DESCRIPTION

ABSTRACT

This dataset depicts the boundaries of the Proposed Critical Habitat for New York Bight Distinct Population Segment of Atlantic Sturgeon for the NOAA Fisheries Service's Greater Atlantic Regional Fisheries Office (GARFO). This feature class includes boundaries for the following Proposed Areas:

- Proposed Critical Habitat for New York Bight Distinct Population Segment of Atlantic Sturgeon: Connecticut River
- Proposed Critical Habitat for New York Bight Distinct Population Segment of Atlantic Sturgeon: Housatonic River
- Proposed Critical Habitat for New York Bight Distinct Population Segment of Atlantic Sturgeon: Delaware River
- Proposed Critical Habitat for New York Bight Distinct Population Segment of Atlantic Sturgeon: Hudson River

Because GIS projection and topology functions can change or generalize coordinates, these GIS files are considered to be approximate representations and are NOT an OFFICIAL record for the exact Proposed Area boundaries. For information on the official legal definition refer to the Use Constraints metadata section.

PURPOSE

Beginning in 2010 and in response to mounting requests for digital depictions of NMFS Regulated Areas in Northeast and Mid-Atlantic Waters (Regulated Areas), the NMFS Greater Atlantic Regional Fisheries Office (GARFO) Geographic Information Systems (GIS) Committee launched a project to standardize the development, publication and regular updating of GIS files depicting Regulated Area boundaries.

As access to and familiarity with Regulated Area GIS data increased, so did requests for GIS data depicting Proposed Areas, or areas described in proposed rules but not yet published as final regulations. The GIS data development standards were adapted for the depiction of Proposed Area boundaries. This dataset is a product of that initiative.

This dataset was created to depict the boundaries of NMFS Proposed Areas only. A proposed rule is not a final regulation and is subject to change before being published as a final rule. This Proposed Area dataset should not be used for a legal definition. For information on the proper use of the dataset refer to the Use Constraints metadata section.

These data depict Proposed Areas.

*** Attribution ***

Whenever NMFS material is reproduced and re-disseminated, we request that users attribute the material appropriately. Pursuant to 17 U.S.C. 403, parties who produce copyrighted works consisting predominantly of material created by the Federal Government are encouraged to provide notice with such work(s) identifying the U.S. Government material incorporated and stating that such material is not subject to copyright protection.

Please cite Proposed Area datasets as follows, with the appropriate information substituted for all text in {CURLY BRACKETS}:

NOAA Fisheries Service. NMFS Proposed Areas in Northeast and Mid-Atlantic Waters. {SHAPEFILE TITLE} [Shapefile]. Gloucester, MA: National Oceanic and Atmospheric Administration (NOAA), National Marine Fisheries Service (NMFS), Greater Atlantic Regional Fisheries Office (GARFO) [producer] {SHAPEFILE PUBLICATION DATE}.
<http://www.greateratlantic.fisheries.noaa.gov/gis>.

*** No Warranty ***

The user assumes the entire risk related to use of these data. NMFS is providing these data "as is," and NMFS disclaims any and all warranties, whether express or implied, including (without limitation) any implied warranties of merchantability or fitness for a particular purpose. No warranty expressed or implied is made regarding the accuracy or utility of the data on any other system or for general or scientific purposes, nor shall the act of distribution constitute any such warranty. It is strongly recommended that careful attention be paid to the contents of the metadata file associated with these data to evaluate dataset limitations, restrictions or intended use. In no event will NMFS be liable to you or to any third party for any direct, indirect, incidental, consequential, special or exemplary damages, or lost profit resulting from any use or misuse of this data.

*** Proper Usage ***

The information on government servers are in the public domain, unless specifically annotated otherwise, and may be used freely by the public. Before using information obtained from this server, special attention should be given to the date, time, and nature of the data and products being displayed. This government information shall not be modified in content and then presented as official government material.

This dataset was created to depict the boundaries of NMFS Proposed Areas only. A proposed rule is not a final regulation and is subject to change before being published as a final rule. The Proposed Area dataset should not be used for a legal definition. The Proposed Area dataset should not be used to infer information regarding the existence or details of other marine features or resources, including, but not limited to, navigable waters, coastlines, bathymetry, submerged features, or man-made structures. Users assume responsibility for determining the appropriate use of this Proposed Area dataset.

*** Not the Legal Definition ***

This Geographic Information System (GIS) dataset is not the legal definition of the Proposed Area. The description published in the Federal Register proposed rule is only a proposed legal definition. This dataset and metadata document may provide a broad overview of a subset of potentially applicable fishing regulations, restrictions and requirements; it is not a substitute for the actual regulations or the final rule publishing any new or modified regulations. Users are encouraged to read the applicable regulations in conjunction with use of this potentially applicable dataset.

*** Temporal Considerations ***

Regulated Area boundary definitions, both proposed and final, are subject to change or modification. Published datasets may represent historic, current, potential, or future Regulated Areas. When changes to fishing regulations affect this dataset, this dataset will be archived and replaced by an updated version as soon as feasible. Approved Regulated Area boundaries may also be published prior to their effective date. It is the user's responsibility to ensure the applicable Regulated Area boundaries are being used.

*** Shorelines/Base Layers ***

The accuracy of this dataset is dependent upon the accuracy and resolution of the datasets (e.g., shoreline, bathymetry, shared administrative boundaries) used in the creation process. Source datasets used are specified in the metadata. These data sources were selected for their suitability to a broad audience, and may not be suitable for specific uses requiring higher-resolution information.

Coastlines change. Unless otherwise noted, where the NOAA Medium Resolution Shoreline is used, assume the regulatory boundary reaches the most current coastline delineation available.

SOURCE CONTRIBUTION

This source highway location layer was used to generate template feature class, which were copied and used to designate upstream boundaries of proposed Atlantic sturgeon critical habitat.

PROCESS STEP

PROCESS DESCRIPTION

[Template Generation] River length for proposed Atlantic sturgeon critical habitat was based on the National Hydrography Dataset (NHD) High Resolution flowlines developed by USGS. This source river line was used to generate template feature class, which were copied and used when identifying river lines.

PROCESS DATE 2015

PROCESS STEP

PROCESS DESCRIPTION

[Get Definition Text] The spatial definition for the Proposed Area was copied from the Federal Register proposed rule.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Edit features] To generate the Proposed Critical Habitat boundary start and end locations in ArcGIS, the template polylines were split by either the National Inventory of Dams feature class, ESRI US Major Highways feature class or text description, depending on the spatial definition outline in the proposed critical habitat definition. After line were appropriately split, any portions of the template outside the proposed critical habitat were discarded. Flowlines were dissolved into a single line file for each proposed river.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Merge features] Individual river features were grouped by Distinct Population Segment, and merged into a new geodatabase feature class for each DPS. Each feature class includes all proposed critical habitat river lengths for the specified DPS.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Add Attributes] The standardized attribute schema was applied to the feature class, and the fields were defined.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Policy Review] The Proposed Area spatial definition text, feature class geometry and attribute values were reviewed with policy staff to verify that the feature class accurately depicted and described the intended boundaries.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Check Geometry] The ESRI ArcGIS Check Geometry tool was run on the feature class to identify any geometry problems. If problems were encountered, they were reviewed and corrected.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Metadata] A GARFO Proposed Area feature class metadata template was developed using the EPA Metadata Editor v3.2. This template was applied and customized to reflect the specific characteristics of the given feature class. The metadata was validated for FGDC CSDGM compliance.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Final Review] The feature class was reviewed by members of the GARFO GIS Committee, policy experts from the GARFO Division responsible for the Proposed Area, and General Counsel, according to the GARFO GIS Data Distribution Policy.

PROCESS DATE 2016

PROCESS STEP

PROCESS DESCRIPTION

[Publication] The feature class, with accompanying metadata, was uploaded for public download on the NOAA NMFS GARFO GIS website.
