

## PROPOSED RULES

## DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[50 CFR Part 17]

ENDANGERED AND THREATENED  
WILDLIFE AND PLANTSProposed Endangered Status for Some  
1700 U.S. Vascular Plant Taxa

The Director, U.S. Fish and Wildlife Service (hereinafter, the Director and the Service, respectively), hereby issues a proposed rulemaking which would determine approximately 1700 native, U.S., vascular plant taxa to be Endangered Species, pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543, 87 Stat. 884; hereinafter, the Act). He also requests comments regarding the determination of "Critical Habitat" of any of these taxa.

## BACKGROUND

On December 28, 1973, the Act became effective and, thereby, provided a means whereby plants in danger of extinction and their dependent ecosystems may be conserved. Recognizing that prior to this Act, members of only the animal kingdom had been considered and that adequate concern for plants was urgent, section 12 of the Act states:

## ENDANGERED PLANTS

SEC. 12. The Secretary of the Smithsonian Institution, in conjunction with other affected agencies, is authorized and directed to review (1) species of plants which are now or may become endangered or threatened and (2) methods of adequately conserving such species, and to report to Congress, within one year after the date of the enactment of this Act, the results of such review including recommendations for new legislation or the amendment of existing legislation.

The Secretary of the Smithsonian Institution presented his report to Congress on January 9, 1975, by transmittal to the Speaker of the U.S. House of Representatives. Designated as House Document No. 94-51 of the 94th Congress, 1st Session, it was subsequently published by the Government Printing Office, Washington, D.C., for use of the House Committee on Merchant Marine and Fisheries, which oversees the Act through its Subcommittee on Fisheries and Wildlife Conservation and the Environment. That report contains lists of over 3,100 U.S. vascular plant taxa which the scientists who compiled the report consider to be endangered, threatened, or perhaps extinct; the criteria used in the selection of such plants; and recommendations for adequate plant conservation. Recommendations 1 and 3 read as follows:

1. Preservation of endangered and threatened species of plants in their native habitat should be adopted as the best method of ensuring their survival. Cultivation or artificial propagation of these species is an unsatisfactory alternative to *in situ* perpetuation and should be used only as a last resort, when extinction appears certain, with the purpose of re-establishing the species in its natural habitat.

3. In accordance with section 4 of the Endangered Species Act of 1973, the Secretary of the Interior should review the lists in this report and publish proposed lists of endan-

gered and threatened plants in the FEDERAL REGISTER.

On April 22, 1975, the Director published a notice in the FEDERAL REGISTER (40 FR 17764-17765), describing the process of determination of "Critical Habitat" for Endangered and Threatened species, as encouraged by section 2(b) and provided for by section 7 of the Act.

On July 1, 1975, the Director published a notice in the FEDERAL REGISTER (40 FR 27823-27924), of his acceptance of the report of the Smithsonian Institution as a petition within the context of section 4(c)(2) of the Act, and of his initiation thereby of a review of the status of the plant taxa named therein as well as any habitat of these taxa which might be determined to be critical, pursuant to section 7 of the Act. On April 21, 1975, the Director had published (40 FR 17612), a similar notice of the review of four plant species of the eastern United States; one of which, *Aconitum noveboracense*, is included in the present proposal.

These publications have received wide distribution among government agencies, private groups, and interested individuals; they also have been provided at meetings and conferences, and references or excerpts from some of them have appeared in scientific and popular journals and in public newspapers and other media outlets.

In the FEDERAL REGISTER of June 7, 1976 (41 FR 22915-22922), the Service published proposed rules which, among other things:

(1) Set forth the procedural steps of determining Endangered or Threatened Species of Plants;

(2) Proscribe the prohibitions which apply to such Endangered or Threatened Plants or to the seeds, roots, or parts thereof;

(3) Establish procedures, conditions, and criteria for the application for and issuance of permits to conduct otherwise prohibited activities.

Any plant herein proposed which is eventually determined to be a Threatened Species or an Endangered Species would be subject to those regulations.

## DISCUSSION OF COMMENTS RECEIVED

As a result of the dissemination of the FEDERAL REGISTER notices discussed above and as a result of the publicity given them, the Service has received hundreds of comments from the scientific community, various States, Federal agencies, industry groups, other special interest groups and the general public pertaining to the need, the procedures and the process of the determination of Threatened or Endangered Species of Plants. Many of these comments have been responded to individually, all have been considered and those containing substantive information will be analyzed further prior to finalization of this Proposal. All such comments have been incorporated into the background files for this Proposal which are maintained in the Service's Office of Endangered Species, Suite 1100, 1612 K Street, N.W., Washington, D.C., and have been catalogued in a correspondence log entitled "Comments on U.S. Plant Candidates Through April

1976." That log, dated May 5, 1976, also has been incorporated into the permanent background files.

## DESCRIPTION OF THE PROPOSAL

Section 4(a) of the Act states that the Secretary may determine a species to be an Endangered Species or a Threatened Species because of any of the five factors following:

(1) The present or threatened destruction, modification, or curtailment of its habitat or range;

(2) Overutilization for commercial, sporting, scientific, or educational purposes;

(3) Disease or predation;

(4) The inadequacy of existing regulatory mechanisms; or

(5) Other natural or manmade factors affecting its continued existence.

The U.S. Fish and Wildlife Service has reviewed the information gathered and compiled by the Smithsonian Institution (Department of Botany) in the preparation of their report and in subsequent investigations to be sufficient for proposing an Endangered Species the approximately 1,700 plants named herein after. In obtaining this information which is on file at the Smithsonian Institution's Department of Botany, Washington, D.C., they contacted and received recommendations from a majority of the top botanists in the country, and this resulting list is a further refinement of their views. At least one of the above five factors threaten each of the identified plant taxa with extinction throughout all or a significant portion of its range. Certain plants proposed herein are of such a restricted range or habitat that they qualify despite their locally sufficient numbers.

The list of some 1,700 taxa proposed represents a portion of the revised report of the Smithsonian Institution, and has been assembled on the basis of the comments and data received by that Institution and the U.S. Fish and Wildlife Service in response to the publications mentioned above, particularly House Document No. 94-51 and the FEDERAL REGISTER notices of April 21 and July 1, 1975.

The Act requires inclusion of the \* \* \* scientific and common name or names, if any, \* \* \* upon the list of those species determined to be Threatened or Endangered. No generally recognized common name exists for many of the plants included on the list contained herein. In such cases, the entry (n.c.n.) follows the scientific name and indicates the Service has located No Common Name for that taxon.

In other cases, acceptable common names exist for the genera or species in question, but no such names for lesser taxa have been located. In these instances, the common name for the genus or species, as appropriate, will be followed by the notation (unnamed).

As usage of such names varies considerably, it should be recognized that only the scientific names carry legal significance. Comments and data toward improving the accuracy of common names, as well as scientific names, are requested.

## PROPOSED RULES

The Service recognizes that plant taxonomy is not an exact science, that the knowledge of plants continues to develop, and that scientific nomenclature reflects such understanding. It further recognizes that the classification and nomenclatural rank given to a plant is subject to opinion, based on the specialist's knowledge of the plant in question, and his interpretation of the terms and concepts of plant taxonomy. Consequently, those plants named as "varieties" in the Smithsonian Institution report and its revision are here considered to be subspecies and, therefore, "species" as defined in section 3(11) of the Act.

Determination that a plant is a Threatened or Endangered Species would, among other things, make that species, including its seeds, roots, or other parts, subject to the prohibitions of section 9(a)(2) of the Act which reads as follows:

(2) Except as provided in sections 6(g)(2) and 10 of this Act, with respect to any endangered species of plants listed pursuant to section 4 of this Act, it is unlawful for any person subject to the jurisdiction of the United States to—

- (A) Import any such species into, or export any such species from the United States;
- (B) Deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever and in the course of a commercial activity, any such species;
- (C) Sell or offer for sale in interstate or foreign commerce any such species; or
- (D) Violate any regulation pertaining to such species or to any threatened species of plants listed pursuant to section 4 of this Act and promulgated by the Secretary pursuant to authority provided in this Act.

Such determination also would make the Threatened or Endangered Plant eligible for the protection provided by section 7 of the Act which reads as follows:

### INTERAGENCY COOPERATION

Sec. 7. The Secretary shall review other programs administered by him and utilize such programs in furtherance of the purposes of this Act. All other Federal departments and agencies shall, in consultation with and with the assistance of the Secretary, utilize their authorities in furtherance of the purposes of this Act by carrying out programs for the conservation of endangered species and threatened species listed pursuant to section 4 of this Act and by taking such action necessary to insure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of such endangered species and threatened species or result in the destruction or modification of habitat of such species which is determined by the Secretary, after consultation as appropriate with the affected States, to be critical.

It should be noted that a determination that a plant is a Threatened Species or an Endangered Species imposes no restrictions upon the "taking"; the *intrastate* sale; nor upon the *interstate* movement of such plants unless such movement is in the course of a commercial activity involving a change of ownership of the plant. In this context, the term "commercial activity" is defined in section 3(1) of the Act as follows:

(1) The term "commercial activity" means all activities of industry and trade, including, but not limited to, the buying or sell-

ing of commodities and activities conducted for the purpose of facilitating such buying and selling.

The terms "industry or trade," as used in the above definition, were defined in the September 26, 1975, FEDERAL REGISTER (40 FR 44416) as follows:

"Industry or trade" in the definition of "commercial activity" in the Act means the actual or intended transfer of wildlife or plants from one person to another person in the pursuit of gain or profit;

In the case of Endangered Species of plants, regulations proposed in the June 7, 1976, FEDERAL REGISTER (41 FR 22915-22922), would provide for the issuance of permits to carry out otherwise prohibited activities under certain circumstances. Such permits would be available for scientific purposes or to enhance the propagation or survival of the species. In some instances permits may be issued during a specified period of time to relieve undue economic hardship which would be suffered if such relief were not available.

### PUBLIC COMMENTS SOLICITED

The Director intends for the finally adopted rules to be as accurate and effective in the conservation of Endangered plants as possible. Therefore, any comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, private interests or any other interested party concerning any aspect of these proposed rules are hereby solicited. Comments particularly are sought concerning:

1. The location of any living specimen of those plants which are identified on the following list by an asterisk preceding the scientific name;
2. Botanical, horticultural or other relevant data concerning any threat (or the lack thereof) to any plant included on the following list;
3. Detailed information concerning the range and distribution of any of these plants;
4. The location of and reasons why any habitat of any plant on the following list should be determined to be "Critical Habitat" as provided for by section 7 of the Act;
5. Improved scientific or common names for any plant on the following list;
6. The extent and kinds of impact in regulating the importation or exportation, or the delivering, receiving, carrying, transporting, shipping, or sale or offer for sale in interstate or foreign commercial activity, of these plants;
7. The extent and kinds of impact on actions authorized, funded or carried out by Federal agencies which might affect these plants or any Critical Habitats which may be determined for any of them.

The list of plants following is arranged alphabetically in the sequence of subspecies (variety) within species within genus within family. The family names are included solely for the purpose of aiding in the identification of the other lower taxa and have no other legal significance.

The reader should be aware that the following list consists of two parts:

(1) The main list and

(2) An addendum immediately following which contains the names of several floral taxa brought to the Service's at-

tention after the main list had been typed. Plants included in this addendum are arranged in the same sequence as those in the main list.

The Service is aware that this proposal, together with the already published proposed regulations for plants, could have a noticeable impact. It is hoped that comments to the Service will bring out any potential problem areas so that our final rules will be effective, equitable and conducive to voluntary compliance. Therefore, the Service will hold several public hearings in various areas of the country relating to this proposal, jointly with the proposal on plant regulations, before any final rulemakings are published. The dates, times, and locations of these public hearings will be announced in the FEDERAL REGISTER and press releases in the near future. It is planned that this proposal and the proposal on plant regulations will be considered together, and may be implemented together. If necessary, the period for comments on this proposal will be extended. Final promulgation of the regulations on these plant taxa will take into consideration the comments and any additional information received by the Director and such communications may lead him to adopt final regulations that differ from this proposal.

An environmental assessment has been prepared in conjunction with this proposal. It is on file in the Service's Office of Endangered Species and International Activities, 1612 K Street, N.W., Washington, D.C. and may be examined during regular business hours. A determination will be made before the time of final rulemaking as to whether this is a major Federal action which would significantly affect the quality of the human environment within the meaning of section 102 (2)(c) of the National Environmental Policy Act of 1969.

### SUBMITTAL OF WRITTEN COMMENTS

Interested persons may participate in this rulemaking by submitting written comments and other documents, preferably in triplicate, to the Director (FWS/LE), U.S. Fish and Wildlife Service, P.O. Box 19183, Washington, D.C. 20036. All relevant comments and materials received no later than August 16, 1976, will be considered. Comments and materials received will be available for public inspection during normal business hours at the Service's office in Suite 600, 1612 K Street, N.W., Washington, D.C.

This proposed rulemaking is issued under the authority contained in the Endangered Species Act of 1973 (16 U.S.C. 1531-1543; 87 Stat. 884).

Dated: June 7, 1976.

LYNN A. GREENWALT,  
Director,  
Fish and Wildlife Service.

Accordingly, it is hereby proposed to amend Part 17, Subchapter B of Chapter I, Title 50 of the Code of Federal Regulations, as set forth below.

In § 17.12 it is proposed to add the following:

**§ 17.12 Endangered or threatened plants.**

## PROPOSED RULES.
