

**MINERALS MANAGEMENT SERVICE  
PACIFIC OCS REGION**

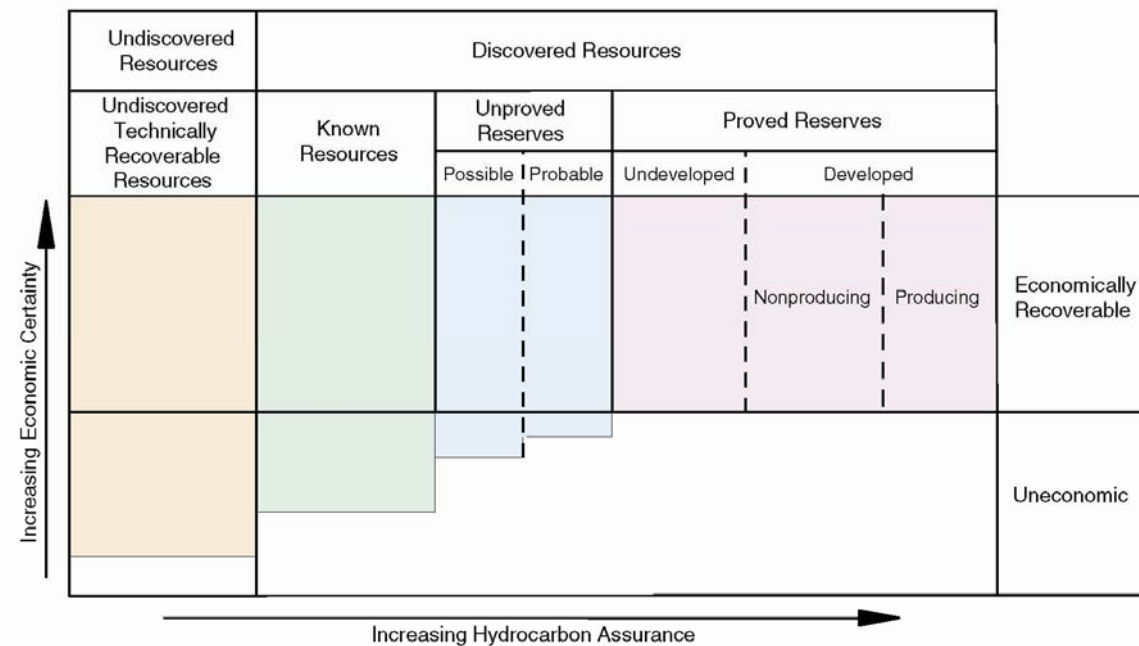

**FIELD RESERVE ESTIMATE SUMMARY**

**AS OF DECEMBER 2007**

## Purpose of this Summary

This document summarizes the results of the MMS, Pacific OCS Region’s Field & Reservoir Reserve Estimates Report (FRRE). The full FRRE Report breaks down POCS reserves and known resources by field as well as productive zone. This is an annual report and is for internal use only. In this summary only the field reserves/resources are reported. Detailed descriptions of reserves and fields can be found in the POCS Region Reserves Reports available on our website at <http://www.mms.gov/omm/pacific/offshore/ofrrpt.htm>. It is our hope that these summaries will provide valuable information regarding reserves and production during the intervening period between Reserve Reports.

## Definition of Resource and Reserve Terminology

The MMS has standardized its definitions of resources (*Estimates of Undiscovered Conventional Oil and Gas Resources in the United States—A Part of the Nation’s Energy Endowment*, U.S. Geological Survey (USGS) and MMS, 1989). The Society of Petroleum Engineers (SPE) and World Petroleum Congresses (WPC) have also adopted a standardized set of reserve categories and definitions (SPE and WPC, 1997). The definitions used within this summary conform with both these sources. Figure 1 shows how resource and reserve definitions are related. Figure 2 shows the POCS oil and gas fields.

Figure 1: MMS Petroleum Reserves Classification modified from USGS and MMS, 1989, and SPE, 1987).

## Definitions Used in this Summary

**Proved Developed and Producing Reserves (PDP)** - Once the first reservoir in a field begins production, the reservoir is considered to contain *proved developed producing reserves*. “Reserves subcategorized as producing are expected to be recovered from completion intervals which are open and producing at the time of the estimate. Improved recovery reserves are considered producing only after the improved recovery project is in operation” (SPE and WPC, 1997). If a reservoir had sustained production during the last year, it is considered to contain proved developed producing reserves.

**Unproved Possible Reserves (UPOS)** - After a lease qualifies under 30 CFR 250.115, the MMS Field Naming Committee reviews the new producible lease to assign it to an existing field or, if the lease is not associated with an established geologic structure, to a new field. Regardless of where the lease is assigned, the reserves associated with the lease are initially considered to be *unproved reserves*. “Unproved reserves are based on geologic and/or engineering data similar to that used in estimates of proved reserves; but technical, contractual, economic, or regulatory uncertainties preclude such reserves being classified as proved. Unproved reserves may be further classified as probable reserves and possible reserves.” (SPE and WPC, 1997)

Unproved reserves may be estimated assuming future economic conditions different from those prevailing at the time of the estimate. The effect of possible future improvements in economic conditions and technological developments can be expressed by allocating appropriate quantities of reserves to the probable and possible classifications.

“*Possible reserves* are those unproved reserves which analysis of geological and engineering data suggests are less likely to be recoverable than probable reserves...” “In general, possible reserves may include (1) reserves which, based on geological interpretations, could possibly exist beyond areas classified as probable, (2) reserves in formations that appear to be petroleum bearing based on log and core analysis but may not be productive at commercial rates, (3) incremental reserves attributed to infill drilling that are subject to technical uncertainty, (4) reserves attributed to improved recovery methods when (a) a project or pilot is planned but not in operation and (b) rock, fluid, and reservoir characteristics are such that a reasonable doubt exists that the project will be commercial, and (5) reserves in an area of the formation that appears to be separated from the proved area by faulting and geological interpretation indicates the subject area is structurally lower than the proved area.” (SPE and WPC, 1997) After a lease qualifies under 30 CFR 250.115, the reserves associated with the lease are initially classified as *unproved possible*.

**Known Resources (KR)** - Hydrocarbons associated with reservoirs penetrated by one or more wells that are on leases that are expired or relinquished are identified as *known resources*.

**2007 POCS Reserves and Cumulative Production Summary**

	Oil (bbl)	Gas (Mcf)
Cumulative Production	1,189,604,166	1,578,380,480
Remaining Proved Reserves	454,503,075	869,752,239
Remaining Unproved Reserves	1,077,559,000	447,558,000
<b>Total Reserves</b>	<b>2,721,666,241</b>	<b>2,576,920,896</b>
<b>Known Resources on Expired Leases</b>	<b>149,255,000</b>	<b>362,505,000</b>
