

Status of International Living Marine Resources Shared by the United States or Subject to Treaties or Agreements to which the United States is a Party

This list accounts for the state of knowledge on the status of international living marine resources shared by the United States or subject to treaties or agreements to which the United States is a party (as required by Section 607 of the Moratorium Protect Act) and is current as of January 2015. It includes resources over which an international treaty or agreement, to which the United States is a party, has explicit conservation or management authority; has in place measures designed to control fishing mortality; or has directed the collection of fisheries data, including bycatch, to inform assessments of status. It also includes other resources shared by the United States, including U.S. territories, on which a directed fishery exists or which are taken as bycatch that is significant either in absolute numbers or because of the sensitivity of the international living marine resources, such as seabirds, sea turtles, marine mammals, or sharks, but which are not subject to an international treaty or agreement to which the United States is a party.

	Common Name	Scientific Name	Stock, if applicable	Status, if known	Domestic Status, if known*	Source of status information (hyperlinked)	Relevant international organization(s) or domestic management council**				
Bony Fishes	Wahoo	<i>Acanthocybium solandri</i>	Atlantic	Least Concern	Unknown	http://www.iucnredlist.org/details/170331/0 http://www.fishwatch.gov/seafood_profiles/species/wahoo/species_pages/atlantic_wahoo.htm	ICCAT	SAFMC
