our second (back-up) DKET system.

2. THEATER INFORMATION GRID (TIG) (CYBERFOR): FY 2012 OCO - Funding for the Navy's portion of the TIG will provide all USAFRICOM network users the same look and capabilities regardless of location in Africa or Europe. Funding is required for hardware and software systems and equipment at Camp Lemonier, DJ to enable NIPRNet/SIPRNet/CENTRIXS networks to be remotely operated from Stuttgart and to meet USAFRICOM defined specifications. TIG transition requirements and timelines are to be defined in a USAFRICOM/CYBERFOR MOA.

3. DSS Upgrade MSPP for P910 (CYBERFOR): FY 2010 and FY 2012 OCO - Install, test, operational cutover of a DISN Subscriber Services Node/Multiple-Service Protocol Platform (MSPP) at Camp Lemonier Djibouti ISO of increased OCO requirements for NIPRNET, and JWICs bandwidth/through-put; DSS/MSPP will alleviate congestion/data packet loss on existing circuits. Camp Lemonier tenants are experiencing TCP/IP communications delays daily.

4. TELEPHONE SWITCH REPLACE B650 (CYBERFOR): FY 2012 OCO - Install, test, operational cutover of Telephone switch at Camp Lemonier Djibouti Technical Control Facility (TCF) to replace two existing REDCOM telephone switches and CISCO Call Manager with state-of-the-art, full-featured, Internet Protocol-based tadem switches able to support up to 30K Voice over Internet Protocol (VoIP) and 7.9 analog phones.

1/ Total Quantity listed for MOC represent sites and is not an Inventory Objective. Unit Costs are based on an averagae cost per site.

2/ Unit cost fluctuations are a result of the varying system configuration requirements and varying Spiral and Build system requirements of particular sites.

DD FORM 2446, JUN 87

Total Quantity listed for MOC represent sites and is not an Inventory Objective. Unit Costs are based on an average cost per site.
 Unit cost fluctuations are a result of the varying system configuration requirements and varyiing Spiral and Build system requirements of particular sites.

Footnotes (Changes in baseline funding for FY 2012 and out between PB-11 and PB-12 as follows:

1/C8106 - Issue 50218 (POM 12 Efficiency Initiative: Afloat Network Enterprise Efficiency (CANES)): This issue decreased funding in FY 2012 through FY 2016. Decrease applied to Cable Infrastructure Repair in FY 2012 through FY 2016 Cost Element Line (C8106) on the P-5 which increased the unit/total cost). Decrease also applied to Cable Upgrade/Naval Station Norfolk in FY 2012 and FY 2013 Cost Element Line (C8106) on P-5/P-5a. 2/ C8106 - Issue 61663 (Unfunded Equipment Procurement and Operating Costs for C10F MOC): This issue increased funding in FY 2012 through FY 2016 for COMTENTHFLT Maritime Operations Center. Cost Element Line was added to the P-5/P-5a to reflect this increase. Funding will be for the procurement of equipment for

COMTENTHFLT Maritime Operations Center.

UNCLASSIFIED

MODIFICATION TITLE: COST CODE MODELS OF SYSTEMS AFFECTED: DESCRIPTION/JUSTIFICATION:

Maritime Operations Center (MOC) YC790

The Maritime Operations Center (MOC) delivers global maritime capabilities at the operational-level of warfare (OLW) throughout the full range of military operations (ROMO). The goal end state is to achieve globally networked operational level Naval Component Commander (NCC), Joint Force Maritime Component Commander and Staff (JFMCC) and Joint Task Force (JTF) capable commands, based on Joint Capability Areas (JCAs) and Joint Mission-Essential Tasks (JMETs) through focused acquisition of standard and common suites of systems from the existing base of Navy, Army, Air Force, joint Programs of Record (PORs) and non-PORs.

U.S. Naval Academy: \$2,078 thousand in FY 2010; \$2,067 thousand in FY 2011; \$2,197 thousand in FY 2012; \$2,249 thousand in FY 2013; \$2,289 thousand in FY 2014; \$2,329 thousand in FY 2016)

The U. S. Naval Academy's mission is to ensure the best-educated and most qualified junior officers enter the naval service. The Academy must maintain the highest standards in academic disciplines and supporting infrastructure. Planned upgrades and replacements are vital in ensuring graduates are technologically prepared to serve in tomorrow's Fleet and Fleet Marine Force while supporting institutional accreditation and competitiveness with peer institutions.

A. Storage System (\$449 thousand in FY 2010; \$500 thousand in FY 2016):

Provides for IT hardware and software in support of data storage simplification and redundancy for mission execution and continuity. The proposed replacement system will facilitate on-site back-up and recovery activities in maximizing enterprise system user availability. Future periodic replacement will be required to maintain technological currency and meet increased storage demand.

B. Advanced Computing Cluster (\$600 thousand in FY 2010; \$630 thousand in FY 2015):

Provides a replacement high-end computer cluster for midshipmen and faculty computational requirements in science and technology disciplines. Applications supported include flow visualization, computer-aided design, and computational fluid dynamics. The server also provides central file back-up, software and communications services for numerous laboratories, classrooms and courses. The computer will replace a device for which incremental upgrades will no longer be feasible due to intervening technological advancements.

C. Internet Gateway (\$250 thousand in FY 2010)

Provides hardware and software for migration of existing Internet gateway to accommodate evolving higher education connectivity needs while providing redundancy for external voice, video and data communications.

D. Chapel Sound System (\$279 thousand in FY 2010):

Upgrade existing speaker and sound system in heavily-used, multifunctional presentation and performance facility. Provides modern audio capabilities to meet diverse range of religious and performance events hosted in the USNA Main Chapel. Replaces existing, obsolete, single-point delivery system with industry-standard, distributed solution typically found in facilities of this type. This system provides capability of multi-directional sound propagation allowing audience members increased audio fidelity and comprehension. This system would have an extended multi-year life cycle based on a design currently used by a variety of industry leaders.

E. Nano-Technology Heat Transfer Laboratory (\$500 thousand in FY 2010):

Provides physical apparatus for propulsion laboratory study of nano-technology based heat transfer and thermal sciences. This capability will permit measurement and demonstration of electromagnetic (thermal) processes at the nano-technology level critical to naval propulsion technology.

F. Mission Systems Host Platform (\$600 thousand in FY 2011)

Provides for the replacement of IT hardware hosting information system applications to meet specific USNA requirements in academic, administrative, athletic, and professional areas.

G. Voice Messaging System (\$415 thousand in FY 2011):

Provides for the replacement of the existing Intuity voicemail system. The system will service all of USNA's landline voice customers. The system will provide the capability of remote message administration in support of the telecommuting and off-site continuity of operations.

H. Stage Technologies System (\$752 thousand in FY 2011):

Provides major hardware and software upgrades of the existing 20-year old stage, seat, and auditorium rigging system. This will ensure availability and reliability to meet the demanding employment schedule. Replaces the existing system with a new control desk, interfacing electronics, wiring and position encoders. Failure to upgrade the existing system will result in significantly higher maintenance costs and/or unacceptable downtime due to limited availability of critical repair parts.

I. Thermodynamics Laboratory (\$300 thousand in FY 2011):

Provides specialized physical apparatus for propulsion laboratory study of heat transfer and thermal sciences. This capability will permit measurement and demonstration of electromagnetic (thermal) processes which are critical to naval propulsion technology.

J. Network Routing (\$762 thousand in FY 2012):

Provides the introduction of layer 3 routing to the access layer for network simplification, stability and fault-tolerance. This logical next step in network modernization will aggregate traffic, permitting faster throughput and preparing for greater multimedia capabilities.

K. Nuclear Transport Storage and Handling Equipment (\$473 thousand in FY 2012)

Provides state-of-the-art radiation transport equipment, integration of new waste management and environmental remediation technologies for the Mechanical Engineering major nuclear program track.

L. Enterprise Survivable Server (\$962 thousand in FY 2012)

Provides for life-cycle upgrades of USNA's telephone communication system by leveraging existing voice communication servers to create a converged infrastructure supporting continuity of operations survivability as well as increased flexibility to meet evolving mission needs.

M. Autonomous Underwater Vehicle (\$300 thousand in FY 2013):

Provides for pedagogical integration of autonomous underwater technologies as currently used for military purposes. The proposed autonomous underwater vehicle will allow midshipmen and faculty the hands-on opportunities for practical demonstration, research into hydrographic survey, underwater mapping and scientific sampling activities. This is vital to the underwater track of the ocean engineering major while providing a platform for multidisciplinary study of controls, hydrodynamics, acoustics and underwater telemetry.

N. Electric Dynamometer (\$350 thousand in FY 2013)

Provides capability for the study of motoring engines. Permits improved engine control along with data acquisition and processing capabilities for the determination of friction horsepower and other metrics vital to the student's understanding of diesel and turbine propulsion engines.

O. Closed-Circuit Wind Tunnel (\$950 thousand in FY 2013):

Provides the mid-life upgrade of the Closed Circuit Wind Tunnel (CCWT) originally funded in FY 2005. Resources support migration to newer technologies while permitting extensive usage of the basic device for additional years.

P. Force Balance (\$649 thousand in FY 2013)

Provides mid-life upgrades of six-component platforms that were installed during FY 2007; permits state-of-the-art aerodynamic experimentations and demonstrations in a variety of courses.

Q. X-Ray Diffractometer (\$450 thousand in FY 2014):

Provides life-cycle replacement of the x-ray diffractometer acquired in FY 2005. This instrument is used in the integrated laboratory courses within the Chemistry major, in midshipmen research projects, in x-ray crystallography special topics courses and for faculty research. It supports the capability for doing crystallography on biological macromolecules.

R. Test Cells (\$1239 thousand in FY 2014)

Comprises the core of the USNA's propulsion and thermal laboratory area. Permits controlled experimentation in engine operation and emissions analysis. The test cells will provide a safe and accessible work environment for midshipmen projects and faculty research.

S. SCRAM Jet (\$250 thousand in FY 2014):

Provides the study of supersonic combustion ramjet (SCRAM jet) combustion and associated propulsion technologies for the Mechanical Engineering and Aerospace Engineering major program tracks.

T. Micro fabrication Facility (\$350 thousand in FY 2014):

Provides the capability to educate midshipmen in micro-fabrication technology through photolithography and other techniques. The equipment will be used to demonstrate metal deposition and surface micro-machining techniques, along with alignment and ultraviolet exposure of coated wafers for bulk silicon etching through wafer-masking. These capabilities are the foundation for semi-conductor, nano-system and micro scale heat transfer topics in various engineering courses. Keeps the academic curriculum current by providing an operational capability that allows midshipmen to conduct hands-on experiments in areas increasingly important to national defense.

U. Integrated Library System (\$499 thousand in FY 2015)

Replaces the existing Integrated Library System (ILS). Provides an automated catalog, records database, circulation control, acquisitions and cataloging for management and distribution of the Academy's information resources. This is beneficial for the midshipmen, faculty and staff. The ILS will replace obsolete hardware and software in order to provide modern, thin-client patron access to on-line information resource databases that are utilized across the curriculum.

V. NMR Spectrometer (\$450 thousand in FY 2015)

Replaces an existing Nuclear Magnetic Resonance (NMR) data acquisition device acquired in FY 2004. The device permits spectral analysis of a wide variety of chemical compounds in support of curriculum requirements. American Chemical Society guidelines specifically list an operational NMR spectrometer as a requirement for accreditation.

W. Scanning Electron Microscope Replacement (\$350 thousand in FY 2015)

Provides high-resolution viewing of fracture surfaces, microstructures, interfaces and elemental composition of materials. The system is required for extensive classroom and laboratory support of several engineering disciplines. Replaces an outdated unit acquired in FY 2002. This unit is increasingly in need of repair.

X. Double-Ended Electromagnetic Free Piston (\$400 thousand in FY 2015):

Provides the advanced research in engine propulsion dynamics that permits controlled experimentation in engine operation and emissions analysis. The electromagnetic free piston will provide a safe and accessible platform for midshipmen projects and faculty research.

Y. Bridge Simulators (\$400 thousand in FY 2016)

Provides life-cycle upgrades to extend the useful life of two existing full-mission bridge simulator devices used for watch standing training and qualification of midshipmen. It is also used for demonstrations of ship handling and navigation learning points not otherwise possible to convey through existing underway laboratories (i.e. Yard Patrol Craft).

Z. Enterprise Network Upgrade (\$668 thousand in FY 2016):

Permits modular, phased upgrades, replacements and modernization of the Academy's enterprise computing network to maintain currency with changing industry standards and user demands. Provides for replacement of aging switches and routers used to direct data communication traffic across fiber optic cables to various places throughout the enterprise.

AA. CNC Milling Machine Replacement (\$351 thousand in FY 2016)

Consists of a multi-axis Computer Numerically Controlled (CNC) milling machine that intricates fabrication of ship hull models, airfoils, propellers and other compound curve geometric shapes. This is required throughout the engineering curriculum. It is also used for demonstrations of computer-aided design and manufacturing technology. The machine will replace an existing asset acquired in FY 2002 that has exceeded its economically useful life.

AB. Gas Turbine Laboratory (\$450 thousand in FY 2016)

Provides demonstration capabilities for split-shaft gas turbine propulsion systems that are widely used in the Navy and Marine Corps. Supports considerable classroom time and provides extensive instruction to all midshipmen in gas turbine theory and operation. Provides an operable lab facility for midshipmen to conduct hands-on experiments and collect data on fleet propulsion systems. This facility includes a fully instrumented helicopter engine, computerized data acquisition, instructor console and small tabletop student labs.

BASE REQUEST:

This line item provides funding for the Medical Shipboard Equipment Replacement Program (SERP), including phased/planned life cycle replacement. Shipboard equipment configuration management, spare parts, technical manuals, new medical support equipment, and installation are also provided through this line item. Requirements are determined through Commander, U.S. Fleet Forces Command and Commander, U.S. Pacific Fleet, and procurement is managed by Naval Medical Logistics Command (NAVMEDLOGCOM).

In FY11 and FY12, the Medical/Dental Equipment and AMAL and ADAL Outfitting for Operational Fleet Units line item is procuring Ceric Prosthetic Systems (1 per hull), Centering Oven Systems (1 per hull), and Piccolo Chemistry Analyzers (2 per L-Class hulls; 3 per CVNs).

The program is part of standardization and life cycle management of the MERCY Class Hospital Ships sustainability plan.

This category includes funding for Mercy Hospital Ships (USNS COMFORT (Fleet Forces Command) and USNS MERCY (CINCPAC)) major systems replacement. Included: Patient Tenders/Rescue -Improve Access, Patient Access and Security Systems, Digital Radiography System Replacement, Medical Electrical Systems Modernization, Commercial Broad Band Satellite Program, Computerized Axial Tomography (CAT) Scan Replacement, Angiography Suite Replacement, Radiographic Fluoroscopy Replacement, Patient Monitoring System and Local Area Network (LAN) Replacement (Wiring/New Tech).

Changes to Authorized Medical Allowance List (AMAL) and Authorized Dental Allowance List (ADAL) requirements are determined through Individual Allowance Change Requests, as a result of reviews chaired by TYCOM Fleet Surgeons. These must provide for initial issue and sustainment of initial operating capabilities and projected operational environment. Changes in scope of care or standard of care result in new allowances to range or depth of equipment, durable equipment, and/or consumables, such as: Digital Dental Imaging, Computer Radiology, Tele-radiology, LPD-17 Class Blood Banking, Reeves Sleeves and Spine Boards for Independent Duty Corpsman (IDC) Platforms, Automatic External Defibrillators (AED)s for IDC Platforms, Mosby Nursing Manuals, and STAT References. (Note: Unit costs may not multiply exactly to total costs due to rounding)

Digital Radiographic System: FY10 OCO Funding is for the procurement and installation of a Digital Radiographic System. The Expeditionary Medical Facility (EMF) Djibouti is unable to provide adequate radiology services due to severely outdated and inadequate x-ray equipment. The present unit is 5 years past its replacement life cycle. As a result, injuries ranging from relatively minor, such as sprains and dislocations, to life threatening, such as pneumothorax and bone fractures, are difficult to correctly diagnose and treat. EMF Djibouti is a primary trauma treatment and stabilization facility serving joint forces within the CTF-HOA operating area. There are over 3,300 personnel on Camp and numerous ships operating in this AOR. The clinic provides Health Services Support to Special Operations Forces and others in harm's way. The EMF has received several battle casualties and is the primary MEDEVAC facility in the area. The current X-ray unit is unreliable and produces poor quality images. The Definium 5000 Radiographic System meets the minimum standard of care for radiology services in theatre. It will allow for telemedicine capability, thereby improving changes of patient survivability and a successful clinical outcome. This system will help save lives. Cost for installation is \$122K.

 Magnetic Silencing Lambert's Point Deperming Station Power Transformers: A transformer is a device that transfers electrical energy from one circuit to another through inductively coupled conductors—the transformer's coils. The Lambert's Point Deperming Station Power Transformers required emergent repairs in FY10. Trident Mooring/Deep Draft Camels: These are very large floating metal structures designed to maintain the proper distance for Trident SSBNs & SSGNs Submarines to keep them from being damaged by the pier. Pier Lines, Camels and Support Equipment: The shore based support equipment provides the equipment required to moor ships, submarines and boats in the U.S. Navy ports and supports their needs with common procured equipment for use by all ships/boats attached to or visiting the ports. CVN Camels: These are very large floating metal structures designed to maintain the proper distance for CVNs to keep the ships from being damaged or damaging the pier structure. CVN camel modification: In order to use the CVN camels with the new type of double deck piers, the existing CVN camels require widening. Crane and/or Boat Hoists: Cranes for projects are various types and sizes (Davit/Bridge/Portal/Gantry/Mobile Harbor) All are Weight Handling Systems designed/selected to meet the specific requirements of the intended facility. DDG separators: These are large floating metal structures designed to maintain the proper distance for DDGs when nested outbourd of an other DDG. Small Bridge Cranes: Weight Handling Systems designed/selected to meet the specific requirements of the intended facility 											.S.

OTHER PROCUREMENT, NAVY/BA-7		Operating Forces Support Ec	uipment LI 8118	
Program Element for Code B Items:			Other Related Program Elements	

OPN10M - AIRCRAFT SHELTERS CH-53E (CNAL): Procure and install aircraft shelters. Allows maintainers to provide year round maintenance and prevents accelerated degradation of aircraft components due to extreme weather temperatures (OCO).

PNOSE - RELOCATABLE BUILDINGS: FY10 - Procure and install 155 four-room Relocatable Buildings (berthing) at Shaikh Isa Air Base, Bahrain. Current berthing are deteriorating. Living in such facilities can adversely affect morale and productivity of personnel. Additionally, the personnel who are not able to be housed on-site will be required to live in housing off-site, which would entail travel times in excess of 45 minutes. Personnel will be required to commute daily to Isa by bus, adding an additional cost and safety risk. The berthing capacity is insufficient to handle all berthing requirements in support of MRPA (P-3) mission. This is an emergent requirement as personnel are arriving in the planned phased manner and berthing will not be sufficient to support all personnel.

PNOSE - ABLUTION UNITS (NAVCENT): FY10 - Procure and install nine Ablution Units (showers/bathrooms) for ISA Air Base mission. Existing Ablution Units are under constant repair, have inadequate power and plumbing, and are well beyond their service life. The Ablution Units are required to support the living area with new Relocatable Buildings (berthing). This is an emergent requirement as personnel are arriving in the planned phased manner.

PNOSE - SPRUNG HANGER (NAVCENT): FY-12 - Procure and install a Sprung Hanger for ISA Air Base. The sprung hanger will allow the MPRA Squadrons to complete some Intermediate Level Maintenance in Bahrain vice sending the aircraft to Sigonella. Currently, no MPRA hanger exists in theater to allow this maintenance. If the sprung hanger is funded, the cost savings will be approximately \$960K per year. CTF-57 is forced to fly their aircraft (approximately 12 maintenance trips per year at a cost of \$80K per trip) back to Sigonella for requirement maintenance. Cost of sprung hanger is \$1.5M and installation cost is \$1M for a total requirement of \$2.5M) (OCO).

PNOSE - RELOCATABLE BUILDINGS (NAVCENT): FY-12 - Procure and install Relocatable Buildings for ISA Air Base mission. The berthing capacity at Shaikh ISA Air Base Logistics Support Area is insufficient to handle all berthing requirements in support of MRPA (P-3) mission. This is an emergent requirement as personnel are arriving in the planned phased manner and berthing will not be sufficient to support all personnel. Cost for 83 RLBs is \$1.494M and cost for installation of 83 RLBs is \$183K for a total requirement of \$1.677M (OCO).

monitor an ever more complex and busy harbor and littoral environment there is a need for advanced tools to effectively integrate current and new sensors in a common tactical picture. Expeditionary Warfare Decision System (EWDS) is a current POR Combat System will be re-deployed with MESF to quickly and cost effectively insert the required capability to build an effective tactical picture for the MESF commander. In addition, EWDS will provide the ability to process acoustic sensor data and correlate to surface sensors. EWDS will allow the MESF Commander to correlate disparate sensor feeds thus allowing him to better interrogate contacts in the continual challenge to identify the ever changing threat and act in a preemptive manner.

R228P - NAVAL COASTAL WARFARE (NCW) MOBILE CENTER AND C4I PLATFORMS (SUPPLEMENTAL)

Replaces current Mobile Port Operation Center communications for deployed troops in remote areas supporting Operations Iraqi Freedom (OIF).

R2G86 - OCO SUPPLEMENTAL

MESF System Upgrades - Pre-Planned Product Improvements (P3I) to improve performance and reliability and provide engineering changes to the MIUW-SU (V4), MAST, IBU's systems as well as various upgrades which would apply to MESF Mission. These upgrades would include sensor system upgrades, VSAT, portable comm gear and additional sensor equipment, new computer operating system related hardware, new or upgraded platforms for movement/transport of the MIUW-SU Radar Sonar Surveillance Central (RSSC) and the Portable Sensor Platform, and additional C4I equipment to include communications wireless links/LANs. System upgrades to MAST III units will enhance system operational performance and improve reliability. These upgrades include communications enhancements; refresh/upgrades to command and control components; and system mobility elements. VSAT provides a highly mobile satellite communication capability for use by the Maritime Expeditionary Security Force (MESF). Navy Expeditionary Logistics Support Group will deliver worldwide expeditionary logistics with active and reserve personnel to conduct port and air cargo handling missions, customs inspections, contingency contracting capabilities, fuel distribution, freight terminal and warehouse operations, postal services and ordnance reporting and handling in support of Overseas Contingency Operations (OCO).

C4ISR Requirement (OCO): There is currently no Navy Information Technology infrastructure at ISA Air Base. Funding is required for the procurement and installation of C4ISR equipment in support of ISA Air Base. Funding will support both the P-3 and M-TAV missions.

Funding is required for the procurement and installation of C4I Systems in support of FY12 Overseas Contingency Operations (OCO). The Joint Task Force-Horn of Africa (CJTF-HOA) Joint Operations and Intelligence Center (JIOC) is relocating from a non-force protected location to their new headquarters building once complete. Per the Military Construction Data Project (MILCON DD 1391), the building should be completed in FY 2012. As noted on the approved DD 1391 (MILCON Data Project Form), the C4I requirements are not funded/covered. The new headquarters building will meet force protection standards and has been approved by Congress. This request will provide the necessary funds to procure the required C4I systems/ equipment to support CJTF-HOA requirements. Tenant is the Operations and Intelligence watch floor portions of JTF-HOA. The requirement is necessary in order for CJTF-HOA to move into the new facility without any downtime to critical services and in support of operational mission. The Guards/Sanitizers requirements will allow for secure data transfer between different network security enclaves. The CJTF-HOA mission relies heavily on the sharing of information with local national partners and without these data sanitizers there is a great propensity for the leakage of classified materials. Visual Integrated Support for Information Operations eNvironment (VISION) provides a suite of tools that enables the coordination and synchronization of Information Operations plans, tools, and effects. Coalition Enterprise Information Exchange System (CENTRIXS) is a system of networks that allow information to be exchanged within a coalition. Each enclave represents a separate network based upon the members of the coalition. With the expansion of the JTF-HOA mission from their Combatant Commander (USAFRICOM), it will be necessary to add additional CENTRIXS enclaves in order to share information with the necessary coalition partners. The Tactical Voice Switching (TVS) will allow multiple users to use a single DAMA radio

COST ELEMENTS DESCRIPTION/JUSTIFICATION:

BASE REQUEST:

PNN5C - ACOUSTIC MEASUREMENT SYSTEM

Acquire lifecycle replacement and upgrade of a new generation of digital acoustic measurement systems. Measurements support production of low frequency bottom loss databases, fleet anti-submarine warfare support measurements, and acoustic measurements to support high resolution acoustic anti-submarine warfare area assessment products. Multi-channel buoys with capability to deploy in different configurations (surface, sub-surface, and bottom moored) will be procured. Procurement will also provide for shipboard data acquisition, control, and processing support systems. The key component of the system is a multi-channel acoustic buoy. The buoy is capable of acquiring the data, providing signal conditioning and gain, and storage of the data in digital form. The buoy acquires time and position data from Global Positioning System (GPS). In shallow water, low frequency tactical scenarios, the attenuation of acoustic energy by the bottom plays the single largest role in determining the nature of acoustic propagation. Improved acoustic performance prediction capability involves the generation of low frequency bottom loss databases. These gridded databases contain layered geoacoustic descriptions of the ocean sea-floor, and are designed as environmental input to fleet transmission loss models for the prediction of passive transmission loss.

PNN5D - ACOUSTIC POSITIONING SYSTEM (ULTRA SHORT BASELINE (USBL))

The Acoustic Positioning System (APS) is an Ultra Short Baseline (USBL) Acoustic Positioning System used to provide high accuracy navigation of tow-bodies and Autonomous Underwater Vehicles (AUVs) deployed from a T-AGS 60 vessel. It is intended to be permanently installed aboard each vessel and will support tracking objects in any direction out to a 5000m radius. In addition, it is used to precisely locate lost vehicles for purposes of recovery. Currently, navigation of towed vehicles is accomplished via approximation based on the length of the cable tether. This often results in significantly inaccurate positioning, depending on sea conditions. The quality of the associated oceanographic data collected is thus comprised in that regard. This is typically side scan imagery. Degraded navigation can result in an inability to properly differentiate mine-like targets in a cluttered environment. This can lead to a substantially increased processing time and increased risk of missed coverage. In addition, the cost or practicality of recovering a lost vehicle is substantially reduced when the exact location can be determined. Without an APS, tow-body or vehicle positioning will continue to contribute a significant error to data sets.

PNN6D - DEEP MULTIBEAM INSTALLATION

Multibeam systems are used to collect deep-water bathymetry data. The full ocean multibeam sonar system is the primary ocean mapping tool in greater than 300 meters of water to full ocean. The deep-water multibeam system is a state-of-the-art commercial one by one degree multibeam having a maximum swath coverage of six times water depth. The multibeam survey system includes an integrated deep water sub-bottom profiler system. The system will be installed on all T-AGS 60 class ships as a life-cycle replacement for the existing deep water multibeam system (EM121A). The deep water multibeam system (EM121A) has exceeded its life expectancy and will no longer be supported by the manufacturer. Bathymetry data is required to support special chart production for the Navy. The deep water multibeam system for USNS MARY SEARS has already been procured. This will fund the installation during the dry dock scheduled for December 2011.

PNN6U - DIGITAL SIDE SCAN SONAR (HSL)

These high-speed, side scanning sonar systems that image the sea-floor with fine resolution. They will be installed on Hydrographic Survey Launches (HSL). The data is required to generate products that directly support mine warfare, hydrographic, and oceanographic requirements. This environmental data is critical in the detection of small mine-like targets as well as hazards-to-navigation (e.g., wrecks) and characterizing the sea-floor over large areas (geoprovincing). This data is used in change-detection programs to compare with any new data collected from the Fleet that will aid in the assessment and determination of mine-threats. T-AGS ships are equipped with a Klein 5000 system and HSLs that operate with Klein 3000 systems. For many mine warfare surveys, a Klein 3000 system does not meet requirements. The HSLs are used in areas typically too shallow for the ship to safely operate. It is now necessary that the HSLs be outfitted with the Klein 5000 high-resolution/high-speed side scan capability to support these operations. The mine warfare threat is a very significant concern to the fleet. The data collected by this system will directly support the fleet in dealing with this threat. Without the equipment to collect this data, efforts to manage the threat will be hindered and increase the risk of casualty and damage to the fleet.

PNN6A - DIGITAL SIDE SCAN SONAR (SHIP)

Additional high-speed, high resolution side scan sonar systems are required to meet fleet requirements supporting mine warfare operations. These three systems procured will be installed aboard three additional T-AGS 60 class ships to replicate the system aboard USNS HEEZEN. The procurement will facilitate simultaneous collection of high resolution imagery at mine warfare resolutions and frequencies. The imagery data is required to generate products that directly support mine warfare, hydrographic and oceanographic requirements. This environmental data is critical in the detection of small mine-like targets as well as hazards-to-navigation (e.g. wrecks) and characterizing the sea-floor over large areas (geoprovincing). This data is used in change-detection programs to compare with any new data collected from the Fleet that will aid in the assessment and determination of mine-threats and significantly reduced clearance time.

PNN61 - HYDROGRAPHIC SURVEY LAUNCH (HSL) MISSION EQUIPMENT

This OPN line item involves the life-cycle replacement of the entire mission equipment suite currently installed aboard the operational fleet of HSL (seven HSLs and the Bertram). The mission equipment suite includes, but is not limited to, shallow water multibeam systems, single beam systems, navigation systems, data collection and storage systems, forward-looking sonar systems, and digital side scan systems. This does not include high-resolution digital side scan systems used for mine warfare. Life-cycle replacement of these systems is critical to ensure state-of-the-art hydrographic surveying capability in littoral areas. Also, due to the harsh environmental conditions encountered by HSLs during typical hydrographic surveys, planned replacement of their mission equipment is necessary to guarantee long-term supportability.

PNN6K - OCEANOGRAPHIC INFORMATION SYSTEM (OIS) ARCHITECTURE

The Oceanographic Information System (OIS) architecture provides the corporate information technology infrastructure to support the collection, processing, storage, archival, and dissemination of oceanographic data, products, and other scientific information in support of fleet Meteorological and Oceanographic (METOC) requirements such as safety of navigation and weapons systems performance. Funds are budgeted over the Future Year Defense Plan to upgrade the end-to-end processing and production systems including the Satellite Processing System, to required levels of performance and establish an enterprise-wide systems level architecture for the OIS. The emergence of state-of-the-art oceanographic sensors, such as high-speed, high-resolution digital side scan sonar systems, are collecting data volumes far in excess of the current OIS capability to receive, process, store, and archive data. The integration of through-the-sensor data into OIS production and the collection of remotely sensed data add to the complexity of the information technology infrastructure required to support the mission. Funds are also budgeted to upgrade existing corporate storage resources that support the data warehouse and expand the storage area network to meet anticipated data storage requirements. Hardware is also required in the outyears to upgrade the bandwidth of the network to meet anticipated user requirements in response to increased data rates from new oceanographic sensors and remote sensing sources and to facilitate mandated defense in depth protection of information technology resources.

PNN5B - SHALLOW WATER SEISMIC SYSTEM

Lifecycle replacement and upgrades to seismic systems are needed to meet existing requirements for geophysical measurements in shallow to mid-depth water environments. The systems will be roll-on/roll-off systems. A system is comprised of sub-bottom profiler, which is a sparker/mini-boomer type system for medium to deep sub-bottom measurements. These systems are designed to meet requirements for geophysical measurements to support geophysical database construction. These databases are an essential part of acoustic prediction systems.

PNN3E - SHIP MOVING VESSEL PROFILER (MVP)

The Shipboard MVP is the larger shipboard complement to the HSL MVP, purchased beginning in FY04. Intended for use from T-AGS 60 platforms, the system consists of a compact and recoverable probe, integrated with a computer controlled over-the-side handling system. It permits the rapid and automated acquisition of sound velocity profile data from an underway vessel. Currently, critical sound velocity profile data is acquired by stopping the vessel and conducting an over-the-side conductivity, temperature, depth probe deployment, which usually takes several hours. This is supplemented with less accurate derived sound velocity profile measurements using expendable underway probes (expendable bathythermograph, etc). The Ship MVP is intended to significantly increase multibeam survey efficiency by acquiring highly accurate automated sound velocity profile data in the critical 0- 400m water layer. In its absence, sound velocity profile data will continue to be collected at less than optimal sampling rates and primarily by stopping the ship. Systems are currently deployed successfully by the Canadian Hydrographic Service and several military hydrographic agencies worldwide.

PNN6L - SHIP TO SHORE DATA COMMUNICATIONS

The Ship to Shore Data Communications system provides high-speed digital data communication between survey ships and the NAVOCEANO Survey Operations Center at Stennis Space Center, Mississippi, using either C-band or Ku-band satellites. The system basically connects the survey ship to the NAVOCEANO local area network to provide real-time survey data to Non-classified Internet Protocol Router (NIPR) or Secret Internet Protocol Router (SIPR) computers for rapid processing to produce near real-time products for the war fighter. Data is transmitted from ship to shore at nominal rate of 1,024,000 bits per second and from shore to ship at a nominal rate of 256,000 bits per second allowing large amounts

of oceanographic data to be transmitted for processing as it is collected on the ship. The system also provides the survey ship with classified and unclassified email and Voice-over-IP communication. The alternate INMARSAT data communications link to the survey ships only operates at 56,000 bits per second and cannot transmit large amounts of survey data from the ship. Survey data is also saved on tapes that are mailed back at the end of the 28-day survey, but this process does not allow the Navy to provide time critical data to the warfighter. The seven survey ships were outfitted with digital topographic support system systems using FY03, FY04, and FY05 OPN funding. The first system was installed in May-June 2003 with projected operational life of seven years. Life cycle OPN replacements are programmed starting in FY11.

90PNW- TIME DISTRIBUTION SYSTEM:

Time is distributed via telephone, modem, Global Positioning System (GPS), Two Way Satellite Time Transfer. Funding is for distribution systems necessary to transfer and distribute time to users. This consists of receivers systems for M Code receiver systems, Two Way Satellite Time Transfer systems, Precise Time and Time Interval measuring systems, and other systems to distribute precise time.

P-1 Item 142

BUDGET ITEM JUSTIFICATION SHEET P-40		DATE: February 2011
APPROPRIATION/BUDGET ACTIVITY	LINE ITEM	P-1 ITEM NOMENCLATURE
Other Procurement, Navy / 07 - Personnel and Command Support Equipment	8126	Environmental Support Equipment
Program Element for Code B Items:	Othe	r Related Program Elements
0305112N - Oceanography		

90PNW - VERY LONG BASELINE INTERFEROMETRY SYSTEM:

Very Long Baseline Interferometry systems consist of large antennas which operate at centimeter wavelengths, radio receivers and amplifiers and electronics to convert the Radio Frequency signals into digital. This data is obtained at sites separated by thousands of kilometers. The data is transported from the sites and combined to determe the precise positions of celestial sources and the location of the antennas. Systems to be purchased here are antennas, radio receivers, Radio Frequency to digital conversion systems, wide band communication systems, and correlators to process the wide band data.

90PNW - ASTROMETRIC TELESCOPE SUBSYSTEM:

The USNO Robotic Astrometric Telescope (URAT) is a terrestrial 0.85m aperture astrometric telescope needed to produce an all-sky, highly accurate star catalog good to 5 milliarcseconds (24 nanoradians) for faint stars to 20th magnitude. Background star positions are used by numerous DoD ground and space assets for orbit determination of blue/grey/red resident space objects (RSO-satellites). Emerging Space Order of Battle requirements for Offensive and Defensive Counterspace will require meter-level orbit determination and targeting for faint microsatellites at GEO (5 milliarcseconds) by 2010-2015. Resultant star catalog will also be used by National Security Space assets for precise focal plane calibration. If not funded, National Security Space capability to assess Space Situational Awareness and perform Space Threat Analysis will be severely compromised due to degraded precision of astrometric catalogs beginning FY10. URAT-based catalogs will compliment the requirements posed to collect astrometric data for bright stars (for NTM/ISR and strategic systems).

PNN6M - DEEP MULTIBEAM REPLACEMENT

The full ocean multibeam sonar system is the primary ocean mapping tool in greater than 300 meters of water to full ocean. The deep water multibeam system will be a state-of-the-art commercial one by one degree multibeam having a maximum swath coverage of six times water depth. The multibeam survey system includes an integrated deep water sub-bottom profiler system. TA deep water multibeam will be installed on all T-AGS 60 class ships as a life-cycle replacement for the existing deep water multibeam system (EM121A). The deep water multibeam system (EM121A) has exceeded its life expectancy and will no longer be supported by the manufacturer. Multibeam systems are used to collect deep-water bathymetry data. Bathymetry data is required to support special chart production for the Navy. If the deep-water multibeam systems are not replaced, the T-AGS 60 ships will loose the capability to support the Navy's requirement for deep and mid-water bathymetry data products.

PNN4G - FLEET SURVEY TEAM INTEGRATED SURVEY PLATFORM

Funding for hydrographic survey platforms. The survey platform is an air-transportable survey boat (Rigid Hull Inflatable Boat (RHIB) type) with installed Multibeam Echo-Sounder RESON 7125, Single Beam Echo-Sounder, Digital Side Scan Sonar, Wide-Area Differential Gloabal Positioning System navigation, Inertial Motion sensor system, Data Acquisition Work-Station (PC), Sound Velocity Probe, and Electric winch. This 7-9 meter survey boat with fully integrated navigation and high resolution sonar systems for collection maritime geospatial data. These survey boats with the ability to navigate in waters with unknown hazards will aid in rapid response requirements in support of fleet safety of navigation requirements. The boat and trailer to be air-transportable in a C-130 aircraft and rigged for hoisting.

PNN6W - INTEGRATED SUB-BOTTOM PROFILER

These systems will be life cycle replacements for existing Sub Bottom Profiler systems that have exceeded life expectancy and do not currently provide the high resolution digital acoustic data with precision positioning and navigational capability that is required for Mine Warfare data. Systems will operate in conjunction with the new deep-water multibeam systems that are scheduled for installation during FY15.

P-1 Item 142

BUDGET ITEM JUSTIFICATION SHEET P-40		DATE: February 2011
APPROPRIATION/BUDGET ACTIVITY	LINE ITEM	P-1 ITEM NOMENCLATURE
Other Procurement, Navy / 07 - Personnel and Command Support Equipment	8126	Environmental Support Equipment
Program Element for Code B Items:	Other	r Related Program Elements
0305112N - Oceanography		

PNN4F - LONG TERM AMBIENT NOISE RECORDING AND REPORTING SYSTEM

Long Term Ambient Noise Recording and Reporting System is a moored, acoustic buoy system. The buoys are four channel Environmental Acoustic Recording System (EARS) units that will record ambient noise for long time periods within a 1kHz bandwidth. The Environmental Acoustic Recording System buoys will have to be recovered for data processing.

PNN3R - NEAR REAL-TIME PROFILING ARRAYS

Funding in FY14 and FY15 is for the procurement of a 'single' profiling system with real-time reporting capabilities configured to support data collection for Antisubmarine Warfare/Mine Warfare requirements. Two types of systems are envisioned: Deep water and Shallow water - A near real-time profiling Array would consist of a surface buoy with Communications and the oceanographic wire rope underneath until close to the sea-floor. The oceanographic wire rope would provide the inductive modem to transfer data from the instruments on the mooring. Instruments would be vertical profiling Conductivity, Temperature, Depth (CTD) sensors with currents and possibly optics. Deep water applications - Above configuration or possibly with subsurface releasable data capsules for deep water applies. Shallow water applications - an underwater winch mechanism in a bottom founded trawl resistant type package. An Acoutsic Doppler Current Profiler would provide currents data and the unit that goes to the surface to transmit data would take a Conductivity, Temperature, Depth profile and transmit that data as well.

PNN6T - SHALLOW WATER MULTIBEAM

The shallow water multibeam sonar system is the primary sea-floor mapping system in the littoral (50-500 meters of water). Without this data: 1) surface and sub-surface littoral navigation charts would not be updated with accurate, high resolution bathymetry, 2) high-resolution littoral bathymetry required for running ocean (currents, waves, tides) models for anti-submarine warfare, naval special warfare and mine warfare would not be available and 3) high-resolution littoral bathymetry required for anti-submarine warfare would not be available.

PROGRAM DESCRIPTION/JUSTIFICATION:

The Physical Security Equipment consists of Mobile Security Force (MSF), Anti-Terrorism/Force Protection (AT/FP) Afloat, Shipboard Protection System, Body Armor, SEAFOX Remote Controlled Surface Vessel, Biometrics, Enhanced Maritime Interception Operations (EMIO), Helicopter Vessel Boarding Search and Seizure (HVBSS), Riverine Visual Augmented Systems (VAS) and Electro-Optical Infrared (EOIR), Navy Expeditionary Combat Command Activities (NECCA), Maritime Civil Affairs Group Activities (MCAG), SSBN Waterfront Restricted Area Security (WRAS), Mobile Diving Salvage Unit (MDSU), Naval Special Warfare (NSW) Forces, Anti-Terrorism Force Protection Ashore and Global War on Terrorism/Overseas Contingency Operations (GWOT/OCO) Supplementals.

(6E23) - SHORE BASED SUPPORT EQUIPMENT (OCO SUPPLEMENTAL)

Requirement is requested to address current and anticipated Overseas Contingency Operations (OCO) requirements placed on the Navy's Installation Protection program. Funding addresses OPN requirements associated with Access Control and Video Surveillance, Harbor Security Barrier Protection, CVI-X-ray machines, Electronic Harbor Surveillance System (EHSS) and Defense Biometric Identity Management System (DBIDS) Deployment. These efforts assist with freeing military master-at-arms (MA) personnel for Global War on Terrorism (GWOT)/Overseas Contingencies Operation (OCO) missions through technology insertion while also providing technologies and capabilities to strengthen Outside Continental United States/Continental United States (OCONUS/CONUS) installation force protection and consequence management preparedness, response, and recovery.

Defense Biometric Identification System (DBIDS) - Physical Security improvements accomplished through access control, base registration, and the proper accounting of critical personal and job-related property through the implementation of enterprise wide solution. The Defense Manpower Data Center has developed DBIDS, the Defense Biometric Identification System to provide a DoD wide solution to ensure the safety of sensitive and classified material as well as the safety of active duty service members, DoD civilians, and their families. This effort directly supports GWOT through the protection of Navy military and strategic assets while also providing manpower mitigation options.

Access Control & Video Surveillance - Procurement, Installation, and integration (i.e., Access Control, Video Surveillance, C4I). Access control improvements to reduce security manning requirements, freeing MAs for Cost of War (COW) requirements.

CVI X-RAY Machines - Currently use handheld mirrors limiting the capability for explosives detection on larger trucks. Enabling terrorist to plant Vehicle-Borne Improvised Explosive Device (VBIED) and enter installation easily.

CLASSIFICATION:	UNCLASSIFIED

			February 2011	
APPROPRIATION/BUDGET ACTIVI	TY	P-1 LINE ITEM NOMENC	ATURE	
OTHER PROCUREMENT, NAVY/BA	A 7	UIPMENT		
		SUBHEAD NO. 87X7 BLI	8128	

Electronic Harbor Surveillance System - Naval Station (NAVSTA) Great Lakes currently has approximately one and one half mile of coast line along Lake Michigan that is not currently monitored or patrolled by the United States Navy, although there is a valid requirement under 33 CFR Ch 11 (334,820 & 334.830). NAVSTA Great Lakes maintains and operates a Marina that is open to the public for recreational use, and has critical infrastructures that are located adjacent to Lake Michigan, vulnerable to numerous types of hostile attacks. Electronic Harbor Surveillance System (EHSS), which would give us the ability to detect, challenge and query vessels within our jurisdictional boundaries, therefore mitigating the threat to our installation from Lake Michigan.

Harbor Security Barrier Protection - Post 9/11 requirement to increase the protection of high value assets (HVAs) during in port. Increased requirement has resulted in increased deployment of boat barriers.

Port Security Barrier (Phase I) - Procurement and Installation of PSB-T barrier material to protect a portion of the waterfront of Subase New London, CT.

(X7001) - MOBILE SECURITY FORCE

Active and Reserve Component of the Naval Coastal Warfare (NCW) detachments. Mobile Security Force (MSF) provides seaward surveillance and security forces in amphibious objective areas, harbors and approaches, straits, anchorages, offshore economic assets and other military areas worldwide. Expeditionary Combat Readiness Center (ECRC) oversees and supports sailors assigned as individual augmentees, in-lieu-of forces and members of provisional units committed to the war effort. ECRC is intended to relieve stress on the sailor, so they can focus on their mission and not have to worry about their pay, families or exams by home. Expeditionary Training Command (ETC) supports Combatant Commanders Theater Security Cooperations (TSC) efforts by delivering timely, focused, and customized training to designated Host Nations so they can govern and protect themselves and their areas of responsibility from enemies. Maritime Expeditionary Security Force (MESF) fills current warfighting gaps by providing highly trained scalable and sustainable Security Teams capable of defending mission critical assets in the near coast environment. MESF units provide Ground Defense, Alfoat Defense, Airfield/Aircraft Security and a wide range of secondary tasks from Detention Operations to Law Enforcement.

(X7001) SSBN WATERFRONT RESTRICTED AREA SECURITY (WRAS)

This category provides for the security equipment required to guard and protect the TRIDENT II (D5) missile while the missile is in storage, being handled, or in a movement convoy to and from the waterfront at the Strategic Weapons Facility, Atlantic (SWFLANT) in Kings Bay, GA and the Strategic Weapons Facility, Pacific (SWFPAC) in Bangor, WA. Funding procures Electronic Security Systems, blocking barges and other equipment necessary to meet Nuclear Security requirements per DOD S-5210.41M.

The West Coast Facility (SWFPAC) and East Coast Facility (SWFLANT) have alternating implementation schedules for physical security equipment which generated cost growth in FY12.

(X7002) - ANTI-TERRORISM/FORCE PROTECTION AFLOAT PHYSICAL SECURITY EQUIPMENT (ATFP PSE)

Anti-terrorism/Force Protection (AT/FP) Physical Security Equipment (PSE) and Vessel Boarding Search and Seizure (VBSS) material are a compilation of specific security and AT related items intended for use by Ship's company aligned with Chief of Naval Operations (CNO's) objective for operation watch standers at pier side and perimeter posts. AT/FP PSE material is used to assist shipboard security forces in thwarting potential terrorist attacks and forms the base of security for shipboard personnel. VBSS PSE material enables surface forces to reach full MIO capability including interception, boarding, searching, diverting and /or seizing suspect vessels.

(X7003) - SHIPBOARD PROTECTION SYSTEM (SPS)

SPS delivers an integrated shipboard, suite of systems designed to detect, identify, and engage asymmetric threats. Capabilities includes: Surface Surveillance System, ROSAM stabilized gun mounts and Non-lethal weapons/devices. The surface surveillance system integrates Electro-Optic/Infrared (EO/IR) sensors, and radar into a common tactical surveillance system. Stabilized guns:

CLASSIFICATION:	UNCLASSIFIED			
Exhibit P-40, BUDGET ITEM JUSTIFICATION (CONTINU	N)		DATE	
		N)		February 2011
APPROPRIATION/BUDGET ACTIVI	TY	P-1 LINE ITEM NOMENCI	ATURE	
OTHER PROCUREMENT, NAVY/BA	A 7	PHYSICAL SECURITY EC	UIPMENT	
		SUBHEAD NO. 87X7 BLI:	8128	

provide integrated lethal engagement capability against asymmetric threats. Non-lethal weapons (NLW): NLW assist in determining intent and target discrimination. SPS is to be fielded in blocks through evolutionary acquisition. The block approach facilitates the early delivery of enhanced situational awareness capability. Future blocks will introduce lethal and non-lethal effectors with total detect to engage capabilities integration. The SPS End State System will provide Navy vessels with the ability, in foreign and domestic ports, to protect themselves from attacks by asymmetric threats. This ability requires that information necessary to seamlessly execute the detect-to-engage sequence be collected, processed, communicated, and acted upon before threats reach their objectives. Due to the requirement for 360 degree coverage for situational awareness and engagement, coverage requirements include larger (CVN, LHA, LHD) as well as smaller (CG, LSD, LPD) platforms.

The funding increases reflect the increase in number of fielded systems and the requisite increase in in-service engineering agent (ISEA) and configuration management support. By the end of FY12, the number of fielded systems will increase by 33% over FY11. The increase in funding for training and support equipment allows for the training of the additional system operators. The additional funds for ECP modification and production allows for pre-planned program improvement for the various edge devices (EO/IR, lethal effector, etc.) prior to full rate production.

(X7004) - SPS INSTALLATIONS

Installations of Shipboard Protection System.

(X7007) - BIOMETRICS

Introduces biometrics capabilities for surface ships during Vessel boarding Search and Seizure (VBSS) Enhanced Maritime Interception Operations (EMIO) by providing a new Maritime Domain Awareness (MDA) capability to download fused terrorism intelligence to Counter Terrorism Centers, Terrorism Screening Centers and other Intelligence Community databases to support on Common intelligence picture in a Naval/Joint/Coalition operational environment.

Funding will provide biometric collection kits which will provide an interim capability to the fleet. These newly procured kits will remain in the fleet until production units are available at Milestone C in FY12.

(X7008)- ENHANCED MARITIME INTERCEPTION OPERATIONS (EMIO)

In response to JCS tasking, implemented Level II MIO Initial Operational Capability May 2005. The new MIO capability expands the operational spectrum for the Navy's support of the GWOT from Compliant to only Non-Compliant boarding. MIO teams will be trained on new equipment, which will allow them to board vessels that refuse to comply with orders to stop and be searched for terrorists and terrorist related material.

(X7009)- HELICOPTER VESSEL BOARDING SEARCH AND SEIZURE (HVBSS)

Phases day/night free band Helicopter Vessel Boarding Search and Seizure (HVBSS) capability deployed on surface combatants to augment Level II Boarding Teams. MIO teams will be trained on new equipment, which will allow Helo entry.

(X7010) -RIVERINE (VAS)

The Riverine Force will integrate and employ a variety of surface and air assets, special vehicles, weapons and appropriately trained personnel. Mission assets needed to support the operational capabilities will vary widely dependant on the Host Nations involved. The Riverine Squadron will deploy with inherent, but limited, force protection capabilities. All members will be equipped with body armor and personal small arms. All Craft being considered will be armored and have stations for a variety of crew-served weapons.

(X7011) -RIVERINE ACTIVITIES

The Riverine Forces will build a concept of operations based on the capabilities requested by the combatant commanders. Those capabilities will include: rapid insertion of forces, interdiction,

OTHER PROCUREMENT, NAVY/B/	A 7	PHYSICAL SECURITY EC	UIPMENT	
		SUBHEAD NO. 87X7 BLI	8128	

maritime security, customs and law enforcement and combat operations against asymmetric threats in support of the Global War on Terror. US Navy Riverine capability to conduct three phases of operational capability. Phase 0: Shaping and Stability (to include Theater Security Cooperation activities); Phase I: Deter; Phase II: Seize the Initiative/Dominate; and Phase III: Stabilize/Enable Civil Authority. Three Riverine Squadrons will serve as a ready Riverine Force for the Joint Forces Maritime Component Commander (JFMCC). Visual Augmented Systems (VAS) devices, handheld thermal imagers and laser aiming devices for Riverine personnel and combatant crafts.

(X7012) NAVY EXPEDITIONARY COMBAT COMMAND ACTIVITIES (NECCA)

NECC combines the Navy's expeditionary forces under a single operational commander with the capability to conduct operations across the full spectrum of maritime expeditionary operations, including maritime security operations; theater security cooperation support; security assistance; shaping operations; and stability, security, transition, and reconstruction operations. Funds are to centrally organize, man, train, equip, and maintain the existing Navy expeditionary forces. To establish and coherently organize new and evolving expeditionary warfighting capabilities. To serve as the single process owner for the man, train, equip, deploy and redeploy functions for all Navy Individual Augmentee, in lieu of, and Ad Hoc units.

(X7013) MARITIME CIVIL AFFAIRS GROUP ACTIVITIES (MCAG)

Maritime Civil Affairs Group (MCAG) integrates both Department of Defense (DOD) and non-DOD initiatives (including humanitarian) to provide Civil Military Operations focused on the maritime and near-coast environments. MCAG supports Global War on Terrorism (GWOT), Major Combat Operations Other Than War (deterring war, resolving conflict, and promoting peace), and Humanitarian Assistance and Disaster Relief.

(X7014) NAVY EXPEDITIONARY LOGISTICS SUPPORT GROUP

Navy Expeditionary Logistics Support Group will deliver worldwide expeditionary logistics with active and reserve personnel to conduct port and air cargo handling missions, customs inspections, contingency contracting capabilities, fuels distribution, freight terminal and warehouse operations, postal services, and ordnance reporting and handling.

(X7015) MOBILE DIVING SALVAGE UNIT (MDSU) OUTFITTING EQUIPMENT

Provides prioritized initial outfitting for newly established Mobile Diving and Salvage Unit Detachments. Includes Salvage and Combat Support Equipment to meet Requirement Operational Capabilities/Program Operational Environment (ROC/POE) requirements. Equipment will be procured for each Detachment as prioritized by the Fleet. Each Detachment will be partially outfitted starting in FY02 with the highest priority equipment. Required Inventory Objective (I/O) is 12.

(X7016) NAVAL SPECIAL WARFARE

Phases and procures new night vision equipment (Visual Augmentation Systems (VAS) that is Navy service common equipment for Naval Special Warfare (NSW) forces. Mission assets needed to support the operational capabilities will vary widely dependant on mission.

Additional funding is provided in FY12 for the procurement of additional AN/PVS-15B and AN/PRQ-15C that are required to support the ramp up of additional troops under Naval Special Warfare (NSW).

(X7017) - RIVERINE/UNMANNED VEHICLES

The Riverine Force will integrate and employ a variety of surface and air assets, special vehicles, weapons and appropriately trained personnel. Mission assets needed to support the operational capabilities will vary widely dependant on the Host Nations involved. The Modular Unmanned Scouting Craft Littoral (MUSCL), is man-portable "X-Class" Unmanned Surface Vehicle provides enhanced surveillance and reconnaissance capability to Naval Expeditionary Combat Command (NECC) Riverine forces.

(X718P) TOPLITE EO/IR SYSTEM (SUPPLEMENTAL)

Replaces Electro-Optic/Infrared (EO/IR) system for the MK38 to support ships conducting Maritime Interdiction and to improve close-in defense capability for Operations Iraqi Freedom (OIF).

(X728P) VESSEL BOARDING SEARCH AND SEIZURE (VBSS) (SUPPLEMENTAL)

CLASSIFICATION:	UNCLASSIFIED			
	Exhibit P-40, BUDGET ITEM JUSTIFICATION (CONTINUATIO	N)		DATE
		N)		February 2011
APPROPRIATION/BUDGET ACTIVI	TY	P-1 LINE ITEM NOMENCI	ATURE	
OTHER PROCUREMENT, NAVY/B	A 7	PHYSICAL SECURITY EC	UIPMENT	
		SUBHEAD NO. 87X7 BLI	8128	

Funds are requested for Fleet wide replacement of VBSS Enhanced Maritime Interception Operations (EMIO) material which provides boarding team members the operational equipment needed to successfully accomplish the EMIO mission. The mission includes intercepting, boarding, searching, diverting, and/or seizing suspect vessels transiting a declared enforcement area to prevent terrorist activities and/or trafficking or illegal personnel and cargo (such as weapons, drugs, or petroleum products) from being imported or exported from a nation. VBSS EMIO material includes personal protective equipment, such as Body Armor and Ballistic Trauma Plates, for increased protection commensurate with threat conditions and unique boarding equipment.

(X7701) ANTI-TERRORISM FORCE PROTECTION ASHORE

This program provides centrally procured equipment to improve the physical security posture of Navy installations worldwide. The program applies the Commander Navy Installations Command (CNIC) Risk-based investment strategy, ensuring appropriate Anti-terrorism and Force Protection (ATFP) solutions are fielded. The Physical Security Equipment (PSE) program procures equipment that supports and improves 15 specific Navy capabilities to detect, defer and defeat terrorist and criminal activity targeted against Navy personnel, government property and facilities ashore/afloat. The program provides funds to procure equipment for Navy Military Construction (MILCON) projects, including Intrusion Detection System(s) (IDS) and other Electronic Security System(s) (ESS) before building occupancy. The funds support the following six categories: Electronic Harbor Security Systems (EHSS) and Barriers; Physical Security/Access Control (Gates Automation & Perimeter Security); MILCON IDS; Command, Control, Computer, Communications & Intelligence (C4I); Explosive/Contraband Detection Systems; and Other Physical Security Equipment (PSE).

The cost growths for Electronic Harbor Security Systems (EHSS)/Barriers and Physical Security/Access Control-Gate Automation are based on the type of Project in FY11 and FY12. Each of the above varies on the Requirement's area of coverage which drives the cost.

(X7CA1) - BODY ARMOR FACTORY

(Congressional Add) Funding provided for modified Interceptor Body Armor (IBA) and Trauma Plates. This Light Assault Vest System is for Naval Coastal Warfare (NCW) reserve units.

(X7CA2) - SEA FOX REMOTE CONTROLLED SURFACE VESSEL

(Congressional Add) Sea Fox is an immediately available asset to support Anti-Terrorism/Force Protection (AT/FP) efforts in a variety of circumstances. This funding will procure 8 vessels and associated mission packages for follow-on proof-of concept operations testing and integration with current AT/FP tests and operation.

(X7GW1) GWOT SUPPLEMENTAL (BODY ARMOR)

Funds are provided for Fleet wide replacement of ATFP helmets, pad systems and replacement of Hand Held Explosive Detector Systems.

(X7GW2) GWOT SUPPLEMENTAL (RIVERINE)

The Riverine Forces will build a concept of operations based on the capabilities requested by the combatant commanders. Those capabilities will include: rapid insertion of forces, interdiction, maritime security, customs and law enforcement and combat operations against asymmetric threats in support of the Global War on Terror. US Navy Riverine capability to conduct three phrases of operational capability. Phase 0: Shaping and Stability (to include Theater Security Cooperation activities); Phase I: Deter; Phase II: Seize the Initiative/Dominate; and Phase III: Stabilize/Enable Civil Authority. Three Riverine Squadrons will serve as a ready Riverine Force for the Joint Forces Maritime Component Commander (JFMCC). The Riverine Squadrons will procure night vision devices, handheld thermal imagers and laser aiming devices for Riverine personnel and combatant crafts.

(GW1X1) - GWOT SUPPLEMENTAL FOR BODY ARMOR

These funds replace the current body armor equipment used by Afloat Visit Board Search and Seizure (VBSS) teams fielded since 2001.

(GW1X2) - GWOT SUPPLEMENTAL FOR WEAPONS OF MASS DESTRUCTION (WMD) DETECTORS

These funds are for fielding the remaining six WMD Detectors for Navy Visit Board Search and Seizure (VBSS) teams.

(X7CA3) ATFP SUPPLEMENTAL

Funding provided to support the deployment of the Vitual Perimeter Monitoring System (VPMS) at the Patuxent River Naval Air Station, Indian Head Division, Naval Surface Warfare Center, and Surface Warfare Center, and Naval Surface Warfare Center, and Naval Surface Warfare Center, and Naval Surface Warfare Center, and Surface

(X7G8P) ATFP-OCO - SUPPLEMENTAL

Current documented requirements/allowances and existing systems require upgrade to next-generation devices. Attainment of required allowance levels and upgrade of existing systems is critical to improving the readiness and effectiveness of the Navy expeditionary forces. Unmanned Aerial Vehicles (UAVs) support Naval Expeditionary Combat Command/Naval Component Commander (NECC/NCC) warfighting. Requires mature technology, focusing on organic self-protection of naval platforms against asymmetric threats. Use of unmanned vehicles is necessary to properly secure assigned mission areas. Mobile Expeditionary Security Force (MESF) required the use of autonomous sensors and scalable reach back capability to meet and address current Initial Capabilities Document (ICD) gaps Surface Target Sensor, Wireless Sensor Links, Unattended Sensors, Ground Target Sensor and other communication systems. Use of unattend sensors is necessary to properly secure assigned mission area. Emergent force protection equipment authorized for Maritime Expeditionary Security Force (MESF) squadrons. Planned acquisition of non-lethal Table of Allowance (TOA) capabilities include the Acoustic Hailing Device (AHD), Optical warning and distraction device. The squadron provides logistics support, field electrical generation services and climate control through environmental control units for assigned security forces.

(X7G85) ATFP AFLOAT - OCO SUPPLEMENTAL

Attainment of required allowance levels and upgrade of existing systems is critical to improving the readiness and effectiveness of the Navy expeditionary forces. Requires mature technology, focusing on organic self-protection of naval platforms against asymmetric threats. Use of unmanned vehicles is necessary to properly secure assigned mission areas. Mobile Expeditionary Security Force (MESF) required the use of autonomous sensors and scalable reach back capability to meet and address current Initial Capabilities Document (ICD) gaps Surface Target Sensor, Wireless Sensor Links, Unattended Sensors, Ground Target Sensor and other communication systems. Use of unattend sensors is necessary to properly secure assigned mission area. Emergent force protection equipment authorized for Maritime Expeditionary Security Force (MESF) squadrons. Planned acquisition of non-lethal Table of Allowance (TOA) capabilities include the Acoustic Hailing Device (AHD), Optical warning and distraction device. The squadron provides logistics support, field electrical generation services and climate control through environmental control units for assigned security forces in support of Oversea Contigency Operations (OCO).

(X7G85) - ATFP ASHORE - OCO SUPPLEMENTAL

Funding provided for equipment to improve the physical security posture of Outside Continental United States (OCONUS) Navy installations. The program applies the Commander Navy Installations Command (CNIC) Risk-based investment strategy, ensuring appropriate Anti-terrorism and Force Protection (ATFP) solutions are fielded. This equipment supports and improves 15 specific Navy capabilities to detect, defer and defeat terrorist and criminal activity targeted against Navy personnel, government property and facilities ashore/afloat. The funding supports the following categories: Electronic Harbor Security Systems (EHSS) and Barriers; Physical Security/Access Control; Command, Control, Computer, Communications & Intelligence (C4I); and Other Physical Security Equipment (PSE).

X7G04- FFC - OCO SUPPLEMENTAL

Funding provided for Yokohama Fenders-Fly-away kits in support of Overseas Contigency Operations (OCO). Yokohama kits are single units comprised of a two container kits (1-40ft open top container to house the two hydro-pneumatic submarine fenders and 1-20ft transit container/workshop designed to hold two counter weights, fender mooring chain, ropes, pneumatic compressor, hose fittings, water fittings, installation tools, safety valve test rig, fender repair kit and various nuts, shackles and bolts). Kit is flown to any designated site as needed for delivery and installation. Specific purpose of submarine fenders is to safely hold a submarine in a certain position along side the pier allowing the proper distance from the pier and protect the submarine from surrounding facilities and preserve the capabilities of the vessel while in a moored arrangement. At the very least, two fenders are required to keep a submarine parallel to a second ship or pier. It is cost effective to purchase a Fly-away kit and ship it to non Commander Naval Installation Command (CNIC) funded locations in advance of the submarine's arrival to port.

		SUBHEAD NO. 87X7 BLI	8128	

X7G8R - OCO SUPPLEMENTAL

Funding provided for Naval Expeditionary Combat Command (NECC) mission objectives in support of Oversea Contingency Operations (OCO). Efforts include replacing destroyed or severely degraded Acoustic Hailing Devices (AHD) and LA9/P laser dazzler being utilized in direct support of Operation Iraqi Freedom/Operation Enduring Freedom (OIF/OEF). Supporting procurement of VENOM V-10 systems to provide upgraded warning and suppress capability for Expeditionary Security Forces. Personal Protective Equipment (PPE) for requested Maritime Interception Operation (MIO) Intelligence Exploitation Teams (IET) increase in end-strength of 72 personnel. NECC Forces operate with Army/USMC thus carrying the requirement for the same Blue Force Tracking (BFT) systems they employ. Future installations, upgrades & Field Service Representative (FSR) support are funded to ensure the continued operational capability. Modernization of Visual Augmentation Systems (VAS) (lasers, night vision devices, thermal imagers) supporting NECC forces is required to ensure forces are able to effectively identify targets and employ weapons during night & adverse weather conditions. Items include 2172 SU-250/U Monocular, 429 SU-251/U Binoculars, 326 SU-252/U Thermal Sights, 622 AN/PVS-15 Submersible Binoculars, 421 AN/PAS-23 Thermal Monocular, 2574 AN/PEQ-15 Laser Designators, and 525 AN/PES-1 Laser Rangefinders to outfit all NECC forces to meet mission requirements. Provides specialized VAS for NECC Riverine & harbor security patrol boats. This equipment enhances craft and crew capabilities through the ability to conduct target identification & discrimination in visually degraded environments. Additionally, these capabilities add enhanced situational awareness throughout the expeditionary mission spectrum. Supports Enhanced Combat Helmet (ECH) procurements which upgrade the replacement for the Marine's Lightweight Helmet (LWH) and the Army's Advanced Combat Helmet (ACH) for personnel in Afgahnistan. These ECHs will be used to outfit the Navy's

6B44 - SECURITY PROTECTION OPS (OCO SUPPLEMENTAL)

Closed Circuit Televisions (CCTV) - The procurement and installation of camera system for the US Navy Complex at Fujairah (port and airfield) and Jevel Ali will provide immediate situational awareness of threats to our forces.

Intrusion Detection System (IDS) - The procurement and installation of IDS at US Navy Complec at Jebel Ali and Fujairah (port and airfield) includes portable amories and mass notification systems to ensure notification of imminent threats to these facilities.

Electronic Security System - The procurement and installation fiber optic infrastructure for new areas of Camp Lemonier Djibouti (CLDJ), exterior surveillance cameras, ammunition supply point, design CAC reader integration via enabler interface, new ground based radar and tunnel detection sensors for east of end of camp area.

NOTE: Airfield Barrier Systemm will no longer be procured with FY10 OCO OPN fundes due to cost increase. Airfield Barrier System cost has breached the OPN threshold of \$750K and will be procured with MILCON. An emergent requirement for Digital Cell Phone System and various cost increases to CCTV, IDS, Electronic Security System and Mobile Ranges will be procured in place of Airfield Barrier System. NAVSTA GTMO for Digital Cell Phone System and cost increases of other FY 10 OCO OPN procurements.

1A53 - SMALL ARMS RANGES (OCO SUPPLEMENTAL)

Mobile Ranges - The procurement and installation of mobile small arms ranges will permit our security forces to qualify on the weapons they use to conduct their security mission. Resource Sponsor requires weapons qualifications annual under various courses of fire.

6B46 - HARBOR SECURITY (OCO SUPPLEMENTAL)

Satellite Communication (SATCOM) Secure Radio - PRW-1007 - these are 3 PRC-117s with base station power supply to support equipment to mount either on a vehicle or in an office setting. Antennas are for vehicle/building installation to support ongoing operations of Commander Task Force-Shore Battle Space. They have Tactical Control (TACON) of all Navy ashore Security Forces in the Navy Cental Command Are of Responsibility (NAVCENT AOR). Emergent requirement identified during FY10 to support physical security mission of Commander Task Force-Shore Battle Space.

		SUBHEAD NO. 87X7 BLI	8128	

Handheld Radios (Motorola) - PRW-1047 - This is a fly-away security communications kit that permits Navy Security Forces to provide secure Very High Frequency (VHF) communications to support mission operations at an austere location which does not have any communications capability. The kit contains 63 handheld radios, with required hardware and software, encryption key loader and support equipment, a single repeater which expands coverage area of the radios at locations where line of sight is not available. this is essential. Kit can be used anywhere in the region and is not site specific. Emergent requirement identified during FY10 to support physical security mission of deployed Navy Security Forces.

6A60 - BASE AREA COMMUNICATIONS INFRASTRUCTURE (OCO SUPPLEMENTAL)

Digital Cellular Phone System - will provide on-site installation, configuration, testing and training for Upgraded Cellular Telephone System. Digital Cellular Phone System is an emergent FY10 buy because the current cellular system has far exceeded its useful life. The system will meet the Federal Communication Commission certification standards. The system is the primary communication for emergency response coordinators such as fire and security. CTF-48 identified the cellular phone as their primary communications tool. The system has identified 3 technological failure points: coverage, building penetration and the inability to pass data. This project upgrade plan resolves each of failures but also addresses 3 other key areas affected by the aged cellular system: maintenance inefficiency, technology and communications collaboration, equipment and maintenance costs.

6A65 - ENTERPRISE LAND MOBILE RADIO (OCO SUPPLEMENTAL)

Enterprise Land Mobile Radio Trunk System - The system includes \$22.96M of Supplemental funding for Enterprise Land Mobile Radio (ELMR) Trunking system for Bahrain, Jebel Ali, Djibouti and Diego Garcia, supporting ship and aircraft movements and command and control services for the warfighter combating Overseas Contingency Operations (OCO). The system also supports the transport and deploymnet of personnel and material to and from theaters of operation.

1) Base Level Information Infrastructure(BLII/IT005): The BLII program modernizes existing Information Technology (IT) infrastructure (inside/outside cable plants), network electronics (switches, routers, servers, storage devices), PCs, hardware and software, and installs the same modern IT capability where none exists at 14 major Outside Continental United States (OCONUS) fleet concentration bases and stations and other remote locations. It provides all the tools necessary for enterprise network management, network monitoring and performance, information assurance suites, and asset inventory. There are two primary functional elements of BLII: OCONUS Navy Enterprise Network and OCONUS Pier IT Infrastructure.

(a) ONE-NET: The OCONUS Navy Enterprise Network (ONE-NET) is the OCONUS equivalent to Navy Marine Corp Internet (NMCI). It is a fully complemented, integrated and interoperable network that consists of standard hardware, software, and Information Assurance suites governed by operational and administrative policies and procedures. It is the medium that enables the rapid and reliable transfer of official classified and unclassified messages, correspondence, email and data. It provides email, print, storage, directory and internet services, help desk and enterprise management for a projected 33,000 users. It meets Fleet Commander stated requirements and is a vast performance and security improvement over existing legacy networks. When fully deployed, ONE-NET will displace all OCONUS legacy networks and yield the same level of security as MMCI. Theater Network Operation and Security Centers (TNOSC) at Yokosuka, Naples and Bahrain are the Network Operations Centers (NOCs) for their respective regions. In FY12, ONE-NET will require procurement funding (OPN) for the continued acquisition of technical refresh of existing outdated and antiquated hardware and technologies at various US OCONUS Navy ONE-NET sites, more specifically: PC Refresh (over 240 new Servers in Guam, Atsugi, Sasebo, Misawa, Okinawa, Diego Garcia, Singapore, and Korea); Network Refresh (over 200 network switches and routers in Bahrain). Additionally, procurement funding (OPN) is required in FY12 for Production Support requirements in support of Technical Refresh in order to ensure all required installation plans and documentation is developed, ONE-NET technical Refresh in order to ensure all required in the project POAM's. Furthermore, procurement funding (OPN) is required in FY12 for the Installation and Government Oversight of ONE-NET Technical Refresh in order to ensure proper installation and metheresh are in accordance with the Shore Installation Process Handbook, to include site surveys, SSRs (Schedule Status Reports), BESEP (Base Electronic Sy

(b) OCONUS Pier IT Infrastructure: Commander Pacific Fleet, Commander United States Naval Europe and Commander United States Naval Central have declared pier IT infrastructure modernization to be a Force Protection matter of urgency. A fully capable and modern OCONUS pier IT infrastructure allows forward deployed ships while pier side to secure their Radio Frequency (RF) systems for maintenance and training yet still receive and send operational and intelligence traffic. This element of the BLII program installs state-of-the-art, Automated Digital Network System (ADNS) compatible, IT infrastructure to the Fleet Commander's prioritized OCONUS piers. Further, it provides expanded SIPRnet capability to OCONUS piers to meet Fleet Commander stated requirements to maintain situational awareness related to anti-terrorist military operations.

2) Telephony Suite Replacement and Modernization (IT006): Replaces obsolete telephony suite hardware and maintains currency of firmware and software in accordance with policy and procedures set forth in DoDI 8100.3, Chairman of the Joint Chiefs of Staff Instruction (CJCSI) 6212.01 and CJCSI 6215.01C and Defense Information Systems Agency (DISA) Unified Capabilities Requirement 2008. In FY12, will procure and install Telephony suite hardware in order to maintain information assurance requirements for voice communications to the fleet and fleet support units.

(a) Telephony Suite Replacement and Modernization funding ensures that all telephony equipment under the purview of CYBER FORCES COMMAND (CYBERFOR) in the Continental United States (CONUS) and OCONUS are replaced in accordance with industry life cycle standards and that software is upgraded in a systemic manner to ensure compatibility with DoD and commercial telephone systems. The majority of CYBERFOR's telephone switches are Defense Switch Network (DSN) switches and as such are nodal and anchor switches for the DSN Command and Control network. These switches also provide on-base, Federal Telephone System (FTS), local and long distance calling service as well as world-wide DSN connectivity. Further, this funding replaces or expands outside and inside telephony suite cable plants.

3)Enterprise Software Licenses (IT703): A tools working group has been established to ensure common tools are used across the language, leverage training and ensure knowledge, data and process improvement can be replicated across the DON enterprise. To date the approved three COTS tools: Minitab, iGrafx Process for Six Sigma, and PowerSteering for Navy-wide use. Minitab is a statistical powerful tool for value stream analysis and process mapping. PowerSteering is a CPI initiative deployment management tool. It tracks for hundreds to thousands of individual projects. The Functional Area Manager (FAM) and the Test Working Group (TWG) have approved two other promising tools, JMP and Crystal to verify their usefulness, before a decision is made to deploy them enterprise wide. To date, hundreds of BLACK Belt and Green Belt process improvement experts have been trained and are conducting nearly a thousand complex initiatives. Per Secretary of the Navy's three-year goals, 1% of the affected workforce will be certified Black Belts and 4% will be certified Green Belts.

4) Distance Support Resource Sponsorship (IT240): Provide technology refresh for Distance Support shore infrastructure, including servers, network appliances and software people, processes and technology into a collaborative infrastructure without regard to geographic location. Distance Support is comprised of the following three components: Infra Management (CRM). Infrastructure provides the "transport" of DS applications and data to and from operating units and shore installations in support of various processes. Techn and shipboard IT servers that bring the DS functionality to the sailor. Content includes specific applications, systems and processes produced by various Navy communities of Intercapabilities include the "Anchor desk" Web Portal, Remedy Software and the Global Distance Support Center, which is the hub of Distance Support, providing the single point of e hours per day, 7 days per week, 365 days per year basis (24/7/365).

5) Next Generation Enterprise Network (NGEN) (IT210): NGEN is an enterprise network which will provide secure, net-centric data and services to Navy and Marine Corps per information technology at the Department of the Navy (DoN). NGEN forms the foundation for the DoN's future Naval Network Environment that will be interoperable with and leve Enterprise Services. The funding profile for FY09-10 captures the procurement of Early Transition Activities (ETAs) software tool suites that were required to replace current vend government control and oversight of the NMCI network, a license to access vendor owned Intellectual Property (IP) was procured.

Funding in FY11-14 procures the Technical Refresh (TR) for fielded equipment. In FY12 funds will continue procurement of TR required for all equipment "behind the wall plug" in (TRP), and the repair components required to support the network. Break/fix of end-user equipment costs are included in the O&M funded seat services for both NIPR and SIPR so NGEN Transport Contract vehicle for TR requirements. DoN will take ownership of the assets as they are refreshed. The estimate for this is based on an Independent Analysis, of the HP/ES IP and Infrastructure (IF). This initial valuation formed a foundation for the CoSC negotiation effort. The estimate will be updated upon receipt of the CoSC TRP from

In FY12, Navy will begin procuring the Transport Layer (backbone) Infrastructure in Pacific, OCONUS, NCR, Tidewater and North east (including Ohio). The End Item Description Routers + Switches + Servers + Storage + Security infrastructure; and B) Cable Plant: The LAN and BAN fiber and wire that connects the office wall plug to the Defense Information addition, FY13 is the first year the CoSC recapitalization plan will take effect. The recapitalization plan is a detailed asset configuration tool providing equipment specific usage, age Program Office estimate is based on the negotiated CoSC contract prices. NGEN will become operational in 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract, which expires April 2012 as it transitions from the CoSC contract and the price of the transitions from the CoSC contract for the transitions from transitions from the transiti

6) SPAWAR System Center/Information Technology Center (SSC/ITC) New Orleans: Congressional add provides critical joint Naval/University information systems in partner Atlantic New Orleans Office was established through a unique cost sharing arrangement between the State of Louisiana and the federal government to provide state-of-the-art fac enterprise solutions for managing information within the DON and DoD. This includes enterprise solutions for managing/migrating DoD/Naval Manpower and Personnel systems a university information hosting and of security/disaster preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel systems at the SPAWAR Systems Center Preparedness tools for Naval Manpower and Personnel Systems Center Preparedness tools for Naval Manpower and Personnel Systems Center Preparedness tools for Naval Manpower and Personnel Systems Center Personnel Systems Center Preparedness tools for Naval Manpower and Personnel Systems Center Personnel Systems Center Personnel Systems Center Personnel Systems Center Personnel Systems Center Personnel Syste

1) BLII quantities represent the number of operational sites. Unit cost fluctuations are a direct result of the wide variation of number of users per site as well as the type of

2) Telephony quantities represent number of regions. The procurement unit cost reflects an average unit cost for these regions. Unit cost and Procurement lead time fluctuations are a result of the varying system configuration requirements of particular sites, architecture, and varying number of locations or sites per region. For FY12, the unit cost for these individual regions range from \$1.6M to \$3.2M.

3) FY11: Next Generation Enterprise Network (NGEN) Total Cost reflects the buyback of intellectual property from NMCI throughout the conversion process to NGEN.

4) Quantities for TR are not reflected because the quantity and unit cost varies according to what equipment is being refreshed. As defined by CoSC, TR includes End User Hardware 5 (EUH5), and Moveable Infrastructure (MI) both Core and Transport. EUH5 is printers; MI-Core is servers, SAN solutions, Other Storage and Miscellaneous items; MI-Transport is switches, routers, security, VPN, WAN and other Network hardware.

5) FY11: Next Generation Enterprise Network (NGEN): \$217.7M realignment from OPN to OMN pending Congressional Approval to fund CoSC Fixed Costs and BSO allocation of Variable Seat Costs
