

July 16, 2015

Bonneville Power Administration is proud to announce the creation of Air Northwest, an HVAC trade ally network. Air Northwest will provide commercial HVAC contractors and distributors across the region with tools to increase the sale and installation of more energy efficient HVAC systems and equipment.

Ultimately, Air Northwest will help realize energy savings from commercial HVAC projects by connecting utilities with trade allies, providing experts to help identify projects and serve as a technical resource, and provide additional resources to build or strengthen your HVAC energy efficiency programs.

Air Northwest has already requested information from utilities on their programs and incentives. This request was delivered by BPA Energy Efficiency Representatives (EER). The information will be used to inform commercial HVAC contractors and distributors about available incentives offered in their service areas.

Please join us for the [brownbag](#) on July 29th where we will be discussing the role of Air Northwest as a resource for utilities, and how they will work with trade allies to implement savings in the region.

In the meantime, if you have questions, please contact your EER.
